

## **Cisco ONS SONET TL1 Command Guide**

Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6  
Product and Documentation Release 9.8.x  
March 2014

**Cisco Systems, Inc.**  
[www.cisco.com](http://www.cisco.com)

Cisco has more than 200 offices worldwide.  
Addresses, phone numbers, and fax numbers  
are listed on the Cisco website at  
[www.cisco.com/go/offices](http://www.cisco.com/go/offices).

THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The following information is for FCC compliance of Class A devices: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to correct the interference at their own expense.

The following information is for FCC compliance of Class B devices: The equipment described in this manual generates and may radiate radio-frequency energy. If it is not installed in accordance with Cisco's installation instructions, it may cause interference with radio and television reception. This equipment has been tested and found to comply with the limits for a Class B digital device in accordance with the specifications in part 15 of the FCC rules. These specifications are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation.

Modifying the equipment without Cisco's written authorization may result in the equipment no longer complying with FCC requirements for Class A or Class B digital devices. In that event, your right to use the equipment may be limited by FCC regulations, and you may be required to correct any interference to radio or television communications at your own expense.

You can determine whether your equipment is causing interference by turning it off. If the interference stops, it was probably caused by the Cisco equipment or one of its peripheral devices. If the equipment causes interference to radio or television reception, try to correct the interference by using one or more of the following measures:

- Turn the television or radio antenna until the interference stops.
- Move the equipment to one side or the other of the television or radio.
- Move the equipment farther away from the television or radio.
- Plug the equipment into an outlet that is on a different circuit from the television or radio. (That is, make certain the equipment and the television or radio are on circuits controlled by different circuit breakers or fuses.)

Modifications to this product not authorized by Cisco Systems, Inc. could void the FCC approval and negate your authority to operate the product.

The Cisco implementation of TCP header compression is an adaptation of a program developed by the University of California, Berkeley (UCB) as part of UCB's public domain version of the UNIX operating system. All rights reserved. Copyright © 1981, Regents of the University of California.

NOTWITHSTANDING ANY OTHER WARRANTY HEREIN, ALL DOCUMENT FILES AND SOFTWARE OF THESE SUPPLIERS ARE PROVIDED "AS IS" WITH ALL FAULTS. CISCO AND THE ABOVE-NAMED SUPPLIERS DISCLAIM ALL WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THOSE OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OR ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

**CHAPTER 1****ACT Commands** 1-1

|              |     |
|--------------|-----|
| 1.1 ACT-USER | 1-1 |
|--------------|-----|

---

**CHAPTER 2****ALW Commands** 2-1

|                        |     |
|------------------------|-----|
| 2.1 ALW-CONSOLE-PORT   | 2-1 |
| 2.2 ALW-MSG-ALL        | 2-2 |
| 2.3 ALW-MSG-DBCHG      | 2-2 |
| 2.4 ALW-MSG-SECU       | 2-3 |
| 2.5 ALW-PMREPT-ALL     | 2-3 |
| 2.6 ALW-SWDX-EQPT      | 2-4 |
| 2.7 ALW-SWTOPROTN-EQPT | 2-5 |
| 2.8 ALW-SWTOWKG-EQPT   | 2-6 |
| 2.9 ALW-USER-SECU      | 2-7 |

---

**CHAPTER 3****APPLY Commands** 3-1

|           |     |
|-----------|-----|
| 3.1 APPLY | 3-1 |
|-----------|-----|

**CHAPTER 4**

**CANC Commands and Messages 4-1**

- 4.1 CANC 4-1
- 4.2 CANC-USER 4-2
- 4.3 CANC-USER-SECU 4-3

**CHAPTER 5**

**CHG Commands 5-1**

- 5.1 CHG-ACCMD-<MOD\_TACC> 5-1
- 5.2 CHG-EQPT 5-3

**CHAPTER 6**

**CLR Commands 6-1**

- 6.1 CLR-CCDB-CFM 6-1
- 6.2 CLR-COND-SECU 6-1
- 6.3 CLR-MACTABLE 6-2
- 6.4 CLR-MEPSTATS-CFM 6-3

**CHAPTER 7**

**CONN Commands 7-1**

- 7.1 CONN-TACC-<MOD\_TACC> 7-1

**CHAPTER 8**

**COPY Commands 8-1**

- 8.1 COPY-IOSCFG 8-1
- 8.2 COPY-RFILE 8-2
  - Prerequisite 8-3

**CHAPTER 9**

**DISC Commands 9-1**

- 9.1 DISC-TACC 9-1

**CHAPTER 10**

**DLT Commands 10-1**

- 10.1 DLT-<MOD1PAYLOAD> 10-1
- 10.2 DLT-<MOD\_RING> 10-2
- 10.3 DLT-ALMTYPE 10-3
- 10.4 DLT-ALM-CPS 10-3
- 10.5 DLT-AUTO 10-4
- 10.6 DLT-AWCFG 10-4
- 10.7 DLT-BULKROLL-<OCN\_TYPE> 10-5
- 10.8 DLT-BWP-ETH 10-6
- 10.9 DLT-CPS 10-7

|                                 |       |
|---------------------------------|-------|
| 10.10 DLT-CRS-<PATH>            | 10-7  |
| 10.11 DLT-CRS-ETH               | 10-9  |
| 10.12 DLT-EQPT                  | 10-11 |
| 10.13 DLT-FFP-<MOD2DWDMPAYLOAD> | 10-12 |
| 10.14 DLT-FFP-<OCN_TYPE>        | 10-12 |
| 10.15 DLT-FOG                   | 10-13 |
| 10.16 DLT-FTPSERVER             | 10-13 |
| 10.17 DLT-LMP-CTRL              | 10-14 |

## Preface

---

This section explains the objectives, intended audience, and organization of this publication and describes the conventions that convey instructions and other information.

This section provides the following information:

- [Revision History](#)
- [Document Objectives](#)
- [Audience](#)
- [Important Notes about TL1 Commands](#)
- [Related Documentation](#)
- [Document Conventions](#)
- [Obtaining Optical Networking Information](#)
- [Obtaining Documentation, Obtaining Support, and Security Guidelines](#)

## Revision History

| Date          | Notes  |
|---------------|--|
| November 2013 | <ul style="list-style-type: none"><li>• Updated the “Important Notes about TL1 Commands” section in the “Preface” chapter.</li><li>• Updated the “Usage Guidelines” section for “ED-PROTOCOL” command in the chapter, ED Commands.</li><li>• Updated the input parameter description for the ENT-EQPT command in the chapter, ENT Commands.</li><li>• Updated the “PRS” parameter description in the chapters, “ED Commands” and “RTRV Commands”.</li><li>• Updated the “SYNCMSG” and “SENDDUS” parameter descriptions in the chapters, “ED Commands” and “RTRV Commands”.</li></ul> |
| January 2014  | Updated the “PST” and “SST” parameter descriptions for the “ED-<GIGE_TYPE>” command in the chapter, “ED Commands”.   |
| March 2014    | Revised the part number and included Release 9.8.1 changes.  |

# Document Objectives

This guide explains the use of Transaction Language 1 (TL1) for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6 systems. Use this guide in conjunction with the appropriate publications listed in the [Related Documentation](#) section.

## Audience

To use this publication, you should be familiar with Cisco or equivalent optical transmission hardware and cabling, telecommunications hardware and cabling, electronic circuitry and wiring practices, and preferably have experience as a telecommunications technician.

## Important Notes about TL1 Commands

TL1 commands can be executed manually or through the use of scripts.

When commands are executed manually, there is a delay of few seconds before the next command can be executed. This gives the Network Elements (NE) sufficient time to perform most of the database (DB) operations.

However, when commands are executed using scripts, the functioning of the NE differs. The NE has insufficient time to perform all the database operations and may cause the NE to malfunction. This in turn causes the controller card to reboot. To prevent this, it is recommended that a delay of 3 to 5 seconds be added between the commands that require DB updates in the script.

User cannot enter question mark (?) as part of input for any parameter. The special character “?” is used in TL1 commands to display help.

## Cisco ONS Documentation Roadmap for Release 9.8

Provides a link to quickly access publications of Cisco ONS Release 9.8.

## Related Documentation

Use this *Cisco ONS SONET TL1 Command Guide, R9.8.x* in conjunction with the following referenced Release 9.8 publications:

- *Cisco ONS SONET TL1 Reference Guide*  
Provides general information, procedures, and errors related to using TL1 in the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.
- *Cisco ONS SONET TL1 Command Quick Reference Guide*  
Provides input formats and output formats (where applicable) for all R9.8 TL1 commands and autonomous messages.
- *Cisco ONS SONET TL1 for Beginners*  
Provides basic beginning instruction for using TL1.

- *Cisco ONS 15454 DWDM Configuration Guide*  
Provides card, node, and network reference information, including performance monitoring parameters and network element defaults, procedures to install, turn up, test, and maintain an ONS 15454 DWDM node and network.
- *Cisco ONS 15454 DWDM Troubleshooting Guide*  
Provides troubleshooting information and troubleshooting-related parameters for the Cisco ONS 15454 (ANSI) and Cisco ONS 15454 SDH (ETSI) platforms, specifically the dense wavelength division multiplexing (DWDM) application that can operate on either platform.
- *Cisco ONS 15454 and Cisco ONS 15454 SDH Ethernet Card Software Feature and Configuration Guide*  
Provides software features for all Ethernet cards and configuration information for Cisco IOS on ML-Series cards.
- *Release Notes for Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6 DWDM, Release 9.8x*  
Provides caveats, closed issues, and new feature and functionality information.

For an update on End-of-Life and End-of-Sale notices, refer to

[http://www.cisco.com/en/US/products/hw/optical/ps4533/prod\\_eol\\_notices\\_list.html](http://www.cisco.com/en/US/products/hw/optical/ps4533/prod_eol_notices_list.html).

## Document Conventions

This publication uses the following conventions:

| Convention    | Application   |
|---------------|---|
| [ ]           | Keywords or arguments that appear within square brackets are optional.  |
| { x   x   x } | A choice of keywords (represented by x) appears in braces separated by vertical bars. The user must select one. |
| Ctrl          | The control key. For example, where Ctrl + D is written, hold down the Control key while pressing the D key.    |
| screen font   | Examples of information displayed on the screen.  |
| < >           | Command parameters that must be replaced by module-specific codes.  |

### Note

Means *reader take note*. Notes contain helpful suggestions or references to material not covered in the document.

### Caution

Means *reader be careful*. In this situation, the user might do something that could result in equipment damage or loss of data.

Warning

**IMPORTANT SAFETY INSTRUCTIONS**

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Use the statement number provided at the end of each warning to locate its translation in the translated safety warnings that accompanied this device. Statement 1071

**SAVE THESE INSTRUCTIONS**

Waarschuwing

**BELANGRIJKE VEILIGHEIDSINSTRUCTIES**

Dit waarschuwingssymbool betekent gevaar. U verkeert in een situatie die lichamelijk letsel kan veroorzaken. Voordat u aan enige apparatuur gaat werken, dient u zich bewust te zijn van de bij elektrische schakelingen betrokken risico's en dient u op de hoogte te zijn van de standaard praktijken om ongelukken te voorkomen. Gebruik het nummer van de verklaring onderaan de waarschuwing als u een vertaling van de waarschuwing die bij het apparaat wordt geleverd, wilt raadplegen.

**BEWAAR DEZE INSTRUCTIES**

Varoitus

**TÄRKEITÄ TURVALLISUUSOHJEITA**

Tämä varoitusmerkki merkitsee vaaraa. Tilanne voi aiheuttaa ruumiillisia vammoja. Ennen kuin käsittelet laitteistoa, huomioi sähköpiirien käsittelemiseen liittyvät riskit ja tutustu onnettomuuksien yleisiin ehkäisytapoihin. Turvallisuusvaroitusten käännökset löytyvät laitteen mukana toimitettujen käännettyjen turvallisuusvaroitusten joukosta varoitusten lopussa näkyvien lausuntonumeroiden avulla.

**SÄILYTÄ NÄMÄ OHJEET**

Attention

**IMPORTANTES INFORMATIONS DE SÉCURITÉ**

Ce symbole d'avertissement indique un danger. Vous vous trouvez dans une situation pouvant entraîner des blessures ou des dommages corporels. Avant de travailler sur un équipement, soyez conscient des dangers liés aux circuits électriques et familiarisez-vous avec les procédures couramment utilisées pour éviter les accidents. Pour prendre connaissance des traductions des avertissements figurant dans les consignes de sécurité traduites qui accompagnent cet appareil, référez-vous au numéro de l'instruction situé à la fin de chaque avertissement.

**CONSERVEZ CES INFORMATIONS**

Warnung

**WICHTIGE SICHERHEITSHINWEISE**

Dieses Warnsymbol bedeutet Gefahr. Sie befinden sich in einer Situation, die zu Verletzungen führen kann. Machen Sie sich vor der Arbeit mit Geräten mit den Gefahren elektrischer Schaltungen und den üblichen Verfahren zur Vorbeugung vor Unfällen vertraut. Suchen Sie mit der am Ende jeder Warnung angegebenen Anweisungsnummer nach der jeweiligen Übersetzung in den übersetzten Sicherheitshinweisen, die zusammen mit diesem Gerät ausgeliefert wurden.

**BEWAHREN SIE DIESE HINWEISE GUT AUF.**

**Avvertenza      IMPORTANTI ISTRUZIONI SULLA SICUREZZA**

Questo simbolo di avvertenza indica un pericolo. La situazione potrebbe causare infortuni alle persone. Prima di intervenire su qualsiasi apparecchiatura, occorre essere al corrente dei pericoli relativi ai circuiti elettrici e conoscere le procedure standard per la prevenzione di incidenti. Utilizzare il numero di istruzione presente alla fine di ciascuna avvertenza per individuare le traduzioni delle avvertenze riportate in questo documento.

**CONSERVARE QUESTE ISTRUZIONI****Advarsel      VIKTIGE SIKKERHETSINSTRUKSJONER**

Dette advarselssymbolet betyr fare. Du er i en situasjon som kan føre til skade på person. Før du begynner å arbeide med noe av utstyret, må du være oppmerksom på farene forbundet med elektriske kretser, og kjenne til standardprosedyrer for å forhindre ulykker. Bruk nummeret i slutten av hver advarsel for å finne oversettelsen i de oversatte sikkerhetsadvarslene som fulgte med denne enheten.

**TA VARE PÅ DISSE INSTRUKSJONENE****Aviso      INSTRUÇÕES IMPORTANTES DE SEGURANÇA**

Este símbolo de aviso significa perigo. Você está em uma situação que poderá ser causadora de lesões corporais. Antes de iniciar a utilização de qualquer equipamento, tenha conhecimento dos perigos envolvidos no manuseio de circuitos elétricos e familiarize-se com as práticas habituais de prevenção de acidentes. Utilize o número da instrução fornecido ao final de cada aviso para localizar sua tradução nos avisos de segurança traduzidos que acompanham este dispositivo.

**GUARDE ESTAS INSTRUÇÕES****¡Advertencia!      INSTRUCCIONES IMPORTANTES DE SEGURIDAD**

Este símbolo de aviso indica peligro. Existe riesgo para su integridad física. Antes de manipular cualquier equipo, considere los riesgos de la corriente eléctrica y familiarícese con los procedimientos estándar de prevención de accidentes. Al final de cada advertencia encontrará el número que le ayudará a encontrar el texto traducido en el apartado de traducciones que acompaña a este dispositivo.

**GUARDE ESTAS INSTRUCCIONES****Varning!      VIKTIGA SÄKERHETSANVISNINGAR**

Denna varningssignal signalerar fara. Du befinner dig i en situation som kan leda till personskada. Innan du utför arbete på någon utrustning måste du vara medveten om farorna med elkretsar och känna till vanliga förfaranden för att förebygga olyckor. Använd det nummer som finns i slutet av varje varning för att hitta dess översättning i de översatta säkerhetsvarningar som medföljer denna anordning.

**SPARA DESSA ANVISNINGAR**

## FONTOS BIZTONSÁGI ELOÍRÁSOK

Ez a figyelmeztető jel veszélyre utal. Sérülésveszélyt rejtő helyzetben van. Mielott bármely berendezésen munkát végezte, legyen figyelemmel az elektromos áramkörök okozta kockázatokra, és ismerkedjen meg a szokásos balesetvédelmi eljárásokkal. A kiadványban szereplő figyelmeztetések fordítása a készülékhez mellékelte biztonsági figyelmeztetések között található; a fordítás az egyes figyelmeztetések végén látható szám alapján kereshető meg.

## ORIZZE MEG EZEKET AZ UTASÍTÁSOKAT!

Предупреждение

## ВАЖНЫЕ ИНСТРУКЦИИ ПО СОБЛЮДЕНИЮ ТЕХНИКИ БЕЗОПАСНОСТИ

Этот символ предупреждения обозначает опасность. То есть имеет место ситуация, в которой следует опасаться телесных повреждений. Перед эксплуатацией оборудования выясните, каким опасностям может подвергаться пользователь при использовании электрических цепей, и ознакомьтесь с правилами техники безопасности для предотвращения возможных несчастных случаев. Воспользуйтесь номером заявления, приведенным в конце каждого предупреждения, чтобы найти его переведенный вариант в переводе предупреждений по безопасности, прилагаемом к данному устройству.

## СОХРАНИТЕ ЭТИ ИНСТРУКЦИИ

警告

重要的安全性说明

此警告符号代表危险。您正处于可能受到严重伤害的工作环境中。在您使用设备开始工作之前，必须充分意识到触电的危险，并熟练掌握防止事故发生的标准工作程序。请根据每项警告结尾提供的声明号码来找到此设备的安全性警告说明的翻译文本。

请保存这些安全性说明

警告

安全上の重要な注意事項

「危険」の意味です。人身事故を予防するための注意事項が記述されています。装置の取り扱い作業を行うときは、電気回路の危険性に注意し、一般的な事故防止策に留意してください。警告の各国語版は、各注意事項の番号を基に、装置に付属の「Translated Safety Warnings」を参照してください。

これらの注意事項を保管しておいてください。

중요 안전 지침

이 경고 기호는 위험을 나타냅니다. 작업자가 신체 부상을 일으킬 수 있는 위험한 환경에 있습니다. 장비에 작업을 수행하기 전에 전기 회로와 관련된 위험을 숙지하고 표준 작업 관례를 숙지하여 사고를 방지하십시오. 각 경고의 마지막 부분에 있는 경고문 번호를 참조하여 이 장치와 함께 제공되는 번역된 안전 경고문에서 해당 번역문을 찾으십시오.

이 지시 사항을 보관하십시오.

**Aviso INSTRUÇÕES IMPORTANTES DE SEGURANÇA**

Este símbolo de aviso significa perigo. Você se encontra em uma situação em que há risco de lesões corporais. Antes de trabalhar com qualquer equipamento, esteja ciente dos riscos que envolvem os circuitos elétricos e familiarize-se com as práticas padrão de prevenção de acidentes. Use o número da declaração fornecido ao final de cada aviso para localizar sua tradução nos avisos de segurança traduzidos que acompanham o dispositivo.

**GUARDE ESTAS INSTRUÇÕES****Advarsel VIGTIGE SIKKERHEDSANVISNINGER**

Dette advarselssymbol betyder fare. Du befinder dig i en situation med risiko for legemeskadedigelse. Før du begynder arbejde på udstyr, skal du være opmærksom på de involverede risici, der er ved elektriske kredsløb, og du skal sætte dig ind i standardprocedurer til undgåelse af ulykker. Brug erklæringsnummeret efter hver advarsel for at finde oversættelsen i de oversatte advarsler, der fulgte med denne enhed.

**GEM DISSE ANVISNINGER****تحذير****إرشادات الأمان الهامة**

يوضح رمز التحذير هذا وجود خطر. وهذا يعني أنك متواجد في مكان قد ينتج عنه التعرض للإصابات. قبل بدء العمل، احذر مخاطر التعرض للصدمات الكهربائية وكن على علم بالإجراءات القياسية للحيلولة دون وقوع أي حوادث. استخدم رقم البيان الموجود في آخر كل تحذير لتحديد مكان ترجمته داخل تحذيرات الأمان المترجمة التي تأتي مع الجهاز. قم بحفظ هذه الإرشادات

**Upozorenje VAŽNE SIGURNOSNE NAPOMENE**

Ovaj simbol upozorenja predstavlja opasnost. Nalazite se u situaciji koja može prouzročiti tjelesne ozljede. Prije rada s bilo kojim uređajem, morate razumjeti opasnosti vezane uz električne sklopove, te biti upoznati sa standardnim načinima izbjegavanja nesreća. U prevedenim sigurnosnim upozorenjima, priloženima uz uređaj, možete prema broju koji se nalazi uz pojedino upozorenje pronaći i njegov prijevod.

**SAČUVAJTE OVE UPUTE****Upozornění DŮLEŽITÉ BEZPEČNOSTNÍ POKYNY**

Tento upozorňující symbol označuje nebezpečí. Jste v situaci, která by mohla způsobit nebezpečí úrazu. Před prací na jakémkoliv vybavení si uvědomte nebezpečí související s elektrickými obvody a seznamte se se standardními opatřeními pro předcházení úrazům. Podle čísla na konci každého upozornění vyhledejte jeho překlad v přeložených bezpečnostních upozorněních, která jsou přiložena k zařízení.

**USCHOVEJTE TYTO POKYNY**

Προειδοποίηση ΣΗΜΑΝΤΙΚΕΣ ΟΔΗΓΙΕΣ ΑΣΦΑΛΕΙΑΣ

Αυτό το προειδοποιητικό σύμβολο σημαίνει κίνδυνο. Βρίσκεστε σε κατάσταση που μπορεί να προκαλέσει τραυματισμό. Πριν εργαστείτε σε οποιοδήποτε εξοπλισμό, να έχετε υπόψη σας τους κινδύνους που σχετίζονται με τα ηλεκτρικά κυκλώματα και να έχετε εξοικειωθεί με τις συνήθεις πρακτικές για την αποφυγή ατυχημάτων. Χρησιμοποιήστε τον αριθμό δήλωσης που παρέχεται στο τέλος κάθε προειδοποίησης, για να εντοπίσετε τη μετάφρασή της στις μεταφρασμένες προειδοποιήσεις ασφαλείας που συνοδεύουν τη συσκευή.

ΦΥΛΑΞΤΕ ΑΥΤΕΣ ΤΙΣ ΟΔΗΓΙΕΣ

הרהר

**הוראות בטיחות חשובות**

סימן אזהרה זה מסמל סכנה. אתה נמצא במצב העלול לגרום לפציעה. לפני שתעבוד עם ציוד כלשהו, עליך להיות מודע לסכנות הכרוכות במעגלים חשמליים ולהכיר את הנהלים המקובלים למניעת תאונות. השתמש במספר ההוראה המסופק בסופה של כל אזהרה כדי לאתר את התרגום באזהרות הבטיחות המתורגמות שמצורפות להתקן.

**שמור הוראות אלה**

Opomena

**ВАЖНИ БЕЗБЕДНОСНИ НАПАТСТВИЈА**

Симболот за предупредување значи опасност. Се наоѓате во ситуација што може да предизвика телесни повреди. Пред да работите со опремата, бидете свесни за ризикот што постои кај електричните кола и треба да ги познавате стандардните постапки за спречување на несреќни случаи. Искористете го бројот на изјавата што се наоѓа на крајот на секое предупредување за да го најдете неговиот период во преведените безбедносни предупредувања што се испорачани со уредот.

ЧУВАЈТЕ ГИ ОБИЕ НАПАТСТВИЈА

Ostrzeżenie

**WAŻNE INSTRUKCJE DOTYCZĄCE BEZPIECZEŃSTWA**

Ten symbol ostrzeżenia oznacza niebezpieczeństwo. Zachodzi sytuacja, która może powodować obrażenia ciała. Przed przystąpieniem do prac przy urządzeniach należy zapoznać się z zagrożeniami związanymi z układami elektrycznymi oraz ze standardowymi środkami zapobiegania wypadkom. Na końcu każdego ostrzeżenia podano numer, na podstawie którego można odszukać tłumaczenie tego ostrzeżenia w dołączonym do urządzenia dokumencie z tłumaczeniami ostrzeżeń.

**NINIEJSZE INSTRUKCJE NALEŻY ZACHOWAĆ**

Upozornenie

**DÔLEŽITÉ BEZPEČNOSTNÉ POKYNY**

Tento varovný symbol označuje nebezpečenstvo. Nachádzate sa v situácii s nebezpečenstvom úrazu. Pred prácou na akomkoľvek vybavení si uvedomte nebezpečenstvo súvisiace s elektrickými obvodmi a oboznámte sa so štandardnými opatreniami na predchádzanie úrazom. Podľa čísla na konci každého upozornenia vyhľadajte jeho preklad v preložených bezpečnostných upozorneniach, ktoré sú priložené k zariadeniu.

**USCHOVAJTE SI TENTO NÁVOD**

# Obtaining Optical Networking Information

This section contains information that is specific to optical networking products. For information that pertains to all of Cisco, refer to the [Obtaining Documentation, Obtaining Support, and Security Guidelines](#) section.

## Where to Find Safety and Warning Information

For safety and warning information, refer to the *Cisco Optical Transport Products Safety and Compliance Information* document that accompanied the product. This publication describes the international agency compliance and safety information for the Cisco ONS 15454 system. It also includes translations of the safety warnings that appear in the ONS 15454 system documentation.

## Cisco Optical Networking Product Documentation CD-ROM

Optical networking-related documentation, including Cisco ONS 15xxx product documentation, is available in a CD-ROM package that ships with your product. The Optical Networking Product Documentation CD-ROM is updated periodically and may be more current than printed documentation.

## Obtaining Documentation, Obtaining Support, and Security Guidelines

For information on obtaining documentation, obtaining support, providing documentation feedback, security guidelines, and also recommended aliases and general Cisco documents, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

<http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html>

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS version 2.0.

# Cisco ONS Documentation Roadmap for Release 9.8.x

---

To quickly access publications of Cisco ONS Release 9.8.x, see the [Cisco ONS Documentation Roadmap for Release 9.8.](#)

# ACT Commands

This chapter provides activate (ACT) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 1.1 ACT-USER

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Activate User (ACT-USER) command opens a session with the network element (NE).

### Usage Guidelines

- Passwords are masked for the following security commands: ACT-USER, COPY-RFILE, COPY-IOSCFG, ED-PID, ENT-USER-SECU, and ED-USER-SECU. The password will be masked when accessing a TL1 session through any means. The Cisco Transport Controller (CTC) Request History and Message Log also show the commands as masked. When a password-masked command is reissued by double-clicking the command from CTC Request History, the password is masked in the CTC Request History and Message Log. The actual password that was previously issued is sent to the NE. To use a former command as a template only, single-click the command in CTC Request History. The command is placed in the Command Request text box, where you can edit the appropriate fields prior to reissuing it.
- For the ACT-USER command:  
ACT-USER:[TID]:[STRING]:CTAG::[STRING]
  - The syntax of the user ID (first [STRING]) and the password (second [STRING]) are not checked.
  - Invalid syntax for both the user ID and password is permitted, but the user can only log in if the user ID/password match what is in the database.
  - The user ID and password cannot exceed 10 characters.
- For the ACT-USER command, no error code is transmitted except to convey that the login is granted or denied. According to Telcordia TR-835, Appendix A, Section A.2, "... the error codes corresponding to ACT ... do not apply to the ACT-USER command because this command requires

that no error code be provided to the session request except to indicate that it has been denied. Before a session is established, a specific error code might reveal clues to an intruder attempting unauthorized entry.”

- In some configurations, a new user must change his or her password after establishing a session for the first time before continuing. All TL1 commands except for ED-PID and CANC-USER are denied until the password is changed. When the password has been changed, a user can execute any command that his security level allows. If the user logs out without changing his password, each following session will DENY all commands, except ED-PID and CANC-USER, until the password is changed. Starting with Release 4.6, this feature can be turned on or off. The default is off.

| <b>Input Example</b> | ACT-USER:PETALUMA:TERRI:100::MYPASSWD; |

**Table 1-1** Input Parameter Support

| Parameter | Description   | Cisco ONS 15454 |
|-----------|---|-----------------|
| <UID>     | The user identifier (user ID) of the person logged in. UID can be any combination of up to 10 alphanumeric characters. UID is a string. It must not be null.  | Y               |
| <PID>     | The user password. PID is any combination of up to 10 alphanumeric characters. Passwords are encrypted for security reasons and will appear as asterisks (*). PID is a string. It must not be null. | Y               |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<UID>:<LASTLOGINTIME>,<LAST2LASTLOGINTIME>,<UNSUCCESSFULLOGINS>”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“CISCO15:2012-12-21 11-44-51,2012-12-21 11-43-45,0”
;
```

**Output Parameters**

|                       |  |
|-----------------------|--|
| <UID>                 | The user ID of the person logged in. The UID can be any combination of up to 10 alphanumeric characters. UID is a string. It must not be null. |
| <LASTLOGINTIME>       | The date and time of the last successful connection to the NE (not including current login). LASTLOGINTIME is a string.                        |
| <<LAST2LASTLOGINTIME> | The date and time of the previous to last successful connection to the NE (not including current login). LASTLOGINTIME is a string.            |
| <UNSUCCESSFULLOGINS>  | The number of unsuccessful login attempts since the last successful login. UNSUCCESSFULLOGINS is an integer.                                   |

# ALW Commands

---

This chapter provides allow (ALW) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

---

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

---

## 2.1 ALW-CONSOLE-PORT

(Cisco ONS 15454) The Allow Console Port (ALW-CONSOLE-PORT) command is used to turn on the console port for the ML1000-2, ML100T-12 and ML-100T-8 cards.

---

**Usage Guidelines**

None.

---

**Category**

Security

---

**Security**

Superuser

---

**Input Format**

ALW-CONSOLE-PORT:[<TID>]:<AID>:<CTAG>;

---

**Input Example**

ALW-CONSOLE-PORT:CISCONODE:SLOT-2:123;

---

**Input Parameters**

---

|       |   |
|-------|---|
| <AID> | Access identifier. Values are in the <a href="#">“26.15 EQPT”</a> section on <a href="#">page 26-39</a> . |
|-------|---|

---

## 2.2 ALW-MSG-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Allow Message All (ALW-MSG-ALL) command instructs the NE to enter a mode where all the REPT ALM and REPT EVT autonomous messages are transmitted. Use the INH-MSG-ALL command to inhibit these autonomous messages. When a TL1 session starts, the REPT ALM and REPT EVT messages are allowed by default.

### Usage Guidelines

If this command is issued twice in the same session, the SAAL (Status, Already Allowed) error message will be returned. The optional fields in the block are not supported.

### Category

System

### Security

Retrieve

### Input Format

ALW-MSG-ALL:[<TID>]:[<AID>]:<CTAG>[:,,:];

### Input Example

ALW-MSG-ALL:PETALUMA:ALL:549;

### Input Parameters

|       |  |
|-------|--|
| <AID> | Access identifier. Support is limited to the AID ALL. AID is a string. |
|-------|--|

## 2.3 ALW-MSG-DBCHG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Allow Database Change Message (ALW-MSG-DBCHG) command enables REPT DBCHG. When a TL1 session starts, the REPT DBCHG messages are not allowed by default.

### Note

This command is not defined in the GR.

### Usage Guidelines

None.

### Category

Log

### Security

Retrieve

---

**Input Format** ALW-MSG-DBCHG:[<TID>]::<CTAG>[:,,];

---

**Input Example** ALW-MSG-DBCHG:CISCO::123;

---

**Input Parameters** None.

## 2.4 ALW-MSG-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Allow Message Security (ALW-MSG-SECU) command enables the REPT EVT SECU and REPT ALM SECU autonomous messages.

---

**Usage Guidelines** None.

---

**Category** Security

---

**Security** Superuser

---

**Input Format** ALW-MSG-SECU:[<TID>]::<CTAG>[:,,];

---

**Input Example** ALW-MSG-SECU:PETALUMA::123;

---

**Input Parameters** None.

## 2.5 ALW-PMREPT-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Allow Performance Report All (ALW-PMREPT-ALL) command resumes the processing of all the PM reports that are inhibited. The allowance of the PM reporting is session-based, which means the command is only effective to the TL1 session that issues this command.

---

**Usage Guidelines** None.

---

**Category** Performance

---

**Security** Retrieve

---

**Input Format** ALW-PMREPT-ALL:[<TID>]::<CTAG>;

---

**Input Example** ALW-PMREPT-ALL:CISCONODE::123;

---

**Input Parameters** None

## 2.6 ALW-SWDX-EQPT

(Cisco ONS 15454) The Allow Switch Duplex Equipment (ALW-SWDX-EQPT) command allows automatic or manual switching on a duplex system containing duplexed or redundant equipment. To inhibit an NE from switching to duplex, use the INH-SWDX-EQPT command.

---

**Usage Guidelines** ALW-SWDX-EQPT is not used for SONET line or electrical card protection switching. For SONET line or path protection switching commands, see the OPR-PROTNSW and RLS-PROTNSW commands. For electrical card protection switching, see the SW-TOWKG-EQPT and SW-TOPROTN-EQPT commands.

**Note**

---

This command applies to the XCVT, XC10G, and XC-VXC-10G equipment units only in this release.

---

---

**Category** Equipment

---

**Security** Maintenance

---

**Input Format** ALW-SWDX-EQPT:[<TID>]:<AID>:<CTAG>[::];

---

**Input Example** ALW-SWDX-EQPT:CISCO:SLOT-8:1234;

---

**Input Parameters** AID Access identifier for the XCVT, XC10G, or XC-VXC-10G card from the “26.15 EQPT” section on page 26-39.

---

## 2.7 ALW-SWTOPROTN-EQPT

(Cisco ONS 15454) The Allow Switch to Protection Equipment (ALW-SWTOPROTN-EQPT) command allows automatic or manual switching of an equipment unit back to a protection status. Use the INH-SWTOPROTN-EQPT command to inhibit an NE from switching to protection.

### Usage Guidelines

ALW-SWTOPROTN-EQPT is used for electrical line cards, for example, DS-1, DS-3, DS3XM, and EC-1. DS-1, DS-3, and DS3XM cards have 1:1 and 1:N equipment protection. EC-1 cards have only 1:1 equipment protection. When this command is given to a working unit, the working unit will be allowed to switch to the protection unit. When this command is given to a protection unit, any working unit in the protection group is allowed to switch to the protection unit.

The standing condition of INHSWPR on the unit specified by the AID will be cleared.

### Note

- This command only supports only the BTH value of the <DIRN> parameter. A command with any other value is considered an incorrect use of the command. An IDNV (Input, Data Not Valid) error message is returned.
- This command is not used for the common control cards (TCC2/TCC2P/ TCC3, XCVT, XC10G, and XC-VXC-10G). A command on a common control card will receive an IIAC (Input, Invalid Access Identifier) error message. To use the common control card switching commands, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
- This command is not used for OC-N cards. A command on a SONET card will receive an IIAC (Input, Invalid Access identifier) error message. To use a SONET card switching command, use the OPR-PROTNSW and RLS-PROTNSW commands.
- If this command is used on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message is returned.
- If this command is used on a card that is not in the inhibit state, the SAAL (Status, Already Allowed) error message is returned.
- As long as none of the previous error conditions apply, you are allowed to send this command to cards that have been uninstalled. This will not generate any error response.

### Category

Equipment

### Security

Maintenance

### Input Format

ALW-SWTOPROTN-EQPT:[<TID>]:<AID>:<CTAG>[::<DIRN>];

### Input Example

ALW-SWTOPROTN-EQPT:CISCO:SLOT-2:123::BTH;

|                         |        |  |
|-------------------------|--------|--|
| <b>Input Parameters</b> | <AID>  | Access identifier. This parameter can either be the protection unit for which carrying traffic will be allowed (release of lockout) or the working unit for which switching to protect will be allowed (release of lock-on). Values are in the “26.15 EQPT” section on page 26-39. |
|                         | <DIRN> | Optional. The switching direction relative to the entity defined in the AID field. This command only supports the BTH value of the DIRN parameter. Defaults to BTH.<br><br>The parameter type is DIRECTION—transmit and receive directions.  |
|                         | • BTH  | Both transmit and receive directions.  |

## 2.8 ALW-SWTOWKG-EQPT

(Cisco ONS 15454) The Allow Switch to Working Equipment (ALW-SWTOWKG-EQPT) command allows automatic or manual switching of an equipment unit back to a working status. Use the INH-SWTOWKG-EQPT command to inhibit an NE from switching to working.

### Usage Guidelines

ALW-SWTOWKG-EQPT is used for electrical line cards, for example, DS-1, DS-3, DS3XM, and EC-1. DS-1, DS-3 and DS3XM cards have 1:1 and 1:N equipment protection. EC-1 cards have only 1:1 equipment protection.

When this command is given to a working unit, the working unit will be allowed to carry traffic. In the case of revertive protection, the traffic will switch immediately from the protection unit to the working unit regardless of the reversion time setting.

When this command is given to a protection unit, the protection unit will be allowed to switch back to the working unit currently protected as long as the working unit has not raised INHSWWKG. In the case of revertive protection, the traffic will switch immediately from the protection unit to the working unit regardless of the reversion time setting. In the case of nonrevertive protection, the protection unit will continue to carry the traffic.

The standing condition of INHSWWKG on the unit specified by the AID will be cleared.

### Note

- This command only supports the BTH value of the <DIRN> parameter. A command with any other value is an incorrect use of the command. An IDNV (Input, Data Not Valid) error message is returned.
- This command is not used for the common control cards (TCC2/TCC2P/TCC3, XCVT, XC10G, and XC-VXC-10G). A command on a common control card will receive an IIAC (Input, Invalid Access Identifier) error message. To use the common control card switching commands, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
- This command is not used for OC-N cards. A command on an optical card will receive an IIAC (Input, Invalid Access Identifier) error message. For OC-N cards, use the OPR-PROTNSW and RLS-PROTNSW commands.
- If this command is used on a card that is not in a protection group, the SNVS (Status, Not in Valid State) error message is returned.
- If this command is used on a card that is not in the inhibit state, the SAAL (Status, Already Allowed) error message is returned.

- As long as none of the previous error conditions apply, you are allowed to send this command to cards that have been uninstalled. This will not generate any error response.

---

|                         |        |   |
|-------------------------|--------|---|
| <b>Input Parameters</b> | <AID>  | Access identifier. This parameter can either be the protection unit for which carrying traffic will be allowed (release of lockout) or the working unit for which switching to protect will be allowed (release of lock-on). Values are in the <a href="#">“26.15 EQPT” section on page 26-39</a> . |
|                         | <DIRN> | Optional. The switching direction relative to the entity defined in the AID field. This command only supports the BTH value of the DIRN parameter. Defaults to BTH.<br><br>The parameter type is DIRECTION—transmit and receive directions.   |
|                         | • BTH  | Both transmit and receive directions.   |

---

## 2.9 ALW-USER-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Allow User Security (ALW-USER-SECU) command enables a user ID that has been disabled using the INH-USER-SECU command so the user can reestablish a session with the NE.

---

**Usage Guidelines** None.

---

**Category** Security

---

**Security** Superuser

---

**Input Format** ALW-USER-SECU:[<TID>]::<CTAG>::<UID>;

---

**Input Example** ALW-USER-SECU:PETALUMA::123::UID;

---

**Input Parameters** <UID> The user identifier (user ID) of the person logged in. UID can be a list of user IDs separated by “&”. The keyword ALL cannot be used to specify all users on an NE. UID is a string.

---

# APPLY Commands

This chapter provides apply (APPLY) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 3.1 APPLY

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Apply (APPLY) command activates or reverts a software load during a software upgrade or downgrade process.

### Usage Guidelines

An error will be generated if you attempt to activate an older software load or attempt to revert to a newer software load.

### Category

File Transfer

### Security

Superuser

### Input Format

APPLY:[<TID>]::<CTAG>[::<MEM\_SW\_TYPE>][:FORCEENABLE=<FORCEENABLE>];

### Input Example

APPLY:::4::DL\_TYPE=ACT:FORCEENABLE=YES;

### Input Parameters

|               |   |
|---------------|---|
| <MEM_SW_TYPE> | (Optional) Memory switch action during the software upgrade. The parameter type is DL_TYPE, which indicates the software download type. The default value is ACT. |
| • RVRT        | Reverts to an older software load during software download.   |
| • ACT         | Activates to a new software load.   |

|               |  |
|---------------|--|
| <FORCEENABLE> | (Optional) Indicates whether the command should proceed even if there are Database Out of Sync alarms. |
| • YES         | Yes  |
| • NO          | No   |

# CANC Commands and Messages

This chapter provides cancel (CANC) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 4.1 CANC

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Cancel (CANC) message reports the occurrence of a session timeout event.

### Usage Guidelines

CANC is an autonomous message transmitted by the NE to a user when a session established by that user is terminated because no messages were exchanged for a long period of time (a timeout). There is a default timeout period based on the user's privilege/security level. Starting with Release 4.0, timeouts can be provisioned through CTC. Starting with Software Release 4.6, timeouts can be provisioned through TL1 with the SET-ATTR-SECUDFLT command. The default timeouts based on privilege/security level are:

- A Superuser [SUPER] has a timeout period of 15 minutes.
- A Provisioning [PROV] user has a timeout period of 30 minutes.
- A Maintenance [MAINT] user has a timeout period of 60 minutes.
- A Retrieve [RTRV] user has no timeout period.

When a timeout occurs, the corresponding port drops the session and the next session initiation at that port requires the regular login procedure.

The CANC message is only used to indicate that a session has been terminated because of a timeout. If a session is terminated for a different reason (for example, forced logout, loss of communication), the REPT EVT SESSION message is used.

### Category

Security

---

**Security** Retrieve

---

**Output Format** SID DATE TIME  
A ATAG CANC  
“<UID>”  
;

---

**Output Example** TID-000 1998-06-20 14:30:00  
A 100.100 CANC  
“CISCO15”  
;

---

|                          |       |   |
|--------------------------|-------|---|
| <b>Output Parameters</b> | <UID> | The user identifier (user ID) of the person logged in. Refers to the user ID of a user whose session is terminated due to timeout. UID is a string. |
|--------------------------|-------|---|

---

## 4.2 CANC-USER

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Cancel User (CANC-USER) command logs a user out of an active session with the NE.

---

**Usage Guidelines** For the CANC-USER command, the syntax of USERID is not checked. Invalid syntax for the user ID is permitted and the user ID must not exceed 10 characters.

---

**Category** Security

---

**Security** Retrieve

---

**Input Format** CANC-USER:[<TID>]:<USERID>:<CTAG>;

---

**Input Example** CANC-USER:PETALUMA:TERRI:101;

---

|                         |          |   |
|-------------------------|----------|---|
| <b>Input Parameters</b> | <USERID> | Identifies the user to the system. user ID can be up to 10 alphanumeric characters. It is a string. |
|-------------------------|----------|---|

---

## 4.3 CANC-USER-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Cancel User Security (CANC-USER-SECU) command forces a user off of the NE.

### Usage Guidelines

The UID specified can be a single user ID or a list of user IDs separated by “&”. The keyword ALL is not permitted. The UID specified cannot be the user ID of the administrator issuing the command.

### Note

This command will log out ALL sessions on the NE (TL1 and Cisco Transport Controller [CTC]) of a user whose user ID matches the UID specified in the command.

### Category

Security

### Security

Superuser

### Input Format

CANC-USER-SECU:[<TID>]:<UID>:<CTAG>;

### Input Example

CANC-USER-SECU:PETALUMA:CISCO10:100;

### Input Parameters

|                    |  |
|--------------------|--|
| <b>&lt;UID&gt;</b> | The user identifier (user ID) of the person logged in. UID can be a list of user IDs separated by “&”. The keyword ALL may not be used to specify all users on an NE. UID is a string. |
|--------------------|--|

## CHG Commands

This chapter provides change (CHG) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

### 5.1 CHG-ACCMD-<MOD\_TACC>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Change Test Access Mode for the DS1, DS3I, E1, E3, STS1, STS12C, STS192C, STS24C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VT1, or VT2 (CHG-ACCMD-<MOD\_TACC>) command changes the test access (TACC) mode for the circuit being tested. This can be a change from monitoring the data to inserting data into the synchronous transport signal (STS). For more information about TACC, refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide*. See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

#### Usage Guidelines

This command can only be applied to an existing test access point (TAP) connection.

### Caution

For this command to be applicable, first create the TAP using the ED-<MOD\_PATH> command. Intrusive test access modes are traffic-affecting. If a facility/path is connected to a TAP in an intrusive test access mode, it is forced to go into the Out of Service, Maintenance (OOS-MT) state. The forced transition could be traffic-affecting. The present state of the facility/path is stored by the network element (NE) and is restored when the TAP connection is terminated. Test access connections are dropped automatically if the TL1 session is terminated or is timed out.

### Note

- If there is no TAP connection, a DENY error message is returned.
- If a requested condition already exists, a SRCN error message is returned.
- If a requested access configuration is invalid, a SRAC error message is returned.
- If a requested TAP does not exist, a RTEN error message is returned.

**Category** Troubleshooting and Test Access

**Security** Maintenance

**Input Format** CHG-ACCMD-<MOD\_TACC>:[<TID>]:<TAP>: <CTAG>::<MD>;

**Input Example** CHG-ACCMD-STS1:CISCO:8:123::MONE;

|                         |         |   |
|-------------------------|---------|---|
| <b>Input Parameters</b> | <TAP>   | The test access point number. The TAP number must be an integer with a range of 1 to 999. It is a string.<br><br><b>Note</b> This command only supports changing the mode for a single TAP number at a time.  |
|                         | <MD>    | The test access mode. (SPLTE, SPLTF, LOOPE, and LOOPF require an external quasi-random signal [QRS] input signal.) Single facility access digroup (FAD) test access does not support MONEF, SPLTEF, and SPLTAB modes.<br><br>The parameter type is test access mode (TACC_MODE).  |
|                         | • LOOPE | Splits both the A and B paths. Connect the line incoming from the E direction to the line outgoing in the E direction, and connect this looped configuration to the FAD. The line outgoing in the F direction will have a QRS connected, and the line incoming from the F direction will be terminated by the nominal characteristic impedance of the line. Intrusive test access mode. |
|                         | • LOOPF | Splits both the A and B paths. Connect the line incoming from F direction to the line outgoing in the F direction, and connect this looped configuration to the FAD. The line outgoing in the E direction will have a QRS connected, and the line incoming from the E direction will be terminated by the nominal characteristic impedance of the line. Intrusive test access mode.     |
|                         | • MONE  | Indicates that a monitor connection will be provided from the FAD to the A transmission path of the accessed circuit.   |
|                         | • MONEF | Indicates that a monitor connection will be provided for the following: <ul style="list-style-type: none"> <li>• From the FAD1 to a dual FAD (DFAD), or from the odd pair of a facility access path (FAP) to the A transmission path</li> <li>• From the FAD2 of the same DFAD or the even pair of a FAP, to the B transmission path of the accessed circuit</li> </ul>                 |
|                         | • MONF  | Indicates that a monitor connection will be provided from the FAD to the B transmission path of the accessed circuit.   |
|                         | • SPLTA | Indicates that a connection will be provided from both the E and F sides of the A transmission path of the circuit under test to the FAD and split the A transmission path. Intrusive test access mode.   |
|                         | • SPLTB | Indicates that a connection will be provided from both the E and F sides of the B transmission path of the circuit under test to the FAD and split the B transmission path. Intrusive test access mode.   |

|          |   |
|----------|---|
| • SPLTE  | Splits both the A and B paths and connect the E side of the accessed circuit to the FAD. The line outgoing in the F direction will have a QRS connected, the line incoming from the F direction will have a QRS connected, and the line incoming from the E direction will be terminated by the nominal characteristic impedance of the line. Intrusive test access mode. |
| • SPLTEF | Splits both the A and B paths, and connect the E side of the accessed circuit to FAD1 and the F side to FAD2. Intrusive test access mode.   |
| • SPLTF  | Splits both the A and B paths, and connect the F side of the accessed circuit to the FAD. The line outgoing in the E direction will have a QRS connected, the line incoming in the E direction will have a QRS connected, and the line incoming from the E direction will be terminated by the nominal characteristic impedance of the line. Intrusive test access mode.  |

## 5.2 CHG-EQPT

(Cisco ONS 15454) The Change Equipment (CHG-EQPT) command performs an in-service upgrade from low density (LD) electrical cards (DS1 [DS1-14, DS1N-14], DS3 [DS3-12, DS3N-12, DS3NE-12], EC1, and DS3XM-6) to high density (HD) electrical cards (DS1/E1-56, DS3/EC1-48, and DS3XM-12).

### Usage Guidelines

- For Software Release 6.0 and later, only limited upgrades are supported, such as upgrading one LD DS3-12 card to one HD DS3/EC1-48 card.
- Optical (OC-N) card upgrades and downgrades are supported with the limitations of the MRC-12 and MRC-2.5G-4 cards.
- Compatible equipment types for card upgrade:
  - DS3XM-6 to DS3XM-12
  - DS-3/DS3-N/DS3-E/DS3N-E to DS3/EC1-48
  - DS-1/DS1-N to DS1/E1-56
  - DS1-28-DS3-EC1-3
  - DS1-84-DS3-EC1-3
- Provisioning rules for card upgrade:
  - DS1-14 and DS1N-14 cards that are provisioned in Slot 1, 2, 3, 15, 16, or 17 should be upgraded to DS1/E1-56.
  - DS1-14 and DSN-14 cards that are provisioned in Slot 4, 5, 6, 12, 13, or 14 will fail when upgrading to DS1/E1-56.
  - DS3-12, DS3N-12, DS3E-12, and DS3N-12E cards that are provisioned in Slot 1, 2, 3, 15, 16, or 17 can be upgraded to DS3/EC1-48.
  - DS3-12, DS3N-12, DS3E-12, and DS3N-12E cards that are provisioned in Slot 4, 5, 6, 12, 13, or 14 will fail when upgrading to DS3/EC1-48.
  - Two upgradable cards provisioned in a 1:1 protection group cannot be upgraded.

Equipment

**Security**

Maintenance

**Input Format**

```
CHG-EQPT:[<TID>]:<AID>:<CTAG>:<EQPTTYPE>:[PPMTYPE=PPMTYPE],
[PPMNUM=<PPMNUM>],[PORTNUM=<PORTNUM>],[PORTRATE=<PORTRATE>];
```

**Input Example**

```
CHG-EQPT::SLOT-14:1::MRC-2.5G-4:PPMTYPE=PPM-1,PPMNUM=1,PORTNUM=1,
PORTRATE=OC48;
```

**Input Parameters**

| Input Parameters   | Description   |
|--|---|
| <SRC>  | The source access identifier from the “26.15 EQPT” section on page 26-39. |
| <EQPTTYPE>   | The equipment type to be upgraded. The parameter type is EQUIPMENT_TYPE.  |

| • FBGDCU-1983    |  |

| Input Parameters   | Description  |
|--------------------|--|
| • FBGDCU-331       |  |
| • FBGDCU-496       |  |
| • FBGDCU-661       |  |
| • FBGDCU-826       |  |
| • FBGDCU-992       |  |
| • FILLER-CARD      | (ONS 15454) Blank filler card  |
| • FMEC-155E-1TO3   | The equipment type for FMEC STM1E12 card with 1:3 protection                   |
| • FMEC-155E-UNPROT | The equipment type for FMEC STM1E12 card without protection                    |
| • G1000-4          | (ONS 15454) A 4-port G1000 card  |
| • GE-XP            | (ONS 15454) 20 x 1 Gbps muxponder/L2 ethernet switch card                      |
| • MD-4             | (ONS 15454) Four channel optical multiplexer/demultiplexer                     |
| • MD-48-CM         |  |
| • MD-48-EVEN       |  |
| • MD-48-ODD        |  |
| • MESH-PP-SMR      | The passive unit Patch Panel device used to connect up to four 40-SMR2-C cards |
| • ML-100T-8        | (ONS 15454) Exige/Elise mapper card  |
| • ML1000-2         | (ONS 15454) Daytona 2-port GigE  |
| • ML100T-12        | (ONS 15454) Daytona 12-port FSTE   |
| • ML100X-8         | (ONS 15454) 8-port 100T card with optical interface                            |
| • MRC-12           | (ONS 15454) Humvee - 12-port multirate optical card                            |
| • MRC-2.5G-4       | (ONS 15454) 4-port MRC 2.5G (Hummer 4 15454-ANSI card)                         |
| • MRC-2.5G-12      | (ONS 15454) 12-port MRC 2.5G (Hummer 12 15454-ETSI card)                       |
| • MXP-2.5G-10E     | (ONS 15454) Monviso 10G (4 * 2.5G) muxponder card with enhanced FEC            |
| • MXP-2.5G-10EX    | (ONS 15454) Cengalo 10G (4 * 2.5G) muxponder with enhanced FEC card            |
| • MXP-2.5G-10G     | (ONS 15454) Skane 10G (4 * 2.5G) muxponder card                                |
| • MXP-MR-2.5G      | (ONS 15454) Bernina multirate 2.5G muxponder unprotected                       |
| • MXPP-MR-2.5G     | (ONS 15454) Bernina multirate 2.5G muxponder protected                         |
| • MXPP-MR-10DME    | (ONS 15454) Multirate 10Gbps datamux   |
| • MXPP-MR-10DMEX   | (ONS 15454) Multirate 10Gbps datamux with enhanced dispersion                  |
| • OC12             | (ONS 15454) OC12 card  |
| • OC12-4           | (ONS 15454) A 4-port OC12 card   |
| • OC192            | (ONS 15454) OC192 card   |

| Input Parameters                 | Description  |
|----------------------------------|--|
| • OC192-XFP                      | (ONS 15454) Mongoose - 1-port OC192 XFP  |
| • OC3                            | (ONS 15454) OC3 card   |
| • OC3-8                          | (ONS 15454) 8-port OC3 card  |
| • OC48                           | (ONS 15454) OC48 card  |
| • OPT-AMP-17-C                   | (ONS 15454) Optical booster/pre-amplifier for C band 17 dBm  |
| • OPT-AMP-23-C                   | (ONS 15454) Optical booster/pre-amplifier for C band 23 dBm  |
| • OPT-AMP-L                      | (ONS 15454) Optical booster/pre-amplifier for L band   |
| • OPT-AMP-C                      | (ONS 15454) Optical booster/pre-amplifier for C band   |
| • OPT-BST                        | (ONS 15454) Optical booster amplifier  |
| • OPT-BST-E                      | (ONS 15454) Optical booster enhanced amplifier for C band  |
| • OPT-BST-L                      | (ONS 15454) Optical booster amplifier for L band   |
| • OPT-EDFA-17                    | MAL-less EDFA Optical Amplifier - C-band - 17dB Gain   |
| • OPT-EDFA-24                    | MAL-less EDFA Optical Amplifier - C-band - 24dB Gain   |
| • OPT-PRE                        | (ONS 15454) Optical pre-amplifier  |
| • OPT-RAMP-C                     | Raman pump amplifier C-band  |
| • OPT-RAMP-CE                    | An extended version of Raman pump amplifier  |
| • OPT-RAMP-E                     | Raman pump amplifier E-band  |
| • OSC-CSM                        | (ONS 15454) Optical service channel (OSC) with combiner/separator module (SCM)                         |
| • OSCM                           | (ONS 15454) Optical service channel (OSC) module   |
| • OTU2-XP                        | A 4x10G transponder that is capable to operate with multiple bit rates - 10G FC, 10GE, and OC192/STM64 |
| • PP-4-SMR                       | Patch-Panel, 4 degrees, for SMR cards  |
| • PP-MESH-4                      | Patch-Panel, 4 degrees   |
| • PP-MESH-8                      | Patch-Panel, 8 degrees   |
| • PPM-1                          | (ONS 15454) Pluggable port module with one SFP port  |
| • PTM-4                          | Line card  |
| • PTF-4                          | Fabric card  |
| • PTSA                           | CPT 50 panel   |
| • PTSYS- Packet Transport System | Packet transport system  |
| • PTSYSFan-Out-Group             | PTSYS Fan-Out-Group  |
| • SHELF-M2                       | SHELF-M2   |
| • SHELF-M6                       | SHELF-M6   |
| • STM1E-12                       | (ONS 15454 SDH) STM1E-12 card  |
| • TCC                            | (ONS 15454) TCC card   |
| • TDC-CC                         | Coarse tunable dispersion compensation unit  |
| • TDC-FC                         | Fine tunable dispersion compensation unit  |
| • TNC                            | Transport Node Controller card   |
| • TSC                            | Transport Shelf Controller card  |

| Input Parameters   | Description  |
|--|--|
| <ul style="list-style-type: none"> <li>TXP-MR-10E</li> </ul>   | (ONS 15454) Skane 10G multirate transponder card with enhanced FEC                                   |

| <ul style="list-style-type: none"> <li>12</li> </ul>           | PPM No. 12   |
| <PORTNUM>  | Identifies the port number, which is used on the entity port with PPM. This parameter is an integer. |
| <ul style="list-style-type: none"> <li>1</li> </ul>            | Port No. 1   |
| <PORTRATE>   | Identifies the port rate, which is used to specify the port rate of the multi-rate card.             |
| <ul style="list-style-type: none"> <li>STM1</li> </ul>         | STM-1 rate   |
| <ul style="list-style-type: none"> <li>STM4</li> </ul>         | STM-4 rate   |
| <ul style="list-style-type: none"> <li>STM16</li> </ul>        | STM-16 rate  |

# CLR Commands

This chapter provides clear (CLR) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 6.1 CLR-CCDB-CFM

(Cisco ONS 15454) The Clear Continuity Check Message Data Base Connectivity Fault Management (CLR-CCDB-CFM) command clears the continuity check message data base on a given slot.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Equipment

### Security

Provisioning

### Input Format

CLR-CCDB-CFM:[<TID>]:<AID>:<CTAG>;

### Input Example

CLR-CCDB-CFM::SLOT-4:a;

## 6.2 CLR-COND-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Clear Security Condition (CLR-COND-SECU) command clears the specified standing condition.

**Usage Guidelines** In Software Release 6.0 and later, only the INTRUSION-PSWD parameter value is supported.

**Category** Security

**Security** Superuser

**Input Formats** CLR-COND-SECU:[<TID>]::<CTAG>[::<SECUALMTYPE>];

**Input Examples** CLR-COND-SECU:CISCO::123::INTRUSION-PSWD:

| Input Parameters | <SECUALMTYPE>  | Secure alarm type. Defaults to INTRUSION-PSWD. The parameter type is security alarm type (SECUALMTYPE).  |
|------------------|--|--|
|                  | <ul style="list-style-type: none"> <li data-bbox="342 842 716 940">INTRUSION-PSWD</li> </ul> | Condition raised after an invalid password is used during login. Condition is raised only if the password is used a specified number of times. |

## 6.3 CLR-MACTABLE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The CLR-MACTABLE command clears the MAC table that has all the learned MAC addresses.

**Usage Guidelines** The card should be in Layer2 over DMDM mode to clear the MAC address.

**Category** System

**Security** Retrieve

**Input Format** CLR-MACTABLE:[<TID>]:<AID>:<CTAG>;

**Input Example** CLR-MACTABLE::SLOT-2:1;

## 6.4 CLR-MEPSTATS-CFM

(Cisco ONS 15454) The Clear Maintenance End Point Statistics Connectivity Fault Management (CLR-MEPSTATS-CFM) command clears the maintenance end point statistics.

---

**Usage Guidelines**

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

---

**Category**

Equipment

---

**Security**

Provisioning

---

**Input Format**

CLR-MEPSTATS-CFM:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;;

---

**Input Example**

CLR-MEPSTATS-CFM::SLOT-15:1;

## CONN Commands

This chapter provides connect (CONN) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

### 7.1 CONN-TACC-<MOD\_TACC>

(Cisco ONS 15454) The Connect Test Access for DS1, DS3I, E1, E3, STS1, STS12C, STS18C, STS192C, STS24C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VT1, or VT2

(CONN-TACC-<MOD\_TACC> command connects the synchronous transport signal (STS) or Virtual Tributary (VT) defined by the access identifier (AID) to the STS specified by the test access point (TAP) number.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform. For more information about TACC, refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide*.

#### Usage Guidelines

For this command to be applicable, you must first create the TAP using the ED-<VC\_PATH> or ED-VC12 command. Intrusive test access modes are traffic-affecting. If a facility/path is connected to a TAP in an intrusive test access mode, it is forced to go into the Locked-Maintenance state. The forced transition could be traffic-affecting. The present state of the facility/path is stored by the NE and is restored when the TAP connection is brought down. Test access connections are dropped automatically if the TL1 session is terminated or is timed out.

The following actions will return error messages:

- If all TAPs are busy, a RABY error message is returned.
- If a requested TAP is busy, a RTBY error message is returned.
- If a requested TAP does not exist, a RTEN error message is returned.
- If a circuit is already connected to another TAP, a SCAT error message is returned.
- If a requested condition already exists, a SRCN error message is returned.
- An invalid AID will return an Input, Invalid Access Identifier (IIAC) error message.
- If an access is not supported, an EANS error message is returned.
- If a requested access configuration is invalid, a SRAC error message is returned.

- You cannot connect a TACC to a cross-connect that is in pending roll.
- A connection can be made to a cross-connection, in which case all modes of access are supported. A connection to an Unmapped AID (an AID without a cross-connect on it) will allow only MONE, SPLTE, and LOOPE modes.
- A connection to the protect path of a 1+1, 1:1, or 1:N is not allowed; however, connecting to the PCA path of a two-fiber or four-fiber multiplex section-shared protection ring (MS-SPRing) is supported. This will be preempted when a MS-SPRing switch occurs.
- When you connect a TACC to a protect subnetwork connection protection (SNCP) trunk, you will always be connected to the working trunk instead.

Troubleshooting and Test Access

**Security**

Maintenance

**Input Format**

CONN-TACC-&lt;MOD\_TACC&gt;:[&lt;TID&gt;]:&lt;SRC&gt;:&lt;CTAG&gt;::&lt;TAP&gt;:MD=&lt;MD&gt;;

**Input Example**

CONN-TACC-ST51:CISCO:STS-2-1-4:123::8:MD=MONE;

**Input Parameters**

|         |   |
|---------|---|
| <SRC>   | Source AID from the <a href="#">“26.1 ALL” section on page 26-1</a> . SRC must not be null.   |
| <TAP>   | The test access point number. The TAP number is used to identify all messages between the TSC and the NE until the access point is released. The TAP number must be an integer with a range of 1 to 999. The TAP must not be null.  |
| <MD>    | The test access mode. (SPLTE, SPLTF, LOOPE, and LOOPF require an external quasi-random signal [QRS] input signal.) Single facility access digroup (FAD) test access does not support MONEF, SPLTEF, and SPLTAB modes. MD must not be null.<br><br>The parameter type is test access mode (TACC_MODE).   |
| • LOOPE | Splits both the A and B paths. Connect the line incoming from E direction to the line outgoing in the E direction, and connect this looped configuration to the FAD. The line outgoing in the F direction will have a QRS connected, and the line incoming from the F direction will be terminated by the nominal characteristic impedance of the line. Intrusive test access mode.   |
| • LOOPF | Splits both the A and B paths. Connects the line incoming from F direction to the line outgoing in the F direction, and connects this looped configuration to the FAD. The line outgoing in the E direction will have a QRS connected, and the line incoming from the E direction will be terminated by the nominal characteristic impedance of the line. Intrusive test access mode. |
| • MONE  | Indicates that a monitor connection is to be provided from the FAD to the A transmission path of the accessed circuit.  |

|          |  |
|----------|--|
| • MONEF  | Indicates that a monitor connection is to be provided from the FAD1 to a dual FAD (DFAD), or the odd pair of a facility access path (FAP), to the A transmission path, and from FAD2 of the same DFAD, or the even pair of a FAP, to the B transmission path of the accessed circuit.  |
| • MONF   | Indicates that a monitor connection is to be provided from the FAD to the B transmission path of the accessed circuit.   |
| • SPLTA  | Indicates that a connection is to be provided from both the E and F sides of the A transmission path of the circuit under test to the FAD and split the A transmission path. Intrusive test access mode.   |
| • SPLTB  | Indicates that a connection is to be provided from both the E and F sides of the B transmission path of the circuit under test to the FAD and split the B transmission path. Intrusive test access mode.   |
| • SPLTE  | Splits both the A and B paths and connects the E side of the accessed circuit to the FAD. The line outgoing in the F direction will have a QRS connected, the line incoming from the F direction will have a QRS connected, and the line incoming from the E direction will be terminated by the nominal characteristic impedance of the line. Intrusive test access mode. |
| • SPLTEF | Splits both the A and B paths, and connects the E side of the accessed circuit to FAD1 and the F side to FAD2. Intrusive test access mode.   |
| • SPLTF  | Splits both the A and B paths and connects the F side of the accessed circuit to the FAD. The line outgoing in the E direction will have a QRS connected, and the line incoming in the E direction will have a QRS connected. The line incoming from the E direction will be terminated by the nominal characteristic impedance of the line. Intrusive test access mode.   |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<TAP>"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"8"
;
```

**Output Parameters**

|       |  |
|-------|--|
| <TAP> | The test access point number. The TAP number is used to identify all messages between TSC and NE until the access point is released. The TAP number must be an integer with a range of 1 to 999. |
|-------|--|

# COPY Commands

This chapter provides copy (COPY) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 8.1 COPY-IOSCFG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Copy Cisco IOS Configuration File (COPY-IOSCFG) command supports the following types of operations on the Cisco IOS configuration file of ML-Series Ethernet cards:

1. Uploading the startup Cisco IOS configuration file from the network to the node.  
FTP is the only protocol allowed for uploading. When doing this operation, the source access identifier (SRC) field must be an FTP URL string specifying the user name and password for FTP authentication, and specifying the host and the directory to locate the startup configuration file from the network. The DEST field must be a string of "STARTUP."
2. Downloading the startup Cisco IOS configuration file from the node to the network.  
FTP is the only protocol allowed for downloading. When doing this operation, the SRC field must be a string of "STARTUP." The DEST field must be an FTP URL string specifying the user name and password for FTP authentication, and specifying the host and the directory to store the startup configuration file on the network.

### Usage Guidelines

- This FTP timeout is 30 seconds and is not configurable.
- The Cisco IOS configuration file is unique for each ML-Series card, and is specified by the SLOT number in the AID field of the command.
- The format of the FTP URL string used in the SRC or DEST field of the command is as follows:
  - In a nonfirewall environment, the format of the URL should be:  
"FTP://[FTPUSER[:FTPPASSWORD]]@FTP\_HOST/CONFIG\_FILE\_PATH"  
where:  
FTPUSER is the user ID to connect to the computer with the package file.

<FTPPASSWORD> is the password used to connect to the computer with the package file.

<FTPHOST> is the IP address of the computer with the package file. DNS lookup of hostnames is not supported.

<CONFIG\_FILE\_PATH> is the long path name to the package file.

Note that USERID and PASSWORD are optional if the user does not need to log into the host computer. All the other portions of the URL are required, including the initial “FTP:\” string.

- In a firewall environment, the hostname should be replaced with a list of IP addresses each separated by the ampersand (@) character. The first IP address should be the machine where the package file is stored. Subsequent IP addresses should be for firewall machines moving outwards towards the edge of the network, until the final IP address listed was the machine that outside users first access the network. For example, if your topology is

“FTPHOST <-> GNE3 <->GNE2 <-> GNE1 <-> ENE”

your FTP URL will be:

“FTP://FTPUSER:FTPPASSWORD@FTPHOST@GNE3@GNE2@GNE1/CONFIG\_FILE\_PATH”

|                         |   |       |   |       |   |        |  |        |                   |
|-------------------------|---|-------|---|-------|---|--------|--|--------|-------------------|
| <b>Category</b>         | File Transfer   |       |   |       |   |        |  |        |                   |
| <b>Security</b>         | Provisioning  |       |   |       |   |        |  |        |                   |
| <b>Input Format</b>     | COPY-IOSCFG:[<TID>]:<AID>:<CTAG>::SRC=<SRC>,DEST=<DEST>,[FTTD=<FTTD>];  |       |   |       |   |        |  |        |                   |
| <b>Input Example</b>    | COPY-IOSCFG::SLOT-1:CTAG::SRC=“LONG_FTP_PATH”,DEST=“STARTUP”,FTTD=“FTTD_URL”;   |       |   |       |   |        |  |        |                   |
| <b>Input Parameters</b> | <table border="1"> <tr> <td>&lt;AID&gt;</td> <td>Access identifier. Specifies the slot number of the card where the Cisco IOS configuration file belongs. The AID is from the <a href="#">“26.15 EQPT” section on page 26-39</a>.</td> </tr> <tr> <td>&lt;SRC&gt;</td> <td>Source AID. Specifies where the Cisco IOS configuration file is copied from. SRC is a string.</td> </tr> <tr> <td>&lt;DEST&gt;</td> <td>Specifies where the Cisco IOS configuration file is copied to. DEST is a string.</td> </tr> <tr> <td>&lt;FTTD&gt;</td> <td>FTTD is a string.</td> </tr> </table> | <AID> | Access identifier. Specifies the slot number of the card where the Cisco IOS configuration file belongs. The AID is from the <a href="#">“26.15 EQPT” section on page 26-39</a> . | <SRC> | Source AID. Specifies where the Cisco IOS configuration file is copied from. SRC is a string. | <DEST> | Specifies where the Cisco IOS configuration file is copied to. DEST is a string. | <FTTD> | FTTD is a string. |
| <AID>                   | Access identifier. Specifies the slot number of the card where the Cisco IOS configuration file belongs. The AID is from the <a href="#">“26.15 EQPT” section on page 26-39</a> .   |       |   |       |   |        |  |        |                   |
| <SRC>                   | Source AID. Specifies where the Cisco IOS configuration file is copied from. SRC is a string.   |       |   |       |   |        |  |        |                   |
| <DEST>                  | Specifies where the Cisco IOS configuration file is copied to. DEST is a string.  |       |   |       |   |        |  |        |                   |
| <FTTD>                  | FTTD is a string.   |       |   |       |   |        |  |        |                   |

## 8.2 COPY-RFILE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Copy File (COPY-RFILE) command downloads a new software package from the location specified by the FTP URL. It is also used to back up and restore the system database.

## Prerequisite

To run the **COPY-RFILE** command, do the following:

- Run the FTP server on the remote machine.
- Register the FTP server on the GNE using the **ENT-FTPSEVER** command.

Here is an example that explains the execution of **COPY-RFILE** command:

```
> ENT-FTPSEVER:::A:::IPADDR=72.163.210.211,ENABLE=Y,IPMASK=255.255.255.
> 0,TIMER=0;
Infy600-162 2009-01-23 07:18:27
M A COMPLD
;
>
> RTRV-FTPSEVER:::A;
Infy600-162 2009-01-23 07:18:43
M A COMPLD
"IPADDR=10.77.29.252,IPMASK=255.255.255.0,ENABLE=Y,TIMER=0"
"IPADDR=72.163.210.211,IPMASK=255.255.255.0,ENABLE=Y,TIMER=0"
"IPADDR=64.103.135.83,IPMASK=255.255.255.0,ENABLE=Y,TIMER=0"
"IPADDR=10.65.72.136,IPMASK=255.255.255.0,ENABLE=N,TIMER=0"
;
>
```

## Usage Guidelines

To upload package files or restore databases from a host, the host must be running an FTP server application. If the host is not running an FTP server application, the command fails, indicating that the NE was unable to connect to the remote IP address (host). A host can either be a PC or a workstation running an FTP server application.

- User ID is the user's ID used to connect to the computer hosting the package file or system database.
- Password is the password used to connect to the computer hosting the package file or system database.
- Hostname is the hostname or IP address of the computer hosting the package file or system database.
- PACKAGE\_PATH is the long path name to the package file, starting from the home directory of the logged-in user.

All the other portions of the URL are required, including the initial "FTP://" string. For example:

```
COPY-RFILE:TID:RFILE-PKG:703::TYPE=SWDL,SRC="FTP://USERID:PASSWORD@HOSTIP:21/DIR1/DIR2/DIR3/PACKAGE.PKG";
```

### Note

- The SWDL type is used for software package uploads. The RFBU type is used for system database backups, and the RFR type is used for system database restores. The SRC input is required when the type is SWDL or RFR. The DEST input is needed when the type is RFBU. The SRC and DEST inputs cannot both be used in the same command.
- The extended FTP URL syntax is required by the COPY-RFILE syntax.
- If using an FTP URL, port number (21) is optional. Leaving this field blank defaults to 21. However, if using an FTTD URL, then port number (21) is mandatory and no default is defined.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. In order to obtain the current value, issue the RTRV-XX command.
- If using an FTTD URL, the firewall on the GNE must be disabled.

**Note** FTP timeout is 30 seconds and is not configurable.

**Category** File Transfer

**Security** Superuser

**Input Format** COPY-RFILE:[<TID>]:[<SRC>]:<CTAG>.:TYPE=<XFERTYPE>,[SRC=<SRC1>],[DEST=<DEST>],[OVWRT=<OVWRT>],[FTTD=<FTTD>][FORCEENABLE=<FORCEENABLE>];

**Input Example** COPY-RFILE:HERNDON:RFILE-PKG:703.:TYPE=SWDL,SRC="LONG\_FTP\_PATH",DEST="LONG\_FTP\_PATH",OVWRT=YES,FTTD="FTTD\_URI,FORCEENABLE=YES";

|                         |   |   |
|-------------------------|---|---|
| <b>Input Parameters</b> | <SRC>   | Source AID. The type of file being transferred. Defaults to RFILE-PKG. From the AID <a href="#">“26.25 RFILE”</a> section on page 26-54.  |
|                         | <XFERTYPE>  | The file transfer protocol. The parameter type is TX_TYPE, which specifies the type and direction of the file transferred.  |
|                         | <ul style="list-style-type: none"> <li>• RFBU</li> <li>• RFR</li> <li>• SWDL</li> </ul> | <ul style="list-style-type: none"> <li>Remote File Backup. Applicable for Maintenance User (and higher).</li> <li>Remote File Restore. Applicable for Superuser.</li> <li>Software Download. Applicable for Maintenance User (and higher).</li> </ul> |

---

|                           |  |
|---------------------------|--|
| <code>&lt;SRC1&gt;</code> | <p>Specifies the source of the file to be transferred. Only the FTP URL is supported. In a nonfirewall environment, the format of the URL should be: “FTP://FTP_USER[:FTP_PASSWORD]]@FTP_HOST_IP[:21]/PACKAGE_PATH[:TYPE=I]”</p> <p>where:</p> <ul style="list-style-type: none"> <li>• <code>&lt;FTP_USER&gt;</code> is the user ID to connect to the computer hosting the package file.</li> <li>• <code>&lt;FTP_PASSWORD&gt;</code> is the password used to connect to the computer hosting the package file.</li> <li>• <code>&lt;FTP_HOST_IP&gt;</code> is the IP address of the computer hosting the package file. DNS lookup of host names is not supported.</li> <li>• <code>&lt;PACKAGE_PATH&gt;</code> is the long path name to the package file starting from the home directory of the logged-in user.</li> </ul> <p><b>Note</b> User ID and password are optional if the user does not need to log into the host computer. All the other portions of the URL are required, including the initial “FTP://” string.</p> <p><b>Note</b> In Software Release 5.0 and later, <code>PACKAGE_PATH</code> is relative to your home directory, instead of being an absolute path from the root directory of the network element (NE). If you want to specify an absolute path, start the path with the string “%2F”.</p> <p>In a firewall environment, the hostname should be replaced with a list of IP addresses each separated by a @ character. The first IP address should be for the machine where the package file is stored. Subsequent IP addresses should then be for firewall machines moving outwards towards the edge of the network, until the final IP address listed is the machine that outside users first access the network.</p> <p>For example, if the topology is</p> <pre>“FTP_HOST_IP &lt;-&gt; GNE3 &lt;-&gt; GNE2 &lt;-&gt; GNE1 &lt;-&gt; ENE”</pre> <p>the FTP URL is:</p> <pre>FTP://FTP_USER:FTP_PASSWORD@FTP_HOST_IP@GNE3@GNE2@GNE1/PACKAGE_PATH</pre> <p>The <code>FTP_HOST_IP</code> must be one of the IP addresses that is configured on the node as a secure FTP Host.</p> <p><b>Note</b> In the secure mode setting, if the IP address of the front LAN port is different from the IP address of the back LAN port, then <code>GNE3</code> is the IP address of the front LAN port.</p> <p><code>SRC1</code> is a string.</p> |
| <code>&lt;DEST&gt;</code> | <p>Specifies the destination of the file to be transferred. The comments for the <code>SRC</code> parameter (above) also apply to the <code>DEST</code> parameter. <code>DEST</code> is a string.</p>  |

---

|               |   |
|---------------|---|
| <OVWRT>       | If OVWRT is YES, the files should be overwritten. If OVWRT is NO, the file transfer will fail if the file already exists at the destination. Using the NO value will result in an error message. The NO value is not supported for database restore or software download. |
|               | The parameter type is YES_NO, which indicates whether the user password is about to expire, the user is logged into the N or the user is locked out of the NE.  |
| • NO          | No  |
| • YES         | Yes   |
| <FTTD>        | FTTD is a string  |
| <FORCEENABLE> | (Optional) Indicates whether the command should proceed even if there are Database Out of Sync alarms.  |
| • YES         | Yes   |
| • NO          | No  |

# DISC Commands

---

This chapter provides disconnect (DISC) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

---

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

---

## 9.1 DISC-TACC

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Disconnect Test Access (DISC-TACC) command disconnects the test access point (TAP) and puts the connection back to its original state (no splits). For more information on test access (TACC), refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide*.

---

### Usage Guidelines

For this command to be applicable, you must first create the TAP using the ED-<MOD\_PATH> command.

**Note**

---

If you send this command to an already disconnected TAP connection, an SADC error message is returned.

---

**Note**

---

If the system cannot release TAP, an SRTN error message is returned.

---

---

### Category

Troubleshooting and Test Access

---

### Security

Maintenance

---

### Input Format

DISC-TACC:[<TID>]:<TAP>:<CTAG>;

---

**Input Example**      DISC-TACC:CISCO:8:123;

---

**Input Parameters**      <TAP>      The test access point number. The TAP number must be an integer with a range of 1 to 999. String

**Note**      This command only supports disconnecting one TAP at a time.

---

## DLT Commands

### Note

The terms "Unidirectional Path Switched Ring" and "UPSR" may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as "Path Protected Mesh Network" and "PPMN," refer generally to Cisco's path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

This chapter provides delete (DLT) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 10.1 DLT-<MOD1PAYLOAD>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 1GISC3, 2GFC, 2GFICON, 2GISC3, 4GFC, 4GFICON, 5GIB, 8GFC, CHGRP, D1VIDEO, DV6000, DVBASI, EC1, ESCON, ETRCLO, FSTE, GIGE, HDTV, ISC1, ISC3PEER1G, ISC3PEER2G, ISC3PEER2R, ISCCOMPAT, OC12, OC192, OC3, OC48, OC768, OTU3, OTU4, T3, 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, OTU2, ISC3STP1G, or ISC3STP2G (DLT-<MOD1PAYLOAD>) command deletes the specified port.

### Usage Guidelines

The command supports the 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G modifiers.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

The ports must be in out of service (OOS) state and must not have any circuits on them while deleting.

### Note

This command supports ports with pluggable port modules (PPMs), for example, the ASAP card, the FC\_MR-4 card and ONS 15454 dense wavelength division multiplexing (DWDM) cards.

### Category

Ports

|                         |   |
|-------------------------|---|
| <b>Security</b>         | Provisioning  |
| <b>Input Format</b>     | DLT-<MOD1PAYLOAD>:[<TID>]:<AID>:<CTAG>[:::];  |
| <b>Input Example</b>    | DLT-100GIGE:100G-LC-C:AGGR-3-1-1:1;   |
| <b>Input Parameters</b> | <AID> <a href="#">Access identifier from the “26.17 FACILITY” section on page 26-42 and “26.8 CHANNEL” section on page 26-23.</a> The AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID. |

## 10.2 DLT-<MOD\_RING>

(Cisco ONS 15454) The Delete Bidirectional Line Switched Ring (DLT-<MOD\_RING>) command deletes the BLSR of the NE.

### Usage Guidelines

- If the system fails on getting IOR, a SROG (Status, Get IOR Failed) error message is returned.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- If the BLSR does not exist, a SRQN (BLSR Does Not Exist) error message is returned.
- The ALL AID is invalid for this command.
- The list AID format has been supported since Software Release 4.6.
- The SROF (Facility Not Provisioned or Cannot Access BLSR) error message will be returned for an invalid query.
- If the BLSR is in use, a SROF (BLSR In Use) error message is returned.
- The SRQN (BLSR Deletion Failed) error message is returned for the invalid deletion query.

|                      |   |
|----------------------|---|
| <b>Category</b>      | BLSR                                      |
| <b>Security</b>      | Provisioning                              |
| <b>Input Format</b>  | DLT-<MOD_RING>:[<TID>]:<AID>:<CTAG>[:::]; |
| <b>Input Example</b> | DLT-BLSR:PETALUMA:BLSR-2:123;             |

|                         |       |   |
|-------------------------|-------|---|
| <b>Input Parameters</b> | <AID> | Access identifier from the “26.3 AidUnionId1” section on page 26-21. Identifies the bidirectional line switched ring (BLSR) of the network element (NE). The ALL and BLSR-ALL AIDs are not allowed for editing BLSRs. |
|-------------------------|-------|---|

## 10.3 DLT-ALMTYPE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Alarm Type (DLT-ALMTYPE) command deletes only user-defined alarm types.

