Preface

The XML application programming interface (API) is available for use on any Cisco platform running Cisco IOS XR software. This document describes the XML API provided to developers of external management applications. The XML interface provides a mechanism for router configuration and monitoring using XML formatted request and response streams.

The XML schemas referenced in this guide are used by the management application developer to integrate client applications with the router programmable interface.

The preface contains these sections:

- Changes to This Document, page ix
- Obtaining Documentation and Submitting a Service Request, page ix

Changes to This Document

Table 1 lists the technical changes made to this document since it was first published.

Table 1   Changes to This Document

Revision	Date	Change Summary
OL-24657-01	April 2011	Initial release of this document.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html

Subscribe to the *What's New in Cisco Product Documentation* as an RSS feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service. Cisco currently supports RSS Version 2.0.
