## Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

## Information About T.38 Fax Support on Cisco UBE for IPv6

- [Cisco Unified Border Element in VoIPv6, page 1](#)

## Cisco Unified Border Element in VoIPv6

The Cisco Unified Border Element (UBE) feature adds IPv6 capability to existing VoIP features. This feature adds dual-stack support on voice gateways and MTP, IPv6 support for SIP trunks, and support for SCCP-controlled analog voice gateways. Real-time control protocol (RTCP) pass-through and T.38 fax over IPv6 have also been added to Cisco UBE.

# How to Configure T.38 Fax Support on Cisco UBE for IPv6

- [Configuring IPv6 Support for Cisco UBE, page 2](#)
- [Configuring T.38 Fax Globally, page 3](#)

## Configuring IPv6 Support for Cisco UBE

Perform this task to configure IPv6 support for Cisco UBE.

**Note**

In Cisco UBE, IPv4-only and IPv6-only modes are not supported when endpoints are dual-stack. In this case, Cisco UBE must also be configured in dual-stack mode.

>

### SUMMARY STEPS

1. enable
2. configure terminal
3. sip-ua
4. protocol mode {ipv4 | ipv6 | dual-stack preference {ipv4 | ipv6}}
5. end

### DETAILED STEPS

Command or Action	Purpose
<b>Step 1</b> enable  <b>Example:</b> <pre>Router&gt; enable</pre>	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b> configure terminal  <b>Example:</b> <pre>Router# configure terminal</pre>	Enters global configuration mode.
<b>Step 3</b> sip-ua  <b>Example:</b> <pre>Router(config)# sip-ua</pre>	Enters SIP user-agent configuration mode.

Command or Action	Purpose
<b>Step 4</b> <code>protocol mode {ipv4   ipv6   dual-stack}</code> <code>preference {ipv4   ipv6}</code> <p><b>Example:</b></p> <pre>Router(config-sip-ua)# protocol mode ipv6</pre>	Configures the Cisco IOS SIP stack. <ul style="list-style-type: none"> <li>• <code>protocol mode dual-stack preference {ipv4   ipv6}</code>--Sets the IP preference when the <code>anat</code> command is configured.</li> <li>• <code>protocol mode {ipv4   ipv6}</code>--Passes the IPv4 or IPv6 address in the SIP invite.</li> <li>• <code>protocol mode dual-stack</code>--Passes both the IPv4 addresses and the IPv6 addresses in the SIP invite and sets priority based on the far-end IP address.</li> </ul>
<b>Step 5</b> <code>end</code> <p><b>Example:</b></p> <pre>Router(config-sip-ua)# end</pre>	Exits SIP user-agent configuration mode.

## Configuring T.38 Fax Globally

### SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `voice service voip`
4. `no ip address trusted authenticate`
5. `allow-connections {h323 | sip} to {h323 | sip}`
6. `fax protocol t38 [nse [force]] [version {0 | 3}] [ls-redundancy value [hs-redundancy value]] [fallback {cisco | none | pass-through {g711ulaw | g711alaw}}]`
7. `sip`
8. `bind control source-interface type number`
9. `bind media source-interface type number`
10. `no anat`
11. `end`

### DETAILED STEPS

Command or Action	Purpose
<b>Step 1</b> <code>enable</code> <p><b>Example:</b></p> <pre>Router&gt; enable</pre>	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>

Command or Action	Purpose
<b>Step 2</b> <code>configure terminal</code>	Enters global configuration mode.
<b>Example:</b> <pre>Router# configure terminal</pre>	
<b>Step 3</b> <code>voice service voip</code>	Enters voice service configuration mode.
<b>Example:</b> <pre>Router(config)# voice service voip</pre>	
<b>Step 4</b> <code>no ip address trusted authenticate</code>	Disables the IP address trusted authentication feature for incoming H.323 or SIP trunk calls for toll-fraud prevention.
<b>Example:</b> <pre>Router(conf-voi-serv)# no ip address trusted authenticate</pre>	
<b>Step 5</b> <code>allow-connections {h323   sip} to {h323   sip}</code>	Allows connections between specific types of endpoints in a VoIP network.
<b>Example:</b> <pre>Router(conf-voi-serv)# allow-connections sip to sip</pre>	
<b>Step 6</b> <code>fax protocol t38 [nse [force]] [version {0   3}] [ls-redundancy value [hs-redundancy value]] [fallback {cisco   none   pass-through {g711ulaw   g711alaw}}]</code>	Specifies the global default ITU-T T.38 standard fax protocol to be used for all VoIP dial peers.
<b>Example:</b> <pre>Router(conf-voi-serv)# fax protocol t38 version 0 ls- redundancy 0 hs-redundancy 0 fallback cisco</pre>	
<b>Step 7</b> <code>sip</code>	Enters SIP configuration mode.
<b>Example:</b> <pre>Router(conf-voi-serv)# sip</pre>	
<b>Step 8</b> <code>bind control source-interface type number</code>	Binds Session Initiation Protocol (SIP) signaling packets and specifies an interface as the source address of SIP packets.
<b>Example:</b> <pre>Router(conf-serv-sip)# bind control source-interface GigabitEthernet 0/0</pre>	

Command or Action	Purpose
<b>Step 9</b> <b>bind media source-interface type number</b>  <b>Example:</b> <pre>Router(conf-serv-sip)# bind media source-interface GigabitEthernet 0/0</pre>	Binds only media packets to the IPv4 or IPv6 address of a specific interface and specifies an interface as the source address of SIP packets.
<b>Step 10</b> <b>no anat</b>  <b>Example:</b> <pre>Router(conf-serv-sip)# no anat</pre>	Enables Alternative Network Address Types (ANAT) on a SIP trunk.
<b>Step 11</b> <b>end</b>  <b>Example:</b> <pre>Router(conf-serv-sip)# end</pre>	Exits SIP configuration mode and returns to the privileged EXEC mode.

## Configuration Examples for T.38 Fax Support on Cisco UBE for IPv6

# Feature Information for T.38 Fax Support on Cisco UBE for IPv6

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

**Table 1** Feature Information for T.38 Fax Support on Cisco UBE for IPv6

Feature Name	Releases	Feature Information
T.38 Fax Support on Cisco UBE for IPv6	15.2(1)T	IPv6 supports this feature.