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | ALMTYPE must not contain blank spaces or special characters other than the hyphen (-). The maximum ALMTYPE length allowed is 20 characters.<br><br>Only one alarm type can be deleted at a time using this command. There is no option available to delete all user-defined alarm types. |
|-------------------------|--|

|                 |        |
|-----------------|--------|
| <b>Category</b> | System |
|-----------------|--------|

|                 |              |
|-----------------|--------------|
| <b>Security</b> | Provisioning |
|-----------------|--------------|

|                     |   |
|---------------------|---|
| <b>Input Format</b> | DLT-ALMTYPE:[<TID>]::<CTAG>::<ALMTYPE>; |
|---------------------|---|

|                      |                                    |
|----------------------|------------------------------------|
| <b>Input Example</b> | DLT-ALMTYPE:::1::USERDEFINEDALARM; |
|----------------------|------------------------------------|

|                         |           |   |
|-------------------------|-----------|---|
| <b>Input Parameters</b> | <ALMTYPE> | Specifies user-defined alarm types associated with virtual wires in environmental alarm inputs. |
|-------------------------|-----------|---|

## 10.4 DLT-ALM-CPS

(Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6) The Delete Alarm Control Plane Service (DLT-ALM-CPS) command deletes a alarm reported on the Control Plane Service.

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | <ul style="list-style-type: none"> <li>Specify the alarm index displayed against the alarm in the RTRV-ALM-CPS response.</li> <li>This command is applicable only to WSON alarms.</li> </ul> |
|-------------------------|--|

|                 |      |
|-----------------|------|
| <b>Category</b> | DWDM |
|-----------------|------|

## 10.5 DLT-AUTO

**Security** Provisioning

**Input Format** DLT-ALM-CPS:[<TID>]:<SRC>:<CTAG>::[:INDEX=<INDEX>][:];

**Input Example** DLT-ALM-CPS::LINE-5-1-RX:1:::INDEX=3;

|                         |       |   |
|-------------------------|-------|---|
| <b>Input Parameters</b> | <SRC> | Source AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31.          |
|                         | INDEX | Index of the alarm to be deleted or acknowledged. To be taken from the RTRV-ALM-CPS response. |

## 10.5 DLT-AUTO

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Auto (DLT-AUTO) command deletes AUTO ports.

**Usage Guidelines** The ports must be in OOS state and must not have any circuits on them while deleting.

**Category** Ports

**Security** Provisioning

**Input Format** DLT-AUTO:[<TID>]:<AID>:<CTAG>;

**Input Example** DLT-AUTO::VFAC-1-3-2-1:1;

|                         |       |   |
|-------------------------|-------|---|
| <b>Input Parameters</b> | <AID> | The AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID. |
|-------------------------|-------|---|

## 10.6 DLT-AWCFG

(Cisco ONS 15454, Cisco ONS 15454 M2, Cisco ONS 15454 M6) The Delete Alien Wavelength Configuration (DLT-AWCFG) deletes the alien wavelength configured.

**Usage Guidelines** None

|                      |                                      |
|----------------------|--------------------------------------|
| <b>Category</b>      | DWDM                                 |
| <b>Security</b>      | Provisioning                         |
| <b>Input Format</b>  | DLT-AWCFG:[<TID>]:<SRC>:<CTAG>::[:]; |
| <b>Input Example</b> | DLT-AWCFG::CHAN-3-4-RX:1;            |

**Table 10-1** Parameter Support

| Parameter | Description   |
|-----------|---|
| <SRC>     | Source access identifier from the “26.1 ALL” section on page 26-1.      |
| <ALIENID> | Indicates the operating mode for alien wavelength. ALIENID is a STRING. |
| <FECMODE> | Specifies the FEC mode for alien wavelength.                            |
| • ENH     | Enhanced FEC is enabled.  |
| • ENH-I4  | Enhanced FEC 1.4 is enabled.  |
| • ENH-I7  | Enhanced FEC 1.7 is enabled.  |
| • HG-7    | 7% High Gain FEC is enabled.  |
| • HG-20   | 20% High Gain FEC is enabled.   |
| • OFF     | FEC is disabled.  |
| • STD     | Standard FEC is enabled.  |

## 10.7 DLT-BULKROLL-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Bulkroll for OC12, OC192, OC3, OC48, OC768 (DLT-BULKROLL-<OCN\_TYPE>) command deletes an attempted bulk rolling operation of a facility or completes an attempted rolling operation. This command is used for bulk line level rolling. Use DLT-ROLL-<MOD\_PATH> for single path level rolling.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Category** Bridge and Roll

**Security** Provisioning

**Input Format** DLT-BULKROLL-<OCN\_TYPE>:[<TID>]:<FROM>:<CTAG>:::  
[RFROMSTART=<RFROMSTART>],[RFROMEND=<RFROMEND>],WHY=<WHY>;

**Input Example**

```
DLT-BULKROLL-OC12:CISCO:FAC-1-1:6:::RFROMSTART=STS-1-1-1,
RFROMEND=STS-1-1-11,WHY=STOP;
```

**Input Parameters**

|  |   |
|--|---|
| <FROM>   | One of the end points. Access identifier from the “26.17 FACILITY” section on page 26-42 for line level rolling and bulk rolling.   |
| <RFROMSTART>   | The starting time slot in the source roll port. For bulk rolling only. The AID is from the “26.12 CrossConnectId1” section on page 26-31 (except VCM and FACILITY). Defaults to STS-<FROMSLOT>-<FROMPORT>-1, where <FROMSLOT> and <FROMPORT> are the slot and port of the <FROM> AID.   |
| <RFROMEND>   | The ending time slot in the source roll port. For bulk rolling only. The AID is from the “26.12 CrossConnectId1” section on page 26-31 (except VCM and FACILITY). Defaults to STS-<FROMSLOT>-<FROMPORT>-N, where <FROMSLOT> and <FROMPORT> are the slot and port of the <FROM> AID and N is the value of OC-N (for example, in the case of OC48, N=48). |
| <WHY>  | The reason for deletion. The parameter type is WHY, which is the reason for deletion.   |
| <ul style="list-style-type: none"> <li>• END</li> </ul>  | Drop the leg to be rolled; this leg is identified by the RFROM parameter in ENT-ROLL or ENT-BULKROLL command.   |
| <ul style="list-style-type: none"> <li>• STOP</li> </ul> | The rolling operation will be aborted and reverted to the previous configuration.   |

## 10.8 DLT-BWP-ETH

(Cisco ONS 15454)

The Delete Bandwidth Profile ETH (DLT-BWP-ETH) command deletes a bandwidth profile from the bandwidth profile database (BWP DB). The BWP DB is a collection of BWP used in a Network Element.

**Usage Guidelines**

Error conditions for deleting bandwidth profile can be:

- Invalid AID. If the AID is invalid an IIAC (Invalid AID) error message is returned.
- The “ALL” AID is invalid for this command.

**Category**

Ethernet

**Security**

Provisioning

**Input Format**

```
DLT-BWP-ETH:[<TID>]:<AID>:<CTAG>[:::];
```

**Input Example** DLT-BWP-ETH:ROCKS:BWP-10000:1;

|                         |                 |  |
|-------------------------|-----------------|--|
| <b>Input Parameters</b> | <AID>           | This AID is used to access BWP.                                  |
|                         | • BWP-ALL       | All AID for BWP.   |
|                         | • BWP-{1-10000} | Single AID for BWP. The valid identifier ranges from 1 to 10000. |

## 10.9 DLT-CPS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Control Plane Service (DLT-CPS) command deletes a Control Plane Service parameter.

### Usage Guidelines

- Specify only the source port to identify the CPS
- Specify both the source AIDs, if the CPS is of type ADD 2WAY

**Category** DWDM

**Security** Provisioning

**Input Format** DLT-CPS:[<TID>]:<SRC>:<CTAG>::[:CKTID=<CKTID>][:];

**Input Example** DLT-CPS:100G:AGGR-3-1-1:1;

|                         |         |   |
|-------------------------|---------|---|
| <b>Input Parameters</b> | <SRC>   | Source AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on <a href="#">page 26-31</a> . |
|                         | <CKTID> | Circuit identification parameter can be used to filter this command                                   |

## 10.10 DLT-CRS-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Cross-Connection for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (DLT-CRS-<PATH>) command deletes a cross-connection between synchronous transport signal (STS) paths. STS paths are specified using their STS AIDs.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Note

- The fields after CTAG (including the trailing colons) are optional.

- For one-way cross-connections, the AIDs must be in the same order as originally entered; for two-way cross-connections, either order will work.
- This command does not support the deletion of multiple STS cross-connections.
- Using “&” in the AID field of this command can delete a path protection STS cross-connection.
  - The following command is used to delete a one-way selector or two-way selector and bridge with:
 

```
from points: F1, F2
to points: T1
DLT-CRS-{STS_PATH}:[<TID>]:F1&F2,T1:<CTAG>;
```
  - The following command is used to delete a one-way bridge or two-way selector and bridge with:
 

```
from point: F1
to points: T1, T2
DLT-CRS-{STS_PATH}:[<TID>]:F1,T1&T2:<CTAG>;
```
  - The following command is used to delete a one-way or two-way subtending path protection connection with:
 

```
from point: F1, F2
to points: T1, T2
DLT-CRS-{STS_PATH}:[<TID>]:F1&F2,T1&T2:<CTAG>;
```
  - The AID format in the deletion command is the same as the AID format in the retrieved response message. For example, if the output of any retrieved AID is “F1&F2,T1:CCT,STS3C”, the deletion command with the AID format (F1&F2,T1) is required to delete this cross-connection.
  - The following command is used to delete a path protection IDRI (integrated dual-ring interconnect) cross-connection:
 

```
DLT-CRS-{STS_PATH}:[<TID>]:A&B,C&D:<CTAG>;
```

A – Path on Ring X to which traffic from Ring Y is bridged  
 B – Path on Ring X to which traffic from the same ring is bridged  
 C – Path on Ring Y to which traffic from Ring X is bridged  
 D – Path on Ring Y to which traffic from the same ring is bridged

A, B, C, and D have a positional meaning. Connection type 2WAYDC is used for path protection IDRI cross-connections.
  - The following command is used to delete a path protection dual-ring interconnect (DRI) cross-connection:
 

```
DLT-CRS-{STS_PATH}:[<TID>]:A&B,C:<CTAG>;
```

A – Path on Ring X to which traffic from Ring Y is bridged  
 B – Path on Ring X to which traffic from the same ring is bridged  
 C – Traffic to and from Ring Y

A, B, C, and D have a positional meaning. Connection type 2WAYDC is used for path protection DRI cross-connections.
- All A&B AIDs in the TL1 cross-connection command are in the format of WorkingAID&ProtectAID.

- You can experience some implementation behavior problems if additional drops have been added to the connection object.
- The facility AID is only valid for slots holding the G1K-4 card.
- The virtual facility AID (VFAC) is only valid on slots holding an ML-Series card.
- CKTID is a string of ASCII characters. The maximum length of CKTID can be 48 characters. If the CKTID is EMPTY or NULL, the field will not appear.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to retrieve current values.

**Category**

Cross Connections

**Security**

Provisioning

**Input Format**

```
DLT-CRS-<PATH>:[<TID>]:<SRC>,<DST>:<CTAG>[::[CKTID=<CKTID>],
[CMDMDE=<CMDMDE>]];
```

**Input Example**

```
DLT-CRS-ST512C:VINBURG:STS-1-1-1,STS-12-1-1:102:::CKTID=XYZ,CMDMDE=NORM;
```

**Input Parameters**

|          |   |
|----------|---|
| <SRC>    | Source AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31.  |
| <DST>    | Destination AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31.   |
| <CKTID>  | Cross-connect ID. The default is Blank or None. String of ASCII characters. Maximum length is 48. If CKTID is empty or null, the CKTID field will not be displayed.   |
| <CMDMDE> | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD   | Force the system to override a state in which the command would normally be denied.   |
| • NORM   | Execute the command normally. Do not override any conditions that might make the command fail.  |

## 10.11 DLT-CRS-ETH

(Cisco ONS 15454)

The Delete Cross-Connect ETH (DLT-CRS-ETH) command deletes a cross connection between the ethernet paths. Ethernet paths are specified by using their ethernet facilities AID and SVLAN.

**Usage Guidelines**

This command deletes an ethernet connection between two or more ethernet connection end points inside an ethernet port. Specify all the ethernet connection end points associated in order to identify a unique cross-connection inside the node.

**Category**

DWDM

**Security**

Provisioning

**Input Format**

DLT-CRS-ETH:[<TID>]:<SRC>,<DST>:<CTAG>:::[CKTID=<CKTID>],[CMDMDE=<CMDMDE>]  
;

**Input Example**

DLT-CRS-ETH:VA454-22:ETHID-1-3-2-1-15,ETH-1-3-21-1-15:116:::CKTID=CIRCUIT,CMDMDE=FRCD;

**Input Parameters**

|  |  |
|--|--|
| <SRC>  | Ethernet connection identifier AIDs used to access L2 ethernet connection end point.   |
| <ul style="list-style-type: none"> <li>ALL</li> </ul>  | The ALL AID is applicable for RTRV-only commands, basically the RTRV-rr type of commands.  |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]{1-5,12-16} -{1-22}-1-{1-20}</li> </ul> | Ethernet connection end point aid for GE-XP card.  |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]{1-6,12-17} -{1-4}-1-{1-20}</li> </ul>  | Facility aid for 10GE-XP card.   |
| <DST>  | Ethernet connection identifier AIDs used to access L2 ethernet connection end point  |
| <ul style="list-style-type: none"> <li>ALL</li> </ul>  | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands.  |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]{1-5,12-16} -{1-22}-1-{1-20}</li> </ul> | Ethernet connection end point aid for GE-XP card.  |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]{1-6,12-17} -{1-4}-1-{1-20}</li> </ul>  | Facility aid for 10GE-XP card.   |
| <CKTID>  | (Optional) Circuit identification parameter contains the Common Language Circuit ID or other alias of the circuit being provisioned. May not contain blank spaces. CKTID is a string of ASCII characters. The maximum length of CKTID can be 48. cktid is a string. Default value is - "NULL". |
| <CMDMDE>   | Command Mode is used to force the system to execute a given irrespective of any standing conditions. Default value is -NORM  |

|        |  |
|--------|--|
| • FRCD | Force the system to override a state in which the command would normally be denied.          |
| • NORM | Execute the command normally. Do not override any conditions that may make the command fail. |

## 10.12 DLT-EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Equipment (DLT-EQPT) command deletes a card from the NE.

This command removes the card type and attributes that were entered for a particular slot. If any facilities are assigned, they are deleted too. The command will be denied if the card is part of a protection group or has a cross-connect endpoint.

The DLT-EQPT command can also be used to delete a shelf that is no longer used. A shelf can only be deleted if there is no equipment present or if the equipment and its attributes are not in use and can be deleted as well. Only one REPT-DBCHG message will be reported on SHELF-{1-8} in the latter case. The node controller shelf (the shelf whose shelf ID is 1) cannot be deleted.

### Usage Guidelines

To delete a card that is part of a protection group, it has to be removed from the protection group first using the ED-EQPT command.

Error conditions for deleting equipment can be:

- The error message SPLD (Equipment In Use) will be returned in the following conditions:
  - The card is in a protection group.
  - The card has a cross-connection, a data communications channel (DCC), a generic communications channel (GCC), an optical service channel (OSC), or a provisionable patchcord termination.
  - If any of its facilities is being used as a synchronization source.
- If a card is not provisioned, an error message is returned.

### Category

Equipment

### Security

Provisioning

### Input Format

DLT-EQPT:[<TID>]:<AID>:<CTAG>[:];

### Input Example

DLT-EQPT:10x10G-LC:SLOT-2:1;

### Input Parameters

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39. Identifies an equipment unit to act on. |
|-------|--|

## 10.13 DLT-FFP-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454) The Delete Facility Protection Group for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 1GISC3, 2GFC, 2GFICON, 2GISC3, 4GFC, 4GFICON, 8GFC, D1VIDEO, DV6000, DVBASI, ETRCLO, FSTE, GIGE, HDTV, ISC1, ISC3, OTU1, OTU2, OTU3, OTU4, PASSTHRU, OCH, ISC3STP1G, or ISC3STP2G (DLT-FFP-<MOD2DWDMPAYLOAD>) command deletes Y-cable protection on client facilities.

### Usage Guidelines

- The command does not support 3GVIDEO, SDSDI, HSDSI, and AUTO payloads on AR-MXP, AR-XP, and AR-XPE cards.
- The command deletes the facility protection group on that port.

### Category

Protection

### Security

Provisioning

### Input Format

DLT-FFP-<MOD2DWDMPAYLOAD>:[<TID>]:<SRC>,<DST>:<CTAG>[:::];

### Input Example

DLT-FFP-HDTV:CISCO:FAC-1-1-1,FAC-2-1-1:100;

DLT-FFP-OTU1:ROCCIANERA:VFAC-2-1-1,VFAC-1-1-1:1;

### Input Parameters

|       |  |
|-------|--|
| <SRC> | The working facility AID from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42. The AR-MXP, AR-XP, and AR-XPE cards use working facility VFAC AID.       |
| <DST> | The protecting facility AID from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42. The AR-MXP, AR-XP, and AR-XPE cards use protecting facility VFAC AID. |

## 10.14 DLT-FFP-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Facility Protection Group for OC3, OC12, OC48, OC192, OC768 (DLT-FFP-<OCN\_TYPE>) command deletes an OC-N facility protection group in a 1+1 protection scheme.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

If the protection group does not exist, an error message will be returned.

### Category

Protection

---

**Security** Provisioning

---

**Input Format** DLT-FFP-<OCN\_TYPE>:[<TID>]:<WORK>,<PROTECT>:<CTAG>[:::];

---

**Input Example** DLT-FFP-OC3:PETALUMA:FAC-2-1,FAC-1-1:1;

---

|                         |                        |   |
|-------------------------|------------------------|---|
| <b>Input Parameters</b> | <b>&lt;WORK&gt;</b>    | The working facility AID from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|                         | <b>&lt;PROTECT&gt;</b> | The protect facility AID from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |

## 10.15 DLT-FOG

(Cisco ONS 15454) The Delete Fan-Out-Group (DLT-FOG) command deletes the provisioned Fan-out-Group.

---

**Usage Guidelines**

- Deletes the provisioned FOG.
- If AID is invalid, an IIAC (Invalid AID) error message is returned.
- An error message will be returned if the unprovisioned FOG AID is entered.

---

**Category** Equipment

---

**Security** Provisioning

---

**Input Format** DLT-FOG:[<TID>]:<AID>:<CTAG>[:::];

---

**Input Examples** DLT-FOG::FOG-1-37:1;

---

|                         |                    |  |
|-------------------------|--------------------|--|
| <b>Input Parameters</b> | <b>&lt;AID&gt;</b> | Access identifier of the Fan-out-group. The ALL AIDs are not allowed for deleting the FOGs. Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39. |
|-------------------------|--------------------|--|

## 10.16 DLT-FTPSEVER

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete FTP Server (DLT-FTPSEVER) command deletes FTP server entries.

**Usage Guidelines** None.

**Category** ENE

**Security** Superuser

**Input Format** DLT-FTPSERVER:[<TID>]::<CTAG>::IPADDR=<IPADDR>;

**Input Examples**

1. DLT-FTPSERVER:[<TID>]::<CTAG>::IPADDR=10.20.30.40;
2. DLT-FTPSERVER:TID::CTAG::IPADDR="[3ffe:0501:0008:0000:0260:97ff:fe40]":efab;

|                         |          |   |
|-------------------------|----------|---|
| <b>Input Parameters</b> | <IPADDR> | Specifies the IP address of the FTP server entry to be deleted.<br>IPADDR=ALL specifies that all entries are deleted from the list. |
|-------------------------|----------|---|

## 10.17 DLT-LMP-CTRL

(Cisco ONS 15454) The Delete Link Management Protocol Control Channel (DLT-LMP-CTRL) command deletes an LMP control channel.

**Usage Guidelines** This command is only applicable on nodes that support the LMP protocol and have the LMP protocol enabled.

**Category** DWDM

**Security** Maintenance

**Input Format** DLT-LMP-CTRL:[<TID>]:<SRC>:<CTAG>;

**Input Example** DLT-LMP-CTRL:PETALUMA:CTRL-3:704;

|                         |              |  |
|-------------------------|--------------|--|
| <b>Input Parameters</b> | <SRC>        | The LMP control channel.                 |
|                         | • CTRL-ALL   | Specifies all the control channels.      |
|                         | • CTRL-{1-4} | Specifies an individual control channel. |

## 10.18 DLT-LMP-TLINK

(Cisco ONS 15454) The Delete Link Management Protocol Traffic Engineering (TE) Link (DLT-LMP-TLINK) command deletes an LMP TE link.

### Usage Guidelines

This command is only applicable on nodes that support the LMP protocol and have the LMP protocol enabled.

### Category

DWDM

### Security

Maintenance

### Input Format

DLT-LMP-TLINK:[<TID>]:<SRC>:<CTAG>;

### Input Example

DLT-LMP-TLINK:PETALUMA:TLINK-3:704;

### Input Parameters

|                 |                                  |
|-----------------|----------------------------------|
| <SRC>           | LMP TE link.                     |
| • TLINK-ALL     | Specifies all the TE links.      |
| • TLINK-{1-256} | Specifies an individual TE link. |

## 10.19 DLT-LMP-DLINK

(Cisco ONS 15454) The Delete Link Management Protocol Data Link (DLT-LMP-DLINK) command deletes an LMP data link.

### Usage Guidelines

This command is only applicable on nodes that support the LMP protocol and have the LMP protocol enabled.

### Category

DWDM

### Security

Maintenance

### Input Format

DLT-LMP-DLINK:[<TID>]:<SRC>:<CTAG>;

**Input Example** DLT-LMP-DLINK:PETALUMA:FAC-14-1-1:704;

**Input Parameters** <SRC> Access identifier from the “26.17 FACILITY” section on page 26-42.

## 10.20 DLT-LNK

(Cisco ONS 15454) The Delete Optical Link for OCH, OMS, or OTS (DLT-LNK) command deletes an optical link between two optical connection points. The optical link is specified by using the AID of the involved optical connection points.

**Usage Guidelines** None

**Category** DWDM

**Security** Provisioning

**Input Format** DLT-LNK:[<TID>]:<FROM>,<TO>:<CTAG>;

**Input Example** DLT-LNK:PENNGROVE:BAND-6-1-TX,BAND-13-1-RX:114;

**Input Parameters** <FROM> The identifier at one end of the optical link from the AID “26.4 BAND” section on page 26-21

<TO> The identifier at the other end of the optical link from the AID “26.4 BAND” section on page 26-21

## 10.21 DLT-LNKTERM

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete a Provisionable Patchcord Termination (DLT-LNKTERM) command deletes a provisionable patchcord termination that is present on a node. All termination points of a link/provisionable patchcord have to be deleted in order for the link to be deleted fully.

**Usage Guidelines** This command accepts multiple AIDs, but does not accept the ALL AID. A suitable error will be responded if the link termination does not exist.

|                         |                                   |   |
|-------------------------|-----------------------------------|---|
| <b>Category</b>         | Provisionable Patchcords          |   |
| <b>Security</b>         | Provisioning                      |   |
| <b>Input Format</b>     | DLT-LNKTERM:[<TID>]:<AID>:<CTAG>; |   |
| <b>Input Example</b>    | DLT-LNKTERM::LNKTERM-1:CTAG;      |   |
| <b>Input Parameters</b> | <AID>                             | Access identifier from the <a href="#">“26.21 LNKTERM”</a> section on page 26-53. Indicates a link (provisionable patchcord) termination on the local node. |

## 10.22 DLT-MA-CFM

(Cisco ONS 15454) The Delete Maintenance Association Connectivity Fault Management (DLT-MA-CFM) command deletes the maintenance association present on the card.

### Usage Guidelines

- The “ALL” AID is invalid for this command.
- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

|                         |  |  |
|-------------------------|--|--|
| <b>Category</b>         | Equipment  |  |
| <b>Security</b>         | Provisioning   |  |
| <b>Input Format</b>     | DLT-MA-CFM:[<TID>]:<AID>:<CTAG>:::MANAME=<MANAME>,SVLANID=<SVLANID>; |  |
| <b>Input Example</b>    | DLT-MA-CFM:454-156:SLOT-1:1:::MANAME=MANAME,SVLANID=4;               |  |
| <b>Input Parameters</b> | <AID>  | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39. |

|           |   |
|-----------|---|
| <MANAME>  | Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.   |
| <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 10.23 DLT-MD-CFM

(Cisco ONS 15454) The Delete Maintenance Domain Connectivity Fault Management (DLT-MD-CFM) command deletes the maintenance domain present on the card.

### Usage Guidelines

- The “ALL” AID is invalid for this command.
- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Equipment

### Security

Provisioning

### Input Format

DLT-MD-CFM:[<TID>]:<AID>:<CTAG>:::MDNAME=<MANAME>,LEVEL=<LEVEL>;

### Input Example

DLT-MD-CFM:454-156:SLOT-1:1:::MDNAME=MDNAME,LEVEL=5;

### Input Parameters

|          |  |
|----------|--|
| <AID>    | Access identifier from the <a href="#">“26.15 EQPT” section on page 26-39</a> .                        |
| <MDNAME> | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters. |
| <LEVEL>  | This indicates the level of the maintenance domain. The value ranges from 0 to 7.                      |

## 10.24 DLT-MDMAMAP-CFM

(Cisco ONS 15454) The Delete Maintenance Domain and Maintenance Association mapping Connectivity Fault Management (DLT-MDMAMAP-CFM) command deletes the maintenance domain and maintenance association mapping.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

|                         |  |       |  |          |   |             |   |          |   |           |   |
|-------------------------|--|-------|--|----------|---|-------------|---|----------|---|-----------|---|
| <b>Category</b>         | Equipment  |       |  |          |   |             |   |          |   |           |   |
| <b>Security</b>         | Configuration  |       |  |          |   |             |   |          |   |           |   |
| <b>Input Format</b>     | DLT-MDMAMAP-CFM:[<TID>]:<AID>:<CTAG>:::MDNAME=<MANAME>,MAPACTION=<MAPACTION>,[MANAME=<MANAME>],[SVLANID=<SVLANID>];  |       |  |          |   |             |   |          |   |           |   |
| <b>Input Example</b>    | DLT-MDMAMAP-CFM::SLOT-17:1:::MDNAME=CISCO,MAPACTION=DETACH,MANAME=MA1,SVLANID=10;  |       |  |          |   |             |   |          |   |           |   |
| <b>Input Parameters</b> | <table border="1"> <tr> <td>&lt;AID&gt;</td> <td>Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.</td> </tr> <tr> <td>&lt;MDNAME&gt;</td> <td>Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.</td> </tr> <tr> <td>&lt;MAPACTION&gt;</td> <td>Describes the mapping action while deleting the attached MAs with MDs. <ul style="list-style-type: none"> <li>• DETACH Deletes the specified MA.</li> <li>• DETACH-ALL Deletes all the MAs attached to the MD.</li> </ul> </td> </tr> <tr> <td>&lt;MANAME&gt;</td> <td>Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.</td> </tr> <tr> <td>&lt;SVLANID&gt;</td> <td>VLAN identifier. A VLAN ID is a number between 1 and 4096. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <AID>                   | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.   |       |  |          |   |             |   |          |   |           |   |
| <MDNAME>                | Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.  |       |  |          |   |             |   |          |   |           |   |
| <MAPACTION>             | Describes the mapping action while deleting the attached MAs with MDs. <ul style="list-style-type: none"> <li>• DETACH Deletes the specified MA.</li> <li>• DETACH-ALL Deletes all the MAs attached to the MD.</li> </ul>  |       |  |          |   |             |   |          |   |           |   |
| <MANAME>                | Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.  |       |  |          |   |             |   |          |   |           |   |
| <SVLANID>               | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.  |       |  |          |   |             |   |          |   |           |   |

## 10.25 DLT-MEP-CFM

(Cisco ONS 15454) The Delete Maintenance End Point Connectivity Fault Management (DLT-MEP-CFM) command deletes the maintenance end points on the port.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

**Category** Ports

**Security** Provisioning

**Input Format** DLT-MEP-CFM:[<TID>]:<AID>:<CTAG>:::SVLANID=<SVLANID>,MDNAME=<MDNAME>,MPID=<MPID>;

**Input Example** DLT-MEP-CFM::ETH-12-3-1:1::SVLANID=100,MDNAME=MD2,MPID=20;

|                         |           |   |
|-------------------------|-----------|---|
| <b>Input Parameters</b> | <AID>     | Access identifier from the “26.16 ETH” section on page 26-41.   |
|                         | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
|                         | <MDNAME>  | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters.  |
|                         | <MPID>    | Maintenance Point Identifier. It is an integer.   |

## 10.26 DLT-MIP-CFM

(Cisco ONS 15454) The Delete Maintenance Intermediate Point Connectivity Fault Management (DLT-MIP-CFM) command deletes the maintenance intermediate points on the port.

- Usage Guidelines**
- This command is applicable only to GE\_XP and 10GE\_XP cards.
  - The card should be in Layer2 over DMDM mode.

**Category** Ports

**Security** Provisioning

**Input Format** DLT-MIP-CFM:[<TID>]:<AID>:<CTAG>::VLANID=<VLANID>;

**Input Example** DLT-MIP-CFM::ETH-1-1-1:1::VLANID=2;

|                         |          |   |
|-------------------------|----------|---|
| <b>Input Parameters</b> | <AID>    | Access identifier from the “26.16 ETH” section on page 26-41.   |
|                         | <VLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 10.27 DLT-NNI-ETH

(Cisco ONS 15454) The Delete Ethernet Network-to-Network Interface (DLT-NNI-ETH) command deletes the NNI S-VLAN ID for the NNI of an L2 Ethernet port.

**Usage Guidelines**

- The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use the RTRV-ETH command to obtain the current value.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

**Category**

Ethernet

**Security**

Provisioning

**Input Format**

DLT-NNI-ETH:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::&lt;SVLANID&gt;[::];

**Input Example**

DLT-NNI-ETH:PETALUMA:ETH-1-1-1:1::1010;

**Input Parameters**

|           |   |
|-----------|---|
| <AID>     | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH” section on page 26-41</a> .  |
| <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 10.28 DLT-NNI-CHGRP

(Cisco ONS 15454) The Delete Channel Group Network-to-Network Interface (DLT-NNI-CHGRP) command deletes the NNI S-VLAN ID for the NNI of a channel group.

**Usage Guidelines**

- The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use the RTRV-ETH command to obtain the current value.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

**Category**

Channel group

**Security**

Provisioning

**Input Format**

DLT-NNI-CHGRP:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::&lt;SVLANID&gt;[::];

**Input Example** DLT-NNI-CHGRP:CISCO:CHGRP-1-1:1::1010;

|                         |           |   |
|-------------------------|-----------|---|
| <b>Input Parameters</b> | <AID>     | Access identifier from the “ <a href="#">Table 26-9CHGRP</a> ” section on <a href="#">page 26-26</a> .  |
|                         | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 10.29 DLT-QNQ-ETH

(Cisco ONS 15454) The Delete Ethernet QinQ (DLT-QNQ-ETH) command deletes the IEEE 802.1Q tunneling (QinQ) relationship between the CE-VLAN and the S-VLAN for Gigabit Ethernet uniprot provisioning associated to an L2 Ethernet port.

**Usage Guidelines** The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use the RTRV-ETH command to obtain the current value.

**Category** Ethernet

**Security** Provisioning

**Input Format** DLT-QNQ-ETH:[<TID>]:<AID>:<CTAG>::<FIRSTCEVLANID>,<LASTCEVLANID>,<SVLANID>[::];

**Input Example** DLT-QNQ-ETH:PETALUMA:ETH-1-1-1:1::10,11,100;

|                         |                 |   |
|-------------------------|-----------------|---|
| <b>Input Parameters</b> | <AID>           | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “ <a href="#">26.16 ETH</a> ” section on <a href="#">page 26-41</a> .                                |
|                         | <FIRSTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

|                |   |
|----------------|---|
| <LASTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <SVLANID>      | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 10.30 DLT-OCHCC

(Cisco ONS 15454) The Delete Optical Channel Client Connection (DLT-OCHCC) command deletes the OCH client connection.

**Usage Guidelines** None

**Category** DWDM

**Security** Provisioning

**Input Format** DLT-OCHCC:[<TID>]:<AID>:<CTAG>[:::CKTID=<CKTID>],[CMDMDE=<CMDMDE>];

**Input Example** DLT-OCHCC:VA454-22:FAC-2-1-1:116:::CKTID=\`OCHCC-1\`,CMDMDE=FRCD;

|                         |          |   |
|-------------------------|----------|---|
| <b>Input Parameters</b> | <AID>    | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
|                         | <CKTID>  | Cross-connect ID. The default is Blank or None. String of ASCII characters. Maximum length is 48. If CKTID is empty or null, the CKTID field will not be displayed.   |
|                         | <CMDMDE> | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
|                         | • FRCD   | Force the system to override a state in which the command would normally be denied.   |
|                         | • NORM   | Execute the command normally. Do not override any conditions that might make the command fail.  |

## 10.31 DLT-OCHNC

(Cisco ONS 15454) The Delete Optical Channel Network Connection (DLT-OCHNC) command deletes the OCH network connection.

**Usage Guidelines** Two OCHNC endpoints must be specified in order to identify the wavelength channel inside the node.

**Category** DWDM

**Security** Provisioning

**Input Format** DLT-OCHNC:[<TID>]:<SRC>,<DST>:<CTAG>:::[CKTID=<CKTID>],[CMDMDE=<CMDMDE>];

**Input Example** DLT-OCHNC:VA454-22:CHANWL-1-3-TX-1530.33,  
CHANWL-4-1-RX-1530.33:116::CKTID=CIRCUIT,CMDMDE=FRCD;

|                         |  |  |
|-------------------------|--|--|
| <b>Input Parameters</b> | <SRC>  | Source access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23. In two-way wavelength connection sources, both directions need to be indicated.  |
|                         | <DST>  | Destination access identifier from the <a href="#">“26.20 LINEWL”</a> section on page 26-49. In two-way wavelength connection sources, both directions need to be indicated.   |
|                         | <CKTID>  | Cross-connect ID. The default is Blank or None. String of ASCII characters. Maximum length is 48. If CKTID is empty or null, the CKTID field will not be displayed.  |
|                         | <CMDMDE>   | The parameter type is command mode, which forces the system to execute a given command regardless of any standing conditions. NORM mode is the default behavior for all commands but you can specify FRCD to force the system to override a state in which the command would normally be denied. |
|                         | <ul style="list-style-type: none"> <li>FRCD</li> </ul> | Force the system to override a state in which the command would normally be denied.  |
|                         | <ul style="list-style-type: none"> <li>NORM</li> </ul> | Execute the command normally. Do not override any conditions that might make the command fail.   |

## 10.32 DLT-OPMODE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Operating Mode (DLT-OPMODE) command deletes the operating mode created on the trunk. Operating mode cannot be deleted when ports are provisioned.

### Usage Guidelines

- Enter the trunkport on which you want to delete the operating mode
- Need not enter clientport, ctmap, or rate for deleting any operating mode.
- In protect operating modes, enter the working trunk port number to delete that operating mode.
- Client port should not be provisioned to delete any opmode.
- OPMODE is the mandatory parameter to delete any operating mode on the 100G-LC-C, 10x10G-LC, and CFP-LC Cards.
- TRUNKPORT parameter is mandatory for all the operating modes on the AR-MXP, AR-XP, and AR-XPE cards.
- TRUNKPORT parameter is optional for 100G cards and is used along with the OPMODE parameter for few operating such as Low-latency, TXP-10G, and RGN-10G.

### Category

DWDM

### Security

Provisioning

### Input Format

DLT-OPMODE[:<TID>]:<AID>:<CTAG>[::OPMODE=<OPMODE>],[TRUNKPORT=<TRUNKPORT>];

### Input Example

DLT-OPMODE:FUM:SLOT-5:1:::OPMODE=CFP-TXP;

DLT-OPMODE::10x10G-LC:SLOT-2:1:::OPMODE=RGN-10G,TRUNKPORT=2;

### Input Parameters

|              |   |
|--------------|---|
| <AID>        | SLOT Access Identifier.   |
| <OPMODE>     | Specifies the opmode created on the card provisioned. Parameter type is OPMODE. |
| • MXP-10x10G | Muxponder mode between 10X10G-LC and 100G-LC-C card.                            |
| • RGN-100G   | Regenerator mode between two 100G-LC-C cards.                                   |
| • TXP-100G   | Transponder mode on standalone 100G-LC-C card.                                  |
| • RGN-10G    | Ginsu regenerator mode among SFP+ ports on 10X10G-LC card.                      |
| • CFP-MXP    | Muxponder mode between one CFP-LC and one 100G-LC-C cards.                      |

|               |   |
|---------------|---|
| • CFP-TXP     | Transponder mode among SFP+ ports on 10X10G-LC card.    |
| • TXP-10G     | Transponder mode among SFP+ ports on 10X10G-LC card.    |
| • LOW-LATENCY | Low latency opmode is supported only on 10x10G-LC card. |
| <TRUNKPORT>   | Trunk port number of the operating mode being deleted.  |

## 10.33 DLT-QNQ-CHGRP

(Cisco ONS 15454) The Delete Channel Group QinQ (DLT-QNQ-CHGRP) command deletes the IEEE 802.1Q tunneling (QinQ) relationship between the CE-VLAN and the S-VLAN for Gigabit Ethernet uniprot provisioning associated to a channel group.

### Usage Guidelines

The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use the RTRV-ETH command to obtain the current value.

### Category

Channel Group

### Security

Provisioning

### Input Format

DLT-QNQ-CHGRP:[<TID>]:<AID>:<CTAG>::<FIRSTCEVLANID>,<LASTCEVLANID>,<SVLANID>[::];

### Input Example

DLT-QNQ-CHGRP:CISCO:CHGRP-1-1:1::10,11,100;

### Input Parameters

|                 |   |
|-----------------|---|
| <AID>           | Access identifier from the <a href="#">“26.9 CHGRP”</a> section on <a href="#">page 26-26</a> .   |
| <FIRSTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <LASTCEVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <SVLANID>       | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 10.34 DLT-REP

(Cisco ONS 15454) The Delete Resilient Ethernet Protocol (DLT-REP) command deletes the ethernet port from the Resilient Ethernet Protocol (REP) segment.

### Usage Guidelines

- This command deletes all REP configuration configured on ETH ports on the card.
- This command is applicable only to GE\_XP and 10GE\_XP cards.
- This command is only applicable if the card is in ETH-L2 card mode.
- If the port is not part of any segment, the NE generates an error message.

### Category

Ethernet

### Security

Provisioning

### Input Format

DLT-REP:[TID]:<AID>:<CTAG>[::];

### Input Example

DLT-REP:CISCO:ETH-1-1-1-1:123;

### Input Parameters

<AID> Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.

## 10.35 DLT-RMONTH-<MOD2\_RMON>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Remote Monitoring Threshold for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 4GFC, 4GFICON, 8GFC, CHGRP, ETH, FSTE, G1K-4, GFPOS, GIGE, HDLC, OCH, POS, SDSDI, HDSDI, OTU1, OTU2, OTU3, OTU4, ISC3STP1G, or ISC3STP2G (DLT-RMONTH-<MOD2\_RMON>) command deletes a threshold entry in the remote monitoring (RMON) alarm table. Because multiple thresholds can be created for a particular MONTYPE, you must specify all of the necessary parameters for the specific threshold that you want to delete.

### Usage Guidelines

The command supports the modifier SDSDI, HDSDI, OTU1, OTU2, ISC3STP1G, and ISC3STP2G. See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Category

**Security**

Provisioning

**Input Format**

```
DLT-RMONTH-<MOD2_RMON>:[<TID>]:<SRC>:<CTAG>::<MONTYPE>,,,<INTVL>:
RISE=<RISE>,FALL=<FALL>,[SAMPLE=<SAMPLE>],[STARTUP=<STARTUP>][:];
```

**Input Example**

```
DLT-RMONTH-GIGE:CISCO:FAC-2-1:1234::etherStatsOctets,,,100:RISE=1000,FALL=100
SAMPLE=DELTA,STARTUP=RISING;
```

```
DLT-RMONTH-ISC3STP1G:CISCO:VFAC-4-2-1:1234::mediaIndStatsRxLcvErrors,,,10:rise=10,fall
=1,sample=absolute;
```

**Input Parameters**

|           |  |
|-----------|--|
| <SRC>     | Source access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. AID for the facility that manages the data statistics. AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID. |
| <MONTYPE> | Monitored type. Type of RMON monitored data statistics. The parameter type is monitoring type list (ALL_MONTYPE).  |
| • AISSP   | Alarm Indication Signal Seconds—Path   |
| • ALL     | All possible values  |
| • BBE-PM  | OTN—Background Block Errors—Path Monitor Point   |
| • BBE-SM  | OTN—Background Block Errors—Section Monitor Point  |
| • BBER-PM | OTN—Background Block Error Ratio—Path Monitor Point expressed as one tenth of a percentage   |
| • BBER-SM | OTN—Background Block Error Ratio—Section Monitor Point expressed as one tenth of a percentage  |
| • BIEC    | FEC—Bit Errors Corrected   |
| • CGV     | 8B10B—Code Group Violations  |
| • CSSP    | Controlled Slip Seconds—Path (DSXM-12 FDL/T1.403 PM count)   |
| • CVCPP   | Coding Violations—CP-Bit Path  |
| • CVL     | Coding Violations—Line   |
| • CVP     | Coding Violations—Path   |
| • CVS     | Coding Violations—Section  |
| • CVV     | Coding Violations—Section  |
| • DCG     | 8B10B—Data Code Groups   |
| • ESAP    | Errored Second Type A—Path (DS3XM-12 DS1 PM count)   |
| • ESBP    | Errored Second Type B—Path (DS3XM-12 DS1 PM count)   |
| • ESCPP   | Errored Seconds—CP—Bit Path  |
| • ESL     | Errored Seconds—Line   |
| • ESNPFE  | Errored Second—Network Path (DS3XM-12 DS1 PM count)  |
| • ESP     | Errored Seconds—Path   |
| • ES-PM   | OTN—Errored Seconds—Path Monitor Point   |
| • ES-SM   | OTN—Errored Seconds—Section Monitor Point  |

|                            |   |
|----------------------------|---|
| • ESR                      | Errored Second—Ratio  |
| • ESR-PM                   | Errored Seconds Ratio—Path monitor Point expressed as one tenth of a percentage   |
| • ESR-SM                   | Errored Seconds Ratio—Section monitor Point expressed as one tenth of a percentage  |
| • ESS                      | Errored Seconds—Section   |
| • ESV                      | Errored Seconds—VT Path   |
| • etherStatsBroadcastPkts  | The total number of good packets received that were directed to a multicast address.  |
| • etherStatsCollisions     | Number of transmit packets that are collisions.   |
| • etherStatsCRCAlignErrors | The total number of packets received that have a length between 64 and 1518 octets (excluding framing bits, but including frame check sequence [FCS] octets). |
| • etherStatsDropEvents     | Number of received frames dropped at the port level.  |
| • etherStatsFragments      | The total number of packets received that were less than 64 octets.   |
| • etherStatsJabbers        | The total number of packets received that are longer than 1518 octets.  |
| • etherStatsOctets         | The total number of octets of data.   |
| • etherStatsOversizePkts   | The total number of packets received that are longer than 1518 octets.  |
| • etherStatsPkts           | The total number of packets received (including bad packets, broadcast packets, and multicast packets).   |
| • etherStatsUndersizePkts  | The total number of packets received that are less than 64 octets.  |
| • FCP                      | Failure Count—Line  |
| • FC-PM                    | OTN—Failure Count—Path Monitor Point  |
| • FC-SM                    | OTN—Failure Count—Section Monitor Point   |
| • HP-AR                    | Availability Ratio  |
| • HP-BBE                   | High-Order Path Background Block Error  |
| • HP-BBER                  | High-Order Path Background Block Error Ratio  |

| • UAS-SM            | OTN—Unavailable Second—Section Monitor Point  |
| • UASV              | Unavailable Second—VT Path  |
| • UNC-WORDS         | FEC—Uncorrectable Words   |
| • VPC               | Valid Packet Count  |
| <INTVL>             | The interval, in seconds, during which the data is sampled and compared with the rising and falling threshold. A valid value is any integer greater than or equal to 10 (seconds).  |
| <RISE>              | The rising threshold for the sampled statistics. A valid value is any integer.  |
| <FALL>              | The falling threshold. A valid value is any integer smaller than the rising threshold.  |
| <SAMPLE>            | The method of calculating the value to be compared to the thresholds. The parameter type is SAMPLE_TYPE, which describes how the data will be calculated during the sampling period.  |
| • ABSOLUTE          | Comparing directly  |
| • DELTA             | Comparing with the current value of the selected variable subtracted by the last sample   |
| <STARTUP>           | Dictates whether an event will generate if the first valid sample is greater than or equal to the rising threshold, less than or equal to the falling threshold, or both. The parameter type is STARTUP_TYPE, which indicates whether an event will be generated when the first valid sample is crossing the rising or falling threshold. |
| • FALLING           | Generates the event when the sample is smaller than or equal to the falling threshold   |
| • RISING            | Generates the event when the sample is greater than or equal to the rising threshold  |
| • RISING-OR-FALLING | Generates the event when the sample is crossing the rising threshold, or the falling threshold  |

## 10.36 DLT-ROLL-<MOD\_PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Roll on STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (DLT-ROLL-MOD\_PATH) command deletes or completes an attempted rolling operation.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Note

STS18C and STS36 are not supported for this command in this release.

### Category

Bridge and Roll

### Security

Provisioning

### Input Format

DLT-ROLL-<MOD\_PATH>:[<TID>]:<FROM>,<TO>:<CTAG>:::WHY=<WHY>;

### Input Example

DLT-ROLL-STS1:CISCO:STS-1-1-1,STS-2-1-1:6:::WHY=STOP;

### Input Parameters

|  |   |
|--|---|
| <b>&lt;FROM&gt;</b>                                      | Source access identifier from the <a href="#">“26.12 CrossConnectId1” section on page 26-31</a> (except VCM and FACILITY). It is one of the termination points (legs) of the existing cross-connection. If the existing cross-connection is one-way, this termination point (leg) should be the FROM-AID termination point. Otherwise, FROM is not significant. FROM and TO should be entered as they are entered in the ENT-CRS command. You can issue RTRV-CRS command, and use the response for the FROM and TO parameters.  |
| <b>&lt;TO&gt;</b>  | Destination access identifier from the <a href="#">“26.12 CrossConnectId1” section on page 26-31</a> (except VCM and FACILITY). It is one of the termination points (legs) of the existing cross-connection. If the existing cross-connection is one-way, this termination point (leg) should be the TO-AID termination point. Otherwise, TO is not significant. FROM and TO should be entered as they are entered in the ENT-CRS command. You can issue RTRV-CRS command, and use the response for the FROM and TO parameters. |
| <b>&lt;WHY&gt;</b>                                       | The reason for deletion. The parameter type is WHY, which is the reason for deletion.   |
| <ul style="list-style-type: none"> <li>• END</li> </ul>  | Drop the leg to be rolled; the leg is identified by the RFROM parameter in the ENT-ROLL command.  |
| <ul style="list-style-type: none"> <li>• STOP</li> </ul> | The rolling operation will be deleted and reverted to the previous configuration.   |

## 10.37 DLT-ROUTE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Route (DLT-ROUTE) command deletes static routes.

---

**Usage Guidelines**

None

---

**Category**

System

---

**Security**

Provisioning

---

**Input Format**

DLT-ROUTE:[&lt;TID&gt;]::&lt;CTAG&gt;::&lt;DESPID&gt;;

---

**Input Example**

DLT-ROUTE:CISCO::123::10.64.72.57;

---

**Input Parameters**

---

<DESPID> Destination IP address. DESPID is a string.

---

## 10.38 DLT-ROUTE-GRE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Route Generic Routing Encapsulation (DLT-ROUTE-GRE) command deletes a GRE tunnel.

---

**Usage Guidelines**

None

---

**Category**

System

---

**Security**

Provisioning

---

**Input Format**

DLT-ROUTE-GRE:[&lt;TID&gt;]::&lt;CTAG&gt;:::IPADDR=&lt;IPADDR&gt;,IPMASK=&lt;IPMASK&gt;,NSAP=&lt;NSAP&gt;;

---

**Input Example**

DLT-ROUTE-GRE:CISCO::123:::IPADDR=10.64.72.57,IPMASK=255.255.255.0,NSAP="39840F80FFFFFFF0000DDDDAA000010CFB4910200";

|                         |          |  |
|-------------------------|----------|--|
| <b>Input Parameters</b> | <IPADDR> | IP address of the tunnel endpoint. IPADDR is a string.   |
|                         | <IPMASK> | Subnet mask for the tunnel endpoint. IPMASK is a string. |
|                         | <NSAP>   | NSAP address for the tunnel endpoint. NSAP is a string.  |

## 10.39 DLT-TADRMAP

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Target Identifier Address Mapping (DLT-TADRMAP) command instructs a gateway NE to delete an entry in the TADRMAP table.

**Usage Guidelines** None

**Category** System

**Security** Provisioning

**Input Format** DLT-TADRMAP:[<TID>]::<CTAG>:::[TIDNAME=<TIDNAME>],[ADDRTYPE=<ADDRTYPE>];

**Input Example** DLT-TADRMAP:DXT::CTAG:::TIDNAME=ENENODENAME,ADDRTYPE=IPADDR;

|                         |               |  |
|-------------------------|---------------|--|
| <b>Input Parameters</b> | <TIDNAME>     | TID of the entity to be removed from the TADRMAP. TIDNAME is a string.                                     |
|                         | <ADDRTYPE>    | Specifies to remove either the IP address entry, the NSAP address entry, or both entries from the TADRMAP. |
|                         | • IP          | IP address   |
|                         | • IP-AND-NSAP | IP and NSAP addresses  |
|                         | • NSAP        | NSAP address   |

## 10.40 DLT-TRAPTABLE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Trap Table (DLT-TRAPTABLE) command deletes a Simple Network Management Protocol (SNMP) trap destination entry. Entering ALL will delete the whole table.

**Usage Guidelines** None

**Category** System

---

**Security** Provisioning

---

**Input Format** DLT-TRAPTABLE:[<TID>]:<AID>:<CTAG>;

---

**Input Examples**

1. DLT-TRAPTABLE::1.2.3.4:1;
2. DLT-TRAPTABLE::"[3ffe:0501:0008:0000:0260:97ff:fe40:efab]":1;

---

**Input Parameters**

|       |   |
|-------|---|
| <AID> | Access identifier from the <a href="#">“26.18 IPADDR”</a> section on page 26-45. IP address identifies the trap destination. Only numeric IP addresses are allowed. |
|-------|---|

---

## 10.41 DLT-TUNNEL-FIREWALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Tunnel Firewall (DLT-TUNNEL-FIREWALL) command deletes a firewall tunnel.

---

**Usage Guidelines** None

---

**Category** System

---

**Security** Provisioning

---

**Input Format** DLT-TUNNEL-FIREWALL:[<TID>]:<CTAG>::SRCADDR=<SRCADDR>, SRCMASK=<SRCMASK>,DESTADDR=<DESTADDR>,DESTMASK=<DESTMASK>;

---

**Input Example** DLT-TUNNEL-FIREWALL:TID::CTAG::SRCADDR=192.168.100.52, SRCMASK=255.255.255.0,DESTADDR=192.168.101.14,DESTMASK=255.255.255.0;

---

**Input Parameters**

|            |   |
|------------|---|
| <SRCADDR>  | Source IP address. SRCADDR is a string.       |
| <SRCMASK>  | Source mask. SRCMASK is a string.             |
| <DESTADDR> | Destination IP address. DESTADDR is a string. |
| <DESTMASK> | Destination mask. DESTMASK is a string.       |

---

## 10.42 DLT-TUNNEL-PROXY

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Tunnel Proxy (DLT-TUNNEL-PROXY) command deletes a proxy tunnel.

**Usage Guidelines** None

**Category** System

**Security** Provisioning

**Input Format** DLT-TUNNEL-PROXY:[<TID>]::<CTAG>::SRCADDR=<SRCADDR>,  
SRCMASK=<SRCMASK>,DESTADDR=<DESTADDR>,DESTMASK=<DESTMASK>;

**Input Example** DLT-TUNNEL-PROXY:TID::CTAG::SRCADDR=192.168.100.52,  
SRCMASK=255.255.255.0,DESTADDR=192.168.101.14,DESTMASK=255.255.255.0;

| Input Parameters |   |
|------------------|---|
| <SRCADDR>        | Source IP address. SRCADDR is a string.       |
| <SRCMASK>        | Source mask. SRCMASK is a string.             |
| <DESTADDR>       | Destination IP address. DESTADDR is a string. |
| <DESTMASK>       | Destination mask. DESTMASK is a string.       |

## 10.43 DLT-UNICFG

(Cisco ONS 15454, Cisco ONS 15454 M2, Cisco ONS 15454 M6) The Delete User Network Interface Configuration (DLT-UNICFG) deletes the UNI Configuration created.

**Usage Guidelines**

- Specify only source access identifier to delete UNI Configuration.

**Category** DWDM

**Security** Provisioning

**Input Format** DLT-UNICFG:[<TID>]:<src>:<CTAG>::[:];

**Input Example** DLT-UNICFG::LINE-2-3:1;

**Table 10-2** Parameter Support

| Parameter | Description  |
|-----------|--|
| <SRC>     | Source AID from the <a href="#">“26.1 ALL”</a> section on page 26-1. |

## 10.44 DLT-USER-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete User Security (DLT-USER-SECU) command deletes a user. It can only be performed by a Superuser. Privilege levels are described in the ENT-USER-SECU command.

**Usage Guidelines** This command cannot be used to delete a user that is currently logged on. For the DLT-USER-SECU command, the syntax of the <UID> is not checked. The user is deleted if the <UID> exists in the database.

**Category** Security

**Security** Superuser

**Input Format** DLT-USER-SECU:[<TID>]:<UID>:<CTAG>;

**Input Example** DLT-USER-SECU:PETALUMA:CISCO15:123;

**Input Parameters** <UID> User Identifier. Any combination of up to 20 alphanumeric characters. The minimum UID size is 2. UID is a string.

## 10.45 DLT-VCG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Delete Virtual Concatenated Group (DLT-VCG) command deletes a virtual concatenation group (VCG) object.

**Usage Guidelines** None

**Category** VCAT

---

**Security** Provisioning

---

**Input Format** DLT-VCG:[<TID>]:<SRC>:<CTAG>:::[CMDMDE=<CMDMDE>][:];

---

**Input Example** DLT-VCG:NODE1:FAC-1-1:1234:::CMDMDE=FRCD;

---

|                         |  |   |
|-------------------------|--|---|
| <b>Input Parameters</b> | <SRC>  | Source AID from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42. ML-Series cards use the VFAC AID and FC_MR-4 cards use the FAC AID.   |
|                         | <CMDMDE>   | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
|                         | <ul style="list-style-type: none"> <li>• FRCD</li> </ul> | Force the system to override a state in which the command would normally be denied.   |
|                         | <ul style="list-style-type: none"> <li>• NORM</li> </ul> | Execute the command normally. Do not override any conditions that might make the command fail.  |

---

## 10.46 DLT-VLAN

(Cisco ONS 15454) The Delete Virtual LAN (DLT-VLAN) command deletes a VLAN from the VLAN database. The VLAN database is a collection of VLANs used in an NE.

---

**Usage Guidelines**

- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

---

**Category** Ethernet

---

**Security** Provisioning

---

**Input Format** DLT-VLAN:[<TID>]:<AID>:<CTAG>[:::];

---

**Input Example** DLT-VLAN:PETALUMA:VLAN-4096:1;

|                         |                 |   |
|-------------------------|-----------------|---|
| <b>Input Parameters</b> | <AID>           | The AID is used to access the VLAN.                                       |
|                         | • VLAN-ALL      | All AIDs for the VLAN.  |
|                         | • VLAN-{0-4096} | The AID used for a single VLAN. VLAN ID 0 is reserved for untagged VLANs. |

## 10.47 DLT-WDMANS

(Cisco ONS 15454) The Delete Wavelength Division Multiplexing Automatic Node Setup (DLT-WDMANS) command deletes the automatic optical node setup application attributes.

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | <ul style="list-style-type: none"> <li>If the AID is invalid, an IIAC (Invalid AID) error message is returned.</li> <li>The ALL AID is invalid for this command.</li> </ul> |
|-------------------------|---|

|                 |      |
|-----------------|------|
| <b>Category</b> | DWDM |
|-----------------|------|

|                 |             |
|-----------------|-------------|
| <b>Security</b> | Maintenance |
|-----------------|-------------|

|                     |  |
|---------------------|--|
| <b>Input Format</b> | DLT-WDMANS:[<TID>]:<AID>:<CTAG>::<PARAM>,[<WLEN>][::]; |
|---------------------|--|

|                      |   |
|----------------------|---|
| <b>Input Example</b> | DLT-WDMANS:PENNGROVE:WDMNODE:114::VOAATT,1530.33; |
|----------------------|---|

|                         |                    |   |
|-------------------------|--------------------|---|
| <b>Input Parameters</b> | <AID>              | The AID is used to access the WDM node or a single port of the DWDM node.                     |
|                         | • WDMNODE          | Indicates the WDM node of an MSTP and accesses the NTWTYPE and DITHER WDMANS node parameters. |
|                         | • LINE             | The optical transport section port.   |
|                         | • BAND             | The optical multiplex section port.   |
|                         | • CHAN             | The optical channel port.   |
|                         | <WLEN>             | (Optional) The parameter type is OPTICAL_WLEN, which indicates the optical wavelength.        |
|                         | • 1310             | Wavelength 1310   |
|                         | • 1470             | Wavelength 1470   |
|                         | • 1490             | Wavelength 1490   |
|                         | • 1510             | Wavelength 1510   |
|                         | • 1528.77          | Wavelength 1528.77  |
| • 1529.16               | Wavelength 1529.16 |   |

|           |                    |
|-----------|--------------------|
| • 1529.55 | Wavelength 1529.55 |
| • 1529.94 | Wavelength 1529.94 |
| • 1530    | Wavelength 1530    |
| • 1530.33 | Wavelength 1530.33 |
| • 1530.73 | Wavelength 1530.73 |
| • 1531.12 | Wavelength 1531.12 |
| • 1531.51 | Wavelength 1531.51 |
| • 1531.90 | Wavelength 1531.90 |
| • 1532.29 | Wavelength 1532.29 |
| • 1532.68 | Wavelength 1532.68 |
| • 1533.07 | Wavelength 1533.07 |
| • 1533.47 | Wavelength 1533.47 |
| • 1533.86 | Wavelength 1533.86 |
| • 1534.25 | Wavelength 1534.25 |
| • 1534.64 | Wavelength 1534.64 |
| • 1535.04 | Wavelength 1535.04 |
| • 1535.43 | Wavelength 1535.43 |
| • 1535.82 | Wavelength 1535.82 |
| • 1536.22 | Wavelength 1536.22 |
| • 1536.61 | Wavelength 1536.61 |
| • 1537    | Wavelength 1537    |
| • 1537.40 | Wavelength 1537.40 |
| • 1537.79 | Wavelength 1537.79 |
| • 1538.19 | Wavelength 1538.19 |
| • 1538.58 | Wavelength 1538.58 |
| • 1538.98 | Wavelength 1538.98 |
| • 1539.37 | Wavelength 1539.37 |
| • 1539.77 | Wavelength 1539.77 |
| • 1540.16 | Wavelength 1540.16 |
| • 1540.56 | Wavelength 1540.56 |
| • 1540.95 | Wavelength 1540.95 |

| <VOAATTN>    | The value of calibrated attenuation for the VOA expressed in dBm. The range is 0.0 to +30.0. VOAATTN is a float. |
| <POWEROSC>   | WDM-ANS OSC power parameter.   |
| <NTWTYPE>    | WDM-ANS network type parameter.  |
| <CHLOSS>     | WDM-ANS channel loss parameter.  |
| <GAIN>       | WDM-ANS amplifier gain parameter.  |
| <TILT>       | WDM-ANS amplifier tilt parameter.  |
| <CHPWR>      | WDM-ANS channel power parameter.   |
| <AMPLMODE>   | WDM-ANS amplifier mode parameter.  |
| <RATIO>      | WDM-ANS Raman amplifier pump ratio parameter.  |
| <OSCCLOSS>   | WDM-ANS OSC channel loss parameter.  |
| <DITHER>     | WDM-ANS WXC dithering parameter.   |
| <TOTALPWR>   | WDM-ANS Raman amplifier total power in mW.   |
| <HIGHSLVEXP> | Span loss verification—high value.   |
| <LOWSLVEXP>  | Span loss verification—low value.  |

## 10.48 DLT-WDMSIDE

(Cisco ONS 15454) The Delete Wavelength Division Multiplexing Side (DLT-WDMSIDE) command deletes a WDM side.

### Usage Guidelines

- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

## 10.48 DLT-WDMSIDE

---

**Category** DWDM

---

**Security** Maintenance

---

**Input Format** DLT-WDMSIDE:[<TID>]:<AID>:<CTAG>[:::];

---

**Input Example** DLT-WDMSIDE:PENNGROVE:WDMSIDE-A:114;

---

**Input Parameters**

|   |   |
|---|---|
| <AID>   | The AID used to access the WDM side of a Multiservice Transport Platform (MSTP) node. |
| <ul style="list-style-type: none"> <li>• WDMSIDE-{UNKNOWN,A,B,C,D,E,F,G,H}</li> </ul> | MSTP side identifier.   |

---

## ED Commands

### Note

The terms "Unidirectional Path Switched Ring" and "UPSR" may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as "Path Protected Mesh Network" and "PPMN," refer generally to Cisco's path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

This chapter provides edit (ED) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 11.1 ED-CPS

This command can be used to modify Control Plane Service parameter. The user needs to specify only the source port to identify the CPS. If the CPS is of type ADD 2WAY , both src AIDs have to be specified

### Usage Guidelines

- If the AID is invalid, an IIAC (invalid AID) error message is returned. The following AIDs are supported:
  - CLIENT cps type support FAC and VFAC AID type.
  - TRUNK cps type support CHAN AID type.
  - ADD cps type support CHAN, PCHAN and LINEWL AID type.
- The ALL AID is invalid for this command
- In case of 1WAY, unidirectional connection, SRC and DST are single AIDs. In case of 2WAY, bidirectional connection, SRC and DST are double AIDs. However, in case of CLIENT or TRUNK cpstype, src and dst are single AID and the connection is of type 2WAY because of bidirectional ports hence this rule is not applicable.
- If the RESTTYPE is REVERT, it is required to set the REVERTMODE and SOAK parameters.
- If the RESTTYPE is REVERT, it is mandatory to set the REVERTMODE parameter as MANUAL or AUTO.

- SOAK time is mandatory if the REVERTMODE parameter is set to MANUAL or AUTO.

DWDM

**Security**

Provisioning

**Input Format**

```
ED-CPS[:<TID>]:<SRC>:<CTAG>[::<CKTID=<CKTID>],[VALMODE=<VALMODE>],[VALZONE=<VALZONE>],[VALMODESEC=<VALMODESEC>],[VALZONESEC=<VALZONESEC>],[CMDMDE=<CMDMDE>],[RESTTYPE=<RESTTYPE>],[REVERTMODE=<REVERTMODE>],[SOAK=<HH-MM-SS>][:<PST>[:<SST>]];
```

**Input Example**

```
ED-CPS::PCHAN-1-1-RX&PCHAN-1-1-TX:8:::CKTID=twoway_add-passive,VALMODE=FULL,VALZONE=GREEN;;
```

```
ED-CPS::CHAN-1-2-2:1:::RESTTYPE=REVERT,REVERTMODE=MANUAL,SOAK=00-00-10;
```

**Input Parameters**

|   |   |
|---|---|
| <SRC>   | Source access identifier from the “26.1 ALL” section on page 26-1. Listable.  |
| <ul style="list-style-type: none"> <li>• 1WAY</li> </ul>    | A unidirectional connection from a source port to a destination port. In 1WAY wavelength connection only one AID is requested   |
| <ul style="list-style-type: none"> <li>• 2WAY</li> </ul>    | A bidirectional connection between the two ports. CLIENT or TRUNK 2WAY is requested together with one AID.  |
| <CKTID>   | (Optional) Circuit identification parameter contains the Common Language Circuit ID or other alias of the circuit being provisioned. Does not contain blank spaces. CKTID is a string of ASCII characters. The maximum length of CKTID can be 48. |
| <VALMODE>   | Identifies the validation mode.   |
| <ul style="list-style-type: none"> <li>• NONE</li> </ul>    | No Optical validation is performed.   |
| <ul style="list-style-type: none"> <li>• FULL</li> </ul>    | The optical validation is performed as indicated in VALZONE parameter.  |
| <VALZONE>   | Identifies the validation operate zone.   |
| <ul style="list-style-type: none"> <li>• UNKNOWN</li> </ul> | Not evaluated   |
| <ul style="list-style-type: none"> <li>• GREEN</li> </ul>   | Margin > 3 sigma  |
| <ul style="list-style-type: none"> <li>• YELLOW</li> </ul>  | 1 < margin < 3 sigma  |
| <ul style="list-style-type: none"> <li>• ORANGE</li> </ul>  | 0 < margin < 1 sigma  |
| <ul style="list-style-type: none"> <li>• RED</li> </ul>     | -3 < margin < 0 sigma   |
| <ul style="list-style-type: none"> <li>• OUT</li> </ul>     | Margin < -3 sigma   |
| <VALMODESEC>  | Identifies the validation mode for secondary circuit  |
| <VALZONESEC>  | Identifies the validation operate zone for secondary circuit  |
| <RESTTYPE>  | Specifies the restoration type on CPS circuit or UNI configuration. Parameter type is RESTTYPE.   |

|              |   |
|--------------|---|
| • NONE       | Restore type is not specified.  |
| • RESTORE    | Only restoration is allowed. The circuit is not revertible.   |
| • REVERT     | The circuit is revertible, manually or automatically.   |
| <REVERTMODE> | Specifies the revertive mode type. Parameter type is REVERTMODE.  |
| • AUTO       | Circuit is automatically revertible after the soak time expires.  |
| • MANUAL     | Manually revert the circuit.  |
| • NONE       | Not revertible.   |
| <SOAK>       | This is the soak time specified in HH-MM-SS format. After the soak time expires, if the revertive mode is AUTO, the circuit reverts automatically. If revertive mode is MANUAL, the soak time is ignored. |

## 11.2 ED-<GIGE\_TYPE>

(Cisco ONS 15454) The Edit 10GIGE, 100GIGE, 40GIGE, or GIGE (ED-<GIGE\_TYPE>) command edits Ethernet facility attributes. See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Usage Guidelines

- The SYNCMSG, SENDDUS, ADMSSM, and ESMC parameters are applicable only for AR-MXP and AR-XP cards.
- The following parameters apply only to ED-GIGE; ADMINSTATE, LINKSTATE, MTU, FLOWCTRL, AUTONEG, HIWMRK, LOWMRK, DUPLEX, SPEED, and SOAK.
- The MACADDR parameter is applicable for ED-10GIGE only.
- The ENCAP parameter applies to 10GIGE SFP+ ports on 10x10G-LC only.
- In the CFP-TXP mode, the ED-<GIGE\_TYPE> is applicable for SOAK, SYNCMSG, and SENDDUS paramters on the CFP-LC card on the VFAC AID.
- In the CFP-TXP mode, the ED-<GIGE\_TYPE> is applicable for MTU and MACADDR paramters on the 100G-LC-C virtual ports on VCFAC AID.
- Autonegotiation parameters such as AUTONEG, DUPLEX, SPEED, ACTDUPLEX, and ACTSPEED are not applicable for 10GIGE on AR-XPE, AR-XP, AR-MXP cards and GIGE on AR-XPE card only.

ED>],[SELECTIVEAUTO=<SELECTIVEAUTO>],[SQUELCHMODE=<SQUELCHMODE>]:[<PST
>[,<SST>]];
```

**Input Example**

```
ED-GIGE:PETALUMA:FAC-1-1:123:::ADMINSTATE=DOWN,LINKSTATE=DOWN,MTU=1548,
FLOWCTRL=NONE,AUTONEG=Y,HIWMRK=485,LOWMRK=25,OPTICS=1000_BASE_LX,
DUPLEX=AUTO,SPEED=AUTO,NAME="GIGE PORT",CMDMDE=FRCD,
MACADDR=00-0E-AA-BB-CC-FF,FREQ=1550,LOSSB=XX,SOAK=32,LIENABLE=Y,
LITIMER=200:IS,AINS;
```

**Input Parameters**

|                    |  |
|--------------------|--|
| <AID>              | The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier.  |
| <ADMINSTATE>       | (Optional) The parameter type is UP_DOWN, which indicates an up or down value.   |
| • DOWN             | Down   |
| • UP               | Up   |
| <LINKSTATE>        | (Optional) The parameter type is UP_DOWN, which indicates an up or down value.   |
| • DOWN             | Down   |
| • UP               | Up   |
| <MTU>              | (Optional) Maximum transport unit. The parameter type is MTU_TYPE, which indicates the maximum transport unit used by an Ethernet card. Defaults to 9600.      |
| • 10004            | 10004. Indicates jumbo size.   |
| • 1500             | 1500   |
| • 1548             | 1548   |
| • 9600             | 9600. Indicates jumbo size.  |
| • 64               | 64   |
| • 9700             | 9700. Indicates jumbo size.  |
| <MFS>              | (Optional) Maximum frame size. The parameter type is MFS_TYPE, which is the maximum frame size used by an Ethernet card.                                       |
| • 1548             | Normal frame size  |
| • JUMBO            | Jumbo frame size   |
| <FLOWCTRL>         | (Optional) Flow control. The parameter type is FLOW, which indicates the type of flow control that has been negotiated for an Ethernet port. Defaults to NONE. |
| • ASYMMETRIC       | Asymmetric flow control  |
| • ASYMMETRIC_LOCAL | Asymmetric local flow control  |
| • NONE             | No flow control  |
| • PASSTHRU         | Passthrough flow control   |

|                    |   |
|--------------------|---|
| • SYMMETRIC        | Symmetric flow control  |
| <AUTONEG>          | (Optional) Autonegotiation. The parameter is ON_OFF, which disables or enables an attribute. Defaults to Y. |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| <HIWMRK>           | (Optional) High water mark. HIWMRK is an integer. Defaults to 485.  |
| <LOWMRK>           | (Optional) Low water mark. LOWMRK is an integer. Defaults to 25.  |
| <OPTICS>           | (Optional) The parameter is OPTICS, which indicates the type of Gigabyte Ethernet optics being used.        |
| • 1000_BASE_CX     | 1000BaseCX  |
| • 1000_BASE_LX     | 1000BaseLX  |
| • 1000_BASE_SX     | 1000BaseSX  |
| • 1000_BASE_T      | 1000BaseT   |
| • 1000_BASE_ZX     | 1000BaseZX  |
| • 100_BASE_BX_D    | 100BaseBX_D   |
| • 100_BASE_BX_U    | 100BaseBX_U   |
| • 100_BASE_FX      | 100BaseFX   |
| • 100_BASE_LX      | 100BaseLX   |
| • CWDM_1470        | Coarse wavelength division multiplexing (CWDM) 1470   |
| • CWDM_1490        | CWDM 1490   |

| • ITU_100G_1558_98 | ITU-100G 1558.98  |
| • ITU_100G_1559_79 | ITU-100G 1559.79  |
| • ITU_100G_1560_61 | ITU-100G 1560.61  |
| • UNKNOWN          | Unknown   |
| • UNPLUGGED        | Unplugged   |
| <EXDUPLEX>         | (Optional) The parameter is ETHER_DUPLEX, which indicates duplex mode. Defaults to AUTO.  |
| • AUTO             | Auto mode   |
| • FULL             | Full mode   |
| • HALF             | Half mode   |
| <SELECTIVEAUTO>    | (Optional) Selective auto-negotiation. The parameter is Y or N (enable or disable auto-negotiation) This indicates selective auto-negotiation of EXPSPEED and EXPDUPLEX only. |
| • Y                | Enable selective auto-negotiation.  |
| • N                | Disable selective auto-negotiation.   |
| <EXSPEED>          | (Optional) The parameter type is ETHER_SPEED, which indicates Ethernet speed. Defaults to AUTO.   |
| • 100_MBPS         | 100 Megabits per second   |
| • 10_GBPS          | 10 Gigabits per second  |
| • 10_MBPS          | 10 Megabits per second  |
| • 1_GBPS           | 1 Gigabit per second  |
| • 40_GBPS          | 40 Gigabit per second   |
| • AUTO_FDX         | Enable auto negotiation with full duplex  |
| • AUTO             | Automatic   |
| <NAME>             | (Optional) Port name. NAME is a string. Defaults to NULL. Maximum length is 32 characters.  |

|           |  |
|-----------|--|
| <CMDMDE>  | (Optional) Command mode. Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in Unlocked-Enabled or Locked-Disabled, AutomaticInService service states. |
| • FRCD    | Force the system to override a state where the command would normally be denied.   |
| • NORM    | Execute the command normally. Do not override any conditions that might make the command fail.   |
| <MACADDR> | (Optional) MACADDR is a string. Defaults to NULL. Maximum length is 18 characters.   |
| <FREQ>    | (Optional) The parameter type is OPTICAL_WLEN, which indicates the optical wavelength.   |

| • TEN-GE-ER   | 10 GE extended range                            |
| • TEN-GE-LR   | 10 GE long range                                |

|              |   |
|--------------|---|
| • TEN-GE-SR  | 10 GE short range   |
| • ULH        | Reach ULH   |
| • VSR        | Reach VSR   |
| • VX         | Reach VX  |
| • ZX         | Reach ZX  |
| <SOAK>       | (Optional) Locked-AutomaticInService to Unlocked transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer. Defaults to 32.                           |
| <LIENABLE>   | (Optional) Enable or Disable link integrity timer. Takes either Y or N. Value Y enables the LITIMER and value N disables LITIMER.<br><br>By default LITIMER is enabled.<br><br><b>Note</b> The LIENABLE parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454. |
| <LITIMER>    | (Optional) Link integrity timer duration in the range between 200 ms and 10000 ms in multiples on 100 ms.<br><br><b>Note</b> The LITIMER parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.  |
| <ENCAP>      | (Optional) Frame encapsulation type. The parameter type is ENCAP, which is the frame encapsulation type.  |
| • GFP        | GFP frame mode.   |
| • HDLC       | HDLC frame mode.  |
| • WIS        | WIS mode.   |
| • CBR        | CBR mapping mode.   |
| • GMP        | GMP mapping mode. Supported only on 8GFC on 10x10G-LC card.   |
| • TRP        | Transparent mapping mode.   |
| <OSC>        | To enable or disable the OSC on the port.<br><br><b>Note</b> The OSC parameter is supported only on 15454-M2 and 15454-M6.  |
| <PAUSEFRAME> | To Enable or Disable the Pause Frame.   |
| • Y          | Enable  |
| • N          | Disable   |
| <CLNTDST>    | Client distance in kilometers.  |
| • 10KM       | 10 kilometers.  |
| • 30KM       | 30 kilometers.  |
| <SYNCSMSG>   | Indicates if the BITS facility supports synchronization status message. Default is ON (Y). The parameter type is EXT_RING, which indicates whether the ring supports the extended K1/K2/K3 protocol.  |
| • N          | The ring does not support the extended K1/K2/K3 protocol.   |
| • Y          | The ring does support the extended K1/K2/K3 protocol.   |

|               |   |
|---------------|---|
| <SENDDUS>     | The facility will send the DUS (Do not use for Synchronization) value as the SSM for that facility. The parameter type is ON_OFF, which disables or enables an attribute.               |
| • N           | Disable an attribute.   |
| • Y           | Enable an attribute.  |
| <ADMSSM>      | SSM selectable value. It will only appear when SSM is disabled. Defaults to STU. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET. |
| • DUS         | Do Not Use For Synchronization  |
| • PRS         | Primary Reference Source, Stratum 1 Traceable   |
| • RES         | Reserved For Network Synchronization Use  |
| • SMC         | SONET Minimum Clock Traceable   |
| • ST2         | Stratum 2 Traceable   |
| • ST3         | Stratum 3 Traceable   |
| • ST3E        | Stratum 3E Traceable  |
| • ST4         | Stratum 4 Traceable   |
| • STU         | Synchronized, Traceability Unknown  |
| • TNC         | Transit Node Clock (2nd Generation Only)  |
| <ESMC>        | By enabling ESMC, Gige port can be enabled as timing reference  |
| • N           | Disable   |
| • Y           | Enable  |
| <PAUSEFRAME>  | To Enable or Disable the Pause Frame.   |
| • N           | Disable   |
| • Y           | Enable  |
| <PST>         | (Optional) Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.  |
| • IS          | In service  |
| • OOS         | Out of service  |
| <SST>         | (Optional) Secondary state. Defaults to AINS. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| • AINS        | Automatic in service  |
| • DSBLD       | Disabled  |
| • LPBK        | Loopback  |
| • MEA         | Mismatch of equipment and attributes  |
| • MT          | Maintenance mode  |
| • OOG         | Out of group  |
| • SWDL        | Software downloading  |
| • UAS         | Unassigned  |
| • UEQ         | Unequipped  |
| <SQUELCHMODE> | Shuts down the far-end laser in response to certain defects.  |

|           |                    |
|-----------|--------------------|
| • NONE    | Transparent        |
| • SQUELCH | Squelch is enabled |

## 11.3 ED-<MOD1FCPAYLOAD>

(Cisco ONS 15454) The Edit 1GISC3, 2GISC3, D1VIDEO, DV6000, ESCON, ETRCLO, HDTV or PASSTHRU (ED-<MODFCPAYLOAD>) command edits the attributes related to the Fibre Channel (FC) facility. The state IS,AINS is not supported on the FC port. See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Usage Guidelines

The user can change the service state of a facility to locked-enabled or disabled, only if all the following conditions are met

- The facility is not sourcing a synchronization clock
- The facility's DCC is disabled.
- The facility is not part of a protection group
- The facility is not supporting cross-connects

**Note** The conditions stipulated can be overridden by using the CMDMDE=FRCD option. The FRCD option will immediately remove the facility from service with no consideration for orderly interruption. Do not use in scripts or automated batch operations.

**Note** To completely disable the CMDMDE=FRCD option, provision the <to be defined parameter> in the NE defaults to FALSE. This will prevent the FRCD option from being honored by the NE. The NE default parameter can be provisioned using the CTC only.

**Note**

- The port parameters VIZ, LINKRCVRY, DISTEXTN, AUTODETECTION, LINKCREDITS, and MFS can be edited only if the port state is OOS,MT or OOS,DSBLD.
- The port parameters AUTODETECTION, LINKCREDITS, and MFS can be edited only if distance extension is enabled (set to B2B).
- When 1GFICON and 2GFICON payloads are provisioned, distance extension=B2B is the default and only valid setting. Setting distance extension (using the ED-nGFICON command) to any other setting will be denied with an error message, for example, Provisioning Rules Failed.

Provisioning

**Input Format**

```
ED-<MOD1FCPAYLOAD>:[<TID>]:<AID>:<CTAG>:::[LINKRCVRY=<LINKRCVRY>],[DISTEXTN= <DISTANCE_EXTENSION>],[AUTODETECTION=<AUTO_DETECTION>],[LINKCREDITS=<CREDITS>],[FASTSWITCH=<FASTSWITCH>],[MFS=<MAXFRMSIZE>],[NAME=<NAME>],[CMDMDE=<CMDMDE>],[SOAK=<SOAK>],[FREQ=<FREQ>],[LOSSB=<LOSSB>],[SQUELCH=<SQUELCH>],[ENCAP=<ENCAP>][:<PST>[:<SST>]];
```

**Input Example**

