

Establishing PPPoE Session Limits per NAS Port

The PPPoE Session Limits per NAS Port feature enables you to limit the number of PPP over Ethernet (PPPoE) sessions on a specific permanent virtual circuit (PVC) or VLAN configured on an L2TP access concentrator (LAC). The network access server (NAS) port is either an ATM PVC or a configured VLAN ID. PPPoE per-NAS-port session limits are maintained in a RADIUS server customer profile database and are downloaded during Subscriber Service Switch (SSS) preauthorization.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for Establishing PPPoE Session Limits per NAS Port

You must understand the concepts described in the "Preparing for Broadband Access Aggregation" module.

Both the LAC and the L2TP Network Server (LNS) must be running a Cisco IOS image that supports the PPPoE Session Limit Per NAS Port feature.

Protocol support for broadband access aggregation must be established using the procedures in the "Providing Protocol Support for Broadband Access Aggregation of PPPoE Sessions" module.

Restrictions for Establishing PPPoE Session Limits per NAS Port

- Do not configure the PPPoE per-NAS-port session limit to zero.
- PPPoE Session Limit per NAS Port does not support TACACS+.
- PPPoE Session Limit per NAS Port applies only to PVCs and VLANs.

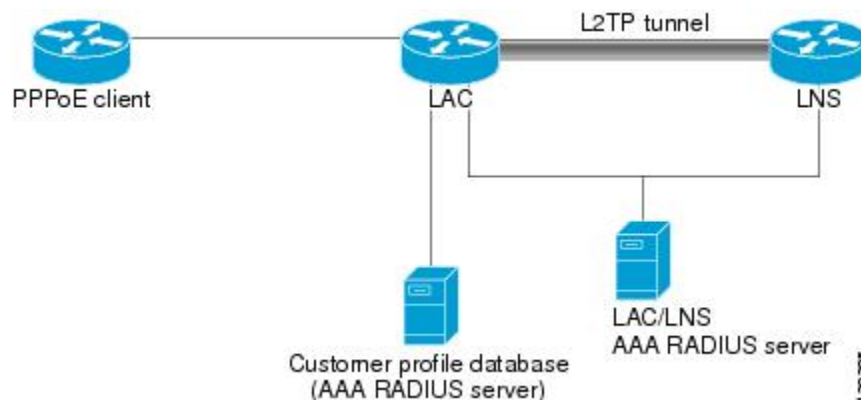

Information About Establishing PPPoE Session Limits per NAS Port

How PPPoE per-NAS-Port Session Limits Work

The PPPoE Session Limits Per NAS Port feature limits the number of PPPoE sessions on a specific PVC or VLAN configured on an LAC. The NAS port is either an ATM PVC or a configured VLAN ID.

The PPPoE per-NAS-port session limit is maintained in a RADIUS server customer profile database. This customer profile database is connected to an LAC and is separate from the RADIUS server that the LAC and LNS use for the authentication and authorization of incoming users. See below for a sample network topology. When the customer profile database receives a preauthorization request from the LAC, it sends the PPPoE per-NAS-port session limit to the LAC.

The LAC sends a preauthorization request to the customer profile database when the LAC is configured for SSS preauthorization. When the LAC receives the PPPoE per-NAS-port session limit from the customer profile database, the LAC compares the PPPoE per-NAS-port session limit with the number of sessions currently on the NAS port. The LAC then decides whether to accept or reject the current call, depending upon the configured PPPoE per NAS port-session-limit and the number of calls currently on the NAS port. PPPoE Session Limit per NAS Port Sample Topology

The customer profile database consists of a user profile for each user that is connected to the LAC. Each user profile contains the NAS-IP-Address (attribute 4) and the NAS-Port-ID (attribute 5.) When the LAC is configured for SSS preauthorization, it queries the customer profile database using the username. When a match is found in the customer profile database, the customer profile database sends the PPPoE per-NAS-port session limit in the user profile. The PPPoE per-NAS-port session limit is defined in the username as a Cisco attribute-value (AV) pair.

