

# **Configuring IP SLAs DHCP Operations**

This module describes how to configure an IP Service Level Agreements (SLAs) Dynamic Host Control Protocol (DHCP) probe to measure the response time between a Cisco device and a DHCP server to obtain an IP address.

- Finding Feature Information, page 1
- Information About IP SLAs DHCP Operations, page 1
- How to Configure IP SLAs DHCP Operations, page 2
- Configuration Examples for IP SLAs DHCP Operations, page 9
- Additional References, page 9
- Feature Information for IP SLAs DHCP Operations, page 10

## **Finding Feature Information**

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see **Bug Search Tool** and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

# Information About IP SLAs DHCP Operations

### **DHCP** Operation

DHCP provides a mechanism for allocating IP addresses dynamically so that addresses can be reused when hosts no longer need them. The DHCP operation measures the round-trip time (RTT) taken to discover a DHCP server and obtain a leased IP address from it. IP SLAs releases the leased IP address after the operation.

You can use the RTT information to determine DHCP performance levels.

There are two modes for the DHCP operation. By default, the DHCP operation sends discovery packets on every available IP interface on the device. If a specific server is configured on the device, discovery packets are sent only to the specified DHCP server.

### **IP SLAs DHCP Relay Agent Options**

A DHCP relay agent is any host that forwards DHCP packets between clients and servers. Relay agents are used to forward requests and replies between clients and servers when they are not on the same physical subnet. Relay agent forwarding is distinct from the normal forwarding of an IP device, where IP packets are switched between networks somewhat transparently. Relay agents receive DHCP messages and then generate a new DHCP message to send out on another interface.

# **How to Configure IP SLAs DHCP Operations**

There is no need to configure an IP SLAs responder on the destination device.

## **Configuring a DHCP Operation on the Source Device**

Perform one of the following tasks:

### **Configuring a Basic DHCP Operation**

#### SUMMARY STEPS

- 1. enable
- 2. configure terminal
- 3. ip sla operation-number
- **4. dhcp** {*destination-ip-address* | *destination-hostname*} [**source-ip** {*ip-address* | *hostname*}]
- **5.** frequency seconds
- 6. end

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	

ſ

	Command or Action	Purpose
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	ip sla operation-number	Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.
	Example:	
	Device(config)# ip sla 10	
Step 4	<b>dhcp</b> { <i>destination-ip-address</i>   <i>destination-hostname</i> } [ <b>source-ip</b> { <i>ip-address</i>   <i>hostname</i> }]	Defines a DHCP operation and enters IP SLA DHCP configuration mode.
	Example:	
	Device(config-ip-sla)# dhcp 10.10.10.3	
Step 5	frequency seconds	(Optional) Sets the rate at which a specified IP SLAs operation repeats.
	Example:	1 1
	Device(config-ip-sla-dhcp)# frequency 30	
Step 6	end	Exits to privileged EXEC mode.
	Example:	
	Device(config-ip-sla-dhcp)# end	

### **Configuring a DHCP Operation with Optional Parameters**

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- 3. ip sla operation-number
- **4. dhcp** {*destination-ip-address* | *destination-hostname*} [**source-ip** {*ip-address* | *hostname*}]
- 5. history buckets-kept size
- 6. history distributions-of-statistics-kept size
- 7. history enhanced [interval seconds] [buckets number-of-buckets]
- 8. history filter {none | all | overThreshold | failures}
- 9. frequency seconds
- 10. history hours-of-statistics-kept hours
- 11. history lives-kept lives
- 12. owner owner-id
- 13. history statistics-distribution-interval milliseconds
- 14. tag text
- **15. threshold** *milliseconds*
- **16. timeout** *milliseconds*
- 17. end

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	ip sla operation-number	Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.
	Example:	
	Device(config)# ip sla 10	

I

ſ

	Command or Action	Purpose
Step 4	<b>dhcp</b> { <i>destination-ip-address</i>   <i>destination-hostname</i> } [ <b>source-ip</b> { <i>ip-address</i>   <i>hostname</i> }]	Defines a DHCP operation and enters IP SLA DHCP configuration mode.
	Example:	
	Device(config-ip-sla)# dhcp 10.10.10.3	
Step 5	history buckets-kept size	(Optional) Sets the number of history buckets that are kept during the lifetime of an IP SLAs operation.
	Example:	
	Device(config-ip-sla-dhcp)# history buckets-kept 25	
Step 6	history distributions-of-statistics-kept size	(Optional) Sets the number of statistics distributions kept per hop during an IP SLAs operation.
	Example:	
	Device(config-ip-sla-dhcp)# history distributions-of-statistics-kept 5	
Step 7	<b>history enhanced</b> [interval seconds] [buckets number-of-buckets]	(Optional) Enables enhanced history gathering for an IP SLAs operation.
	Example:	
	<pre>Device(config-ip-sla-dhcp)# history enhanced interval 900 buckets 100</pre>	
Step 8	history filter {none   all   overThreshold   failures}	(Optional) Defines the type of information kept in the history table for an IP SLAs operation.
	Example:	
	<pre>Device(config-ip-sla-dhcp)# history filter failures</pre>	
Step 9	frequency seconds	(Optional) Sets the rate at which a specified IP SLAs operation repeats.
	Example:	
	<pre>Device(config-ip-sla-dhcp)# frequency 30</pre>	
Step 10	history hours-of-statistics-kept hours	(Optional) Sets the number of hours for which statistics are maintained for an IP SLAs operation.
	Example:	
	<pre>Device(config-ip-sla-dhcp)# history hours-of-statistics-kept 4</pre>	