```
ED-1GFC:PETALUMA:FAC-6-1:1:::LINKRCVRY=Y,DISTEXTN=NONE,AUTODETECTION=Y,LINKCREDITS=10,FASTSWITCH=,MFS=2148,NAME="FC PORT",CMDMDE=NORM,SOAK=32,FREQ=1550,LOSSB=LR-1:OOS,MT;
```

**Input Parameters**

|                 |   |
|-----------------|---|
| <AID>           | Access identifier from the “26.17 FACILITY” section on page 26-42.  |
| <LINKRCVRY>     | Link recovery. The parameter type is ON_OFF, which disables or enables an attribute. <ul style="list-style-type: none"> <li>• N Disable an attribute.</li> <li>• Y Enable an attribute.</li> </ul>  |
| <DISTEXTN>      | Distance extension. It can be set to Buffer-to-Buffer (B2B) Credit Management state or None. <p><b>Note</b> B2B and link recovery are mutually exclusive. You cannot turn on both B2B and link recovery at the same time.</p> <p>The parameter type is DISTANCE_EXTENSION (distance extension).</p> <ul style="list-style-type: none"> <li>• B2B Buffer to buffer flow control</li> <li>• NONE No distance extension</li> </ul>     |
| <AUTODETECTION> | Autodetection. Turns autodetection on or off. The parameter type is ON_OFF, which disables or enables an attribute. <ul style="list-style-type: none"> <li>• N Disable an attribute</li> <li>• Y Enable an attribute</li> </ul>   |
| <LINKCREDITS>   | Number of link credits. If autodetection is set to off, the value of the link credits will be used to configure the hardware. LINKCREDITS is an integer.  |
| <FASTSWITCH>    | When Fast Switchover is ON switchover must be less than 150 ms. In case of client Failure Fast Switchover is not supported. This switch time is achieved for fc1g/fc2g/fc4g traffic for trunk failures and manual/forced/lockout switches only. The parameter type is ON_OFF, which disables or enables an attribute. <ul style="list-style-type: none"> <li>• N Disable an attribute.</li> <li>• Y Enable an attribute.</li> </ul> |
| <MFS>           | Maximum frame size. MFS is an integer.  |
| <NAME>          | String. User-assigned port name.  |

|           |   |
|-----------|---|
| <CMDMDE>  | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD    | Force the system to override a state where the command would normally be denied.  |
| • NORM    | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <SOAK>    | OOS-AINS to IS transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer.   |
| <FREQ>    | The parameter type is OPTICAL_WLEN, which is the optical wavelength.  |
| • 1310    | Wavelength 1310   |
| • 1470    | Wavelength 1470   |
| • 1490    | Wavelength 1490   |
| • 1510    | Wavelength 1510   |
| • 1528.77 | Wavelength 1528.77  |
| • 1529.16 | Wavelength 1529.16  |
| • 1529.55 | Wavelength 1529.55  |
| • 1529.94 | Wavelength 1529.94  |
| • 1530    | Wavelength 1530   |
| • 1530.33 | Wavelength 1530.33  |
| • 1530.73 | Wavelength 1530.73  |
| • 1531.12 | Wavelength 1531.12  |
| • 1531.51 | Wavelength 1531.51  |
| • 1531.90 | Wavelength 1531.90  |
| • 1532.29 | Wavelength 1532.29  |
| • 1532.68 | Wavelength 1532.68  |
| • 1533.07 | Wavelength 1533.07  |
| • 1533.47 | Wavelength 1533.47  |
| • 1533.86 | Wavelength 1533.86  |
| • 1534.25 | Wavelength 1534.25  |
| • 1534.64 | Wavelength 1534.64  |
| • 1535.04 | Wavelength 1535.04  |
| • 1535.43 | Wavelength 1535.43  |
| • 1535.82 | Wavelength 1535.82  |
| • 1536.22 | Wavelength 1536.22  |
| • 1536.61 | Wavelength 1536.61  |
| • 1537    | Wavelength 1537   |
| • 1537.40 | Wavelength 1537.40  |

|           |                    |
|-----------|--------------------|
| • 1537.79 | Wavelength 1537.79 |
| • 1538.19 | Wavelength 1538.19 |
| • 1538.58 | Wavelength 1538.58 |
| • 1538.98 | Wavelength 1538.98 |
| • 1539.37 | Wavelength 1539.37 |
| • 1539.77 | Wavelength 1539.77 |
| • 1540.16 | Wavelength 1540.16 |
| • 1540.56 | Wavelength 1540.56 |
| • 1540.95 | Wavelength 1540.95 |
| • 1541.35 | Wavelength 1541.35 |
| • 1541.75 | Wavelength 1541.75 |
| • 1542.14 | Wavelength 1542.14 |
| • 1542.35 | Wavelength 1542.35 |
| • 1542.54 | Wavelength 1542.54 |
| • 1542.94 | Wavelength 1542.94 |
| • 1543.33 | Wavelength 1543.33 |
| • 1543.73 | Wavelength 1543.73 |
| • 1544.13 | Wavelength 1544.13 |
| • 1544.53 | Wavelength 1544.53 |
| • 1544.92 | Wavelength 1544.92 |
| • 1545.32 | Wavelength 1545.32 |
| • 1545.72 | Wavelength 1545.72 |
| • 1546.12 | Wavelength 1546.12 |
| • 1546.52 | Wavelength 1546.52 |
| • 1546.92 | Wavelength 1546.92 |
| • 1547.32 | Wavelength 1547.32 |
| • 1547.72 | Wavelength 1547.72 |
| • 1548.12 | Wavelength 1548.12 |
| • 1548.51 | Wavelength 1548.51 |
| • 1548.92 | Wavelength 1548.92 |
| • 1549.32 | Wavelength 1549.32 |
| • 1549.71 | Wavelength 1549.71 |
| • 1550    | Wavelength 1500    |
| • 1550.12 | Wavelength 1550.12 |
| • 1550.52 | Wavelength 1550.52 |
| • 1550.92 | Wavelength 1550.92 |

| • 1597.62       | Wavelength 1597.62                                     |
| • 1598.04       | Wavelength 1598.04                                     |
| • 1598.47       | Wavelength 1598.47                                     |
| • 1598.89       | Wavelength 1598.89                                     |
| • 1599.32       | Wavelength 1599.32                                     |
| • 1599.75       | Wavelength 1599.75                                     |
| • 1600.06       | Wavelength 1600.06                                     |
| • 1601.03       | Wavelength 1601.03                                     |
| • 1601.46       | Wavelength 1601.46                                     |
| • 1601.88       | Wavelength 1601.88                                     |
| • 1602.31       | Wavelength 1602.31                                     |
| • 1602.74       | Wavelength 1602.74                                     |
| • 1603.17       | Wavelength 1603.17                                     |
| • 1603.60       | Wavelength 1603.60                                     |
| • 1604.03       | Wavelength 1604.03                                     |
| • 1610          | Wavelength 1610  |
| • USE-TWL1      | Use Tunable Wavelength 1                               |
| <LOSSB>         | The parameter type is REACH, which is the reach value. |
| • 100GBASE-LR4  | 100GBASE-LR4   |
| • 100GBASE-SR10 | 100GBASE-SR10  |
| • 40GBASE-FR    | 40GBASE-FR   |
| • 40GBASE-LR4   | 40GBASE-LR4  |
| • 40GBASE-SR4   | Reach supported on 40GIGE payload on CFP-LC card.      |
| • 4I1-9D1F      | 4I1-9D1F   |

|               |  |
|---------------|--|
| • C4S1-2D1    | C4S1-2D1   |
| • FE-BX       | FE-BX  |
| • FX          | FX   |
| • GE-BX       | GE-BX  |
| • GE-EX       | GE-EX  |
| • LX-10       | LX-10  |
| • TEN-GE-LRM  | TEN-GE-LRM   |
| • TEN-GE-ZR   | TEN-GE-ZR  |
| • VSR2000-3R2 | VSR2000-3R2  |
| • AUTOPROV    | Autoprovisioning   |
| • CX          | Reach CX   |
| • CX1         | Reach CX1  |
| • DX          | Reach DX   |
| • HX          | Reach HX   |
| • I1          | Reach I1   |
| • IR-1        | Reach IR-1   |
| • IR-2        | Reach IR-2   |
| • L1          | Reach L1   |
| • L2          | Reach L2   |
| • L3          | Reach L3   |
| • LR-1        | Reach LR-1   |
| • LR-2        | Reach LR-2   |
| • LR-3        | Reach LR-3   |
| • LX          | Reach LX   |
| • S1          | Reach S1   |
| • S2          | Reach S2   |
| • SR          | Reach SR   |
| • SR-1        | Reach SR-1   |
| • SX          | Reach SX   |
| • T           | Reach T  |
| • TEN-GE-ER   | 10 GE extended range   |
| • TEN-GE-LR   | 10 GE long range   |
| • TEN-GE-SR   | 10 GE short range  |
| • VX          | Reach VX   |
| • ZX          | Reach ZX   |
| <ENCAP>       | Specifies the mapping mode on the port provisioned. Parameter Type is ENCAP. |
| • CBR         | CBR mapping mode.  |
| • GFP         | GFP mapping mode.  |
| • GMP         | GMP mapping mode is supported only on 8GFC on 10x10G-LC card.                |
| • TRP         | Transparent mapping mode.  |

|         |   |
|---------|---|
| <PST>   | Primary state. the parameter type is PST, which indicates the current overall service condition of an entity. |
| • IS    | In service  |
| • OOS   | Out of service  |
| <SST>   | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS  | Automatic in service  |
| • DSBLD | Disabled  |
| • LPBK  | Loopback  |
| • MEA   | Mismatch of equipment and attributes  |
| • MT    | Maintenance mode  |
| • OOG   | Out of group  |
| • SWDL  | Software downloading  |
| • UAS   | Unassigned  |
| • UEQ   | Unequipped  |

## 11.4 ED-<MOD1FICONPAYLOAD>

(Cisco ONS 15454) The Edit 1GFICON, 2GFICON, 4GFICON, or ESCON (ED-<MOD1FICONPAYLOAD>) command edits the attributes related with the fiber connectivity (FICON) payload facility. The state IS,AINS is not supported on the FICON port.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Category** Ports

**Security** Provisioning

**Input Format** ED-<MOD1FICONPAYLOAD>[:<TID>]:<AID>:<CTAG>[:::LINKRCVRY=<LINKRCVRY>],[DISTEXTN=<DISTANCE\_EXTENSION>],[AUTODETECTION=<AUTO\_DETECTION>],[LINKCREDITS=<CREDITS>],[FASTSWITCH=<FASTSWITCH>],[MFS=<MAXFRMSIZE>],[NAME=<NAME>],[CMDMDE=<CMDMDE>],[SOAK=<SOAK>],[FREQ=<FREQ>],[LOSSB=<LOSSB>],[SQUELCH=<SQUELCH>],[SQUELCHMODE=<SQUELCHMODE>],[ENCAP=<ENCAP>][:<PST>[:<SST>]];

**Input Example** ED-1GFICON:PETALUMA:FAC-6-1:1:::LINKRCVRY=Y,DISTEXTN=NONE,AUTODETECTION=Y, LINKCREDITS=10, FASTSWITCH=,MFS=2148,NAME="FCPORT",CMDMDE=CMDMDE,SOAK=32,FREQ=1550,LOSSB=LR-1:OOS,MT;

| Input Parameters |   |
|------------------|---|
| <AID>            | Access identifier from the “26.17 FACILITY” section on page 26-42.  |
| <LINKRCVRY>      | Link recovery. The parameter type is ON_OFF, which disables or enables an attribute.  |
| • N              | Disable an attribute  |
| • Y              | Enable an attribute   |
| <DISTEXTN>       | Distance extension. It can be set to B2B Credit Management state or None.   |
|                  | <b>Note</b> B2B and link recovery are mutually exclusive. You cannot turn on both B2B and link recovery at the same time.   |
|                  | The parameter type is DISTANCE_EXTENSION (distance extension).  |
| • B2B            | Buffer-to-buffer flow control   |
| • NONE           | No distance extension   |
| <AUTODETECTION>  | Autodetection. Turns autodetection on or off. The parameter type is ON_OFF, which disables or enables an attribute.   |
| • N              | Disable an attribute  |
| • Y              | Enable an attribute   |
| <LINKCREDITS>    | Number of link credits. If autodetection is set to off the value of the link credits will be used to configure the hardware. LINKCREDITS is an integer.   |
| <FASTSWITCH>     | When Fast Switchover is ON switchover must be less than 150 ms. In case of client Failure Fast Switchover is not supported. This switch time is achieved for fc1g/fc2g/fc4g traffic for trunk failures and manual/forced/lockout switches only. The parameter type is ON_OFF, which disables or enables an attribute.   |
| • N              | Disable an attribute.   |
| • Y              | Enable an attribute.  |
| <MFS>            | Maximum frame size. MFS is an integer.  |
| <NAME>           | String. User-assigned port name.  |
| <CMDMDE>         | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD           | Force the system to override a state where the command would normally be denied.  |
| • NORM           | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <SOAK>           | OOS-AINS to IS transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer.   |

|           |  |
|-----------|--|
| <FREQ>    | The parameter type is OPTICAL_WLEN (optical wavelength). |
| • 1310    | Wavelength 1310  |
| • 1470    | Wavelength 1470  |
| • 1490    | Wavelength 1490  |
| • 1510    | Wavelength 1510  |
| • 1529.16 | Wavelength 1529.16                                       |
| • 1529.55 | Wavelength 1529.55                                       |
| • 1529.94 | Wavelength 1529.94                                       |
| • 1530    | Wavelength 1530  |
| • 1530.33 | Wavelength 1530.33                                       |
| • 1530.73 | Wavelength 1530.73                                       |
| • 1531.12 | Wavelength 1531.12                                       |
| • 1531.51 | Wavelength 1531.51                                       |
| • 1531.90 | Wavelength 1531.90                                       |
| • 1532.29 | Wavelength 1532.29                                       |
| • 1532.68 | Wavelength 1532.68                                       |
| • 1533.07 | Wavelength 1533.07                                       |
| • 1533.47 | Wavelength 1533.47                                       |
| • 1533.86 | Wavelength 1533.86                                       |
| • 1534.25 | Wavelength 1534.25                                       |
| • 1534.64 | Wavelength 1534.64                                       |
| • 1535.04 | Wavelength 1535.04                                       |
| • 1535.43 | Wavelength 1535.43                                       |
| • 1535.82 | Wavelength 1535.82                                       |
| • 1536.22 | Wavelength 1536.22                                       |
| • 1536.61 | Wavelength 1536.61                                       |
| • 1537    | Wavelength 1537  |
| • 1537.40 | Wavelength 1537.40                                       |
| • 1537.79 | Wavelength 1537.79                                       |
| • 1538.19 | Wavelength 1538.19                                       |
| • 1538.58 | Wavelength 1538.58                                       |
| • 1538.98 | Wavelength 1538.98                                       |
| • 1539.37 | Wavelength 1539.37                                       |
| • 1539.77 | Wavelength 1539.77                                       |
| • 1540.16 | Wavelength 1540.16                                       |
| • 1540.56 | Wavelength 1540.56                                       |
| • 1540.95 | Wavelength 1540.95                                       |
| • 1541.35 | Wavelength 1541.35                                       |
| • 1541.75 | Wavelength 1541.75                                       |
| • 1542.14 | Wavelength 1542.14                                       |
| • 1542.35 | Wavelength 1542.35                                       |

|           |                    |

## 11.5 ED-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 1GISC3, 2GFC, 2GFICON, 2GISC3, 4GFC, 4GFICON, 5GIB, 8GFC, D1VIDEO, DV6000, DVBASI, ESCON, ETRCLO, GIGE, HDTV, ISC1, ISC3, OTU3, OTU4, PASSTHRU, AUTO, 3GVIDEO, SDSDI , HSDSI, OTU1, OTU2, ISC3STP1G, or ISC3STP2G (ED-<MOD2DWDMPAYLOAD>) command edits the operating parameters for a dense wavelength division multiplexing (DWDM) client facility. This command creates GCC with a given GCCRATE.

### Usage Guidelines

The command supports the modifier AUTO, 3GVIDEO, SDSDI , HSDSI, OTU1, ISC3STP1G, and ISC3STP2G. See [Table 28-1 on page 28-1](#) for other supported modifiers by platform.

- Squelchmode applicable for SDSDI, HSDSI, 3GVIDEO, ISC3STG1G, ISC3STP2G, and ESCON are NONE and SQUELCH.
- Squelchmode applicable for 1GFC, 2GFC, 4GFC in NON-TXP mode and 8GFC are NONE, NOS and SQUELCH.
- Squelchmode for 4GFC client in TXP modes are NONE and NOS.
- The only allowed Squelchmode for 4GFC trunk is SQUELCH
- Video RATES - NTSC/PAL can be set based on ANSI/ETSI chassis types respectively for HSDSI and 3GVIDEO.
- Video RATE is not applicable for other video payloads - SDSDI, ESCON, ISC3STP1G, and ISC3STP2G.
- Video RATE is also not applicable for 1G/2G/3G/4G/8G-FC payloads.
- Editing the working port will automatically edit the protect port.
- OVRCLK is the new parameter added and applicable for OTU2 payload on SFP+ ports of 10x10G-LC only.

### Input Format

```
ED-<MOD2DWDMPAYLOAD>[:<TID>]:<AID>:<CTAG>[:::LINKRCVRY=<LINKRCVRY>],[DIS
TEXTN=<DISTANCE_EXTENSION>],[AUTODETECTION=<AUTO_DETECTION>],[LINKCRED
ITS=<CREDITS>],[FASTSWITCH=<FASTSWITCH>],[MFS=<MAXFRMSIZE>],[NAME=<NAME
>],[CMDMDE=<CMDMDE>],[SOAK=<SOAK>],[FREQ=<FREQ>],[LOSSB=<LOSSB>],[SQUELC
H=<SQUELCH>],[SQUELCHMODE=<SQUELCHMODE>],[ENCAP=<ENCAP>][:<PST>[:<SST>]]
;
```

### Input Example

```
ED-SDSDI::VFAC-3-1-1:1:::SQUELCHMODE=SQUELCH;
```

**Input Parameters**

|               |   |
|---------------|---|
| <AID>         | Access identifier from the “26.1 ALL” section on page 26-1. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
| <SQUELCHMODE> | Shuts down the far-end laser in response to certain defects.  |
| • DISABLE     | Disable   |
| • AIS         | AIS   |
| • G-AIS       | Generis AIS   |
| • ODU-AIS     | ODU AIS   |
| • SQUELCH     | Squelch is enabled  |
| • NONE        | Transparent   |
| • NOS         | Disable in FC payloads.   |
| <ENCAP>       | Specifies the mapping mode on the port provisioned. Parameter Type is ENCAP.  |
| • CBR         | CBR mapping mode.   |
| • GFP         | GFP mapping mode.   |
| • GMP         | GMP mapping mode is supported only on 8GFC on 10x10G-LC card.   |
| • TRP         | Transparent mapping mode.   |

## 11.6 ED-<MOD\_PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VC12, VC3, VT1, or VT2 (ED-<MOD\_PATH>) command edits the attributes associated with synchronous transport signal (STS) and Virtual Tributary (VT) paths.

**Usage Guidelines**

The SFBER, SDBER, RVRTV, and RVTM parameters only apply to path protection configurations at the STS path level and ONS 15454 VT paths.

SFBER and SDBER also apply to the VT path level on the ONS 15454 when the ONS 15454 has an XC-VXC-10G card.

SWPDIP does not apply to the VT path level (VT1 and VT2).

The path trace message is a 64 character string including the terminating CR (carriage return) and LF (line feed) that is transported in the J1 byte of the SONET STS Path overhead. Both the EXPTRC and TRC string can be provisioned by user with up to 62 character string.

The EXPTRC indicates that the contents of the expected incoming path trace are provisioned by the user. The TRC indicates the contents of the outgoing path trace message. The INCTRC indicates the contents of the incoming path trace message.

Path trace has three modes: OFF, MANUAL, and AUTO. The path trace mode defaults to OFF. The MANUAL mode performs the comparison of the received string with the user-entered expected string. The AUTO mode performs the comparison of the present received string with an expected string that is set to a previously received string. If there is a mismatch, a TIM-P alarm is raised. When the path trace is in OFF mode, there is no path trace processing, and all of the alarm and state conditions are reset.

The TACC parameter edits an existing single STS or VT and changes it to a test access point. When an editing command on TACC is executed, it assigns the STS or VT for the first two-way connection and STS+1 as the second two-way connection. For single facility access digroup (FAD) test access, only a single STS/VT is used for the test access point (TAP) creation. For more information on TACC, refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide*.

J1 is implemented on the DS1/DS1N, DS3E/DS3NE, DS3XM, EC1, OC3, OC12-4, OC48AS, and OC192 cards.

DS3/DS3N, OC12, OC48, E100, and E1000 cards do not support path trace.

DS1/DS1N, DS3E/DS3NE, and DS3XM support both TRC and EXPTRC in the ED-STIS-PATH command.

EC1, OC3, OC48AS, and OC192 only support EXPTRC in the ED-STIS-PATH command.

**Note**

Each TL1 command must be less than or equal to 255 characters. Any command larger than 255 characters must be split into multiple commands. For example, if you use the ED-<MOD\_PATH> command to edit the J1 EXPTRC/TRC message, path protection attributes, and TACC attributes and the command exceeds 255 characters, the command will not be processed. You must use multiple ED-<MOD\_PATH> commands instead.

The following actions will produce error messages:

- Sending this command to edit SFBER, SDBER, RVRTV, or RVTM for the non-path protection STS path.
- Sending this command to edit the EXPTRC string with the AUTO path trace mode (TRCMODE=AUTO).
- Sending this command to edit TRC on any card other than DS3(N)E, DS1(N), and DS3XM cards, will return the “TRC-not allowed for monitor paths. Incorrect card type” error message.
- Sending this command to edit both TACC and any other attribute(s) will return the “Parameters Not compatible” error message.
- Sending this command to edit TACC on an AID with cross-connections will return the “STS in Use” error message.

**Note**

- TACC creation will be denied on the protect ports/cards for 1:1, 1:N, and 1+1 protection.
- The VFAC AID is only valid on slots containing an ML-Series card. TACC is not supported for the ML-Series cards.
- After bidirectional line switched ring (BLSR) switching, provisioning of the J1 trace string or trace mode is not allowed on the protection path.
- TACC creation is allowed on protection channel access (PCA) for two-fiber and four-fiber BLSR.
- TACC is not supported on G1000, MXP\_2.5G\_10G, TXP\_MR\_10G, ML1000-2, and ML100T-12 cards.
- HOLDOFFTIMER is not specific to a path. It is applicable to the path protection selector. If HOLDOFFTIMER is changed on one path associated with the selector, the HOLDOFFTIMER of the other path associated with the same selector is also changed.
- The test set physical connection set up through ED-T3/DS1/STS1/VT1 of the DS3XM-12 card is only allowed on the physical front ports (PORTED ports, Ports 1 to 12), which are the monitoring ports.

- The monitoring test access ports follow the common rules for the other cards. For example, with an ED-T3 command on Port 2 (FAC-6-2) that has a TACC number (8), the next port, Port 3 (FAC-6-3) is used as the monitoring point also. The RTRV-T3 on both Port 2 and Port 3 return the same TACC number (8) used to monitor the cross-connection end (A-B). The last port (Port 12) is not allowed to set up a physical connection with the test set because there is no next available port to be the monitoring port.
  - The TACC disconnection (DISC-TACC) and the test access mode change command (CHG-TACC) follow the same requirement as in the previous step, but it is applied on the ported ports of the DS3XM-12 card.
  - The test access connection setup command (CONN-TACC) has monitored points, which can be portless ports. This command is applied on both ported and portless ports of the DS3XM-12 card.
- If the entity has a TACC connection, the entity is not allowed to have ported or portless STS/VT cross-connection (or circuit) provisioning on the DS3XM-12 card.
  - The cross-connects on the DS3i-N-12 card will be STS3c width, but the individual STS 1s within the 3C will be accessible. To edit the path attributes, use the ED-STIS1 command with the FAC AID. For TACC creation, use the ED-STIS3C command because the TACC path width (like the cross-connect) has to be 3C on the DS3i-N-12 card. In this case, you are creating a new entity (TAP) on the DS3i-N-12 card that has to be of 3C width. On the DS3i-N-12 card, the ED0STS command can be used either with STS1 or STS3C depending on the parameter to be modified.
  - For the selector path on a BLSR, the SWPDIP is not editable and is always in the ON state. If you attempt to edit SWPDIP (for the selector path on a BLSR), an error message will be returned.
  - You can create an STS1 or VT1.5 single TAP on the DS3XM-12 card's last ported port (12) if the bandwidth is available on that port.
  - Optical ports do not support MAN and AUTO trace mode because they are not capable of raising AIS on TIM-P. Use the AUTO-NO-AIS or MAN-NO-AIS trace mode on optical ports.
  - Sending the ED-VT1/VT2 commands over ONS 15454 path protection paths to edit SFBER or SDBER (when the ONS 15454 does not have an XC-VXC-10G cross-connect) will return the "Invalid Operation For The XCON" error message.
  - Sending the ED-VT1/VT2 commands to edit SDBER with 1E-9 will return the "Out Of Range" error message.

```

**Input Parameters**

|                |   |
|----------------|---|
| <AID>          | Access identifier from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31.   |
| <SFBER>        | Signal failure threshold. Applies only to path protection. Defaults to 1E-4. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.   |
| • 1E-3         | SFBER is 1E-3.  |
| • 1E-4         | SFBER is 1E-4.  |
| • 1E-5         | SFBER is 1E-5.  |
| <SDBER>        | Signal degrade threshold. Applies only to path protection. 1E-9 is not allowed for VT-level/LO paths. Defaults to 1E-6. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.  |
| • 1E-5         | SDBER is 1E-5.  |
| • 1E-6         | SDBER is 1E-6.  |
| • 1E-7         | SDBER is 1E-7.  |
| • 1E-8         | SDBER is 1E-8.  |
| • 1E-9         | SDBER is 1E-9.  |
| <RVRTV>        | Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. Only applies to path protection. The parameter type is ON_OFF, which disables or enables an attribute. |
| • N            | Does not revert service to original line after restoration.   |
| • Y            | Reverts service to original line after restoration.   |
| <RVTM>         | Revertive time. RVTM is not allowed to be set while RVRTV is N. Only applies to path protection. The parameter type is REVERTIVE_TIME (revertive time).   |
| • 0.5 to 12.0  | Revertive time is 0.5 to 12.0 minutes.  |
| <SWPDIP>       | On/off switch for path protection payload defect level switching. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). For the selector path on a BLSR, SWPDIP is not editable and always ON. Defaults to N. The parameter type is ON_OFF, which disables or enables an attribute.  |
| • N            | Disable an attribute.   |
| • Y            | Enable an attribute.  |
| <HOLDOFFTIMER> | Hold off timer for path protection dual-ring interconnect (DRI). Values must be within 0 and 10000 ms (0 to 10 seconds), with increments of 100 ms. Defaults to “existed value.” HOLDOFFTIMER is an integer.  |

|               |   |
|---------------|---|
| <EXPTRC>      | Expected path trace content. Indicates the expected path trace message (J1) contents. EXPTRC is any 64-character ASCII string, including the terminating CR (carriage return) and LF (line feed). Applicable to STS-level paths in SONET (STS <sub>n</sub> ). Applicable to VT-level paths for the DS3XM-12 and CE-100T-8 card on the ONS 15454. Defaults to 64 null characters. EXPTRC is a string.    |
| <TRC>         | The path trace message to be transmitted. The trace byte (J1) continuously transmits a 64-byte, fixed length ASCII string, one byte at a time. A null value defaults to the network element (NE) transmitting 62 null characters (hex 00) and CR and LF. Applicable to STS-level paths in SONET (STS <sub>n</sub> ). Applicable to VT-level paths for the DS3XM-12 and CE-100T-8 card on the ONS 15454. |
| <TRCMODE>     | Path trace mode. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). Defaults to the OFF mode.<br><br>The parameter type is TRCMODE (trace mode).  |
| • AUTO        | Use the previously received path trace string as the expected string. Not applicable to muxponder (MXP) and transponder (TXP) cards.  |
| • AUTO-NO-AIS | Use the previously received path trace string as the expected string and do not turn on the alarm indication signal (AIS) and remote defect indication (RDI) if TIM-P is detected.  |
| • MAN         | Use the provisioned expected string as the expected string.   |
| • MAN-NO-AIS  | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
| • OFF         | Turn off path trace capability. Nothing will be reported.   |
| <TRCFORMAT>   | Path trace format. Only 64-byte is supported. Defaults to 64-byte. The parameter type is TRCFORMAT (trace format).  |
| • 64-BYTE     | 64 byte trace message   |
| <TACC>        | TAP number within a range of 0 to 999. Indicates whether the digroup being provisioned is to be used as a test access digroup. When TACC is 0 (zero), the TAP is deleted. TACC is an integer.   |
| <TAPTYPE>     | TAP type. Defaults to DUA The parameter type is TAPTYPE, which is the test access point type.   |
| • DUAL        | Dual FAD  |
| • SINGLE      | Single FAD  |
| <CMDMDE>      | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states.                       |
| • FRCD        | Force the system to override a state where the command would normally be denied.  |
| • NORM        | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <PST>         | Primary state. Defaults to IS. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • IS          | In service  |

|         |   |
|---------|---|
| • OOS   | Out of service  |
| <SST>   | Secondary state. Defaults to AINS. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS  | Automatic in service  |
| • DSBLD | Disabled  |
| • LPBK  | Loopback  |
| • MEA   | Mismatch of equipment and attributes  |
| • MT    | Maintenance mode  |
| • OOG   | Out of group  |
| • SWDL  | Software downloading  |
| • UAS   | Unassigned  |
| • UEQ   | Unequipped  |

## 11.7 ED-<MOD\_RING>

(Cisco ONS 15454) The Edit Bidirectional Line Switched Ring (ED-<MOD\_RING>) command edits the BLSR attributes.

### Usage Guidelines

The RVRTV, RVTM, SRVRTV, SRVTM, NODEID, and RINGID attributes can be edited for the four-fiber BLSR.

The RVRTV, RVTM, NODEID, and RINGID attributes can be edited for the two-fiber BLSR.

The following actions will produce errors:

- If the system fails on getting IOR, a SROF (Get IOR Failed) error message is returned.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- If the BLSR does not exist, a SRQN (BLSR Does Not Exist) error message is returned.
- The SROF (Facility Not Provisioned) or (Cannot Access BLSR) error message will be returned for an invalid query.
- The SRQN (BLSR Edition Failed) error message is returned for an invalid edition query.
- Sending this command to modify SRVRTV or SRVTM on a two-fiber BLSR will return an IDNV (Invalid Data For 2F-BLSR) error message.
- Sending this command to modify the nodeid with invalid data will return an IIAC (Invalid NodeId) error message.
- Sending this command to change the ringid into invalid data will return an IIAC (Invalid RingId) error message.
- Changing the BLSR nodeid with a duplicated ID will return a SROF (Cannot Set NodeId) error message.
- Changing the BLSR ringid with a duplicated ID will return a SROF (Cannot Set RingId) error message is returned.

#### Note

- The ALL AID is invalid for this command.

- The list AID format is supported for Software Release 4.6 and later.

**Category**

BLSR

**Security**

Provisioning

**Input Format**

```
ED-<MOD_RING>:[<TID>]:<AID>:<CTAG>:::[RINGID=<RINGID>],[NODEID=<NODEID>],
[RVRTV=<RVRTV>],[RVTM=<RVTM>],[SRVRTV=<SRVRTV>],[SRVTM=<SRVTM>][:];
```

**Input Example**

```
ED-BLSR:PETALUMA:BLSR-43:123::RINGID=43,NODEID=3,RVRTV=Y,RVTM=2.0,
SRVRTV=Y,SRVTM=5.0;
```

**Input Parameters**

|          |   |
|----------|---|
| <AID>    | Access identifier from the “ <a href="#">26.3 AidUnionId1</a> ” section on page 26-21. Identifies the BLSR of the NE. The ALL and BLSR-ALL AIDs are not allowed for editing BLSRs.  |
| <RINGID> | The BLSR ID of the NE up to six characters. Valid characters are A–Z and 0–9. RINGID is a string.   |
| <NODEID> | The BLSR node ID of the NE. NODEID ranges from 0 to 31. It is an integer.   |
| <RVRTV>  | <p>Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N.</p> <p>The parameter type is ON_OFF, which disables or enables an attribute.</p> <ul style="list-style-type: none"> <li>N Does not revert service to original line after restoration.</li> <li>Y Reverts service to original line after restoration.</li> </ul> |
| <RVTM>   | <p>Revertive time. RVTM is not allowed to be set while RVRTV is N. The parameter type is REVERTIVE_TIME (revertive time).</p> <ul style="list-style-type: none"> <li>0.5 to 12.0 Revertive time is 0.5 to 12.0 minutes.</li> </ul>  |
| <SRVRTV> | <p>The span revertive mode for four-fiber BLSR only. The parameter type is ON_OFF, which disables or enables an attribute.</p> <ul style="list-style-type: none"> <li>N Disable an attribute.</li> <li>Y Enable an attribute.</li> </ul>  |
| <SRVTM>  | <p>The span revertive time for four-fiber BLSR only. SRVTM is not allowed to be set while SRVRTV is N. The parameter type is REVERTIVE_TIME (revertive time).</p> <ul style="list-style-type: none"> <li>0.5 to 12.0 Revertive time is 0.5 to 12.0 minutes.</li> </ul>  |

## 11.8 ED-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit OC3, OC12, OC48, OC192, or OC768 (ED-<OCN\_TYPE>) command edits the attributes (for example, service parameters) and status of an OC-N facility. Allowable states for a facility are Out Of Service (OOS), Out Of Service and Automatic In Service (OOS-AINS), Out Of Service and Maintenance (OOS-MT), and In Service (IS). See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Usage Guidelines

- Squelchmode applicable for OC3/OC12/OC48 payloads are NONE, G-AIS and SQUELCH
- The OPRNOMINAL parameter is supported only by optical card types that support Optical PM. The following cards support OPRNOMINAL: OC3-8, MRC-12, MRC-12-2.5G, MRC-4-2.5G, OC192-XFP, CTX-2500, CTX, OC192-4, OC48-16, OC192-4-DWDM, ASAP-4.
- The data communications channel (DCC) transmit side is bridged to both working and protect in a 1+1 protection scheme. On the receive side, the active one is selected for DCC. The DCC is provisioned on the working port only in a 1+1 protection scheme.
- All lines in a 1+1 BLSR must have the same mode. If you change the mode of a line that is in a 1+1 BLSR, an error message will be returned.
- You cannot directly transition a facility from IS to OOS-MA,DSBLD service state. You can transition a facility to OOS-MA,DSBLD service state from any state except OOS-MA,MT. To transition a facility from OOS-MA,MT to OOS-MA,DSBLD service state, all the following conditions must be met:
  - The facility is not sourcing a synchronization clock
  - The facility's DCC is disabled
  - The facility is not part of a protection group
  - The facility is not supporting cross-connects
  - The facility is not using overhead connections or overhead terminations (such as express orderwire, local orderwire, or user data channels [UDCs])

**Note** The conditions stipulated can be overridden by using the CMDMDE=FRCD option. The FRCD option will immediately remove the facility from service (except for IS to OOS-MA,DSBLD transition) with no consideration for orderly interruption.

**Note** OSI parameters are not supported in Release 9.0 and 9.1.

Ports

### Security

Provisioning

**Input Format**

```
ED-<OCN_TYPE>:[<TID>]:<AID>:<CTAG>:::[DCC=<DCC>],[AREA=<AREA>],[SYNCSMSG=<SYNCSMSG>],[SENDDUS=<SENDDUS>],[PJMON=<PJMON>],[SFBER=<SFBER>],[SDBER=<SDBER>],[MODE=<MODE>],[SOAK=<SOAK>],[OSPF=<OSPF>],[LDCC=<LDCC>],[NAME=<NAME>],[CMDMDE=<CMDMDE>],[EXPTRC=<EXPTRC>],[TRC=<TRC>],[TRCMODE=<TRCMODE>],[TRCFORMAT=<TRCFORMAT>],[ADMSSM=<ADMSSM>],[SENDDUSFF=<SENDDUSFF>],[AISONLPBK=<AISONLPBK>],[FOREIGNFEND=<FOREIGNFAREND>],[FOREIGNIP=<FOREIGNIPADDRESS>],[FREQ=<FREQ>],[LOSSB=<LOSSB>],[OPRNOMINAL=<OPRNOMINAL>],[OSISDCC=<OSISDCC>],[OSILDCC=<OSILDCC>],[OSIROUTER=<OSIROUTER>],[PORTMODE=<PORTMODE>],[SQUELCHMODE=<SQUELCHMODE>]:[<PST>],[<SST>]]
```

**Input Example**

```
ED-OC48:ROCCIANERA:VFAC-12-1-1:1:::SQUELCHMODE=G-AIS;
```

**Input Parameters**

|  |  |
|--|--|
| <AID>  | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.   |
| <DCC>  | Indicates whether or not the SDCC is to be used. Identifies the SDCC connection of the port. The parameter type is ON_OFF, which disables or enables an attribute.         |
| <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>                       | <ul style="list-style-type: none"> <li>Disable an attribute.</li> <li>Enable an attribute.</li> </ul>  |
| <AREA>   | The area ID and shows up only if the DCC is enabled. AREA is a string.   |
| <SYNCSMSG>   | Synchronization status message. The parameter type is EXT_RING, which indicates whether the ring supports the extended K1/K2/K3 protocol.                                  |
| <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>                       | <ul style="list-style-type: none"> <li>The ring does not support the extended K1/K2/K3 protocol.</li> <li>The ring does support the extended K1/K2/K3 protocol.</li> </ul> |
| <SENDDUS>  | The facility will send the DUS (Do not use for Synchronization) value as the SSM for that facility. The parameter type is ON_OFF, which disables or enables an attribute.  |
| <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>                       | <ul style="list-style-type: none"> <li>Disable an attribute.</li> <li>Enable an attribute.</li> </ul>  |
| <PJMON>  | Identifies an OC-N port PJMON. PJMON is an integer. It defaults to 0 (zero). Set a valid STS number of the optical port.   |
|  | <b>Note</b> The PJMON number displayed in TL1 interface does not correspond to the PJVC4MON number in CTC, but instead corresponds to the STS number of the optical port.  |
| <SFBER>  | Signal failure threshold. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.   |
| <ul style="list-style-type: none"> <li>• 1E-3</li> <li>• 1E-4</li> <li>• 1E-5</li> </ul> | <ul style="list-style-type: none"> <li>SFBER is 1E-3.</li> <li>SFBER is 1E-4.</li> <li>SFBER is 1E-5.</li> </ul>   |
| <SDBER>  | Signal degrade threshold. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.   |
| <ul style="list-style-type: none"> <li>• 1E-5</li> </ul>                                 | <ul style="list-style-type: none"> <li>SDBER is 1E-5.</li> </ul>   |

|          |   |
|----------|---|
| • 1E-6   | SDBER is 1E-6.  |
| • 1E-7   | SDBER is 1E-7.  |
| • 1E-8   | SDBER is 1E-8.  |
| • 1E-9   | SDBER is 1E-9.  |
| <MODE>   | This parameter identifies the facility's operating mode. The mode could be either SONET or SDH.   |
| • SDH    | SDH/ETSI mode   |
| • SONET  | SONET/ANSI mode   |
| <MUX>    | BLSR extension byte (supported only on the OC48AS card). MUX cannot be configured if: <ul style="list-style-type: none"> <li>• The card is SONET and the media type is SDHT.</li> <li>• The card has an orderwire or user data channel (UDC) connection.</li> <li>• This is a protect line and the working line has an orderwire or UDC connection.</li> </ul> <p>The parameter type is MUX_TYPE, which is the BLSR extension type.</p> |
| • E2     | E2 byte (orderwire)   |
| • F1     | F1 byte (user)  |
| • K3     | K3 byte   |
| • Z2     | Z2 byte   |
| <SOAK>   | OOS-AINS to IS transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). Defaults to 32. SOAK is an integer.   |
| <OSFP>   | The Open Shortest Path First discovery. Defaults to Y. The parameter type is ON_OFF, which disables or enables an attribute.  |
| • N      | Disable an attribute.   |
| • Y      | Enable an attribute.  |
| <LDCC>   | The LDCC connection on the port. Defaults to N. the parameter type is EXT_RING, which indicates if the ring supports the extended K1/K2/K3 protocol.  |
| • N      | The ring does not support the extended K1/K2/K3 protocol.   |
| • Y      | The ring does support the extended K1/K2/K3 protocol.   |
| <NAME>   | NAME is a user-specified string to identify the facility. It defaults to NULL. Its maximum length is 32 characters.   |
| <CMDMDE> | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states.   |
| • FRCD   | Force the system to override a state where the command would normally be denied.  |

|   |   |
|---|---|
| <ul style="list-style-type: none"> <li>• NORM</li> </ul>        | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <EXPTRC>  | Expected section trace content. Indicates the expected section trace message (J1) contents. EXPTRC is any 64-character ASCII string, including the terminating CR (carriage return) and LF (line feed). Applicable to STS-level paths in SONET (STS <sub>n</sub> ). Applicable to VT-level paths for the DS3XM-12 card on the ONS 15454. Defaults to NULL. EXPTRC is a string.              |
| <TRC>   | The section trace message to be transmitted. The trace byte (J1) continuously transmits a 64-byte, fixed length ASCII string, one byte at a time. A null value defaults to the NE transmitting 62 null characters (hex 00) and CR and LF. Applicable to STS-level paths in SONET (STS <sub>n</sub> ). Applicable to VT-level paths for the DS3XM-12 card on the ONS 15454. TRC is a string. |
| <TRCMODE>   | Section trace mode. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). Defaults to MAN. The parameter type is TRCMODE (trace mode).   |
| <ul style="list-style-type: none"> <li>• AUTO</li> </ul>        | Use the previously received section trace string as the expected string. Not applicable to MXP or TXP cards.  |
| <ul style="list-style-type: none"> <li>• AUTO-NO-AIS</li> </ul> | Use the previously received section trace string as the expected string and do not turn on AIS and RDI if TIMP is detected.   |
| <ul style="list-style-type: none"> <li>• MAN</li> </ul>         | Use the provisioned expected string as the expected string.   |
| <ul style="list-style-type: none"> <li>• MAN-NO-AIS</li> </ul>  | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIMP is detected.  |
| <ul style="list-style-type: none"> <li>• OFF</li> </ul>         | Turn off section trace capability. Nothing will be reported.  |
| <TRCFORMAT>   | Trace message size. The parameter type is TRCFORMAT (trace format).   |
| <ul style="list-style-type: none"> <li>• 1-BYTE</li> </ul>      | 1 byte trace message  |
| <ul style="list-style-type: none"> <li>• 16-BYTE</li> </ul>     | 16 byte trace message   |
| <ul style="list-style-type: none"> <li>• 64-BYTE</li> </ul>     | 64 byte trace message   |
| <ADMSSM>  | SSM selectable value. It will only appear when SSM is disabled. Defaults to STU. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET.   |
| <ul style="list-style-type: none"> <li>• DUS</li> </ul>         | Do Not Use For Synchronization  |
| <ul style="list-style-type: none"> <li>• PRS</li> </ul>         | Primary Reference Source, Stratum 1 Traceable   |
| <ul style="list-style-type: none"> <li>• RES</li> </ul>         | Reserved For Network Synchronization Use  |
| <ul style="list-style-type: none"> <li>• SMC</li> </ul>         | SONET Minimum Clock Traceable   |
| <ul style="list-style-type: none"> <li>• ST2</li> </ul>         | Stratum 2 Traceable   |
| <ul style="list-style-type: none"> <li>• ST3</li> </ul>         | Stratum 3 Traceable   |
| <ul style="list-style-type: none"> <li>• ST3E</li> </ul>        | Stratum 3E Traceable  |
| <ul style="list-style-type: none"> <li>• ST4</li> </ul>         | Stratum 4 Traceable   |
| <ul style="list-style-type: none"> <li>• STU</li> </ul>         | Synchronized, Traceability Unknown  |
| <ul style="list-style-type: none"> <li>• TNC</li> </ul>         | Transit Node Clock (2nd Generation Only)  |
| <SENDDUSFF>   | The parameter type is ON_OFF, which disables or enables an attribute.   |

|             |  |
|-------------|--|
| • N         | Disable an attribute.  |
| • Y         | Enable an attribute.   |
| <AISONLPBK> | The parameter type is AIS_ON_LPBK, which indicates if AIS is sent on a loopback. |
| • FACILITY  | AIS is sent on facility loopbacks.   |
| • ALL       | AIS is sent on all loopbacks.  |
| • OFF       | AIS is not sent on loopbacks.  |
| • TERMINAL  | AIS is sent on terminal loopbacks.   |
| <FREQ>      | The parameter type is OPTICAL_WLEN (optical wavelength).                         |
| • 1310      | Wavelength 1310  |
| • 1470      | Wavelength 1470  |

| <FOREIGNFEND> | Indicates whether the far-end NE on the DCC is a foreign NE. The parameter type is ON_OFF, which disables or enables an attribute. |
| • N           | Disable an attribute.  |
| • Y           | Enable an attribute.   |
| <FOREIGNIP>   | The IP address of the far-end NE on the DCC. Used only if FOREIGNFEND is Y. FOREIGNIP is a string.                                 |

|                      |  |
|----------------------|--|
| <OPRNOMINAL>         | Reads the current raw optical receive power and sets the raw OPR value as the nominal optical receive power.   |
| • N                  | Not Supported.   |
| • Y                  | Sets the OPR.  |
| OSISDCC              | Indicates whether or not the OSI SDCC is to be used. Identifies the SDCC connection of the port. The parameter type is ON_OFF, which disables or enables an attribute. |
| • Y                  | Enable an attribute.   |
| • N                  | Disable an attribute.  |
| OSILDCC              | Indicates whether or not the OSI LDCC is to be used. Identifies the SDCC connection of the port. The parameter type is ON_OFF, which disables or enables an attribute. |
| • Y                  | Enable an attribute.   |
| • N                  | Disable an attribute.  |
| OSIROUTER            | The OSI virtual router number in the range of 1 to 3 for 15454.  |
| <PORTMODE>           | Describes the termination mode of each interface on the OTU2-XP card.  |
| • DWDM-LINE          | Line terminating mode.   |
| • DWDM-SECTION       | Section terminating mode.  |
| • DWDM-TRANS-AIS     | Transparent mode AIS.  |
| • DWDM-TRANS-SQUELCH | Transparent mode squelch.  |
| • 10GLANWAN-SQUELCH  | 10G LAN to WAN Squelch.  |
| <SQUELCHMODE>        | Shuts down the far-end laser in response to certain defects  |
| • NONE               | Transparent  |
| • SQUELCH            | Squelch is enabled   |
| • AIS                | Generic AIS  |
| • DISABLE            | Squelch is disabled  |
| <PST>                | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.  |
| • IS                 | In service   |
| • OOS                | Out of service   |
| <SST>                | Secondary state. Defaults to AINS. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| • AINS               | Automatic in service   |
| • DSBLD              | Disabled   |
| • LPBK               | Loopback   |
| • MEA                | Mismatch of equipment and attributes   |
| • MT                 | Maintenance mode   |
| • OOG                | Out of group   |
| • SWDL               | Software downloading   |
| • UAS                | Unassigned   |
| • UEQ                | Unequipped   |

## 11.9 ED-ALS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Automatic Laser Shutdown (ED-ALS) command is used to modify the ALS attributes of an OC-N facility and all the facilities that support the ALS feature. For transponder and muxponder cards, this command is used to modify the ALS parameter of the OC48 and OC192 ports.

### Usage Guidelines

The ED-ALS command is applicable for the following:

- For all non-OTU payloads on 100G-LC-C, 10x10G-LC, and CFP-LC cards on the CHAN AID.
- Payload interfaces for OTU enabled ports.

### Category

Ports

### Security

Provisioning

### Input Format

```
ED-ALS[:<TID>]:<AID>:<CTAG>[:::ALSMODE=<ALSMODE>],[ALSRCINT=<ALSRCINT>],[ALSRCPW=<ALSRCPW>],[OSRI=<OSRI>],[:];
```

### Input Example

```
ED-ALS::CHAN-1-1-1:100:::ALSMODE=AUTO,ALSRCINT=130,ALSRCPW=80.1;
```

### Input Parameters

|  |   |
|--|---|
| <SRC>  | Access identifier from the <a href="#">“26.2 AidUnionId” section on page 26-13</a> .  |
| <ALSMODE>  | ALS is enabled or disabled. The parameter type is ALS_MODE, which is the working mode for automatic laser shutdown.                                       |
| <ul style="list-style-type: none"> <li>• AUTO</li> <li>• DISABLED</li> <li>• MAN</li> <li>• MAN-RESTART</li> </ul> | <ul style="list-style-type: none"> <li>Automatic</li> <li>Disabled</li> <li>Manual</li> <li>Manual restart for test</li> </ul>                            |
| <ALSRCINT>   | ALS recovery interval. The range is 60 to 300 seconds. ALSRCINT is an integer.  |
| <ALSRCPW>  | ALS recovery pulse width. The range is 2.0 to 100.00 seconds, in increments of 100 ms. ALSRCWP is a float.  |
| <OSRI>   | (Optional) OSRI enabled or disabled. Present only on a port where the safety is supported. The parameter type is ON_OFF (disable or enable an attribute). |
| <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>   | <ul style="list-style-type: none"> <li>Disable an attribute.</li> <li>Enable an attribute.</li> </ul>   |

## 11.10 ED-APC

(Cisco ONS 15454) The Edit Amplification Power Control (ED-APC) command is used to modify the APC application attributes. The default value for an optional parameter is the NE default value. The value might not be the current value for the parameter. Use a retrieve command to retrieve the current value.

**Usage Guidelines** None

**Category** DWDM

**Security** Provisioning

**Input Format** ED-APC[:<TID>]:<AID>:<CTAG>[:<ROLE>][:APCENABLE=<APCENABLE>][:];

**Input Example** ED-APC:PENNGROVE:WDMSIDE-A:CTAG:::APCENABLE=N;

|                         |  |  |
|-------------------------|--|--|
| <b>Input Parameters</b> | <WDMSIDE>  | The AID is used to access the WDM side of an MSTP node.  |
|                         | <ul style="list-style-type: none"> <li>WDMSIDE-{UNKNOWN,A, B,C,D,E,F,G,H}</li> </ul> | MSTP side identifier   |
|                         | <ROLE>   | The role the unit is playing in the protection group.  |
|                         | <ul style="list-style-type: none"> <li>PROT</li> <li>WORK</li> </ul>                 | The entity is the protection unit in the protection group.<br>The entity is the working unit in the protection group.      |
|                         | <APCENABLE>  | Enable or disable the APC application. Default is N. The parameter type is ON_OFF, which disables or enables an attribute. |
|                         | <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>                       | Disable an attribute.<br>Enable an attribute.  |

## 11.11 ED-AUTO

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Auto (ED-AUTO) command is used to retrieve the AUTO port provisioned. Port bandwidth changes to OC3/OC12/OC48/1GE as per the incoming signal when auto sense is enabled. Default is OC48 when auto sense is disabled.

**Usage Guidelines** None

**Category** DWDM

|                         |  |   |
|-------------------------|--|---|
| <b>Security</b>         | Provisioning   |   |
| <b>Input Format</b>     | ED-AUTO:[<TID>]:<AID>:<CTAG>::: AUTOSENSE=<AUTOSENSE>; |   |
| <b>Input Example</b>    | ED-AUTO:CISCO:VFAC-2-1-1:CTAG:::AUTOSENSE=Y;           |   |
| <b>Input Parameters</b> | <AID>  | The AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID. |
|                         | <AUTOSENSE>  | Specifies if auto sense must be enabled or disabled.  |
|                         | • Y  | Enables auto sense.                                   |
|                         | • N  | Disables auto sense.                                  |

## 11.12 ED-BITS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Building Integrated Timing Supply (ED-BITS) command edits the building integrated timing supply (BITS) reference attributes.

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | The SYNC-BITS1 and SYNC-BITS2 AIDs can be used to set the BITS-OUT port state. For a BITS facility, 64 k and 6 MHz are only applicable to ON. The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value. |
|-------------------------|--|

|                 |                 |
|-----------------|-----------------|
| <b>Category</b> | Synchronization |

|---------------------|---|

|                      |  |
|----------------------|--|
| <b>Input Example</b> | <b>Cisco ONS 15454</b><br><br>ED-BITS:SONOMA:BITS-2:779:::LINECDE=AMI,FMT=E1-MF,SYNCSMSG=N,<br>,SABIT=BYTE-5,BITSFAC=E1,ADMSSM=G811:UNLOCKED |
|----------------------|--|

## Input Parameters

|              |  |
|--------------|--|
| <AID>        | Access identifier from the “26.6 BITS” section on page 26-22.  |
| <LINECODE>   | The parameter type is LINE_CODE (line code).   |
| • AMI        | Line code value is AMI.  |
| • B3ZS       | Bipolar with three-zero substitution   |
| • B6ZS       | Line code value is B6ZS.   |
| • B8ZS       | Line code value is B8ZS.   |
| • JBZS       | JBZS   |
| • ZBTSI      | ZBTSI  |
| <FMT>        | Digital signal frame format. The parameter type is FRAME_FORMAT, which is the frame format for a T1 port.  |
| • AUTOPROV   | AUTOPROV   |
| • CBIT       | C-BIT line type applies to the DS3XM and DS3E cards.   |
| • D4         | Frame format is D4.  |
| • DS2 FRAMED | DS2 FRAMED   |
| • E2 FRAMED  | E2 FRAMED  |
| • E3-FRAME   | E3-FRAME   |
| • E3-PLCP    | E3-PLCP  |
| • ESF        | Frame format is ESF.   |
| • FRAMENA    | FRAMENA  |
| • G-751      | G-751  |
| • G-832      | G-832  |
| • M13        | M13 line type applies to the DS3XM and DS3E cards.   |
| • M23        | M23  |
| • SYNTRAN    | SYNTRAN  |
| • UNFRAMED   | Frame format is unframed.  |
| <IMPEDANCE>  | (Optional) Impedance is the total opposition that a circuit presents to alternating current. The maximum power transfer that takes place from the source to load when the impedance match.           |
| • 120 ohms   | 120 ohm termination.   |
| • 100 ohms   | 100 ohm termination.   |
| • 75 ohms    | 75 ohm termination.  |
| <LBO>        | Line build-out settings. BITS line build-out. Default value is 0 to 133. LBO is an integer. The parameter type is BITS_LineBuildOut (BITS line build-out).   |
| • 0–133      | BITS line build-out range is 0–133.  |
| • 134–266    | BITS line build-out range is 134–266.  |
| • 267–399    | BITS line build-out range is 267–399.  |
| • 400–533    | BITS line build-out range is 400–533.  |
| • 534–655    | BITS line build-out range is 534–655.  |
| <SYNCMSG>    | Indicates if the BITS facility supports synchronization status message. Default is ON (Y). The parameter type is EXT_RING, which indicates whether the ring supports the extended K1/K2/K3 protocol. |

|              |   |
|--------------|---|
| • N          | The ring does not support the extended K1/K2/K3 protocol.   |
| • Y          | The ring does support the extended K1/K2/K3 protocol.   |
| <AISTHRSHLD> | Alarm indication signal threshold. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET.   |
| • DUS        | Do Not Use For Synchronization  |
| • PRS        | Primary Reference Source, Stratum 1 Traceable   |
| • RES        | Reserved For Network Synchronization Use  |
| • SMC        | SONET Minimum Clock Traceable   |
| • ST2        | Stratum 2 Traceable   |
| • ST3        | Stratum 3 Traceable   |
| • ST3E       | Stratum 3E Traceable  |
| • ST4        | Stratum 4 Traceable   |
| • STU        | Synchronized, Traceability Unknown  |
| • TNC        | Transit Node Clock (2nd Generation Only)  |
| <SABIT>      | When the frame format selection is E1, SABIT is the bit used to receive and transmit the SSM. The parameter type is SABITS (SA BITS).   |
| • BYTE-4     | SABIT is BYTE-4.  |
| • BYTE-5     | SABIT is BYTE-5.  |
| • BYTE-6     | SABIT is BYTE-6.  |
| • BYTE-7     | SABIT is BYTE-7.  |
| • BYTE-8     | SABIT is BYTE-8.  |
| <IMPEDANCE>  | When the frame format selection is E1, IMPEDANCE is the terminal impedance of the BITS-IN port. The parameter type is IMPEDANCE, which is the terminal impedance of the BITS-IN port. |
| • 120-OHM    | Impedance of 120 ohm  |
| • 75-OHM     | Impedance of 75 ohm   |
| <BITSFAC>    | BITS facility settings. BITS-2 always inherits the value of BITS-1. The parameter type is BITS_FAC (the BITS facility rate). 64 k and 6 MHz are only applicable to the ONS 15454.     |
| • 2 M        | 2 MHz rate  |
| • 64 K       | 64 K rate   |
| • 6 M        | 6 MHz rate  |
| • E1         | E1 rate   |
| • T1         | T1 rate   |
| <ADMSSM>     | SSM selectable. Only applicable to BITS-IN when SSM is disabled. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET.               |
| • DUS        | Do Not Use For Synchronization  |
| • PRS        | Primary Reference Source, Stratum 1 Traceable   |
| • RES        | Reserved For Network Synchronization Use  |

|        |   |
|--------|---|
| • SMC  | SONET Minimum Clock Traceable   |
| • ST2  | Stratum 2 Traceable   |
| • ST3  | Stratum 3 Traceable   |
| • ST3E | Stratum 3E Traceable  |
| • ST4  | Stratum 4 Traceable   |
| • STU  | Synchronized, Traceability Unknown  |
| • TNC  | Transit Node Clock (2nd Generation Only)  |
| <PST>  | The primary state. The parameter type is PST, which indicates the current overall service condition of an entity. |
| • IS   | In service  |
| • OOS  | Out of service  |

## 11.13 ED-BULKROLL-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Bulkroll for OC12, OC192, OC3, OC48, or OC768 (ED-BULKROLL-<OCN\_TYPE>) command edits information about the rolling of traffic from one endpoint to another without interrupting service. This command uses the FORCE option to force a valid signal. The only parameters that can be edited are RMODE and FORCE. The time slots cannot be edited. Use ED-ROLL-<MOD\_PATH> for single path level rolling.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Category

Bridge and Roll

### Security

Provisioning

### Input Format

```
ED-BULKROLL-<OCN_TYPE>:[<TID>]:<FROM>:<CTAG>:::
[RFROMSTART=<RFROMSTART>],[RFROMEND=<RFROMEND>],[CMDMDE=<CMDMDE>];
```

### Input Example

```
ED-BULKROLL-OC48:PETALUMA:FAC-1-1:1:::RFROMSTART=STS-1-1-1,
RFROMEND=STS-1-1-11,CMDMDE=FRCD;
```

|                         |  |   |
|-------------------------|--|---|
| <b>Input Parameters</b> | <FROM>   | One of the endpoints. Access identifier from the “26.17 FACILITY” section on page 26-42 for line level rolling and bulk rolling.  |
|                         | <RFROMSTART>   | The starting time slot in the source roll port. For bulk rolling only. The AID is from the “26.12 CrossConnectId1” section on page 26-31 (except VCM and FACILITY). Defaults to STS-<FROMSLOT>-<FROMPORT>-1, where <FROMSLOT> and <FROMPORT> are the slot and port of the <FROM> AID.   |
|                         | <RFROMEND>   | The ending time slot in the source roll port. For bulk rolling only. The AID is from the “26.12 CrossConnectId1” section on page 26-31 (except VCM and FACILITY). Defaults to STS-<FROMSLOT>-<FROMPORT>-N, where <FROMSLOT> and <FROMPORT> are the slot and port of the <FROM> AID and N is the value of OCn. (for example, OC48, n=48).  |
|                         | <CMDMDE>   | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
|                         | <ul style="list-style-type: none"> <li>FRCD</li> </ul> | Force the system to override a state where the command would normally be denied.  |
|                         | <ul style="list-style-type: none"> <li>NORM</li> </ul> | Execute the command normally. Do not override any conditions that might make the command fail.  |

## 11.14 ED-BWP-ETH

(Cisco ONS 15454) This command is used to modify a Bandwidth Profile entry in BWP DB. The BWP DB is a collection of BWP used in a Network Element.

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | Error conditions for deleting bandwidth profile can be: <ul style="list-style-type: none"> <li>Invalid AID. If the AID is invalid, an IIAC (Invalid AID) error message is returned.</li> <li>The "ALL" AID is invalid for this command.</li> <li>The BWP having the specified AID should be present in the node, that is, already been entered by ENT-BWP-ETH command.</li> </ul> |
| <b>Category</b>         | ETHERNET  |
| <b>Security</b>         | Provisioning  |
| <b>Input Format</b>     | ED-BWP-ETH:[<TID>]:<AID>:<CTAG>:::[NAME=<NAME>],[CIR=<CIR>],[CBS=<CBS>],[PBS=<PBS>],[PIR=<PIR>],[CFMSTATE=<CFM_STATE>][:];  |

**Input Example**

```
ED-BWP-ETH:ROCKS:BWP-10000:1:::NAME="MyBWP",CIR=10,CBS=1M,PBS=1M,PIR=20,CFM
STATE=Y;
```

**Input Parameters**

|                 |  |
|-----------------|--|
| <AID>           | This AID is used to access BWP.BWP AID Format is:<br>BWP-[bwpid]Values                             |
| • BWP-ALL       | All aid for BWP.   |
| • BWP-{1-10000} | Single AID for BWP. The valid identifiers ranges from 1 to 10000.                                  |
| <NAME>          | indicates the BWP name. bwp name is a String. - Default value is -                                 |
| <CIR>           | Ingress committed information rate. This is a value between 0.0 and 100.0. Default value is 100.0. |
| <CBS>           | Ingress committed burst bucket size.   |
| • 4K            | 4 Kbit bucket size   |
| • 8K            | 16 Kbit bucket size  |
| • 16K           | 32 Kbit bucket size  |
| • 32K           | 64 Kbit bucket size  |
| • 64K           | 128 Kbit bucket size   |
| • 128K          | 256 Kbit bucket size   |
| • 256K          | 512 Kbit bucket size   |
| • 512K          | 1 Mbit bucket size   |
| • 1M            | 2 Mbit bucket size   |
| • 2M            | 4 Mbit bucket size   |
| • 4M            | 8 Mbit bucket size   |
| • 8M            | 16 Mbit bucket size  |
| • 16M           | 16 Kbit bucket size  |
| <EBS>           | Ingress peak burst bucket size   |
| • 4K            | 4 Kbit bucket size   |
| • 8K            | 8 Kbit bucket size   |
| • 16K           | 16 Kbit bucket size  |
| • 32K           | 32 Kbit bucket size  |
| • 64K           | 64 Kbit bucket size  |
| • 128K          | 128 Kbit bucket size   |
| • 256K          | 256 Kbit bucket size   |
| • 512K          | 512 Kbit bucket size   |
| • 1M            | 1 Mbit bucket size   |
| • 2M            | 2 Mbit bucket size   |
| • 4M            | 4 Mbit bucket size   |
| • 8M            | 8 Mbit bucket size   |
| • 16M           | 16 Mbit bucket size  |
| <PIR>           | Peak information rate. This is a value between 0.0 and 100.0.<br>Default value is 100.0.           |

|            |                       |
|------------|-----------------------|
| <CFMSTATE> | Link Integrity status |
| • Y        | Enabled               |
| • N        | Disabled              |

## 11.15 ED-CFM

(Cisco ONS 15454) The Edit Connectivity Fault Management (ED-CFM) command edits the Connectivity Fault Management (CFM) protocol at the port level.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Port

### Security

Provisioning

### Input Format

ED-CFM:[<TID>]:<AID>:<CTAG>;

### Input Example

ED-CFM:454-156:ETH-1-1-1:1::CFMSTATE=enable;

### Input Parameters

**Table 11-1 ED-CFM Command - Parameter Support**

| Input Parameters | Description  |
|------------------|--|
| <AID>            | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH” section on page 26-41</a> . |
| <CFM_STATE>      | Indicates whether the CFM is enabled or disabled on the port.  |
| • ENABLE         | Indicates the CFM is enabled on the port.  |
| • DISABLE        | Indicates the CFM is disabled on the port.   |

## 11.16 ED-CHGRP

(Cisco ONS 15454) The Edit Channel Group (ED-CHGRP) command edits the layer 2 channel group information of GE\_XP and 10GE\_XP ethernet cards.

**Usage Guidelines**

The default values for all optional parameters are network element (NE) default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

**Category**

Channel Group

**Security**

Provisioning

**Input Format**

```
ED-CHGRP:[<TID>]:<AID>:<CTAG>:::[ATTACH=<ATTACH>],[DETACH=<DETACH>],[LACPMODE=<LACPMODE>],[HASHALGO=<HASHALGO>],[NIMODE=<NIMODE>],[MACLEARNING=<MACLEARNING>],[INGRESSCOS=<INGRESSCOS>],[ETHERCETYPE=<ETHERCETYPE>],[ETHERSTYPE=<ETHERSTYPE>],[BPDU=<BPDU>],[QNQMODE=<QNQMODE>],[TRNSPSVLAN=<TRNSP_SVLAN>],[MTU=<MTU>],[FLOWCONTROL=<FLOWCONTROL>],[SPEED=<SPEED>],[EXPSPEED=<EXPSPEED>],[CIR=<CIR>],[CBS=<CBS>],[EBS=<EBS>]:[<PST>[,<SST>]];
```

**Input Example**

```
ED-CHGRP::CHGRP-12-2:1:::ATTACH=ETH-12-5-1&ETH-12-1-1,LACPMODE=ON,HASHINGALGO=HASHING-UCAST-SA-DA-VLAN-INCOMING-PORT,NIMODE=UNI,MACLEARNING=Y,INGRESSCOS=0,ETHERCETYPE=8100,ETHERSTYPE=8100,BPDU=Y,QNQMODE=SELECTIVE,MTU=9700,FLOWCTRL=ASYMMETRIC,SPEED=10_GBPS,EXPSPEED=1_GBPS,CIR=100,CBS=4K,EBS=4k;
```

**Input Parameters**

|                                    |  |
|------------------------------------|--|
| <AID>                              | Access identifier from the “26.9 CHGRP” section on page 26-26. |
| <NIMODE>                           | Identifies the Ethernet Network Interface Mode.                |
| • NNI                              | (Default) Network-Network Interface Mode                       |
| • UNI                              | User-Network Interface Mode                                    |
| <LACPMODE>                         | LACP mode values   |
| • ON                               | Manual mode of LACP  |
| • ACTIVE                           | Active mode of LACP  |
| • PASSIVE                          | Passive mode of LACP   |
| <HASHINGALGO>                      | Hashing algorithm value  |
| • HASHING_SA_VLAN_INCOMING_PORT    | The Hashing Algorithm value is HASHING_SA_VLAN_INCOMING_PORT.  |
| • HASHING_DA_VLAN_INCOMING_PORT    | The Hashing Algorithm is HASHING_DA_VLAN_INCOMING_PORT.        |
| • HASHING_SA_DA_VLAN_INCOMING_PORT | The Hashing Algorithm is HASHING_SA_DA_VLAN_INCOMING_PORT.     |
| • HASHING_SRC_IP_TCP_UDP           | The Hashing Algorithm is HASHING_SRC_IP_TCP_UDP.               |
| • HASHING_DST_IP_TCP_UDP           | The Hashing Algorithm is HASHING_DST_IP_TCP_UDP.               |

|                              |   |
|------------------------------|---|
| • HASHING_SRC_DST_IP_TCP_UDP | The Hashing Algorithm is HASHING_SRC_DST_IP_TCP_UDP.  |
| <MTU>                        | (Optional) Maximum transport unit. The parameter type is MTU_TYPE, which indicates the maximum transport unit used by an Ethernet card. Defaults to 9600. |
| • 10004                      | 10004. Indicates jumbo size.  |
| • 1500                       | 1500  |
| • 1548                       | 1548  |
| • 9600                       | 9600. Indicates jumbo size.   |
| • 64                         | 64  |
| • 9700                       | 9700. Indicates jumbo size.   |
| <ATTACH >                    | Ethernet AID for the ethernet port on GE_XP and 10GE_XP card.   |
| <DETACH>                     | To remove or detach the port.   |
| <SPEED>                      | (Optional) The parameter type is ETHER_SPEED, which indicates Ethernet speed. Defaults to AUTO.   |
| • 100_MBPS                   | 100 Megabits per second   |
| • 10_GBPS                    | 10 Gigabits per second  |
| • 10_MBPS                    | 10 Megabits per second  |
| • 1_GBPS                     | 1 Gigabit per second  |
| <EXPSPEED>                   | (Optional) Ethernet speed. The parameter type is ETHER_SPEED, which is the Ethernet speed.  |
| • 100_MBPS                   | 100 Megabits per second   |
| • 10_GBPS                    | 10 Gigabits per second  |
| • 10_MBPS                    | 10 Megabits per second  |
| • 1_GBPS                     | 1 Gigabit per second  |
| • 40_GBPS                    | 40 Gigabit per second   |
| • AUTO_FDX                   | Enable auto negotiation with full duplex  |
| • AUTO                       | Auto  |
| <CIR>                        | Ingress committed information rate. The value ranges from 0.0 to 100.0. The default value is 100.0.   |
| <CBS>                        | Ingress committed burst bucket size.  |
| • 4K                         | 4 Kbit bucket size  |
| • 8K                         | 16 Kbit bucket size   |
| • 16K                        | 32 Kbit bucket size   |
| • 32K                        | 64 Kbit bucket size   |
| • 64K                        | 128 Kbit bucket size  |
| • 128K                       | 256 Kbit bucket size  |
| • 256K                       | 512 Kbit bucket size  |
| • 512K                       | 1 Mbit bucket size  |
| • 1M                         | 2 Mbit bucket size  |
| • 2M                         | 4 Mbit bucket size  |

|               |  |
|---------------|--|
| • 4M          | 8 Mbit bucket size   |
| • 8M          | 16 Mbit bucket size  |
| • 16M         | 16 Kbit bucket size  |
| <EBS>         | Ingress excess burst bucket size.  |
| <MACLEARNING> | MAC Address Learning Mode. This activates the MAC address learning on the interface to avoid packet broadcasting.  |
| • Y           | Enables the MAC learning on the interface.   |
| • N           | Disables the MAC learning on the interface.  |
| <INGRESSCOS>  | Identifies the COS value set in the S-VLAN tag.  |
| • 0 to 7      | Set a Cos value  |
| • TRUST       | Use the Customer COS   |
| • VLAN        | The COS will be provisioned on CVLAN basis (QinQ selective mode)   |
| <ETHERCETYPE> | Identifies a customer foreseen Ethernet type. If the customer uses a non-standard Ethernet type, the incoming packets will be accepted only if the CE-VLAN Ethernet type matches this parameter. |
| <ETHERSTYPE>  | Identifies a customer foreseen Ethernet type. If the customer uses a non-standard Ethernet type, the incoming packets will be accepted only if the CE-VLAN Ethernet type matches this parameter. |
| <BPDU>        | BPDU (Bridge Protocol Data Unit) management mode; Drop/Passthrough BPDU tagged packets.  |
| • Y           | Enables the BPDU tag.  |
| • N           | Disables the BPDU tag.   |
| <QNQMODE>     | This is used to represent the QinQ mode operations.  |
| • Selective   | The S-VLAN tag is added only on specified CE-VLANs. The other packets are dropped.   |
| • Transparent | The S-VLAN tag is always performed where all packets having the S-VLAN-ID identified by TRNSPSVLAN parameter are allowed.  |
| <TRNSPSVLAN>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.              |
| <NAME>        | (Optional) NAME is a string. User-assigned port name.  |

## 11.17 ED-CMD-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Command Security (ED-CMD-SECU) command edits the command security level of a particular command.

### Usage Guidelines

None

|                      |  |
|----------------------|--|
| <b>Category</b>      | Security                                 |
| <b>Security</b>      | Superuser                                |
| <b>Input Format</b>  | ED-CMD-SECU:[<TID>]:<AID>:<CTAG>::<CAP>; |
| <b>Input Example</b> | ED-CMD-SECU::INIT-REG:1::SUPER;          |

|                         |             |  |
|-------------------------|-------------|--|
| <b>Input Parameters</b> | <AID>       | Access identifier string. Identifies the entity in the NE to which the command pertains. It is the command verb along with verb modifier(s), as it currently exists. It can be a single command or a block of commands, where the block might include all commands. Only INIT-REG will be supported. String. Must not be null. |
|                         | <CAP>       | Command access privilege. Must not be null. The parameter type is PRIVILEGE, which is the security level.  |
|                         | • PROV      | Provision security level. 60 minutes of idle time.   |
|                         | • SUPER     | Superuser security level. 15 minutes of idle time.   |
|                         | • ROOT_USER | Root user.   |
|                         | • SEC_SUPER | Security super user.   |
|                         | • SEC_USER  | Security user.   |

## 11.18 ED-COS-ETH

(Cisco ONS 15454) The Edit Ethernet Cost of Service Table (ED-COS-ETH) command edits the egress parameter of a cost of service table associated to an L2 Ethernet port.

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use a retrieve command to obtain the current value. |
| <b>Category</b>         | Ethernet   |
| <b>Security</b>         | Provisioning   |
| <b>Input Format</b>     | ED-COS-ETH:[<TID>]:<AID>:<CTAG>:::[AISACTION=<AISACTION>],[IGMPROUTE=<IGMPROUTE>],[QOSENABLED=<QOSENABLED>],[BW0=<BW0>],[WEIGHT0=<WEIGHT0>],[BW1=<BW1>],[WEIGHT1=<WEIGHT1>],[BW2=<BW2>],   |

```
[WEIGHT2=<WEIGHT2>],[BW3=<BW3>],[WEIGHT3=<WEIGHT3>],[BW4=<BW4>],
[WEIGHT4=<WEIGHT4>],[BW5=<BW5>],[WEIGHT5=<WEIGHT5>],[BW6=<BW6>],
[WEIGHT6=<WEIGHT6>],[BW7=<BW7>],[WEIGHT7=<WEIGHT7>][:];
```

**Input Example**

```
ED-COS-ETH:PETALUMA:ETH-1-1-1:1:::QOSENABLED=Y,BW0=10,WEIGHT0=0,BW1=20,
WEIGHT1=2,BW2=40,WEIGHT2=4,BW3=60,WEIGHT3=6,BW4=70,WEIGHT4=8,BW5=80,
WEIGHT5=10,BW6=85,WEIGHT6=12,BW7=100,WEIGHT7=15::;
```

**Input Parameters**

|   |  |
|---|--|
| <AID>   | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH” section on page 26-41</a> .                                       |
| <AISACTION>   | VLAN-AIS Action. Indicates what action take place on port when VLAN-AIS alarm is raised.   |
| <ul style="list-style-type: none"> <li>AIS-NONE</li> <li>AIS-SQUELCH</li> </ul>       | <ul style="list-style-type: none"> <li>No action after VLAN-AIS</li> <li>The port is squelched.</li> </ul>   |
| <IGMPROUTE>   | IGMP M Router port. Indicates the type of connection between this port and the IGMP M Router.  |
| <ul style="list-style-type: none"> <li>STATIC</li> <li>NONE</li> </ul>                | <ul style="list-style-type: none"> <li>A static connection is present between this port and the IGMP M Router</li> <li>No connection is present</li> </ul>               |
| <INGRESSCOS>  | Identifies the COS value set in the S-VLAN tag.  |
| <ul style="list-style-type: none"> <li>0 to 7</li> <li>TRUST</li> <li>VLAN</li> </ul> | <ul style="list-style-type: none"> <li>Set a Cos value</li> <li>Use the customer COS</li> <li>The COS to be provisioned on CVLAN basis (QinQ selective mode).</li> </ul> |
| <QOSENABLED>  | Used to enable or disable the egress QOS policy of an L2 Ethernet port.  |
| <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>                        | <ul style="list-style-type: none"> <li>Disable the service.</li> <li>Enable the service.</li> </ul>  |
| <BW0>   | Bandwidth percentage, a value between 0 and 100.   |
| <WEIGHT0>   | Value represents the weighted round-robin (WRR) weight associated to the COS values, an integer value between 0 and 15.  |
| <BW1>   | Bandwidth percentage, a value between 0 and 100.   |
| <WEIGHT1>   | Value represents the WRR weight associated to the COS values, an integer value between 0 and 15.   |
| <BW2>   | Bandwidth percentage, a value between 0 and 100.   |
| <WEIGHT2>   | Value represents the WRR weight associated to the COS values, an integer value between 0 and 15.   |
| <BW3>   | Bandwidth percentage, a value between 0 and 100.   |
| <WEIGHT3>   | Value represents the WRR weight associated to the COS values, an integer value between 0 and 15.   |
| <BW4>   | Bandwidth percentage, a value between 0 and 100.   |

|           |  |
|-----------|--|
| <WEIGHT4> | Value represents the WRR weight associated to the COS values, an integer value between 0 and 15. |
| <BW5>     | Bandwidth percentage, a value between 0 and 100.   |
| <WEIGHT5> | Value represents the WRR weight associated to the COS values, an integer value between 0 and 15. |
| <BW6>     | Bandwidth percentage, a value between 0 and 100.   |
| <WEIGHT6> | Value represents the WRR weight associated to the COS values, an integer value between 0 and 15. |
| <BW7>     | Bandwidth percentage, a value between 0 and 100.   |
| <WEIGHT7> | Value represents the WRR weight associated to the COS values, an integer value between 0 and 15. |

## 11.19 ED-CRS-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Cross-Connect for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (ED-CRS-<PATH>) command edits a cross-connection.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

#### Note

- ADD and REMOVE cannot be used together. The example provided is for informational purposes only. ADD and REMOVE are mutually exclusive.
- Add/Remove drops is possible only on ONEWAY, UPSR\_DROP, UPSR\_DC, and UPSR\_EN type cross-connections (one-way only).
- Traditional cross-connections cannot be upgraded to DRI cross-connections using the ED\_CRS command.
- CKTID is a string of ASCII characters. The maximum length of CKTID is 48. If the CKTID is EMPTY or NULL, this field will not appear.
- You cannot add a drop onto unidirectional connections on BLSR DRI primary or secondary nodes.

### Category

Cross Connections

### Security

Provisioning

### Input Format

```
ED-CRS-<PATH>:[<TID>]:<SRC>,<DST>:<CTAG>:::[<CCT>]:[ADD=<ADD>],
[REMOVE=<REMOVE>],[CKTID=<CKTID>],[CMDMDE=<CMDMDE>]:[<PST>[,<SST>]];
```

**Input Example**

```
ED-CRS-ST53C::STS-1-1-1,STS-2-1-1:1:::ADD=STS-13-1-1,REMOVE=STS-2-1-1,CKTID=CKTID
CMDMDE=FRCD:IS,AINS;
```

**Input Parameters**

|          |  |
|----------|--|
| <SRC>    | Source AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31.   |
| <DST>    | Destination AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31.  |
| <CCT>    | Cross-connection. The parameter type is CCT which indicates the type of cross-connection to be created. <ul style="list-style-type: none"> <li>• 1WAY<br/>A unidirectional connection from a source tributary to a destination tributary</li> <li>• 1WAYDC<br/>Path Protection multicast drop (one-way continue)</li> <li>• 1WAYEN<br/>Path Protection multicast end node (one-way continue)</li> <li>• 1WAYMON<br/>A bidirectional connection between the two tributaries <p><b>Note</b> In ONS 15454 Software Release 3.0 and later, 1WAYMON is not supported with TL1. However, it is still supported from Cisco Transport Controller (CTC). Using CTC, you can create 1WAYMON cross-connects that can be retrieved with TL1.</p> </li> <li>• 1WAYPCA<br/>A unidirectional connection from a source tributary to a destination tributary on the protection path/fiber</li> <li>• 2WAY<br/>A bidirectional connection between the two tributaries</li> <li>• 2WAYDC<br/>A bidirectional drop and continue connection applicable only to path protection traditional and integrated DRIs</li> <li>• 2WAYPCA<br/>A bidirectional connection between the two tributaries on the extra protection path/fiber</li> <li>• DIAG<br/>Diagnostics cross-connect. Supports BERT (BLSR PCA diagnostics cross-connect).</li> </ul> |
| <ADD>    | AID from the “ <a href="#">26.2 AidUnionId</a> ” section on page 26-13.  |
| <REMOVE> | AID from the “ <a href="#">26.2 AidUnionId</a> ” section on page 26-13.  |
| <CKTID>  | Cross-connect ID. The default is Blank or None. String of ASCII characters. Maximum length is 48. If CKTID is empty or null, the CKTID field will not be displayed.  |
| <CMDMDE> | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. <ul style="list-style-type: none"> <li>• FRCD<br/>Force the system to override a state where the command would normally be denied.</li> <li>• NORM<br/>Execute the command normally. Do not override any conditions that might make the command fail.</li> </ul>   |
| <PST>    | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.  |

|         |   |
|---------|---|
| • IS    | In service  |
| • OOS   | Out of service  |
| <SST>   | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS  | Automatic in service  |
| • DSBLD | Disabled  |
| • LPBK  | Loopback  |
| • MEA   | Mismatch of equipment and attributes  |
| • MT    | Maintenance mode  |
| • OOG   | Out of group  |
| • SWDL  | Software downloading  |
| • UAS   | Unassigned  |
| • UEQ   | Unequipped  |

## 11.20 ED-CRS-ETH

This command modifies an ethernet connection relationship between two or more ethernet connection end points inside the ethernet facilities.

### Usage Guidelines

The default values for all optional parameters are NE default values. These values may not be the current value for a parameter. In order to obtain the current value use RTRV-XX command to retrieve them.

The ethernet connection end point identifier must be the same for all the ethernet ports inside the connection and must be kept the same for all the ethernet circuit.

CKTID is a string of ASCII characters. The maximum length of CKTID can be 48. If the CKTID is EMPTY or NULL this field is not displayed

If the AID is invalid, an IIAC (Invalid AID) error message is returned.

The "ALL" AID is invalid for this command.

**Security**

Provisioning

**Input Format**

ED-DAT:[&lt;TID&gt;]::&lt;CTAG&gt;::[&lt;DATE&gt;],[&lt;TIME&gt;];

**Input Example**

ED-DAT:PETALUMA::1234::99-12-21,14-35-15;

**Input Parameters**

|        |                                 |
|--------|---------------------------------|
| <DATE> | The new date. DATE is a string  |
| <TIME> | The new time. TIME is a string. |

## 11.22 ED-DS1

(Cisco ONS 15454) The Edit DS1 (ED-DS1) command edits the test access attribute for DS1 access on a DS3XM-6 and DS3XM-12 card.

**Usage Guidelines**

- This command is not allowed if the card is a protect card.
- Both the MODE and FMT fields of this command apply to the DS3XM-12 card only.
- For the DS3XM-12 card, the DS1 frame format NE default is AUTO\_PROV\_FMT for the first 30 seconds to determine the real format. After 30 seconds, the DS1 frame format will be detected as FRAMED. If the frame format is not detected, it will be in the UNFRAMED format.
- For preprovisioning the DS3XM-12 card, the DS1 frame format defaults to UNFRAMED.
- For the DS3XM-12 card, the DS1 configurable attributes (PM, TH, alarm, etc.) only apply on the ported ports (Ports 1 to 12) and the VT-mapped (odd) portless ports in xxx-xxx-DS1 commands. If you provision or retrieve DS1 attributes on the DS3-mapped (even) portless port in xxx-xxx-DS1 commands, an error message will be returned.
- The test set physical connection that is set up through the ED-T3/DS1/STS1/VT1 command of the DS3XM-12 card is only allowed on the physical front ports (PORTED ports, Ports 1 to 12), which are the monitoring ports, as follows:
  - The monitoring test access ports follow the common rules for the other cards. For example, when issuing the ED-T3 command on Port 2 (FAC-6-2) with a TACC number (8), the next port, Port 3 (FAC-6-3) is used as the monitoring point also. The RTRV-T3 command on both Port 2 and Port 3 return the same TACC number (8) being used to monitor the cross-connection end (A-B). The last port (Port 12) is not allowed to set up a physical connection with the test set because there is no next available port to be the monitoring port.
  - The TACC disconnection (DISC-TACC) and the test access mode change command (CHG-TACC) follow the same requirement as in the previous step, but it is applied on the ported ports of the DS3XM-12 card.
  - The test access connection set-up command (CONN-TACC) has monitored points, which can be portless ports. This command is applied on both ported and portless ports of the DS3XM-12 card.
- If the entity has a TACC connection, the entity is not allowed to have ported or portless STS/VT cross-connection (or circuit) provisioning on the DS3XM-12 card.