Relationship Between the Per-NAS-Port Session Limit and Other Types of Session Limits

You can configure types of session limits other than per-NAS-port sessions on the LAC, including session limit per VC, per VLAN, per MAC, and a global session limit for the LAC. When PPPoE session limits for a NAS port are enabled (that is, when you have enabled SSS preauthorization on the LAC), local configurations for session limits per VC and per VLAN are overwritten by the PPPoE per-NAS-port session limit downloaded from the customer profile database. Configured session limits per VC and per VLAN serve as backups in case of a download failure of the PPPoE per-NAS-port session limit. Global session limits and per-MAC session limits, if configured on the router, will take effect as other means of limiting PPPoE sessions.

Benefits of PPPoE Session Limits per NAS Port

PPPoE session limits per NAS port provides flexibility and simplifies router configuration by allowing you to download the per-VC and per-VLAN session limits from a RADIUS server in addition to being able to configure them on the router.

How to Establish PPPoE Session Limits per NAS Port

Enabling Subscriber Service Switch Preauthorization

When SSS preauthorization is enabled on an LAC, local configurations for session limit per VC and per VLAN are overwritten by the per-NAS-port session limit downloaded from the server. Perform this task to enable SSS preauthorization:

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **subscriber access pppoe pre-authorize nas-port-id** [*aaa-method-list*]
4. **exit**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	subscriber access pppoe pre-authorize nas-port-id [<i>aaa-method-list</i>] Example: Router(config)# subscriber access pppoe pre-authorize nas-port-id mlist-llid Example:	Enables SSS preauthorization. <ul style="list-style-type: none"> • <i>aaa-method-list</i> --Name of an authentication, authorization and accounting (AAA) list configured on the LAC. <p>Note During SSS preauthorization, per-NAS-port session limits are downloaded to the LAC.</p>
Step 4	exit Example: Router(config)# exit	Exits global configuration mode.

Configuring the RADIUS User Profile for PPPoE Session Limits per NAS Port

Perform the following steps to enable per-NAS-port PPPoE session limits in a RADIUS user profile for the customer profile database. Refer to the Cisco IOS Security Configuration Guide for information about creating a RADIUS user profile.

SUMMARY STEPS

1. User-Name = nas-port:ip-address:slot/subslot/port/vpi.vci
2. User-Name = nas-port:ip-address:slot/subslot/port/vlan-id
3. User-Name = nas-port:ip-address:slot/subslot/port/vlan-id
4. Password = "cisco"
5. cisco-avpair = "pppoe:session-limit-session-limit-per-NAS-port"

DETAILED STEPS

	Command or Action	Purpose
Step 1	User-Name = nas-port:ip-address:slot/subslot/port/vpi.vci	Configures the NAS port username for a PPPoE over ATM NAS port user. <ul style="list-style-type: none"> • <i>ip-address</i> --IP address of the LAC interface that connects to the customer profile database. • <i>slot /subslot/port</i>--ATM interface. • <i>vpi.vci</i> --Virtual path identifier (VPI) and virtual channel identifier (VCI) values for the PVC.
Step 2	User-Name = nas-port:ip-address:slot/subslot/port/vlan-id	Configures the NAS port username for a PPPoE over ATM NAS port user. <ul style="list-style-type: none"> • <i>ip-address</i> --IP address of the LAC interface that connects to the customer profile database. • <i>slot /subslot/port</i>--ATM interface. • <i>vpi.vci</i> --Virtual path identifier (VPI) and virtual channel identifier (VCI) values for the PVC.
Step 3	User-Name = nas-port:ip-address:slot/subslot/port/vlan-id Example:	Configures the NAS port username for a PPPoE over VLAN NAS port user. <ul style="list-style-type: none"> • <i>ip-address</i> --IP address of the LAC interface that connects to the customer profile database. • <i>slot /subslot/port</i>--ATM interface. • <i>vlan-id</i> --VLAN identifier.
Step 4	Password = "cisco" Example:	Sets the fixed password.
Step 5	cisco-avpair = "pppoe:session-limit-session-limit-per-NAS-port"	Adds the PPPoE session limit per NAS port cisco AVpair to the user profile. <ul style="list-style-type: none"> • <i>session-limit-per-NAS-port</i> --per-NAS-port PPPoE session limit.

Command or Action	Purpose
-------------------	---------

Verifying PPPoE Session Limit per NAS Port

Perform this task to verify per-NAS-port session limit performance.

