

Adaptive QoS over DMVPN

Adaptive QoS over Dynamic Multipoint VPN (DMVPN) ensures effective bandwidth management using dynamic shapers based on available bandwidth. This feature enables various QoS features to adapt to non service-level agreement (SLA) based environments where bandwidth is variable and fluctuate with time.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for Adaptive QoS over DMVPN

Adaptive QoS over DMVPN can be enabled either on hub or spoke or both. To enable feature at a spoke side, the spoke must support basic egress per-SA QoS policy.

Internet Protocol Security (IPSec) is required and must be configured before Adaptive QoS is enabled on the DMVPN tunnel.

Restrictions for Adaptive QoS over DMVPN

The Adaptive QoS over DMVPN feature configuration is:

- Supported only on DMVPN tunnels
- Allowed only on egress direction
- Allowed only in parent most policy that has class-default only

Information About Adaptive QoS over DMVPN

Overview of Adaptive QoS over DMVPN

Enterprise networks are increasingly using the Internet as form of WAN transport, therefore QoS models needs to be revisited. QoS works effectively when deployed in an service-level agreement (SLA) environment today, like Multiprotocol Label Switching (MPLS) . The available bandwidth on the internet at a given point of time can vary, and can be often much lesser than the actual bandwidth offered by the service provider. In cases of non SLA environments, QoS has limitations - mainly because it cannot predict changing bandwidth on the link.

Cisco Intelligent WAN (IWAN) recommends using Dynamic Multipoint VPN (DMVPN) over Internet to connect branches to the data center or headquarters, and QoS to be deployed in such environments of fluctuating bandwidth. Currently, the shapers that are applied as part of the egress QoS policy are static in value - they are configured based on the service provider bandwidth offering, they do not change with time and hence do not reflect the actual available Internet bandwidth. In many instances where Internet available bandwidth becomes much lesser than the offered bandwidth, the shapers become irrelevant as they do not adapt to the varying bandwidth. Due to the static value of the shapers, application traffic gets dropped indiscriminately at the Internet core, nullifying the very need to have configured a QoS policy to protect critical traffic.

DMVPN provides the ability to do QoS per-tunnel, which means a QoS policy can be applied at the hub towards a specific spoke, to ensure a high bandwidth hub does not overrun a low capacity spoke. However, these QoS policies still work with static shapers per spoke. If the bandwidth towards a particular spoke fluctuates, the shapers towards the spokes do not adapt. Also, it is not possible today to configure a QoS policy for the traffic from the spoke towards the hub, which is very common in many retail-like environments.