- The parameters BERTMODE, BERTPATTERN, and BERTERRCOUNT apply only to DS1/E1-56 and DS3XM-12 cards
- BERT is implemented on a single port.

**Category**

Ports

**Security**

Provisioning

**Input Format**

```
ED-DS1:[<TID>]:<AID>:<CTAG>:::[TACC=<TACC>],[TAPTYPE=<TAPTYPE>],
[AISONLPBK=<AISONLPBK>],[MODE=<MODE>],[FMT=<FMT>],
[BERTMODE=<BERTMODE>],[BERTPATTERN=<BERTPATTERN>],
[BERTERRCOUNT=<BERTERRCOUNT>];
```

**Input Example**

```
ED-DS1:PETALUMA:DS1-2-1-6-12:123:::TACC=8,TAPTYPE=DUAL,MODE=FDL,
FMT=ESF,BERTMODE=NONE,BERTPATTERN=NONE;
```

**Input Parameters**

|             |   |
|-------------|---|
| <AID>       | Access identifier from the <a href="#">“26.13 DS1” section on page 26-38</a> .  |
| <TACC>      | TAP number within a range of 0 to 999. Indicates whether the digroup being provisioned is to be used as a test access digroup. When TACC is 0 (zero), the TAP is deleted. TACC is an integer. |
| <TAPTYPE>   | TAP type. The parameter type is TAPTYPE (test access point type).   |
| • DUAL      | Dual FAD  |
| • SINGLE    | Single FAD  |
| <AISONLPBK> | The parameter type is AIS_ON_LPBK, which indicates whether AIS is sent on a loopback.   |
| • FACILITY  | AIS is sent on facility loopbacks.  |
| • ALL       | AIS is sent on all loopbacks.   |
| • OFF       | AIS is not sent on loopbacks.   |
| • TERMINAL  | AIS is sent on terminal loopbacks.  |
| <MODE>      | Mode with which the command is to be implemented. DS1 path mode of the DS3XM-12 card. Defaults to FDL. The parameter type is DS1MODE, which is the DS1 path mode of the DS3XM-12 card.        |
| • ATT       | The DS1 path of the DS3XM-12 card is in AT&T 54016 mode.  |
| • FDL       | The DS1 path of the DS3XM-12 card is in FDL T1-403 mode.  |
| <FMT>       | Digital signal format. The DS1 path frame format of the DS3XM-12 card. Defaults to UNFRAMED. The parameter type is FRAME_FORMAT, which is the frame format for a T1 port.                     |
| • AUTOPROV  | AUTOPROV  |
| • CBIT      | C-BIT line type applies to the DS3XM and DS3E cards.  |
| • D4        | Frame format is D4.   |

|                    |   |
|--------------------|---|
| • DS2 FRAMED       | DS2 FRAMED  |
| • E2 FRAMED        | E2 FRAMED   |
| • E3-FRAME         | E3-FRAME  |
| • E3-PLCP          | E3-PLCP   |
| • ESF              | Frame format is ESF.  |
| • FRAMENA          | FRAMENA   |
| • G-751            | G-751   |
| • G-832            | G-832   |
| • M13              | M13 line type applies to the DS3XM and DS3E cards.  |
| • M23              | M23   |
| • SYNTRAN          | SYNTRAN   |
| • UNFRAMED         | Frame format is unframed.   |
| <BERTMODE>         | Specifies the mode [Test Pattern Generator (TPG) or Test Pattern Monitor (TPM)] of the port for BERT. |
| • NONE             | BERT mode not enabled.  |
| • TPGM-L           | Test pattern generator and monitor on line side.  |
| • TPGM-B           | Test pattern generator and monitor on backplane.  |
| • TPG-L            | Test pattern generator on line side.  |
| • TPM-L            | Test pattern monitor on line side.  |
| • TPG-B            | Test pattern generator on backplane.  |
| • TPM-B            | Test pattern monitor on backplane.  |
| <BERTPATTERN>      | Specifies the error pattern to be injected for BERT.  |
| • NONE             | BERT pattern not enabled.   |
| • PRBS15           | PRBS15 test pattern.  |
| • PRBS20           | PRBS20 test pattern.  |
| • PRBS23           | PRBS23 test pattern.  |
| • QRSS             | QRSS test pattern.  |
| • ALT-ONE-ALT-ZERO | Alternate one and zero pattern.   |
| <BERTERRCOUNT>     | Integer value. Value -1 indicates that BERT is disabled/not supported.                                |

## 11.23 ED-DSCP-<MOD2>

(Cisco ONS 15454) The Edit ETH or CHGRP (ED-DSCP-<MOD2>) command edits Differentiated Service Code Points (DSCP) to COS conversion table associated to a L2 ethernet port or a channel group.

### Usage Guidelines

This command is applicable when the INGRESSCOS parameter is set to DSCP value on the ethernet port or channel group.

### Category

Ethernet or Channel Group

**Security**

Provisioning

**Input Format**

```
ED-DSCP-MOD2:[<TID>]:<AID>:<CTAG>::<COS>:DSCPFIRST=<DSCP_FIRST>,DSCPLAST=<DSCP_LAST>[:];
```

**Input Example**

```
ED-DSCP-ETH::ETH-5-1-1:1234::3:DSCPFIRST=26,DSCPLAST=30;
ED-DSCP-CHGRP::CHGRP-5-1:1::3:DSCPFIRST=26,DSCPLAST=30;
```

**Table 11-2 ED-DSCP-MOD2 Command - Parameter Support**

| Input Parameters  | Description   |
|---|---|
| <AID>   | Access identifier.  |
| <ul style="list-style-type: none"> <li>Ethernet</li> </ul>      | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.   |
| <ul style="list-style-type: none"> <li>Channel Group</li> </ul> | Access identifier from the “26.9 CHGRP” section on page 26-26.  |
| <INGRESSCOS>  | Identifies the COS value set in the S-VLAN tag.   |
| <ul style="list-style-type: none"> <li>0 to 7</li> </ul>        | Set a Cos value   |
| <ul style="list-style-type: none"> <li>DSCP</li> </ul>          | The COS is set according to DSCP to COS mapping table.  |
| <ul style="list-style-type: none"> <li>TRUST</li> </ul>         | Use the Customer COS  |
| <ul style="list-style-type: none"> <li>VLAN</li> </ul>          | The COS will be provisioned on CVLAN basis (QinQ selective mode)  |
| <DSCPFIRST>   | DSCP range. Indicates a DSCP value used in the ethernet frame to define the QoS in L3 ethernet transport. It is a number in the range 0..64. Default values is 0  |
| <DSCPLAST>  | DSCP range. Indicates a DSCP value used in the ethernet frame to define the QoS in L3 ethernet transport. It is a number in the range 0..64. Default values is 0. |

## 11.24 ED-EC1

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Electrical Carrier (ED-EC1) command edits the attributes of an EC1 card.

**Usage Guidelines**

- This command is not allowed if the card is a protecting card.
- You cannot directly transition a facility from IS to OOS-MA,DSBLD service state. You can transition a facility to OOS-MA,DSBLD service state from any state except OOS-MA,MT. To transition a facility from OOS-MA,MT to OOS-MA,DSBLD service state, all the following conditions must be met:
  - The facility is not sourcing a synchronization clock

- The facility's DCC is disabled
- The facility is not part of a protection group
- The facility is not supporting cross-connects
- The facility is not using overhead connections or overhead terminations (such as express orderwire, local orderwire, or user data channels [UDCs])

**Note**

The conditions stipulated can be overridden by using the CMDMDE=FRCD option. The FRCD option will immediately remove the facility from service (except for IS to OOS-MA,DSBLD transition) with no consideration for orderly interruption.

**Category**

Ports

Provisioning

**Input Format**

```
ED-EC1:[<TID>]:<AID>:<CTAG>:::[PJMON=<PJMON>],[LBO=<LBO>],[SOAK=<SOAK>],
[SFBER=<SFBER>],[SDBER=<SDBER>],[NAME=<NAME>],[EXPTRC=<EXPTRC>],
[TRC=<TRC>],[TRCMODE=<TRCMODE>],[<TRCFORMAT>],[AISONLPBK=<AISONLPBK>],
[CMDMDE=<CMDMDE>]:[<PST>[,<SST>]];
```

**Input Example**

```
ED-EC1:PETALUMA:FAC-1-1:123:::PJMON=0,LBO=0-225,SOAK=10,SFBER=1E-4,SDBER=1E-6,
NAME="EC1 PORT",EXPTRC="AAA",TRC="AAA",TRCMODE=MAN,TRCFORMAT="16-BYTE,
AISONLPBK=AIS_ON_LPBK_ALL,CMDMDE=CMDMDE:IS,AINS;
```

**Input Parameters**

|         |  |
|---------|--|
| <AID>   | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.   |
| <PJMON> | A SONET pointer number (0 or 1) of an EC1 port. PJMON is an integer.   |
| <LBO>   | Line build-out settings. LBO is an integer. It defaults to 0–225. The parameter type is E_LBO (electrical signal line build-out). <ul style="list-style-type: none"> <li>• 0–225 Electrical signal line build-out range is 0–225.</li> <li>• 226–450 Electrical signal line build-out range is 226–450.</li> </ul> |
| <SOAK>  | IS-AINS to IS transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer. Defaults to 32.   |
| <SFBER> | Signal failure threshold. Defaults to 1E-4. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path. <ul style="list-style-type: none"> <li>• 1E-3 SFBER is 1E-3.</li> <li>• 1E-4 SFBER is 1E-4.</li> </ul>  |

|                       |   |
|-----------------------|---|
| • 1E-5                | SFBER is 1E-5.  |
| <SDBER>               | Signal degrade threshold. Defaults to 1E-7. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.  |
| • 1E-5                | SDBER is 1E-5.  |
| • 1E-6                | SDBER is 1E-6.  |
| • 1E-7                | SDBER is 1E-7.  |
| • 1E-8                | SDBER is 1E-8.  |
| • 1E-9                | SDBER is 1E-9.  |
| <NAME>                | NAME is a string. Default value is NULL. Maximum length is 32 characters.   |
| <EXPTRC>              | String  |
| <TRC>                 | String  |
| <TRCMODE>             | The parameter type is TRCMODE (trace mode).   |
| • AUTO                | Use the previously received path trace string as the expected string. Not applicable to MXP/TXP cards.  |
| • AUTO-NO-AIS         | Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
| • MAN                 | Use the provisioned expected string as the expected string.   |
| • MAN-NO-AIS          | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
| • OFF                 | Turn off path trace capability. Nothing will be reported.   |
| <TRCFORMAT>           | Trace message size. The parameter type is TRCFORMAT (trace format).   |
| • 1-BYTE              | 1 byte trace message.   |
| • 16-BYTE             | 16 byte trace message.  |
| • 64-BYTE             | 64 byte trace message.  |
| • Y                   | Enable an attribute.  |
| <AISONLPBK>           | Defaults to AIS_ONLPBK_FACILITY. The parameter type is AIS_ON_LPBK, which indicates whether AIS is sent on a loopback.  |
| • AIS_ONLPBK_FACILITY | AIS is sent on facility loopbacks.  |
| • ALL                 | AIS is sent on all loopbacks.   |
| • OFF                 | AIS is not sent on loopbacks.   |
| • TERMINAL            | AIS is sent on terminal loopbacks.  |
| <CMDMDE>              | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD                | Force the system to override a state where the command would normally be denied.  |
| • NORM                | Execute the command normally. Do not override any conditions that might make the command fail.  |

|         |   |
|---------|---|
| <PST>   | Primary state. Defaults to IS. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • IS    | In service  |
| • OOS   | Out of service  |
| <SST>   | Secondary state. Defaults to AINS. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS  | Automatic in service  |
| • DSBLD | Disabled  |
| • LPBK  | Loopback  |
| • MEA   | Mismatch of equipment and attributes  |
| • MT    | Maintenance mode  |
| • OOG   | Out of group  |
| • SWDL  | Software downloading  |
| • UAS   | Unassigned  |
| • UEQ   | Unequipped  |

## 11.25 ED-EFM

(Cisco ONS 15454) The Edit Ethernet in the First Mile (ED-EFM) command edits ethernet OAM parameters on the front end port of the fast (10/100 Mbps) ethernet card.

### Usage Guidelines

- The EFMSTATE parameter should be “enabled” for the facility by ED-FSTE to edit the EFM parameters.
- You cannot enable or disable the remote loopback through the local interface on the remote OAM peer entity if any other type of loopback (facility/terminal) is already configured on the local interface.

### Category

Ports

### Security

Provisioning

### Input Format

```
ED-EFM:[<TID>]:<AID>:<CTAG>:::[STATE=<STATE>],[MODE=<MODE>],[LFACTION=<LFACTION>],[SESSIONTIMER=<SESSIONTIMER>];
```

### Input Example

```
ED-EFM::ETH-12-1-1:1:::MODE=PASSIVE,LFACTION=ERROR-BLOCK,DGACTION=ERROR-BLOCK,SESSIONTIMER=40;
```

|                         |                 |   |
|-------------------------|-----------------|---|
| <b>Input Parameters</b> | <AID>           | Access identifier from the “26.16 ETH” section on page 26-41. |
|                         | <STATE>         | Indicates whether the EFM is enabled or disabled on the port. |
|                         | • ENABLE        | Indicates the EFM is enabled on the port.                     |
|                         | • DISABLE       | Indicates the EFM is disabled on the port.                    |
|                         | <MODE>          | Indicates the mode of the EFM port.                           |
|                         | • ACTIVE        | The port is in the active state.                              |
|                         | • PASSIVE       | The port is in the passive state.                             |
|                         | <LFACTION>      | Action to be taken for the failure of the link on the port.   |
|                         | • RFACTION-NONE | No action.  |
|                         | • ERROR-BLOCK   | Block the port.   |
|                         | <SESSIONTIMER>  | Session expire timer for EFM (in seconds).                    |

## 11.26 ED-ETH

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Ethernet (ED-ETH) command edits the front-end port information of a 10/100/1000 Mbps Ethernet card.

### Usage Guidelines

The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

The SELECTIVEAUTO parameter is applicable only when EXPSPEED and EXPDUPLEX are not set to AUTO mode.

### Note

This command is available in Software Release 8.0.1 and later. It is not available in R8.0 and earlier.

### Category

Ethernet

### Security

Provisioning

### Input Format

```
ED-ETH:[<TID>]:<AID>:<CTAG>:::[FLOW=<FLOW>],[EXPDUPLEX=<EXPDUPLEX>],[SELECTIVEAUTO=<SELECTIVEAUTO>],[EXPSPEED=<EXPSPEED>],[VLANCOS=<VLANCOSTHRESHOLD>],[IPTOS=<IPTOSTHRESHOLD>],[NAME=<NAME>],[CMDMDE=<CMDMDE>],[SUPPRESS=<SUPPRESS>],[SOAK=<SOAK>],[LIENABLE=<LIENABLE>],[LITIMER=<LITIMER>][:<PST>[:<SST>]];
```

### Input Example

```
ED-ETH:CISCO:FAC-1-1:123:::FLOW=Y,EXPDUPLEX=HALF,EXPSPEED=10_MBPS,SELECTIVEAUTO=Y,VLANCOS=2,IPTOS=4,NAME="ETHPORT",CMDMDE=FRCD,SOAK=32,LIENABLE=Y,LITIMER=200:IS,AINS;
```

## Input Parameters

|                  |   |
|------------------|---|
| <AID>            | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.   |
| <FACILITY>       | Access identifier from the “26.17 FACILITY” section on page 26-42   |
| <FLOW>           | (Optional) Flow. The parameter type is ON_OFF (disable or enable an attribute).   |
| • N              | Disable an attribute.   |
| • Y              | Enable an attribute.  |
| <EXPDUPLICATION> | (Optional) Ethernet duplex mode. The parameter type is ETHER_DUPLEX, which is the duplex mode.  |
| • AUTO           | Auto mode   |
| • FULL           | Full mode   |
| • HALF           | Half mode   |
| <SELECTIVEAUTO>  | (Optional) Selective auto-negotiation. The parameter is Y or N (enable or disable auto-negotiation). This indicates selective auto-negotiation of EXPSPEED and EXPDUPLICATION only.   |
| • Y              | Enable selective auto-negotiation.  |
| • N              | Disable selective auto-negotiation.   |
| <EXPSPEED>       | (Optional) Ethernet speed. The parameter type is ETHER_SPEED, which is the Ethernet speed.  |
| • 100_MBPS       | 100 Megabits per second   |
| • 10_GBPS        | 10 Gigabits per second  |
| • 10_MBPS        | 10 Megabits per second  |
| • 1_GBPS         | 1 Gigabit per second  |
| • 40_GBPS        | 40 Gigabit per second   |
| • AUTO_FDX       | Enable auto negotiation with full duplex  |
| • AUTO           | Auto  |
| <VLANCOS>        | (Optional) Priority queuing threshold based on VLAN class of service for incoming Ethernet packets. VLANCOS is an integer.  |
| <IPTOS>          | (Optional) Priority queuing threshold based on IP type of service for incoming Ethernet packets. IPTOS is an integer.   |
| <NAME>           | (Optional) Name. NAME is a string.  |
| <CMDMDE>         | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| <SUPPRESS>       | Pre-service alarm flag for data ports.  |
| • ON             | Enable suppress.  |
| • OFF            | Disable suppress. Default is Off.   |
| <SOAK>           | (Optional) OOS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer.  |

|            |   |
|------------|---|
| <LIENABLE> | (Optional) Enable or Disable link integrity timer. Takes either Y or N. Value Y enables the LITIMER and value N disables LITIMER.<br><br>By default LITIMER is enabled.<br><br><b>Note</b> The LIENABLE parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454. |
| <LITIMER>  | (Optional) Link integrity timer duration in the range between 200 ms and 10000 ms in multiples on 100 ms.<br><br><b>Note</b> The LITIMER parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.  |
| <PST>      | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • IS       | In service  |
| • OOS      | Out of service  |
| <SST>      | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
| • AINS     | Automatic in service  |
| • DSBLD    | Disabled  |
| • LPBK     | Loopback  |
| • MEA      | Mismatch of equipment and attributes  |
| • MT       | Maintenance mode  |
| • OOG      | Out of group  |
| • SWDL     | Software downloading  |
| • UAS      | Unassigned  |
| • UEQ      | Unequipped  |

## 11.27 ED-EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Equipment (ED-EQPT) command edits the attributes for a given equipment slot in the NE. If the card is in an equipment slot, this command is allowed only on the working AID.

The ED-EQPT command also modifies a shelf role from node controller (NC) to shelf controller (SC) on an NE configured in multishelf mode.

### Usage Guidelines

The PROTID parameter indicates the unique identifier of the protection group (the protect card). “NULL” is a special value of the PROTID parameter and indicates the absence of a protection group. For the 1:1 protection type, RVRTV and RVTM parameters can be changed. For the 1:1 protection type, if the PROTID parameter is entered as “NULL”, the protection group is deleted, as shown in the following command:

```
ED-EQPT:[<TID>]:SLOT-2:<CTAG>:::PROTID=NULL;
```

For the 1:N protection type, if the PROTID is “NULL,” the AIDs in the list are removed from the protection group. If all the working cards are in the AID list, the protection group is deleted.

For example, if Slot 1, Slot 2, and Slot 4 were the only working cards in the protection group, the following command would remove Slot 4 from the protection group:

```
ED-EQPT:[<TID>]:SLOT-4:<CTAG>:::PROTID=NULL;
```

The protection group still has Slot 1 and Slot 2 as working cards.

The following command will remove all the other working cards in the above example and consequently, delete the protection group itself:

```
ED-EQPT:[<TID>]:SLOT-2&SLOT-1:<CTAG>:::PROTID=NULL;
```

The ED-EQPT command can be successfully executed on an already provisioned card to add or remove a working card from a protection group. This command is not valid on a protect card. Only cards can be added to or removed from a protection group. Protection type is immutable and is determined at the time of creation of a protection group (while adding the first working card). After it is provisioned, the equipment type cannot be edited either.

Examples of adding an existing card to a protection group using the ED-EQPT command:

1:1 protection group:

```
ED-EQPT::SLOT-2:12:::PROTID=SLOT-1,RVRTV=Y,RVTM=9.0;
```

1:N protection group:

```
ED-EQPT::SLOT-2:12:::PROTID=SLOT-3,PRTYPE=1-N,RVTM=6.5;
```

Error conditions for editing a 1:1 or 1:N protection group might be:

- Editing the PRTYPE or PROTID (non-NULL value) parameters.
- Editing RVRTV or RVTM when no protection group exists.
- Editing RVRTV for 1:N protection.
- Failed to remove, currently switched to protect.
- CARDMODE provisioning is allowed on the DS3XM-12 cards as follows:
  - DS3XM-12 card provisioning is based on the XCON type and DS3XM-12 card's location. For example, the DS3XM-12 card in the lower speed I/O slot with the XCVT card only allows the DS3XM-12-STS12 CARDMODE. Other cases allow the CARDMODE to be DS3XM-12-STS-48.
  - There is no card reboot if the CARDMODE is changed on the DS3XM-12 card.
  - The DS3XM-12 card can be upgraded or downgraded by changing the CARDMODE with the ED-EQPT command.

CMDMDE provisioning behaves as follows:

- If the command mode (CMDMDE) is set to NORM during the creation of a 1:1 or 1:N protection group, all cards must be physically plugged in and in the service state (IS). If the cards are not physically plugged in and are not in ready state, the command is denied with an appropriate error message. CMDMDE=FRCD will override the default behavior and allow creation of protection group regardless of the physical presence and ready state of cards.
- If the command mode is set to NORM during the removal of a card in a 1:1 or 1:N protection group, there must be no cross-connects (for example, services) present on the card. CMDMDE=FRCD will override the default behavior and allow deletion of protection group regardless of presence of cross-connects on the card.

**Note**

For the FC\_MR-4 card, the card mode cannot be changed to FCMR-LINERATE when the payload on any port is 1GFICON or 2GFICON. These payloads are allowed only in distance extension card mode.

|                           |   |
|---------------------------|---|
| • FCMR-DISTEXTN           | FC-MR-4 card with Distance Extension support.   |
| • FCMR-LINERATE           | FC-MR-4 card without Distance Extension support.  |
| • ML-GFP                  | ML1 series card in DOS FPGA using GFP framing type.   |
| • ML-HDLC                 | ML1 series card in DOS FPGA using HDLC framing type.  |
| • ML-IEEE-RPR             | ML1 series card in DOS FPGA which supports Resilient Packet Ring (RPR).   |
| • MXPMR25G-FCGE           | Fiber channel or GIGE mode for the MXP-MR-2.5G.   |
| • MXPMR10DME-FCGEISC      | Fiber channel, GIGE, or ISC mode for the Cisco ONS 15454 MXP-MR-10DME, MXP-MR-10DMEX card series.   |
| • MXPMR10DME-FCGEISC-4GFC | 1..4 facilities with fiber channel, GIGE, or ISC traffic mode and facility 5 with 4 Gbps fiber channel traffic mode for the Cisco ONS 15454 MXP-MR-10DME, MXP-MR-10DMEX card series.                                      |
| • MXPMR10DME-4GFC-FCGEISC | Facility 1 with 4 Gbps fiber channel traffic mode and 5..8 facilities with fiber channel, GIGE, or ISC traffic mode for the Cisco ONS 15454 MXP-MR-10DME, MXP-MR-10DMEX card series.                                      |
| • MXPMR10DME-4GFC         | 4 Gbps fiber channel traffic mode for the Cisco ONS 15454 MXP-MR-10DME, MXP-MR-10DMEX card series.  |
| • PSM-NORMAL              | PSM working in classic configuration.   |
| • PSM-STANDALONE          | PSM working in stand-alone mode.  |
| • AMPL-BST                | Booster mode for amplifier cards: OPT-AMP-L, OPT-AMP-17-C and OPT-AMP-23-C cards.   |
| • AMPL-PRE                | Pre-amplifier mode for amplifier cards: OPT-AMP-L, OPT-AMP-17-C and OPT-AMP-23-C cards.   |
| • 10GEXP-TXP              | 10GE-XP behaves as two separate transponders, where client 1 is associated to trunk 3 and client 2 is associated to trunk 4.  |
| • 10GEXP-L2ETH            | 10GE-XP behaves as an L2 Ethernet switch.   |
| • GEXP-10x1Gx2-MXP        | GE-XP behaves as a double Muxponder having ten 1 Gbps client facilities with one trunk. The first 10 GIGE clients are associated to the first trunk (21), while GIGE facilities from 11 to 20 are associated to trunk 22. |
| • GEXP-20x1G-MXP          | GE-XP behaves as a single Muxponder having ten 1 Gbps client facilities with one trunk. Only the first 10 GIGE clients are associated to the first trunk (21) while the other facilities are unused.                      |
| • GEXP-L2ETH              | GE-XP behaves as an L2 Ethernet Switch.   |
| • CEMR-AUTO               | Auto allocation of back-end channels for CE-MR-10 (Cisco ONS 15454 SONET only) cards.   |
| • CEMR-MANUAL             | Manual allocation of back-end channels for CE-MR-10 (Cisco ONS 15454 SONET only) cards.   |
| • UNKNOWN                 | Unknown.  |
| • WXC80-BIDI              | 80-WXC-C working in bidirectional mode.   |
| • WXC80-DMX               | 80-WXC-C working as demultiplexer.  |
| • WXC80-MUX               | 80-WXC-C working as multiplexer.  |
| • 40G-MXP-MUXPONDER       | 40G-MXP-MUXPONDER working as multiplexer.   |

|                        |   |
|------------------------|---|
| • 40G-MXP-UNIDIR-REGEN | 40G-MXP-UNIDIR-REGEN working as regenerator.  |
| <FRPHOLDOFFTIME>       | Indicates the hold off timer value. The protection does not start until the hold off time expires.  |
| • 100-MSEC             | Indicates the hold off timer value as 100 milliseconds.   |
| • 1-MSEC               | Indicates the hold off timer value as 1milisecond.  |
| • 200-MSEC             | Indicates the hold off timer value as 200 milliseconds.   |
| • 2-MSEC               | Indicates the hold off timer value as 2 milliseconds.   |
| • 500-MSEC             | Indicates the hold off timer value as 500 milliseconds.   |
| • 50-MSEC              | Indicates the hold off timer value as 50 milliseconds.  |
| • 5-MSEC               | Indicates the hold off timer value as 50 milliseconds.  |
| • DISABLED             | Indicates that the hold off timer is disabled.  |
| <ADMINCVLAN>           | Customer VLAN identifier for REP. ADMINCVLAN is a number between 1 and 4096. The value 0 is reserved to untagged VLAN.  |
| <ADMINSVLAN<br>>       | Service provider VLAN identifier for REP. ADMINSVLAN is a number between 1 and 4096. The value 0 is reserved to untagged VLAN.  |
| <CFMSTATE>             | Link Integrity status.  |
| • Y                    | Enabled   |
| • N                    | Disabled  |
| <CCTIMER>              | Indicates continuity check message timer.   |
| • ONE-MIN              | 1 minute.   |
| • ONE-SEC              | 1 second.   |
| • TEN-SEC              | 10 seconds.   |
| <PROTOPMODE>           | PROTOPMODE  |
| <FRPROLE>              | Indicates the fast ring protection enable mode for GE-XP/10GE-XP units involved in a protection scheme.   |
| • MASTER               | Role is of card master of the ring.   |
| • SLAVE                | Role is of card slave of the ring.  |
| <FRPSTATE>             | Indicates the fast ring protection enable state.  |
| • DISABLED             | Disabled protection   |
| • ENABLED              | Enabled protection  |
| • FORCED               | Forced protection   |
| <NEWSHELFID>           | (Optional) New shelf identifier is used to change the value of the shelf identifier for the addressed shelf. The value must be different by one and can be in the range from two to eight. This field can only be changed if (in the same command) the SHELFROLE is equal to SC. Integer. |
| <PEERID>               | The regeneration peer slot from the <a href="#">“26.9 CHGRP” section on page 26-26.</a>   |
| <PROTID>               | (Optional) Protection group name. PROTID is a string.   |
| <REGENNAME>            | The name of a regeneration group. REGENNAME is a string.  |

|                            |   |
|----------------------------|---|
| <RETIME>                   | (Optional) Indicates the RETIME function for all the facilities on this card. The parameter type is ON_OFF (disable or enable an attribute). (Supported on the DS1/E1-56 card for the Cisco ONS 15454 platform).  |
| • N                        | Disable an attribute.   |
| • Y                        | Enable an attribute.  |
| <RVRTV>                    | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Defaults to N, non-revertive. |
| • N                        | Does not revert service to original line after restoration.   |
| • Y                        | Reverts service to original line after restoration.   |
| <RVTM>                     | (Optional) Revertive time. The parameter type is REVERTIVE_TIME (revertive time).   |
| • 0.5 to 12.0              | Revertive time is 0.5 to 12.0 minutes.  |
| <SWITCHWITHCRCALAR<br>M>   | Switch the GZ card with CRC Alarms  |
| <CRCTHR>                   | CRC threshold values beyond which alarms are raised. The available threshold values are 10E-2, 10E-3, and 10E-4.  |
| <CRCPOLLINTRVL>            | Interval of time after which the polling starts.  |
| <CRCSOAKCNT>               | Number of poll cycles during which defect is integrated. The value ranges from 3 to 10.   |
| <USB>                      | Identifies the USB port where a passive unit is connected.  |
| <PST>                      | (Optional) Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.  |
| • Unlocked                 | In service  |
| • Locked                   | Out of service  |
| <SHELFROLE>                | The role of the shelf in the context of the node. When it is omitted it defaults to SC. The parameter is SHELF_ROLE.  |
| <SST>                      | (Optional) Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| • AutomaticInService       | Automatic in service  |
| • Disabled                 | Disabled  |
| • Loopback                 | Loopback  |
| • MismatchofEquipmentAlarm | Mismatch of equipment and attributes  |
| • Maintenance              | Maintenance mode  |
| • OutOfGroup               | Out of group  |
| • SoftwareDownload         | Software downloading  |
| • Unassigned               | Unassigned  |
| • NotInstalled             | Unequipped  |

## 11.28 ED-FAC

(Cisco ONS 15454) The Edit Facility (ED-FAC) command provisions the payload (or signal) type of facility. The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

### Usage Guidelines

The DS3/EC1 values for the payload parameter are applicable to the following cards:

- DS3/EC1-48 (ONS 15454)"

### Category

Ports

### Security

Provisioning

### Input Format

```
ED-FAC:[<TID>]:<SRC>:<CTAG>:::[PAYLOAD=<PAYLOAD>],
[CMDMDE=<CMDMDE>]:[<PST>[,<SST>]];
```

### Input Example

```
ED-FAC:PETALUMA:FAC-3-9:2222:::PAYLOAD=E4-FRAMED,CMDMDE=FRCD:IS,AINS;
```

### Input Parameters

|           |   |
|-----------|---|
| <SRC>     | Source access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.   |
| <PAYLOAD> | The payload for the card. The parameter type is PAYLOAD, which identifies the payload type.   |
| • DS3     | DS3/T3 facility   |
| • EC1     | EC1 facility  |
| • E3      | E3 facility   |
| • OC3     | OC3 facility  |
| • OC12    | OC12 facility   |
| • OC48    | OC48 facility   |
| <CMDMDE>  | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD    | Force the system to override a state where the command would normally be denied.  |
| • NORM    | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <PST>     | Primary state. Defaults to IS. The parameter type is PST, which indicates the current overall service condition of an entity.   |

|         |   |
|---------|---|
| • IS    | In service  |
| • OOS   | Out of service  |
| <SST>   | Secondary state. Defaults to AINS. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS  | Automatic in service  |
| • DSBLD | Disabled  |
| • MT    | Maintenance mode  |

## 11.29 ED-FFP-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Facility Protection Group for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 4GFC, 4GFICON, 8GFC, D1VIDEO, DV6000, DVBASI, ETRCLO, FSTE, GIGE, HDTV, ISC1, OTU2, OTU3, OTU4, OTU1, ISC3STP1G, or ISC3STP2G (ED-FFP-<MOD2DWDMPAYLOAD>) command edits the operating parameters for a dense wavelength division multiplexing (DWDM) client facility.

### Usage Guidelines

- Y-cable with bidirectional protection is applicable only for ISC3STP1G and ISC3STP2G payloads on the AR-MXP, AR-XP, and AR-XPE cards.
- Y-cable with unidirectional protection is applicable only for payloads other than ISC3STP1G and ISC3STP2G on the AR-MXP, AR-XP, and AR-XPE cards.
- The command does not support 3GVIDEO, SDSDI, HSDSI, and AUTO payloads on AR-MXP, AR-XP, and AR-XPE cards.

### Category

DWDM

### Security

Provisioning

### Input Format

ED-FFP-<MOD2DWDMPAYLOAD>:[<TID>]:<AID>:<CTAG>:::[PROTID=<PROTID>],  
[RVRTV=<RVRTV>],[RVTM=<RVTM>],[PSDIRN=<PSDIRN>][:];

### Input Example

ED-FFP-OTU1:CISCO:VFAC-1-1-1:100:::PROTID=DC-METRO,RVRTV=N,RVTM=1.0,PSDIRN=BI  
;

### Input Parameters

|           |   |
|-----------|---|
| <AID>     | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on <a href="#">page 26-42</a> . The AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID.                                 |
| <PROTAID> | The protection group identifier (protection group name). Defaults to the protecting port AID of the protection group. PROTAID can have a maximum length of 32 characters. It is a string. |

|               |  |
|---------------|--|
| <RVRTV>       | Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. Only applies to path protection configurations. The parameter type is ON_OFF, which disables or enables an attribute. |
| • N           | Does not revert service to original line after restoration.  |
| • Y           | Reverts service to original line after restoration.  |
| <RVTM>        | Revertive time. RVTM is not allowed to be set while “RVRTV” is N. Only applies to path protection configurations. The parameter type is REVERTIVE_TIME (revertive time).   |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.   |
| <PSDIRN>      | Protection switch operation. Identifies the switching mode. Defaults to UNI.   |
|               | <b>Note</b> The MXP_2.5G_10G and TXP_MR_10G cards do not support bidirectional switching.  |
|               | The parameter type is UNI_BI (unidirectional switch operations).   |
| • BI          | Bidirectional protection switching   |
| • UNI         | Unidirectional protection switching  |

## 11.30 ED-FFP-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Facility Protection Group for OC3, OC12, OC48, OC192, or OC768 (ED-FFP-<OCN\_TYPE>) command edits the optical facility protection.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

#### Note

- This command can be used on both protecting and working AIDs. Optimized 1+1 and related attributes are only applicable to the ONS 15454.
- Optimized 1+1 and related attributes are only applicable to ONS 15454.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command obtain the current value.

[DTGRDTM=<DTGRDTM>],[RCGRDTM=<RCGRDTM>][:];
```

**Input Example**

```
ED-FFP-OC3:PETALUMA:FAC-1-1:1:::PROTID=PROT_NAME,RVRTV=Y,RVTM=1.0,
PSDIRN=BI,VRGRDTM=0.5,DTGRDTM=1.0,RCGRDTM=1.0;
```

**Input Parameters**

|           |   |
|-----------|---|
| <AID>     | Access identifier from the “26.17 FACILITY” section on page 26-42.  |
| <PROTAID> | The protection group identifier (protection group name). PROTAID can have a maximum length of 32 characters. It is a string.  |
| <RVRTV>   | Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF, which disables or enables an attribute. <ul style="list-style-type: none"> <li>• N Does not revert service to original line after restoration.</li> <li>• Y Reverts service to original line after restoration.</li> </ul> |
| <RVTM>    | Revertive time. The parameter type is REVERTIVE_TIME (revertive time). <ul style="list-style-type: none"> <li>• 0.5 to 12.0 Revertive time is 0.5 to 12.0 minutes.</li> </ul>   |
| <PSDIRN>  | Protection switch operation. Indicates the switch mode. Defaults to UNI. The parameter type is UNI_BI (unidirectional and bidirectional switch operations). <ul style="list-style-type: none"> <li>• BI Bidirectional protection switching</li> <li>• UNI Unidirectional protection switching</li> </ul>  |
| <VRGRDTM> | Verification guard timer. Only applicable to optimized 1+1. The parameter type is VERIFICATION_GUARD_TIMER (optimized 1+1 verification guard timer). <ul style="list-style-type: none"> <li>• 0.5 500 milliseconds</li> <li>• 1.0 1 second</li> </ul>   |
| <DTGRDTM> | Detection guard timer. Only applicable to optimized 1+1. The parameter type is DETECTION_GUARD_TIMER (optimized 1+1 detection guard timer). <ul style="list-style-type: none"> <li>• 0.0 0 seconds</li> <li>• 0.05 50 milliseconds</li> <li>• 0.1 100 milliseconds</li> <li>• 0.5 500 milliseconds</li> <li>• 1.0 to 5.0 1 second to 5 seconds</li> </ul>   |
| <RCGRDTM> | Recovery guard timer. Only applicable to optimized 1+1. The parameter type is RECOVERY_GUARD_TIMER (optimized 1+1 recovery guard timer). <ul style="list-style-type: none"> <li>• 0.0 0 seconds</li> </ul>  |

|               |                        |
|---------------|------------------------|
| • 0.05        | 50 milliseconds        |
| • 0.1         | 100 milliseconds       |
| • 0.5         | 500 milliseconds       |
| • 1.0 to 10.0 | 1 second to 10 seconds |

## 11.31 ED-FFP-OCH

(Cisco ONS 15454) The Edit Facility Protection Group Optical Channel (ED-FFP-OCH) command changes the provisioning for the default protection group on the DWDM port of a TXP\_MR\_2.5G and TXPP\_MR\_2.5G card.

**Usage Guidelines** None

**Category** DWDM

**Security** Provisioning

**Input Format** ED-FFP-OCH:[<TID>]:<AID>:<CTAG>:::[PROTID=<PROTID>],[RVRTV=<RVRTV>],[RVTM=<RVTM>],[PSDIRN=<PSDIRN>][:];

**Input Example** ED-FFP-OCH:VA454-22:CHAN-2-2:100:::PROTID="FIXEDPROTECTION",RVRTV=N,RVTM=1.0,PSDIRN=BI;

|                         |               |  |
|-------------------------|---------------|--|
| <b>Input Parameters</b> | <AID>         | Access identifier from the <a href="#">"26.8 CHANNEL" section on page 26-23</a> .  |
|                         | <PROTAID>     | The protection group identifier (protection group name). PROTAID is a string.  |
|                         | <RVRTV>       | Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. |                         | • N           | Does not revert service to original line after restoration.  |
|                         | • Y           | Reverts service to original line after restoration.  |
|                         | <RVTM>        | Revertive time. The parameter type is REVERTIVE_TIME (revertive time).   |
|                         | • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes  |

|          |  |
|----------|--|
| <PSDIRN> | Protection switch operation. The parameter type is TRANS_MODE (G1000 transponder mode) |
| • BI     | Bidirectional  |
| • NONE   | Not in transponder mode  |
| • UNI    | Unidirectional   |

## 11.32 ED-FFP-OTS

(Cisco ONS 15454)

The Edit Facility Protection Group OTS (ED-FFP-OTS) command changes provisioning for the Y-cable or splitter protection group on the OTU2-XP card

### Usage Guidelines

The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

### Category

DWDM

### Security

Provisioning

### Input Format

ED-FFP-OTS:[<TID>]:<AID>:<CTAG>:::[PROTID=<PROTID>],[RVRTV=<RVRTV>],[RVTM=<RVTM>],[PSDIRN=<PSDIRN>][:];

### Input Example

ED-FFP-OTS:VA454-22:CHAN-2-2:100:::PROTID="FIXED PROTECTION",RVRTV=N,RVTM=1.0,PSDIRN=BI;

**Table 11-3** Parameter Support

| Parameter | Description  |
|-----------|--|
| <AID>     | Access identifier from the <a href="#">"26.8 CHANNEL" section on page 26-23</a> .  |
| <PROTAID> | The protection group identifier (protection group name). PROTAID is a string.  |
| <RVRTV>   | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| • N       | Does not revert service to original line after restoration.  |
| • Y       | Reverts service to original line after restoration.  |

**Table 11-3 Parameter Support**

| Parameter   | Description  |
|---|--|
| <RVTM>  | (Optional) Revertive time. The parameter type is REVERTIVE_TIME (revertive time).                              |
| <ul style="list-style-type: none"> <li>0.5 to 12.0</li> </ul>                   | Revertive time is 0.5 to 12.0 minutes.   |
| <PSDIRN>  | (Optional) Protection switch operation. The parameter type is TRANS_MODE, which is the G1000 transponder mode. |
| <ul style="list-style-type: none"> <li>BI</li> <li>NONE</li> <li>UNI</li> </ul> | Bidirectional<br>Not in transponder mode<br>Unidirectional   |

## 11.33 ED-FOG

(Cisco ONS 15454) The Edit Fan-Out-Group (ED-FOG) command adds and deletes the members connecting to the CPT 50 panel and applied on the carrier packet transport (CPT) system.

### Usage Guidelines

The interfaces that can be attached should be valid for the FOG. At least one interface must be always attached to the FOG.

### Category

Equipment

### Security

Provisioning

### Input Format

```
ED-FOG[:<TID>]:<AID>:<CTAG>[::ATTACH=<ATTACH>],[DETACH=<DETACH>],[QUEUEMODE=<QUEUEMODE>],[PBNAME=<PBNAME>];
```

### Input Examples

```
ED-FOG::FOG-1-36:1::ATTACH=FAC-2-2-1;
```

### Input Parameters

|   |  |
|---|--|
| <AID>   | Access identifier from the <a href="#">“26.15 EQPT” section on page 26-39</a> .  |
| <ATTACH>  | AID of the fabric and line card ports used as the Fan-out members. This is the AID of the interface to be attached to the FOG.   |
| <DETACH>  | AID of the fabric and line card ports used as the Fan-out members. This is the AID of the interface to be detached from the FOG. |
| <QUEUEMODE><br>>  | QUEUEMODE  |
| <ul style="list-style-type: none"> <li>NOPRI</li> </ul> | NOPRI  |

|          |        |
|----------|--------|
| • STRICT | STRICT |
| <PBNAME> | PBNAME |

## 11.34 ED-FSTE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Fast Ethernet (ED-FSTE) command edits the front-end port information of the fast (10/100 Mbps) Ethernet card.

### Usage Guidelines

The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

The SELECTIVEAUTO parameter is applicable only when EXPSPEED and EXPDUPLEX are not set to AUTO mode.

Squelch can either be enabled or set to transparent on FE.

### Note

For the ML-100T-8 card, only the NAME parameter can be set.

### Category

Ports

### Security

Provisioning

### Input Format

```
ED-FSTE:[<TID>]:<SRC>:<CTAG>:::[FLOW=<FLOW>],[EXPDUPLEX=<EXPDUPLEX>],[EXPSPEED=<EXPSPEED>],[SELECTIVEAUTO=<SELECTIVEAUTO>],[VLANCOS=<VLANCOSTHRESHOLD>],[IPTOS=<IPTOSTHRESHOLD>],[NAME=<NAME>],[CMDMDE=<CMDMDE>],[SUPPRESS=<SUPPRESS>],[SOAK=<SOAK>],[LIENABLE=<LIENABLE>],[LITIMER=<LITIMER>],[FREQ=<FREQ>],[LOSSB=<LOSSB>],[CIR=<CIR>],[CBS=<CBS>],[EBS=<EBS>],[OSC=<OSC>],[AUTONEG=<AUTONEG>],[MTU=<MTU>],[SQUELCHMODE=<SQUELCH>]:[<PST>[,<SST>]];
```

### Input Example

```
ED-FSTE:CISCO:FAC-1-1:123::FLOW=Y,EXPDUPLEX=HALF,EXPSPEED=10_MBPS,SELECTIVEAUTO=Y,VLANCOS=2,IPTOS=4,NAME="FSTEPOR",CMDMDE=FRCD,SUPPRESS=Y,SOAK=32,LIENABLE=Y,LITIMER=200:IS,AINS;
```

### Input Parameters

|        |   |
|--------|---|
| <AID>  | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on <a href="#">page 26-42</a> . The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
| <FLOW> | Flow control. The parameter type is ON_OFF, which disables or enables an attribute.   |

|                 |   |
|-----------------|---|
| • N             | Disable an attribute.   |
| • Y             | Enable an attribute.  |
| <EXPDUPLICATE>  | Ethernet duplex mode. The parameter type is ETHER_DUPLEX (duplex mode).   |
| • AUTO          | Auto mode   |
| • FULL          | Full mode   |
| • HALF          | Half mode   |
| <EXPSPEED>      | Ethernet speed. The parameter type is ETHER_SPEED (Ethernet speed).   |
| • 100_MBPS      | 100 Megabits per second   |
| • 10_GBPS       | 10 Gigabits per second  |
| • 10_MBPS       | 10 Megabits per second  |
| • 1_GBPS        | 1 Gigabits per second   |
| • 40_GBPS       | 40 Gigabit per second   |
| • AUTO_FDX      | Enable auto negotiation with full duplex  |
| • AUTO          | Auto  |
| <SELECTIVEAUTO> | (Optional) Selective auto-negotiation. The parameter is Y or N (enable or disable auto-negotiation). This indicates selective auto-negotiation of EXPSPEED and EXPDUPLICATE only.   |
| • Y             | Enable selective auto-negotiation.  |
| • N             | Disable selective auto-negotiation.   |
| <VLANCOS>       | Priority queuing threshold based on VLAN class of service of incoming Ethernet packets. Default value is 1175. VLANCOS is an integer.   |
| <IPTOS>         | Priority queuing threshold based on IP type of service of incoming Ethernet packets. Default value is 368. IPTOS is an integer.   |
| <NAME>          | Name. NAME is a string.   |
| <CMDMDE>        | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD          | Force the system to override a state where the command would normally be denied.  |
| • NORM          | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <SUPPRESS>      | Pre-service alarm flag for data ports.  |
| • ON            | Enable suppress.  |
| • OFF           | Disable suppress. Default is Off.   |
| <SOAK>          | OOS-AINS to IS transition soak time as measured in 15 minute intervals, so a value of 4 translates to a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer.   |

|                 |   |
|-----------------|---|
| <LIENABLE>      | (Optional) Enable or Disable link integrity timer. Takes either Y or N. Value Y enables the LITIMER and value N disables LITIMER.<br>By default LITIMER is enabled.<br><b>Note</b> The LIENABLE parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454. |
| <LITIMER>       | (Optional) Link integrity timer duration in the range between 200 ms and 10000 ms in multiples on 100 ms.<br><b>Note</b> The LITIMER parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.  |
| <FREQ>          | (Optional) The parameter type is OPTICAL_WLEN, which indicates the optical wavelength.  |
| • 1310          | Wavelength 1310.  |
| • 1529.16       | Wavelength 1529.16  |
| • 1562.23       | Wavelength 1562.23  |
| • 1562.64       | Wavelength 1562.64  |
| • 1563.05       | Wavelength 1563.05  |
| • 1563.45       | Wavelength 1563.45  |
| • 1563.86       | Wavelength 1563.86  |
| • 1564.27       | Wavelength 1564.27  |
| • 1564.68       | Wavelength 1564.68  |
| • 1565.09       | Wavelength 1565.09  |
| • 1565.50       | Wavelength 1565.50  |
| • 1565.90       | Wavelength 1565.90  |
| • 1566.31       | Wavelength 1566.31  |
| • 1566.72       | Wavelength 1566.72  |
| <LOSSB>         | (Optional) The parameter type is REACH, which indicates the reach values.   |
| • 100GBASE-LR4  | 100GBASE-LR4  |
| • 100GBASE-SR10 | 100GBASE-SR10   |
| • 40GBASE-FR    | 40GBASE-FR  |
| • 40GBASE-LR4   | 40GBASE-LR4   |
| • 40GBASE-SR4   | Reach supported on 40GIGE payload on CFP-LC card.   |
| • 4I1-9D1F      | 4I1-9D1F  |
| • C4S1-2D1      | C4S1-2D1  |
| • FE-BX         | FE-BX   |
| • FX            | FX  |
| • GE-BX         | GE-BX   |
| • GE-EX         | GE-EX   |
| • LX-10         | LX-10   |
| • TEN-GE-LRM    | TEN-GE-LRM  |
| • TEN-GE-ZR     | TEN-GE-ZR   |
| • VSR2000-3R2   | VSR2000-3R2   |

|               |   |
|---------------|---|
| • AUTOPROV    | Auto provisioning   |
| • CWDM        | Coarse wavelength division multiplexing (CWDM)  |
| • CX1         | Reach CX1   |
| • LR          | Reach LR  |
| • LR-2        | Reach LR-2  |
| • LX          | Reach LX  |
| • PIII-2D1    | Long haul 10G Ethernet with 1310 nm wavelength  |
| • PIL1-1D2    | Longhaul 2.5G Ethernet with 1550 nm wavelength  |
| • PIL1-2D2    | Long haul 10G Ethernet with 1550 nm wavelength  |
| • PIS1-1D1    | Shorthaul 2.5G Ethernet with 1310 nm wavelength   |
| • PIS1-2D1    | Short haul 10G Ethernet in 1310 nm wavelength   |
| • SC          | Reach SC  |
| • SR          | Reach SR  |
| • TEN-GE-ER   | 10 GE extended range  |
| • TEN-GE-LR   | 10 GE long range  |
| • TEN-GE-SR   | 10 GE short range   |
| <CIR>         | Ingress committed information rate. This is a value between 0.0 and 100.0. Default value is 100.0.  |
| <CBS>         | Ingress committed burst bucket size.  |
| 4K            | 4 Kbit bucket size  |
| 8K            | 8 Kbit bucket size  |
| 16K           | 16 Kbit bucket size   |
| 32K           | 32 Kbit bucket size   |
| 64K           | 64 Kbit bucket size   |
| 128K          | 128 Kbit bucket size  |
| 256K          | 256 Kbit bucket size  |
| 512K          | 512 Kbit bucket size  |
| 1M            | 1 Mbit bucket size  |
| 2M            | 1 Mbit bucket size  |
| 4M            | 4 Mbit bucket size  |
| 8M            | 8 Mbit bucket size  |
| 16M           | 16 Mbit bucket size   |
| <EBS>         | Ingress excess burst bucket size.   |
| <OSC>         | To enable or disable the OSC on the port.<br><br><b>Note</b> The OSC parameter is supported only on 15454-M2 and 15454-M6.                                |
| <AUTONEG>     | Automatic negotiation. Defaults to Y. The parameter type is ON_OFF, which disables or enables an attribute.   |
| <MTU>         | (Optional) Maximum transport unit. The parameter type is MTU_TYPE, which indicates the maximum transport unit used by an Ethernet card. Defaults to 9600. |
| <SQUELCHMODE> | Shuts down the far-end laser in response to certain defects   |

|           |   |
|-----------|---|
| • NONE    | Transparent   |
| • SQUELCH | Squelch is enabled  |
| <PST>     | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity. |
| • IS      | In service  |
| • OOS     | Out of service  |
| <SST>     | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS    | Automatic in service  |
| • DSBLD   | Disabled  |
| • LPBK    | Loopback  |
| • MEA     | Mismatch of equipment and attributes  |
| • MT      | Maintenance mode  |
| • OOG     | Out of group  |
| • SWDL    | Software downloading  |
| • UAS     | Unassigned  |
| • UEQ     | Unequipped  |

## 11.35 ED-FTPSERVER

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit FTP Server (ED-FTPSERVER) command edits FTP server entries.

### Usage Guidelines

This command is used to edit only the ENABLE and TIMER parameters.

### Category

ENE

### Security

Superuser

### Input Format

```
ED-FTPSERVER:[<TID>]::<CTAG>::IPADDR=<IPADDR>,[ENABLE=<ENABLE>],
[TIMER=<TIMER>];
```

### Input Examples

- ED-FTPSERVER:::A::IPADDR=10.20.30.40,ENABLE=Y,TIMER=30;
- ED-FTPSERVER:TID::CTAG::IPADDR="[3ffe:0501:0008:0000:0260:97ff:fe40:efab]",ENABLE=Y,
 ,
 TIMER=45;

|                         |          |  |
|-------------------------|----------|--|
| <b>Input Parameters</b> | <IPADDR> | Specifies the IP address of the FTP server.  |
|                         | <ENABLE> | Specifies the enable/disable option of the FTP server. The parameter type is ON_OFF (disable or enable an attribute).              |
|                         | • N      | Disable an attribute.  |
|                         | • Y      | Enable an attribute.   |
|                         | <TIMER>  | (Optional) Specifies the timeout value of the FTP server in minutes. Timer is an integer that can be set between 0 and 60 minutes. |

## 11.36 ED-G1000

(Cisco ONS 15454) The Edit G1000 (ED-G1000) command edits the attributes related to a G1000 port.

### Usage Guidelines

The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

### Category

Ports

### Security

Provisioning

### Input Format

```
ED-G1000:[<TID>]:<AID>:<CTAG>:::[MFS=<MFS>],[FLOW=<FLOW>],
[LOWMRK=<LOWMRK>],[HIWMRK=<HIWMRK>],[AUTONEG=<AUTONEG>],
[NAME=<NAME>],[CMDMDE=<CMDMDE>],[SOAK=<SOAK>],[LIENABLE=<LIENABLE>],
[LITIMER=<LITIMER>]:[<PST>[,<SST>]];
```

### Input Example

```
ED-G1000:PETALUMA:FAC-1-1:CTAG:::MFS=1548,FLOW=Y,LOWMRK=20,HIWMRK=492,
AUTONEG=Y,NAME="G1000 PORT",CMDMDE=FRCD,SOAK=32,LIENABLE=Y
LITIMER=300:OOS,DSBLD;
```

### Input Parameters

|         |   |
|---------|---|
| <AID>   | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.                            |
| <MFS>   | Maximum frame size. the parameter type is MFS_TYPE, which is the maximum frame size used by an Ethernet card. |
| • 1548  | Normal frame size   |
| • JUMBO | Jumbo frame size  |
| <FLOW>  | Flow control. The parameter type is ON_OFF, which disables or enables an attribute.                           |

|            |   |
|------------|---|
| • N        | Disable an attribute.   |
| • Y        | Enable an attribute.  |
| <LOWMRK>   | Low watermark value. LOWMRK is an integer. Defaults to 25. LOWMRK is available in Software Release 4.0.1 and later.   |
| <HIWMRK>   | High watermark value. HIWMRK is an integer. Defaults to 485.  |
| <AUTONEG>  | Automatic negotiation. Defaults to Y. The parameter type is ON_OFF, which disables or enables an attribute.   |
| • N        | Disable an attribute.   |
| • Y        | Enable an attribute.  |
| <NAME>     | Name. NAME is a string. Default is NULL. Maximum length is 32 characters.   |
| <CMDMDE>   | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD     | Force the system to override a state where the command would normally be denied.  |
| • NORM     | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <SOAK>     | OOS-AINS to IS transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer. Defaults to 32.   |
| <LIENABLE> | (Optional) Enable or Disable link integrity timer. Takes either Y or N. Value Y enables the LITIMER and value N disables LITIMER.<br>By default LITIMER is enabled.<br><b>Note</b> The LIENABLE parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.   |
| <LITIMER>  | (Optional) Link integrity timer duration in the range between 200 ms and 10000 ms in multiples on 100 ms.<br><b>Note</b> The LITIMER parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.  |
| <ENCAP>    | (Optional) Frame encapsulation type. The parameter type is ENCAP, which is the frame encapsulation type.  |
| • GFP_F    | GFP frame mode.   |
| • GFP_T    | GFP transparent mode.   |
| • HDLC     | HDLC frame mode.  |
| • HDLC_LEX | HDLC LAN extension frame mode.  |
| • HDLC_X86 | HDLC X.86 frame mode.   |
| • CBR      | CBR mapping mode.   |
| • GFP      | GFP mapping mode.   |
| • GMP      | GMP mapping mode is supported only on 8GFC on 10x10G-LC card.   |

|         |  |
|---------|--|
| • TRP   | Transparent mapping mode.  |
| <PST>   | Primary state. Defaults to OOS. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • IS    | In service   |
| • OOS   | Out of service   |
| <SST>   | Secondary state. Defaults to DSBLD. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS  | Automatic in service   |
| • DSBLD | Disabled   |
| • LPBK  | Loopback   |
| • MEA   | Mismatch of equipment and attributes   |
| • MT    | Maintenance mode   |
| • OOG   | Out of group   |
| • SWDL  | Software downloading   |
| • UAS   | Unassigned   |
| • UEQ   | Unequipped   |

## 11.37 ED-GFP

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Generic Framing Protocol (ED-GFP) command edits GFP parameters on the ONS 15454 CE-100T-8 AND FC\_MR-4, CE-1000-4 cards.

### Usage Guidelines

- For the FC\_MR-4 card, the parameters AUTOTHGFPBUF, GFPBUF, and FILTER can be edited only if distance extension is enabled (set to B2B).
- On POS ports of CE-MR-10 card, FCS cannot be set to NONE when the encapsulation is set to GFP.

### Category

Ports

### Security

Provisioning

### Input Format

```
ED-GFP:[<TID>]:<AID>:<CTAG>:::[FCS=<FCS>],[AUTOTHGFPBUF=<AUTOTHGFPBUF>],
[GFPBUF=<GFPBUF>],[FILTER=<FILTER>];
```

### Input Example

```
ED-GFP:PETALUMA:VFAC-1-0:123:::FCS=N,AUTOTHGFPBUF=Y,GFPBUF=16,
FILTER=INGRESS;
```

|                         |                          |  |
|-------------------------|--------------------------|--|
| <b>Input Parameters</b> | <AID>                    | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.<br><br><b>Note</b> VFAC AID is used for the CE-100T-8 cards on the ONS 15454. ML-100T-8 GFP management is done through the Cisco IOS command-line interface (CLI) and not through the TL1 interface. The FAC AID is used for the ONS 15454 FC_MR-4. |
|                         | <FCS>                    | Payload frame check sequence. The parameter type is FCS (frame check sequence).  |
|                         | • FCS-16                 | Frame check sequencing using 16 bits   |
|                         | • FCS-32                 | Frame check sequencing using 32 bits   |
|                         | • NONE                   | No frame check sequence  |
|                         | <AUTOTHGFPBUF>           | The parameter type is ON_OFF, which disables or enables an attribute.  |
|                         | • N                      | Disable an attribute.  |
|                         | • Y                      | Enable an attribute.   |
|                         | <FILTER>                 | The parameter type is GFP_FILTER, which is the filter feature in GFP.  |
|                         | • INGRESS                | Activate filter feature on the egress port.  |
| • NONE                  | Turn off filter feature. |  |

## 11.38 ED-HDLC

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit High-Level Data Link Control (ED-HDLC) command edits HDLC-related attributes for HDLC-encapsulated payloads.

### Usage Guidelines

None

### Category

Ports

### Security

Provisioning

### Input Format

ED-HDLC:[<TID>]:<SRC>:<CTAG>[::FCS=<FCS>][CRC=<CRC>];

### Input Example

ED-HDLC:PETALUMA:VFAC-1-1-PORT:CTAG::FCS=FCS-16,CRC=CRC-32;

| Input Parameters |          |  |
|------------------|----------|--|
| <SRC>            |          | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42. |
| <FCS>            |          | Payload frame check sequence. The parameter type is FCS (frame check sequence).      |
|                  | • FCS-16 | Frame check sequence using 16 bits   |
|                  | • FCS-32 | Frame check sequence using 32 bits   |
|                  | • NONE   | No frame check sequence  |
| <CRC>            |          | Cyclic Redundancy Check.   |
|                  |          | <b>Note</b> CRC is applicable only to ADM10G card.                                   |
|                  | • CRC-16 | Cyclic Redundancy Check using 16 bits.   |
|                  | • CRC-32 | Cyclic Redundancy Check using 32 bits.   |

## 11.39 ED-L2-ETH

(Cisco ONS 15454) The Edit Layer 2 Ethernet (ED-L2-ETH) command edits the layer 2 port information of GE-XP and 10GE-XP Ethernet cards.

### Usage Guidelines

The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

### Category

Ethernet

### Security

Provisioning

### Input Format

```
ED-L2-ETH[:<TID>]:<AID>:<CTAG>[:::NIMODE=<NIMODE>],[MACLEARNING=<MACLEAR
NING>],[INGRESSCOS=<INGRESSCOS>],[ETHERCETYPE=<ETHER_CE_TYPE>],[ETHERSTY
PE=<ETHER_S_TYPE>],[ALWMACADDR=<ALW_MAC_ADDR>],[INHMACADDR=<INH_MAC
_ADDR>],[BPDU=<BPDU>],[BRIDGESTATE=<BRIDGE_STATE>],[QNQMODE=<QNQMODE>],
[TRNSPSVLAN=<TRNSP_SVLAN>],[NAME=<NAME>],[IGMPROUTER=<IGMPROUTER>],[AI
SACTION=<AISACTION>],[PROTACTION=<PROTACTION>],[CMDMD=<CMDMD>],[IGMPO
NCVLAN=<IGMPONCVLAN>],[IGMPCVLAN=<IGMPCVLAN>],[DLF=<DLF>],[DLFTHRES=<
DLFTHRES>],[MCAST=<MCAST>],[MCASTTHRES=<MCASTTHRES>],[BCAST=<BCAST>],[B
CASTTHRES=<BCASTTHRES>],[CLRCRCALM=<CLRCRCALM>][:];
```

### Input Example

```
"ETH-2-21-1:::NIMODE=NNI,MACLEARNING=N,INGRESSCOS=0,ETHERCETYPE=8100,ETHE
RSTYPE=8100,BPDU=N,BRIDGESTATE=FORWARDING,ACTBRIDGESTATE=UNKNOWN,QNQ
MODE=SELECTIVE,IGMPROUTER=NONE,AISACTION=AIS-NONE,PROTACTION=PROT-SQU
ELCH,IGMPONCVLAN=N,DLF=N,DLFTHRES=0,MCAST=N,MCASTTHRES=0,BCAST=N,BCA
STTHRES=0,CLRCRCALM=N:"
```

```
"ETH-2-22-1::NIMODE=NNI,MACLEARNING=N,INGRESSCOS=0,ETHERCETYPE=8100,ETHERSTY
PE=8100,BPDU=N,BRIDGESTATE=FORWARDING,ACTBRIDGESTATE=UNKNOWN,QNQ
MODE=SELECTIVE,IGMPROUTER=NONE,AISACTION=AIS-NONE,PROTACTION=PROT-SQU
ELCH,IGMPONCVLAN=N,DLF=N,DLFTHRES=0,MCAST=N,MCASTTHRES=0,BCAST=N,BCA
STTHRES=0,CLRCRCALM=Y:"
```

**Input Parameters**

|               |  |
|---------------|--|
| <AID>         | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.  |
| <NIMODE>      | Identifies the Ethernet Network Interface Mode.  |
| • NNI         | (Default) Network-Network Interface Mode   |
| • UNI         | User-Network Interface Mode  |
| <MACLEARNING> | MAC address learning mode. This activates the MAC address learning on the interface to avoid packet broadcasting.  |
| • Y           | Enables MAC learning   |
| • N           | Disable MAC learning   |
| <INGRESSCOS>  | Identifies the COS value set in the S-VLAN tag.  |
| • 0 to 7      | Set a Cos value  |
| • TRUST       | Use the customer COS   |
| • VLAN        | The COS to be provisioned on CVLAN basis (QinQ selective mode).  |
| <ETHERCETYPE> | Identifies a customer foreseen Ethernet type. If the customer uses a non-standard Ethernet type, the incoming packets will be accepted only if the CE-VLAN Ethernet type matches this parameter. |
| <ETHERSTYPE>  | Identifies a customer foreseen Ethernet type. If the customer uses a non-standard Ethernet type, the incoming packets will be accepted only if the CE-VLAN Ethernet type matches this parameter. |
| <ALWMACADDR>  | Identifies the allowed MAC addresses filtered out by the L2 Ethernet port. Every single MAC address is in the format of aa-bb-cc-dd-ee-ff, where every digit is in a hexadecimal form.           |
| <INHMACADDR>  | Identifies the inhibited MAC addresses filtered out by the L2 Ethernet port. Every single MAC address is in the format of aa-bb-cc-dd-ee-ff, where every digit is in a hexadecimal form.         |
| <BPDU>        | BPDU (Bridge Protocol Data Unit) management mode; Drop/Passthrough BPDU tagged packets.  |
| • Y           | Enables the BPDU tag.  |
| • N           | Disables the BPDU tag.   |
| <BRIDGESTATE> | Defines if the traffic is blocked on the port.   |
| • Unknown     | Unknown state  |
| • Disabled    | Disabled state   |
| • Blocking    | Blocking state   |
| • Listening   | Listening state  |
| • Learning    | Learning state   |

|               |   |
|---------------|---|
| • Forwarding  | Forwarding state  |
| • Broken      | Broken state  |
| <QNQMODE>     | This is used to represent the QinQ mode operations.   |
| • Selective   | The S-VLAN tag is added only on specified CE-VLANs. The other packets are dropped.  |
| • Transparent | The S-VLAN tag is always performed where all packets having the S-VLAN-ID identified by TRNPSVLAN parameter are allowed.  |
| <TRNPSVLAN>   | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.   |
| <NAME>        | (Optional) Name. NAME is a string.  |
| <CMDMDE>      | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| <PST>         | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • IS          | In service  |
| • OOS         | Out of service  |
| <SST>         | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
| • AINS        | Automatic in service  |
| • DSBLD       | Disabled  |
| • LPBK        | Loopback  |
| • MEA         | Mismatch of equipment and attributes  |
| • MT          | Maintenance mode  |
| • OOG         | Out of group  |
| • SWDL        | Software downloading  |
| • UAS         | Unassigned  |
| • UEQ         | Unequipped  |
| <IGMPROUTE>   | IGMP M Router port. Indicates the type of connection between this port and the IGMP M Router.   |
| • STATIC      | A static connection is present between this port and the IGMP M Router  |
| • NONE        | No connection is present  |
| <AISACTION>   | VLAN-AIS Action. Indicates what action take place on port when VLAN-AIS alarm is raisedValues   |
| • AIS-SQUELCH | The port is squelched   |
| • AIS-NONE    | No action after VLAN-AIS  |

|   |   |
|---|---|
| <PROTECTION>  | Indicates the action that takes place on the standby port in the protection unit when a ONEPLUSONEL2 protection is activated. |
| <ul style="list-style-type: none"> <li>• SQUELCH</li> <li>• NONE</li> </ul> | <p>The port is squelched.</p> <p>Ethernet traffic is blocked.</p>   |
| <IGMPCVLAN>   | Indicates the customer VLAN value for IGMP on CVLAN.  |
| <DLF>   | To enable or disable storm control on DLFPC packet.   |
| <DLFTHRES>  | Indicates the DLFPC packet threshold value for storm control.   |
| <MCAST>   | To enable or disable the storm control on multicast packet.   |
| <MCASTTHRES>  | Indicates the multicast packet threshold value for storm control.   |
| <BCAST>   | To enable or disable the storm control on broadcast packet.   |
| <BCASTTHRES>  | Indicates the broadcast packet threshold value for storm control.   |
| <CLRRCALM>  | Clears the DATA-CRC alarm.  |

## 11.40 ED-LM-EFM

(Cisco ONS 15454) The Edit Link Monitoring Ethernet in the First Mile (ED-LM-EFM) command edits the Ethernet in the First Mile (EFM) link monitoring parameters and the action associated with each of the parameters.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Ports

### Security

Provisioning

### Input Format

ED-LM-EFM:[<TID>]:<AID>:<CTAG>:::LMPARAM=<LMPARAM>,[LOWTH=<LOWTH>],[HIGH TH=<HIGHTH>],[ACTION=<ACTION>],[WINDOW=<WINDOW>];

### Input Example

ED-LM-EFM::ETH-12-1-1:1:::LMPARAM=ERR-FRAME,LOWTH=20,HIGHTH=30,ACTION=DISABLE-PORT,WINDOW=40;

### Input Parameters

|           |  |
|-----------|--|
| <AID>     | Access identifier from the <a href="#">“26.16 ETH” section on page 26-41</a> . |
| <LMPARAM> | Name of the link monitoring parameter.   |

|                 |   |
|-----------------|---|
| • ERR-FRAME     | Error frames.   |
| • ERR-FRAME-PRD | Error frame period.   |
| • ERR-FRAME-SEC | Error frames second.  |
| <LOWTH>         | The lowest value of the link monitoring parameter. It is an integer.  |
| <HIGHTH>        | The highest value of the link monitoring parameter. It is an integer.   |
| <ACTION>        | Action to be taken when the link monitoring parameter crosses the HIGH value, which is set by the user. The value can be NONE or DISABLED.            |
| <WINDOW>        | This indicates the window associated with each of the link monitoring parameter (number of packets, number of frames or the timer). It is an integer. |

## 11.41 ED-LMP

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Link Management Protocol (ED-LMP) command edits the global LMP protocol attributes.

### Usage Guidelines

This command is only available on platforms that support the LMP protocol.

### Category

LMP

### Security

Provisioning

### Input Format

```
ED-LMP:[<TID>]::<CTAG>:::[ENABLED=<ENABLED>],[WDMEXT=<WDM>],
[ROLE=<ROLE>], [LMPNODEID-<NODEID>][:];
```

### Input Example

```
ED-LMP:PETALUMA::704::ENABLED=Y,WDMEXT=Y,ROLE=PEER,LMPNODEID=198.133.219.25;
```

### Input Parameters

|           |  |
|-----------|--|
| <ENABLED> | LMP protocol status.   |
| • Y       | The protocol is enabled.   |
| • N       | The protocol is disabled.  |
| • <WDM>   | Determines if the LMP wave division multiplexing (WDM) extensions are in effect. |
| • Y       | The LMP WDM extensions are in effect.  |
| • N       | The LMP WDM extensions are not in effect.  |
| • <ROLE>  | The role the LMP protocol is configured to play.                                 |

|            |  |
|------------|--|
| • OLS      | The LMP protocol is configured to respond as an optical line system (OLS).   |
| • PEER     | The LMP protocol is configured to respond as a peer node.  |
| • <NODEID> | LMP node ID. NODEID is a stable IP address that is always reachable if there is any connectivity to it. The default LMP node ID value is the IP address of the node. |

## 11.42 ED-LMP-CTRL

(Cisco ONS 15454) The Edit Link Management Protocol Control Channel (ED-LMP-CTRL) command edits the LMP control channels.

### Usage Guidelines

This command is only available on nodes where the LMP protocol is available and has been enabled.

### Category

LMP

### Security

Provisioning

### Input Format

```
ED-LMP-CTRL:[<TID>]:<SRC>:<CTAG>:::[LOCALPORT=<LOCALPORT>],
[REBOTENE=<REBOTENE>],[REMOTEIP=<REMOTEIP>],[HELLO=<HELLO>],
[HELLOMIN=<HELLOMIN>],[HELLOMAX=<HELLOMAX>],[DEAD=<DEAD>],
[DEADMIN=<DEADMIN>],[DEADMAX=<DEADMAX>]:[<PST>][,<SST>];
```

### Input Example

```
ED-LMP-CTRL:PETALUMA:CTRL-123:704:::LOCALPORT=FAC-1-1-1
,REBOTENE=15.15.15.115,REMOTEIP=126.0.0.1,HELLO=500,HELLOMIN=300,
HELLOMAX=5000,DEAD=12000,DEADMIN=2000,DEADMAX=20000:OOS,DSBLD;
```

### Input Parameters

|              |  |
|--------------|--|
| <SRC>        | The LMP control channel AID values.  |
| • CTRL-ALL   | Specifies all the control channels.  |
| • CTRL-{1-4} | Specifies an individual control channel.   |
| <LOCALPORT>  | The pathway that the LMP control channel will use to send and receive messages.                                  |
| <REBOTENE>   | Remote IP address used by the far-end LMP control channel.   |
| <REMOTEIP>   | Remote IP address used by the LMP control channel to send and receive messages.                                  |
| <HELLO>      | The time interval in which the LMP protocol sends HELLO messages.  |
| <HELLOMIN>   | The minimum amount of time within which the LMP control channels can send out HELLO messages to the remote node. |

|            |   |
|------------|---|
| <HELLOMAX> | The maximum amount of time that the LMP control channel can wait between HELLO messages.  |
| <DEAD>     | Time interval an LMP control channel will wait for a HELLO message from the remote side before listing the control channel as down. |
| <DEADMIN>  | The minimum amount of time that an LMP control channel can wait before listing the control channel status as down.                  |
| <DEADMAX>  | The maximum amount of time that the LMP control channel can wait before listing the control channel as down.                        |
| <PST>      | Primary state. This parameter indicates the current overall service condition of an entity.   |
| • IS       | In service  |
| • OOS      | Out of service  |
| <SST>      | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.                       |
| • AINS     | Automatic in service  |
| • DSBLD    | Disabled  |
| • LPBK     | Loopback  |
| • MEA      | Mismatch of equipment and attributes  |
| • MT       | Maintenance mode  |
| • OOG      | Out of group  |
| • SWDL     | Software downloading  |
| • UAS      | Unassigned  |
| • UEQ      | Unequipped  |

## 11.43 ED-LMP-TLINK

(Cisco ONS 15454) The Edit Link Management Protocol Traffic Engineering (TE) Link (ED-LMP-TLINK) command edits the LMP TE link.

### Usage Guidelines

This command can only be used on nodes that have the LMP protocol available and enabled.

### Category

LMP

### Security

Provisioning

### Input Format

```
ED-LMP-TLINK:[<TID>]:<SRC>:<CTAG>:::REMOTEID=<REMOTE_ID>,
REMOTETE=<REMOTE_TELINK>, [MUXCAP=<MUXCAP>]:[<PST>[,<SST>]];
```

**Input Example**

```
ED-LMP-TLINK:PETALUMA:TLINK-123:704:::REMOTEID=15.15.15.115,REMOTETE=123,
MUXCAP=LAMBDA:OOS,DSBLD;
```

**Input Parameters**

|  |  |
|--|--|
| <SRC>  | LMP TE link AID values.  |
| <ul style="list-style-type: none"> <li>TLINK-ALL</li> <li>TLINK-{1-256}</li> </ul>   | <ul style="list-style-type: none"> <li>Specifies all the TE links.</li> <li>Specifies an individual TE link.</li> </ul>  |
| <REMOTEID>   | Remote node ID associated with the LMP TE link.  |
| <REMOTETE>   | Remote ID used by the far end LMP TE link.   |
| <MUXCAP>   | The muxponder capability of the LMP TE link.   |
| <ul style="list-style-type: none"> <li>PKTSWITCH1</li> <li>PKTSWITCH2</li> <li>PKTSWITCH3</li> <li>PKTSWITCH4</li> <li>LAYER2</li> <li>TDM</li> <li>LAMBDA</li> <li>FIBER</li> </ul> | <ul style="list-style-type: none"> <li>Packet Switching 1</li> <li>Packet Switching 2</li> <li>Packet Switching 3</li> <li>Packet Switching 4</li> <li>Layer 2 switching</li> <li>Time-division multiplexing (TDM) switching</li> <li>Lambda switching</li> <li>Fiber switching</li> </ul> |
| <PST>  | Primary state. This parameter indicates the current overall service condition of an entity.  |
| <ul style="list-style-type: none"> <li>IS</li> <li>OOS</li> </ul>  | <ul style="list-style-type: none"> <li>In service</li> <li>Out of service</li> </ul>   |
| <SST>  | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| <ul style="list-style-type: none"> <li>AINS</li> <li>DSBLD</li> <li>LPBK</li> <li>MEA</li> <li>MT</li> <li>OOG</li> <li>SWDL</li> <li>UAS</li> <li>UEQ</li> </ul>                    | <ul style="list-style-type: none"> <li>Automatic in service</li> <li>Disabled</li> <li>Loopback</li> <li>Mismatch of equipment and attributes</li> <li>Maintenance mode</li> <li>Out of group</li> <li>Software downloading</li> <li>Unassigned</li> <li>Unequipped</li> </ul>             |

## 11.44 ED-LMP-DLINK

(Cisco ONS 15454) The Edit Link Management Protocol Data Link (ED-LMP-DLINK) command edits the LMP data link.

**Usage Guidelines**

This command can only be used on nodes that have the LMP protocol available and enabled.

|                         |   |       |  |            |                            |        |                |             |                     |          |   |            |                              |
|-------------------------|---|-------|--|------------|----------------------------|--------|----------------|-------------|---------------------|----------|---|------------|------------------------------|
| <b>Category</b>         | LMP   |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| <b>Security</b>         | Provisioning  |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| <b>Input Format</b>     | ED-LMP-DLINK:[<TID>]:<SRC>:<CTAG>:::[LINKTYPE=<LINKTYPE>],TELINK=<TELINK>,REMOTEID=<REMOTEID>;  |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| <b>Input Example</b>    | ED-LMP-DLINK:PETALUMA:FAC-14-1-1:704:::LINKTYPE=PORT,TELINK=TLNK-45,REMOTEID=646631;  |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| <b>Input Parameters</b> | <table border="1"> <tr> <td>&lt;SRC&gt;</td> <td>Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.</td> </tr> <tr> <td>&lt;LINKTYPE&gt;</td> <td>The type of LMP data link.</td> </tr> <tr> <td>• PORT</td> <td>Port data link</td> </tr> <tr> <td>• COMPONENT</td> <td>Component data link</td> </tr> <tr> <td>&lt;TELINK&gt;</td> <td>Used to map LMP data links to LMP TE links.</td> </tr> <tr> <td>&lt;REMOTEID&gt;</td> <td>The remote LMP data link ID.</td> </tr> </table> | <SRC> | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. | <LINKTYPE> | The type of LMP data link. | • PORT | Port data link | • COMPONENT | Component data link | <TELINK> | Used to map LMP data links to LMP TE links. | <REMOTEID> | The remote LMP data link ID. |
| <SRC>                   | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| <LINKTYPE>              | The type of LMP data link.  |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| • PORT                  | Port data link  |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| • COMPONENT             | Component data link   |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| <TELINK>                | Used to map LMP data links to LMP TE links.   |       |  |            |                            |        |                |             |                     |          |   |            |                              |
| <REMOTEID>              | The remote LMP data link ID.  |       |  |            |                            |        |                |             |                     |          |   |            |                              |

## 11.45 ED-LNK

(Cisco ONS 15454) The Edit Link (ED-LNK) command edits an optical link state.

**Usage Guidelines** The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

**Categories** DWDM

**Security** Provisioning

**Input Format** ED-LNK:[<TID>]:<FROM>,<TO>:<CTAG>:::[CMDMDE=<CMDMDE>]:[<PST>[,<SST>]];

**Input Example** ED-LNK:PENNGROVE:BAND-6-1-TX,BAND-13-1-RX:114:::CMDMDE=CMDMDE:IS,AINS;

| Input Parameters  |   |
|---|---|
| <FROM>  | Identifier at one end of the optical link from the “26.4 BAND” section on page 26-21.   |
| <TO>  | Identifier at the other end of the optical link from the “26.4 BAND” section on page 26-21.   |
| <CMDMDE>  | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| <ul style="list-style-type: none"> <li>• FRCD</li> </ul>  | Force the system to override a state where the command would normally be denied.  |
| <ul style="list-style-type: none"> <li>• NORM</li> </ul>  | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <PST>   | Primary state.<br><br><b>Note</b> PST is not supported for optical channel (OCH) provisioning.<br><br>The parameter type is PST, which indicates the current overall service condition of an entity.  |
| <ul style="list-style-type: none"> <li>• IS</li> </ul>    | In service  |
| <ul style="list-style-type: none"> <li>• OOS</li> </ul>   | Out of service  |
| <SST>   | Secondary state.<br><br><b>Note</b> SST is not supported for OCH provisioning.<br><br>The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| <ul style="list-style-type: none"> <li>• AINS</li> </ul>  | Automatic in service  |
| <ul style="list-style-type: none"> <li>• DSBLD</li> </ul> | Disabled  |
| <ul style="list-style-type: none"> <li>• LPBK</li> </ul>  | Loopback  |
| <ul style="list-style-type: none"> <li>• MEA</li> </ul>   | Mismatch of equipment and attributes  |
| <ul style="list-style-type: none"> <li>• MT</li> </ul>    | Maintenance mode  |
| <ul style="list-style-type: none"> <li>• OOG</li> </ul>   | Out of group  |
| <ul style="list-style-type: none"> <li>• SWDL</li> </ul>  | Software downloading  |
| <ul style="list-style-type: none"> <li>• UAS</li> </ul>   | Unassigned  |
| <ul style="list-style-type: none"> <li>• UEQ</li> </ul>   | Unequipped  |

## 11.46 ED-LNKTERM

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Provisionable Patchcord Termination (ED-LNKTERM) command edits the attributes of a provisionable patchcord that has already been created. Only the remote end attributes (REMOTENODE and REMOTELNKTERMID) can be edited.

**Usage Guidelines**

- No two provisionable patchcord terminations on a node can have the same remote end link termination information. An attempt to modify an existing provisionable patchcord termination while not following this restriction will lead to an error message being responded.
- If the provisionable patchcord termination does not exist, an error message will be responded.
- This command does not accept multiple and ALL AIDs.
- REMOTENODE is a string with a maximum length of 20 characters.

**Category**

Provisionable Patchcords

**Security**

Provisioning

**Input Format**

