

Bidirectional Forwarding Detection over Logical Bundle

The Bidirectional Forwarding Detection (BFD) over Logical Bundle feature implements and deploys BFD over bundle interfaces based on RFC 5880. The BFD over Logical Bundle (BLB) feature replaces the BVLAN feature and resolves certain interoperability issues with other platforms that run BFD over bundle interface in pure RFC5880 fashion. These platforms include products of other vendors, as well as other Cisco products running Cisco IOS or Cisco Nexus OS software.

BLB is a multipath (MP) single-hop session. BLB requires limited knowledge of the bundle interfaces on which the sessions run; this is because BFD treats the bundle as one big pipe. To function, BLB requires only information about IP addresses, interface types, and caps on bundle interfaces. Information such as list of bundle members, member states, and configured minimum or maximum bundle links are not required.

BLB is supported on IPv4 address. The current version of the software supports a total of 500 mixed BFD sessions (which include multi-hop, single-hop on regular interface, BFD over Bundle (BoB) and BLB). The maximum processing capability of BFD control packets, per line card, has also increased to 7000 pps (packets per second).

Note

ISSU is not supported for BFD over Logical Bundle feature.

- [Configuration , page 1](#)

Configuration

Perform the following tasks to configure BFD over Logical Bundle feature.

- Create VLAN sub-interface under bundle interface
- Enable BFD on a static route
- Enable BFD on IS-IS
- Enable BFD for OSPF on an interface
- Enable BFD on a BGP neighbor

- Configure multipath capability under BFD

Create VLAN sub-interface under bundle interface

```
Router# configure
Router(config)# interface Bundle-Ether 2.1
Router(config-if)# ipv4 address 10.1.1.1 255.255.255.0
Router(config-if)# encapsulation dot1q 1
Router(config-if)# end
```

Enable BFD on a static route.

```
Router# configure
Router(config)# router static
Router(config-static)# address-family ipv4 unicast
Router(config-static)# 10.158.3.13/32 10.1.1.2 bfd fast-detect minimum-interval 300
multiplier 3
```

Enable BFD on IS-IS.

```
Router# configure
Router(config)# router isis cybi
Router(config-isis)# interface Bundle-Ether 2.1
Router(config-isis-if)# bfd minimum-interval 300
Router(config-isis-if)# bfd multiplier 3
Router(config-isis-if)# bfd fast-detect ipv4
Router(config-isis-if)# address-family ipv4 unicast
Router(config-isis-if-af)# end
```

Enable BFD for OSPF on an interface.

```
Router# configure
Router(config)# router ospf cybi
Router(config-ospf)# area 0
Router(config-ospf)# interface Bundle-Ether 2.1
Router(config-ospf-if)# bfd fast-detect
Router(config-ospf-if)# bfd minimum-interval 300
Router(config-ospf-if)# bfd multiplier 3
Router(config-ospf-if)# end
```

Enable BFD on a BGP neighbor

```
Router# configure
Router(config)# router bgp 4787
Router(config-bgp)# neighbor 10.158.1.1
Router(config-bgp-nbr)# remote-as 4787
Router(config-bgp-nbr)# update-source Bundle-Ether 2.1
Router(config-bgp-nbr)# bfd fast-detect
Router(config-bgp-nbr)# bfd minimum-interval 300
Router(config-bgp-nbr)# bfd multiplier 3
Router(config-bgp-nbr)# address-family ipv4 unicast
Router(config-bgp-nbr-af)# route-policy PASS-ALL in
Router(config-bgp-nbr-af)# route-policy PASS-ALL out
Router(config-bgp-nbr-af)# exit
Router(config-bgp-nbr)# commit
```

Configure a specific LC (or LCs) to host BFD sessions. The BFD sessions and bundle member links need not be configured on the same LC. For example, you can configure the bundle member links on LC slot 2 and slot 3, while you can configure BFD sessions on LC slot 5.

```
Router(config)# bfd
Router(config-bfd)# multipath include location 0/6/CPU0
Router(config-bfd)# multipath include location 0/2/CPU0
```

Running Configuration

This section shows the BFD over logical bundle configuration.

```

interface Bundle-Ether2.1
  ipv4 address 10.1.1.1 255.255.255.0
  encapsulation dot1q 1
!

router static
  address-family ipv4 unicast
    10.158.3.13/32 10.1.1.2 bfd fast-detect minimum-interval 300 multiplier 3
  !
!
router isis cybi
  interface Bundle-Ether2.1
    bfd minimum-interval 300
    bfd multiplier 3
    bfd fast-detect ipv4
    address-family ipv4 unicast
  !
!
router ospf cybi