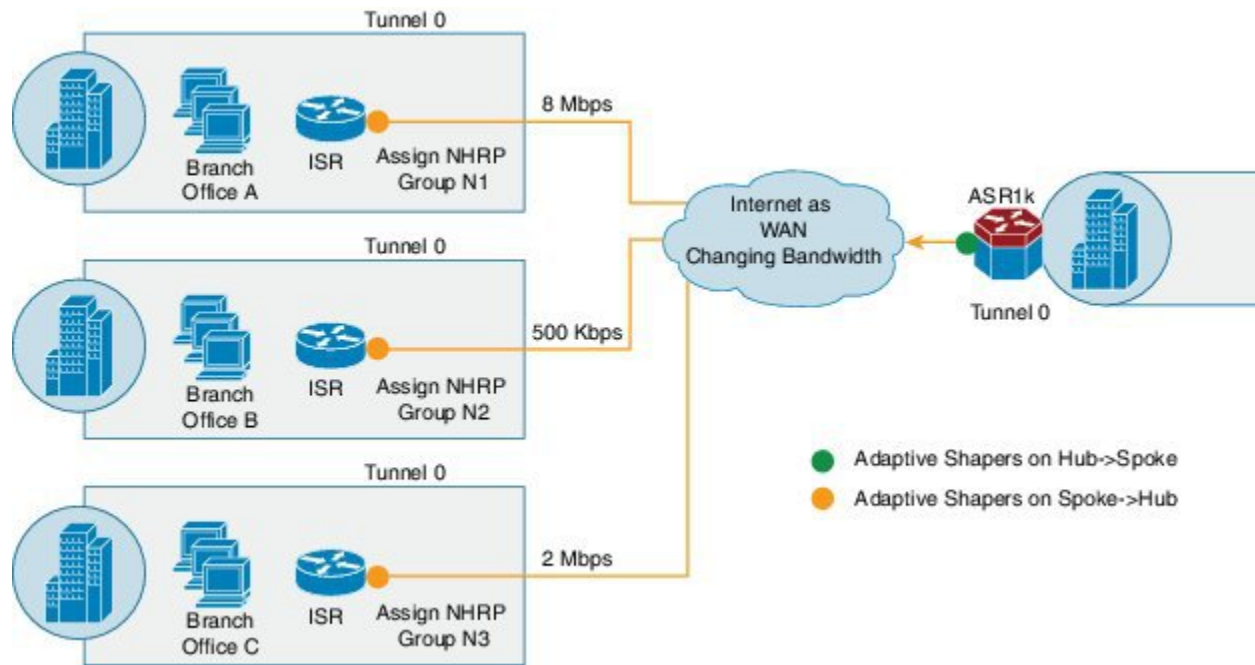

The Adaptive QoS over DMVPN feature provides the following benefits:

- Adjusts the shaper parameters based on the actual available Internet bandwidth in both directions that is periodically computed.
- Allows to configure a QoS policy on the spoke towards the hub.
- Ensures better control of application performance at the enterprise edge even in changing bandwidth scenarios over the Internet.
- Allows aggregate tunnel shape adaptation to provide effective bandwidth between spoke and hub.

Adaptive QoS for Per-Tunnel QoS over DMVPN

Per-tunnel QoS over DMVPN can be configured on the hub towards the spoke today using Next Hop Resolution Protocol (NHRP) groups. The QoS policies contain static shapers. With Adaptive QoS, the framework of per tunnel QoS configuration remains the same, but the shaper can be an adaptive one as shown in the following figure. These shapers would adapt automatically based on the changing Internet bandwidth that is periodically computed using an algorithm.

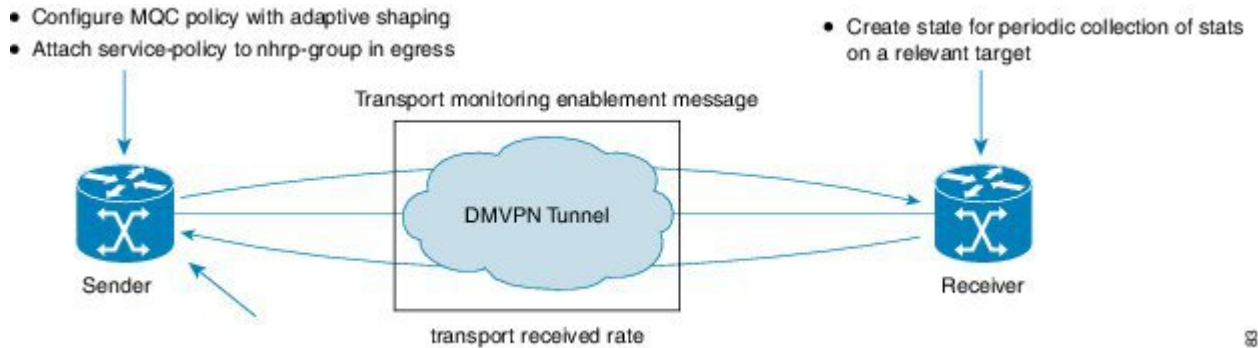

Figure 1: Adaptive QoS for Per-Tunnel QoS over DMVPN

Workflow of Adaptive QoS

The Adaptive QoS over DMVPN feature adapts shaping rate at the Sender based on the available bandwidth between specific Sender and Receiver (two end-points of a DMVPN tunnel).

Figure 2: Workflow of Adaptive QoS

At the Sender:

- Configure MQC Policy with Adaptive shaping
- Attach service-policy to nhrp-group in Egress

At the Receiver:

Create state for periodic collection of stats on a relevant target

How to Configure Adaptive QoS over DMVPN

Note Configure the Per-Tunnel QoS for DMVPN before configuring the Adaptive QoS over DMVPN feature, as Adaptive QoS over DMVPN feature is an enhancement to the Per-Tunnel QoS for DMVPN feature.