```
ED-LNKTERM:[<TID>]:<AID>:<CTAG>:::[RE MOTENODE=<RE MOTENODE>],
[RE MOTELNKTERMID=<RE MOTELNKTERMID>];
```

**Input Example**

```
ED-LNKTERM::LNKTERM-1:CTAG::RE MOTENODE=172.20.208.226,
RE MOTELNKTERMID=25;
```

**Input Parameters**

|                    |   |
|--------------------|---|
| <AID>              | Access identifier from the “ <a href="#">26.21 LNKTERM</a> ” section on <a href="#">page 26-53</a> . Indicates a link (provisionable patchcord) termination on the local node.                      |
| <RE MOTENODE>      | The node where the other end of the provisionable patchcord resides. This can be an IP address or a valid TID. Defaults to the IP address of the local node/existing value. REMOTENODE is a string. |
| <RE MOTELNKTERMID> | The corresponding provisionable patchcord termination on the remote node (as specified by the REMOTENODE parameter). Integer value within the range of 1 to 65535. Defaults to the existing value.  |

## 11.47 ED-MA-CFM

(Cisco ONS 15454) The Edit Maintenance Association Connectivity Fault Management (ED-MA-CFM) command edits the maintenance association present on the card.

**Usage Guidelines**

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.
- The ALL AID is invalid for this command.

**Category** Equipment

**Security** Provision

**Input Format** ED-MA-CFM:[<TID>]:<AID>:<CTAG>:::MANAME=<MANAME>,SVLANID=<SVLANID>,[NEWMANAME=<NEWMANAME>],[NEWSVLANID=<NEWSVLANID>],[CCENABLE=<CCENABLE>];

**Input Example** ED-MA-CFM:454-156:SLOT-1:1:::MANAME=MANAME,SVLANID=4,NEWMANAME=NEWMA,NEWSVLANID=5;

|                         |              |   |
|-------------------------|--------------|---|
| <b>Input Parameters</b> | <AID>        | Access identifier from the “26.15 EQPT” section on page 26-39.  |
|                         | <MANAME>     | Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.   |
|                         | <SVLANID>    | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
|                         | <CCENABLE>   | Enable or disable Continuous Check messaging  |
|                         | • Y          | Enable  |
|                         | • N          | Disable   |
|                         | <NEWMANAME>  | New name for Maintenance Association. It is a string.   |
|                         | <NEWSVLANID> | New service Vlan ID. It is an integer.  |

## 11.48 ED-MCAST

(Cisco ONS 15454)

Edit Multicast attributes command is used to modify the Multicast VLAN Registration attributes.

**Usage Guidelines** The default values for all optional parameters are NE default values. These values may not be the current value for a parameter. In order to obtain the current value use RTRV-XX command to retrieve them.

Error conditions:

- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The “ALL” AID is invalid for this command.

**Category** ETHERNET

**Security** Provisioning

**Input Format** ED-MCAST[:<TID>]:<AID>:<CTAG>[::MVRSTATE=<MVRSTATE>],[MVRSVLAN=<MVRSVLAN>],[MVRSTARTIP=<MVRSTARTIP>],[MVRIPRANGE=<MVRIPRANGE>],[IGMPONCVLAN=<IGMPONCVLAN>][:];

**Input Example** ED-MCAST::SLOT-1-4:321::MVRSTATE=Y,MVRSVLAN=46,MVRSTARTIP=230.64.72.57  
,MVRIPRANGE=20;;

|                         |                             |  |
|-------------------------|-----------------------------|--|
| <b>Input Parameters</b> | <AID>                       | Equipment aids are used to access specific cards.  |
|                         | • ALL                       | It is only used for RTRV-INV, RTRV-EQPT, RTRV-ALM/COND-EQPT commands.  |
|                         | • SLOT-ALL                  | The NE equipment AIDs.   |
|                         | • SLOT[-{1-50}]-{1-6,12-17} | Individual equipment AID of the I/O card units or slots.   |
|                         | <MVRSTATE>                  | Multicast VLAN Registration status. Default values is - N  |
|                         | • Y                         | Enabled  |
|                         | • N                         | Disabled   |
|                         | <MVRSVLAN>                  | Define the SVLAN used to distribute the Multicast stream inside the Network. Default values is 0   |
|                         | <MVRSTARTIP>                | Define the first IP Address of the Multicast IP Group.   |
|                         | <MVRIPRANGE>                | MVR IP Range. Indicates the number of IP address starting from mvrStartIp used to identified the multicast IP group. It is a number in the range 0..255. Default values is 0 |
|                         | <IGMPONCVLAN>               | To Enable IGMP on Customer VLAN.   |

## 11.49 ED-MIP-CFM

(Cisco ONS 15454) The Edit Maintenance Intermediate Point Connectivity Fault Management (ED-MIP-CFM) command edits the maintenance intermediate points on the port.

**Usage Guidelines**

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

**Category** Ports

**Security** Provisioning

**Input Format** ED-MIP-CFM:[<TID>]:<AID>:<CTAG>:::VLANID=<VLANID>,LEVEL=<LEVEL>;

**Input Example** ED-MIP-CFM::ETH-1-1-1:1:::VLANID=2,LEVEL=3;

|                         |          |   |
|-------------------------|----------|---|
| <b>Input Parameters</b> | <AID>    | Access identifier from the “26.16 ETH” section on page 26-41.   |
|                         | <VLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
|                         | <LEVEL>  | This indicates the level of the maintenance domain. The value ranges from 0 to 7.   |

## 11.50 ED-NE-GEN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Network Element General (ED-NE-GEN) command edits the node attributes of the NE.

### Usage Guidelines

- The node name can be a maximum of 20 characters. If the entered name exceeds 20 characters, an IPNV (Node Name Too Long) error message is returned.
- An existing NTP timing source can be removed by setting the address to 0.0.0.0.
- The maximum length of IPADDR and DEFRTTR is 20 characters. The default value is the local IP address and default router.
- The maximum length of IPMASK is 18 characters. The default is the mask of the local IP address.
- ETHIPADDR and ETHIPMASK are disabled in this command. ETHIPADDR and ETHIPMASK are used to show the Ethernet interface address and mask. Both default to the nodes' IP address and masks.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.
- An existing NTP and Backup NTP timing source can be removed by setting the address to 0.0.0.0.

### Caution

Changing the IPADDR, IPMASK, or IIOPPORT will cause a reset of the controller card.

### Note

OSI parameters are not supported in Release 9.0 and 9.1.

**Category** System

**Security** Superuser

**Input Format**

```
ED-NE-GEN[:<TID>]::<CTAG>[:::NAME=<NAME>],[IPADDR=<IPADDR>],[IPMASK=<IPMASK>],[DEFRTR=<DEFRTR>],[IPV6ADDR=<IPV6ADDR>],[IPV6PREFLEN=<IPV6PREFLEN>],[IPV6DEFRTR=<IPV6DEFRTR>],[IPV6ENABLE=<IPV6ENABLE>],[IIOPPORT=<IIOPPORT>],[NTP=<NTP>],[SUPPRESSIP=<SUPPRESSIP>],[MODE=<MODE>],[MSPUBVLANID=<MSPUBVLANID>],[MSINTLVLANID=<MSINTLVLANID>],[SERIALPORTECHO=<SERIALPORTECHO>],[OSIROUTINGMODE=<OSIROUTINGMODE>],[OSIL1BUFSIZE=<OSIL1BUFSIZE>],[OSIL2BUFSIZE=<OSIL2BUFSIZE>],[BKUPNTP=<BKUPNTP>],[SYSTEMMODE=<SYSTEMMODE>],[FORCEENABLE=<FORCEENABLE>];
```

**Input Example**

```
ED-NE-GEN:CISCO::123:::NAME=NODENAME,IPADDR=192.168.100.52,
IPMASK=255.255.255.0,DEFRTR=192.168.100.1,IPV6ADDR="[3ffe:0501:0008:0000:0260:97ff:efab]",
IPV6PREFLEN=112,IPV6DEFRTR="[3ffe:0501:0008:0000:0260:97ff:fe40:efab]",
IPV6ENABLE=Y,IIOPPORT=57790, NTP=192.168.100.52, SUPPRESSIP=NO,
MODE=SINGLESHelf,MSPUBVLANID=1,MSINTLVLANID=5,SERIALPORTECHO=Y,OSIROUTINGMODE=ES,OSIL1BUFSIZE=512,OSIL2BUFSIZE=512,BKUPNTP=10.1.1.2,FORCEENABLE=YES;;
```

**Input Parameters**

|               |  |
|---------------|--|
| <NAME>        | Node name. NAME is a string. Defaults to NULL.   |
| <IPADDR>      | Node IP address. IPADDR is a string.   |
| <IPMASK>      | Node IP mask. IPMASK is a string.  |
| <DEFRTR>      | Node default router. DEFRTR is a string.   |
| <IPV6ADDR>    | Specifies the IPv6 address of the NE. IPV6ADDR is a string.  |
|               |  <b>Note</b> IPV6ADDR parameter can be set only if IPV6ENABLE parameter is set to Y   |
| <IPV6PREFLEN> | Specifies the prefix length for the IPv6 address of the NE. IPV6PREFLEN is an integer  |
| <IPV6DEFRTR>  | Specifies the IPv6 default router address for the NE. IPV6DEFRTR is a string   |
| <IPV6ENABLE>  | Specifies if the IPv6 enable mode for the NE is enabled or disabled. <ul style="list-style-type: none"> <li>• Y Indicates that IPV6 mode is enabled.</li> <li>• N Indicates that IPV6 mode is disabled.</li> </ul>                                   |
| <IIOPPORT>    | Node IIO port. IIOPPORT is an integer. Defaults to 57790.  |
| <NTP>         | Node NTP timing origin address. NTP is a string. Defaults to 0.0.0.0.  |
| <SUPPRESSIP>  | Suppress the IP display. <ul style="list-style-type: none"> <li>• NO No</li> <li>• YES Yes</li> </ul>  |
| <MODE>        | (Optional) Indicates the AID mode to access shelf identifier objects. Defaults to SINGLESHelf. This field is always set to MULTISHelf in the case of DWDM nodes with more than one shelf managed. Parameter type is SHELF_MODE which is the NE mode. |

|                  |   |
|------------------|---|
| • SINGLESHELF    | The NE contains only one shelf and the AID representation does not consider the shelf identifier for command requests/response and autonomous reports.  |
| • MULTISHELF     | The AID representation considers the shelf identifier for command requests/response and autonomous reports. This means the NE has more than one shelf configured or the user wants to use the new AID style.  |
| • MULTISHELFETH  | The AID representation considers the shelf identifier for command requests/response and autonomous reports. This means the NE has more than one shelf configured or the user wants to use the new AID style. The shelves are connected by means of an external Ethernet switch. |
| <MSPUBVLANID>    | Public VLAN ID used by the node controller to communicate with the external network. The VLAN ID can be in the range of 1 to 4094. But for M6 shelf, you cannot modify the MSPUBVLANID value. The MSPUBVLANID value is 1.   |
| <MSINTLVLANID>   | Internal VLAN ID used by the node controller to communicate with the Subtending shelves. The VLAN ID can be in the range of 1 to 4094. But for M6 shelf, you cannot modify the MSINTLVLANID value. The MSINTLVLANID value is 2.   |
| <SERIALPORTECHO> | Indicates if echo is turned on for the TL1 serial port sessions.  |
| • Y              | Echo is turned on.  |
| • N              | Echo is turned off.   |
| <OSIROUTINGMODE> | Indicates the routing mode of the node.   |
| • ES             | Provisions the node as an OSI ES. The ONS node performs all ES functions and relies upon an IS for communication with other IS nodes inside and outside the ES OSI area.  |
| • IS1            | Provisions the node as an OSI IS. The ONS node performs all IS functions including routing data between ISs and ESs, between networks, and between parts of a network.  |
| • IS2            | The ONS node performs all IS functions. It communicates with other IS and ES nodes within an OSI area. It also broadcasts ISHs to IS nodes in other areas to which it is connected.   |
| <OSIL1BUFSIZE>   | Level 1 Link State Protocol Data Unit (LSP) buffer size. The default is 512.  |
| <OSIL2BUFSIZE>   | Level 2 Link State Protocol Data Unit (LSP) buffer size. The default is 512.  |
| <BKUPNTP>        | Indicates that the Secondary NTP server is used as backup for primary.  |
| <SYSTEMMODE>     | Indicates the system mode   |
| • SONET          |   |
| • SDH            |   |
| <FORCEENABLE>    | (Optional) Indicates whether the command should proceed even if there are Database Out of Sync alarms.  |
| • YES            | Yes   |
| • NO             | No  |

## 11.51 ED-NE-PATH

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Network Element Path (ED-NE-PATH) command edits the path attributes of the NE.

### Usage Guidelines

The default value for an optional parameter is the NE default value.

### Category

System

### Security

Provisioning

### Input Format

ED-NE-PATH:[<TID>]::<CTAG>:::[PDIP=<PDIP>],[XCMODE=<XCMODE>];

### Input Example

ED-NE-PATH:::CTAG:::PDIP=Y,XCMODE=MIXED;

### Input Parameters

|   |   |
|---|---|
| <PDIP>  | Flag used to indicate whether PDI-P should be generated on the outgoing VT structured STSs. The parameter type is ON_OFF, which disables or enables an attribute.   |
| <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>                      | <ul style="list-style-type: none"> <li>Disable an attribute.</li> <li>Enable an attribute.</li> </ul>   |
| <XCMODE>  | Cross-connect mode. The parameter type is XCMODE, which is applicable only to a node with cross-connect cards (XC-VXC-10G or XC-VXC-2.5G, for example) that support cross-connect mode change.  |
| <ul style="list-style-type: none"> <li>• MIXED</li> <li>• VT1</li> <li>• VT2</li> </ul> | <ul style="list-style-type: none"> <li>Both VT1 and VT2 cross-connects can be provisioned on the node.</li> <li>Only VT1 cross-connects can be provisioned on the node.</li> <li>Only VT2 cross-connects can be provisioned on the node.</li> </ul> |

## 11.52 ED-NE-SYNCN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Network Element Synchronization (ED-NE-SYNCN) command edits the synchronization attributes of the NE.

### Usage Guidelines

The existing external and line modes have the same functionality in all ONS 15454 4.x and 5.x releases:

- External mode: The node derives its timing from the BITS inputs.
- Line mode: The node derives its timing from the SONET line(s).
- Mixed mode: The node derives its timing from the BITS input or SONET lines.

**Note**

Although mixed mode timing is supported in this release, it is not recommended. Refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide* for more information.

**Category**

Synchronization

**Security**

Provisioning

**Input Format**

```
ED-NE-SYNCN:[<TID>]:[<AID>]:<CTAG>:::[TMMD=<TMMD>],[SSMGEN=<SSMGEN>],
[QRES=<QRES>],[RVRTV=<RVRTV>],[RVTM=<RVTM>];
```

```
ED-NE-SYNCN:[<TID>]:[<AID>]:<CTAG>:::[TMMD=<TMMD>],[RVRTV=<RVRTV>],
[RVTM=<RVTM>],[SYSTEMN=<SYSTEMN>];
```

**Input Example**

```
ED-NE-SYNCN:PETALUMA::123::TMMD=LINE,SSMGEN=GEN1,QRES=ABOVE-PRS,
RVRTV=Y,RVTM=8.0,SYSTEMN=SONET;
```

```
ED-NE-SYNCN:PETALUMA::123::TMMD=LINE,RVRTV=Y,RVTM=8.0,SYSTEMN=SONET;
```

**Input Parameters**

|   |  |
|---|--|
| <AID>   | The node or shelf access identifier from the <a href="#">“26.26 SHELF” section on page 26-55</a> . If omitted it addresses the node or first shelf of the node. Must not be null. This is applicable only to ONS 15454.  |
| <TMMD>  | Timing mode. A null value is equivalent to ALL. Defaults to EXTERNAL. The parameter type is TIMING_MODE, which is the timing mode for the current node.  |
| <ul style="list-style-type: none"> <li>EXTERNAL</li> <li>LINE</li> <li>MIXED</li> </ul>           | <ul style="list-style-type: none"> <li>The node derives its clock from the BITS input.</li> <li>The node derives its clock from the SONET lines.</li> <li>The node derives its clock from the mixed timing mode.</li> </ul>  |
| <SSMGEN>  | Synchronization status message set. Defaults to GEN1. A null value is equivalent to ALL. The default is ABOVE-STU. The parameter type is SYNC_GENERATION (synchronization status message set generation).  |
| <ul style="list-style-type: none"> <li>GEN1</li> <li>GEN2</li> </ul>                              | <ul style="list-style-type: none"> <li>First generation SSM set</li> <li>Second generation SSM set</li> </ul>  |
| <QRES>  | Quality of the RES. A null value is equivalent to ALL. Defaults to DUS. The parameter type is SYNC_QUALITY_LEVEL, which is the network synchronization quality level.  |
| <ul style="list-style-type: none"> <li>ABOVE-PRS</li> <li>ABOVE-SMC</li> <li>ABOVE-ST2</li> </ul> | <ul style="list-style-type: none"> <li>Better than primary reference source. Valid setting for Generation-1 and Generation-2 SSM Set.</li> <li>Between SMC and ST3. Valid setting for Generation-1 and Generation-2 SSM Set.</li> <li>Between ST2 and STU. Valid setting for Generation-1 and Generation-2 SSM Set.</li> </ul> |

|               |   |
|---------------|---|
| • ABOVE-ST3   | For Generation-1 SSM set, between ST3 and ST2. For Generation-2 SSM set, between ST3 and ST3E.  |
| • ABOVE-ST3E  | Between ST3E and TNC. Valid setting only for Generation-2 SSM set.  |
| • ABOVE-ST4   | Between ST4 and ST3. Valid setting for Generation-1 and Generation-2 SSM Set.   |
| • ABOVE-STU   | Between STU and PRS. Valid setting for Generation-1 and Generation-2 SSM Set. This is default setting.  |
| • ABOVE-TNC   | Between TNC and ST2. Valid setting only for Generation-2 SSM set.   |
| • BELOW-ST4   | Below ST4 but still usable. Valid setting for Generation-1 and Generation-2 SSM Set.  |
| • SAME-AS-DUS | Disable the RES message by equating it to DUS. Valid setting for Generation-1 and Generation-2 SSM Set.   |
| <RVRTV>       | Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. A null value is equivalent to ALL. The parameter type is ON_OFF, which disables or enables an attribute. |
| • N           | Does not revert service to original line after restoration.   |
| • Y           | Reverts service to original line after restoration.   |
| <RVTM>        | Revertive time. A null value is equivalent to ALL. The parameter type is REVERTIVE_TIME (revertive time).   |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.  |
| <SYSTEMN>     | (ONS 15454 only) Identifies the system timing standard used by the node.  |
| • SONET       | SONET timing standard   |
| • SDH         | SDH timing standard   |

## 11.53 ED-OCH

(Cisco ONS 15454) The Edit Optical Channel (ED-OCH) command edits the attributes (service parameters) and state of an OCH facility. Refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide* for specific card provisioning rules.

### Usage Guidelines

- Primary=OOS and secondary=AINS states do not apply to Ethernet mode.
- Disable all the ports, before you change the card mode from LAN to WAN mode.
- The SQUELCHMODE parameter is added to OCH interfaces of 100G-LC-C, 10x10G-LC, and CFP-LC cards.
- CDLOW and CDHIGH parameters are interdependant. You must set both the parameters to edit either of them.
- CDLOW is always less than or equal CDHIGH in the range of -70000 to + 70000.

**Category** DWDM

**Security** Provisioning

**Input Format** ED-OCH[:<TID>]:<AID>:<CTAG>[::<EXPWLEN=<EXPWLEN>],[VOAATTN=<VOAATTN>],[VOAPWR=<VOAPWR>],[CALOPWR=<CALOPWR>],[NAME=<PORTNAME>],[OSDBER=<OSDBER>],[GCC=<GCC>],[GCCRATE=<GCCRATE>],[DWRAP=<DRWAP>],[FEC=<FEC>],[PAYLOADMAP=<PAYLOADMAP>],[SOAK=<SOAK>],[LOSSB=<LOSSB>],[CMDMDE=<CMDMDE>],[PEERID=<PEERID>],[REGENNAME=<REGENNAME>],[PORTMODE=<PORTMODE>],[ODUTRANSMODE=<ODUTRANSMODE>],[ERRORDECORRELATOR=<ERRORDECORRELATOR>],[FCS=<FCS>],[PPR=<PPR>],[TRIGTH=<TRIGTH>],[RVRTTH=<RVRTTH>],[TRIGWINDOW=<TRIGWINDOW>],[RVRTWINDOW=<RVRTWINDOW>],[OVRCLK=<OVRCLK>],[RXWLEN=<RXWLEN>],[SQUELCHMODE=<SQUELCHMODE>],[FECALMSUPPRESS=<FECALMSUPPRESS>],[SYNCSMSG=<SYNCSMSG>],[SENDDUS=<SENDDUS>],[ADMSSM=<ADMSSM>],[CDLOW=<CDLOW>],[CDHIGH=<CDHIGH>],[VOATXPOWER=<VOATXPOWER>],[TXLASERSHUTDN=<TXLASERSHUTDN>][:<PST>[:<SST>]]];

**Input Example** ED-OCH:CISCO:CHAN-6-2:114:::EXPWLEN=1530.32,NAME="NYLINE",GCC=Y,GCCRATE=192K,OSDBER=1E-6,DWRAP=Y,FEC=STD,PAYLOADMAP=ASYNCH,SOAK=10,CMDMDE=FRCD:IS,AINS;  
ED-OCH::CHAN-2-2:1:::CDLOW=-6000,CDHIGH=8000,VOATXPOWER=-9.08,TXLASERSHUTDN=Y;

|                         |           |  |
|-------------------------|-----------|--|
| <b>Input Parameters</b> | <AID>     | Access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23.   |
|                         | <EXPWLEN> | (Optional) Optical wavelength for this port. Applicable only to the following types of cards: optical service channel cards, optical amplifier cards, dispersion compensation units, multiplexer and demultiplexer cards, and optical add/drop multiplexing (OADM) cards. The parameter type is OPTICAL_WLEN, which is the optical wavelength. |
|                         | • 1310    | Wavelength 1310  |
|                         | • 1470    | Wavelength 1470  |
|                         | • 1490    | Wavelength 1490  |
|                         | • 1510    | Wavelength 1510  |

| • 1610     | Wavelength 1610  |
| • USE-TWL1 | Use Tunable Wavelength 1   |
| <VOAATTN>  | (Optional) The value of calibrated attenuation for the VOA expressed in dBm. The range is 0.0 to +30.0. VOAATTN is a float.  |
| <FCS>      | (Optional) First Circuit Startup. An automatic channel startup that operates the VOA when the light is detected on the ingress port.   |
| • Y        | Automatic Channel startup enabled.   |
| • N        | Automatic Channel startup disabled.  |
| <VOAPWR>   | (Optional) The value of calibrated output power that the VOA is going to set as a result of its attenuation. VOAPWR is a float.  |
| <CALOPWR>  | (Optional) The value of the calibrated optical power expected for the line added to the calculated value, which equals the total expected output power. Expressed in dBm. Defaults to 0 dBm. CALOPWR is a float.           |
| <NAME>     | (Optional) Port name. PORTNAME is a string.  |
| <OSDBER>   | OTN SDBER. Can only be provisioned on the working port. Defaults to 1E-7<br><br>Parameter type is SD_BER—the threshold for declaring signal degrade on a facility or path  |
| • 1E-5     | SDBER is 1E-5  |
| • 1E-6     | SDBER is 1E-6  |
| • 1E-7     | SDBER is 1E-7  |
| • 1E-8     | SDBER is 1E-8  |
| • 1E-9     | SDBER is 1E-9  |
| <GCC>      | Identifies the Generic communication channel (GCC) connection of the port.   |
| • Y        | GCC can be utilized  |
| • N        | GCC cannot be utilized   |
| <GCCRATE>  | (Optional) The data rate of the GCC traffic. The default is 192 Kbps. For MXP_2.5G_10G and TXP_MR_10G cards, this applies only to the DWDM port. The parameter type is GCCRATE, which is the data rate of the GCC traffic. |
| • 192K     | 192 Kbps   |

|                    |   |
|--------------------|---|
| • 400K             | 400 Kbps  |
| • 576K             | 576 Kbps  |
| • 1200K            | 1200 Kbps   |
| <DWRAP>            | (Optional) The ITU-T G.709 monitoring digital wrapper. It is either on or off. The system default is ON. For MXP_2.5G_10G and TXP_MR_10G cards, this applies only to the DWDM port. The parameter type is ON_OFF (disable or enable an attribute). To enable ITU-T G.709 monitoring, there should be no GCC on the DWDM port and the payload (in which the card is configured) should not be UNFRAMED. To disable ITU-T G.709 monitoring, there should be no GCC on the DWDM port, the FEC should be turned to off, there should be no overhead circuit created on the DWDM port, and none of the client ports on the card should be part of a Y-cable protection group (muxponder only). |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| <FEC>              | (Optional) Forward error correction. It can be enabled only if ITU-T G.709 monitoring is turned ON. It is either off or enabled in standard or enhanced mode. The system default is standard FEC enabled. The FEC level PM and thresholds apply if the FEC is turned ON. The parameter type is FEC_MODE, which specifies the type of forward error correction.  |
| • ENH              | Enhanced FEC is enabled.  |
| • ENH-I4           | Enhanced FEC 1.4 is enabled.  |
| • ENH-I7           | Enhanced FEC 1.7 is enabled.  |
| • ENH-20           | 20 % Enhanced FEC supported on fixed trunk port of 100G-LC-C card.  |
| • HG-7             | High Gain 7% FEC.   |
| • OFF              | FEC is disabled.  |
| • STD              | Standard FEC is enabled.  |
| <PAYLOADMAP>       | (Optional) The type of payload mapping. It can be enabled only if ITU-T G.709 monitoring is turned ON and FEC is enabled. The parameter type is PAYLOAD_MAPPING, which is the payload mapping mode.   |
| • ASYNCH           | Asynchronous mapping mode   |
| • ODU              | ODU multiplex structure mode  |
| • SYNCH            | Synchronous mapping mode  |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| • NOOPU2FIXEDSTUFF | Mapping with no FIXEDSTUFF  |

|                 |   |
|-----------------|---|
| <SOAK>          | (Optional) Locked-AutomaticInService to Unlocked transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer. |
| <LOSSB>         | The parameter type is REACH which indicates the reach values.   |
| • 100GBASE-LR4  | 100GBASE-LR4  |
| • 100GBASE-SR10 | 100GBASE-SR10   |
| • 40GBASE-FR    | 40GBASE-FR  |
| • 40GBASE-LR4   | 40GBASE-LR4   |
| • 40GBASE-SR4   | Reach supported on 40GIGE payload on CFP-LC card.   |
| • 4I1-9D1F      | 4I1-9D1F  |
| • AUTOPROV      | Autoprovisioning  |
| • C4S1-2D1      | C4S1-2D1  |
| • CWDM-40KM     | CWDM 40 kilometers.   |
| • CX            | Reach CX  |
| • CX1           | Reach CX1   |
| • DX            | Reach DX  |
| • FE-BX         | FE-BX   |
| • FX            | FX  |
| • GE-BX         | GE-BX   |
| • GE-EX         | GE-EX   |
| • HX            | Reach HX  |
| • I1            | Reach I1  |
| • IR-1          | Reach IR-1  |
| • IR-2          | Reach IR-2  |
| • L1            | Reach L1  |
| • L2            | Reach L2  |
| • L3            | Reach L3  |
| • LR-1          | Reach LR-1  |
| • LR-2          | Reach LR-2  |
| • LR-3          | Reach LR-3  |
| • LX            | Reach LX  |
| • LX-10         | LX-10   |
| • P1I1-2D1LX-10 | Long haul 10G Ethernet with 1310 nm wavelength  |
| • P1L1-1D2      | Longhaul 2.5G Ethernet with 1550 nm wavelength  |
| • P1L1-2D2      | Long haul 10G Ethernet with 1550 nm wavelength  |
| • P1S1-1D1      | Shorthaul 2.5G Ethernet with 1310 nm wavelength   |
| • P1S1-2D1      | Short haul 10G Ethernet in 1310 nm wavelength   |
| • SC            | Reach SC  |
| • S1            | Reach S1  |

|                      |  |
|----------------------|--|
| • S2                 | Reach S2   |
| • SR                 | Reach SR   |
| • SR-1               | Reach SR-1   |
| • SX                 | Reach SX   |
| • T                  | Reach T  |
| • TEN-GE-ER          | 10 GE extended range   |
| • TEN-GE-LR          | 10 GE long range   |
| • TEN-GE-LRM         |  |
| • TEN-GE-SR          | 10 GE short range  |
| • TEN-GE-ZR          |  |
| • ULH                | Reach ULH  |
| • VSR                | Reach VSR  |
| • VSR2000-3R2        |  |
| • VX                 | Reach VX   |
| • ZX                 | Reach ZX   |
| <CMDMDE>             | (Optional) Command mode. Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in Unlocked-Enabled or Locked-Disabled, AutomaticInService service states. |
| • FRCD               | Force the system to override a state in which the command would normally be denied.  |
| • NORM               | Execute the command normally. Do not override any conditions that could make the command fail.   |
| <PEERID>             | Indicates the peer trunk facility of the regeneration group on the OTU2-XP card. Accessed using the CHAN AID.  |
| <REGENNAME>          | Indicates the name of a regeneration group. Applicable only to DWDM flavored cards, which support regeneration group. Regenname is a string. The default value is "NULL".  |
| <PORTMODE>           | Describes the termination mode of each interface on the OTU2-XP card.  |
| • DWDM-LINE          | Line terminating mode.   |
| • DWDM-SECTION       | Section terminating mode.  |
| • DWDM-TRANS-AIS     | Transparent mode AIS.  |
| • DWDM-TRANS-SQUELCH | Transparent mode squelch.  |
| • 10GLANWAN-SQUELCH  | 10G LAN to WAN Squelch.  |
| <ODUTRANSMODE>       | To configure the "ODUk OH" transparency on the OTU2-XP card.   |
| • CISCO-EXT          | Cisco Extended. When the Cisco Extended configuration is selected, two bytes of the ODU layer is terminated to guarantee the interoperability with the older Transponder/Muxponder cards.  |

|                     |   |
|---------------------|---|
| • TRANS-STD         | Transparent Standard Use. The transponder, behaving as a regenerator, terminates the OUT layer and is transparent to the ODU layer. Also in this case the FEC-MISM (FEC Mismatch) alarm is not generated. |
| <ERRORDECORRELATOR> | To enable or disable the MLSE module on the card. This applies only to TXP_MR_10EX_C, MXP_2.5G_10EX_C, and MXP_MR_10DMEX_C cards  |
| • Y                 | To enable the MLSE module on the card.  |
| • N                 | To disable the MLSE module on the card.   |
| <PPR>               | (Optional) To enable or disable the Proactive Protection Regen (PPR) in the OTU2 Card in Regen Mode.  |
| • Y                 | PPR enabled.  |
| • N                 | PPR disabled.   |
| <TRIGTH>            | Specifies the trigger threshold value for Proactive Protection Regen. The parameter type is TRIGGER_THRESHOLD.  |
| • 1E-2              | Trigger threshold is 1E-2.  |
| • 1E-3              | Trigger threshold is 1E-3.  |
| • 1E-4              | Trigger threshold is 1E-4.  |
| • 1E-5              | Trigger threshold is 1E-5.  |
| • 1E-6              | Trigger threshold is 1E-6.  |
| • 1E-7              | Trigger threshold is 1E-7.  |
| • 2E-2              | Trigger threshold is 2E-2.  |
| • 2E-3              | Trigger threshold is 2E-3.  |
| • 2E-4              | Trigger threshold is 2E-4.  |
| • 2E-5              | Trigger threshold is 2E-5.  |
| • 2E-6              | Trigger threshold is 2E-6.  |
| • 2E-7              | Trigger threshold is 2E-7.  |
| • 3E-2              | Trigger threshold is 3E-2.  |
| • 3E-3              | Trigger threshold is 3E-3.  |
| • 3E-4              | Trigger threshold is 3E-4.  |
| • 3E-5              | Trigger threshold is 3E-5.  |
| • 3E-6              | Trigger threshold is 3E-6.  |
| • 3E-7              | Trigger threshold is 4E-7.  |
| • 4E-2              | Trigger threshold is 4E-2.  |
| • 4E-3              | Trigger threshold is 4E-3.  |
| • 4E-4              | Trigger threshold is 4E-4.  |
| • 4E-5              | Trigger threshold is 4E-5.  |
| • 4E-6              | Trigger threshold is 4E-6.  |
| • 4E-7              | Trigger threshold is 4E-7.  |
| • 5E-2              | Trigger threshold is 5E-2.  |
| • 5E-3              | Trigger threshold is 5E-3.  |
| • 5E-4              | Trigger threshold is 5E-4.  |
| • 5E-5              | Trigger threshold is 5E-5.  |

|          |  |
|----------|--|
| • 5E-6   | Trigger threshold is 5E-6.   |
| • 5E-7   | Trigger threshold is 5E-7.   |
| • 6E-2   | Trigger threshold is 6E-2.   |
| • 6E-3   | Trigger threshold is 6E-3.   |
| • 6E-4   | Trigger threshold is 6E-4.   |
| • 6E-5   | Trigger threshold is 6E-5.   |
| • 6E-6   | Trigger threshold is 6E-6.   |
| • 6E-7   | Trigger threshold is 6E-7.   |
| • 7E-2   | Trigger threshold is 7E-2.   |
| • 7E-3   | Trigger threshold is 7E-3.   |
| • 7E-4   | Trigger threshold is 7E-4.   |
| • 7E-5   | Trigger threshold is 7E-5.   |
| • 7E-6   | Trigger threshold is 7E-6.   |
| • 7E-7   | Trigger threshold is 7E-7.   |
| • 8E-2   | Trigger threshold is 8E-2.   |
| • 8E-3   | Trigger threshold is 8E-3.   |
| • 8E-4   | Trigger threshold is 8E-4.   |
| • 8E-5   | Trigger threshold is 8E-5.   |
| • 8E-6   | Trigger threshold is 8E-6.   |
| • 8E-7   | Trigger threshold is 8E-7.   |
| • 9E-2   | Trigger threshold is 9E-2.   |
| • 9E-3   | Trigger threshold is 9E-3.   |
| • 9E-4   | Trigger threshold is 9E-4.   |
| • 9E-5   | Trigger threshold is 9E-5.   |
| • 9E-6   | Trigger threshold is 9E-6.   |
| • 9E-7   | Trigger threshold is 9E-7.   |
| <RVRTTH> | Specifies the revert threshold for Proactive Protection Regen. The parameter type is RVRTTH. |
| • 1E-3   | Revert threshold is 1E-3.  |
| • 1E-4   | Revert threshold is 1E-4.  |
| • 1E-5   | Revert threshold is 1E-5.  |
| • 1E-6   | Revert threshold is 1E-6.  |
| • 1E-7   | Revert threshold is 1E-7.  |
| • 2E-3   | Revert threshold is 2E-3.  |
| • 2E-4   | Revert threshold is 2E-4.  |
| • 2E-5   | Revert threshold is 2E-5.  |
| • 2E-6   | Revert threshold is 2E-6.  |
| • 2E-7   | Revert threshold is 2E-7.  |
| • 3E-3   | Revert threshold is 3E-3.  |
| • 3E-4   | Revert threshold is 3E-4.  |
| • 3E-6   | Revert threshold is 3E-6.  |
| • 3E-7   | Revert threshold is 4E-7.  |

|              |   |
|--------------|---|
| • 4E-3       | Revert threshold is 4E-4.   |
| • 4E-4       | Revert threshold is 4E-4.   |
| • 4E-5       | Revert threshold is 4E-5.   |
| • 4E-6       | Revert threshold is 4E-6.   |
| • 4E-7       | Revert threshold is 4E-7.   |
| • 5E-3       | Revert threshold is 5E-3.   |
| • 5E-4       | Revert threshold is 5E-4.   |
| • 5E-5       | Revert threshold is 5E-5.   |
| • 5E-6       | Revert threshold is 5E-6.   |
| • 5E-7       | Revert threshold is 5E-7.   |
| • 5E-8       | Revert threshold is 5E-8.   |
| • 6E-3       | Revert threshold is 6E-3.   |
| • 6E-4       | Revert threshold is 6E-4.   |
| • 6E-5       | Revert threshold is 6E-5.   |
| • 6E-6       | Revert threshold is 6E-6.   |
| • 6E-7       | Revert threshold is 6E-7.   |
| • 6E-8       | Revert threshold is 6E-8.   |
| • 7E-3       | Revert threshold is 7E-3.   |
| • 7E-4       | Revert threshold is 7E-4.   |
| • 7E-5       | Revert threshold is 7E-5.   |
| • 7E-6       | Revert threshold is 7E-6.   |
| • 7E-7       | Revert threshold is 7E-7.   |
| • 7E-8       | Revert threshold is 7E-8.   |
| • 8E-3       | Revert threshold is 8E-3.   |
| • 8E-4       | Revert threshold is 8E-4.   |
| • 8E-5       | Revert threshold is 8E-5.   |
| • 8E-6       | Revert threshold is 8E-6.   |
| • 8E-7       | Revert threshold is 8E-7.   |
| • 8E-8       | Revert threshold is 8E-8.   |
| • 9E-3       | Revert threshold is 9E-3.   |
| • 9E-4       | Revert threshold is 9E-4.   |
| • 9E-5       | Revert threshold is 9E-5.   |
| • 9E-6       | Revert threshold is 9E-6.   |
| • 9E-7       | Revert threshold is 9E-7.   |
| • 9E-8       | Revert threshold is 9E-8.   |
| <TRIGWINDOW> | Specifies the trigger window value for Proactive Protection Regen in milli seconds. It should always be a multiple of the sample slot value, derived from the trigger threshold value. The maximum TRIGWINDOW value is 10000. |

|                            |  |
|----------------------------|--|
| <RVRTWINDOW>               | Specifies the revert window value for Proactive Protection Regen in milli seconds. It should always be a multiple of the sample slot value, derived from the revert threshold value. The maximum RVRTWINDOW value is 10000 and minimum value is 2000.            |
| <OVRCLK>                   | Indicates whether the optical trunk is over-clocked or not. It can be Y or N. The default is N.  |
| • Y                        | Yes  |
| • N                        | No   |
| <RXWLEN>                   | The RX wavelength. It is applicable in unidirectional regeneration mode of a muxponder card. In this case the RX wavelength can be different from the nominal TX wavelength (EXPWLEN). It can be any valid DWDM wavelength value. The default value is USE-TWL1. |
| <CDLOW>                    | (Optional) Lower limit of CD working range.  |
| <CDHIGH>                   | (Optional) Upper limit of CD working range.  |
| <VOATXPOWER>               | (Optional) VOA Transmit Power. The parameter type is VOATXPOWER, indicates the VOA transmit power on a fixed trunk.  |
| <TXLASERSHUTDN>            | (Optional) Transmit Laser Shut down. The parameter type is TXLASERSHUTDN indicates the transmit laser shut down status as Y or N.  |
| <PST>                      | (Optional) Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • Unlocked                 | In service   |
| • Locked                   | Out of service   |
| <SST>                      | (Optional) Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
| • AutomaticInService       | Automatic in service   |
| • Disabled                 | Disabled   |
| • Loopback                 | Loopback   |
| • MismatchofEquipmentAlarm | Mismatch of equipment and attributes   |
| • Maintenance              | Maintenance mode   |
| • OutOfGroup               | Out of group   |
| • SoftwareDownload         | Software downloading   |
| • Unassigned               | Unassigned   |
| • NotInstalled             | Unequipped   |

## 11.54 ED-OCHCC

(Cisco ONS 15454) The Edit Optical Channel Client Connection (ED-OCHCC) command edits the OCH client connection.

**Usage Guidelines**

- The fields after CTAG (trailing colons) are optional.
- This command does not support multiple editing of OCH client connection provisioning.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

**Category**

DWDM

**Security**

Provisioning

**Input Format**

```
ED-OCHCC:[<TID>]:<AID>:<CTAG>[::CKTID=<CKTID>],
[CMDMDE=<CMDMDE>]:[<PST>[,<SST>]];
```

**Input Example**

```
ED-OCHCC:VA454-22:FAC-2-1-1:116::CKTID=OCHCC,CMDMDE=FRCD:OOS,DSBLD;
```

**Input Parameters**

|          |   |
|----------|---|
| <AID>    | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
| <CKTID>  | Cross-connect ID. The default is Blank or None. String of ASCII characters. Maximum length is 48. If CKTID is empty or null the CKTID field will not be displayed.  |
| <CMDMDE> | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD   | Force the system to override a state in which the command would normally be denied.   |
| • NORM   | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <PST>    | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity. The default is IS.  |
| • IS     | In service  |
| • OOS    | Out of service  |
| <SST>    | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. The default is AINS.  |
| • AINS   | Automatic in service  |
| • DSBLD  | Disabled  |
| • LPBK   | Loopback  |
| • MEA    | Mismatch of equipment and attributes  |
| • MT     | Maintenance mode  |

|        |                      |
|--------|----------------------|
| • OOG  | Out of group         |
| • SWDL | Software downloading |
| • UAS  | Unassigned           |
| • UEQ  | Unequipped           |

## 11.55 ED-OCHNC

(Cisco ONS 15454) The Edit Optical Channel Network Connection (ED-OCHNC) command edits the OCH network connection.

### Usage Guidelines

- The fields after CTAG (trailing colons) are optional.
- This command does not support multiple editing of wavelength connection provisioning.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

### Category

DWDM

### Security

Provisioning

### Input Format

ED-OCHNC:[<TID>]:<SRC>,<DST>:<CTAG>:::[CKTID=<CKTID>],[CMDMDE=<CMDMDE>],[WLOPWR=<WLOPWR>],[VOAATTN=<VOAATTN>]:[<PST>[,<SST>]];

### Input Example

ED-OCHNC:VA454-22:CHANWL-1-3-TX-1530.33,  
LINEWL-4-1-RX-1530.33:116:::CKTID=CIRCUIT,CMDMDE=FRCD:LOCKED,DISABLED;

### Input Parameters

|         |   |
|---------|---|
| <SRC>   | Source access identifier from the <a href="#">“26.8 CHANNEL”</a> section on <a href="#">page 26-23</a> . In two-way wavelength connection sources, both directions need to be indicated.      |
| <DST>   | Destination access identifier from the <a href="#">“26.20 LINEWL”</a> section on <a href="#">page 26-49</a> . In two-way wavelength connection sources, both directions need to be indicated. |
| <CKTID> | Cross-connect ID. The default is Blank or None. String of ASCII characters. Maximum length is 48. If CKTID is empty or null the CKTID field will not be displayed.                            |

|           |   |
|-----------|---|
| <CMDMDE>  | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD    | Force the system to override a state in which the command would normally be denied.   |
| • NORM    | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <WLOPWR>  | The value of calibrated output power that the VOA is going to set as a result of its attenuation. WLOPWR is a float.  |
| <VOAATTN> | The value of calibrated attenuation for the VOA expressed in dBm. The range is 0.0 to +30.0. VOAATTN is a float.  |
| <PST>     | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity. The default is IS.  |
| • IS      | In service  |
| • OOS     | Out of service  |
| <SST>     | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. The default is AINS.  |
| • AINS    | Automatic in service  |
| • DSBLD   | Disabled  |
| • LPBK    | Loopback  |
| • MEA     | Mismatch of equipment and attributes  |
| • MT      | Maintenance mode  |
| • OOG     | Out of group  |
| • SWDL    | Software downloading  |
| • UAS     | Unassigned  |
| • UEQ     | Unequipped  |

## 11.56 ED-OMS

(Cisco ONS 15454) The Edit Optical Multiplex Section (ED-OMS) command edits the attributes (service parameters) and state of an OMS facility.

**Usage Guidelines** None

**Category** DWDM

**Security** Provisioning

**Input Format**

```
ED-OMS[:<TID>]:<AID>:<CTAG>[::EXPBAND=<EXPBAND>],[VOAATTN=<VOAATTN>],[VO
APWR=<VOAPWR>],[CALOPWR=<CALOPWR>],[NAME=<NAME>],[SOAK=<SOAK>],[CMDM
DE=<CMDMDE>][:<PST>[,<SST>]];
```

**Input Example**

```
ED-OMS:PENNGROVE:BAND-6-1:114:::,EXPBAND=1530.32-1532.68,
VOAATTN=2.5,VOAPWR=7.5,CALOPWR=0.0,NAME="OMSPORT",
SOAK=8,CMDMDE=NORM:UNLOCKED,AUTOMATICINSERVICE;
```

**Input Parameters**

|   |   |
|---|---|
| <AID>   | Access identifier from the <a href="#">“26.4 BAND” section on page 26-21</a> .  |
| <RDIRN>   | Ring directionality of the optical line. The parameter type is RDIRN_MODE, which is the optical ring directionality.  |
| <ul style="list-style-type: none"> <li>E-W</li> <li>W-E</li> </ul>  | <p>The direction of the signal is from east to west (clockwise).</p> <p>The direction of the signal is from west to east (counterclockwise).</p>  |
| <EXPBAND>   | The expected value of the optical band for this port. The parameter type is OPTICAL_BAND (optical band).  |
| <ul style="list-style-type: none"> <li>1530.33 to 1532.68</li> <li>1534.25 to 1536.61</li> <li>1538.19 to 1540.56</li> <li>1542.14 to 1544.53</li> <li>1546.12 to 1548.51</li> <li>1550.12 to 1552.52</li> <li>1554.13 to 1556.55</li> <li>1558.17 to 1560.61</li> <li>USE-DEFAULT</li> </ul> | <p>Band 1</p> <p>Band 2</p> <p>Band 3</p> <p>Band 4</p> <p>Band 5</p> <p>Band 6</p> <p>Band 7</p> <p>Band 8</p> <p>This band is not yet configured/retrieved from unit.</p>   |
| <VOAATTN>   | The value of calibrated attenuation for the VOA expressed in dBm. The range is 0.0 to +30.0. VOAATTN is a float.  |
| <VOAPWR>  | The value of calibrated output power that the VOA is going to set as a result of its attenuation. VOAPWR is a float.  |
| <CALOPWR>   | The value of the calibrated optical power expected for the line added to the calculated value which equals the total expected output power. Expressed in dBm. Defaults to 0 dBm. CALOPWR is a float.  |
| <ul style="list-style-type: none"> <li>0.5 to 12.0</li> </ul>   | Revertive time is 0.5 to 12.0 minutes.  |
| <NAME>  | Port name. NAME is a string.  |
| <SOAK>  | SOAK is an integer. Defaults to 8.  |
| <CMDMDE>  | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| <ul style="list-style-type: none"> <li>FRCD</li> </ul>  | Force the system to override a state where the command would normally be denied.  |

|         |   |
|---------|---|
| • NORM  | Execute the command normally. Do not override any conditions that might make the command fail.                |
| <PST>   | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity. |
| • IS    | In service  |
| • OOS   | Out of service  |
| <SST>   | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS  | Automatic in service  |
| • DSBLD | Disabled  |
| • LPBK  | Loopback  |
| • MEA   | Mismatch of equipment and attributes  |
| • MT    | Maintenance mode  |
| • OOG   | Out of group  |
| • SWDL  | Software downloading  |
| • UAS   | Unassigned  |
| • UEQ   | Unequipped  |

## 11.57 ED-OPMODE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Operating Mode (ED-OPMODE) command adds or deletes the client ports from MXP-MR and MXPP-MR modes on the AR\_MXP or AR\_XP card, and adds or deletes a client-peer pair from the CFP-TXP mode on the CFP-LC card.

### Usage Guidelines

- CLIENTPORTS, PEERSLOTS, ACTION, and OPMODE are the mandatory parameters for the ED-OPMODE on the CFP-LC card.
- ED-OPMODE command can be executed only on the CFP-LC card, which is part of the CFP-TXP mode.
- ED-OPMODE command adds or deletes a client-peer pair from the CFP-TXP mode.
- On an existing client1-peer1 pair mode, if a client2-peer2 pair is added using the ED-OPMODE command, either client1-peer1 or client2-peer2 can be deleted using the ED-OPMODE command. However, the same does not work for client1-peer2 or client2-peer1 pair.
- ACTION, CLIENTPORTS, and TRUNKPORT are mandatory parameters for the AR-MXP, AR-XP, and AR-XPE cards.
- OPMODE, CLIENTPORTS, PEERSLOTS, and ACTION are mandatory parameters for the 100G-LC-C, 10x10G-LC, and CFP-LC cards.
- The TRUNKPORT parameter is not used in the ED-OPMODE command on the CFP-LC card.

### Category

DWDM

**Security**

Provisioning

**Input Format**

```
ED-OPMODE:[<TID>]:<AID>:<CTAG>:::[TRUNKPORT=<TRUNKPORT>],CLIENTPORTS=<CLIENTPORTS>,[PEERSLOTS=<PEERSLOTS>],[ACTION=<ACTION>],[OPMODE=<OPMODE>];
```

**Input Example**

```
ED-OPMODE::SLOT-1-3:21:::OPMODE=CFP-TXP,CLIENTPORTS=2,PEERSLOTS=SLOT-1-2,ACTION=ADD.
```

**Input Parameters**

|   |   |
|---|---|
| <AID>   | SLOT Access Identifier  |
| <OPMODE>  | Existing operating mode which is being edited   |
| <ul style="list-style-type: none"> <li>CFP-TXP</li> </ul>     | Transponder mode between one CFP-LC and one or two 100G-LC-C cards.   |
| <ACTION>  | The ADD or DELETE action required while editing the operating mode.   |
| <ul style="list-style-type: none"> <li>ADD</li> </ul>         | Add client ports to the existing MXP-MR mode or add client-peer pair on 100G-LC-C, 10x10G-LC, and CFP-LC cards.                                 |
| <ul style="list-style-type: none"> <li>DELETE</li> </ul>      | Delete client ports from the existing MXP-MR mode or Delete client-peer pair on 100G-LC-C, 10x10G-LC, and CFP-LC cards.                         |
| <ul style="list-style-type: none"> <li>LOW-LATENCY</li> </ul> | Low latency opmode is supported only on 10x10G-LC card.   |
| <TRUNKPORT>   | The trunk port number in MXP-MR mode on which the edit operation is being performed   |
| <CLIENTPORTS>   | The client port numbers that are being added or deleted to the operating mode.  |
| <PEERSLOTS>   | The slot number of the peer card (100G-LC-C) of the CFP-LC card, which is part of the CFP-TXP and CFP-MXP modes, specified by the SLOT<SLOTNO>. |

## 11.58 ED-OTS

(Cisco ONS 15454) The Edit Optical Transport Section (ED-OTS) command edits the attributes (service parameters) and state of an OTS facility.

**Usage Guidelines**

None

**Category**

DWDM

**Security**

Provisioning

**Input Format**

```
ED-OTS[:<TID>]:<AID>:<CTAG>[:<<VOAATTN=<VOAATTN>>,<VOAPWR=<VOAPWR>>,<OFFSET=<OFFSET>>,<CALTILT=<CALTILT>>,<OSRI=<OSRI>>,<NAME=<NAME>>,<SOAK=<SOAK>>,<CG>,<CMDMDE=<CMDMDE>>]:<PST>,<SST>];
```

**Input Example**

```
ED-OTS:PENNGROVE:LINE-6-1:114::RDIRN=W-E,VOAATTN=5.0,VOAPWR=10.0,OFFSET=0.0,CALTILT=0.0,OSRI=N,NAME="OTS PORT",SOAK=8,CMDMDE=NORM:UNLOCKED,AUTOMATICINSERVICE;
```

**Input Parameters**

|  |   |
|--|---|
| <AID>  | Access identifier from the <a href="#">“26.19 LINE” section on page 26-45</a> .   |
| <RDIRN>  | Ring directionality of the optical line. The parameter type is RDIRN_MODE, which is the optical ring directionality.  |
| <ul style="list-style-type: none"> <li>E-W</li> <li>W-E</li> </ul>   | <p>The direction of the signal is from east to west (clockwise).</p> <p>The direction of the signal is from west to east (counterclockwise).</p>  |
| <VOAATTN>  | The value of calibrated attenuation for the VOA expressed in dBm. The range is 0.0 to +30.0. VOAATTN is a float.  |
| <VOAPWR>   | The value of calibrated output power that the VOA is going to set as a result of its attenuation. VOAPWR is a float.  |
| <OFFSET>   | The calibration value of the optical power added to the calculated reference value. Defaults to 0 dBm. OFFSET is a float.   |
| <CALTILT>  | (Optional) The amplifier calibration tilt offset to be added to the calculated reference value. Defaults to 0 dBm. CALTILT is a float.  |
| <OSRI>   | (Optional) Optical safety remote interlock (OSRI) is enabled or disabled. Present only on a port where the OSRI is supported. The parameter type is ON_OFF, which disables or enables an attribute.   |
| <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>   | <p>Disable an attribute.</p> <p>Enable an attribute.</p>  |
| <NAME>   | The name of the port. NAME is a string.   |
| <SOAK>   | SOAK is an integer. It defaults to 8.   |
| <CMDMDE>   | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| <ul style="list-style-type: none"> <li>FRCD</li> <li>NORM</li> </ul>   | <p>Force the system to override a state where the command would normally be denied.</p> <p>Execute the command normally. Do not override any conditions that might make the command fail.</p>   |
| <CG>   | TDCU coarse grain value   |
| <ul style="list-style-type: none"> <li>0</li> <li>-110</li> <li>-1100</li> <li>-1210</li> <li>-1320</li> </ul> | <p>TDCU coarse grain value</p> <p>TDCU coarse grain value</p> <p>TDCU coarse grain value</p> <p>TDCU coarse grain value</p> <p>TDCU coarse grain value</p>  |

|         |   |
|---------|---|
| • -1430 | TDCU coarse grain value   |
| • -1540 | TDCU coarse grain value   |
| • -1650 | TDCU coarse grain value   |
| • -220  | TDCU coarse grain value   |
| • -330  | TDCU coarse grain value   |
| • -440  | TDCU coarse grain value   |
| • -550  | TDCU coarse grain value   |
| • -660  | TDCU coarse grain value   |
| • -770  | TDCU coarse grain value   |
| • -880  | TDCU coarse grain value   |
| • -990  | TDCU coarse grain value   |
| <FG>    | TDCU fine grain value   |
| • 0     | TDCU fine grain value   |
| • -45   | TDCU fine grain value   |
| • -450  | TDCU fine grain value   |
| • -495  | TDCU fine grain value   |
| • -540  | TDCU fine grain value   |
| • -585  | TDCU fine grain value   |
| • -630  | TDCU fine grain value   |
| • -675  | TDCU fine grain value   |
| • -90   | TDCU fine grain value   |
| • -135  | TDCU fine grain value   |
| • -180  | TDCU fine grain value   |
| • -225  | TDCU fine grain value   |
| • -270  | TDCU fine grain value   |
| • -315  | TDCU fine grain value   |
| • -360  | TDCU fine grain value   |
| • -405  | TDCU fine grain value   |
| <PST>   | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity. |
| • IS    | In service  |
| • OOS   | Out of service  |
| <SST>   | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS  | Automatic in service  |
| • DSBLD | Disabled  |
| • LPBK  | Loopback  |
| • MEA   | Mismatch of equipment and attributes  |

## 11.59 ED-OTU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Optical Transport Unit Level 1/2/3 command edits the attributes (service parameters) and state of an OTU1, OTU2, OTU3, and OTU4 facilities respectively. The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

### Usage Guidelines

- Squelchmode is applicable for OTU1, OTU2, OTU3, and OTU4 modifiers.
- Squelchmode for OTU1 clients are NONE or ODU-AIS.
- Squelchmode for OTU1/OTU2 trunk in RGN and TXP modes is ODU-AIS.
- Squelchmode for OTU1/OTU2 trunk in non-TXP mode is NONE.
- OVRCLK parameter is supported on OTU2 on SFP+ ports on 10x10G-LC.
- In the CFP-TXP mode, the ED-OTU is applicable for FREQ, LOSSB, SOAK, and SQUELCHMODE parameters on the CFP-LC card on the VFAC AID.
- In the CFP-TXP mode, the ED-OTU is applicable for FEC, OSFBER, and OSDBER parameters on the 100G-LC-C virtual ports on the VCFAC AID.

### Category

### Security

Provisioning

### Input Format

```
ED-<OTU>[:<TID>]:<AID>:<CTAG>[::OSDBER=<SDBER>],[GCC=<GCC>],[DWRAP=<DRWAP>],[FEC=<FEC>],[PAYLOADMAP=<PAYLOADMAP>],[PMMODE=<PMMODE>],[FREQ=<FREQ>],[LOSSB=<LOSSB>],[NAME=<PORTNAME>],[SOAK=<SOAK>],[GCCRATE=<GCCRATE>],[SQUELCHMODE=<SQUELCHMODE>],[OTNTRMAP=<OTNTRMAP>],[SYNCSMSG=<SYNCSMSG>],[SENDDUS=<SENDDUS>],[ADMSSM=<ADMSSM>],[ODUTRANSMODE=<ODUTRANSMODE>],[PORTMODE=<PORTMODE>],[CMDMDE=<CMDMDE>],[PPR=<PPR>],[TRIGTH=<TRIGTH>],[RVRTTH=<RVRTTH>],[TRIGWINDOW=<TRIGWINDOW>],[RVRTWINDOW=<RVRTWINDOW>][:<PST>[:<SST>]];
```

### Input Example

```
ED-OTU1::VFAC-3-5-1:1:::GCC=Y,GCCRATE=400K,SENDDUS=N;
```

```
ED-OTU2::VFAC-6-9-1:1:::PPR=Y,TRIGTH=6E-4,TRIGWINDOW=1000,RVRTTH=1E-5,RVRTWINDOW=2000;
```

## Input Parameters

|           |   |
|-----------|---|
| AID>      | The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. OTU2 uses VFAC and VLINE AID on 10x10G-LC card. OTU3 and OTU4 use VFAC on CFP-LC cards.   |
| <OSDBER>  | OTN SDBER. Can only be provisioned on the working port. Defaults to 1E-7 Parameter type is SD_BER—the threshold for declaring signal degrade on a facility or path.   |
| • 1E-5    | SDBER is 1E-5   |
| • 1E-6    | SDBER is 1E-6   |
| • 1E-7    | SDBER is 1E-7   |
| • 1E-8    | SDBER is 1E-8   |
| • 1E-9    | SDBER is 1E-9   |
| <GCC>     | Identifies the Generic communication channel (GCC) connection of the port.  |
| • Y       | GCC can be utilized   |
| • N       | GCC cannot be utilized  |
| <DWRAP>   | (Optional) The ITU-T G.709 monitoring digital wrapper. It is either on or off. The system default is ON. For MXP_2.5G_10G and TXP_MR_10G cards, this applies only to the DWDM port. The parameter type is ON_OFF (disable or enable an attribute). To enable ITU-T G.709 monitoring, there should be no GCC on the DWDM port and the payload (in which the card is configured) should not be UNFRAMED. To disable ITU-T G.709 monitoring, there should be no GCC on the DWDM port, the FEC should be turned to off, there should be no overhead circuit created on the DWDM port, and none of the client ports on the card should be part of a Y-cable protection group (muxponder only). |
| • N       | Disable an attribute.   |
| • Y       | Enable an attribute.  |
| <FEC>     | (Optional) Forward error correction. It can be enabled only if ITU-T G.709 monitoring is turned ON. It is either off or enabled in standard or enhanced mode. The system default is standard FEC enabled. The FEC level PM and thresholds apply if the FEC is turned ON. The parameter type is FEC_MODE, which specifies the type of forward error correction.  |
| • ENH     | Enhanced FEC is enabled.  |
| • ENH-I4  | Enhanced FEC 1.4 is enabled.  |
| • ENH-I7  | Enhanced FEC 1.7 is enabled.  |
| • HG-20   | 20% High Gain FEC.  |
| • HG-7    | High Gain 7% FEC.   |
| • OFF     | FEC is disabled.  |
| • STD     | Standard FEC is enabled.  |
| <GCCRATE> | (Optional) The data rate of the GCC traffic. The default is 192 Kbps. For MXP_2.5G_10G and TXP_MR_10G cards, this applies only to the DWDM port. The parameter type is GCCRATE, which is the data rate of the GCC traffic.  |
| • 192K    | 192 Kbps  |

|                    |   |
|--------------------|---|
| • 400K             | 400 Kbps (only on M2 and M6 chassis)  |
| • 1200K            | 1200 Kbps (only on 15454 chassis)   |
| <PAYLOADMAP>       | (Optional) The type of payload mapping. It can be enabled only if ITU-T G.709 monitoring is turned ON and FEC is enabled. The parameter type is PAYLOAD_MAPPING, which is the payload mapping mode. |
| • ASYNCH           | Asynchronous mapping mode   |
| • ODU              | ODU multiplex structure mode  |
| • SYNCH            | Synchronous mapping mode  |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| • NOOPU2FIXEDSTUFF | Mapping with no FIXEDSTUFF  |
| <FREQ>             | The parameter type is OPTICAL_WLEN (optical wavelength).  |
| • 850 nm           | Wavelength 850 nm   |
| • 1310 nm          | Wavelength 1310 nm  |
| • 1550 nm          | Wavelength 1550 nm  |
| • 1470 nm          | Wavelength 1470 nm  |
| • 1490 nm          | Wavelength 1490 nm  |
| • 1510 nm          | Wavelength 1510 nm  |
| • 1530 nm          | Wavelength 1530 nm  |
| • 1570 nm          | Wavelength 1570 nm  |
| • 1590 nm          | Wavelength 1590 nm  |
| • 1610 nm          | Wavelength 1610 nm  |
| • 1528.77 nm       | Wavelength 1528.77 nm   |
| • 1529.16          | Wavelength 1529.16  |
| • 1529.55 nm       | Wavelength 1529.55 nm   |

| • TEN-GE-ER   | 10 GE extended range                              |
| • TEN-GE-LR   | 10 GE long range                                  |
| • TEN-GE-LRM  | TEN-GE-LRM  |
| • TEN-GE-SR   | 10 GE short range                                 |
| • TEN-GE-ZR   | TEN-GE-ZR   |
| • VSR2000-3R2 | VSR2000-3R2                                       |
| • VX          | Reach VX  |
| • ZX          | Reach ZX  |
| • P1S1-1D1    | Shorthaul 2.5G Ethernet with 1310 nm wavelength   |

|              |   |
|--------------|---|
| • P1L1-1D2   | Longhaul 2.5G Ethernet with 1550 nm wavelength  |
| • CWDM       | Coarse Wavelength Division Multiplexing with  |
| • DWDM       | Dense Wavelength Division Multiplexing with wavelength between 1525–1565 nm   |
| <PORTNAME>   | (Optional) Port name. PORTNAME is a string.   |
| <SOAK>       | (Optional) Locked-AutomaticInService to Unlocked transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer. |
| <OTNTRMAP>   | OTN Traffic Mapping   |
| • TRMAP-NONE | No traffic mapping  |
| • CBR10G     | Constant Bit Rate 10G   |
| • ODU2E      | 10.399 Gbit/s   |
| • ODU1MUX    | ODU1 Multiplexer  |
| • ODU1       | 2.498 Gbits/s   |
| <NAME>       | (Optional) Port name. NAME is a string. Defaults to NULL. Maximum length is 32 characters.  |
| <SYNCMSG>    | Synchronization status messaging is enabled or disabled on the facility.  |
| • N          | Disable an attribute.   |
| • Y          | Enable an attribute.  |
| <PPR>        | (Optional) To enable or disable the Proactive Protection Regen (PPR) in the OTU2 Card in Regen Mode.  |
| • Y          | PPR enabled.  |
| • N          | PPR disabled.   |
| <TRIGTH>     | Specifies the trigger threshold value for Proactive Protection Regen. The parameter type is TRIGGER_THRESHOLD.  |
| • 1E-2       | Trigger threshold is 1E-2.  |
| • 1E-3       | Trigger threshold is 1E-3.  |
| • 1E-4       | Trigger threshold is 1E-4.  |
| • 1E-5       | Trigger threshold is 1E-5.  |
| • 1E-6       | Trigger threshold is 1E-6.  |
| • 1E-7       | Trigger threshold is 1E-7.  |
| • 2E-2       | Trigger threshold is 2E-2.  |
| • 2E-3       | Trigger threshold is 2E-3.  |
| • 2E-4       | Trigger threshold is 2E-4.  |
| • 2E-5       | Trigger threshold is 2E-5.  |
| • 2E-6       | Trigger threshold is 2E-6.  |
| • 2E-7       | Trigger threshold is 2E-7.  |
| • 3E-2       | Trigger threshold is 3E-2.  |
| • 3E-3       | Trigger threshold is 3E-3.  |
| • 3E-4       | Trigger threshold is 3E-4.  |
| • 3E-5       | Trigger threshold is 3E-5.  |

|          |  |
|----------|--|
| • 3E-6   | Trigger threshold is 3E-6.   |
| • 3E-7   | Trigger threshold is 4E-7.   |
| • 4E-2   | Trigger threshold is 4E-2.   |
| • 4E-3   | Trigger threshold is 4E-3.   |
| • 4E-4   | Trigger threshold is 4E-4.   |
| • 4E-5   | Trigger threshold is 4E-5.   |
| • 4E-6   | Trigger threshold is 4E-6.   |
| • 4E-7   | Trigger threshold is 4E-7.   |
| • 5E-2   | Trigger threshold is 5E-2.   |
| • 5E-3   | Trigger threshold is 5E-3.   |
| • 5E-4   | Trigger threshold is 5E-4.   |
| • 5E-5   | Trigger threshold is 5E-5.   |
| • 5E-6   | Trigger threshold is 5E-6.   |
| • 5E-7   | Trigger threshold is 5E-7.   |
| • 6E-2   | Trigger threshold is 6E-2.   |
| • 6E-3   | Trigger threshold is 6E-3.   |
| • 6E-4   | Trigger threshold is 6E-4.   |
| • 6E-5   | Trigger threshold is 6E-5.   |
| • 6E-6   | Trigger threshold is 6E-6.   |
| • 6E-7   | Trigger threshold is 6E-7.   |
| • 7E-2   | Trigger threshold is 7E-2.   |
| • 7E-3   | Trigger threshold is 7E-3.   |
| • 7E-4   | Trigger threshold is 7E-4.   |
| • 7E-5   | Trigger threshold is 7E-5.   |
| • 7E-6   | Trigger threshold is 7E-6.   |
| • 7E-7   | Trigger threshold is 7E-7.   |
| • 8E-2   | Trigger threshold is 8E-2.   |
| • 8E-3   | Trigger threshold is 8E-3.   |
| • 8E-4   | Trigger threshold is 8E-4.   |
| • 8E-5   | Trigger threshold is 8E-5.   |
| • 8E-6   | Trigger threshold is 8E-6.   |
| • 8E-7   | Trigger threshold is 8E-7.   |
| • 9E-2   | Trigger threshold is 9E-2.   |
| • 9E-3   | Trigger threshold is 9E-3.   |
| • 9E-4   | Trigger threshold is 9E-4.   |
| • 9E-5   | Trigger threshold is 9E-5.   |
| • 9E-6   | Trigger threshold is 9E-6.   |
| • 9E-7   | Trigger threshold is 9E-7.   |
| <RVRTTH> | Specifies the revert threshold for Proactive Protection Regen. The parameter type is RVRTTH. |
| • 1E-3   | Revert threshold is 1E-3.  |
| • 1E-4   | Revert threshold is 1E-4.  |

|        |                           |
|--------|---------------------------|
| • 1E-5 | Revert threshold is 1E-5  |
| • 1E-6 | Revert threshold is 1E-6. |
| • 1E-7 | Revert threshold is 1E-7. |
| • 2E-3 | Revert threshold is 2E-3. |
| • 2E-4 | Revert threshold is 2E-4. |
| • 2E-5 | Revert threshold is 2E-5  |
| • 2E-6 | Revert threshold is 2E-6. |
| • 2E-7 | Revert threshold is 2E-7. |
| • 3E-3 | Revert threshold is 3E-3. |
| • 3E-4 | Revert threshold is 3E-4. |
| • 3E-6 | Revert threshold is 3E-6  |
| • 3E-7 | Revert threshold is 4E-7. |
| • 4E-3 | Revert threshold is 4E-4. |
| • 4E-4 | Revert threshold is 4E-4. |
| • 4E-5 | Revert threshold is 4E-5  |
| • 4E-6 | Revert threshold is 4E-6. |
| • 4E-7 | Revert threshold is 4E-7. |
| • 5E-3 | Revert threshold is 5E-3. |
| • 5E-4 | Revert threshold is 5E-4. |
| • 5E-5 | Revert threshold is 5E-5  |
| • 5E-6 | Revert threshold is 5E-6. |
| • 5E-7 | Revert threshold is 5E-7. |
| • 5E-8 | Revert threshold is 5E-8. |
| • 6E-3 | Revert threshold is 6E-3. |
| • 6E-4 | Revert threshold is 6E-4. |
| • 6E-5 | Revert threshold is 6E-5  |
| • 6E-6 | Revert threshold is 6E-6. |
| • 6E-7 | Revert threshold is 6E-7. |
| • 6E-8 | Revert threshold is 6E-8. |
| • 7E-3 | Revert threshold is 7E-3. |
| • 7E-4 | Revert threshold is 7E-4. |
| • 7E-5 | Revert threshold is 7E-5  |
| • 7E-6 | Revert threshold is 7E-6. |
| • 7E-7 | Revert threshold is 7E-7. |
| • 7E-8 | Revert threshold is 7E-8. |
| • 8E-3 | Revert threshold is 8E-3. |
| • 8E-4 | Revert threshold is 8E-4. |
| • 8E-5 | Revert threshold is 8E-5  |
| • 8E-6 | Revert threshold is 8E-6. |
| • 8E-7 | Revert threshold is 8E-7. |
| • 8E-8 | Revert threshold is 8E-8. |

|                |  |
|----------------|--|
| • 9E-3         | Revert threshold is 9E-3.  |
| • 9E-4         | Revert threshold is 9E-4.  |
| • 9E-5         | Revert threshold is 9E-5.  |
| • 9E-6         | Revert threshold is 9E-6.  |
| • 9E-7         | Revert threshold is 9E-7.  |
| • 9E-8         | Revert threshold is 9E-8.  |
| <TRIGWINDOW>   | Specifies the trigger window value for Proactive Protection Regen in milli seconds. It should always be a multiple of the sample slot value, derived from the trigger threshold value. The maximum TRIGWINDOW value is 10000.  |
| <RVRTWINDOW>   | Specifies the revert window value for Proactive Protection Regen in milli seconds. It should always be a multiple of the sample slot value, derived from the revert threshold value. The maximum RVRTWINDOW value is 10000 and minimum value is 2000.  |
| <SENDDUS>      | The facility will send the DUS value as the SSM for that facility.   |
| • N            | Disable an attribute.  |
| • Y            | Enable an attribute.   |
| <ADMSSM>       | The administrative synchronization status message. Only supported on the ONS 15454. Defaults to STU. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level.  |
| • DUS          | DoNot Use  |
| • PRS          | Primary Reference Source, Stratum 1 Traceable  |
| • RES          | Reserved For Network Synchronization Use   |
| • SMC          | SONET Minimum Clock Traceable  |
| • ST2          | Stratum 2 Traceable  |
| • ST3          | Stratum 3 Traceable  |
| • ST3E         | Stratum 3E Traceable   |
| • ST4          | Stratum 4 Traceable  |
| • STU          | Synchronized, Traceability Unknown   |
| • TNC          | Transit Node Clock (2nd Generation Only)   |
| <ODUTRANSMODE> | To configure the "ODUk OH" transparency on the OTU2-XP card.   |
| • TRANS-STD    | Transparent Standard Use. The transponder, behaving as a regenerator, terminates the OUT layer and is transparent to the ODU layer. Also in this case the FEC-MISM (FEC Mismatch) alarm is not generated.  |
| • CISCO-EXT    | Cisco Extended. When the Cisco Extended configuration is selected, two bytes of the ODU layer is terminated to guarantee the interoperability with the older Transponder/Muxponder cards.  |
| <CMDMDE>       | (Optional) Command mode. Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in Unlocked-Enabled or Locked-Disabled, AutomaticInService service states. |

|                      |   |
|----------------------|---|
| • FRCD               | Force the system to override a state where the command would normally be denied.  |
| • NORM               | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <PORTMODE>           | Describes the termination mode of each interface on the card.   |
| • DWDM-LINE          | Line terminating mode.  |
| • DWDM-SECTION       | Section terminating mode.   |
| • DWDM-TRANS-AIS     | Transparent mode AIS.   |
| • DWDM-TRANS-SQUELCH | Transparent mode Squelch  |
| • 10GLANWAN-SQUELCH  | 10G LAN to WAN Squelch.   |
| <ODUTRANSMODE>       | To configure the "ODUk OH" transparency on the OTU2-XP card.  |
| • CISCO-EXT          | Cisco Extended. When the Cisco Extended configuration is selected, two bytes of the ODU layer is terminated to guarantee the interoperability with the older Transponder/Muxponder cards.                 |
| • TRANS-STD          | Transparent Standard Use. The transponder, behaving as a regenerator, terminates the OUT layer and is transparent to the ODU layer. Also in this case the FEC-MISM (FEC Mismatch) alarm is not generated. |
| <SQUELCHMODE>        | Shuts down the far-end laser in response to certain defects.  |
| • ODU-AIS            | ODU AIS   |
| • AIS                | Generis AIS   |
| • NONE               | Transparent   |
| • SQUELCH            | Squelch is enabled  |
| • DISABLE            | Squelch is disabled   |
| <OVRCLK>             | Indicates whether the optical trunk is over-clocked or not. The default is N.   |
| • Y                  | Yes   |
| • N                  | No  |
| • OTU1e              | OTU1e is a 10G overlocked payload with a rate of 11.0491 Gbps $\pm$ 100 PPM.  |
| <PST>                | (Optional) Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.  |
| • IS                 | In Service  |
| • OOS                | Out Of Service  |
| • Unlocked           | In service  |
| • Locked             | Out of service  |
| <SST>                | (Optional) Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| • DSBLD              | Disabled  |
| • MT                 | Maintenance mode  |
| • AINS               | Automatically IN Service  |

## 11.60 ED-PID

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Password (ED-PID) command allows a user to change his or her own password.

### Usage Guidelines

- Passwords are masked for the following security commands: ACT-USER, ED-PID, ENT-USER-SECU, and ED-USER-SECU. Access to a TL1 session by any means will have the password masked. The Cisco Transport Controller (CTC) Request History and Message Log will also show the masked commands. When a password-masked command is reissued by double-clicking the command from CTC Request History, the password will still be masked in the CTC Request History and Message Log. The actual password that was previously issued will be sent to the NE. To use a former command as a template only, single-click the command in CTC Request History. The command will be placed in the Command Request text box, where you can edit the appropriate fields prior to reissuing it.
- The password will not appear in the TL1 log on the NE.
- For the ED-PID command:  
ED-PID:[TID]:<UID>:[CTAG]::<OLDPID>,<NEWPID>;  
The syntax of OLDPID is not checked. The NEWPID should follow Telcordia standards set by SET-ATTR-SECUDFLT command for minimum password length, maximum password length, and password character rule.
- You must use the ED-USER-SECU command to change the default password for the CISCO15 superuser.
- The ED-PID command cannot be used to change the empty password to a valid password.

### Category

Security

### Security

Retrieve

### Input Format

ED-PID:[<TID>]:<UID>:<CTAG>::<OLDPID>,<NEWPID>;

### Input Example

ED-PID:PETALUMA:UID:123::OLDPWD,NEWPWD;

### Input Parameters

|                    |   |
|--------------------|---|
| <b>&lt;UID&gt;</b> | User Identifier. Any combination of up to 20 alphanumeric characters. The minimum UID size is 2. UID is a string. |
|--------------------|---|

|          |  |
|----------|--|
| <OLDPID> | The user's old password. Minimum length of the PID depends on the PWDMINLEN, the type of characters to be entered depends on the PWDCHRULE, and maximum length depends on PWDMAXLEN set by SET-ATTR-SECUDFLT command. Passwords are encrypted and appear as asterisks (*). OLDPID is a string. |
| <NEWPID> | The user's new password. Minimum length of the PID depends on the PWDMINLEN, the type of characters to be entered depends on the PWDCHRULE, and maximum length depends on PWDMAXLEN set by SET-ATTR-SECUDFLT command. Passwords are encrypted and appear as asterisks (*). NEWPID is a string. |

## 11.61 ED-POS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Packet-Over-SONET (ED-POS) command edits the back-end port information for the Ethernet card when the back-end port is working in POS mode. The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use the retrieve command to obtain the current value. ED-POS cannot set ENCAP and PST/SST.

### Usage Guidelines

This command is supported for the ONS 15454 CE-100T-8 and CE-1000-4 cards.

### Category

Ports

### Security

Provisioning

### Input Format

```
ED-POS:[<TID>]:<AID>:<CTAG>:::[ENCAP=<ENCAP>],[NAME=<NAME>],
[CMDMDE=<CMDMDE>],[SOAK=<SOAK>]:[<PST>[,<SST>]];
```

### Input Example

```
ED-POS:PETALUMA:VFAC-2-0:123:::ENCAP=HDLC,NAME=NAME,CMDMDE=CMDMDE,
SOAK=32:IS,AINS;
```

### Input Parameters

|            |  |
|------------|--|
| <AID>      | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
| <ENCAP>    | Encapsulation. The parameter type is ENCAP, which is the frame encapsulation type. |
| • GFP_F    | GFP frame mode   |
| • GFP_T    | GFP transparent mode   |
| • HDLC     | HDLC frame mode  |
| • HDLC_LEX | HDLC LAN extension frame mode  |

|            |   |
|------------|---|
| • HDLC_X86 | HDLC X.86 frame mode  |
| • CBR      | CBR mapping mode.   |
| • GFP      | GFP mapping mode.   |
| • GMP      | GMP mapping mode is supported only on 8GFC on 10x10G-LC card.   |
| • TRP      | Transparent mapping mode.   |
| <NAME>     | Port name. NAME is a string.  |
| <CMDMDE>   | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD     | Force the system to override a state where the command would normally be denied.  |
| • NORM     | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <SOAK>     | OOS-AINS to IS transition soak time as measured in 15 minute intervals, so a value of 4 translates to a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer.   |
| <PST>      | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • IS       | In service  |
| • OOS      | Out of service  |
| <SST>      | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
| • AINS     | Automatic in service  |
| • DSBLD    | Disabled  |
| • LPBK     | Loopback  |
| • MEA      | Mismatch of equipment and attributes  |
| • MT       | Maintenance mode  |
| • OOG      | Out of group  |
| • SWDL     | Software downloading  |
| • UAS      | Unassigned  |
| • UEQ      | Unequipped  |

## 11.62 ED-PROTOCOL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Protocol (ED-PROTOCOL) command is used to enable/disable a protocol/service that is supported in the NE. Valid protocols include shell/file system access (SHELL), EMS, TL1, and Simple Network Management Protocol (SNMP).

**Usage Guidelines**

- If the AID is TL1, the command will be denied because TL1 users are not allowed to change the setting for TL1 protocol.
- If the PROTOCOLAID is SNMP, the SECURE PROTOCOLSTAT is supported. To enable SNMP, set PROTOCOLSTAT to either SECURE or UNSECURE.

**Category**

Security

**Security**

Superuser

**Input Format**

ED-PROTOCOL:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::&lt;PROTSTAT&gt;;

**Input Example**

ED-PROTOCOL:CISCONODE:EMS:123::SECURE;

**Input Parameters**

|            |   |
|------------|---|
| <AID>      | The protocol/service to which the command pertains. The parameter type is PROTOCOLAID, which is the AID for the protocol/service. |
| • EMS      | CTC/CTM protocol/service  |
| • SHELL    | Shell/file system access protocol   |
| • SNMP     | SNMP protocol/service   |
| • TL1      | TL1 protocol service  |
| <PROTSTAT> | Identifies the status of the protocol/service. The parameter type is PROTOCOLSTAT, which is the status of the protocol.           |
| • DISABLED | The protocol cannot be used.  |
| • SECURE   | The protocol is enabled and communication using the protocol are sure, for example, through Secure Shell Protocol (SSH).          |
| • UNSECURE | The protocol is enabled but communication is not secure, for example, through Telnet.   |

## 11.63 ED-QNQ-CHGRP

(Cisco ONS 15454) The Edit Channel Group QinQ (ED-QNQ-CHGRP) command edits the IEEE 802.1Q tunneling (QinQ) relationship between the CE-VLAN and the S-VLAN for Gigabit Ethernet uniprot provisioning associated to a channel group.

**Usage Guidelines**

- The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use the RTRV-ETH command to obtain the current value.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

**Category** Channel Group

**Security** Provisioning

**Input Format** ED-QNQ-CHGRP:[<TID>]:<AID>:<CTAG>::<FIRST\_CE\_VLAN\_ID>,<LAST\_CE\_VLAN\_ID>,<S\_VLAN\_ID>:[RULE=<RULE>],[INTERNALVLAN=<INTERNAL\_VLAN\_ID>],[INGRESSCOS=<INGRESSCOS>][:];

**Input Example** ED-QNQ-CHGRP:CISCO:CHGRP-1-1-1::10,11,100:RULE=ADD;

|                         |   |  |
|-------------------------|---|--|
| <b>Input Parameters</b> | <AID>   | Access identifier from the “26.9 CHGRP” section on page 26-26.   |
|                         | <FIRSTCEVLANID>   | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.  |
|                         | <LASTCEVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.  |
|                         | <SVLANID>   | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.  |
|                         | <RULE>  | Used to represent the rules allowed for the VLAN tagging operations. The default value is ADD.   |
|                         | <ul style="list-style-type: none"> <li>• ADD</li> <li>• XLTE</li> <li>• XLTE-ADD</li> </ul>                 | <p>The S-VLAN tag is added to the CE-VLAN tag.</p> <p>The S-VLAN tag replaces the CE-VLAN tag (single Q).</p> <p>XLTE and ADD rule applied together. This rule request to supply an internal S-VLAN. First the Internal VLAN substitutes the Customer VLAN, then Service Provider VLAN TAG (S-VLAN) is added</p> |
|                         | <ul style="list-style-type: none"> <li>• DOUBLE-ADD</li> </ul>  | ADD rule applied two times. This rule request to supply an internal S-VLAN. First the Internal VLAN is added, then Service Provider VLAN TAG (S-VLAN) is added to have a double tag  |
|                         | <INTERNAL_VLAN_ID>  | Internal VLAN ID.  |
|                         | <INGRESSCOS>  | Identifies the COS value set in the S-VLAN tag.  |
|                         | <ul style="list-style-type: none"> <li>• 0 to 7</li> <li>• DSCP</li> <li>• TRUST</li> <li>• VLAN</li> </ul> | <p>Set a Cos value</p> <p>The COS is set according to DSCP to COS mapping table.</p> <p>Use the Customer COS</p> <p>The COS provisioned on CVLAN basis (QinQ selective mode)</p>   |

## 11.64 ED-QNQ-ETH

(Cisco ONS 15454) The Edit ETH QinQ Table (ED-QNQ-ETH) command modifies the IEEE 802.1Q tunneling (QinQ) relationship between the customer VLAN (CE-VLAN) and the service provider VLAN (S-VLAN) for Gigabit Ethernet uniport provisioning associated to an L2 Ethernet port.

### Usage Guidelines

- The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use a retrieve command to obtain the current value.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

### Category

Ethernet

### Security

Provisioning

### Input Format