SUMMARY STEPS

1. `enable`
2. `debug aaa authorization`
3. `debug radius [brief | hex]`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p><code>enable</code></p> <p>Example:</p> <pre>Router> enable</pre>	<p>Enables privileged EXEC mode.</p> <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	<p><code>debug aaa authorization</code></p> <p>Example:</p> <pre>Router# debug aaa authorization</pre>	<p>Displays information about AAA authorization.</p>
Step 3	<p><code>debug radius [brief hex]</code></p> <p>Example:</p> <pre>Router(config)# debug radius</pre>	<p>Displays information about RADIUS.</p>

Configuration Examples for Establishing PPPoE Session Limits per NAS Port

Configuring the LAC for per-NAS-Port Session Limits for PPPoE over ATM Example

Note

Effective with Cisco IOS Release 12.2(28)SB, the **pppoe limit per-mac**, **pppoe limit per-vc**, and **pppoe limit per-vlan** commands are replaced by the **sessions per-mac limit**, **sessions per-vc limit**, and **sessions per-vlan limit** commands, respectively, in bba-group configuration mode. See the **sessions per-mac limit**, **sessions per-vc limit**, and **sessions per-vlan limit** commands for more information.

The following example shows how to configure per-NAS-port session limits for PPPoE over ATM on the LAC:

```

!
username lac password 0 lab
username lns password 0 lab

```

Configuring the LAC for per-NAS-Port Session Limits for PPPoE over VLAN Example

Note

Effective with Cisco IOS Release 12.2(28)SB, the **pppoe limit per-mac**, **pppoe limit per-vc**, and **pppoe limit per-vlan** commands are replaced by the **sessions per-mac limit**, **sessions per-vc limit**, and **sessions per-vlan limit** commands, respectively, in bba-group configuration mode. See the **sessions per-mac limit**, **sessions per-vc limit**, and **sessions per-vlan limit** commands for more information.

The following example shows how to configure per-NAS-port session limits for PPPoE over VLAN on the LAC:

```

!
username lac password 0 lab
username lns password 0 lab
aaa new-model
!
!
aaa authentication ppp default group radius local
aaa authentication ppp mlist-nasport group radius
aaa authorization network mlist-nasport group radius
aaa session-id common
ip subnet-zero
!
!
no ip domain lookup
ip host abrick 192.0.2.0
!
ip cef
subscriber access pppoe pre-authorize nas-port-id mlist-nasport

```

```

vpdn enable
!
vpdn-group l2tp_initiator
 request-dialin
  protocol l2tp
  domain example.com
  initiate-to ip 10.1.1.2
  local name lac
!

!
!
ip radius source-interface FastEthernet6/0
!
!
!
radius-server host 10.1.1.2 auth-port 1645 acct-port 1646
radius-server key cisco
radius-server authorization permit missing Service-Type
!

```

Configuring the User Profile for PPPoE Session Limits per NAS Port Example

The following example shows how to configure the user profile for PPPoE session limits per NAS port. In this example, the user has a PVC with a VPI of 1 and a VCI of 100 on ATM interface 4/0/0 of the LAC with an IP address of 10.10.10.10:

```

Username=nas_port:10.10.10.10:4/0/0/1.100
Password = "password1"
cisco-avpair= "pppoe:session-limit=<session limit per NAS-port>"

```

Where to Go Next

- If you want to use service tags to enable a PPPoE server to offer PPPoE clients a selection of services during call setup, refer to the "Offering PPPoE Clients a Selection of Services During Call Setup" module.
- If you want to enable an L2TP access concentrator to relay active discovery and service selection functionality for PPPoE over an L2TP control channel to an LNS or tunnel switch, refer to the "Enabling PPPoE Relay Discovery and Service Selection Functionality" module.
- If you want to configure the transfer upstream of the PPPoX session speed value, refer to the "Configuring Upstream Connections Speed Transfer" module.
- If you want to use the Simple Network Management Protocol (SNMP) to monitor PPPoE sessions, refer to the "Monitoring PPPoE Sessions with SNMP" module.
- If you want to identify a physical subscribe line for RADIUS communication with a RADIUS server, refer to the "Identifying a Physical Subscriber Line for RADIUS Access and Accounting" module.
- If you want to configure a Cisco Subscriber Service Switch, refer to the "Configuring Cisco Subscriber Service Switch Policies" module.

Feature Information for Establishing PPPoE Session Limits per NAS Port

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [http://www.cisco.com/go/featurenavigator](#). An account on Cisco.com is not required.

Table 1: Feature Information for PPOE Session Limit per NAS Port.