Note For details on configuring the Per-Tunnel QoS for DMVPN feature, refer to [Per-Tunnel QoS for DMVPN](#).

Configuring Adaptive QoS for DMVPN

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **policy-map** *parent-policy-name*
4. **class class-default**
5. **shape adaptive** { **upper-bound** *bps* |**percent** *percentage* } [**lower-bound** *bps* | **percent** *percentage*]
6. **end**
7. **configure terminal**
8. **interface tunnel** *tunnel-id*
9. **nhrp map group** *group-name* **service-policy output** *parent-policy-name*
10. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. • Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	policy-map <i>parent-policy-name</i> Example: Router(config)# policy-map example	Creates or modifies a child policy map and enters policy-map configuration mode. • Enter the name of the child policy map.
Step 4	class class-default Example: Router(config-pmap)# class class-default	This step associates the traffic class with the traffic policy. Configures the default class map and enters policy-map class configuration mode.
Step 5	shape adaptive { upper-bound <i>bps</i> percent <i>percentage</i> } [lower-bound <i>bps</i> percent <i>percentage</i>]	Creates a specific adaptive shaper that has upper bound on the rate and optionally lower bound on the rate.

	Command or Action	Purpose
	<p>Example:</p> <pre>Router(config-pmap-c)# shape adaptive upper-bound 20000</pre>	<p>Note When such a template is attached to a target, adaptive shaping is enabled for that instance. Shaping rate adapts to a new rate, that is a function of parameters, including peer's received rate.</p>
Step 6	<p>end</p> <p>Example:</p> <pre>Router(config-pmap-c)# end</pre>	Returns to privileged EXEC mode.
Step 7	<p>configure terminal</p> <p>Example:</p> <pre>Router# configure terminal</pre>	Enters global configuration mode.
Step 8	<p>interface tunnel <i>tunnel-id</i></p> <p>Example:</p> <pre>Router(config)# interface tunnel 0</pre>	<p>Configures an interface type and enters interface configuration mode.</p> <ul style="list-style-type: none"> • Enter the interface type and interface number.
Step 9	<p>nhrp map group <i>group-name</i> service-policy output <i>parent-policy-name</i></p> <p>Example:</p> <pre>Router(config-if)# nhrp map group 1 service-policy output example</pre>	Adds the NHRP group to the QoS policy map on the hub.
Step 10	<p>end</p> <p>Example:</p> <pre>Router(config-if)# end</pre>	Returns to privileged EXEC mode.

Verifying the Adaptive QoS over DMVPN

SUMMARY STEPS

1. **enable**
2. **show dmvpn**
3. **show policy-map** [*policy-map-name*]
4. **show policy-map multipoint**
5. **exit**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables higher privilege levels, such as privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	show dmvpn Example: Router# show dmvpn	Displays detailed DMVPN information for each session, including the Next Hop Server (NHS) and NHS status, crypto session information, and socket details. Also displays the NHRP group received from the spoke and the QoS policy applied to the spoke tunnel.
Step 3	show policy-map [<i>policy-map-name</i>] Example: Router# show policy-map example	Displays the configuration of all classes for a specified policy map or of all classes for all existing policy maps.
Step 4	show policy-map multipoint Example: Router# show policy-map tunnel 0	(Optional) Displays the statistics and the configurations of the input and output policies that are attached to an interface.
Step 5	exit Example: Router(config-if)# exit	(Optional) Returns to user EXEC mode.

Troubleshooting the Adaptive QoS over DMVPN

SUMMARY STEPS

1. enable
2. debug qos peer mon detail
3. debug qos peer rate detail

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables higher privilege levels, such as privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	debug qos peer mon detail Example: Router# debug qos peer mon detail	Displays debug messages for Adaptive QoS over DMVPN.
Step 3	debug qos peer rate detail Example: Router# debug qos peer rate detail	Displays debug messages for Adaptive QoS over DMVPN.