٦

	Command or Action	Purpose
Step 11	history lives-kept lives	(Optional) Sets the number of lives maintained in the history table for an IP SLAs operation.
	Example:	
	Device(config-ip-sla-dhcp)# history lives-kept 5	
Step 12	owner owner-id	(Optional) Configures the Simple Network Management Protocol (SNMP) owner of an IP SLAs operation.
	Example:	
	<pre>Device(config-ip-sla-dhcp)# owner admin</pre>	
Step 13	history statistics-distribution-interval milliseconds	(Optional) Sets the time interval for each statistics distribution kept for an IP SLAs operation.
	Example:	
	Device(config-ip-sla-dhcp)# history statistics-distribution-interval 10	
Step 14	tag text	(Optional) Creates a user-specified identifier for an IP SLAs operation.
	Example:	
	<pre>Device(config-ip-sla-dhcp)# tag TelnetPollServer1</pre>	
Step 15	threshold milliseconds	(Optional) Sets the upper threshold value for calculating network monitoring statistics created by an IP SLAs
	Example:	operation.
	<pre>Device(config-ip-sla-dhcp)# threshold 10000</pre>	
Step 16	timeout milliseconds	(Optional) Sets the amount of time an IP SLAs operation waits for a response from its request packet.
	Example:	
	<pre>Device(config-ip-sla-dhcp)# timeout 10000</pre>	
Step 17	end	Exits to privileged EXEC mode.
	Example:	
	Device(config-ip-sla-dhcp)# end	

## **Scheduling IP SLAs Operations**

#### **Before You Begin**

- All IP Service Level Agreements (SLAs) operations to be scheduled must be already configured.
- The frequency of all operations scheduled in a multioperation group must be the same.
- The list of one or more operation ID numbers to be added to a multioperation group must be limited to a maximum of 125 characters in length, including commas (,).

#### **SUMMARY STEPS**

- 1. enable
- 2. configure terminal
- **3.** Enter one of the following commands:
  - ip sla schedule *operation-number* [life {forever | *seconds*}] [start-time {[*hh:mm:ss*] [month day | day month] | pending | now | after *hh:mm:ss*}] [ageout *seconds*] [recurring]
  - ip sla group schedule *group-operation-number operation-id-numbers* {schedule-period *schedule-period-range* | schedule-together} [ageout *seconds*] frequency *group-operation-frequency* [life {forever | *seconds*}] [start-time {*h:mm* [:ss] [month day | day month] | pending | now | after *hh:mm* [:ss]}]
- 4. end
- 5. show ip sla group schedule
- 6. show ip sla configuration

#### **DETAILED STEPS**

I

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	Enter one of the following commands: • ip sla schedule operation-number [life {forever   seconds}]	• Configures the scheduling parameters for an individual IP SLAs operation.
	[start-time {[hh:mm:ss] [month day   day month]   pending   now   after hh:mm:ss}] [ageout seconds] [recurring]	• Specifies an IP SLAs operation group number and the range of operation numbers for a multioperation scheduler.

	Command or Action	Purpose
	<ul> <li>ip sla group schedule group-operation-number operation-id-numbers {schedule-period schedule-period-range   schedule-together} [ageout seconds] frequency group-operation-frequency [life {forever   seconds}] [start-time {hh:mm [:ss] [month day   day month]   pending   now   after hh:mm [:ss]}]</li> </ul>	
	Example:	
	Device(config)# ip sla schedule 10 life forever start-time now	
	Device(config)# ip sla group schedule 10 schedule-period frequency	
	<pre>Device(config)# ip sla group schedule 1 3,4,6-9 life forever start-time now</pre>	
	Device(config)# ip sla schedule 1 3,4,6-9 schedule-period 50 frequency range 80-100	
Step 4	end	Exits global configuration mode and returns to privileged EXEC mode.
	Example:	
	Device(config)# end	
Step 5	show ip sla group schedule	(Optional) Displays IP SLAs group schedule details.
	Example:	
	Device# show ip sla group schedule	
Step 6	show ip sla configuration	(Optional) Displays IP SLAs configuration details.
	Example:	
	Device# show ip sla configuration	

### **Troubleshooting Tips**

• If the IP Service Level Agreements (SLAs) operation is not running and not generating statistics, add the **verify-data** command to the configuration (while configuring in IP SLA configuration mode) to enable data verification. When data verification is enabled, each operation response is checked for corruption. Use the **verify-data** command with caution during normal operations because it generates unnecessary overhead.

• Use the **debug ip sla trace** and **debug ip sla error** commands to help troubleshoot issues with an IP SLAs operation.

### What to Do Next

To add proactive threshold conditions and reactive triggering for generating traps (or for starting another operation) to an IP Service Level Agreements (SLAs) operation, see the "Configuring Proactive Threshold Monitoring" section.

# **Configuration Examples for IP SLAs DHCP Operations**

### **Example Configuration for an IP SLAs DHCP Operation**

In the following example, IP SLAs operation number 12 is configured as a DHCP operation enabled for DHCP server 172.16.20.3. Note that DHCP option 82 is used to specify the circuit ID.

#### **Device B Configuration**

```
ip dhcp-server 172.16.20.3
!
ip sla 12
dhcp 10.10.10.3
frequency 30
timeout 5000
tag DHCP_Test
!
ip sla schedule 12 start-time now
```

# **Feature Information for IP SLAs DHCP Operations**

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