```
ED-QNQ-ETH:[<TID>]:<AID>:<CTAG>::<FIRSTCEVLANID>,<LASTCEVLANID>,<S_VLAN_ID>[:RULE=<RULE>],[INTERNALVLAN=<INTERNAL_VLAN_ID>],[INGRESSCOS=<INGRESSCOS>][:];
```

### Input Example

```
ED-QNQ-ETH:PETALUMA:ETH-1-1-1:1::10,11,100:RULE=ADD;
```

### Input Parameters

|                 |   |
|-----------------|---|
| <AID>           | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH” section on page 26-41</a> .  |
| <FIRSTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <LASTCEVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <SVLANID>       | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <RULE>          | Used to represent the rules allowed for VLAN tagging operations.  |
| • ADD           | The service provider VLAN tag is added to the customer VLAN tag.  |
| • XLTE          | The service provider VLAN tag replaces the CE-VLAN tag (single Q).  |

|                    |   |
|--------------------|---|
| • XLTE-ADD         | XLTE and ADD rule applied together. This rule request to supply an internal S-VLAN. First the Internal VLAN substitutes the Customer VLAN, then Service Provider VLAN TAG (S-VLAN) is added |
| • DOUBLE-ADD       | ADD rule applied two times. This rule request to supply an internal S-VLAN. First the Internal VLAN is added, then Service Provider VLAN TAG (S-VLAN) is added to have a double tag         |
| <INTERNAL_VLAN_ID> | Internal VLAN ID  |
| <INGRESSCOS>       | Identifies the COS value set in the S-VLAN tag.   |
| • 0 to 7           | Set a Cos value   |
| • DSCP             | The COS is set according to DSCP to COS mapping table.  |
| • TRUST            | Use the Customer COS.   |
| • VLAN             | The COS provisioned on CVLAN basis (QinQ selective mode)  |

## 11.65 ED-REP

(Cisco ONS 15454) The Edit Resilient Ethernet Protocol (ED-REP) command edits the Resilient Ethernet Protocol (REP) configuration on the ethernet port.

### Usage Guidelines

- The PREEMPTDELAY parameter value “0” indicates the automatic VLB is disabled on the Edge Ports.
- The NE generates a REPT-DBCHG notification when the preempt delay timer is changed.
- This command is applicable only to GE\_XP and 10GE\_XP cards.

### Category

Ethernet

### Security

Provisioning

### Input Format

ED-REP:[<TID>]:<AID>:<CTAG>::<PREEMPTDELAY>;

### Input Example

ED-REP:CISCO:ETH-12-1-1:1::20;

### Input Parameters

|                 |  |
|-----------------|--|
| <AID>           | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.  |
| <PREEMPTD ELAY> | Specifies the time in minutes after which the VLAN load balancing is triggered automatically. The valid range is from 15 to 300 minutes. The default value is 0. |

## 11.66 ED-ROLL-<MOD\_PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Roll for STS1, STS12C, STS192C, STS24C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (ED-ROLL-<MOD\_PATH>) command forces a rolling operation, which attempts to force a valid signal to complete the rolling operation.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Note

STS18C and STS36C are not supported for this command in this release.

### Category

Bridge and Roll

### Security

Provisioning

### Input Format

ED-ROLL-<MOD\_PATH>:[<TID>]:<FROM>,<TO>:<CTAG>:::[CMDMDE=<CMDMDE>];

### Input Example

ED-ROLL-STs1:PETALUMA:STS-1-1-1,STS-2-1-1:1:::CMDMDE=FRCD;

### Input Parameters

|                     |   |
|---------------------|---|
| <b>&lt;FROM&gt;</b> | Source access identifier from the <a href="#">“26.12 CrossConnectId1” section on page 26-31</a> . It is one of the termination points (legs) of the existing cross-connection. If the existing cross-connection is one-way, then this termination point (leg) should be the FROM-AID termination point. Otherwise, FROM is not significant. FROM and TO should be entered as they are entered in the ENT-CRS command. You can issue RTRV-CRS command, and use the response for FROM and TO parameters.      |
| <b>&lt;TO&gt;</b>   | Destination access identifier from the <a href="#">“26.12 CrossConnectId1” section on page 26-31</a> . It is one of the termination points (legs) of the existing cross-connection. If the existing cross-connection is one-way, then this termination point (leg) should be the TO-AID termination point. Otherwise, the TO is not significant. FROM and TO should be entered as they are entered in the ENT-CRS command. You can issue RTRV-CRS command, and use the response for FROM and TO parameters. |

|  |  |
|--|--|
| <CMDMDE>   | <p>The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states.</p> <p><b>Note</b> CMDMDE can only go from NORM to FRCD (cannot go from FRCD to NORM). CMDMDE cannot be set to NORM using this command.</p> |
| <ul style="list-style-type: none"> <li>FRCD</li> </ul> | Force the system to override a state where the command would normally be denied.   |
| <ul style="list-style-type: none"> <li>NORM</li> </ul> | Execute the command normally. Do not override any conditions that might make the command fail.   |

## 11.67 ED-SLV-WDMANS

(Cisco ONS 15454) The Edit Span Loss Verification Wavelength Division Multiplexing Automatic Node Set-Up (ED-SLV-WMANS) command edits the expected span loss verification.

### Usage Guidelines

None

### Category

DWDM

### Security

Maintenance

### Input Format

ED-SLV-WDMANS:[<TID>]:<AID>:<CTAG>[::<ROLE>][:];

### Input Example

ED-SLV-WDMANS:VA454-22:WDMANS-E:116;

### Input Parameters

|  |  |
|--|--|
| <AID>  | Access identifier from the <a href="#">“26.34 WDMANS”</a> section on page 26-62. |
| <ROLE>   | The role the unit is playing in the protection group.                            |
| <ul style="list-style-type: none"> <li>PROT</li> </ul> | The entity is the protection unit in the protection group.                       |
| <ul style="list-style-type: none"> <li>WORK</li> </ul> | The entity is the working unit in the protection group.                          |

## 11.68 ED-STCN-REP

(Cisco ONS 15454) The Edit Segment Topology Change Notification Resilient Ethernet Protocol (ED-STCN-REP) command edits the Segment Topology Change Notification (STCN) for REP Segment on the ethernet ports.

### Usage Guidelines

- STCN can be enabled only on the EDGE ports of the REP Segment.
- If the STCN is not enabled, you cannot edit any other parameters related to STCN.
- Only one Segment range can be added or removed at a time
- A maximum of 2 Segment range can be configured on the ethernet edge port.
- This command is applicable only to GE\_XP and 10GE\_XP cards.

### Category

Ethernet

### Security

Provisioning

### Input Format

```
ED-STCN-REP:[<TID>]:<AID>:<CTAG>:::[STCNENABLED=<STCNENABLED>],[STCNOPERATION=<STCNOPERATION>],[SEGRANGESTART=<SEGRANGESTART>],[SEGRANGEEND=<SEGRANGEEND>],[STCNPORT=<STCNPORT>];
```

### Input Example

```
ED-STCN-REP::ETH-16-1-1:1:::STCNENABLED=Y,STCNOPERATION=ADD,SEGRANGESTART=1000,SEGRANGEEND=1004,STCNPORT=ETH-16-2-1;
```

### Input Parameters

|   |  |
|---|--|
| <AID>   | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.   |
| <STCNENABLED>   | To enable or disable the Segment Topology Notification on ethernet entity for REP.   |
| <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>        | <p>Enables STCN on the ethernet port.</p> <p>Disables STCN on the ethernet port.</p>   |
| <STCNOPERATION>   | Adds or removes the range for STCN notification.   |
| <ul style="list-style-type: none"> <li>• ADD</li> <li>• REMOVE</li> </ul> | <p>Adds the range to a list of segment ranges for STCN notification.</p> <p>Removes the range from the list of ranges for STCN notification.</p> |
| <SEGRANGESTART>   | Indicates the segment range start value for the STCN. The valid range is from 0 to 1024.   |

|               |   |
|---------------|---|
| <SEGRANGEEND> | Indicates the segment range end value for the STCN. The valid range is from 0 to 1024.                                      |
| <STCNPORT>    | Determines on which ethernet port the STCN should be sent. STCNPORT is an AID, it takes ETH AID value. The default is NULL. |

## 11.69 ED-SYNCN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Synchronization (ED-SYNCN) command edits the synchronization reference list used to determine the sources for the NE's reference clock and the BITS output clock. For each clock, up to three synchronization sources might be specified (for example, PRIMARY, SECOND, THIRD). To view or edit the system timing mode, use the RTRV-NE-SYNCN or ED-NE-SYNCN commands.

**Usage Guidelines** To retrieve/set the timing mode, SSM message set, or quality of RES information, use the RTRV-NE-SYNCN and ED-NE-SYNCN commands.

**Category** Synchronization

**Security** Provisioning

**Input Format** ED-SYNCN:[<TID>]:<AID>:<CTAG>:::[PRI=<PRI>],[SEC=<SEC>],[THIRD=<THIRD>][:];

**Input Example** ED-SYNCN:BOYES:SYNC-NE:112:::PRI=INTERNAL,SEC=INTERNAL,THIRD=INTERNAL;

|                         |         |  |
|-------------------------|---------|--|
| <b>Input Parameters</b> | <AID>   | Access identifier from the <a href="#">“26.30 SYNC_REF”</a> section on page 26-60.                         |
|                         | <PRI>   | Primary reference of the synchronization from the <a href="#">“26.29 SYN_SRC”</a> section on page 26-59.   |
|                         | <SEC>   | Secondary reference of the synchronization from the <a href="#">“26.29 SYN_SRC”</a> section on page 26-59. |
|                         | <THIRD> | Third reference of the synchronization from the <a href="#">“26.29 SYN_SRC”</a> section on page 26-59.     |

## 11.70 ED-T1

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Digital Signal Facility (ED-T1) command edits the attributes related to a DS1/T1 port.

**Usage Guidelines**

- This command is not allowed if the card is a protect card.
- If sending this command to edit TACC and any other attribute(s), and the port having the cross-connection, the Parameters Not Compatible error message will be returned.
- Editing the TACC using an ED-xxx command is only allowed when there is no circuit/cross-connection on the port and the port/VT does not have a TAP or TACC number. Otherwise, an error message (for example, VT in Use) will be returned.
- TACC creation will be denied on protect ports/cards.
- AUTO-PROV is not supported.
- The AISONLPBK and RETIME options are applicable to the DS1/E1-56 card on the ONS 15454.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to retrieve the current value.
- The parameters SYNCMAP, and VTMAP are only supported on the DS1/E1-56 card on the ONS 15454.
- The parameters ADMSSM and INHFELPBK are only supported on the DS1/E1-56 card on the ONS 15454.
- You cannot directly transition a facility from IS to OOS-MA,DSBLD service state. You can transition a facility to OOS-MA,DSBLD service state from any state except OOS-MA,MT. To transition a facility from OOS-MA,MT to OOS-MA,DSBLD service state, all the following conditions must be met:
  - The facility is not sourcing a synchronization clock
  - The facility's DCC is disabled
  - The facility is not part of a protection group
  - The facility is not supporting cross-connects
  - The facility is not using overhead connections or overhead terminations (such as express orderwire, local orderwire, or user data channels [UDCs])

**Note** The conditions stipulated can be overridden by using the CMDMDE=FRCD option. The FRCD option will immediately remove the facility from service (except for IS to OOS-MA,DSBLD transition) with no consideration for orderly interruption.

- The parameters BERTMODE, BERTPATTERN, and BERTERRCOUNT apply to DS1/E1-56 and DS3XM-12 cards.
- BERT is implemented on a single port.

**Input Parameters**

|                   |   |
|-------------------|---|
| <AID>             | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.                        |
| <CLKSRC>          | <CLKSRC>  |
| • INTERNAL        | INTERNAL  |
| • LOOPBACK TIMING | LOOPBACK TIMING   |
| • SYNCE           | SYNCE   |
| • ADAPTIVE        | ADAPTIVE  |
| <LINECDE>         | Line code. The parameter type is LINE_CODE.   |
| • AMI             | Line code value is AMI.   |
| • B3ZS            | Bipolar with three-zero substitution  |
| • B6ZS            | Line code value is B6ZS.  |
| • B8ZS            | Line code value is B8ZS.  |
| • JBZS            | JBZS  |
| • ZBTISI          | ZBTISI  |
| <FMT>             | Digital signal frame format. The parameter type is FRAME_FORMAT, which is the frame format for a T1 port. |
| • AUTOPROV        | AUTOPROV  |
| • CBIT            | C-BIT line type applies to the DS3XM and DS3E cards.  |
| • D4              | Frame format is D4.   |
| • DS2 FRAMED      | DS2 FRAMED  |
| • E2 FRAMED       | E2 FRAMED   |
| • E3-FRAME        | E3-FRAME  |
| • E3-PLCP         | E3-PLCP   |
| • ESF             | Frame format is ESF.  |
| • FRAMENA         | FRAMENA   |
| • G-751           | G-751   |
| • G-832           | G-832   |
| • M13             | M13 line type applies to the DS3XM and DS3E cards.  |
| • M23             | M23   |

|            |   |
|------------|---|
| • SYNTRAN  | SYNTRAN   |
| • UNFRAMED | Frame format is unframed.   |
| <LBO>      | Line build-out settings. The parameter type is LINE_BUILDOUT.   |
| • 0-133    | Line build-out range is 0–133   |
| • 133-266  | Line build-out range is 133-266   |
| • 266-399  | Line build-out range is 266-399   |
| • 399-533  | Line build-out range is 399-533   |
| • 533-655  | Line build-out range is 533-655   |
| <TACC>     | TAP number within a range of 0 to 999. Indicates whether the digroup being provisioned is to be used as a test access digroup. When TACC is 0 (zero), the TAP is deleted. Default is N. TACC is an integer. |
| <TAPTYPE>  | TAP type. Defaults to DUAL. The parameter type is TAPTYPE (test access point type).   |
| • DUAL     | Dual FAD  |
| • SINGLE   | Single FAD  |
| <SOAK>     | OOS-AINS to IS transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer.     |
| <SFBER>    | The port signal failure threshold. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.   |
| • 1E-3     | SFBER is 1E-3.  |
| • 1E-4     | SFBER is 1E-4.  |
| • 1E-5     | SFBER is 1E-5.  |
| <SDBER>    | Port signal degrade threshold. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.   |
| • 1E-5     | SDBER is 1E-5.  |
| • 1E-6     | SDBER is 1E-6.  |
| • 1E-7     | SDBER is 1E-7.  |
| • 1E-8     | SDBER is 1E-8.  |
| • 1E-9     | SDBER is 1E-9.  |
| <SYNCMSG>  | Synchronization status messaging is enabled or disabled on the T1 facility.   |
| • N        | Disable an attribute.   |
| • Y        | Enable an attribute.  |
| <SENDDUS>  | The facility will send the DUS value as the SSM for that facility.  |
| • N        | Disable an attribute.   |
| • Y        | Enable an attribute.  |
| <NAME>     | Name. NAME is a string.   |

|             |   |
|-------------|---|
| <CMDMDE>    | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD      | Force the system to override a state where the command would normally be denied.  |
| • NORM      | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <AISONLPBK> | Defaults to AIS_ON_LPBK_ALL. The parameter type is AIS_ON_LPBK, which indicates if AIS is sent on a loopback.   |
| • FACILITY  | AIS is sent on facility loopbacks.  |
| • ALL       | AIS is sent on all loopbacks.   |
| • OFF       | AIS is not sent on loopbacks.   |
| • TERMINAL  | AIS is sent on terminal loopbacks.  |
| <MODE>      | Mode. Default value is FDL. The parameter type is DS1MODE, which is the DS1 path mode of the DS3XM-12 card.   |
| • ATT       | Indicates that the DS1 path of the DS3XM-12 is in AT&T 54016 mode.  |
| • FDL       | Indicates that the DS1 path of the DS3XM-12 is in FDL T1-403 mode.  |
| <SYNCPMAP>  | The synchronous mapping for the DS1 facility. Defaults to ASYNC. Only supported on ONS 15454. The parameter type is SYNCPMAP (synchronous mapping type).  |
| • ASYNC     | Asynchronous  |
| • BYTE      | Mapping in byte   |
| • JBYTE     | Mapping in jbyte  |
| <ADMSSM>    | The administrative synchronization status message. Only supported on the ONS 15454. Defaults to STU. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level.   |
| • DUS       | Do Not Use For Synchronization  |
| • PRS       | Primary Reference Source, Stratum 1 Traceable   |
| • RES       | Reserved For Network Synchronization Use  |
| • SMC       | SONET Minimum Clock Traceable   |
| • ST2       | Stratum 2 Traceable   |
| • ST3       | Stratum 3 Traceable   |
| • ST3E      | Stratum 3E Traceable  |
| • ST4       | Stratum 4 Traceable   |
| • STU       | Synchronized, Traceability Unknown  |
| • TNC       | Transit Node Clock (2nd Generation Only)  |
| <VTMAP>     | The port to VT mapping type for that particular STS. Only supported on ONS 15454. Defaults to GR253. The parameter type is VTMAP (VT mapping).  |

|                    |   |
|--------------------|---|
| • GR253            | Mapping based on Telcordia GR-253.  |
| • INDUSTRY         | Mapping based on industry standard.   |
| <AISVONAI>         | Defaults to N. The parameter type is ON_OFF, which disables or enables an attribute.                            |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| <AISVONLOF>        | (Optional) The parameter type is ON_OFF (disable or enable an attribute).                                       |
| <INHFELPBK>        | Indicates whether far-end loopbacks are inhibited on the facility. Defaults to N. The parameter type is ON_OFF. |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| <INHFEPLPBK>       | Indicates whether far-end backplane loopbacks are inhibited on the facility.                                    |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| <BERTMODE>         | Specifies the mode TPG or TPM of the port for BERT.   |
| • NONE             | BERT mode not enabled.  |
| • TPGM-L           | Test pattern generator and monitor on line side.  |
| • TPGM-B           | Test pattern generator and monitor on backplane.  |
| • TPG-L            | Test pattern generator on line side.  |
| • TPM-L            | Test pattern monitor on line side.  |
| • TPG-B            | Test pattern generator on backplane.  |
| • TPM-B            | Test pattern monitor on backplane.  |
| <BERTPATTERN>      | Specifies the error pattern to be injected for BERT.  |
| • NONE             | BERT pattern not enabled.   |
| • PRBS15           | PRBS15 test pattern.  |
| • PRBS20           | PRBS20 test pattern.  |
| • PRBS23           | PRBS23 test pattern.  |
| • QRSS             | QRSS test pattern.  |
| • ALT-ONE-ALT-ZERO | Alternate one and zero pattern.   |
| <BERTERRCOUNT>     | Integer value. Value -1 indicates that BERT is disabled/not supported.  |
| <PST>              | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • IS               | In service  |
| • OOS              | Out of service  |
| <SST>              | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
| • AINS             | Automatic in service  |
| • DSBLD            | Disabled  |
| • LPBK             | Loopback  |
| • MEA              | Mismatch of equipment and attributes  |

|        |                      |
|--------|----------------------|
| • MT   | Maintenance mode     |
| • OOG  | Out of group         |
| • SWDL | Software downloading |
| • UAS  | Unassigned           |
| • UEQ  | Unequipped           |

## 11.71 ED-T3

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Digital Signal Facility (ED-T3) command edits the attributes related to a DS3/T3 port and the DS3i-N-12 card.

### Usage Guidelines

- This command is not allowed if the card is a protect card.
- Neither FMT nor Line code are supported for T3/DS3 facility. They are supported on both the DS3XM and DS3E card. The unframed value of the framing format is only supported on the DS3E facility.
- If you send this command to edit TACC and any other attribute(s), and the port having the cross-connection or the port/VT has a TAP or TACC number, the Parameters Not Compatible error message is returned.
- Editing TACC using an ED-xxx command is only allowed when there is no circuit/cross-connection on the port and the port/VT does not have a TAP or TACC number. Otherwise, an error message (VT in Use) will be returned.
- TACC creation will be denied on the protect ports/cards.
- Automatic application of loopbacks originating from the far end can be initiated on the T3 ports of a DS3E, DS3NE, or DS3XM card.
- CTC can set the FMT attribute of a DS3(N)E line to AUTOPROVISION to set the framing based on the framing that is coming in. The result is the FMT field being blanked out for a few seconds or blanked out indefinitely for a preprovisioned DS3(N)E card in CTC. AUTOPROVISION is not considered a valid DS3 framing type. It is only used to trigger an autosense and subsequent autoprovisioning of a valid DS3 framing type (unframed, M13, C-BIT). TL1 does not have the AUTOPROVISION mode. TL1 maps/returns the AUTOPROVISION mode to the unframed framing type.
- For the DS3XM-12 card, the DS3/T3 configurable attributes (PM, TH, alarm, etc.) only apply on the ported ports (1 to 12) and the DS3-mapped (even) portless ports in xxx-xxx-T3 commands. If you attempt to provision or retrieve DS3/T3 attributes on the VT-mapped (odd) portless port in xxx-xxx-T3 commands, an error message is returned.
- For the DS3XM-12 card, if the administrative state is already set for a portless port, the state setting operation over its associated ported port is an invalid operation.
- The test set physical connection set up through ED-T3/DS1/STS1/VT1 of the DS3XM-12 card is only allowed on the physical front ports (PORTED ports, Ports 1 to 12), which are the monitoring ports.
  - The monitoring test access ports follow the common rules for the other cards. For example, ED-T3 on Port 2 (FAC-6-2) with a TACC number (8), the next port, Port 3 (FAC-6-3) is used as the monitoring point also. The RTRV-T3 on both Port 2 and Port 3 return the same TACC

- number (8) being used to monitor the cross-connection end (A-B). The last port (Port 12) is not allowed to set up a physical connection with the test set because there is no next available port to be the monitoring port.
- The DISC-TACC and CHG-TACC commands follow the same requirements as in the previous bullet, but applied on the ported ports of the DS3XM-12 card.
  - The CONN-TACC command has monitored points that can be portless ports. This command is applied on both ported and portless ports of the DS3XM-12 card.
- If the entity has a TACC connection, the entity is not allowed to have ported or portless STS/VT cross-connection (or circuit) provisioning on the DS3XM-12 card.
  - ED-T3 cannot be used to create TAPs on the DS3i-N-12 card on the SONET platform because the DS3I card only supports STS3C TAPs.
  - You cannot use this command to change the default provisioning on Slots 3 and 15 for the DS3/EC1-48 card.
  - The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to retrieve the current default values.
  - You cannot directly transition a facility from IS to OOS-MA,DSBLD service state. You can transition a facility to OOS-MA,DSBLD service state from any state except OOS-MA,MT. To transition a facility from OOS-MA,MT to OOS-MA,DSBLD service state, all the following conditions must be met:
    - The facility is not sourcing a synchronization clock.
    - The facility's DCC is disabled.
    - The facility is not part of a protection group.
    - The facility is not supporting cross-connects.
    - The facility is not using overhead connections or overhead terminations (such as express orderwire, local orderwire, or user data channels [UDCs]).

---

**Note** The conditions stipulated can be overridden by using the CMDMDE=FRCD option. The FRCD option will immediately remove the facility from service (except for IS to OOS-MA,DSBLD transition) with no consideration for orderly interruption.

---

- The parameters BERTMODE, BERTPATTERN, and BERTERRCOUNT apply to DS1/E1-56 and DS3XM-12 cards.
- BERT is implemented on a single port.

**Input Format**

```
ED-T3[:<TID>]:<AID>:<CTAG>[::<CLKSRC=<CLKSRC>],[FMT=<FMT>],[LINECDE=<LINECDE>],
[LBO=<LBO>],[INHFELPBK=<INHFELPBK>],[TACC=<TACC>],[TAPTYPE=<TAPTYPE>],[SOAK=<SOAK>],
[SFBER=<SFBER>],[SDBER=<SDBER>],[NAME=<NAME>],[AISONLPBK=<AISONLPBK>],[CMDMDE=<CMDMDE>],
[BERTMODE=<BERTMODE>],[BERTPATTERN=<BERTPATTERN>],[BERTERRCOUNT=<BERTERRCOUNT>][:<PST>[:<SST>]]];
```

**Input Example**

```
ED-T3:CISCO:FAC-1-2:123:::FMT=C-BIT,LINECDE=B3ZS,LBO=0-225,INHFELPBK=N,
TACC=8,TAPTYPE=SINGLE,SOAK=10,SFBER=1E-4,SDBER=1E-6,NAME="T3
PORT",AISONLPBK=ALL,CMDMDE=FRCD,BERTMODE=NONE,BERTPATTERN=NONE,
BERTERRCOUNT=0:IS,AINS;
```

**Input Parameters**

|                   |   |
|-------------------|---|
| <AID>             | Access identifier from the “26.17 FACILITY” section on page 26-42.  |
| <CLKSRC>          | <CLKSRC>  |
| • INTERNAL        | INTERNAL  |
| • LOOPBACK TIMING | LOOPBACK TIMING   |
| • SYNCE           | SYNCE   |
| • ADAPTIVE        | ADAPTIVE  |
| <FMT>             | Digital signal frame format. The parameter type is FRAME_FORMAT, which is the frame format for a T1 port. |
| • AUTOPROV        | AUTOPROV  |
| • CBIT            | C-BIT line type applies to the DS3XM and DS3E cards.  |
| • DS2 FRAMED      | DS2 FRAMED  |
| • E2 FRAMED       | E2 FRAMED   |
| • E3-FRAME        | E3-FRAME  |
| • E3-PLCP         | E3-PLCP   |
| • FRAMENA         | FRAMENA   |
| • G-751           | G-751   |
| • G-832           | G-832   |
| • M13             | M13 line type applies to the DS3XM and DS3E cards.  |
| • M23             | M23   |
| • SYNTRAN         | SYNTRAN   |
| • UNFRAMED        | Line type is unframed. The old DS3 (L3M) and DS3CR cards can only run in unframed mode.                   |
| <LINECDE>         | Line code. The parameter type is DS_LINE_CODE, which is the DS123 line code.                              |
| • B3ZS            | Bipolar with three-zero substitution  |
| • B6ZS            | B6ZS  |
| • JBZS            | JBZS  |
| • ZBTSI           | ZBTSI   |

|             |   |
|-------------|---|
| <LBO>       | Line build-out settings. LBO is an integer. The parameter type is E_LBO, which is the electrical signal line build-out.   |
| • 0–225     | Electrical signal line build-out range is 1–225.  |
| • 226–450   | Electrical signal line build-out range is 226–450.  |
| <INHFELPBK> | (Optional) Far-end loopback inhibition attribute of the port. If it is Y, the automatic far-end loopbacks are inhibited. It is either on or off. The system default is N. The parameter type is ON_OFF, which disables or enables an attribute. |
| • N         | Disable an attribute.   |
| • Y         | Enable an attribute.  |
| <TACC>      | TAP number within a range of 0 to 999. Indicates whether the digroup being provisioned is to be used as a test access digroup. When TACC is 0 (zero), the TAP is deleted. Default is N. TACC is an integer.                                     |
| <TAPTYPE>   | TAP type. Defaults to DUAL. The parameter type is TAPTYPE, which is the test access point type.   |
| • DUAL      | Dual FAD  |
| • SINGLE    | Single FAD  |
| <SOAK>      | OOS-AINS to IS transition soak time as measured in 15-minute intervals. A value of 4 equals a soak time of 1 hour. The allowable range is 0 to 192 intervals (maximum of 48 hours). SOAK is an integer.   |
| <SFBER>     | The port signal failure threshold. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.   |
| • 1E-3      | SFBER is 1E-3.  |
| • 1E-4      | SFBER is 1E-4.  |
| • 1E-5      | SFBER is 1E-5.  |
| <SDBER>     | Port signal degrade threshold. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.   |
| • 1E-5      | SDBER is 1E-5.  |
| • 1E-6      | SDBER is 1E-6.  |
| • 1E-7      | SDBER is 1E-7.  |
| • 1E-8      | SDBER is 1E-8.  |
| • 1E-9      | SDBER is 1E-9.  |
| <NAME>      | Name. NAME is a string.   |
| <AISONLPBK> | The parameter type is AIS_ON_LPBK, which indicates whether AIS is sent on a loopback. Defaults to AIS_ON_LPBK_ALL.  |
| • FACILITY  | AIS is sent on facility loopbacks.  |
| • ALL       | AIS is sent on all loopbacks.   |
| • OFF       | AIS is not sent on loopbacks.   |
| • TERMINAL  | AIS is sent on terminal loopbacks.  |

|                    |   |
|--------------------|---|
| <CMDMDE>           | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD             | Force the system to override a state where the command would normally be denied.  |
| • NORM             | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <BERTMODE>         | Specifies the mode TPG and TPM of the port for BERT.  |
| • NONE             | BERT mode not enabled.  |
| • TPGM-L           | Test pattern generator and monitor on line side.  |
| • TPGM-B           | Test pattern generator and monitor on backplane.  |
| • TPG-L            | Test pattern generator on line side.  |
| • TPM-L            | Test pattern monitor on line side.  |
| • TPG-B            | Test pattern generator on backplane.  |
| • TPM-B            | Test pattern monitor on backplane.  |
| <BERTPATTERN>      | Specifies the error pattern to be injected for BERT.  |
| • NONE             | BERT pattern not enabled.   |
| • PRBS15           | PRBS15 test pattern.  |
| • PRBS20           | PRBS20 test pattern.  |
| • PRBS23           | PRBS23 test pattern.  |
| • QRSS             | QRSS test pattern.  |
| • ALT-ONE-ALT-ZERO | Alternate one and zero pattern.   |
| <BERTERRCOUNT>     | Integer value. Value -1 indicates that BERT is disabled/not supported.  |
| PST                | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| • IS               | In service  |
| • OOS              | Out of service  |
| SST                | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
| • AINS             | Automatic in service  |
| • DSBLD            | Disabled  |
| • LPBK             | Loopback  |
| • MEA              | Mismatch of equipment and attributes  |
| • MT               | Maintenance mode  |
| • OOG              | Out of group  |
| • SWDL             | Software downloading  |
| • UAS              | Unassigned  |
| • UEQ              | Unequipped  |

## 11.72 ED-TRAPTABLE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Trap Table (ED-TRAPTABLE) command edits a trap destination entry identified by a specific trap destination address.

**Usage Guidelines** None

**Category** System

**Security** Provisioning

**Input Format** ED-TRAPTABLE:[<TID>]:<AID>:<CTAG>::COMMUNITY=<COMMUNITY>,  
[TRAPPORT=<TRAPPORT>],[TRAPVER=<TRAPVER>];

**Input Examples**

1. ED-TRAPTABLE::1.2.3.4:1::COMMUNITY="PUBLIC",TRAPPORT=162,TRAPVER=SNMPV1;
2. ED-TRAPTABLE:"[3ffe:0501:0008:0000:0260:97ff:fe40:efab]":1::COMMUNITY="PUBLIC",TRAPPORT=162,TRAPVER=SNMPV1;

|                         |             |   |
|-------------------------|-------------|---|
| <b>Input Parameters</b> | <AID>       | Access identifier from the <a href="#">“26.18 IPADDR”</a> section on page 26-45. IP address identifying the trap destination. |
|                         | <COMMUNITY> | Community name associated to the trap destination. Maximum of 32 characters. COMMUNITY is a string.                           |
|                         | <TRAPPORT>  | User datagram protocol (UDP) port number associated with the trap destination. Default to 162. TRAPPORT is an integer.        |
|                         | <TRAPVER>   | SNMP version number. Defaults to SNMPv1. The parameter type is SNMP_VERSION (SNMP version).                                   |
|                         | • SNMPV1    | SNMP version 1 (default)  |
|                         | • SNMPV2    | SNMP version 2  |

## 11.73 ED-TRC-OCH

(Cisco ONS 15454) The Edit Trace Optical Channel Facility (ED-TRC-OCH) command edits trace-related optical channel facilities. Refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TLI Reference Guide* for specific card provisioning rules.

**Usage Guidelines** None

**Category** DWDM

**Security** Provisioning

**Input Format** ED-TRC-OCH:[<TID>]:<SRC>:<CTAG>:::[EXPTRC=<EXPTRC>],[TRC=<TRC>],[TRCMODE=<TRCMODE>],[TRCLEVEL=<TRCLEVEL>],[TRCFORMAT=<TRCFORMAT>][:];

**Input Example** ED-TRC-OCH:PETALUMA:CHAN-6-2:10:::EXPTRC="AAA",TRC="AAA",TRCMODE=MAN,TRCLEVEL=TTI-PM,TRCFORMAT=64-BYTE;

|                         |   |   |
|-------------------------|---|---|
| <b>Input Parameters</b> | <SRC>   | Source access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23.   |
|                         | <EXPTRC>  | Expected path trace content. Indicates the expected path trace message (J1) contents. EXPTRC is any 64-character ASCII string, including the terminating CR (carriage return) and LF (line feed). A null value is equivalent to ALL. EXPTRC is a string.              |
|                         | <TRC>   | The path trace message to be transmitted. The trace byte continuously transmits a 64-byte, fixed-length, ASCII string, one byte at a time. A null value defaults to the NE transmitting 62 null characters (Hex 00) and CR and LF. A null value is equivalent to ALL. |
|                         | <TRCMODE>   | Trace mode. Defaults to the OFF mode. The parameter type is TRCMODE (trace mode).   |
|                         | <ul style="list-style-type: none"> <li>AUTO</li> </ul>        | Use the previously received path trace string as the expected string. Not applicable to MXP/TXP cards.  |
|                         | <ul style="list-style-type: none"> <li>AUTO-NO-AIS</li> </ul> | Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
|                         | <ul style="list-style-type: none"> <li>MAN</li> </ul>         | Use the provisioned expected string as the expected string.   |
|                         | <ul style="list-style-type: none"> <li>MAN-NO-AIS</li> </ul>  | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
|                         | <ul style="list-style-type: none"> <li>OFF</li> </ul>         | Turn off path trace capability. Nothing will be reported.   |
|                         | <TRCLEVEL>  | The trace level to be managed. TRCLEVEL is a string.<br><b>Note</b> This command is mandatory when editing the TRC parameters.  |
|                         | <ul style="list-style-type: none"> <li>J0</li> </ul>          | Identifies the SDH J0 section trace level.  |
|                         | <ul style="list-style-type: none"> <li>TTI-PM</li> </ul>      | Identifies the TTI path monitoring point.   |
|                         | <ul style="list-style-type: none"> <li>TTI-SM</li> </ul>      | Identifies the TTI section monitoring point.  |
|                         | <TRCFORMAT>   | Trace message size. The parameter type is TRCFORMAT (trace format).   |
|                         | <ul style="list-style-type: none"> <li>1-BYTE</li> </ul>      | 1 byte trace message  |
|                         | <ul style="list-style-type: none"> <li>16-BYTE</li> </ul>     | 16 byte trace message   |
|                         | <ul style="list-style-type: none"> <li>64-BYTE</li> </ul>     | 64 byte trace message   |

## 11.74 ED-TRC-OTU

(Cisco ONS 15454) The Edit Trace Optical Transport Unit Level 1, Level 2, Level 3, and Level 4 (ED-TRC-OTU1, ED-TRC-OTU2, ED-TRC-OTU3, and ED-TRC-OTU4) command edits trace-related attributes of an OTU1, OTU2, OTU3, and OTU4 facility respectively.

### Usage Guidelines

- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.
- In the CFP-TXP mode, trace is supported on the 100G-LC-C virtual ports (VCFAC) and not on the CFP-LC card.

### Category

DWDM

### Security

Provisioning

### Input Format

ED-TRC-<OTU>:[<TID>]:<SRC>:<CTAG>:::[EXPTRC=<EXPTRC>],[TRC=<TRC>],[TRCMODE=<TRCMODE>],[TRCLEVEL=<TRCLEVEL>],[TRCFORMAT=<TRCFORMAT>][:];

### Input Example

ED-TRC-OTU1:CISCO:VFAC-1-6-1:10:::EXPTRC="AAA",TRC="AAA",TRCMODE=MAN,TRCLEVEL=TTI-PM,TRCFORMAT=64-BYTE;

### Input Parameters

|               |   |
|---------------|---|
| <SRC>         | Source access identifier from the <a href="#">“26.17 FACILITY” section on page 26-42</a> .  |
| <EXPTRC>      | (Optional) Expected path trace content. Indicates the expected path trace message (J1) contents. EXPTRC is any 64-character ASCII string, including the terminating CR (carriage return) and LF (line feed). A null value is equivalent to ALL. EXPTRC is a string.             |
| <TRC>         | (Optional) The path trace message to be transmitted. The trace byte continuously transmits a 64 byte, fixed length ASCII string, one byte at a time. A null value defaults to the NE transmitting 62 null characters (Hex 00) and CR and LF. A null value is equivalent to ALL. |
| <TRCMODE>     | (Optional) Trace mode. Defaults to the OFF mode. A null value is equivalent to ALL. The parameter type is TRCMODE (trace mode).   |
| • AUTO        | Use the previously received path trace string as the expected string. Not applicable to MXP/TXP cards.  |
| • AUTO-NO-AIS | Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
| • MAN         | Use the provisioned expected string as the expected string.   |
| • MAN-NO-AIS  | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
| • OFF         | Turn off path trace capability. Nothing will be reported.   |

|             |  |
|-------------|--|
| <TRCLEVEL>  | The trace level to be managed. TRCLEVEL is a string.<br><b>Note</b> This command is mandatory when editing the TRC parameters. |
| • J0        | Identifies the SDH J0 section trace level.   |
| • TTI-PM    | Identifies the TTI path monitoring point.  |
| • TTI-SM    | Identifies the TTI section monitoring point.   |
| <TRCFORMAT> | (Optional) Trace message size. A null value is equivalent to ALL. The parameter type is TRCFORMAT (trace format).              |
| • 1-BYTE    | 1-byte trace message   |
| • 16-BYTE   | 16-byte trace message  |
| • 64-BYTE   | 64-byte trace message  |

## 11.75 ED-UNICFG

(Cisco ONS 15454, Cisco ONS 15454 M2, Cisco ONS 15454 M6) The Edit User Network Interface Configuration command edits the attributes and service parameters of UNI configuration created.

### Usage Guidelines

- With the VALMODE parameter value as NONE, the VALZONE parameter is not applicable.
- RESTTYPE as REVERT is not applicable for UNICFG.

### Category

DWDM

### Security

Provisioning

### Input Format

ED-UNICFG:[<TID>]:<SRC>:<CTAG>:::[VALMODE=<OPTVAL>],[VALZONE=<OPRZONE>],[DESCR=<DESCR>],[ADMINSTATE=<ADMINSTATE>],[RESTTYPE=<RESTTYPE>];

### Input Example

ED-UNICFG::LINE-2-3:1::DESCR="CISCO",ADMINSTATE=DOWN;

**Table 11-4** Parameter Support

| Parameter | Description  |
|-----------|--|
| <SRC>     | Source AID from the <a href="#">“26.1 ALL” section on page 26-1</a> .  |
| <VALMODE> | Identifies the validation mode.  |
| • NONE    | No optical validation is performed.                                    |
| • FULL    | The optical validation is performed as indicated in VALZONE parameter. |
| <VALZONE> | Identifies the validation operate zone.                                |
| • UNKNOWN | Not evaluated.   |
| • GREEN   | Margin > 3 sigma.  |

Table 11-4 Parameter Support

| Parameter    | Description  |
|--------------|--|
| • YELLOW     | 1 < margin < 3 sigma.  |
| • ORANGE     | 0 < margin < 1 sigma.  |
| • RED        | -3 < margin < 0 sigma.   |
| • OUT        | Margin < -3 sigma.   |
| <DESC>       | Description parameter. DECSR is a STRING.                          |
| <ADMINSTATE> | Identifies the adminstate is UP or DOWN.                           |
| • UP         | Indicates Adminstate is UP and UNI Services can be activated.      |
| • DOWN       | Indicates Adminstate is DOWN and UNI Services cannot be activated. |
| <RESTTYPE>   | Identifies the restoration type on UNI configuration.              |
| • NONE       | None restoration type for UNICFG.                                  |
| • RESTORE    | Restore restoration type for UNICFG.                               |

## 11.76 ED-USER-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit User Security (ED-USER-SECU) command edits a user's privileges, password, or ID. Only a Superuser can perform this operation. Privilege levels are described in the ENT-USER-SECU command.

### Usage Guidelines

- Passwords are masked for the following security commands: ACT-USER, ED-PID, ENT-USER-SECU, and ED-USER-SECU. Access to a TL1 session by any means will have the password masked. The CTC Request History and Message Log will also show the masked commands. When a password-masked command is reissued by double-clicking the command from CTC Request History, the password will still be masked in the CTC Request History and Message Log. The actual password that was previously issued will be sent to the NE. To use a former command as a template only, single-click the command in CTC Request History. The command will be placed in the Command Request text box, where you can edit the appropriate fields prior to reissuing it.
- <NEWUID> can be set to a minimum length of 2 characters up to 20 characters long.
- <NEWPID> depends on the minimum password length, maximum password length, and password character rule that is set by SET-ATTR-SECUDFLT command.
- For the ED-USER-SECU command:  
ED-USER-SECU:[TID]:<UID>:[CTAG]:[:<NEWUID>],[<NEWPID>],[<UAP>]:;  
  - If the <NEWPID> is specified, the syntax is checked.
  - The syntax of <UID> is not checked.
  - Old users can change their password without changing their user ID, but the new password must meet the new requirements.
  - The <NEWPID> is required when changing the <UID>.
- When <NEWUID> is specified, <NEWPID> (and the <UAP>) become mandatory.

- The ED-USER-SECU command should be used to change the default password for the CISCO15 default Superuser.
- The ED-PID command cannot be used to change the empty password to a valid password.

**Category**

Security

**Security**

Superuser

**Input Format**

ED-USER-SECU:[&lt;TID&gt;]:&lt;UID&gt;:&lt;CTAG&gt;::[&lt;NEWUID&gt;],[&lt;NEWPID&gt;],[&lt;UAP&gt;][:];

**Input Example**

ED-USER-SECU:PETALUMA:CISCO15:123::NEWUID,NEWPID,,MAINT;

**Input Parameters**

|             |  |
|-------------|--|
| <UID>       | User identifier. Minimum UID is 6 characters. Maximum UID is 10 characters. UID is a string.   |
| <NEWUID>    | (Optional) User's new Identifier. Minimum UID is 2 characters . Maximum UID is 20 characters. NEWUID is a string.  |
| <NEWPID>    | (Optional) User's new password. Minimum length depends on PWDMINLEN, maximum length depends on PWDMAXLEN, and password character rule depends on PWDCHRULE set by command SET-ATTR-SECUDFLT. |
| <UAP>       | User's access privilege. The parameter type is PRIVILEGE, which is the security level.   |
| • MAINT     | Maintenance security level. 60 minutes of idle time.   |
| • PROV      | Provisioning security level. 30 minutes of idle time.  |
| • RTRV      | Retrieve security level. Unlimited idle time.  |
| • SUPER     | Superuser security level. 15 minutes of idle time.   |
| • ROOT_USER | Root user.   |
| • SEC_SUPER | Security super user.   |
| • SEC_USER  | Security user.   |

## 11.77 ED-VCG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Edit Virtual Concatenated Group (ED-VCG) command edits the attributes of a VCG.

**Usage Guidelines**

None

**Category**

VCAT

**Security** Provisioning

**Input Format** ED-VCG:[<TID>]:<SRC>:<CTAG>:::[TXCOUNT=<TXCOUNT>],[NAME=<NAME>];

**Input Example** ED-VCG:NODE1:FAC-1-1:1234:::TXCOUNT=7,NAME="VCG2";

|                         |           |  |
|-------------------------|-----------|--|
| <b>Input Parameters</b> | <SRC>     | Source access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
|                         | <TXCOUNT> | Number of members in the transmit (Tx) direction. For ML1000-2 and ML100T-12 cards, the only valid value is 2. For the FC_MR-4 card, the only valid value is 8. TXCOUNT is an integer. |
|                         | <NAME>    | Name of the VCAT group. Maximum length is 64 characters. NAME is a string.   |

## 11.78 ED-VLAN

(Cisco ONS 15454) The Edit VLAN (ED-VLAN) command modifies a VLAN entry in the VLAN database. The VLAN database is a collection of VLANs used in an NE.

**Usage Guidelines** A VLAN having the specified AID should be present in the node.

**Category** Ethernet

**Security** Provisioning

**Input Format** ED-VLAN:[<TID>]:<AID>:<CTAG>[:::NAME=<NAME>],[PROTN=<PROTN>],[MACLEARNING=<MACLEARNING>],[IGMPENABLE=<IGMPENABLE>],[IGMPFASTLEAVE=<IGMPFASTLEAVE>],[IGMPSUPP=<IGMPSUPP>][:];

**Input Example** ED-VLAN:PETALUMA:VLAN-4096:1:::NAME="MYVLAN",PROTN=N,MACLEARNING=Y,IGMPENABLE=Y,IGMPFASTLEAVE=Y,IGMPSUPP=Y;

|                         |          |                                 |
|-------------------------|----------|---------------------------------|
| <b>Input Parameters</b> | <AID>    | AID is used to access the VLAN. |
|                         | VLAN-ALL | All AIDs for the VLAN.          |

|                 |   |
|-----------------|---|
| VLAN-{0-4096}   | Single AID for the VLAN. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.                     |
| <NAME>          | Indicates the name of the VLAN.   |
| <PROTN>         | Indicates the VLAN protection, enable or disable feature  |
| <MACLEARNING>   | MAC Address Learning Mode. This activates the MAC address learning on interface to avoid packet broadcasting. Default value is - "N"                                  |
| • Y             | Activate the MAC learning.  |
| • N             | Disable MAC learning.   |
| <IGMPENABLE>    | Internet Group Management Protocol status.  |
| • Y             | Enabled   |
| • N             | Disabled  |
| <IGMPFASTLEAVE> | Internet Group Management Protocol FastLeave status. When enabled, decreases the delay between receiving a Leave Group packet and disabling forwarding of multicast   |
| • Y             | Enabled   |
| • N             | Disabled  |
| <IGMPSUPP>      | IGMP Report suppression. Indicates multicast registered client hiding. When enabled (default) it prevents duplicate reports from being sent to the multicast devices. |
| • Y             | Enabled   |
| • N             | Disabled  |

## 11.79 ED-VLAN-ETH

(Cisco 15454)

Edit VLAN ETH attributes command is used to modify the VLAN Profile associated to the L2 Ethernet ports - VLAN.

### Usage Guidelines

The default values for all optional parameters are NE default values. These values may not be the current value for a parameter. In order to obtain the current value, a user needs to use RTRV-XX command to retrieve them.

If the AID is invalid, an IIAC (Invalid AID) error message is returned.

The "ALL" AID is invalid for this command.

The L2 ethernet port must be present when this command is sent. The S-VLAN-ID must not be absent otherwise this command will fail.

If BWP is omitted the first time this command is performed, the default BWP-0 is assumed

Use BWP=0 to restore the Default VLAN Profile

### Category

ETHERNET

**Security** Provisioning

**Input Format** ED-VLAN-ETH[:<TID>]:<AID>:<CTAG>::[VLAN\_ID=<VLAN\_ID>],[VLAN\_TYPE=<VLAN\_TY  
PE>],[BWP=<BWP>][:];

**Input Example** ED-VLAN-ETH::ETH-1-1-1:1::1010:BWP=34;

| Input Parameters  | Description   |
|---|---|
| <AID>   | Ethernet aids are used to access L2 Ethernet ports.   |
| <ul style="list-style-type: none"> <li>ALL</li> </ul>                               | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands.   |
| <ul style="list-style-type: none"> <li>ETH[-{1-50}]-{1-5,12-16}-{1-22}-1</li> </ul> | Facility aid for GE-XP card.  |
| <ul style="list-style-type: none"> <li>ETH[-{1-50}]-{1-6,12-17}-{1-4}-1</li> </ul>  | Facility aid for 10GE-XP card.  |
| <VLAN_ID>   | The VLAN identifier. A VLAN ID is a number in the range 1..4096. The value of 0 is reserved to UNTAGged VLAN.   |
| VLAN_TYPE   | Specifies the type of VLAN.   |
| <ul style="list-style-type: none"> <li>SVLAN</li> <li>CVLAN</li> </ul>              | Service provider VLAN.<br>Customer VLAN.  |
| <BWP>   | The BWP identifier. A BWP ID is a number in the range 0..10000. The value of 0 is reserved for the default profile that cannot be edited or delete. Default value is 0. |

## 11.80 ED-VLB-REP

(Cisco ONS 15454) The Edit VLAN Load Balancing Resilient Ethernet Protocol (ED-VLB-REP) command edits the VLAN Load Balancing (VLB) for REP Segment on the ethernet ports.

### Usage Guidelines

- VLB can be enabled only on the EDGE Primary ports of the REP Segment.
- If the VLB is not enabled, you cannot edit any other parameters related to STCN.
- Only one VLAN range can be added or removed at a time
- A maximum of 10 VLAN range can be configured on the ethernet edge port.
- This command is applicable only to GE\_XP and 10GE\_XP cards.

**Category** Ethernet

**Security** Provisioning

**Input Format**

```
ED-VLB-REP:[<TID>]:<AID>:<CTAG>:::[VLBENABLED=<VLBENABLED>],[VLBOPERATION
=<VLBOPERATION>],[VLANRANGESTART=<VLANRANGESTART>],[VLANRANGEEND=<V
LANRANGEEND>],[PREFERRED=<PREFERRED>],[REPPORTID=<REPPORTID>];
```

**Input Example**

```
ED-VLB-REP::ETH-16-2-1:1:::VLBENABLED=Y,VLBOPERATION=ADD,VLANRANGESTART=
1000,VLANRANGEEND=1001,PREFERRED=N,REPPORTID=0X0134454345678598;
```

**Input Parameters**

| Input Parameters  | Description   |
|---|---|
| <AID>   | Access identifier from the “26.17 FACILITY” section on page 26-42.  |
| <VLBENABLED>  | Enables or disables the segment topology notification on ethernet entity for REP.   |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>        | <ul style="list-style-type: none"> <li>Enables STCN on the ethernet port.</li> <li>Disables STCN on the ethernet port.</li> </ul>   |
| <VLBOPERATION>  | Adds or removes the range for STCN notification.  |
| <ul style="list-style-type: none"> <li>ADD</li> <li>REMOVE</li> </ul> | <ul style="list-style-type: none"> <li>Adds the range to a list of segment ranges for STCN notification.</li> <li>Removes the range from a list of segment ranges for STCN notification.</li> </ul> |
| <VLANRANGESTART>  | Indicates the VLAN range start value for VLB on REP. The valid range is 0 to 1024.  |
| <VLANRANGEEND>  | Indicates the VLAN range end value for VLB on REP. The valid range is from 0 to 1024.   |
| <PREFERRED>   | Indicates that the port is the preferred alternate port. Or the preferred port for VLAN load balancing.   |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>        | <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>   |
| <REPPORTID>   | Determines the REP port to trigger VLB.   |

## 11.81 ED-WDMANS

(Cisco ONS 15454) The Edit Wavelength Division Multiplexing Automatic Node Set Up (ED-WDMANS) command edits the optical node set-up application (AONS) attributes.

**Usage Guidelines**

None

**Category**

DWDM

**Security**

Maintenance

**Input Format**

```
ED-WDMANS:[<TID>]:<AID>:<CTAG>::[<WLEN>]:[VOAATTN=<VOAATTN>],[POWEROSC=<POWEROSC>],[NTWTYPE=<NTWTYPE>],[CHLOSS=<CHLOSS>],[GAIN=<GAIN>],[TILT=<TILT>],[CHPWR=<CHPWR>],[AMPLMODE=<AMPLMODE>],[RATIO=<RATIO>],[OSCCLOSS=<OSCCLOSS>],[DITHER=<DITHER>],[TOTALPWR=<TOTALPWR>],[HIGHSLVEXP=<HIGHSLVEXP>],[LOWSLVEXP=<LOWSLVEXP>][:];
```

**Input Example**

```
ED-WDMANS:PENNGROVE:WDMSIDE-A:114:::POWERIN=10.0,POWEROUT=10.0,POWEREXP=10.0;
```

```
ED-WDMANS:PENNGROVE:WDMSIDE-A:114:::POWERIN=10.0,POWEROUT=10.0,POWEREXP=10.0,POWEROSC=5.0;
```

```
ED-WDMANS::LINE-1-3-1-RX:77:::CHLOSS=-11.00;
```

**Input Parameters**

|           |   |
|-----------|---|
| <AID>     | The AID is used to access the WDM node or a single port of the DWDM node.                     |
| • WDMNODE | Indicates the WDM node of an MSTP and accesses the NTWTYPE and DITHER WDMANS node parameters. |
| • LINE    | The optical transport section port.   |
| • BAND    | The optical multiplex section port.   |
| • CHAN    | The optical channel port.   |
| <WLEN>    | (Optional) The parameter type is OPTICAL_WLEN, which indicates the optical wavelength.        |
| • 1310    | Wavelength 1310   |
| • 1470    | Wavelength 1470   |
| • 1490    | Wavelength 1490   |
| • 1510    | Wavelength 1510   |
| • 1528.77 | Wavelength 1528.77  |
| • 1529.16 | Wavelength 1529.16  |
| • 1529.55 | Wavelength 1529.55  |
| • 1529.94 | Wavelength 1529.94  |
| • 1530    | Wavelength 1530   |
| • 1530.33 | Wavelength 1530.33  |
| • 1530.73 | Wavelength 1530.73  |
| • 1531.12 | Wavelength 1531.12  |
| • 1531.51 | Wavelength 1531.51  |
| • 1531.90 | Wavelength 1531.90  |
| • 1532.29 | Wavelength 1532.29  |
| • 1532.68 | Wavelength 1532.68  |
| • 1533.07 | Wavelength 1533.07  |
| • 1533.47 | Wavelength 1533.47  |
| • 1533.86 | Wavelength 1533.86  |
| • 1534.25 | Wavelength 1534.25  |
| • 1534.64 | Wavelength 1534.64  |

|           |                    |
|-----------|--------------------|
| • 1535.04 | Wavelength 1535.04 |
| • 1535.43 | Wavelength 1535.43 |
| • 1535.82 | Wavelength 1535.82 |
| • 1536.22 | Wavelength 1536.22 |
| • 1536.61 | Wavelength 1536.61 |
| • 1537    | Wavelength 1537    |
| • 1537.40 | Wavelength 1537.40 |
| • 1537.79 | Wavelength 1537.79 |
| • 1538.19 | Wavelength 1538.19 |
| • 1538.58 | Wavelength 1538.58 |
| • 1538.98 | Wavelength 1538.98 |
| • 1539.37 | Wavelength 1539.37 |
| • 1539.77 | Wavelength 1539.77 |
| • 1540.16 | Wavelength 1540.16 |
| • 1540.56 | Wavelength 1540.56 |
| • 1540.95 | Wavelength 1540.95 |
| • 1541.35 | Wavelength 1541.35 |
| • 1541.75 | Wavelength 1541.75 |
| • 1542.14 | Wavelength 1542.14 |
| • 1542.35 | Wavelength 1542.35 |
| • 1542.54 | Wavelength 1542.54 |
| • 1542.94 | Wavelength 1542.94 |
| • 1543.33 | Wavelength 1543.33 |
| • 1543.73 | Wavelength 1543.73 |
| • 1544.13 | Wavelength 1544.13 |
| • 1544.53 | Wavelength 1544.53 |

| • 1604.03 | Wavelength 1604.03   |
| • 1610    | Wavelength 1610  |
| <VOAATTN> | The value of calibrated attenuation for the VOA expressed in dBm. The range is 0.0 to +30.0. VOAATTN is a float. |

|              |   |
|--------------|---|
| <POWEROSC>   | WDM-ANS OSC power parameter.                  |
| <NTWTYPE>    | WDM-ANS network type parameter.               |
| <CHLOSS>     | WDM-ANS channel loss parameter.               |
| <GAIN>       | WDM-ANS amplifier gain parameter.             |
| <TILT>       | WDM-ANS amplifier tilt parameter.             |
| <CHPWR>      | WDM-ANS channel power parameter.              |
| <AMPLMODE>   | WDM-ANS amplifier mode parameter.             |
| <RATIO>      | WDM-ANS Raman amplifier pump ratio parameter. |
| <OSCLOSS>    | WDM-ANS OSC channel loss parameter.           |
| <DITHER>     | WDM-ANS WXC dithering parameter.              |
| <TOTALPWR>   | WDM-ANS Raman amplifier total power in mW.    |
| <HIGHSLVEXP> | Span loss verification—high value.            |
| <LOWSLVEXP>  | Span loss verification—low value.             |

## 11.82 ED-WDMSIDE

(Cisco ONS 15454) The Edit Wavelength Division Multiplexing Side (ED-WDMSIDE) command modifies the WDM node side attribute.

### Usage Guidelines

- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

### Category

DWDM

### Security

Maintenance

### Input Format

ED-WDMSIDE:[<TID>]:<AID>:<CTAG>:::[NEWSIDE=<NEWSIDE>][:];

### Input Example

ED-WDMSIDE:PENNGROVE:WDMSIDE-A:114:::NEWSIDE=WDMSIDE-B;

### Input Parameters

|                             |   |
|-----------------------------|---|
| <AID>                       | The AID is used to access the WDM side of an MSTP node. |
| • WDMSIDE-{A,B,C,D,E,F,G,H} | MSTP side identifier.                                   |
| <NEWSIDE>                   | The AID is used to access the WDM side of an MSTP node. |
| • WDMSIDE-{A,B,C,D,E,F,G,H} | MSTP side identifier.                                   |

## ENT Commands

### Note

The terms "Unidirectional Path Switched Ring" and "UPSR" may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as "Path Protected Mesh Network" and "PPMN," refer generally to Cisco's path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

This chapter provides enter (ENT) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 12.1 ENT-<MOD1PAYLOAD>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 4GFC, 2GFICON, 5GIB, 8GFC, CHGRP, D1VIDEO, DV6000, DVBASI, EC1, ESCON, ETRCLO, FSTE, GIGE, HDTV, ISC1, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC-12, OC-192, OC-3, OC-48, OC768, OTU1, OTU2, OTU3, OTU4, or T3 (ENT-<MOD1PAYLOAD> command creates a specified port.

### Usage Guidelines

- Supports 3GVIDEO, SDSDI , HSDSI, ISC3STP1G, ISC3STP2G modifiers.
- When 1GFICON and 2GFICON payloads are provisioned, distance extension=B2B is the default and only valid setting. Setting distance extension (using ED-1GFICON or ED-2GFICON) to any other setting will be denied with the error message "Provisioning Rules Failed."
- Support is limited to ports with pluggable port modules (PPMs) and any operating mode.
- When creating an operating mode for payloads, the trunk ports are auto provisioned.
- See [Table 28-1 on page 28-1](#) for supported modifiers by platform.
- NUMOFLANES is the new parameter added for ENT-<MOD1PAYLOAD> command. This parameter is applicable for payload provisioning on CFP-LC card only. The possible values are 1 and 4. Depending on the values mentioned, the card provisions 1 or 4 number of sublanes for CFP ports.

- No payloads can be provisioned in RGN-100G opmode between two 100G-LC-C Cards.

**Category**

Ports

**Security**

Provisioning

**Input Format**

ENT-&lt;MOD1PAYLOAD&gt;:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;[:::NUMOFLANES=&lt;NUMOFLANES&gt;:];

**Input Example**

ENT-GIGE:TID:FAC-5-1:1;

ENT-HDSDI:ROCCIANERA:VFAC-1-3-2-1:1;

ENT-100GIGE::VFAC-5-1-1:1:::NUMOFLANES=4;

**Input Parameters**

|                           |  |
|---------------------------|--|
| <b>&lt;AID&gt;</b>        | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID. |
| <b>&lt;NUMOFLANES&gt;</b> | Identifies the type of pluggable provisioned on the CFP-LC card based on number of lanes provisioned. The value can be 1 or 4.       |

## 12.2 ENT-<MOD\_RING>

(Cisco ONS 15454) The Enter Bidirectional Line Switched Ring (ENT-<MOD\_RING>) command creates either a two-fiber or four-fiber BLSR.

**Usage Guidelines**

The command parameters that are used vary depending on whether a two-fiber or four-fiber BLSR is being created.

Here is an example of a command to create a four-fiber BLSR:

```
ENT-BLSR:TID:BLSR-N02ABC:CTAG:::RINGID=N02ABC,NODEID=3,MODE=4F,RVRTV=Y,
RVTM=5.0,SRVRTV=Y,SRVTM=5.0,EASTWORK=FAC-5-1,WESTWORK=FAC-6-1,
EASTPROT=FAC-12-1,WESTPROT=FAC-13-1;
```

Here is an example of a command to create a two-fiber BLSR:

```
ENT-BLSR:TID:BLSR-N04EFG:CTAG:::RINGID=N04EFG,NODEID=6,MODE=2F,RVRTV=Y,
RVTM=5.0,EASTWORK=FAC-5-1,WESTWORK=FAC-6-1;
```

The following actions will produce error messages:

- If RINGID is different from the string presented in the AID format, an IIAC (RingId Does Not Match With AID) error message is returned.
- Sending this command to create a BLSR with an out-of-range node ID or ring ID will return an IIAC (Invalid NodeId) or (Invalid RingId) error message.

- Sending this command to create a four-fiber BLSR on OC-12 cards, or a two-fiber BLSR on OC-3 cards will return an IIAC (Input, Invalid Work/Prot Port) error message.
- Sending this command to create a BLSR on a network element (NE) that already has five BLSRs will return a SRQN (BLSR Creation Failed) error message because only one NE can support up to five BLSRs.
- Sending this command to create a BLSR on a port with 1+1 protection will return a SRQN (BLSR Creation Failed) error message.
- If the system fails while accessing the IOR, an SROF (Get IOR Failed) error message is returned.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- If any facility requested in this command is in use, a SPLD (Facility is Busy) error message is returned.
- The SRQN (BLSR Creation Failed) error message is returned for an invalid creation query.
- Sending this command to provision the mode with an invalid BLSR mode will return an IIDT (Invalid BLSR Mode) error message.
- Sending this command to modify SRVRTV or SRVTM on the two-fiber BLSR will return an IDNV (Invalid Data for 2F-BLSR) error message.
- Sending this command to provision the node ID with invalid data will return an IIAC (Invalid NodeId) error message.
- Sending this command to provision the ring ID with invalid data will return an IIAC (Invalid RingId) error message.
- Sending this command with an invalid working AID will return an IIDT (Invalid BLSR Working Facility) error message.
- Sending this command with an invalid protection AID will return an IIDT (Invalid BLSR Protect Facility) error message.
- Changing the BLSR node ID with a duplicated ID will return an SROF (Cannot Set NodeId) error message.

**Note**

---

Both <EASTPROT> and <WESTPROT> are optional, but required for 4-fiber BLSR creation.

---

**Note**

---

The ALL AID is invalid for this command.

---

**Category**

BLSR

**Security**

Provisioning

**Input Format**

```
ENT-<MOD_RING>:[<TID>]:<AID>:<CTAG>:::[RINGID=<RINGID>],NODEID=<NODEID>,
MODE=<MODE>,[RVRTV=<RVRTV>],[RVTM=<RVTM>],[SRVRTV=<SRVRTV>],
[SRVTM=<SRVTM>],EASTWORK=<EASTWORK>,WESTWORK=<WESTWORK>,
[EASTPROT=<EASTPROT>],[WESTPROT=<WESTPROT>];
```

**Input Example**

Four-fiber BLSR:

```
ENT-BLSR:PETALUMA:BLSR-2:123:::RINGID=2,NODEID=1,MODE=4F,
RVRTV=Y,RVTM=5.0,SRVRTV=Y,SRVTM=5.0,EASTWORK=FAC-5-1,WESTWORK=FAC-6-1,
EASTPROT=FAC-12-1,WESTPROT=FAC-13-1;
```

Two-fiber BLSR:

```
ENT-BLSR:PETALUMA:BLSR-2:123::RINGID=2,NODEID=1,MODE=2F,RVRTV=Y,
RVTM=5.0,EASTWORK=FAC-5-1,WESTWORK=FAC-6-1;
```

**Input Parameters**

|  |  |
|--|--|
| <AID>  | Access identifier from the <a href="#">“26.3 AidUnionId1”</a> section on page 26-21. Identifies the BLSR of the NE. ALL or BLSR-ALL AIDs are not allowed for editing the BLSR. This command only supports a single BLSR AID.   |
| <RINGID>   | (Optional) The BLSR ID of the NE up to six characters. Valid characters are A-Z and 0-9. RINGID is a string. The parameter defaults to the text in the AID that follows the “BLSR-”.   |
| <NODEID>   | The BLSR node ID of the NE. NODEID ranges from 0 to 31. NODEID is an integer.  |
| <MODE>   | Mode with which the command is to be implemented. Identifies the BLSR mode. The parameter type is BLSR_MODE (BLSR mode).   |
| <ul style="list-style-type: none"> <li>• 2F</li> <li>• 4F</li> </ul> | <ul style="list-style-type: none"> <li>Two-fiber BLSR</li> <li>Four-fiber BLSR</li> </ul>  |
| <RVRTV>  | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>   | <ul style="list-style-type: none"> <li>Does not revert service to original line after restoration.</li> <li>Reverts service to original line after restoration.</li> </ul>   |
| <RVTM>   | (Optional) Revertive time. Defaults to 5.0. The parameter type is REVERTIVE_TIME (revertive time).   |
| <ul style="list-style-type: none"> <li>• 0.5 to 12.0</li> </ul>      | (Optional) Revertive time is 0.5 to 12.0 minutes.  |
| <SRVRTV>   | The span revertive mode for four-fiber BLSR only. Defaults to Y. The parameter type is ON_OFF (disable or enable an attribute)   |
| <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>   | <ul style="list-style-type: none"> <li>Disable an attribute.</li> <li>Enable an attribute.</li> </ul>  |
| <SRVTM>  | (Optional) The span revertive time for four-fiber BLSR only. Defaults to 5.0. The parameter type is REVERTIVE_TIME (revertive time).   |
| <ul style="list-style-type: none"> <li>• 0.5 to 12.0</li> </ul>      | Revertive time is 0.5 to 12.0 minutes.   |
| <EASTWORK>   | East working facility. AID from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
| <WESTWORK>   | West working facility. AID from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |

|            |  |
|------------|--|
| <EASTPROT> | (Optional) East protect facility. AID from the “26.17 FACILITY” section on page 26-42. |
| <WESTPROT> | (Optional) West protect facility. AID from the “26.17 FACILITY” section on page 26-42. |

## 12.3 ENT-ALMTYPE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Alarm Type (ENT-ALMTYPE) command enters user-defined alarm types on the fly for environmental inputs. In addition to the system-defined alarm types, this command supports up to 50 new user-defined alarm types.

### Usage Guidelines

ALMTYPE must not contain blank spaces or special characters other than the hyphen (-). The maximum ALMTYPE length allowed is 20 characters.

Entering of duplicate alarm types is not allowed. System-defined alarm types cannot be replicated as user-defined alarm type.

### Category

System

### Security

Provisioning

### Input Format

ENT-ALMTYPE:[<TID>]::<CTAG>::<ALMTYPE>;

### Input Example

ENT-ALMTYPE:::1::USERDEFINEDALARM;

### Input Parameters

|           |   |
|-----------|---|
| <ALMTYPE> | Specifies user-defined alarm types associated with virtual wires in environmental alarm inputs. |
|-----------|---|

## 12.4 ENT-AUTO

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) This command creates an AUTO port.

### Usage Guidelines

Requires ports with PPMs and any operating mode on that port.

Supports OC3, OC12, OC48, and 1GE line rates based on incoming traffic when auto sense is enabled. Default line rate is OC48.

### Category

Ports

|                     |                                |
|---------------------|--------------------------------|
| <b>Security</b>     | Provisioning                   |
| <b>Input Format</b> | ENT-AUTO:[<TID>]:<AID>:<CTAG>; |

**Input Example** ENT-AUTO::VFAC-1-3-2-1:1;

**Input Parameters** <AID> AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID.

## 12.5 ENT-AWCFG

(Cisco ONS 15454, Cisco ONS 15454 M2, Cisco ONS 15454 M6) The Enter Alien Wavelength Configuration (ENT-AWCFG) creates alien wavelength configuration.

**Usage Guidelines** None

**Category** DWDM

**Security** Provisioning

**Input Format** ENT-AWCFG:[<TID>]:<SRC>:<CTAG>:::<ALIENID=ALIENID>,[FECMODE=<FECMOD>],[.];

**Input Example** ENT-AWCFG::PCHAN-1-35-TX:1:::ALIENID=CRS-1 40G-DPSK-ITU-T LC,FECMODE=OFF;

**Table 12-1** Parameter Support

| Parameter | Description   |
|-----------|---|
| <AID>     | AID from the “26.1 ALL” section on page 26-1.                           |
| <ALIENID> | Indicates the operating mode for alien wavelength. ALIENID is a STRING. |
| <FECMODE> | Specifies the FEC mode for alien wavelength.                            |
| • ENH     | Enhanced FEC is enabled.  |
| • ENH-I4  | Enhanced FEC 1.4 is enabled.  |
| • ENH-I7  | Enhanced FEC 1.7 is enabled.  |
| • HG-7    | 7% High Gain FEC is enabled.  |
| • HG-20   | 20% High Gain FEC is enabled.   |

Table 12-1 Parameter Support

| Parameter | Description              |
|-----------|--------------------------|
| • OFF     | FEC is disabled.         |
| • STD     | Standard FEC is enabled. |

## 12.6 ENT-BULKROLL-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Bulk Roll for OC-12, OC-192, OC-3, OC-48, or OC768 (ENT-BULKROLL-<OCN\_TYPE>) command enters information about rolling traffic from one end point to another without interrupting service. This command can be used for line-level rolling and bulk rolling and cannot be used for single-path-level rolling.

**Usage Guidelines** None

**Category** Bridge and Roll

**Security** Provisioning

**Input Format** ENT-BULKROLL-<MOD\_PATH>:[<TID>]:<FROM>:<CTAG>:::RTOSTART=<RTOSTART>,[RFROMSTART=<RFROMSTART>],[RFROMEND=<RFROMEND>],[RMODE=<RMODE>],[CMDMDE=<CMDMDE>];

**Input Example** ENT-BULKROLL-OC-48:CISCO:FAC-5-1:123:::RTOSTART=STS-6-1-1,  
RFROMSTART=STS-5-1-1,RFROMEND=STS-5-1-4,RMODE=AUTO,CMDMDE=FRCD;

| Input Parameters |   |
|------------------|---|
| <FROM>           | One of the endpoints. Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42 for line-level rolling and bulk rolling.  |
| <RTOSTART>       | The starting time slot in the destination roll port. Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42 (synchronous transport signal [STS] or Virtual Tributary [VT]).<br><b>Note</b> For bulk rolling only   |
| <RFROMSTART>     | The starting time slot in the source roll port. Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42 (STS or VT). Defaults to STS-<FROMSLOT>-<FROMPORT>-1, where <FROMSLOT> and <FROMPORT> are the slot and port of the <FROM> AID.<br><b>Note</b> For bulk rolling only |

|            |   |
|------------|---|
| <RFROMEND> | The ending time slot in the source roll port. Access identifier from the “26.17 FACILITY” section on page 26-42 (STS and VT). Defaults to STS-<FROMSLOT>-<FROMPORT>-N, where <FROMSLOT> and <FROMPORT> are the slot and port of the <FROM> AID and N is the value of OCn (for example, with OC-48, n=48).                           |
|            | <b>Note</b> For bulk rolling only   |
| <RMODE>    | Indicates the mode of the rolling operation. The parameter type is RMODE (roll mode).   |
| • AUTO     | Automatic. When a valid signal is available, the roll with an AUTO mode will automatically delete the previous end-point.   |
| • MAN      | Manual. Enter the corresponding delete roll/bulkroll command to delete the previous end-point.  |
| <CMDMDE>   | Command execution mode. Defaults to NORM. The parameter type is CMDMDE, which forces the system to execute a given command regardless of any standing conditions. Normal mode is the default behavior for all commands but you can specify FRCD to force the system to override a state where the command would normally be denied. |
| • FRCD     | Force the system to override a state where the command would normally be denied.  |
| • NORM     | Execute the command normally. Do not override any conditions that could make the command fail.  |

## 12.7 ENT-BWP-ETH

(Cisco ONS 15454)

Enter Bandwidth Profile for ETH command is used to enter a new Bandwidth Profile entry in BWP DB. The BWP DB is a collection of Bandwidth Profiles used in a Network Element.

### Usage Guidelines

Error conditions are:

- If the AID is invalid, an IIAC (Invalid AID) error message is returned
- The “ALL” AID is invalid for this command.
- The BWP having the specified AID should not be present in the node, otherwise the command is denied.

### Category

ETHERNET

### Security

Provisioning

**Input Format**

```
ENT-BWP-ETH:[<TID>]:<AID>:<CTAG>:::[NAME=<NAME>],[CIR=<CIR>],[CBS=<CBS>],[PBS=<PBS>],[PIR=<PIR>],[CFMSTATE=<CFM_STATE>][:];
```

**Input Example**

```
ENT-BWP-ETH:ROCKS:BWP-10000:1:::NAME="MyBWP",CIR=10,CBS=1M,PBS=1M,PIR=20,CFMSTATE=Y;
```

**Input Parameters**

|  |  |
|--|--|
| <AID>  | This AID is used to access BWP.BWP AID Format is:<br>BWP-[bwpid]Values   |
| <ul style="list-style-type: none"> <li>BWP-ALL</li> <li>BWP-{1-10000}</li> </ul>   | <p>All aid for BWP.</p> <p>Single AID for BWP. The valid identifiers ranges from 1 to 10000.</p>   |
| <NAME>   | indicates the BWP name. bwp name is a String. - Default value is -   |
| <CIR>  | Ingress committed information rate. This is a value between 0.0 and 100.0. Default value is 100.0.   |
| <CBS>  | Ingress committed burst bucket size.   |
| <ul style="list-style-type: none"> <li>4K</li> <li>8K</li> <li>16K</li> <li>32K</li> <li>64K</li> <li>128K</li> <li>256K</li> <li>512K</li> <li>1M</li> <li>2M</li> <li>4M</li> <li>8M</li> <li>16M</li> </ul> | <p>4 Kbit bucket size</p> <p>16 Kbit bucket size</p> <p>32 Kbit bucket size</p> <p>64 Kbit bucket size</p> <p>128 Kbit bucket size</p> <p>256 Kbit bucket size</p> <p>512 Kbit bucket size</p> <p>1 Mbit bucket size</p> <p>2 Mbit bucket size</p> <p>4 Mbit bucket size</p> <p>8 Mbit bucket size</p> <p>16 Mbit bucket size</p> <p>16 Kbit bucket size</p> |
| <PBS>  | Ingress peak burst bucket size   |
| <ul style="list-style-type: none"> <li>4K</li> <li>8K</li> <li>16K</li> <li>32K</li> <li>64K</li> <li>128K</li> <li>256K</li> <li>512K</li> <li>1M</li> <li>2M</li> <li>4M</li> </ul>                          | <p>4 Kbit bucket size</p> <p>8 Kbit bucket size</p> <p>16 Kbit bucket size</p> <p>32 Kbit bucket size</p> <p>64 Kbit bucket size</p> <p>128 Kbit bucket size</p> <p>256 Kbit bucket size</p> <p>512 Kbit bucket size</p> <p>1 Mbit bucket size</p> <p>2 Mbit bucket size</p> <p>4 Mbit bucket size</p>   |

|            |   |
|------------|---|
| • 8M       | 8 Mbit bucket size  |
| • 16M      | 16 Mbit bucket size   |
| <PIR>      | Peak information rate. This is a value between 0.0 and 100.0. Default value is 100.0. |
| <CFMSTATE> | Link Integrity status. Default value is -   |
| • Y        | Enabled   |
| • N        | Disabled  |

## 12.8 ENT-CPS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Control Plane Service (CPS) command creates a control plane service. Specify the source port, destination ports, and the IP address of the destination node.

### Usage Guidelines

- If the AID is invalid, an IIAC (invalid AID) error message is returned. The following AIDs are supported:
  - CLIENT cps type support FAC and VFAC AID type.
  - TRUNK cps type support CHAN AID type.
  - ADD cps type support CHAN, PCHAN, and LINEWL AID type.
- The ALL AID is invalid for this command
- No check is performed on destination AIDs. The check is made during the CPS activation by OPR-CPS.
- In case of 1WAY, unidirectional connection, SRC and DST are single AIDs. In case of 2WAY, bidirectional connection, SRC and DST are double AIDs. However, in case of CLIENT or TRUNK cpstype, src and dst are single AID and the connection is of type 2WAY because of bidirectional ports hence this rule is not applicable.
- If the RESTTYPE is REVERT, it is required to set the REVERTMODE and SOAK parameters.
- If the RESTTYPE is REVERT, it is mandatory to set the REVERTMODE parameter as MANUAL or AUTO.
- SOAK time is mandatory if the REVERTMODE parameter is set to MANUAL or AUTO.

Provisioning

### Input Format

```
ENT-CPS[:<TID>]:<SRC>:<CTAG>::<DSTADDR>,<DST>,[<WCT>],<CPSTYPE>[:<CKTID=<CKTID>],[<VALMODE=<VALMODE>],[<VALZONE=<VALZONE>],[<VALMODESEC=<VALMODESEC>],[<VALZONESEC=<VALZONESEC>],[<RESTTYPE=<RESTTYPE>],[<REVERTMODE=<REVERTMODE>],[<SOAK=<HH-MM-SS>][:];
```

**Input Example**

```
ENT-CPS::CHAN-1-15-10-RX&CHAN-1-14-10-TX:8::10.20.30.40,CHAN-10-1-10-TX&CHAN-10-1-10-RX,2WAY,ADD::;
```

```
ENT-CPS::FAC-1-5-1:888::10.58.40.33,FAC-1-2-1-1,2WAY,CLIENT:CKTID=OCHCC_Rock,VALMODE=FULL,VALZONE=RED::;
```

```
ENT-CPS::CHAN-1-2-2:1::10.64.107.36,CHAN-1-3-2,1WAY,ADD:RESTTYPE=REVERT,REVERT MODE=MANUAL,SOAK=00-00-15;
```

**Input Parameters**

|              |   |
|--------------|---|
| <SRC>        | Source access identifier from the “26.1 ALL” section on page 26-1. Listable.  |
| <DSTADDR>    | Identifies the destination node IP address.   |
| <DST>        | Destination AID from the “26.1 ALL” section on page 26-1.   |
| <WCT>        | Identifies the wavelength connection type.  |
| • 1WAY       | A unidirectional connection from a source to a destination port. Default is 1WAY  |
| • 2WAY       | A bidirectional connection between the two ports.   |
| <CPSTYPE>    | Identifies the type of CPS.   |
| • CLIENT     | CPS End Point are client ports  |
| • TRUNK      | CPS End Point are trunk ports   |
| • ADD        | CPS Source End Point is an ADD port   |
| • DROP       | Not applicable  |
| • TNA        | Not applicable  |
| <CKTID>      | (Optional) Circuit identification parameter contains the Common Language Circuit ID or other alias of the circuit being provisioned. Does not contain blank spaces. CKTID is a string of ASCII characters. The maximum length of CKTID can be 48. |
| <VALMODE>    | Identifies the validation mode.   |
| • NONE       | No Optical validation is performed  |
| • FULL       | The optical validation is performed as indicated in VALZONE parameter   |
| <VALZONE>    | Identifies the validation operate zone.   |
| • UNKNOWN    | Not evaluated   |
| • GREEN      | Margin > 3 sigma  |
| • YELLOW     | 1 < margin < 3 sigma  |
| • ORANGE     | 0 < margin < 1 sigma  |
| • RED        | -3 < margin < 0 sigma   |
| • OUT        | Margin < -3 sigma   |
| <VALMODESEC> | Identifies the validation mode for secondary circuit  |
| <VALZONESEC> | Identifies the validation operate zone for secondary circuit  |
| <RESTTYPE>   | Specifies the restoration type on CPS circuit or UNI configuration. Parameter type is RESTTYPE.   |
| • NONE       | Restore type is not specified.  |
| • RESTORE    | Only restoration is allowed. The circuit is not revertible.   |

|              |   |
|--------------|---|
| • REVERT     | The circuit is revertible, manually or automatically.   |
| <REVERTMODE> | Specifies the revertive mode type. Parameter type is REVERTMODE.  |
| • AUTO       | Circuit is automatically revertible after the soak time expires.  |
| • MANUAL     | Manually revert the circuit.  |
| • NONE       | Not revertible.   |
| <SOAK>       | This is the soak time specified in HH-MM-SS format. After the soak time expires, if the revertive mode is AUTO, the circuit reverts automatically. If revertive mode is MANUAL, the soak time is ignored. |

## 12.9 ENT-CRS-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter STS Cross-Connection for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (ENT-CRS-<PATH>) command creates a synchronous transport signal (STS) cross-connection with a cross-connection type (CCT). Refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide* for specific ring provisioning procedures.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

When a path protection cross-connection is created, the path presented by the first AID is configured to be the preferred path. For example, the AID (F1) of the cross-connection (created by ENT-CRS-STS1::F1&F2,T1:123;) is the preferred path.

The following guidelines also apply:

- The default cross-connection type is two-way.
- If a path is already in a connection, it cannot be in another connection even if the existing connection is one-way and the new one will be one-way in the other direction.
- This command does not support creating multiple STS cross-connections.
- The path protection STS cross-connection can be created by using “&” in the AID fields of this command.
  - The following command is used to create a one-way selector or two-way selector and bridge with F1, F2 as from points and T1 as the to point:  
ENT-CRS-{STS\_PATH}:<TID>:F1&F2,T1:<CTAG>::<CCT>;
  - The following command is used to create a one-way bridge or two-way selector and bridge with F1 as the from point and T1, T2 as the to points:  
ENT-CRS-{STS\_PATH}:<TID>:F1,T1&T2:<CTAG>::<CCT>;
  - The following command is used to create a one-way subtending path protection connection or two-way subtending path protection connection with F1, F2 as the from points and T1, T2 as the to points:  
ENT-CRS-{STS\_PATH}:<TID>:F1&F2,T1&T2:<CTAG>::<CCT>;
  - The following command is used to create a two-way selector and bridge with F1,F2 (F1 is the working side, F2 is the protect side) as the from points and S1, S2 (S1 is the working side, S2 is the protect side) as the selector points:

```
ENT-CRS-{STS_PATH}:[<TID>]:F1&F2,S1&S2:<CTAG>::2WAY;
```

- The following command is used to create a path protection integrated dual-ring interconnect (IDRI) cross-connection:

```
ENT-CRS-{STS_PATH}:[<TID>]:A&B,C&D:<CTAG>::2WAYDC;
```

where:

A: Path on Ring X to which traffic from Ring Y is bridged

B: Path on Ring X to which traffic from the same ring is bridged

C: Path on Ring Y to which traffic from Ring X is bridged

D: Path on Ring Y to which traffic from the same ring is bridged

A, B, C, and D have a positional meaning. Connection type 2WAYDC is used for path protection IDRI cross-connections.

- The following command is used to create a path protection dual-ring interconnect (DRI) cross-connection:

```
ENT-CRS-{STS_PATH}:[<TID>]:A&B,C:<CTAG>::2WAYDC;
```

where:

A: Path on Ring X to which traffic from Ring Y is bridged

B: Path on Ring X to which traffic from the same ring is bridged

C: Traffic to and from Ring Y

A, B, C, and D have a positional meaning. Connection type 2WAYDC is used for path protection DRI cross-connections.

- All A&B AIDs in the TL1 cross-connection command are in the WorkingAID&ProtectAID format.
- To establish a cross-connection on a two-fiber protection path or on a four-fiber protection channel, the protection channel access (PCA) connection type (1WAYPCA or 2WAYPCA) is required.
- If you send a PCA cross-connection type on the non-PCA AIDs, the IIAC error message is returned.
- If you send a non-PCA cross-connection type on the PCA AIDs, the IIAC error message is returned.
- The facility AID is only valid on slots with a G1K-4 card installed.
- The virtual facility AID (VFAC) is only valid on slots holding an ML-Series card.
- Both DRITYPE and DRINODE have been optional fields since Release 5.0 to support the BLSR-DRI feature. DRITYPE is applied only if the CCT is drop-and-continue (1WAYDC or 2WAYDC), and defaults to path protection for the DRI. DRINODE must be specified only if at least one end of the connection is on the BLSR, and defaults to NA.
- The DS3XM-12 card allows portless STS1/VT1.5 cross-connection provisioning on the DS3XM-12 PORTLESS ports (port number >= 12).
- CKTID is a string of ASCII characters. The maximum length of CKTID is 48. If the CKTID is EMPTY or NULL the field will not appear.
- STS18c and STS36c cross-connects are only supported on the FC\_MR-4 card and optical cards.
- LO CCAT is not applicable for ML-100T-8 and CE-100T-8 cards.

**Security**

Provisioning

**Input Format**

```
ENT-CRS-<PATH>:[<TID>]:<SRC>,<DST>:<CTAG>::[<CCT>]:[DRITYPE=<DRITYPE>],
[DRINODE=<DRINODE>],[CKTID=<CKTID>],[CMDMDE=<CMDMDE>]:[<PST>[,<SST>]];
```

**Input Example**

```
ENT-CRS-ST53C:BODEGA:STS-5-1-1&STS-6-1-1,STS-12-1-1&STS-13-1-1:116::1WAYDC:
DRITYPE=BLSR,DRINODE=PRI,CKTID=CKTID,CMDMDE=FRCD:IS,AINS;
```

**Input Parameters**

|  |   |
|--|---|
| <SRC>  | Source access identifier from the “26.1 ALL” section on page 26-1. Listable.  |
| <DST>  | Destination AID from the “26.1 ALL” section on page 26-1.   |
| <CCT>  | Type of connection. Used for specifying one or two-way connections. Default is 2-way. The parameter type is CCT, which is the type of cross-connect that will be created.   |
| <ul style="list-style-type: none"> <li>1WAY</li> </ul>                 | A unidirectional connection from a source tributary to a destination tributary.   |
| <ul style="list-style-type: none"> <li>1WAYDC</li> </ul>               | Path Protection multicast drop with one-way continue.   |
| <ul style="list-style-type: none"> <li>1WAYEN</li> </ul>               | Path Protection multicast end node with one-way continue.   |
| <ul style="list-style-type: none"> <li>1WAYMON</li> </ul>              | A bidirectional connection between the two tributaries.<br><br><b>Note</b> 1WAYMON is not supported with TL1. However, it is still supported from the Cisco Transport Controller (CTC). Using CTC, you can create 1WAYMON cross-connects that can be retrieved through TL1. |
| <ul style="list-style-type: none"> <li>1WAYPCA</li> </ul>              | A unidirectional connection from a source tributary to a destination tributary on the protection path/fiber.  |
| <ul style="list-style-type: none"> <li>2WAY</li> </ul>                 | A bidirectional connection between the two tributaries.   |
| <ul style="list-style-type: none"> <li>2WAYDC</li> </ul>               | A bidirectional drop-and-continue connection applicable only to path protection traditional and integrated DRIs.  |
| <ul style="list-style-type: none"> <li>2WAYPCA</li> </ul>              | A bidirectional connection between the two tributaries on the extra protection path/fiber.  |
| <ul style="list-style-type: none"> <li>DIAG</li> </ul>                 | Diagnostic cross-connect. Supports BERT (BLSR PCA diagnostic cross-connect).  |
| <DRITYPE>  | DRI connection type. Applied only if the CCT is a drop-and-continue connection type (1WAYDC or 2WAYDC). Defaults to path protection. The parameter type is DRITYPE (DRI type).  |
| <ul style="list-style-type: none"> <li>BLSR</li> </ul>                 | BLSR DRI type   |
| <ul style="list-style-type: none"> <li>Path Protection</li> </ul>      | Path Protection DRI type  |
| <ul style="list-style-type: none"> <li>Path Protection-BLSR</li> </ul> | Path Protection-BLSR type   |
| <DRINODE>  | Dual ring interconnect node. The parameter type is DRINODE (DRI node).  |
| <ul style="list-style-type: none"> <li>INT</li> </ul>                  | Intermediate DRI node   |
| <ul style="list-style-type: none"> <li>NA</li> </ul>                   | The node is not a DRI node.   |

|          |   |
|----------|---|
| • PRI    | Primary DRI node  |
| • SEC    | Secondary DRI node  |
| <CKTID>  | Cross-connect ID. Defaults to blank or none. CKTID is a string.   |
| <CMDMDE> | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD   | Force the system to override a state where the command would normally be denied.  |
| • NORM   | Execute the command normally. Do not override any conditions that could make the command fail.  |
| <PST>    | Primary state. Defaults to IS. The parameter type is primary state (PST), which indicates the current overall service condition of an entity.   |
| • IS     | In service  |
| • OOS    | Out of service  |
| <SST>    | Secondary state. Defaults to AINS. The parameter type is SST, which provides additional information pertaining to PST and primary state qualifier (PSTQ).   |
| • AINS   | Automatic in-service  |
| • DSBLD  | Disabled  |
| • LPBK   | Loopback  |
| • MEA    | Mismatch of equipment and attributes  |
| • MT     | Maintenance mode  |
| • OOG    | Out of group  |
| • SWDL   | Software downloading  |
| • UAS    | Unassigned  |
| • UEQ    | Unequipped  |

## 12.10 ENT-CRS-ETH

(Cisco ONS 15454)

Enter Cross-Connect Ethernet (ENT-CRS-ETH) command allocates an Ethernet Connection. The user need to specify two or more ethernet connection end points inside ethernet facilities in order to allocate the connection inside the node. According to the specified ethernet facilities, the connection allocated can be a pass-through, add or drop or multi-drop.

### Usage Guidelines

The ethernet connection end point identifier must be the same for all the ethernet ports inside the connection and must be kept the same for all the ethernet circuit.

The client and trunk facilities involved in cross-connection is set in UNI and NNI network mode respectively.

The ethernet connection can be allocated in 2WAY (bidirectional) mode.

AID rule to be used for different cases:

- only one source AID can be specified
- one or more destination (drops) AID can be specified
- In both cases the AID specifies a valid ethernet facility and a connection end point identifier within the valid range.
- CKTID is a string of ASCII characters. The maximum length of CKTID can be 48. If the CKTID is EMPTY or NULL this field is not displayed.

---

**Input Parameters**

|   |  |
|---|--|
| <SRC>   | Ethernet connection identifier AID used to access L2 ethernet connection end point.  |
| <ul style="list-style-type: none"> <li>• ALL</li> </ul>                                       | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands.  |
| <ul style="list-style-type: none"> <li>• ETHID[-{1-12}]{1-5, 12-16}{1-22}-1-{1-20}</li> </ul> | Ethernet connection end point aid for GE-XP card.  |
| <ul style="list-style-type: none"> <li>• ETHID[-{1-12}]{1-6, 12-17}{1-4}-1-{1-20}</li> </ul>  | Facility aid for 10GE-XP card.   |
| <DST>   | Ethernet connection identifier AIDs used to access L2 ethernet connection end point.   |
| <ul style="list-style-type: none"> <li>• ALL</li> </ul>                                       | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands.  |
| <ul style="list-style-type: none"> <li>• ETHID[-{1-12}]{1-5, 12-16}{1-22}-1-{1-20}</li> </ul> | Ethernet connection end point aid for GE-XP card.  |
| <ul style="list-style-type: none"> <li>• ETHID[-{1-12}]{1-6, 12-17}{1-4}-1-{1-20}</li> </ul>  | Facility aid for 10GE-XP card.   |
| <ECT>   | Defines the type of cross-connect to be created. It is a subset of the CCT. Default value is - 2way default for cross-connection creation. |

|         |   |
|---------|---|
| • 2WAY  | A bidirectional connection between the two tributaries.   |
| <CKTID> | (optional) Circuit identification parameter contains the Common Language Circuit ID or other alias of the circuit being provisioned. CKTID is a string of ASCII characters. The maximum length of CKTID can be 48. cktid is a String. Default value is - "NULL" |

## 12.11 ENT-EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Equipment (ENT-EQPT) command enters the card type and attributes for a given equipment slot in the NE. It also automatically enters all facilities supported by the card and assigns default values to all facility and path attributes. The ENT-EQPT command is also used to preprovision an NE configured in multishelf mode. This command can also be used to create PPM.

### Usage Guidelines

The command supports optional parameters: RVTM (revertive time), RVRTV (revertive behavior), PROTID (unique protection ID), and PRYTYPE (protection type) for configuring the card in an equipment protection group. PRYTYPE can be 1:1 or 1:N. These parameters can only be entered for a working AID. The protect card must already be provisioned before creating the protection group.

This command creates a 1:1 protection group. If the command has the optional parameters for creating a protection group and the protection group cannot be created due to an error condition, provisioning of the equipment fails. 1:1 protection involves the odd slot protecting the even slot. The work-protect pair is 2-1, 4-3, 6-5, 16-17, 14-15, 12-13. The DS1, DS3, DS3XM, DS3N, DS3E, EC1 and other electrical cards support 1:1 protection. The value of PROTID is the protecting slot and has a "Slot-x" format.

The PROTID slot must be provisioned first.

To create 1:1 with the ENT-EQPT command, do not provision a working card first.

The following is an example for a 1:1 protection group:

```
ENT-EQPT:[<TID>]:SLOT-1:<CTAG>::DS1;
ENT-EQPT:[<TID>]:SLOT-2:<CTAG>::DS1:PROTID=SLOT-1,PRYTYPE=1-1,RVTM=5.0,
RVRTV=Y;
```

The ENT-EQPT command creates a 1:N protection group or adds a new card to an existing 1:N protection group. Multiple working AIDs can be entered in a protection group. 1:N protection is always revertive. For 1:N protection, the protect slot can only be Slot 3 or Slot 15. For a protect card in Slot 3, the working cards can be in any of the slots on Bank A. Slot 15 is for protection in Bank B. A DSXN (DS1N or DS3N) card must be provisioned in the protect slot. 1:1 protection cannot be upgraded to 1:N protection.

The following is an example of provisioning a 1:N protection group with the ENT-EQPT command:

```
ENT-EQPT:[<TID>]:SLOT-3:<CTAG>::DS1N;
ENT-EQPT:[<TID>]:SLOT-2&SLOT-1:<CTAG>::DS1:PROTID=SLOT-3,PRYTYPE=1-N;
```

The following is an example of provisioning a 1:N protection group with the ED-EQPT command:

```
ENT-EQPT:[<TID>]:SLOT-1&SLOT-2:<CTAG>::DS1;
ENT-EQPT:[<TID>]:SLOT-3:<CTAG>::DS1N;
ED-EQPT:[<TID>]:SLOT-2&SLOT-1:<CTAG>::PROTID=SLOT-1,PRYTYPE=1-N;
```

**Note**

The ENT-EQPT command provisions a new card and adds it to the protection group. The ED-EQPT command adds the already provisioned cards to the protection group.

If the provisioning fails for some AIDs, PRTL responses will indicate failed AIDs. If the provisioning fails for all the AIDs, a DENY response occurs. CMPLD and PRTL responses for protection group queries indicate that the protection group has been successfully created for the AID(s) query.

The following is an example for 1:N protection. The RVRTV parameter is not valid for 1:N protection.

```
ENT-EQPT:[<TID]>:SLOT-2:<CTAG>:::PROTID=SLOT-3,PRTYPE=1-N,RVTM=5.0;
```

Both ENT-EQPT and ED-EQPT commands can provision all working AIDs (1-5) together for 1:N by using listed AIDs. The protect AID should already be provisioned for either command because protection group parameters are not supported for the protect AID.

The ENT-EQPT command provisions a card successfully in an empty slot if the equipment type is compatible with the slot number. This command can have the optional parameters in the “f” block to provision a card as a working card. It has the effect of adding the protection behavior at the time of provisioning itself. For the protection provisioning to succeed, the protect card should have already been provisioned. Trying to execute ENT-EQPT to provision a protection group on an already provisioned card will result in an error.

The following is an example of provisioning a 1:1 protection group:

|               |  |  |
|---------------|--|--|
| <b>Step 1</b> | ENT-EQPT::SLOT-1:12::DS3;                                    | Provisions the protect card.                           |
| <b>Step 2</b> | ENT-EQPT::SLOT-2:12::DS3:PROTID=SLOT-1,<br>RVRTV=Y,RVTM=8.0; | Provisions a card and adds it to the protection group. |

The following is an example of provisioning a 1:N protection group:

|               |   |  |
|---------------|---|--|
| <b>Step 1</b> | ENT-EQPT::SLOT-3:12::DS3N;                                      | Provisions the protect card.                       |
| <b>Step 2</b> | ENT-EQPT::SLOT-1:12::DS3:PROTID=SLOT-3,<br>RVTM=7.5,PRTYPE=1-N; | Provisions a card and adds it to protection group. |

**Note**

- If you send this command to provision a DS3NE card on Slot 1, 2, 4, 5, 6, 12, 13, 14, 16, or 17, the DS3E card type is presented.
- If you send this command to provision a DS3N card on Slot 1, 2, 4, 5, 6, 12, 13, 14, 16, or 17, the DS3 card type is presented.
- If you send this command to provision a DS1N card on Slot 1, 2, 4, 5, 6, 12, 13, 14, 16, or 17, the DS1 card type is presented.
- For the MRC-12 card, there are hardware limitations for which Small Form-Factor Pluggable (SFP) ports can be used.
- The OC192-XFP card must be installed in Slots 5 and 6 or 12 and 13 and requires an XC10G or XC-VXC-10G cross-connect card.

Error conditions for creating 1:1 or 1:N protection groups are:

- AID sent to a non-working slot; the working cards must be in even slots for 1:1 protection, and working cards must be in the same bank and not in Slot 3 or Slot 15 for 1:N protection.

- An invalid AID was chosen for the protection slot.
- The working AID is already in a protection group.
- The AID is a protect AID.
- The protect card has a circuit.
- The equipment type does not match the allowed AID.
- The slot is already provisioned.
- The protect slot is not provisioned.
- Multiple working AIDs were sent for 1:1 protection.
- The CARDMODE provisioning is allowed on the DS3XM-12 and ML-Series cards. Provisioning for the DS3XM-12 is based on the cross-connect type and DS3XM-12 location. The following error conditions apply:
  - The DS3XM-12 card in the lower speed input/output (I/O) slot with the XCVT card only allows the DS3XM-12-STS12 CARDMODE. Other cases allow the CARDMODE to be DS3XM-12-STS48.
  - The NE defaults to the highest available backplane rate/mode for the DS3XM-12 card if you do not specify the CARDMODE in the ENT-EQPT command.
  - The ML100T-8 card will be provisioned to MAPPER mode by default.
- The 1:N (1 <= N <= 7) protection group is allowed on the DS3XM-12 card in an ONS 15454 across two sides (A and B). All the cards in the 1:N protection group must be on the same backplane rate (or CARDMODE). The following error conditions apply:
  - For 1:N protection, the protect card must be allocated on either Slot 3 or Slot 15. For 1:1 protection, the protect card must be allocated on the odd slots.
  - The working DS3XM-12 cards on the opposite side of the shelf from the protection card (either Slot 3 or Slot 15) in a 1:N group can only have portless connections. The other working cards of the 1:N group on the same side of the shelf as the protection card do not have this limitation.

For example, suppose that there is a DS3XM-12 card 1:N group on Slot 2, Slot 3, Slot 4, Slot 12, and Slot 16, where Slot 3 is the protect card. Slot 2, Slot 4, Slot 12, and Slot 16 are the working cards in the 1:N (1:5) protection group. According to the above limitation rule, the Slot 12 and Slot 16 cards need to have the portless provisioning only, while the Slot 2 and Slot 4 cards can be either portless or ported provisioning.

CMDMDE provisioning behaves as follows:

- If the command mode (CMDMDE) is set to NORM during the creation of a 1:1 or 1:N protection group, all cards must be physically plugged in and in the service state (IS). If the cards are not physically plugged in and are not in ready state, the command is denied with an appropriate error message. CMDMDE=FRCD will override the default behavior and allow creation of protection group regardless of the physical presence and ready state of cards.
- If the command mode is set to NORM during the removal of a card in a 1:1 or 1:N protection group, there must be no cross-connects (for example, services) present on the card. CMDMDE=FRCD will override the default behavior and allow deletion of protection group regardless of presence of cross-connects on the card.
- RETIME provisioning is allowed only on the DS1/E1-56 card (ONS 15454).
- The protection group is automatically created when both the working and protect cards are provisioned; therefore, protection groups cannot be created using the ENT-EQPT or ED-EQPT commands. A protection group can be deleted by deleting the protect card (DLT-EQPT). Trying to delete the working card will result in the Equipment In Use (SPLD) error.

**Category** Equipment

**Security** Provisioning

**Input Format** ENT-EQPT:[<TID>]:<AID>:<CTAG>::<AIDTYPE>:[PROTID=<PROTID>],[PRTYPE=<PRTYPE>],[RVRTV=<RVRTV>],[RVTM=<RVTM>],[CARDMODE=<CARDMODE>],[PEERID=<PROTID>],[REGENNAME=<REGENNAME>],[CMDMDE=<CMDMDE>],[TRANSMODE=<TRANSMODE>],[RETIME=<RETIME>],[SHELFROLE=<SHELFROLE>],[FRPROLE=<FRPROLE>],[FRPSTATE=<FRPSTATE>],[FRPHOLDOFFTIME=<FRPHOLDOFFTIME>],[CFMSTATE=<CFMSTATE>],[CCTIMER=<CCTIMER>],[SWITCHWITHCRCALARM=<SWITCHWITHCRCALARM>],[CRCTHR=<CRCTHR>],[CRCPOLLINTRVL=<CRCPOLLINTRVL>],[CRCISOAKCNT=<CRCISOAKCNT>],[USB=<USB>][:];

**Input Example** ENT-EQPT::SLOT-15:a::GE-XP:CARDMODE=GEXP-L2ETH,SWITCHWITHCRCALARM=Y;

ENT-EQPT::SLOT-15:a::GE-XP:CARDMODE=GEXP-L2ETH,CRCPOLLINTRVL=4;

ENT-EQPT:ROCCIANERA:SLOT-4-1:1::AR-XP;

### Input Parameters

| Parameter  | Description   |
|--|---|
| <AID>  | Access identifier from the <a href="#">“26.15 EQPT” section on page 26-39</a> . AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID.   |
| <AIDTYPE>  | (Optional) The type of facility, link or other addressable entity targeted by the message. The parameter type is EQUIPMENT_TYPE (equipment type). It is the type of equipment being provisioned.  |
| <ul style="list-style-type: none"> <li>10GE-XP</li> <li>100G-LC-C</li> <li>10X10G-LC</li> <li>AR-XPE</li> <li>15216-MD-40-EVEN</li> <li>15216-MD-40-ODD</li> <li>15216-MD-ID-50</li> <li>15216-FLD4-30-3</li> <li>15216-FLD4-33-4</li> <li>15216-FLD4-36-6</li> <li>15216-FLD4-39-7</li> <li>15216-FLD4-42-9</li> <li>15216-FLD4-46-1</li> </ul> | <ul style="list-style-type: none"> <li>(ONS 15454) 2 x 10 Gbps. muxponder/L2 ethernet switch card</li> <li>100G-LC-C</li> <li>10X10G-LC</li> <li>Any rate enhanced xponder</li> <li>Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on even grid</li> <li>Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on odd grid</li> <li>Thermal Interleaver Passive Unit, spaced at 50 GHz grid</li> <li>Edge 4-Ch Bi-Directional OADM Module 1530.33 to 1532.68</li> <li>Edge 4-Ch Bi-Directional OADM Module 1533.47 to 1535.82</li> <li>Edge 4-Ch Bi-Directional OADM Module 1536.61 to 1538.98</li> <li>Edge 4-Ch Bi-Directional OADM Module 1539.77 to 1542.14</li> <li>Edge 4-Ch Bi-Directional OADM Module 1542.94 to 1545.32</li> <li>Edge 4-Ch Bi-Directional OADM Module 1546.12 to 1548.51</li> </ul> |

| Parameter         | Description  |
|-------------------|--|
| • 15216-FLD4-49-3 | Edge 4-Ch Bi-Directional OADM Module 1549.32 to 1551.72  |
| • 15216-FLD4-52-5 | Edge 4-Ch Bi-Directional OADM Module 1552.52 to 1554.94  |
| • 15216-FLD4-55-7 | Edge 4-Ch Bi-Directional OADM Module 1555.75 to 1558.17  |
| • 15216-FLD4-58-9 | Edge 4-Ch Bi-Directional OADM Module 1558.98 to 1561.42  |
| • 32-DMX          | (ONS 15454) 32 channel optical demultiplexer   |
| • 32-DMX-L        | (ONS 15454) 32 channel optical demultiplexer for L-band  |
| • 32-DMX-O        | (ONS 15454) 32 channel unidirectional optical demultiplexer<br>This overrides the old equipment type DMX-32 present in the 4.6 and earlier releases. |
| • 32-MUX-O        | (ONS 15454) 32 channel unidirectional optical multiplexer<br>This overrides the old equipment type MUX-32 present in the 4.6 and earlier releases.   |
| • 32-WSS          | (ONS 15454) 32 channel optical wavelength selective switch for C Band  |
| • 40-DMX-C        | (ONS 15454) 40 channel optical demultiplexer for C Band  |
| • 40-MUX-C        | (ONS 15454) 40 channel optical multiplexer for C Band  |
| • 40G-MXP-C       | 40 Gbit/Sec Multirate Muxponder  |
| • 40-SMR1-C       | The single module 40-channel ROADM on C-band   |
| • 40-SMR2-C       | The single module 40-channel ROADM with EDFA on C-band   |
| • 40G-TXP-C       | 40 Gigabits per second Multirate Transponder   |
| • 40-WXC-C        | (ONS 15454) 40 channel optical wavelength cross-connect/wavelength router for C Band   |
| • 80-WXC-C        | 80-channel wavelength cross-connect spaced at 100 GHz grid   |
| • AD-1B           | (ONS 15454) Optical add/drop multiplexed (OADM) 1 band filter  |
| • AD-1C           | (ONS 15454) Optical add/drop multiplexed (OADM) 1 channel filter   |
| • AD-2C           | (ONS 15454) Optical add/drop multiplexed (OADM) 2 channels filter  |
| • AD-4B           | (ONS 15454) Optical add/drop multiplexed (OADM) 4 bands filter   |
| • AD-4C           | (ONS 15454) Optical add/drop multiplexed (OADM) 4 channels filter  |
| • ADM-10G         | (ONS 15454) 16 x OC3/OC12/OC48/GIGE and OC192/Trunk ADM 10 Gbps card   |
| • AIC             | (ONS 15454) AIC card   |
| • AICI            | (ONS 15454) AICI Card  |
| • AR-MXP          | Any rate muxponder card  |
| • AR-XP           | Any rate xponder card  |
| • CE-1000-4       | (ONS 15454) Modena mapper card   |
| • CE-100T-8       | (ONS 15454) Exige/Elise mapper card  |
| • CE-MR-10        | (ONS 15454, ONS 15454) Lotus20g ce2 card   |
| • CFP-LC          | CFP-LC   |
| • DCU             | Dispersion Compensation Unit   |
| • DS1-E1-56       | (ONS 15454) DS1-E1-56 card   |

| Parameter          | Description   |
|--------------------|---|
| • DS1I             | (ONS 15454) DS1I card   |
| • DS3              | (ONS 15454) DS3 card  |
| • DS3-EC1-48       | (ONS 15454) DS3-EC1-48 card type  |
| • DS3E             | (ONS 15454) DS3E card   |
| • DS3I             | (ONS 15454) DS3I card   |
| • DS3IN            | (ONS 15454) DS3IN card  |
| • E1-42            | (ONS 15454) 42 port E1 card   |
| • E1000T           | (ONS 15454) E1000T card   |
| • E100T            | (ONS 15454) E100T card  |
| • E3               | (ONS 15454) E3 card   |
| • EC1              | (ONS 15454) EC1 card  |
| • FBGDCU-1157      | FBGDCU-1157   |
| • FBGDCU-1322      | FBGDCU-1322   |
| • FBGDCU-165       | FBGDCU-165  |
| • FBGDCU-1653      | FBGDCU-1653   |
| • FBGDCU-1983      | FBGDCU-1983   |
| • FBGDCU-331       | FBGDCU-331  |
| • FBGDCU-496       | FBGDCU-496  |
| • FBGDCU-661       | FBGDCU-661  |
| • FBGDCU-826       | FBGDCU-826  |
| • FBGDCU-992       | FBGDCU-992  |
| • FILLER-CARD      | (ONS 15454) Blank filler card   |
| • FMEC-155E-1TO3   | The equipment type for FMEC STM1E12 card with 1:3 protection                    |
| • FMEC-155E-UNPROT | The equipment type for FMEC STM1E12 card without protection                     |
| • G1000-4          | (ONS 15454) A 4-port G1000 card   |
| • GE-XP            | (ONS 15454) 20 x 1 Gbps muxponder/L2 ethernet switch card                       |
| • MD-4             | (ONS 15454) Four channel optical multiplexer/demultiplexer                      |
| • MD-48-CM         | MD-48-CM  |
| • MD-48-EVEN       | MD-48-EVEN  |
| • MD-48-ODD        | MD-48-ODD   |
| • MESH-PP-SMR      | The passive unit Patch Panel device used to connect up to four 40-SMR2-C cards. |
| • ML-100T-8        | (ONS 15454) Exige/Elise mapper card   |
| • ML1000-2         | (ONS 15454) Daytona 2-port GigE   |
| • ML100T-12        | (ONS 15454) Daytona 12-port FSTE  |
| • ML100X-8         | (ONS 15454) 8-port 100T card with optical interface                             |
| • MRC-12           | (ONS 15454) Humvee - 12-port multirate optical card                             |
| • MRC-2.5G-4       | (ONS 15454) 4-port MRC 2.5G (Hummer 4 15454-ANSI card)                          |
| • MRC-2.5G-12      | (ONS 15454) 12-port MRC 2.5G (Hummer 12 15454-ETSI card)                        |
| • MS-ISC-100T      | (ONS 15454) Multishelf Internal Switch Card                                     |

| Parameter      | Description  |
|----------------|--|
| • MXP-2.5G-10E | (ONS 15454) Monviso 10G (4 * 2.5G) muxponder card with enhanced FEC                                    |
| • MXP-2.5G-10G | (ONS 15454) Skane 10G (4 * 2.5G) muxponder card  |
| • MXP-MR-2.5G  | (ONS 15454) Bernina multirate 2.5G muxponder unprotected   |
| • MXPP-MR-2.5G | (ONS 15454) Bernina multirate 2.5G muxponder protected   |
| • MXP-MR-10DME | (ONS 15454) Multirate 10Gbps datamux   |
| • OPT-AMP-17-C | (ONS 15454) Optical booster/pre-amplifier for C band 17 dBm  |
| • OPT-AMP-23-C | (ONS 15454) Optical booster/pre-amplifier for C band 23 dBm  |
| • OPT-AMP-L    | (ONS 15454) Optical booster/pre-amplifier for L band   |
| • OPT-AMP-C    | (ONS 15454) Optical booster/pre-amplifier for C band   |
| • OPT-BST      | (ONS 15454) Optical booster amplifier  |
| • OPT-BST-E    | (ONS 15454) Optical booster enhanced amplifier for C band  |
| • OPT-BST-L    | (ONS 15454) Optical booster amplifier for L band   |
| • OPT-EDFA-17  | MAL-less EDFA Optical Amplifier - C-band - 17dB Gain   |
| • OPT-EDFA-24  | MAL-less EDFA Optical Amplifier - C-band - 24dB Gain   |
| • OPT-PRE      | (ONS 15454) Optical pre-amplifier  |
| • OPT-RAMP-C   | Raman pump amplifier C-band  |
| • OPT-RAMP-CE  | An extended version of Raman pump amplifier  |
| • OPT-RAMP-E   | Raman pump amplifier E-band  |
| • OSC-CSM      | (ONS 15454) Optical service channel (OSC) with combiner/separator module (SCM)                         |
| • OSCM         | (ONS 15454) Optical service channel (OSC) module   |
| • OTU2-XP      | A 4x10G transponder that is capable to operate with multiple bit rates - 10G FC, 10GE, and OC192/STM64 |
| • PP-4-SMR     | Patch-Panel, 4 degrees, for SMR cards  |
| • PP-MESH-4    | Patch-Panel, 4 degrees   |
| • PP-MESH-8    | Patch-Panel, 8 degrees   |
| • PPM-1        | (ONS 15454) Pluggable port module with one SFP port  |
| • PSM          | Protection Service Module card   |
| • PTM-4        | Line card  |
| • PTF-4        | Fabric card  |
| • PTSA         | CPT 50 panel   |
| • SHELF        | To Provision the 15454 node as SSC   |
| • SHELF-M6     | To Provision the M6 node as SSC  |
| • STM1E-12     | (ONS 15454 SDH) STM1E-12 card  |
| • TCC          | (ONS 15454) TCC card   |
| • TDC-CC       | Coarse tunable dispersion compensation unit  |
| • TDC-FC       | Fine tunable dispersion compensation unit  |
| • TNC          | Transport Node Controller card   |
| • TSC          | Transport Shelf Controller card  |

| Parameter      | Description   |
|----------------|---|
| • TXP-MR-10E   | (ONS 15454) Skane 10G multirate transponder card with enhanced FEC  |
| • TXP-MR-10G   | (ONS 15454) Skane 10G multirate transponder card  |
| • TXP-MR-2.5G  | (ONS 15454) Rockwell multirate 2.5G unprotected   |
| • TXPP-MR-2.5G | (ONS 15454) Rockwell multirate 2.5G protected   |
| • WSE          | Wire Speed Encryption (WSE) card  |
| • XC           | (ONS 15454) XC card   |
| • XC10G        | (ONS 15454) XC10G card  |
| • XCVT         | (ONS 15454) XCVT card   |
| • XCVXC-10G    | (ONS 15454) XCVXC-10G card  |
| • XCVXL-10G    | (ONS 15454) XCVXL-10G card  |
| • XCVXL-2.5G   | (ONS 15454) XCVXL-2.5G card   |
| <PROTID>       | Identifies valid protection slots for the electrical cards.   |
| • NULL         | Indicates there is no protection group. Used when trying to delete a protection group.  |
| • SLOT-1       | The No.1 slot of an NE.   |
| • SLOT-2       | The No.2 slot of an NE  |
| • SLOT-3       | The No.3 slot of an NE.   |
| • SLOT-5       | The No.5 slot of an NE.   |
| • Slot-6       | The No.6 slot of an NE.   |
| • SLOT-13      | The No.13 slot of an NE.  |
| • SLOT-15      | The No.15 slot of an NE.  |
| • SLOT-17      | The No.17 slot of an NE.  |
| <PRTYPE>       | Identifies the protection group type values.  |
| • 1-1          | 1 to 1 protection   |
| • 1-N          | 1 to N protection   |
| <RVRTV>        | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. Only applies to SNCP. The parameter type is ON_OFF, which disables or enables an attribute. |
| • N            | Does not revert service to original line after restoration.   |
| • Y            | Reverts service to original line after restoration.   |
| <RVTM>         | (Optional) Revertive time. RVTM is not allowed to be set while RVRTV is N. Only applies to SNCP. The parameter type is REVERTIVE_TIME (revertive time).   |
| • 0.5 to 12.0  | Revertive time is 0.5 to 12.0 minutes.  |

| Parameter   | Description   |
|---|---|
| <CMDMDE>  | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states.   |
| <FRCD>  | Force the system to override a state where the command would normally be denied.  |
| <ul style="list-style-type: none"> <li>NORM</li> </ul>  | Execute the command normally. Do not override any conditions that might make the command fail.  |
| <RETIME>  | (Optional) Indicates the RETIME function for all the facilities on this card. Applies only to the DS1/E1-56 card. The parameter type is ON_OFF (disable or enable an attribute).  |
| <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>  | <p>Disable an attribute.</p> <p>Enable an attribute.</p>  |
| <PEERID>  | Indicates the peer trunk facility of the regeneration group on the OTU2-XP card. Accessed using the CHAN AID.   |
| <REGENNAME>   | Indicates the name of a regeneration group. Applicable only to DWDM flavored cards, which support regeneration group. Regenname is a string. The default value is "NULL".   |
| <TRANSMODE>   | Transition Mode.  |
| <ul style="list-style-type: none"> <li>AU3</li> <li>AU4</li> <li>SONET</li> </ul>   | <p>Au3 mode.</p> <p>Au4 mode.</p> <p>Sonnet mode.</p>   |
| <SHELFROLE>   | The role of the shelf in the context of the node. When it is omitted it defaults to SC. The parameter is SHELF_ROLE.  |
| <FRPHOLDOFFTIME>  | Indicates the hold off timer value. The protection do not start until the hold off expire.  |
| <ul style="list-style-type: none"> <li>100-MSEC</li> <li>1-MSEC</li> <li>200-MSEC</li> <li>2-MSEC</li> <li>500-MSEC</li> <li>50-MSEC</li> <li>5-MSEC</li> <li>DISABLED</li> </ul> | <p>Indicates the hold off timer value as 100 milliseconds.</p> <p>Indicates the hold off timer value as 1milisecond.</p> <p>Indicates the hold off timer value as 200 milliseconds.</p> <p>Indicates the hold off timer value as 2 milliseconds.</p> <p>Indicates the hold off timer value as 500 milliseconds.</p> <p>Indicates the hold off timer value as 50 milliseconds.</p> <p>Indicates the hold off timer value as 50 milliseconds.</p> <p>Indicates that the hold off timer is disabled.</p> |
| <FRPROLE>   | Indicates the fast ring protection enable mode for GE-XP/10GE-XP units involved in a protection scheme.   |
| <ul style="list-style-type: none"> <li>MASTER</li> <li>SLAVE</li> </ul>   | <p>Role is of card master of the ring.</p> <p>Role is of card slave of the ring.</p>  |
| <FRPSTATE>  | Indicates the fast ring protection enable state.  |
| <ul style="list-style-type: none"> <li>DISABLED</li> <li>ENABLED</li> <li>FORCED</li> </ul>   | <p>Disabled protection</p> <p>Enabled protection</p> <p>Forced protection</p>   |

| Parameter            | Description  |
|----------------------|--|
| <CFMSTATE>           | Link Integrity status.   |
| • Y                  | Enabled  |
| • N                  | Disabled   |
| <CCTIMER>            | Indicates continuity check message timer.  |
| • ONE-MIN            | 1 minute.  |
| • ONE-SEC            | 1 second.  |
| • TEN-SEC            | 10 seconds.  |
| <SWITCHWITHCRCALARM> | Switch the GZ card with CRC Alarms   |
| <CRCTHR>             | CRC threshold values beyond which alarms are raised. The available threshold values are 10E-2, 10E-3, and 10E-4. |
| <CRCPOLLINTRVL>      | Interval of time after which the polling starts.   |
| <CRCISOAKCNT>        | Number of poll cycles during which defect is integrated. The value ranges from 3 to 10.                          |
| <USB>                | Identifies the USB Port where a passive unit is connected.   |

## 12.12 ENT-FFP-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Facility Protection Group for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 4GFC, 2GFICON, 8GFC, D1VIDEO, DV6000, DVBA5I, ETRCLO, FSTE, GIGE, HDTV, ISC1, ISC3, ISC3STP1G, ISC3STP2G, OTU1, OTU2, OTU3, OTU4, PASSTHRU, or OCH (ENT-FFP-<MOD2DWDMPAYLOAD>) command creates Y-cable protection on client facilities. Refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TLI Reference Guide* for specific card provisioning rules.

### Usage Guidelines

- Y-cable with bidirectional protection is applicable only for ISC3STP1G and ISC3STP2G payloads on the AR-MXP, AR-XP, and AR-XPE cards.
- Y-cable with unidirectional protection is applicable only for payloads other than ISC3STP1G and ISC3STP2G on the AR-MXP, AR-XP, and AR-XPE cards.
- In CFP-TXP and CFP-MXP operating modes, Y-cable is provisioned on the CHAN AID of the CFP-LC card and not on the 100G-LC-C virtual ports.
- Y-cable protection is supported on the following operational modes for 10x10G-LC, 100G-LC-C, and CFP-LC cards:
  - MXP-10x10G (using 10x10G-LC and 100G-LC-C cards) operational mode with client payloads as 10GIGE and 8GFC only.
  - TXP-10G (using 10x10G-LC card) operational mode with client payloads as 10GIGE and 8GFC only.
  - CFP-MXP (using CFP-LC and 100G-LC-C cards) operational mode with client payload as 40GIGE.
  - CFP-TXP (using CFP-LC and 100G-LC-C cards) operational mode with client payload as 100GIGE.
- The command does not support 3GVIDEO, SDSDI, HSDI, and AUTO payloads on AR-MXP, AR-XP, and AR-XPE cards.

**Category** DWDM

**Security** Provisioning

**Input Format** ENT-FFP-<MOD2DWDMPAYLOAD>:[<TID>]:<SRC>,  
<DST>:<CTAG>:::[PROTOTYPE=<PROTOTYPE>],[PROTID=<PROTID>],[RVRTV=<RVRTV>],  
[RVTM=<RVTM>],[PSDIRN=<PSDIRN>][:];

**Input Example** ENT-FFP-HDTV:CISCO:FAC-1-1-1,FAC-2-1-1:100:::PROTOTYPE=Y-CABLE,  
PROTID=DC-METRO-1,RVRTV=Y,RVTM=1.0,PSDIRN=BI;

|                         |  |   |
|-------------------------|--|---|
| <b>Input Parameters</b> | <SRC>  | Source access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. The working facility uses VFAC AID.   |
|                         | <DST>  | Destination access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. The protecting facility uses VFAC AID.   |
|                         | <PROTOTYPE>  | The type of facility protection. The parameter type is PROTOTYPE (protection type for dense wavelength division multiplexing [DWDM] client facilities).   |
|                         | <ul style="list-style-type: none"> <li>Y-CABLE</li> </ul>      | Y-cable protection for the client ports on TXP_MR_10G, MXP_2.5G_10G, TXP_MR_2.5G, TXPP_MR_2.5G, AR_MXP, and AR_XP cards.  |
|                         | <ul style="list-style-type: none"> <li>SPLITTER</li> </ul>     | Splitter Protection is applicable only on OTU2-XP card.   |
|                         | <ul style="list-style-type: none"> <li>ONEPLUSONEL2</li> </ul> | 1 + 1 L2 Protection for the client ports on 10GE XP and GE XP   |
|                         | <PROTID>   | Protection group identifier. Defaults to the protect port AID of the protection group. The identifier is a string that can have a maximum length of 32 characters.  |
|                         | <RVRTV>  | Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
|                         | <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul> | Does not revert service to original line after restoration.<br>Reverts service to original line after restoration.  |
|                         | <RVTM>   | Revertive time. Defaults to 5.0 minutes. The parameter type is REVERTIVE_TIME (revertive time).   |
|                         | <ul style="list-style-type: none"> <li>0.5 to 12.0</li> </ul>  | Revertive time is 0.5 to 12.0 minutes.  |

|          |   |
|----------|---|
| <PSDIRN> | Protection switch operation. Identifies the switching mode. Defaults to UNI.          |
|          | <b>Note</b> TXP_MR_10G and MXP_2.5G_10G cards do not support bidirectional switching. |
|          | Parameter type is UNI_BI (unidirectional and bidirectional switch operations).        |
| • BI     | Bidirectional protection switching  |
| • UNI    | Unidirectional protection switching   |

## 12.13 ENT-FFP-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Facility Protection Group for OC-3, OC-12, OC-48, OC-192, or OC768 (ENT-FFP-<OCN\_TYPE>) command creates optical 1+1 protection.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

#### Note

- The protect AID must not be provisioned with traffic.
- The working AID can be provisioned with traffic.
- PROTID is a string and can have a maximum length of 32 characters.
- Optimized 1+1 protection and related attributes are only applicable to the ONS 15454.
- The following parameters are supported in Software Release 6.0 and later: OPOTYPE, VRGRDTM, DTGRDTM, and RCGRDTM.
- The following 1+1 protection group rules apply to the MRC-12 card:
  - A 1+1 protection group can only be created between MRC-12 cards. You cannot create a 1+1 protection group between an MRC-12 card and an OC-48 card, for example.
  - A 1+1 protection group can be created only using the same port number. For example, a protection group cannot be created between Port 1 of Slot 5 and Port 4 of Slot 12 (assuming that Slot 5 and Slot 12 both contain MRC-12 cards).
  - A 1+1 protection group cannot be created between ports on the same card. For example, protection groups cannot be created between Port 1 of Slot 5 and Port 4 of Slot 5 (assuming that Slot 5 contains a MRC-12 card).
  - Both the cards in the protection group must be placed in the same type of slot. Both MRC-12 cards must be in drop slots (Slots 1 to 4, 14 to 17) or both cards must be in trunk slots (Slots 5 to 6, 12 to 13). You cannot create a protection group between an MRC-12 card in a drop slot and another MRC-12 card in a trunk slot.
- The following 1+1 protection group rules apply to the OC192-XFP cards:
  - A 1+1 protection group can be created between two OC192-XFP cards in trunk slots (Slots 5 to 6, 12 to 13).
  - A 1+1 protection group can be created between an OC192-XFP card and an OC192LR/STM64LH card in trunk slots (Slots 5 to 6, 12 to 13).

- The PROTOTYPE parameter is only applicable to optical DWDM cards.

Provisioning

**Input Format**

```
ENT-FFP-<OCN_TYPE>:[<TID>]:<WORK>,
<PROTECT>:<CTAG>:::[PROTOTYPE=<PROTOTYPE>],[PROTID=<PROTID>],
[RVRTV=<RVRTV>],[RVTM=<RVTM>],[PSDIRN=<PSDIRN>],[OPOTYPE=<OPOTYPE>],
[VRGRDTM=<VRGRDTM>],[DTGRDTM=<DTGRDTM>],[RCGRDTM=<RCGRDTM>][:];
```

**Input Example**

```
ENT-FFP-OC-3:PETALUMA:OC3-3-1-1,OC3-3-2-1:1:::PROTOTYPE=Y-CABLE,
PROTID=PROT_NAME,RVRTV=Y,RVTM=1.0,PSDIRN=BI,OPOTYPE=STANDARD,
VRGRDTM=0.5,DTGRDTM=1.0,RCGRDTM=1.0;
```

**Input Parameters**

|               |  |
|---------------|--|
| <PROTID>      | Protection group identifier. Defaults to the protect port AID of the protection group. If the name has an embedded double quote character, that double quote character has to be escaped with a backslash \". The double quotes are special characters that delimit the protection group name and they must be balanced (paired). PROTID is a string that has a maximum length of 32 characters. |
| <RVRTV>       | Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute).  |
| • N           | Does not revert service to original line after restoration.  |
| • Y           | Reverts service to original line after restoration.  |
| <RVTM>        | Revertive time. Defaults to 5.0 minutes. The parameter type is REVERTIVE_TIME (revertive time).  |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.   |
| <PSDIRN>      | Protection switch operation. Identifies the switch mode. The parameter type is UNI_BI (unidirectional and bidirectional switch operations)   |
| • BI          | Bidirectional protection switching   |
| • UNI         | Unidirectional protection switching  |
| <OPOTYPE>     | 1+1 protection type. Can be either standard or optimized 1+1 protection. The parameter type is ONE_PLUS_ONE (1+1 protection type).   |

|   |  |
|---|--|
| <ul style="list-style-type: none"> <li>Optimized</li> </ul> | Optimized 1+1.<br><b>Note</b> Only applicable to the ONS 15454. The port must be in Sonet mode.  |
| <ul style="list-style-type: none"> <li>Standard</li> </ul>  | Standard 1+1   |
| <VRGRDTM>   | Verification guard timer. Only applicable to optimized 1+1. The parameter type is VERIFICATION_GUARD_TIMER (optimized 1+1 verification guard timer). |
| <ul style="list-style-type: none"> <li>0.5</li> </ul>       | 500 ms   |
| <ul style="list-style-type: none"> <li>1.0</li> </ul>       | 1 second   |
| <DTGRDTM>   | Detection guard timer. Only applicable to optimized 1+1. The parameter type is DETECTION_GUARD_TIMER (optimized 1+1 detection guard timer).          |
| <ul style="list-style-type: none"> <li>0.0</li> </ul>       | 0 seconds  |
| <ul style="list-style-type: none"> <li>0.05</li> </ul>      | 50 ms  |
| <ul style="list-style-type: none"> <li>0.1</li> </ul>       | 100 ms   |
| <ul style="list-style-type: none"> <li>0.5</li> </ul>       | 500 ms   |
| <ul style="list-style-type: none"> <li>1.0</li> </ul>       | 1 second   |
| <ul style="list-style-type: none"> <li>2.0</li> </ul>       | 2 second   |
| <ul style="list-style-type: none"> <li>3.0</li> </ul>       | 3 seconds  |
| <ul style="list-style-type: none"> <li>4.0</li> </ul>       | 4 seconds  |
| <ul style="list-style-type: none"> <li>5.0</li> </ul>       | 5 seconds  |
| <RCGRDTM>   | Recovery guard timer. Only applicable to optimized 1+1. The parameter type is RECOVERY_GUARD_TIMER (optimized 1+1 detection guard timer).            |
| <ul style="list-style-type: none"> <li>0.0</li> </ul>       | 0 seconds  |
| <ul style="list-style-type: none"> <li>0.05</li> </ul>      | 50 ms  |
| <ul style="list-style-type: none"> <li>0.1</li> </ul>       | 100 ms   |
| <ul style="list-style-type: none"> <li>0.5</li> </ul>       | 500 ms   |
| <ul style="list-style-type: none"> <li>1.0</li> </ul>       | 1 second   |
| <ul style="list-style-type: none"> <li>2.0</li> </ul>       | 2 second   |
| <ul style="list-style-type: none"> <li>3.0</li> </ul>       | 3 seconds  |

| <ul style="list-style-type: none"> <li>6.0</li> </ul>       | 6 seconds  |
| <ul style="list-style-type: none"> <li>7.0</li> </ul>       | 7 seconds  |
| <ul style="list-style-type: none"> <li>8.0</li> </ul>       | 8 seconds  |
| <ul style="list-style-type: none"> <li>9.0</li> </ul>       | 9 seconds  |
| <ul style="list-style-type: none"> <li>10.0</li> </ul>      | 10 seconds   |

## 12.14 ENT-FOG

(Cisco ONS 15454) The Enter Fan-Out-Group (ENT-FOG) command creates the Fan-Out-Group.

**Usage Guidelines**

- This command is used to provision the CPT 50 panel and applied on the carrier packet transport (CPT) system.
- The FOG can be created on a PTSYS AID.
- A 10 GIGE interface provisioned on the CPT 50 panel must be attached when you create the FOG.
- Interfaces that are valid for a particular FOG can be attached.
- Interface attached to one of the FOG cannot be attached to any other FOG.

**Category**

## 12.15 ENT-FTPSERVER

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter FTP Server (ENT-FTPSERVER) command creates FTP server entries.

**Usage Guidelines**

- The default value of the TIMER, 0, denotes infinite timeout. The TIMER cannot be set with ENABLE=N.
- The FTP server entries are created on the gateway node only.

|  |  |          |   |          |  |          |   |  |   |         |  |

## 12.16 ENT-LMP-CTRL

(Cisco ONS 15454) The Enter Link Management Protocol Control Channel (ENT-LMP-CTRL) command creates an LMP control channel.

**Usage Guidelines** This command is only available on nodes where the LMP is available and has been enabled.

**Category** LMP

**Security** Provisioning

**Input Format** ENT-LMP-CTRL:[<TID>]:<SRC>:<CTAG>:::[LOCALPORT=<LOCALPORT>],[RE MOTENE=<RE MOTENE>],REMOTEIP=<REMOTEIP>,[HELLO=<HELLO>],[HELLOMIN=<HELLOMIN>],[HELLOMAX=<HELLOMAX>],[DEAD=<DEAD>],[DEADMIN=<DEADMIN>],[DEADMAX=<DEADMAX>]:[<PST>][,<SST>];

**Input Example**

```
ENT-LMP-CTRL:PETALUMA:CTRL-123:704:::LOCALPORT=FAC-1-1-1,
RE MOTENE=15.15.15.115,RE MOTEIP=126.0.0.1,HELLO=500,
HELLOMIN=300,HELLOMAX=5000,DEAD=12000,DEADMIN=2000,
DEADMAX=20000:OOS,DSBLD;
```

**Input Parameters**

|   |  |
|---|--|
| <SRC>   | The LMP control channel AID value  |
| <ul style="list-style-type: none"> <li>CTRL-ALL</li> <li>CTRL-{1-4}</li> </ul>  | <ul style="list-style-type: none"> <li>Specifies all the control channels</li> <li>Specifies an individual control channel</li> </ul>  |
| <LOCALPORT>   | LOCALPORT is the pathway that the LMP control channel will use to send and receive messages.   |
| <RE MOTENE>   | Remote IP address used by the far-end LMP control channel  |
| <RE MOTEIP>   | Remote IP address with which the LMP control channel sends and receives messages   |
| <HELLO>   | The time interval in which the LMP protocol sends HELLO messages   |
| <HELLOMIN>  | Minimum hello time within which the LMP control channels can send out HELLO messages to the remote node  |
| <HELLOMAX>  | The maximum amount of time that the LMP control channel can wait between HELLO messages  |
| <DEAD>  | Time interval an LMP control channel will wait for a HELLO message from the remote side before listing the control channel as down   |
| <DEADMIN>   | The minimum amount of time that an LMP control channel can wait before listing the control channel status as down  |
| <DEADMAX>   | The maximum amount of time that the LMP control channel can wait before listing the control channel as down  |
| <PST>   | Primary state. This parameter indicates the current overall service condition of an entity.  |
| <ul style="list-style-type: none"> <li>IS</li> <li>OOS</li> </ul>   | <ul style="list-style-type: none"> <li>In service</li> <li>Out of service</li> </ul>   |
| <SST>   | Secondary state. This parameter provides additional information pertaining to PST and PSTQ.  |
| <ul style="list-style-type: none"> <li>AINS</li> <li>DSBLD</li> <li>LPBK</li> <li>MEA</li> <li>MT</li> <li>OOG</li> <li>SWDL</li> <li>UAS</li> <li>UEQ</li> </ul> | <ul style="list-style-type: none"> <li>Automatic in-service</li> <li>Disabled</li> <li>Loopback</li> <li>Mismatch of equipment and attributes</li> <li>Maintenance mode</li> <li>Out of group</li> <li>Software downloading</li> <li>Unassigned</li> <li>Unequipped</li> </ul> |

## 12.17 ENT-LMP-DLINK

(Cisco ONS 15454) The Enter Link Management Protocol Data Link (ENT-LMP-DLINK) command creates an LMP data link.

### Usage Guidelines

This command can only be used on nodes where the LMP protocol is available and enabled.

### Category

LMP

### Security

Provisioning

### Input Format

```
ENT-LMP-DLINK:[<TID>]:<SRC>:<CTAG>:::[LINKTYPE=<LINKTYPE>],TELINK=<TELINK>,
REMOTEID=<REMOTEID>;
```

### Input Example

```
ENT-LMP-DLINK:PETALUMA:FAC-14-1-1:704:::LINKTYPE=PORT,TELINK=TLNK-45,
REMOTEID=646631;
```

### Input Parameters

|   |  |
|---|--|
| <SRC>   | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
| <LINKTYPE>  | The type of LMP data link  |
| <ul style="list-style-type: none"> <li>• PORT</li> <li>• COMPONENT</li> </ul> | Port data link<br>Component data link  |
| <TELINK>  | Maps LMP data links to LMP TE links  |
| <REMOTEID>  | The remote LMP data link ID  |

## 12.18 ENT-LMP-TLINK

(Cisco ONS 15454) The Enter Link Management Protocol Traffic Engineering Link (ENT-LMP-TLINK) command creates an LMP Traffic Engineering (TE) link.

### Usage Guidelines

This command can only be used on nodes where LMP is available and enabled.

### Category

LMP

### Security

Provisioning

**Input Format**

```
ENT-LMP-TLINK:[<TID>]:<SRC>:<CTAG>:::REMOTEID=<REMOTEID>,
REMOTETE=<REMOTETELINK>, [MUXCAP=<MUXCAP>]:[<PST>[,<SST>]];
```

**Input Example**

```
ENT-LMP-TLINK:PETALUMA:TLINK-123:704:::REMOTEID=15.15.15.115,REMOTETE=123,
MUXCAP=LAMBDA:OOS,DSBLD;
```

**Input Parameters**

|  |  |
|--|--|
| <SRC>  | LMP TE link AID values   |
| <ul style="list-style-type: none"> <li>• TLINK-ALL</li> <li>• TLINK-{1-256}</li> </ul>   | <ul style="list-style-type: none"> <li>Specifies all the TE links.</li> <li>Specifies an individual TE link.</li> </ul>  |
| <REMOTEID>   | Remote node ID associated with the LMP TE link   |
| <REMOTETE>   | Remote ID used by the far-end LMP TE Link  |
| <MUXCAP>   | The muxponder capability of the LMP TE link  |
| <ul style="list-style-type: none"> <li>• PKTSWITCH1</li> <li>• PKTSWITCH2</li> <li>• PKTSWITCH3</li> <li>• PKTSWITCH4</li> <li>• LAYER2</li> <li>• TDM</li> <li>• LAMBDA</li> <li>• FIBER</li> </ul> | <ul style="list-style-type: none"> <li>Packet Switching 1</li> <li>Packet Switching 2</li> <li>Packet Switching 3</li> <li>Packet Switching 4</li> <li>Layer 2 switching</li> <li>Time-division multiplexing (TDM) switching</li> <li>Lambda switching</li> <li>Fiber switching</li> </ul> |
| <PST>  | Primary state. This parameter indicates the current overall service condition of an entity.  |
| <ul style="list-style-type: none"> <li>• IS</li> <li>• OOS</li> </ul>  | <ul style="list-style-type: none"> <li>In service</li> <li>Out of service</li> </ul>   |
| <SST>  | Secondary state. This parameter provides additional information pertaining to PST and PSTQ.  |
| <ul style="list-style-type: none"> <li>• AINS</li> <li>• DSBLD</li> <li>• LPBK</li> <li>• MEA</li> <li>• MT</li> <li>• OOG</li> <li>• SWDL</li> <li>• UAS</li> <li>• UEQ</li> </ul>                  | <ul style="list-style-type: none"> <li>Automatic in-service</li> <li>Disabled</li> <li>Loopback</li> <li>Mismatch of equipment and attributes</li> <li>Maintenance mode</li> <li>Out of group</li> <li>Software downloading</li> <li>Unassigned</li> <li>Unequipped</li> </ul>             |

## 12.19 ENT-LNK

(ONS 15454) The Enter Optical Link (ENT-LNK) command creates an optical link between two optical connection points.

The optical links can be established between:

- Two optical transport sections (OTSs)
- Two optical multiplexing sections (OMSs) with the same band
- Two optical channels (OCHs) with the same wavelength

### Usage Guidelines

The created optical link must be between points belonging to the same ring direction. An optical link between two OMSs or between two OCHs can be HITLESS if the connection is between two points from one drop point to a consecutive add point in the logical link. When this command is used to create an optical link between two OCH ports, where the first port belongs to an OCH filter and the second port is an OCH trunk, the second port should be tuned to the same wavelength of the OCH filter if it has not been set yet.

### Category

DWDM

### Security

Provisioning

### Input Format

ENT-LNK:[<TID>]:<FROM>,<TO>:<CTAG>:::[<PST>[,<SST>]];

### Input Example

```
ENT-LNK:PENNGROVE:CHAN-6-2,CHAN-13-1-RX:114:::OOS,AINS;
ENT-LNK:PENNGROVE:CHAN-6-3-1,CHAN-13-1-RX:114:::OOS,AINS;
ENT-LNK:PENNGROVE:CHAN-6-19-1,CHAN-13-1-RX:114:::OOS,AINS;
ENT-LNK:PENNGROVE:BAND-6-1-TX,BAND-13-1-RX:114:::OOS,AINS;
ENT-LNK:PENNGROVE:LINE-6-1-TX,LINE-13-1-RX:114:::OOS,AINS;
```

### Input Parameters

|         |  |
|---------|--|
| <FROM>  | Identifier at one end of the optical link from the “26.8 CHANNEL” section on page 26-23, “26.4 BAND” section on page 26-21, or “26.19 LINE” section on page 26-45.       |
| <TO>    | Identifier at the other end of the optical link from the “26.8 CHANNEL” section on page 26-23, “26.4 BAND” section on page 26-21, or “26.19 LINE” section on page 26-45. |
| <PST>   | Primary state of the entity. The parameter type is PST (primary state). Indicates the current overall service condition of an entity.                                    |
| • IS    | In Service   |
| • OOS   | Out of Service   |
| <SST>   | Secondary state of the entity. The parameter type is SST (secondary state). Provides additional information pertaining to PST and PSTQ.                                  |
| • AINS  | Automatic in-service   |
| • DSBLD | Disabled   |

|        |                                      |
|--------|--------------------------------------|
| • LPBK | Loopback                             |
| • MEA  | Mismatch of equipment and attributes |
| • MT   | Maintenance mode                     |
| • OOG  | Out of group                         |
| • SWDL | Software downloading                 |
| • UAS  | Unassigned                           |
| • UEQ  | Unequipped                           |

## 12.20 ENT-LNKTERM

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The ENT-LNKTERM command creates a provisionable patchcord (PP) termination (virtual link) on a physical interface. A user-provisioned link is needed when the data communications channel/generic communications channel (DCC/GCC) is transparently carried over several physical links, and the physical link cannot be automatically discovered by Open Shortest Path First (OSPF) due to lack of control-channel termination or non-support of SONET by the link.

### Usage Guidelines

The error message “Provisioning Rules Failed” is returned if the provisioning rules are not satisfied. The following rules must be satisfied while creating a provisionable patchcord termination on a physical interface:

- For a SONET port:
  - A Section DCC (SDCC) termination must be provisioned. If it is the protect facility in a 1+1 protection group, the corresponding working facility must have an SDCC termination provisioned.
  - If the port is part of a BLSR, the SDCC must be provisioned on all of the working ports of the BLSR.
- For a TXP/MXP trunk port, either ITU-T G.709 must be enabled or the payload type must be non-SONET/SDH.
- For a TXP/MXP client port, a card must be operating in the transparent termination mode.
- For a DWDM OCH port:
  - If the OC-N interface is part of a 1+1 protection group, a separate PP termination can be provisioned on the other (working/protect) interface also.
  - If the client interface is part of a Y-cable protection group, a separate PP termination can be provisioned on the other (working/protect) interface also.
  - If the MXP/TXP trunk interface is part of a splitter protection group, a separate PP termination can be provisioned on the other (working/protect) interface also.
  - If REMOTENODE is specified as an IP address (or a node name that can be resolved by the gateway network element [GNE]) that is different from the local node’s IP address/name, this termination is intended to be a part of an internode provisionable patchcord.
  - All endpoints of the provisionable patchcord need to be provisioned correctly (on the local and/or remote node) for it to show as UP in OSPF.
  - Misconfigured or partially configured provisionable patchcords will not cause alarms or events to be generated at either end of the link.

- No two provisionable patchcord terminations on a node can be configured to have the same remote node PP termination information (for example, the combination of values for REMOTENODE and REMOTELNKTERMAID attributes for a PP termination must be unique on a single node).
- All provisionable patchcord terminations on one physical interface must have their remote terminations on a single remote node.
- The command does not accept multiple and ALL style AIDs.
- (R9.6.0) The number of PP terminations and the identifier range is limited to 146.
- (R9.6.0.3) The number of PP terminations is limited to 146.

**Category**

Provisionable Patchcords

**Security**

Provisioning

**Input Format**

```
ENT-LNKTERM:[<TID>]:<AID>:<CTAG>:::PORT=<PORT>,
[REMOTENODE=<REMOTENODE>],REMOTELNKTERMID=<REMOTELNKTERMID>;
```

**Input Example**

```
ENT-LNKTERM::LNKTERM-1:CTAG:::PORT=FAC-5-1,REMOTENODE=172.20.208.225,
REMOTELNKTERMID=20;
```

**Input Parameters**

|                                |  |
|--------------------------------|--|
| <b>&lt;AID&gt;</b>             | Access identifier from the <a href="#">“26.21 LNKTERM”</a> section on <a href="#">page 26-53</a> . Indicates a link (provisionable patchcord) termination on the local node. For R9.6.0, the integer value can be within the range of 1 to 146. For R9.6.0.3, the integer value can be within the range of 1 to 65535.                   |
| <b>&lt;PORT&gt;</b>            | The local port corresponding to this provisionable patchcord termination from the <a href="#">“26.8 CHANNEL”</a> section on <a href="#">page 26-23</a> .   |
| <b>&lt;REMOTENODE&gt;</b>      | The node where the other end of the provisionable patchcord resides. This can be an IP address or a valid TID. Defaults to the IP address of the local node/existing value. REMOTENODE is a string.  |
| <b>&lt;REMOTELNKTERMID&gt;</b> | The corresponding provisionable patchcord termination on the remote node (as specified by the REMOTENODE parameter). Integer value within the range of 1 to 65535. Defaults to existing value. For R9.6.0, the integer value can be within the range of 1 to 146. For R9.6.0.3, the integer value can be within the range of 1 to 65535. |

## 12.21 ENT-MA-CFM

(Cisco ONS 15454) The Enter Maintenance Association Connectivity Fault Management (ENT-MA-CFM) command adds the maintenance association on the card.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.
- The ALL AID is invalid for this command.

### Category

Equipment

### Security

Provision

### Input Format

ENT-MA-CFM:[<TID>]:<AID>:<CTAG>:::MANAME=<MANAME>,SVLANID=<SVLANID>,[<CCENABLE=CCENABLE>];

### Input Example

ENT-MA-CFM:454-156:SLOT-1:1:::MANAME=MANAME,SVLANID=4,CCENABLE=Y;

### Input Parameters

|            |   |
|------------|---|
| <AID>      | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.  |
| <MANAME>   | Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.   |
| <SVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <CCENABLE> | Enable or disable Continuous Check messaging  |
| • Y        | Enable  |
| • N        | Disable   |

## 12.22 ENT-MD-CFM

(Cisco ONS 15454) The Enter Maintenance Domain Connectivity Fault Management (ENT-MD-CFM) command adds the maintenance domain on the card.

### Usage Guidelines

- The “ALL” AID is invalid for this command.
- This command is applicable only to GE\_XP and 10GE\_XP cards.

- The card should be in Layer2 over DMDM mode.

**Category**

Equipment

**Security**

Provisioning

**Input Format**

ENT-MD-CFM:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::MDNAME=&lt;MANAME&gt;,LEVEL=&lt;LEVEL&gt;;

**Input Example**

ENT-MD-CFM:454-156:SLOT-1:1::MDNAME=MDNAME,LEVEL=5;

**Input Parameters**

|          |  |
|----------|--|
| <AID>    | Access identifier from the “26.15 EQPT” section on page 26-39.   |
| <MDNAME> | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters. |
| <LEVEL>  | This indicates the level of the maintenance domain. The value ranges from 0 to 7.                      |

## 12.23 ENT-MDMAMAP-CFM

(Cisco ONS 15454) The Enter Maintenance Domain and Maintenance Association mapping Connectivity Fault Management (ENT-MDMAMAP-CFM) command creates the maintenance domain and maintenance association mapping.

**Usage Guidelines**

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

**Category**

Equipment

**Security**

Configuration

**Input Format**

ENT-MDMAMAP-CFM:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::MDNAME=&lt;MANAME&gt;,SVLANID=&lt;SVLAN ID&gt;,MANAME=&lt;MANAME&gt;;

**Input Example**

ENT-MDMAMAP-CFM::SLOT-17:1::MDNAME=CISCO,SVLANID=6,MANAME=MA\_1;

| Input Parameters |   |
|------------------|---|
| <AID>            | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.  |
| <MDNAME>         | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters.  |
| <MANAME>         | Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.   |
| <SVLANID>        | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 12.24 ENT-MEP-CFM

(Cisco ONS 15454) The Enter Maintenance End Point Connectivity Fault Management (ENT-MEP-CFM) command creates the maintenance end points on the port.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Ports

### Security

Provisioning

### Input Format

ENT-MEP-CFM:[<TID>]:<AID>:<CTAG>::SVLANID=<SVLANID>,MDNAME=<MDNAME>,MPID=<MPID>;

### Input Example

ENT-MEP-CFM::ETH-12-3-1:1::SVLANID=100,MDNAME=MD2,MPID=20;

| Input Parameters |   |
|------------------|---|
| <AID>            | Access identifier from the <a href="#">“26.16 ETH”</a> section on page 26-41.   |
| <SVLANID>        | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <MDNAME>         | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters.  |
| <MPID>           | Maintenance Point Identifier. It is an integer.   |
| <LEVEL>          | This indicates the level of the maintenance domain. The value ranges from 0 to 7.   |

## 12.25 ENT-MIP-CFM

(Cisco ONS 15454) The Enter Maintenance Intermediate Point Connectivity Fault Management (ENT-MIP-CFM) command creates the maintenance intermediate points on the port.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Ports

### Security

Provisioning

### Input Format

ENT-MIP-CFM:[<TID>]:<AID>:<CTAG>::VLANID=<VLANID>,LEVEL=<LEVEL>;

### Input Example

ENT-MIP-CFM::ETH-1-1-1:1::VLANID=2,LEVEL=5;

### Input Parameters

|          |   |
|----------|---|
| <AID>    | Access identifier from the <a href="#">“26.16 ETH” section on page 26-41</a> .  |
| <VLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <LEVEL>  | This indicates the level of the maintenance domain. The value ranges from 0 to 7.   |

## 12.26 ENT-NNI-ETH

(Cisco ONS 15454) The Enter Network-to-Network Interface Ethernet (ENT-NNI-ETH) command adds a new network-to-network interface service provider VLAN ID to the NNI interface of an L2 Ethernet port.

### Usage Guidelines

- The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use a retrieve command to obtain the current value.
- If the AID is invalid, an IIAC error message is returned.
- The ALL AID is invalid for this command.
- The L2 Ethernet port must be present when this command is executed.
- The command will be denied if the service provider VLAN ID is present.

### Category

---

**Input Example** ENT-NNI-ETH:PETALUMA:ETH-1-1-1:1::1010;

---

|                         |           |   |
|-------------------------|-----------|---|
| <b>Input Parameters</b> | <AID>     | Ethernet AIDs are used to access the L2 Ethernet ports. Access identifier from the “ <a href="#">26.16 ETH</a> ” section on <a href="#">page 26-41</a> .                            |
|                         | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

---

## 12.27 ENT-NNI-CHGRP

(Cisco ONS 15454) The Enter Channel Group Network-to-Network Interface (ENT-NNI-CHGRP) command adds the NNI S-VLAN ID for the NNI of a channel group.

---

### Usage Guidelines

- The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use the RTRV-ETH command to obtain the current value.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

|                         | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 12.28 ENT-OCHCC

(Cisco ONS 15454) The Enter Optical Channel Client Connection (ENT-OCHCC) command allocates an OCH client connection. An OCH client connection is the portion of the circuit that connects the end client ports using trail ports to an OCH network connection circuit. This allocates the portion of the circuit between the OCH filter port to the TXP/MXP or ITU-T client port.

### Usage Guidelines

- The client port FAC AID must be specified in order to allocate a client channel inside the node.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.
- On OTU1 and 4GFC ports, time slots are not applicable.
- ODU0START and ODU0END parameters are applicable only on GIGE and 1GFC payloads on the AR-XPE card only.

### Category

DWDM

### Security

Provisioning

### Input Format

ENT-OCHCC[:<TID>]:<AID>:<CTAG>[:<<CTID= <CKTID>,<CMDMDE= <CMDMDE>,<ODU1S  
TART= <ODU1START>,<ODU1END= <ODU1END>,<TSSTART= <TSSTART>,<TSEND= <TSEND  
>,<ODU0START= <ODU0START>,<ODU0END= <ODU0END>]:<PST>[:<SST>];

### Input Example

```
ENT-OCHCC::VFAC-3-2-1:123::ODU1START=1,ODU1END=1,TSSTART=1,TSEND=16;
ENT-OCHCC::VFAC-2-1-1:1::ODU0START=1,ODU0END=1;
```

### Input Parameters

|         |  |
|---------|--|
| <AID>   | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on <a href="#">page 26-42</a> . AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID.                  |
| <CKTID> | Cross-connect ID. The default is Blank or None. It is a string of ASCII characters. The maximum length is 48. If CKTID is empty or null the CKTID field will not appear. |

|             |   |
|-------------|---|
| <CMDMDE>    | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| • FRCD      | Force the system to override a state in which the command would normally be denied.   |
| • NORM      | Execute the command normally. Do not override any conditions that may make the command fail.  |
| <ODU1START> | ODU1 Start  |
| <ODU1END>   | ODU1 End  |
| <TSSSTART>  | Time Slot Start   |
| <TSEND>     | Time Slot End   |
| <ODU0START> | ODU0 Start.   |
| <ODU0END>   | ODU0 End.   |
| <PST>       | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity. The default is IS.  |
| • IS        | In service  |
| • OOS       | Out of service  |
| <SST>       | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. The default is AINS.  |
| • AINS      | Automatic in-service  |
| • DSBLD     | Disabled  |
| • LPBK      | Loopback  |
| • MEA       | Mismatch of equipment and attributes  |
| • MT        | Maintenance mode  |
| • OOG       | Out of group  |
| • SWDL      | Software downloading  |
| • UAS       | Unassigned  |
| • UEQ       | Unequipped  |

## 12.29 ENT-OCHNC

(Cisco ONS 15454) The Enter Optical Channel Network Connection (ENT-OCHNC) command allocates an OCH network connection.

### Usage Guidelines

- Two CHANWL end points must be specified in order to allocate a wavelength channel inside the node. According to the CHANWL specified, the channel allocated can be a passthrough.
- The default values for all optional parameters are NE default values. These values might not be the current value for a parameter. Use a retrieve command to obtain the current value.

**Category** DWDM

**Input Format** ENT-OCHNC:[<TID>]:<SRC>,<DST>:<CTAG>::[<WCT>]:[CKTID=<CKTID>],[CMDMDE=<CMDMDE>],[WLOPWR=<WLOPWR>],[VOAATTN=<VOAATTN>]:[<PST>[,<SST>]];

**Input Example**

```
ENT-OCHNC:VA454-22:LINEWL-1-3-TX-1530.33,CHAN-4-1-RX:116::1WAY:
CKTID=CIRCUIT,CMDMDE=FRCD:OOS,DSBLD;

ENT-OCHNC:VA454-22:LINEWL-1-3-TX-1530.33&CHAN-4-1-TX,
CHAN-4-1-RX&LINEWL-1-3-RX-1530.33:116::2WAYDCN:
CKTID="DCN CIRCUIT",CMDMDE=FRCD:OOS,DSBLD;

ENT-OCHNC:VA454-22:LINEWL-1-9-TX-1530.33,LINEWL-1-11-RX-1530.33:116::DIAG:
WLOPWR=1.0,VOAATTN=1.0;
```

|                         |   |  |
|-------------------------|---|--|
| <b>Input Parameters</b> | <SRC>   | Source access identifier from the “ <a href="#">26.8 CHANNEL</a> ” section on page 26-23. In 2-way wavelength connection sources both directions need to be indicated.   |
|                         | <DST>   | Destination access identifier from the “ <a href="#">26.20 LINEWL</a> ” section on page 26-49. In 2-way wavelength connection sources both directions need to be indicated.  |
|                         | <WCT>   | Wavelength connection type. The parameter type is WCT. The default is 1WAY.  |
|                         | <ul style="list-style-type: none"> <li>• 1WAY</li> <li>• 2WAY</li> <li>• DIAG</li> <li>• 2WAYDCN</li> </ul> | <ul style="list-style-type: none"> <li>A unidirectional wavelength connection for one specified ring direction.</li> <li>A bidirectional wavelength connection for both the ring directions.</li> <li>A unidirectional maintenance wavelength connection inside 40-WXC-C cards.</li> <li>A bidirectional wavelength connection for both the ring directions that is also used to carry the data communication channels.</li> </ul> |
|                         | <CKTID>   | Cross-connect ID. The default is Blank or None. It is a string of ASCII characters. The maximum length is 48. If CKTID is empty or null the CKTID field will not appear.   |
|                         | <CMDMDE>  | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states.  |
|                         | <ul style="list-style-type: none"> <li>• FRCD</li> <li>• NORM</li> </ul>                                    | <ul style="list-style-type: none"> <li>Force the system to override a state in which the command would normally be denied.</li> <li>Execute the command normally. Do not override any conditions that may make the command fail.</li> </ul>  |
|                         | <WLOPWR>  | The value of calibrated output power that the VOA is going to set as a result of its attenuation. WLOPWR is a float.   |

|           |  |
|-----------|--|
| <VOAATTN> | The value of calibrated attenuation for the VOA expressed in dBm. The range is 0.0 to +30.0. VOAATTN is a float.                   |
| <PST>     | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity. The default is IS.   |
| • IS      | In service   |
| • OOS     | Out of service   |
| <SST>     | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. The default is AINS. |
| • AINS    | Automatic in-service   |
| • DSBLD   | Disabled   |
| • LPBK    | Loopback   |
| • MEA     | Mismatch of equipment and attributes   |
| • MT      | Maintenance mode   |
| • OOG     | Out of group   |
| • SWDL    | Software downloading   |
| • UAS     | Unassigned   |
| • UEQ     | Unequipped   |

## 12.30 ENT-OPMODE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Operating Mode (ENT-OPMODE) command creates operating mode on a given client or trunk or peer card.

### Usage Guidelines

- Enter the operating mode that is being created.
- Enter the client and trunk port numbers while creating the operating mode.
- Enter the rate on which the operating mode is created.
- PEERSLOTS parameter is applicable only on 100G-LC-C, 10x10G-LC, and CFP-LC cards. PEERSLOTS parameter values should be specified as SLOT-<SLOTNO>.
- RATE parameter is not applicable on 100G-LC-C, 10x10G-LC, and CFP-LC cards.
- In Low-latency and RGN-10G modes, one of the port is represented as Client and the other as Trunk while both are represented as trunks on CTC.
- The OPMODE parameter is a mandatory parameter for all the operating modes on the AR-MXP, AR-XP, AR-XPE, 10x10G-LC, 100G-LC-C, and CFP-LC cards.
- CLIENTPORTS and TRUNKPORTS are the mandatory parameters for all the operating modes on the AR-MXP, AR-XP, and AR-XPE cards.
- CLIENTPORTS and TRUNKPORTS are optional parameters for few operating modes on the 10x10G-LC, 100G-LC-C, and CFP-LC cards. Both these parameters are used in TXP-10G and RGN-10G modes on the 10x10G-LC Card. The CLIENTPORTS parameter is used in CFP-TXP and CFP-MXP operating modes on the CFP-LC card.
- RATE is a mandatory parameter for HIGH rate operating modes on the AR-MXP, AR-XP, and AR-XPE cards.

- CTMAP is a mandatory parameter only in MXP(P)-DME High rate modes on the AR-MXP, AR-XP, and AR-XPEcards.
- PEERSLOTS is a mandatory parameter only in dual card operating modes on the 10x10G-LC, 100G-LC-C, and CFP-LC cards. PEERSLOTS parameter value is of syntax SLOT[-SH]-<SLOTNO>.
- Following are the mandatory parameters for the operating modes on the 10x10G-LC, 100G-LC-C, and CFP-LC cards:
  - OPMODE, CLIENTPORTS, and TRUNKPORTS for TXP-10G, RGN-10G, and LOW-LATENCY operating modes on the 10x10G-LC card.
  - OPMODE parameter for TXP-100G operating mode on the 100G-LC-C card.
  - OPMODE and PEERSLOTS parameters for RGN-100G dual card operating mode on the 100G-LC-C card along with one peer 100G-LC-C and MXP-10X10G dual card operating mode among with two peer cards 10x10G-LC and 100G-LC-C.
  - OPMODE, CLIENTPORTS, and PEERSLOTS parameters for CFP-TXP dual card operating mode between CFP-LC and 100G-LC-C cards.
  - OPMODE and PEERSLOTS parameters for CFP-MXP dual card operating mode between CFP-LC and 100G-LC-C cards.

|                         |   |       |                        |          |   |              |  |            |   |           |  |           |  |           |   |           |  |          |                                    |           |                                 |

| • TXPP-MR               | Protected Muti-rate Transponder   |       |                        |          |   |              |  |            |   |           |  |           |  |           |   |           |  |          |                                    |           |                                 |

|                 |   |
|-----------------|---|
| • MXP-DME       | Unprotected Data Muxponder  |
| • MXPP-DME      | Protected Data Muxponder  |
| • MXP-MR        | Unprotected Multi-Rate Muxponder  |
| • MXPP-MR       | Protected Multi-Rate Muxponder  |
| • MXP-4x25-10G  | OC48/OTU1 Unprotected Muxponder   |
| • MXPP-4x25-10G | OC48/OTU1 Protected Muxponder   |
| • MXP-VDC-10G   | Video Muxponder (without Drop & Continue)   |
| • RGN           | Regenerator Mode in AR-XP or AR-MXP cards   |
| • LOW-LATENCY   | Low latency opmode is supported only on 10x10G-LC card.                               |
| <TRUNKPORTS>    | The trunk port(s) on which operating mode being entered                               |
| <PEERSLOTS>     | Peer Card slot number.  |
| <CLIENTPORTS>   | The client port(s) on which operating mode is being entered                           |
| <RATE>          | The rate on which the operating mode is created                                       |
| • HIGH          | High rate (>5G)   |
| • LOW           | Low rate (<5G)  |
| <CTMAP>         | (Optional) The client to trunk ratio that will be used while creating operating mode  |
| • ONE-ONE       | 1 Client to 1 Trunk used in TXP-MR-LOW, TXP-MR-HIGH, RGN-LOW and RGN-HIGH modes       |
| • ONE-TWO       | 1 Client to 2 Trunks used in TXPP-MR-LOW mode   |
| • THREE-ONE     | 3 Clients to 1 Trunk used in Video Muxponder mode                                     |
| • FOUR-ONE      | 4 Clients to 1 Trunk used in MXP-4x2.5-10G, MXP-DME-HIGH modes                        |
| • FOUR-TWO      | 4 Clients to 2 Trunks used in MXPP-4x2.5-10G and MXPP-DME-HIGH modes                  |
| • EIGHT-ONE     | 8 Clients to 1 Trunk used in MXP-DME-HIGH mode  |
| • EIGHT-TWO     | 8 Clients to 2 Trunks used in MXPP-DME-HIGH mode                                      |
| • N-ONE         | N Clients to 1 Trunk where N=2,3,4,5,6,7,8 used in MXP-MR-LOW and MXP-MR-HIGH modes   |
| • N-TWO         | N Clients to 2 Trunks where N=2,3,4,5,6,7,8 used in MXPP-MR-LOW or MXPP-MR-HIGH modes |

## 12.31 ENT-QNQ-CHGRP

(Cisco ONS 15454) The Enter Channel Group QinQ (ENT-QNQ-CHGRP) command adds the IEEE 802.1Q tunneling (QinQ) relationship between the CE-VLAN and the S-VLAN for Gigabit Ethernet uniport provisioning associated to a channel group.

### Usage Guidelines

- The default values for all optional parameters are NE default values, but these values might not be the current value for a parameter. Use the RTRV-ETH command to obtain the current value.
- If the AID is invalid, an IIAC (Invalid AID) error message is returned.
- The ALL AID is invalid for this command.

**Category** Channel Group

**Security** Provisioning

**Input Format** ENT-QNQ-CHGRP:[<TID>]:<AID>:<CTAG>::<FIRST\_CE\_VLAN\_ID>,<LAST\_CE\_VLAN\_ID>,<S\_VLAN\_ID>:[RULE=<RULE>],[INTERNALVLAN=<INTERNAL\_VLAN\_ID>],[INGRESSCOS=<INGRESSCOS>][:];

**Input Example** ENT-QNQ-CHGRP:CISCO:CHGRP-1-1:1::10,11,100:RULE=ADD;

|                         |  |   |
|-------------------------|--|---|
| <b>Input Parameters</b> | <AID>  | Access identifier from the “26.9 CHGRP” section on page 26-26.  |
|                         | <FIRSTCEVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.         |
|                         | <LASTCEVLANID>   | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.         |
|                         | <SVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.         |
|                         | <RULE>   | Used to represent the rules allowed for the VLAN tagging operations. The default value is ADD.  |
|                         | <ul style="list-style-type: none"> <li>• ADD</li> </ul>        | The S-VLAN tag is added to the CE-VLAN tag.   |
|                         | <ul style="list-style-type: none"> <li>• XLTE</li> </ul>       | The S-VLAN tag replaces the CE-VLAN tag (single Q).   |
|                         | <ul style="list-style-type: none"> <li>• XLTE-ADD</li> </ul>   | XLTE and ADD rule applied together. This rule request to supply an internal S-VLAN. First the Internal VLAN substitutes the Customer VLAN, then Service Provider VLAN TAG (S-VLAN) is added |
|                         | <ul style="list-style-type: none"> <li>• DOUBLE-ADD</li> </ul> | ADD rule applied two times. This rule request to supply an internal S-VLAN. First the Internal VLAN is added, then Service Provider VLAN TAG (S-VLAN) is added to have a double tag         |
|                         | <INTERNAL_VLAN_ID>   | Internal VLAN ID.   |
|                         | <INGRESSCOS>   | Identifies the COS value set in the S-VLAN tag.   |
|                         | <ul style="list-style-type: none"> <li>• 0 to 7</li> </ul>     | Set a Cos value   |
|                         | <ul style="list-style-type: none"> <li>• DSCP</li> </ul>       | The COS is set according to DSCP to COS mapping table.  |
|                         | <ul style="list-style-type: none"> <li>• TRUST</li> </ul>      | Use the Customer COS  |
|                         | <ul style="list-style-type: none"> <li>• VLAN</li> </ul>       | The COS provisioned on CVLAN basis (QinQ selective mode)  |

## 12.32 ENT-QNQ-ETH

(Cisco ONS 15454) The Enter QinQ Ethernet (ENT-QNQ-ETH) command enters a new IEEE 802.1Q tunneling (QinQ) relationship between the CE-VLAN and S-VLAN for Gigabit Ethernet uniport provisioning associated to an L2 Ethernet port.

### Usage Guidelines

- The default values for all optional parameters are NE default values, but these values may not be the current value for a parameter. Use a retrieve command to obtain the current value.
- If the AID is invalid, an IIAC error message is returned.
- The ALL AID is invalid for this command.
- The L2 Ethernet port must be defined before executing this command or the command will be denied.
- The command will be denied if the CE-VLAN-ID and S-VLAN-ID relationship is defined before the L2 Ethernet port is defined.

### Category

Ethernet

### Security

Provisioning

### Input Format