Configuration Examples for Configuring Adaptive QoS over DMVPN

Example Configuring Adaptive QoS over DMVPN

The following example shows how to configure Adaptive QoS over DMVPN:

```
Router(config)# policy-map example
Router(config-pmap)# class class-default
Router(config-pmap-c)# shape adaptive upper-bound 20000
Router(config-pmap-c)# end
Router# configure terminal
Router(config)# interface tunnel 0
Router(config-if)# nhrp map group 1 service-policy output example
Router(config-if)# end
```

Example Verifying Adaptive QoS over DMVPN

The **show policy-map** and **show policy-map interface** commands can be used to confirm that the Adaptive QoS over DMVPN feature is enabled at an interface.

The following is a sample output of the **show dmvpn** command:

```
Router# show dmvpn
```

```
Interface: Tunnel1, IPv4 NHRP Details
Type: Hub, NHRP Peers:1,
```

#	Ent	Peer NBMA Addr	Peer Tunnel Add	State	UpDn Tm	Attrb
1		10.1.1.1	10.10.1.2	UP	00:18:37	D

```
Interface: Tunnel2, IPv4 NHRP Details
Type: Hub, NHRP Peers:1,
```

#	Ent	Peer NBMA Addr	Peer Tunnel Add	State	UpDn Tm	Attrb
1		10.2.1.1	10.10.2.2	UP	00:22:09	D

```
Interface: Tunnel3, IPv4 NHRP Details
Type: Hub, NHRP Peers:1,
```

#	Ent	Peer NBMA Addr	Peer Tunnel Add	State	UpDn Tm	Attrb
1		10.3.1.1	10.10.3.2	UP	00:22:04	D

```
Interface: Tunnel4, IPv4 NHRP Details
Type: Hub, NHRP Peers:1,
```

#	Ent	Peer NBMA Addr	Peer Tunnel Add	State	UpDn Tm	Attrb
1		10.3.1.1	10.10.3.2	UP	00:22:01	D

The following is a sample output of the **show policy-map** command:

```
Router# show policy-map
```

```
Policy Map test
  Class class-default
    Adaptive Rate Traffic Shaping
    cir upper-bound 2120000 (bps) cir lower-bound 1120000 (bps)
```

The following is a sample output of the **show policy-map multipoint** command:

```
Router# show policy-map multipoint
```

```
Service-policy output: test

Class-map: class-default (match-any)
```

```

0 packets, 0 bytes
5 minute offered rate 0000 bps, drop rate 0000 bps
Match: any
Queueing
queue limit 64 packets
(queue depth/total drops/no-buffer drops)0/0/0
(pkts output/bytes output) 0/0
shape (adaptive) cir 2120000,bc 8480, be 8480
lower bound cir 2120000
target shape rate 2120000

```

Note One of the important parameters displayed as an output of the **show policy-map multipoint** command is **target shape rate**. The Adaptive QoS over DMVPN feature dynamically changes the value of the **target shape rate** to adapt to the available bandwidth.

Example for Troubleshooting Adaptive QoS over DMVPN

The **debug qos peer mon detail** and **debug qos peer rate detail** commands can be used to display any errors for the Adaptive QoS over DMVPN feature.

The following is a sample output of the **debug qos peer mon detail** command:

```
Router# debug qos peer mon detail
```

```
QoS peer remote monitoring debugging is on
```

```
Router#
```

```

*May 22 21:25:28.006 UTC: [SEND]Processing entry with address :
50.1.1.2,vrfid : 0 sending rate(delta bytes) : 1514
*May 22 21:25:28.006 UTC: [SEND]Processing entry with address :
50.1.1.3,vrfid : 0 sending rate(delta bytes) : 1598
*May 22 21:25:28.201 UTC: [RCV]Received message for interface Tunnell
address 50.1.1.2 vrf 0

Feature Information for Adaptive QoS over DMVPN

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [http://www.cisco.com/efn](#). An account on Cisco.com is not required.

Table 1: Feature Information for Adaptive QoS over DMVPN

Feature Name	Releases	Feature Information
Adaptive QoS over DMVPN	Cisco IOS 15.5(1)T	Adaptive QoS over Dynamic Multipoint VPN (DMVPN) ensures effective bandwidth management using dynamic shapers based on available bandwidth. This feature enables various QoS features to adapt to non service-level agreement (SLA) based environments where bandwidth is variable and fluctuate with time. The following commands were introduced or modified: shape adaptive , show policy-map , and show policy-map interface .
