

## MQC Policy Map on Configured VC Range ATM

The Modular Quality of Service Command Line Interface (MQC) Policy Map support on Configured VC Range ATM feature extends the functionality for policy maps on a single ATM VC to the ATM VC range.

### Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

### Information About MQC Policy Map on Configured VC Range ATM

The MQC Policy Map Support on Configured VC Range feature simplifies the configuration of ATM VC ranges by allowing you to attach policy maps on a range of ATM VCs or on a specific VC within a range of VCs.

# How to Configure MQC Policy Map on Configured VC Range ATM

## Attaching QoS Policies to an ATM PVC Range

Use the following configuration steps to attach a QoS policy to a range of ATM PVCs.

### SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **interface atm slot/subslot/port[.subinterface] [multipoint | point-to-point]**
4. **range [range-name] pvc start-vpi/start-vci end-vpi/end-vci**
5. **service-policy input output policy-map-name**
6. **end**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Router# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>interface atm</b> <b>slot/subslot/port[.subinterface]</b> <b>[multipoint   point-to-point]</b>  <b>Example:</b> Router(config)# interface atm 1/0.1	Specifies the ATM interface and enters interface configuration mode.
<b>Step 4</b>	<b>range [range-name] pvc</b> <b>start-vpi/start-vci end-vpi/end-vci</b>	Defines a range of ATM permanent virtual circuits (PVCs) and enters ATM range configuration mode.

	Command or Action	Purpose
	<p><b>Example:</b></p> <pre>Router(config-if)# range pvc 101/304 200/400</pre>	<ul style="list-style-type: none"> <li>• (Optional) range-name is the name of the range. The range-name can be a maximum of 15 characters.</li> <li>• start-vpi/ specifies the beginning value for a range of virtual path identifiers (VPIs). The slash is required. If you do not provide a VPI value or the slash, the default value of 0 is used. Valid values for VPI are from 0 to 255.</li> <li>• start-vci specifies the beginning value for a range of virtual channel identifiers (VCIs). Valid values are from 32 to 65535.</li> <li>• end-vpi/ specifies the end value for a range of virtual path identifiers (VPIs). The slash is required. If you do not provide a VPI value or the slash, the start-vpi value is used by default. Valid values for VPI are from 0 to 255.</li> <li>• end-vci specifies the end value for a range of virtual channel identifiers (VCIs). Valid values are from 32 to 65535.</li> </ul>
<b>Step 5</b>	<p><b>service-policy input output</b> <i>policy-map-name</i></p> <p><b>Example:</b></p> <pre>Router(config-if-atm-range)# service-policy output Downstream_Traffic</pre>	<p>Attaches the service policy you specify to the specified ATM PVC range and enters ATM PVC range configuration mode.</p> <ul style="list-style-type: none"> <li>• <b>input</b> indicates to apply the service policy to the inbound traffic on the interface.</li> <li>• <b>output</b> indicates to apply the service policy to the outbound traffic on the interface.</li> </ul> <p><b>Note</b> For QoS policies containing the bandwidth, priority, random-detect, queue-limit, and shape commands, you must specify the output keyword. The router ignores these commands when you use them with the input keyword.</p> <ul style="list-style-type: none"> <li>• <b>policy-map-name</b> is the name of the policy map you want to attach to the subinterface.</li> </ul> <p><b>Note</b> The router applies the service policy to only the PVCs within the PVC range.</p>
<b>Step 6</b>	<p><b>end</b></p> <p><b>Example:</b></p> <pre>Router(config-if-atm-range)# end</pre>	<p>Exits ATM PVC range configuration mode and returns to privileged EXEC mode.</p>

## Attaching QoS Policies to an Individual PVC Within an ATM PVC Range

Use the following configuration task to attach a QoS policy to an individual PVC within a range of ATM PVCs.

## SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **interface atm slot/subslot/port[.subinterface] [multipoint | point-to-point]**
4. **range [range-name] pvc start-vpi/start-vci end-vpi/end-vci**
5. **pvc-in-range [pvc-name] vpi/vci**
6. **service-policy input output policy-map-name**
7. **end**

## DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Router# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>interface atm</b> <b>slot/subslot/port[.subinterface]</b> <b>[multipoint   point-to-point]</b>  <b>Example:</b> Router(config)# interface atm 1/0	Specifies the ATM interface and enters interface configuration mode.
<b>Step 4</b>	<b>range [range-name] pvc</b> <b>start-vpi/start-vci end-vpi/end-vci</b>  <b>Example:</b> Router(config-if)# range pvc 101/304 200/400	Defines a range of ATM permanent virtual circuits (PVCs) and enters ATM range configuration mode. <ul style="list-style-type: none"> <li>• (Optional) range-name is the name of the range. The range-name can be a maximum of 15 characters.</li> <li>• start-vpi/ specifies the beginning value for a range of virtual path identifiers (VPIs). The slash is required. If you do not provide a VPI value or the slash, the default value of 0 is used. Valid values for VPI are from 0 to 255.</li> <li>• start-vci specifies the beginning value for a range of virtual channel identifiers (VCIs). Valid values are from 32 to 65535.</li> <li>• end-vpi/ specifies the end value for a range of virtual path identifiers (VPIs). The slash is required. If you do not provide a VPI value or the slash, the start-vpi value is used by default. Valid values for VPI are from 0 to 255.</li> </ul>

	Command or Action	Purpose
		<ul style="list-style-type: none"> <li>• <code>end-vci</code> specifies the end value for a range of virtual channel identifiers (VCIs). Valid values are from 32 to 65535.</li> </ul>
<b>Step 5</b>	<p><code>pvc-in-range [pvc-name] vpi/vci</code></p> <p><b>Example:</b></p> <pre>Router(config-if-atm-range)# pvc-in-range pvc 105/350</pre>	<p>Configures an individual PVC within a PVC range and enters ATM PVC range configuration mode.</p> <ul style="list-style-type: none"> <li>• (Optional) <code>pvc-name</code> is the name given to the PVC. The PVC name can have a maximum of 15 characters.</li> <li>• <code>vpi/</code> is the virtual path identifier (VPI) for this PVC. The slash is required. If you do not specify a VPI value or the slash, the default value of 0 is used. Valid VPI values are from 0 to 255.</li> <li>• <code>vci</code> is the virtual circuit identifier (VCI) for this PVC. Valid values are from 32 to 2047.</li> </ul>
<b>Step 6</b>	<p><b>service-policy input output</b> <i>policy-map-name</i></p> <p><b>Example:</b></p> <pre>Router(cfg-if-atm-range-pvc)# service-policy output Downstream_Rate</pre>	<p>Attaches the service policy you specify to the specified PVC within the ATM PVC range.</p> <ul style="list-style-type: none"> <li>• <b>input</b> indicates to apply the service policy to the inbound traffic on the interface.</li> <li>• <b>output</b> indicates to apply the service policy to the outbound traffic on the interface.</li> </ul> <p><b>Note</b> For QoS policies containing the bandwidth, priority, random-detect, queue-limit, and shape commands, you must specify the output keyword. The router ignores these commands when you use them with the input keyword.</p> <ul style="list-style-type: none"> <li>• <code>policy-map-name</code> is the name of the policy map you want to attach to the subinterface.</li> </ul> <p><b>Note</b> The router applies the service policy to only the individual ATM PVC within the PVC range.</p>
<b>Step 7</b>	<p><b>end</b></p> <p><b>Example:</b></p> <pre>Router(cfg-if-atm-range-pvc)# end</pre>	<p>Exits ATM PVC range configuration mode and enters privileged EXEC mode.</p>

# Configuration Examples for MQC Policy Map on Configured VC Range ATM

## Attaching QoS Service Policies to an ATM PVC Range Example

The following example configuration shows how to attach policy maps to a range of ATM PVCs. In the example, the service policy named voice is attached to the range of ATM PVCs 1/32 to 1/34. The router applies the service policy to all of the PVCs within the PVC range.

```
Router(config)# interface atm 2/0/0
Router(config-if)# range pvc 1/32 1/34
Router(config-if-atm-range)# service-policy input voice
```

## Attaching QoS Service Policies to an Individual PVC Within an ATM PVC Range Example

The following example configuration shows how to attach policy maps to a specific PVC within a PVC range. In the example, the service policy named data is attached to PVC 1/33 within the PVC range 1/32 to 1/34. The router applies the service policy to only PVC 1/33.

```
Router(config)# interface atm 2/0/0
Router(config-if)# range pvc 1/32 1/34
Router(config-if-atm-range)# service-policy input voice
Router(config-if-atm-range)# pvc-in-range 1/33
Router(config-if-atm-range-vc)# service-policy input data
```

## Feature Information for MQC Policy Map on Configured VC Range ATM

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.