```
ENT-QNQ-ETH:[<TID>]:<AID>:<CTAG>::<FIRSTCEVLANID>,<LASTCEVLANID>,<S_VLAN_ID>[:RULE=<RULE>],[INTERNALVLAN=<INTERNAL_VLAN_ID>],[INGRESSCOS=<INGRESSCOS>][:];
```

### Input Example

```
ENT-QNQ-ETH:PETALUMA:ETH-1-1-1:1::10,11,100:RULE=ADD;
```

### Input Parameters

|                 |   |
|-----------------|---|
| <AID>           | Ethernet AIDs are used to access the L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH” section on page 26-41</a> .  |
| <FIRSTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <LASTCEVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <SVLANID>       | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

|   |  |
|---|--|
| <RULE>  | Used to represent the rules allowed for the VLAN tagging operations. The default value is ADD.   |
| <ul style="list-style-type: none"> <li>• ADD</li> <li>• XLTE</li> <li>• XLTE-ADD</li> </ul> | <p>The S-VLAN tag is added to the CE-VLAN tag.</p> <p>The S-VLAN tag replaces the CE-VLAN tag (single Q).</p> <p>XLTE and ADD rule applied together. This rule request to supply an internal S-VLAN. First the Internal VLAN substitutes the Customer VLAN, then Service Provider VLAN TAG (S-VLAN) is added</p> |
| <ul style="list-style-type: none"> <li>• DOUBLE-ADD</li> </ul>                              | ADD rule applied two times. This rule request to supply an internal S-VLAN. First the Internal VLAN is added, then Service Provider VLAN TAG (S-VLAN) is added to have a double tag  |
| <INTERNAL_VLAN_ID>  | Internal VLAN ID   |
| <INGRESSCOS>  | Identifies the COS value set in the S-VLAN tag.  |
| <ul style="list-style-type: none"> <li>• 0 to 7</li> <li>• TRUST</li> <li>• VLAN</li> </ul> | <p>Set a Cos value</p> <p>Use the Customer COS</p> <p>The COS provisioned on CVLAN basis (QinQ selective mode)</p>   |

## 12.33 ENT-REP

(Cisco ONS 15454) The Enter Resilient Ethernet Protocol (ENT-REP) command associates the Resilient Ethernet Protocol (REP) configuration on the ethernet port of GE\_XP or 10GE\_XP card.

### Usage Guidelines

- This command is applicable only if the card is in ETH-L2 card mode.
- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The PORTROLE parameter can be PRIMARY, NO\_NEIGHBOR, or NO\_NEIGHBOR\_PRIMARY only if the port is an edge port.
- If the Edge is not Enabled, the PORTROLE parameter can only be REGULAR.
- If only the segment ID is specified, by default the edge is disabled and PORTROLE is REGULAR; PREFERRED is disabled.

### Category

Ethernet

### Security

Provisioning

### Input Format

ENT-REP:[TID]:<AID>:<CTAG>:::<SEGMENTID=<SEGMENTID>,[EDGE=<EDGE>],[PORTROLE=<PROTROLE>],[PREFERRED=<PREFERRED>];

**Input Example** ENT-REP::ETH-12-1-1:1:::SEGMENTID=1,EDGE=Y,PORTROLE=PRIMARY,PREFERRED=N;

|                         |                               |   |
|-------------------------|-------------------------------|---|
| <b>Input Parameters</b> | <AID>                         | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41. |
|                         | <SEGMENTID>                   | Indicates the segment ID for REP segment. The valid range is from 0 to 1024.                                      |
|                         | <EDGE>                        | Configures the port as an edge port.  |
|                         | • Y                           | To configure the port as an edge port.  |
|                         | • N                           | Not to configure the port as an edge port.  |
|                         | <PORTROLE>                    | The parameter type is REP_PORT_ROLE, which indicates the port’s role in a REP Segment for the ethernet ports.     |
|                         | • PRIMARY                     | Indicates that the port is a primary port.  |
|                         | • NO_NEIGHB<br>OR             | Indicates that the port has no neighbor port in the segment.  |
|                         | • NO_NEIGHB<br>OR_PRIMA<br>RY | Indicates that the port is a primary port and has no neighbor port in the segment.                                |
|                         | • REGULAR                     | Indicates that the port is a regular port.  |
|                         | • None                        | Indicates that the port is an edge port.  |
|                         | <PREFERRED>                   | Indicates that the port is the preferred alternate port. Or the preferred port for VLAN load balancing.           |
|                         | • Y                           | Yes   |
|                         | • N                           | No  |

## 12.34 ENT-RMONTH-<MOD2\_RMON>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Remote Monitoring Threshold for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 4FGC, 4GFICON, 8GFC, CHGRP, FSTE, G1000, GFP, GIGE, ETH, GFPOS, GIGE, HDLC, ISCCOMPAT, and POS (ENT-RMONTH-<MOD2\_RMON>) command creates an entry in the remote monitoring (RMON) alarm table for the threshold of data statistics (for example, GIGE or FC) managed by the RMON engine. After creating the RMON threshold (RMONTH), a threshold crossing alert (TCA) event will be generated and reported to the TL1 session when the threshold is crossed. More than one threshold can be created with different parameters for each data statistic type.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Category** Performance

**Security** Provisioning

**Input Format**

```
ENT-RMONTH-<MOD2_RMON>:[<TID>]:<SRC>:<CTAG>::<MONTYPE>,,,,
<INTVL>:RISE=<RISE>,FALL=<FALL>,[SAMPLE=<SAMPLE>],[STARTUP=<STARTUP>][:];
```

**Input Example**

```
ENT-RMONTH-GIGE:CISCO:FAC-2-1:1234::ETHERSTATSOCTETS,,,100:RISE=1000,
FALL=100,SAMPLE=DELTA,STARTUP=RISING;
```

**Input Parameters**

|           |  |
|-----------|--|
| <SRC>     | Source access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42. AID for the facility that manages the data statistics. AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID. |
| <MONTYPE> | Monitored type. Type of RMON data statistics. The parameter type is ALL_MONTYPE (monitoring type list).  |
| • AISSP   | Alarm Indication Signal Seconds—Path   |
| • BBE-PM  | OTN—Background Block Errors—Path Monitor Point   |
| • BBE-SM  | OTN—Background Block Errors—Section Monitor Point  |
| • BBER-PM | OTN—Background Block Error Ratio—Path Monitor Point expressed as one tenth of a percentage   |
| • BBER-SM | OTN—Background Block Error Ratio—Section Monitor Point expressed as one tenth of a percentage  |
| • BIEC    | FEC—Bit Errors Corrected   |
| • CGV     | 8B10B—Code Group Violations  |
| • CSSP    | Controlled Slip Seconds—Path (DSXM-12 FDL/T1.403 PM count)   |
| • CVCPP   | Coding Violations—CP-Bit Path  |
| • CVL     | Coding Violations—Line   |
| • CVP     | Coding Violations—Path   |
| • CVS     | Coding Violations—Section  |
| • CVV     | Coding Violations—Section  |
| • DCG     | 8B10B—Data Code Groups   |
| • ESAP    | Errored Second Type A-Path (DS3XM-12 DS1 PM count)   |
| • ESBP    | Errored Second Type B-Path (DS3XM-12 DS1 PM count)   |
| • ESCPP   | Errored Seconds—CP—Bit Path  |
| • ESL     | Errored Seconds—Line   |
| • ESNPFE  | Errored Second—Network Path (DS3XM-12 DS1 PM count)  |
| • ESP     | Errored Seconds—Path   |
| • ES-PM   | OTN—Errored Seconds—Path Monitor Point   |
| • ES-SM   | OTN—Errored Seconds—Section Monitor Point  |
| • ESR     | Errored Second—Ratio   |
| • ESR-PM  | Errored Seconds Ratio—Path monitor Point expressed as one tenth of a percentage  |
| • ESR-SM  | Errored Seconds Ratio—Section monitor Point expressed as one tenth of a percentage   |
| • ESS     | Errored Seconds—Section  |
| • ESV     | Errored Seconds—VT Path  |

|                             |   |
|-----------------------------|---|
| • etherStatsBroadcastPkts   | The total number of good packets received that were directed to a multicast address   |
| • etherStatsCollisions      | Number of transmit packets that are collisions  |
| • etherStatsCRCAAlignErrors | The total number of packets received that have a length (excluding framing bits, but including frame check sequence [FCS] octets) of between 64 and 1518 octets |
| • etherStatsDropEvents      | Number of received frames dropped at the port level   |
| • etherStatsFragments       | The total number of packets received that were less than 64 octets  |
| • etherStatsJabbers         | The total number of packets received that are longer than 1518 octets   |
| • etherStatsOctets          | The total number of octets of data  |
| • etherStatsOversizePkts    | The total number of packets received that are longer than 1518 octets   |
| • etherStatsPkts            | The total number of packets (including bad packets, broadcast packets, and multicast packets) received  |
| • etherStatsUndersizePkts   | The total number of packets received that are less than 64 octets   |
| • FCP                       | Failure Count—Line  |
| • FC-PM                     | OTN—Failure Count—Path Monitor Point  |

| • UAS-SM    | OTN—Unavailable Second—Section Monitor Point  |
| • UASV      | Unavailable Second—VT Path  |
| • UNC-WORDS | FEC—Uncorrectable Words   |
| • VPC       | Valid Packet Count  |
| <INTVL>     | The interval in seconds over which the data is sampled and compared with the rising and falling threshold. A valid value is any integer larger than or equal to 10 (seconds).   |
| <RISE>      | The rising threshold for the sampled statistic. A valid value is any integer.   |
| <FALL>      | The falling threshold. A valid value is any integer smaller than the rising threshold.  |
| <SAMPLE>    | The method of calculating the threshold comparison value. The parameter type is SAMPLE_TYPE, which describes how the data will be calculated during the sampling period.  |
| • ABSOLUTE  | Comparing directly  |
| • DELTA     | Comparing with the current value of the selected variable subtracted by the last sample   |
| <STARTUP>   | Dictates whether an event will generate if the first valid sample is greater than or equal to the rising threshold, less than or equal to the falling threshold, or both. The parameter type is STARTUP_TYPE, which indicates whether an event will be generated when the first valid sample is crossing the rising or falling threshold. |

|                     |  |
|---------------------|--|
| • FALLING           | Generates the event when the sample is smaller than or equal to the falling threshold.         |
| • RISING            | Generates the event when the sample is greater than or equal to the rising threshold.          |
| • RISING-OR-FALLING | Generates the event when the sample is crossing the rising threshold or the falling threshold. |

## 12.35 ENT-ROLL-<MOD\_PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Roll for STS1, STS12C, STS192C, STS24C, STS3C, STS48C, STS96C, STS6C, STS9C, VC12, VC3, VT1, or VT2 (ENT-ROLL-<MOD\_PATH>) command enters information about rolling of traffic from one end point to another without interrupting service. This command can be used to roll single paths (STS or VT).

### Note

STS18C and STS36C are not supported in this release.

### Usage Guidelines

None

### Category

Bridge and Roll

### Security

Provisioning

### Input Format

ENT-ROLL-<MOD\_PATH>:[<TID>]:<FROM>,<TO>:<CTAG>:::RFROM=<RFROM>,  
RTO=<RTO>,RMODE=<RMODE>,[CMDMDE=<CMDMDE>];

### Input Example

ENT-ROLL-STS1:CISCO:STS-1-1-1,STS-2-1-1:1:::RFROM=STS-2-1-1,RTO=STS-3-1-1,  
RMODE=MAN,FORCE=Y;

|                         |         |   |
|-------------------------|---------|---|
| <b>Input Parameters</b> | <FROM>  | Source access identifier from the “26.27 STS” section on page 26-55, which is one of the termination points (legs) of the existing cross-connection. If the existing cross-connection is one-way, then this termination point (leg) should be the FROM-AID termination point. Otherwise, FROM is not significant. FROM and TO should be entered as they are entered in the ENT-CRS command. You can issue the RTRV-CRS command and use the response for FROM and TO parameters. |
|                         | <TO>    | Destination AID from the “26.27 STS” section on page 26-55 which is one of the termination points (legs) of the existing cross-connection. If the existing cross-connection is one-way, then this termination point (leg) should be the TO-AID termination point. Otherwise, the TO is not significant. FROM and TO should be entered as they are entered in the ENT-CRS command. You can issue the RTRV-CRS command and use the response for FROM and TO parameters.           |
|                         | <RFROM> | The termination point of the existing cross-connect that is to be rolled. The termination point is an AID from the “26.27 STS” section on page 26-55.   |
|                         | <RTO>   | The termination point that will become a leg of the new cross-connection. the termination point is an AID from the “26.27 STS” section on page 26-55.   |
|                         | <RMODE> | Indicates the mode of the rolling operation. The parameter type is RMODE (roll mode).   |
|                         | • AUTO  | Automatic. When a valid signal is available, the roll that has the AUTO mode will automatically delete the previous end-point.  |
|                         | • MAN   | Manual. Enter the corresponding delete roll/bulkroll command to delete the previous end-point.  |
|                         | <FORCE> | Forces a valid signal on the path. FORCE can only go from Y to N. The parameter type is ON_OFF (disable or enable an attribute).  |
|                         | • N     | Disable an attribute.   |
|                         | • Y     | Enable an attribute.  |

## 12.36 ENT-ROUTE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Route (ENT-ROUTE) command creates static routes.

**Usage Guidelines** There is no Domain Name Server (DNS) service available on the node. Only numeric IP addresses will be accepted.

**Category** System

**Security** Provisioning

**Input Format** ENT-ROUTE:[<TID>]::<CTAG>::<DESTIP>,<IPMASK>,<NXTHOP>,<COST>;

**Input Example** ENT-ROUTE:CISCO::123::10.64.72.57,255.255.255.0,10.64.10.12,200;

|                         |          |  |
|-------------------------|----------|--|
| <b>Input Parameters</b> | <DESTIP> | Destination tip. DESTIP is a string.                   |
|                         | <IPMASK> | IP mask. IPMASK is a string.                           |
|                         | <NXTHOP> | Next hop. NXTHOP is a string.                          |
|                         | <COST>   | Unsigned integer. The valid range is from 1 to 32,797. |

## 12.37 ENT-ROUTE-GRE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Route Generic Routing Encapsulation (ENT-ROUTE-GRE) command creates a GRE tunnel. This can be used to transport IP over Open Systems Interconnect (OSI) or OSI over IP.

**Usage Guidelines** None

**Category** System

**Security** Provisioning

**Input Format** ENT-ROUTE-GRE:[<TID>]::<CTAG>:::IPADDR=<IPADDR>,IPMASK=<IPMASK>,NSAP=<NSAP>,[COST=<COST>];

**Input Example** ENT-ROUTE-GRE:CISCO::123:::IPADDR=10.64.72.57,IPMASK=255.255.255.0,NSAP="39840F80FFFFFF0000DDDDAA000010CFB4910200",COST=110;

|                         |          |  |
|-------------------------|----------|--|
| <b>Input Parameters</b> | <IPADDR> | IP address of the tunnel endpoint. IPADDR is a string.                                 |
|                         | <IPMASK> | Subnet mask for the tunnel endpoint. IPMASK is a string.                               |
|                         | <NSAP>   | Network service access point (NSAP) address for the tunnel endpoint. NSAP is a string. |
|                         | <COST>   | Routing cost associated with the tunnel. COST is an integer.                           |

## 12.38 ENT-TADRMAP

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Target Identifier Address Mapping (ENT-TADRMAP) command instructs a gateway NE (GNE) to create an entry in the TADRMAP table that maps the target identifiers (TIDs) of the subtending NEs to their addresses. The operating systems (OSs) will address the subtending NEs using the TID in TL1 messages and a GNE will address these NEs by mapping the TID to an IP address or NSAP. The TADRMAP table, which resides in the GNE, correlates a TID and an address. The command requires that at least one IPADDR or NSAP be specified. The PORT and ENCODING parameters are only used with IP address mappings.

### Usage Guidelines

None

### Category

System

### Security

Provisioning

### Input Format

```
ENT-TADRMAP:[<TID>]::<CTAG>:::[TIDNAME=<TIDNAME>],[IPADDR=<IPADDR>],
[PORT=<PORT>],[ENCODING=<ENCODING>],[NSAP=<NSAP>];
```

### Input Example

```
ENT-TADRMAP:TID::CTAG::TIDNAME=ENENODENAME,IPADDR=192.168.100.52,
PORT=3082,ENCODING=LV,NSAP="39840F80FFFFFFF0000DDDDAA01001800";
```

### Input Parameters

|   |   |
|---|---|
| <TIDNAME>   | TID of the new TID/address mapping. TIDNAME is a string.  |
| <IPADDR>  | (Optional) IP address. IPADDR is a string.<br><b>Note</b> If the NSAP parameter is not used, the IPADDR parameter is required.  |
| <PORT>  | Port for the TID/IP address mapping. The port default is 3082. PORT is an integer.  |
| <ENCODING>  | TL1 encoding for the TID/IP address mapping. The encoding default is LV. The parameter type is ENCODING (modifies information into the required transmission format). |
| <ul style="list-style-type: none"> <li>LV</li> </ul>        | Length encoding   |
| <ul style="list-style-type: none"> <li>RAW-CISCO</li> </ul> | Cannot be specified. Used only for display with backward compatible Optical Networking System (ONS) NEs.  |
| <ul style="list-style-type: none"> <li>RAW-STD</li> </ul>   | Noninteractive encoding   |
| <NSAP>  | (Optional) NSAP address. NSAP is a string.<br><b>Note</b> If the IPADDR parameter is not used, the NSAP parameter is required.  |

## 12.39 ENT-TRAPTABLE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Trap Table (ENT-TRAPTABLE) command provisions a Simple Network Management Protocol (SNMP) trap destination and its associated community, User Datagram Protocol (UDP) port, and SNMP version. The maximum number of trap entries is ten.

**Usage Guidelines** None

**Category** System

**Security** Provisioning

**Input Format** ENT-TRAPTABLE:[<TID>]:<AID>:<CTAG>::COMMUNITY=<COMMUNITY>,  
[TRAPPORT=<TRAPPORT>],[TRAPVER=<TRAPVER>];

**Input Examples**

1. ENT-TRAPTABLE::1.2.3.4:1::COMMUNITY="PRIVATE",TRAPPORT=162,TRAPVER=SNMPV1;
2. ENT-TRAPTABLE::"[3ffe:0501:0008:0000:0260:97ff:fe40:efab]":1::COMMUNITY="PRIVATE",TRAPPORT=162,TRAPVER=SNMPV1;

| Input Parameters |   |
|------------------|---|
| <AID>            | IP address identifying the trap destination. Only a numeric IP address is allowed. Access identifier from the <a href="#">“26.18 IPADDR”</a> section on page 26-45. |
| <COMMUNITY>      | Community associated with the trap destination. Community name is a string with up to 32 characters.  |
| <TRAPPORT>       | UDP port number associated with the trap destination. The UDP port number default is 162. TRAPPORT is an integer.   |
| <TRAPVER>        | SNMP version number. Defaults to SNMPv1. The parameter type is SNMP_VERSION (SNMP Version).   |
|                  | <ul style="list-style-type: none"> <li>• SNMPV1 (Default) SNMP Version 1</li> <li>• SNMPV2 SNMP Version 2</li> </ul>  |

## 12.40 ENT-TUNNEL-FIREWALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Tunnel Firewall (ENT-TUNNEL-FIREWALL) command creates a firewall tunnel.

**Usage Guidelines** None

---

**Category** System

---

**Security** Provisioning

---

**Input Format** ENT-TUNNEL-FIREWALL:[<TID>]::<CTAG>:::[SRCADDR=<SRCADDR>],  
[SRCMASK=<SRCMASK>],[DESTADDR=<DESTADDR>],[DESTMASK=<DESTMASK>];

---

**Input Example** ENT-TUNNEL-FIREWALL:TID::CTAG:::SRCADDR=192.168.100.52,  
SRCMASK=255.255.255.0,DESTADDR=192.168.101.14,DESTMASK=255.255.255.0;

---

|                         |            |   |
|-------------------------|------------|---|
| <b>Input Parameters</b> | <SRCADDR>  | Source IP address. SRCADDR is a string.       |
|                         | <SRCMASK>  | Source mask. SRCMASK is a string.             |
|                         | <DESTADDR> | Destination IP address. DESTADDR is a string. |
|                         | <DESTMASK> | Destination mask. DESTMASK is a string.       |

---

## 12.41 ENT-TUNNEL-PROXY

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Tunnel Proxy (ENT-TUNNEL-PROXY) command creates a proxy tunnel.

---

**Usage Guidelines** None

---

**Category** System

---

**Security** Provisioning

---

**Input Format** ENT-TUNNEL-PROXY:[<TID>]::<CTAG>:::[SRCADDR=<SRCADDR>],  
[SRCMASK=<SRCMASK>],[DESTADDR=<DESTADDR>],[DESTMASK=<DESTMASK>];

---

**Input Example** ENT-TUNNEL-PROXY:TID::CTAG:::SRCADDR=192.168.100.52,SRCMASK=255.255.255.0,  
DESTADDR=192.168.101.14,DESTMASK=255.255.255.0;

---

|                         |           |   |
|-------------------------|-----------|---|
| <b>Input Parameters</b> | <SRCADDR> | Source IP address. SRCADDR is a string. |
|                         | <SRCMASK> | Source mask. SRCMASK is a string.       |

---

|            |   |
|------------|---|
| <DESTADDR> | Destination IP address. DESTADDR is a string. |
| <DESTMASK> | Destination mask. DESTMASK is a string.       |

## 12.42 ENT-UNICFG

(Cisco ONS 15454, Cisco ONS 15454 M2, Cisco ONS 15454 M6) The Enter User Network Interface Configuration (ENT-UNICFG) command creates UNI configuration which informs the circuit that the two ports specified in the command acts as an entry or exit point of an optical circuit.

### Usage Guidelines

- Before executing the ENT-UNICFG command, the node should be configured with an optical side and an internal patchcords between a multiplexer, demultiplexer, and a mesh card.
- The source port should be an ADD port and destination port should be a DROP port.
- By default, the VALMODE parameter value is FULL and the VALZONE parameter value is GREEN.
- With the VALMODE parameter value as NONE, the VALZONE parameter is not applicable.
- RESTTYPE as REVERT is not applicable for UNICFG.

### Category

DWDM

### Security

Provisioning

### Input Format

ENT-UNICFG:[<TID>]:<SRC>:<CTAG>::<RVRS AID>,<RSYSIP>,<RIFCIP>,<MSTPIP>,<COMMIP>:[VALMODE=<OPTVAL>],[VALZONE=<OPRZONE>],[ADMINSTATE=<ADMINSTATE>],[RESTTYPE=<RESTTYPE>][:];

### Input Example

ENT-UNICFG::LINE-2-3:1::LINE-4-11-TX,10.11.12.13,14.15.16.17,18.19.20.21:VALMODE=FULL,VALZONE=RED,ADMINSTATE=UP;

**Table 12-2** Parameter Support

| Parameter  | Description  |
|------------|--|
| <SRC>      | Source AID from the <a href="#">“26.1 ALL” section on page 26-1</a> .      |
| <RVRS AID> | Destination AID from the <a href="#">“26.1 ALL” section on page 26-1</a> . |
| <RSYSIP>   | Remote system IP.  |
| <RIFCIP>   | Remote interface IP.   |
| <MSTPIP>   | MSTP interface IP.   |
| <COMMIP>   | Communication IP.  |
| <VALMODE>  | Identifies the validation mode.  |

Table 12-2 Parameter Support

| Parameter    | Description  |
|--------------|--|
| • NONE       | No optical validation is performed.                                    |
| • FULL       | The optical validation is performed as indicated in VALZONE parameter. |
| <VALZONE>    | Identifies the validation operate zone.                                |
| • UNKNOWN    | Not evaluated.   |
| • GREEN      | Margin > 3 sigma.  |
| • YELLOW     | 1 < margin < 3 sigma.  |
| • ORANGE     | 0 < margin < 1 sigma.  |
| • RED        | -3 < margin < 0 sigma.   |
| • OUT        | Margin < -3 sigma.   |
| <ADMINSTATE> | Identifies the adminstate is UP or DOWN.                               |
| • UP         | Indicates Adminstate is UP and UNI Services can be activated.          |
| • DOWN       | Indicates Adminstate is DOWN and UNI Services cannot be activated.     |
| <RESTTYPE>   | Identifies the restoration type on UNI configuration.                  |
| • NONE       | None restoration type for UNICFG.                                      |
| • RESTORE    | Restore restoration type for UNICFG.                                   |

## 12.43 ENT-USER-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter User Security (ENT-USER-SECU) command adds a user account. Only a Superuser can use the ENT-USER-SECU command. Each user created by the Superuser has one of these four privilege levels:

1. Retrieve [RTRV]: Users with this security level can retrieve information from the node, but cannot modify anything. The default idle time for a Retrieve user is unlimited.
2. Maintenance [MAINT]: Users with this security level can retrieve information from the node and perform limited maintenance operations such as card resets, Manual/Force/Lockout on cross-connects or in protection groups, and BLSR maintenance. The default idle time for a Maintenance user is 60 minutes.
3. Provisioning [PROV]: Users with this security level can perform all maintenance actions, and all provisioning actions except those restricted to Superusers. The default idle time for a Provisioning user is 30 minutes.
4. Superuser [SUPER]: Users with this security level can perform all provisioning user actions, plus creating and deleting user security profiles, setting basic system parameters such as time, date, node name, and IP address, and doing database backup and restoration. The default idle time for a Superuser is 15 minutes.

### Usage Guidelines

- Passwords are masked for the following security commands: ACT-USER, ED-PID, ENT-USER-SECU, and ED-USER-SECU. Access to a TL1 session by any means will have the password masked. The CTC Request History and Message Log will also show the masked commands. When a password-masked command is reissued by double-clicking the command from CTC Request History, the password will still be masked in the CTC Request History and Message

Log. The actual password that was previously issued will be sent to the NE. To use a former command as a template only, single-click the command in CTC Request History. The command will be placed in the Command Request text box, where you can edit the appropriate fields prior to reissuing it.

- In CTC, TL1 accepts the UID length of 2 to 20 characters. The minimum length for PID and the password character rule can be configured using the command SET-ATTR-SECUDFLT. If minimum length for PID is selected as 2, it is mandatory to select ANY\_CHAR as the password character rule, but if the password character rule is selected as ANY\_CHAR, minimum length for PID can be selected as 2 or 4 or 6 or 8 or 10 or 12.
- Prior execution of SET-ATTR-SECUDFLT command is mandatory to set the minimum password length (PWDMINLEN) and password character rule (PWDCHARULE) for the PID to be entered in ENT-USER-SECU command, else default minimum length and password character rule is applied.
- The TL1 password security is enforced as follows:
  - The PID cannot be the same as or contain the UID. For example, if the userid is CISCO25 the password cannot be CISCO25#.
  - The PID must have one nonalphanumeric and one special (+, %, or #) character.
  - PID toggling is not permitted; for example, if the current password is CISCO25#, the new password cannot be CISCO25#.

ENT-USER-SECU:[&lt;TID&gt;]:&lt;UID&gt;:&lt;CTAG&gt;::&lt;PID&gt;,&lt;UAP&gt;[:];

**Input Example**

ENT-USER-SECU:PETALUMA:CISCO15:123::PSWD11#,,MAINT;

|                         |             |   |
|-------------------------|-------------|---|
| <b>Input Parameters</b> | <UID>       | User Identifier. Any combination of up to 20 alphanumeric characters. The minimum UID size is 2. UID is a string.   |
|                         | <PID>       | User's password or Private Identifier. Minimum length of the PID depends on the PWDMINLEN, the type of characters to be entered depends on the PWDCHRULE, and maximum length depends on PWDMAXLEN set by SET-ATTR-SECUDFLT command.<br><br><b>Note</b> PID cannot be the same as or contain the user ID (UID), for example, if the user ID is CSNL25 the password cannot be CSNL25#.<br><br><b>Note</b> PID must have one nonalphabetic and one special (+,%, or #) character.<br><br><b>Note</b> PID toggling is not permitted; for example, if the current password is CSNL25#, the new password cannot be CSNL25#. |
|                         | <UAP>       | User's access privilege. The parameter type is PRIVILEGE (security level).  |
|                         | • MAINT     | Maintenance security level  |
|                         | • PROV      | Provision security level  |
|                         | • RTRV      | Retrieve security level   |
|                         | • SUPER     | Superuser security level  |
|                         | • ROOT_USER | Root user.  |
|                         | • SEC_SUPER | Security super user.  |
|                         | • SEC_USER  | Security user.  |

## 12.44 ENT-VCG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Enter Virtual Concatenated Group (ENT-VCG) command creates a VCG object. VCGs on ML-Series cards support two members. Supported subrates are STS1, STS3C, and STS12C. ML-Series VCG also supports SW-LCAS or NONE. VCG on the FC\_MR-4 card supports eight members and the supported subrate is limited to STS3C. The FC\_MR-4 card VCG has no link capacity adjustment scheme (LCAS) support (NONE). VCG on the ML-100T-8 card supports up to three members at a subrate of STS1 and 64 members at a subrate of VT1.

**Usage Guidelines** None

**Category** VCAT

**Security** Provisioning

**Input Format**

ENT-VCG:[<TID>]:<SRC>:<CTAG>:::TYPE=<TYPE>,TXCOUNT=<TXCOUNT>,[CCT=<CCT>],[LCAS=<LCAS>],[BUFFERS=<BUFFERS>],[NAME=<NAME>];

**Input Example**

ENT-VCG:NODE1:FAC-1-1:1234:::TYPE=STS3C,TXCOUNT=8,CCT=2WAY,LCAS=LCAS,BUFFERS=DEFAULT,NAME="VCG1";

**Input Parameters**

|           |  |
|-----------|--|
| <SRC>     | Source access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. ML1000-2 and ML100T-12 cards use the VFAC AID. The FC_MR-4 card uses the FAC AID.  |
| <TYPE>    | The type of entity or member cross-connect being provisioned. Null indicates not applicable. TYPE can be a Common Language Equipment Identification (CLEI) code or another value. ML1000-2 and ML100T-12 cards support STS1, STS3c, and STS12c. The FC_MR-4 card supports STS3c only. The parameter type is MOD_PATH (STS/VT path modifier). |
| • STS1    | STS1 path  |
| • STS12C  | STS12C path  |
| • STS18C  | STS18C path  |
| • STS192  | STS192C path   |
| • STS24C  | STS24C path  |
| • STS36C  | STS36C path  |
| • STS3C   | STS3C path   |
| • STS48C  | STS48C path  |
| • STS6C   | STS6C path   |
| • STS9C   | STS9C path   |
| • VT1     | VT1 path   |
| • VT2     | VT2 path   |
| <TXCOUNT> | Number of members in the transmit (Tx) direction. For ML1000-2 and ML100T-12 cards, the only valid value is 2. For the FC_MR-4 card the only valid value is 8. TXCOUNT is an integer.  |
| <CCT>     | Type of connection (one-way or two-way). CCT is the cross-connect type for the VCG member cross-connects. It must be the same for all the member cross-connects of a VCG. The parameter type is CCT, which is the type of cross-connect to be created.   |
| • 1WAY    | A unidirectional connection from a source tributary to a destination tributary   |
| • 1WAYDC  | Path Protection multicast drop with one-way continue   |
| • 1WAYEN  | Path Protection multicast end node with one-way continue   |
| • 1WAYMON | A bidirectional connection between the two tributaries   |
|           | <b>Note</b> 1WAYMON is not supported with TL1. However, it is still supported from CTC. Using CTC, you can create 1WAYMON cross-connects that can be retrieved through TL1.  |

|            |  |
|------------|--|
| • 1WAYPCA  | A unidirectional connection from a source tributary to a destination tributary on the protection path/fiber  |
| • 2WAY     | A bidirectional connection between the two tributaries   |
| • 2WAYDC   | A bidirectional drop-and-continue connection applicable only to traditional path protection configurations and integrated DRIs   |
| • 2WAYPCA  | A bidirectional connection between the two tributaries on the extra protection path/fiber  |
| • DIAG     | Diagnostic cross-connect. Supports BERT (BLSR PCA diagnostic cross-connect).   |
| <LCAS>     | Link capacity adjustment scheme.<br><br><b>Note</b> If SW-LCAS is selected, then the far-end VCG must also be configured as SW-LCAS.<br><br>The parameter type is LCAS, which is the link capacity adjustment scheme mode for the VCG created.     |
| • LCAS     | LCAS is enabled.   |
| • NONE     | No LCAS is created   |
| • SW-LCAS  | Supports the temporary removal of a VCG member during member failure. Only supported by the ML1000-2 and ML100T-12 cards.  |
| <BUFFERS>  | Buffer type. The default value is DEFAULT. The FC_MR-4 and CE1000 cards support DEFAULT and EXPANDED buffers. Other data cards support DEFAULT buffers only. The parameter type is BUFFER_TYPE, which is the buffer type used in the VCAT circuit. |
| • DEFAULT  | Default buffer value   |
| • EXPANDED | Expanded buffer value  |
| <NAME>     | Name of the VCAT group. The name defaults to null. Its maximum length is 32 characters. NAME is a string.  |

## 12.45 ENT-VLAN

(Cisco ONS 15454) The Enter Virtual VLAN (ENT-VLAN) command adds a new VLAN entry to the VLAN database. The VLAN database is a collection of VLANs used in an NE.

### Usage Guidelines

- If the AID is invalid, an IIAC error message is returned.
- The ALL AID is invalid for this command.
- The VLAN with the specified AID must be present in the node or the command will be denied.

### Category

Ethernet

### Security

Provisioning

**Input Format**

```
ENT-VLAN:[<TID>]:<AID>:<CTAG>:::NAME=<NAME>,[PROTN=<PROTN>],[MACLEARNING=
<MACLEARNING>],[IGMPENABLE=<IGMPENABLE>],[IGMPFASTLEAVE=<IGMPFASTLEAV
E>],[IGMPSUPP=<IGMPSUPP>][:];
```

**Input Example**

```
ENT-VLAN:ROCKS:VLAN-4096:1:::NAME=MYVLAN,PROTN=N,MACLEARNING=Y,
IGMPENABLE=Y,IGMPFASTLEAVE=Y,IGMPSUPP=Y;
```

**Input Parameters**

|   |   |
|---|---|
| <AID>   | The AID is used to access the VLAN.   |
| <ul style="list-style-type: none"> <li>VLAN-ALL</li> <li>VLAN-{0-4096}</li> </ul> | <p>All AIDs for the VLAN.</p> <p>Single AID for the VLAN. VLAN ID 0 is reserved for untagged VLAN.</p>  |
| <NAME>  | (Optional) Indicates the name of the VLAN.  |
| <PROTN>   | Indicates the VLAN protection feature. This is an optional parameter indicating if the VLAN being created/modified is protected.                                      |
| <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>                    | <p>Not protected (Default)</p> <p>Protected</p>   |
| <MACLEARNING>   | MAC Address Learning Mode. This activates the MAC address learning on interface to avoid packet broadcasting. Default value is - "N"                                  |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>                    | <p>Activate the MAC learning.</p> <p>Disable MAC learning.</p>  |
| <IGMPENABLE>  | Internet Group Management Protocol status.  |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>                    | <p>Enabled</p> <p>Disabled</p>  |
| <IGMPFASTLEAVE>   | Internet Group Management Protocol FastLeave status. When enabled, decreases the delay between receiving a Leave Group packet and disabling forwarding of multicast   |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>                    | <p>Enabled</p> <p>Disabled</p>  |
| <IGMPSUPP>  | IGMP Report suppression. Indicates multicast registered client hiding. When enabled (default) it prevents duplicate reports from being sent to the multicast devices. |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>                    | <p>Enabled</p> <p>Disabled</p>  |

## 12.46 ENT-WDMANS

(Cisco ONS 15454) The Enter Wavelength Division Multiplexing Automatic Node Setup (ENT-WDMANS) command adds the automatic optical node setup application attributes.

**Usage Guidelines**

- If the AID is invalid, an IIAC (Invalid AID) error message is returned.

- The ALL AID is invalid for this command.

**Category**

DWDM

**Security**

Maintenance

**Input Format**

```
ENT-WDMANS:[<TID>]:<AID>:<CTAG>::[<WLEN>]:[VOAATTN=<VOAATTN>],[POWEROSC=
<POWEROSC>],[NTWTYPE=<NTWTYPE>],[CHLOSS=<CHLOSS>],[GAIN=<GAIN>],[TILT=<TI
LT>],[CHPWR=<CHPWR>],[AMPLMODE=<AMPLMODE>],[RATIO=<RATIO>],[OSCCLOSS=<OS
CLOSS>],[DITHER=<DITHER>],[TOTALPWR=<TOTALPWR>],[HIGHSLVEXP=<HIGHSLVEXP>
],[LOWSLVEXP=<LOWSLVEXP>];
```

**Input Example**

```
ENT-WDMANS:PENNGROVE:WDMNODE:114::1530.33:VOAATTN=2.5,POWEROSC=5.0,NTWT
YPE=METRO-CORE,CHPWR=2.0,DITHER=10,TOTALPWR=150;
```

**Input Parameters**

|   |   |
|---|---|
| <AID>   | The AID is used to access the WDM node or a single port of the DWDM node.                     |
| <ul style="list-style-type: none"> <li>• WDMNODE</li> </ul> | Indicates the WDM node of an MSTP and accesses the NTWTYPE and DITHER WDMANS node parameters. |
| <ul style="list-style-type: none"> <li>• LINE</li> </ul>    | The optical transport section port.   |
| <ul style="list-style-type: none"> <li>• BAND</li> </ul>    | The optical multiplex section port.   |
| <ul style="list-style-type: none"> <li>• CHAN</li> </ul>    | The optical channel port.   |
| <WLEN>  | (Optional) The parameter type is OPTICAL_WLEN, which indicates the optical wavelength.        |
| <ul style="list-style-type: none"> <li>• 1310</li> </ul>    | Wavelength 1310   |
| <ul style="list-style-type: none"> <li>• 1470</li> </ul>    | Wavelength 1470   |
| <ul style="list-style-type: none"> <li>• 1490</li> </ul>    | Wavelength 1490   |
| <ul style="list-style-type: none"> <li>• 1510</li> </ul>    | Wavelength 1510   |
| <ul style="list-style-type: none"> <li>• 1528.77</li> </ul> | Wavelength 1528.77  |
| <ul style="list-style-type: none"> <li>• 1529.16</li> </ul> | Wavelength 1529.16  |
| <ul style="list-style-type: none"> <li>• 1529.55</li> </ul> | Wavelength 1529.55  |
| <ul style="list-style-type: none"> <li>• 1529.94</li> </ul> | Wavelength 1529.94  |
| <ul style="list-style-type: none"> <li>• 1530</li> </ul>    | Wavelength 1530   |
| <ul style="list-style-type: none"> <li>• 1530.33</li> </ul> | Wavelength 1530.33  |
| <ul style="list-style-type: none"> <li>• 1530.73</li> </ul> | Wavelength 1530.73  |
| <ul style="list-style-type: none"> <li>• 1531.12</li> </ul> | Wavelength 1531.12  |
| <ul style="list-style-type: none"> <li>• 1531.51</li> </ul> | Wavelength 1531.51  |
| <ul style="list-style-type: none"> <li>• 1531.90</li> </ul> | Wavelength 1531.90  |
| <ul style="list-style-type: none"> <li>• 1532.29</li> </ul> | Wavelength 1532.29  |
| <ul style="list-style-type: none"> <li>• 1532.68</li> </ul> | Wavelength 1532.68  |

|           |                    |

| <LOWSLVEXP>  | Span loss verification—low value.  |

## 12.47 ENT-WDMSIDE

(Cisco ONS 15454) The Enter Wavelength Division Multiplexing Side (ENT-WDMSIDE) command adds a new WDM Node Side and defines its attributes.

### Usage Guidelines

- The LINEIN and LINEOUT attributes are mandatory and they specify the input and output lines of the node.
- If the AID is invalid, an IIAC error message is returned.
- The ALL AID is invalid for this command.

### Category

DWDM

### Security

Maintenance

### Input Format

ENT-WDMSIDE:[<TID>]:<AID>:<CTAG>:::LINEIN=<LINEIN>,LINEOUT=<LINEOUT>[:];

### Input Example

ENT-WDMSIDE:TEXAS:WDMSIDE-A:114:::LINEIN=LINE-1-3-RX,LINEOUT=LINE-1-3-TX;

| Input Parameters                         |  |   |
|--|--|---|
| <AID>                                    |  | The AID is used to access the WDM side of a DWDM node.  |
| • WDMSIDE-{A,B,C,D,E,F,G,H}              |  | DWDM side identifier  |
| <LINEIN>                                 |  | Used to access the Optical Transport Section (OTS) layer of the ONS cards.  |
| • LINE[-{1-8}]-{1-6,12-17}-{1-3}-ALL     |  | All the lines (COM=1, OSC=2, LINE=3) in OPT-BST, OPT-BST-E, OPT-BST-L, and OPT-AMP-17-C cards where the format is LINE-[SHELF]-[SLOT]-[PORT]-ALL.                 |
| • LINE[-{1-8}]-{1-6,12-17}-{1-3}-{RX,TX} |  | The receive/transmit lines (COM=1, OSC=2, LINE=3) in OPT-BST, OPT-BST-E, OPT-BST-L, and OPT-AMP-17-C cards where the format is LINE-[SHELF]-[SLOT]-[PORT]-[DIRN]. |
| <LINEOUT>                                |  | Used to access Optical Transport Section (OTS) layer of Optical Network units.  |
| • LINE[-{1-8}]-{1-6,12-17}-{1-3}-ALL     |  | All the lines (COM=1, OSC=2, LINE=3) in OPT-BST, OPT-BST-E, OPT-BST-L, and OPT-AMP-17-C cards where the format is LINE-[SHELF]-[SLOT]-[PORT]-ALL.                 |
| • LINE[-{1-8}]-{1-6,12-17}-{1-3}-{RX,TX} |  | The receive/transmit lines (COM=1, OSC=2, LINE=3) in OPT-BST, OPT-BST-E, OPT-BST-L, and OPT-AMP-17-C cards where the format is LINE-[SHELF]-[SLOT]-[PORT]-[DIRN]. |

## EX Commands

This chapter provides exercise (EX) commands for Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

### 13.1 EX-SW-<OCN\_BLSR>

(Cisco ONS 15454) The Exercise Protection Switch for OC12, OC48, OC192, or OC768 (EX-SW-<OCN\_BLSR>) command exercises the algorithm for switching from a working facility to a protection facility without actually performing a switch. It is assumed that the facility being exercised is the working unit. The success or failure of the exercise switching will be indicated by an automatic alarm.

#### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

Exercise switch for the SONET protection line is not supported in this release. If sending this command to the protection unit, an error message will be returned. In addition to all normal INPUT, EQUIPAGE, and PRIVILEGE error codes, the following error codes are also included in this command:

- SNVS (Status, Not in Valid State)
- SROF (Status, Requested Operation Failed)
- SSRD (Status, Switch Request Denied)

**Note**

- If you send the EX-SW-<OCN\_BLSR> command to both the east and the west sides/spans of a two-fiber or four-fiber ring within a short time period (less than 30 to 45 seconds) the system will only execute one (WEST) side EXER-RING query, and preempt the other (EAST) side query. There will be no event messages reported for the preempted side, and it will be in APS-CLEAR switching state. Examples of this are:
  - A single command with both side/span AIDs (in the list AID format) of the same two-fiber or four-fiber ring
  - Separate queries (through TL1 or Cisco Transport Controller [CTC], or TL1 and CTC) on both sides/spans of the same two-fiber or four-fiber ring

- DIRN is an optional parameter. A NULL value of this parameter defaults to BTH for a two-fiber or four-fiber BLSR protection group. DIRN follows these rules:
  - TRMT will always fail for any kind of protection group.
  - For two-fiber and four-fiber BLSR protection groups, both the RCV and TRMT direction will fail.
  - Only BTH is a valid parameter. EX-SW-<OCN\_TYPE> can be operated only on bidirectional line switched ring (BLSR) protection groups.

**Category**

BLSR

**Security**

Maintenance

**Input Format**

EX-SW-&lt;OCN\_BLSR&gt;:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::,[&lt;SWITCHTYPE&gt;],[&lt;DIRECTION&gt;];

**Input Example**

EX-SW-OC48:CISCO:FAC-12-1:123::,SPAN,BTH;

**Input Parameters**

|               |  |
|---------------|--|
| <AID>         | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. Identifies the facility in the NE to which the switch request is directed.  |
| <SWITCHTYPE>  | Switch type. Must not be null. The parameter type is SWITCH_TYPE, which is the BLSR switch type. MANWKSWBK, MANWKSWPR, FRCDWKSWBK, FRCDWKSWPR, LOCKOUTOFPR, and LOCKOUTOFWK are retrieve-only values for RTRV-PROTNSW-OCn commands. They are not applicable for the OPR-PROTNSW-OCn commands. RING and SPAN are the only allowed values for BLSR protection. |
| • FRCDWKSWBK  | Working unit is forced to switch back to working   |
| • FRCDWKSWPR  | Working unit is forced to switch to the protection unit  |
| • LOCKOUTOFPR | Lock out of protection   |
| • LOCKOUTOFWK | Lock out of working  |
| • MANWKSWBK   | Manual switch of working unit back to working  |
| • MANWKSWPR   | Manual switch of working unit back to the protection unit  |
| • RING        | BLSR ring switch type  |
| • SPAN        | BLSR span switch type  |
| <DIRECTION>   | Direction. A null value defaults to RCV. The parameter type is DIRECTION (transmit and receive direction)  |
| • BTH         | Both transmit and receive directions   |
| • RCV         | Receive direction only   |
| • TRMT        | Transmit direction only  |

# INH Commands

This chapter provides inhibit (INH) commands for the for the Cisco ONS 15454,Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 14.1 INH-CONSOLE-PORT

(Cisco ONS 15454) The Inhibit Console Port (INH-CONSOLE-PORT) command is used to turn off the console port for the ML-Series cards.

**Usage Guidelines** None

**Category** Security

**Security** Superuser

**Input Format** INH-CONSOLE-PORT:[<TID>]:<AID>:<CTAG>;

**Input Example** INH-CONSOLE-PORT:CISCONODE:SLOT-2:123;

**Input Parameters** <AID> Access identifier from the [“26.15 EQPT”](#) section on page 26-39.

## 14.2 INH-MSG-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Inhibit Message All (INH-MSG-ALL) command inhibits all REPT ALM and REPT EVT autonomous messages from being transmitted. See the ALW-MSG-ALL to resume these autonomous messages.

**Note**

When a TL1 session starts, the REPT ALM and REPT EVT messages are allowed by default.

**Usage Guidelines**

If this command is used twice in the same session, the SAIN (Already Inhibited) error message is reported.

**Category**

System

**Security**

Retrieve

**Input Format**

INH-MSG-ALL:[<TID>]:[<AID>]:<CTAG>[::,];

**Input Example**

INH-MSG-ALL:PETALUMA:ALL:550;

**Input Parameters**

<AID> Access identifier from the [“26.1 ALL” section on page 26-1](#).

## 14.3 INH-MSG-DBCHG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Inhibit Database Change Message (INH-MSG-DGCHG) command disables REPT DBCHG autonomous message.

**Usage Guidelines**

None

**Category**

Log

**Security**

Retrieve

**Input Format**

INH-MSG-DBCHG:[<TID>]::<CTAG>[::,];

---

**Input Example** INH-MSG-DBCHG:CISCO::123;

---

**Input Parameters** None

## 14.4 INH-MSG-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Inhibit Message Security (INH-MSG-SECU) command inhibits the REPT EVT SECU and REPT ALM SECU autonomous messages.

---

**Usage Guidelines** None

---

**Category** Security

---

**Security** Superuser

---

**Input Format** INH-MSG-SECU:[<TID>]::<CTAG>[:,,];

---

**Input Example** INH-MSG-SECU:PETALUMA::123;

---

**Input Parameters** None

## 14.5 INH-PMREPT-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Inhibit Performance Report All (INH-PMREPT-ALL) command inhibits all scheduled performance monitoring (PM) reporting. Inhibiting PM reporting is session-based, which means the command is only effective to the TL1 session that issues this command. By default, the scheduled PM reporting is inhibited by a TL1 session.

**Note**

---

A TL1 session for which PM reports are inhibited will include an INHMSG-PMREPT condition when issuing TL1 command RTRV-COND-ALL.

---

---

**Usage Guidelines** None

---

**Category** Performance

---

**Security** Retrieve

---

**Input Format** INH-PMREPT-ALL:[<TID>]::<CTAG>;

---

**Input Example** INH-PMREPT-ALL:NE-NAME::123;

---

**Input Parameters** None

## 14.6 INH-SWDX-EQPT

(Cisco ONS 15454) The Inhibit Switch Duplex Equipment (INH-SWDX-EQPT) command inhibits automatic or manual switching on a system containing duplex equipment.

---

### Usage Guidelines

- Use the ALW-SWDX command to release the inhibit.
- This command is not used for SONET line protection switching. For SONET line/path protection switching commands, use the OPR-PROTNSW and RLS-PROTNSW commands.
- This command is not used for 1:1 and 1:N equipment protection switching. Instead, use the ALW-SWTOPROTN, ALW-SWTOWKG, INH-SWTOPROTN, and INH-SWTOWKG commands.
- This command applies to XCVT, XC10G, XC-VXC-10G equipment units.
- When sending this command to a TCC2/TCC2P/TCC3 card, an error message will occur because the network element (NE) treats the TCC2/TCC2P/TCC3 as a nonrevertive protection group without user control.

---

**Category** Equipment

---

**Security** Maintenance

---

**Input Format** INH-SWDX-EQPT:[<TID>]:<AID>:<CTAG>[::];

---

**Input Example** INH-SWDX-EQPT:CISCO:SLOT-8:1234;

---

**Input Parameters** <AID> Access identifier from the [“26.15 EQPT” section on page 26-39](#).  
XCVT/XC10G equipment AID (Slot 8 or Slot 10).

---

## 14.7 INH-SWTOPROTN-EQPT

(Cisco ONS 15454) The Inhibit Switch to Protection Equipment (INH-SWTOPROTN-EQPT) command inhibits automatic or manual switching of an equipment unit to protection. Use the ALW-SWTOPROTN-EQPT command to release the inhibit.

### Usage Guidelines

INH-SWTOPROTN-EQPT is used for electrical cards that could participate in an electrical protection group (for example, DS1, DS3, DS3XM, and EC1 cards). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection. When performing a lockout with this command, the traffic will be switched from the unit specified by the AID, unless the working unit being protected has failed or is missing. When performing a lock-on with this command and the working unit specified in the AID is in standby, sending this command will also initiate a traffic switch. When traffic is locked on a working unit or locked out of the protection unit with this command, the protection unit will not carry traffic, even if the working unit is pulled from the system.

Sending this command to a working unit in a 1:N protection group does not prevent a protection switch from another working unit in the same protection group. All the working units must be sent this command to prevent a protection switch. If the command is sent only to a subset of the working units, only those working units will have traffic locked on.

The inhibit state is persistent over TCC2/TCC2P/TCC3 side switches and removal/reboot of all the units in the protection group. The inhibit state can, but does not have to be, persistent over a complete power cycle of the NE.

The unit specified by the AID will raise the condition of INHSWPR when this command is sent.

The following actions will produce errors:

- This command only supports the BTH value of the DIRN parameter. A command with any other value is considered an incorrect use of the command and will return an IDNV (Input, Data Not Valid) error message.
- This command is not used for the common control (TCC2/TCC2P/TCC3 or CTX2500) cards. A command on a common control card will return an IIAC (Input, Invalid Access Identifier) error message. For common control card switching, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
- This command is not used for optical (OC-N) cards. A command on an optical card will return an IIAC (Input, Invalid Access Identifier) error message. For optical card switching, use the OPR-PROTNSW and RLS-PROTNSW commands.
- Using this command on a card that is not in a protection group will return the SNVS (Status, Not in Valid State) error message.
- Using this command on a card that is already in the inhibit state will return the SAIN (Status, Already Inhibited) error message.
- Sending the inhibit switch to protection command to a working card when the protect card in the same protection group has already raised the condition of INHSWWKG will return the SPLD (Status, Protection unit Locked) error message.
- Sending the inhibit switch to protection command to the protect card when a working card in the same protection group has already raised the condition of INHSWWKG will return the SWLD (Status, Working unit Locked) error message.
- Sending the inhibit switch to protection command to an active protect card when the peer working card is failed or missing will return the SWFA (Status, Working unit Failed) error message.

- As long as none of the previous error conditions apply, sending this command to missing cards is allowed and will not generate any error response.

**Category**

Equipment

**Security**

Maintenance

**Input Format**

INH-SWTOPROTN-EQPT:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;[:&lt;DIRN&gt;];

**Input Example**

INH-SWTOPROTN-EQPT:CISCO:SLOT-2:123::BTH;

**Input Parameters**

|        |   |
|--------|---|
| <AID>  | Access identifier from the “26.15 EQPT” section on page 26-39. This AID can either be the working unit for which switching to protection is inhibited (lock-on) or the protection unit for which carrying traffic is to be inhibited (lockout).     |
| <DIRN> | The direction relative to the entity defined in the AID field. The direction of the switching. This command only supports the BTH value of this parameter. DIRN defaults to BTH. The parameter type is DIRECTION (transmit and receive directions). |
| • BTH  | Both transmit and receive directions  |

## 14.8 INH-SWTOWKG-EQPT

(Cisco ONS 15454) The Inhibit Switch to Working Equipment (INH-SWTOWKG-EQPT) command inhibits automatic or manual switching of an equipment unit back to the working unit. Use the ALW-SWTOWKG-EQPT command to release the inhibit.

**Usage Guidelines**

INH-SWTOWKG-EQPT is used for electrical cards that could participate in an electrical protection group (for example, DS1, DS3, DS3XM, and EC1 cards). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection. When performing a lockout with this command, the traffic will be switched from the unit specified by the AID, unless the protection unit has failed or is missing. When performing a lock-on with this command and the protection unit specified in the AID is in standby, sending this command will initiate a traffic switch only when there is one working card in the protection group. In the case where there is more than one working card in the protection group, an error will be generated (see the error conditions that follow). When traffic is locked on the protection unit or locked out of a working unit with this command, the working unit will not carry traffic, even if the protection unit is pulled from the system.

The inhibit state is persistent over TCC2/TCC2P/TCC3 side switches and removal/reboot of all the units in the protection group. The inhibit state can but does not have to be persistent over a complete power cycle of the NE.

The unit specified by the AID will raise the condition of INH-SWTOWKG when this command is sent.

The following actions will return error messages:

- The command only supports the BTH value of the DIRN parameter. A command with any other value is considered an incorrect use of the command and will return An IDNV (Input, Data Not Valid) error message.
- This command is not used for the common control (TCC2/TCC2P/TCC3 or CTX2500) cards. A command on a common control card will return an IIAC (Input, Invalid Access Identifier) error message. For common control card switching, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
- This command is not used for optical (OC-N) cards. A command on an optical card will return an IIAC (Input, Invalid Access Identifier) error message. For optical card switching, use the OPR-PROTNSW and RLS-PROTNSW commands.
- Using this command on a card that is not in a protection group will return the SNVS (Status, Not in Valid State) error message.
- Using this command on a card that is already in the inhibit state will return the SAIN (Status, Already Inhibited) error message.
- Sending this command to a working card when the protect card in the same protection group has already raised the condition of INHSWPR will return the SPLD (Status, Protection unit Locked) error message.
- Sending the INH-SWTOWKG command to a protect card when a working card in the same protection group has already raised the condition of INHSWPR will return the SWLD (Status, Working unit Locked) error message.
- Sending the INH-SWTOWKG command to an active working card when the protect card has failed or is missing will return the SPFA (Status, Protection unit Failed) error message.
- Sending the INH-SWTOWKG command to an active working card when the protect card is already carrying traffic (this only occurs in a 1:N protection group with N greater than one) will return the SPAC (Status, Protection unit Active) error message.
- As long as none of the previous error conditions apply, sending this command to missing cards is allowed and will not generate any error response.

|                         |        |   |
|-------------------------|--------|---|
| <b>Input Parameters</b> | <AID>  | Access identifier from the “26.15 EQPT” section on page 26-39. This AID can either be the working unit for which switching to protection is inhibited (lock-on) or the protection unit for which carrying traffic is to be inhibited (lockout).     |
|                         | <DIRN> | The direction relative to the entity defined in the AID field. The direction of the switching. This command only supports the BTH value of this parameter. DIRN defaults to BTH. The parameter type is DIRECTION (transmit and receive directions). |
|                         | • BTH  | Both transmit and receive directions  |

## 14.9 INH-USER-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Inhibit User Security (INH-USER-SECU) command disables (without deleting) a user account, so the user is denied access to the NE. The user is disabled until reenabled by the ALW-USER-SECU command.

### Usage Guidelines

- This command does not forcibly log a user off. If the user is logged in, changes do not apply until after the user has logged off.
- The user is disabled until enabled using the corresponding ALW command.

### Category

Security

### Security

Superuser

### Input Format

INH-USER-SECU:[<TID>]::<CTAG>::<UID>;

### Input Example

INH-USER-SECU:PETALUMA::123::CISCO100;

### Input Parameters

|       |                                   |

| <UID> | User identifier. UID is a string. |
|-------|-----------------------------------|

## INIT Commands

This chapter provides initialize (INIT) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

### 15.1 INIT-REG-<MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) Initialize Register for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 4GFC, 2GFICON, 5GIB, 8GFC, CHGRP, CLNT, D1VIDEO, DS1, DV6000, DVBAS1, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, FSTE, G1000, GFPOS, GIGE, HDLC, HDTV, ISC1, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU3, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C STS6C, STS9C, T1, T3, VC12, VC3, VT1, VT2, 3GVIDEO, SDDSDI , HSDSDI, AUTO, OTU1, OTU2, OTU4, ISC3STP1G, or ISC3STP2G (INIT-REG-<MOD2>) command initializes the performance monitoring (PM) registers.

#### Usage Guidelines

The command supports the modifier 3GVIDEO, SDDSDI , HSDSDI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Note**

- The time period is always the current time period, and the previous time period counts are not cleared; therefore, neither MONDAT nor MONTM are supported in this command.
- Unless otherwise stated, DS1 cards are the only cards that support the RCV and TRMT directions.
- INIT-REG-<MOD2> can also be used to initialize the remote monitoring (RMON)-managed raw data.

| • UASV      | Unavailable Second—VT Path  |
| • UNC-WORDS | FEC—Uncorrectable Words   |
| • VPC       | Valid Packet Count  |
| <LOCN>      | Location associated with a particular command in reference to the entity identified by the AID. The parameter type is LOCATION, which is the location where the action is to take place.  |
| • FEND      | Action occurs on the far end of the facility  |
| • NEND      | Action occurs on the near end of the facility   |
| <DIRN>      | Direction relative to the entity identified by the AID. Defaults to ALL, which means that the command initializes all of the registers irrespective of the PM direction. The parameter type is DIRECTION (transmit and receive directions). |
| • BTH       | Both transmit and receive directions  |
| • RCV       | Receive direction only  |
| • TRMT      | Transmit direction only   |
| <TMPER>     | Accumulation time period for performance counters. A null value defaults to 15-MIN. Defaults to 15-MIN. The parameter type is TMPER, which is the accumulation time period for the performance management center.                           |
| • 1-DAY     | Performance parameter accumulation interval length; every 24-hours. For SONET PM data, only one day of history data is available. For RMON managed PM data, seven days of history data are available.                                       |
| • 1-HR      | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.  |
| • 1-MIN     | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.   |

|            |  |
|------------|--|
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length. |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.            |

## 15.2 INIT-SYS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Initialize System (INIT-SYS) command initializes the specified card and its associated subsystems.

### Usage Guidelines

- This command cannot be executed if the network is in a Bidirectional Line Switched Ring (BLSR).
- The SLOT-ALL AID and the list AID are not allowed in this command.
- Only one level of reset is supported in this command for the ONS 15454.
- It is important that the standby TCC2/TCC2P/TCC3, TNC, and TSC should be up and running fully standby for a period of time before this command is sent on the active TCC2/TCC2PTCC3, TNC, and TSC. During this time, the system is vulnerable to traffic outages caused by timing disruptions or other causes.
- If a card is hard reset, it has to be in one of the following states: OOS-MA, MT; OOS-MA, DSBLD; OOS-AUMA, MT; OOS-AUMA, DSBLD.

### Category

System

### Security

Maintenance

### Input Format

INIT-SYS:[<TID>]:<AID>:<CTAG>::<PH>[,<CMDMDE=CMDMDE>];

### Input Examples

INIT-SYS:HOTWATER:SLOT-8:201::1,CMDMDE=FRCD;

### Input Parameters

|       |   |
|-------|---|
| <AID> | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.  |
| <PH>  | The phase. 1=soft reset; 2=hard reset. PH is an integer.<br><br>The PH parameter is supported on the CE-100T-8 and CE-MR-10 cards on the ONS 15454. |

---

|          |  |
|----------|--|
| <CMDMDE> | (Optional) Command mode. Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in Unlocked-Enabled or Locked-Disabled, AutomaticInService service states. |
| • FRCD   | Force the system to override a state in which the command would normally be denied.  |
| • NORM   | Execute the command normally. Do not override any conditions that could make the command fail.   |

---

## OPR Commands

### Note

The terms "Unidirectional Path Switched Ring" and "UPSR" may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as "Path Protected Mesh Network" and "PPMN," refer generally to Cisco's path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

This chapter provides operate (OPR) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 16.1 OPR-ACO-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate Alarm Cutoff All (OPR-ACO-ALL) command cuts off the office audible alarm indication without changing the local alarm indications.

### Usage Guidelines

This command does not have any effect on future alarms at the network element (NE); it directs the NE to provide conditioning only on those alarms that are currently active.

The ACO retires the Central Office (CO) alarm audible indicators without clearing the indicators that show that the trouble still exists. There is no need for a RLS-ACO command.

### Category

Environment

### Security

Maintenance

### Input Format

OPR-ACO-ALL:[<TID>]:[<AID>]:<CTAG>;

---

**Input Example** OPR-ACO-ALL:CISCO:SHELF-1:123;  
OPR-ACO-ALL:CISCO::123;

---

**Input Parameters** <AID> The node or shelf access identifier from the [“26.26 SHELF” section on page 26-55](#). If this parameter is omitted, the node or the first shelf of the node becomes the AID.

---

## 16.2 OPR-ALS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate Automatic Laser Shutdown (OPR-ALS) command is used to restart the laser of an OC-N facility and for all of the facilities that support the ALS feature.

---

**Usage Guidelines** None

---

**Category** Ports

---

**Security** Maintenance

---

**Input Format** OPR-ALS:[<TID>]:<AID>:<CTAG>[::::];

---

**Input Example** OPR-ALS:CISCO:FAC-1-1:100;

---

**Input Parameters** <AID> Access identifier from the [“26.2 AidUnionId” section on page 26-13](#).

---

## 16.3 OPR-APC

(Cisco ONS 15454) The Operate Amplification Power Control (OPR-APC) command permits the APC application inside the NE to force regulation of the optical power to the entire dense wavelength division multiplexing (DWDM) ring.

---

**Usage Guidelines** None

---

**Category** DWDM

---

**Security** Maintenance

---

**Input Format** OPR-APC[:<TID>]:<AID>:<CTAG>[:<ROLE>];

---

**Input Example** OPR-APC:15454:WDMSIDE-A:123::;

---

**Input Parameters**

**Table 16-1 Input Parameter Support**

|        |  |
|--------|--|
| <AID>  | Access identifier from the “ <a href="#">26.34 WDMANS</a> ” section on page 26-62. |
| <ROLE> | The role the unit is playing in the protection group.                              |
| • PROT | The entity is the protection unit in the protection group.                         |
| • WORK | The entity is the working unit in the protection group.                            |

## 16.4 OPR-CPS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate Control Plane Service (OPR-CPS) command activates a Control Plane Service parameter.

---

**Usage Guidelines**

- Specify only the source port to identify the CPS.
- Specify both the source AIDs, if the CPS is of type ADD 2WAY.
- If the AID is invalid, an IIAC (invalid AID) error message is returned.
- The ALL AID is invalid for this command.
- CMPLD response to this command means that CPS Activation is Started.
- Since this operation can take more than a minute, use RTRV-CPS to check when is ended positively.
- If the CPSSTATUS remain in ACTIVATING for more than 10 min the operation is automatically aborted and status return to INACTIVE.
- CLIENT cps type support FAC and VFAC AID type.
- TRUNK cps type support CHAN AID type.
- ADD cps type support CHAN, PCHAN, and LINEWL AID type.

---

**Category** DWDM

---

**Security** Provisioning

**Input Format**

```
OPR-CPS[:<TID>]:<SRC>:<CTAG>[::<CKTID=<CKTID>],[IGNPATHALM=<IGNPATHALM>],[ACTION=<ACTION>][:];
```

**Input Example**

```
OPR-CPS::CHAN-1-15-10-RX&CHAN-1-14-10-TX:8::;
OPR-CPS::FAC-1-4-1-1:1:::ACTION=UPGRADE;
```

**Input Parameters**

|              |   |
|--------------|---|
| <SRC>        | Source AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on <a href="#">page 26-31</a> . |
| <CKTID>      | Circuit identification parameter can be used to filter this command.                                  |
| <IGNPATHALM> | (Optional) Ignore Path Alarms. Parameter type is IGNPATHALM.  |
| <ACTION>     | Specifies the action to be performed after the WSON Circuit is established. Parameter Type is ACTION. |
| • MANRVRT    | Manual Revert. Switches the circuit manually to revert state.   |
| • NONE       | None.   |
| • FRCD       | Forced.   |
| • UPGRADE    | Upgrades the circuit to the restored path.  |

## 16.5 OPR-EXT-CONT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate External Control (OPR-EXT-CONT) command operates an external control and closes the external control contact. The control can be operated momentarily or continuously.

**Usage Guidelines**

- The duration has two values:
  - MNTRY: Momentary duration
  - CONTS: Continuous duration
- In an automatic state, the contact could be opened or closed depending on the provisioned trigger.
- RLS-EXT-CONT changes the state to automatic. Therefore, issuing an OPR-EXT-CONT command when the control is manually open and then issuing a RLS-EXT-CONT command will not revert the state back to Manual Open.
- A NULL value for the duration parameter defaults to MNTRY in this release.
- RLS-EXT-CONT is not allowed during the MNTRY duration. It is allowed for the CONTS duration. The length of the MNTRY duration is 2 seconds on the Cisco ONS 15454.
- RLS-EXT-CONT cannot change the state to automatic if the existing state is Manual Open.

**Caution**

Do not turn on external controls that activate a potential danger, such as sprinklers or other controls connected to possibly hazardous systems or equipment.

**Category** Environment

**Security** Maintenance

**Input Format** OPR-EXT-CONT:[<TID>]:<AID>:<CTAG>::[<CONTTYPER>],[<DURATION>];

**Input Example** OPR-EXT-CONT:CISCO:ENV-OUT-2:123::AIRCOND,CONTS;

|                         |             |   |
|-------------------------|-------------|---|
| <b>Input Parameters</b> | <AID>       | Access identifier from the “26.14 ENV” section on page 26-39. The AID must not be null.   |
|                         | <CONTTYPER> | Environmental control type. A null value is equivalent to ALL. The parameter type is CONTTYPER (the environmental control types). |
|                         | • AIRCOND   | Air conditioning  |
|                         | • ENGINE    | Engine  |
|                         | • FAN       | Fan   |
|                         | • GEN       | Generator   |
|                         | • HEAT      | Heat  |
|                         | • LIGHT     | Light   |
|                         | • MISC      | Miscellaneous   |
|                         | • SPKLR     | Sprinkler   |
|                         | <DURATION>  | Identifies the duration. A NULL value for the duration parameter defaults to CONTS (Continuous).                                  |
|                         | • CONTS     | Continuous duration   |

## 16.6 OPR-LPBK-<MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate Loopback for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 4GFC, 2GFICON, 5GIB, 8GFC, CLNT, D1VIDEO, DS1, DS3I, DV6000, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, EQPT, FSTE, G1000, GFPOS, GIGE, HDTV, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU2, OTU3, OTU4, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VC12, VC3, VT1, VT2, AUTO, OTU1, ISC3STP1G, or ISC3STP2G (OPR-LPBK-MMOD2) command operates a signal loopback on an input/output (I/O) card or on a cross-connect.

### Usage Guidelines

- The command supports the modifier AUTO, OTU1, ISC3STP1G, and ISC3STP2G.
- See [Table 28-1 on page 28-1](#) for supported modifiers by platform.
- The optional <LPBKTYPE> defaults to FACILITY in this command if it is given to a port entity. It defaults to CRS if given to a VC entity.

- The value CRS for the LPBKTYPE parameter is applicable only for the VC modifier. The FACILITY and TERMINAL values are applicable to the ports.
- Loopbacks are only allowed to be set up if the port/interface/VC\_PATH is in Locked-Maintenance or in Locked-AutomaticInService state.
- Cross-connect loopbacks cannot be applied to the destination end of any 1WAY cross-connect.
- A cross-connect loopback can be applied only on one VC path of a cross-connect.
- Far end access control (FEAC) loopbacks can be applied only if the DS-3 is in C-bit framing format. FEAC loopbacks will override existing loopbacks at the near end on the entity and vice versa. This means that if a facility loopback has been applied on a port and the FEAC loopback is also applied, then the facility loopback is released first and then the far-end loopback is applied.
- A Lockout of Protection command is required before putting the span of either a two-fiber or four-fiber multiplex section-shared protection ring (MS-SPRing) line in loopback.
  - A span lockout on one side (for example, the east side) of the two-fiber MS-SPRing is required before operating a Facility (or Terminal) line loopback on the same side of the ring.
  - A span lockout on one Protection side (for example, the east side) of the four-fiber MS-SPRing is required before operating a Facility (or Terminal) line loopback on the same side working line of the ring.
- FEAC loopbacks on the DS-1 interface of a DS3XM card can be applied only if a Virtual Tributary (VT) connection has been created on the DS-1. An attempt to operate or release FEAC loopbacks in the absence of a VT connection will cause an error message.
- The FEAC line is supported only with the FEND value of the LOCN parameter on DS-1/ T3 of the DS3XM-12 card.
- Only the following MOD2 fields are supported in this release: DS1 EC1, G1000, FSTE, OC12, OC192, OC3, OC48, OCH, T1, T3, STS1, STS12C, STS192C, STS24C, STS3C, STS36C, STS48C, STS6C, STS9C, E1, 1GFC, 2GFC, 4GFC, 10GFC, 1GFICON, 2GFICON, 4GFICON, GIGE, 10GIGE, ESCON, STS18C, DV6000, ETRCLO, ISCCOMPAT, ISC3PEER1G, ISC3PEER2R, PASSTHRU, ISC3PEER2G.
- This command supports a new Modifier, EQPT, which operates backplane loopback at card level.
- OPR-LPBK-EQPT command is applicable to 100g cards only. The supported backplane loopback types for this modifier are : BACKPLANE-FACILITY and BACKPLANE-TERMINAL.
- Move the card to OOS,MT state to operate backplane loopback. All the ports provisioned on the card will be moved to loopback state once the card is in Backplane loopback.
- Ports cannot be provisioned/unprovisioned when the card is in backplane loopback state.
- NEND is the only location supported for Backplane loopback.

**Note**

---

LINE and PAYLOAD values are applicable only with the FEND location value. PAYLOAD loopback can be applied by specifying the loopback type as PAYLOAD and the location as FEND.

---

- CFP-TXP and CFP-MXP modes loopback is provisioned on the 100G-LC-C virtual ports on VCFAC(OTU3/OTU4) or VCHAN(40GIGE/100GIGE) AIDs and not on the CFP-LC card.

**Security**

Maintenance

**Input Format**

OPR-LPBK-&lt;MOD2&gt;:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::[&lt;LOCATION&gt;],,,[&lt;LPBKTYPE&gt;];

**Input Example****Cisco ONS 15454 SDH**

OPR-LPBK-OTU1:PTREYES:VFAC-4-1-1-13:203::NEND,,,FACILITY;

OPR-LPBK-EQPT::SLOT-2:1::NEND,,,BACKPLANE-FACILITY;

**Input Parameters**

|            |   |
|------------|---|
| <AID>      | Access identifier from the “26.1 ALL” section on page 26-1. The valid values for AID are BAND, CHANNEL, DS1, FACILITY, LINE, STS, and VT. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC AID.   |
| <LOCATION> | The location where the operation is to be carried out. LOCATION defaults to NEND. The parameter type is LOCATION, which is the location where the action is to take place.  |
|            | <ul style="list-style-type: none"> <li>• FEND Action occurs on the far end of the facility.</li> <li>• NEND Action occurs on the near end of the facility.</li> </ul>   |
| <LPBKTYPE> | Type of loopback signal. The parameter type is LPBK_TYPE, which indicates the type of loopback that is to be operated or released.  |
|            | <ul style="list-style-type: none"> <li>• BACKPLANE-FACILITY Puts the 100G-LC-C, 10x10G-LC, and CFP-LC cards in facility loopback.</li> <li>• BACKPLANE-TERMINAL Puts the 100G-LC-C, 10x10G-LC, and CFP-LC cards in Terminal loopback.</li> <li>• CRS Path-level loopback that is established at the cross-connect matrix level. A VC level cross-connect loopback causes an AIS-P to be sent on the outgoing direction of transmission.</li> <li>• FACILITY Type of loopback that connects the incoming received signal immediately following the optical-to-electrical conversion (after descrambling) to the associated transmitter in the return direction.</li> <li>• TERMINAL A loopback that connects the signal that is about to be transmitted (after scrambling but before the electrical-to-optical conversion) and is connected to the associated, incoming receiver.</li> </ul> |

## 16.7 OPR-LPBK-EFM

(Cisco ONS 15454) The Operate Loopback Edit Ethernet in the First Mile (OPR-LPBK-EFM) command enables loopback on the Edit Ethernet in the First Mile (EFM) enabled port.

**Usage Guidelines**

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

## 16.8 OPR-PROTNSW-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate Protection Switch for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 8GFC, D1VIDEO, DV6000, DVBASI, ETRCLO, FSTE, GIGE, HDTV, ISC1, ISC3, OTU3, PASSTHRU, 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, OTU4, ISC3STP1G, or ISC3STP2G (OPR-PROTNSW-<MOD2DWDMPAYLOAD>) command initiates a Y-cable protection switch request. User switch requests initiated with this command remain active until they are released through the RLS-PROTNSW-<MOD2DWDMPAYLOAD> command or are overridden by a higher priority protection switch request.

### Usage Guidelines

The command supports the modifier 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

The switch commands MAN (Manual Switch), FRCD (Forced Switch), and LOCKOUT (Lockout) are supported by the ONS 15454.

- Manual Switch of Protection Line (to Working Line). If the AID identifies the protection line in a 1+1 protection group, then service will be transferred from the protection line to the working line, unless a request of equal or higher priority is in effect.
- Manual Switch of Working Line (to Protection Line). If the AID identifies a working line, service will be switched from the working line to the protection line unless a request of equal or higher priority is in effect.
- Force Switch of Protection Line (to Working Line). If the AID identifies the protection line, service will be transferred from the protection line to the working line unless a request of equal or higher priority is in effect.
- Force Switch of Working Line (to Protection Line). If the AID identifies a working line, service will be transferred from the working line to the protection line unless a request of equal or higher priority is in effect. A lockout of protection and a signal fail of protection have higher priority than a Force switch command.

- Lockout of Protection Line. If the AID identifies the protection line, this switch command will prevent the working line from switching to protection line. If the working line is already in protection, then the protection line will be switched back to its original working line.
- Lockout of Working Line. If the AID identifies the working line, this switch command will prevent the working line from switching to protection line. If the working line is already in protection, then the working line will be switched back from the protection line to its original working line.

If the command is used against preprovisioned cards, the SROF (Protection Switching Failed) error is returned.

**Input Format**

OPR-PROTNSW-&lt;MOD2DWDMPAYLOAD&gt;:[&lt;TID&gt;]:&lt;SRC&gt;:&lt;CTAG&gt;::&lt;SC&gt;[:];

**Input Example**

OPR-PROTNSW-SDSDI:CISCO:VFAC-1-1-1:100::FRCD;

**Input Parameters**

|             |  |
|-------------|--|
| <SRC>       | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
| <SC>        | Switch command that is to be initiated on the paths. The parameter type is SW.   |
| • APS-CLEAR | APS-CLEAR switch state. It is a read-only switch state and is not allowed in the OPR-PROTNSW-xxx commands.   |
| • CLEAR     | CLEAR switch state. CLEAR switch state is not allowed in the OPR-PROTNSW-xxx commands.   |
| • EXERCISE  | EXERCISE switch state. EXERCISE switch state is not allowed in the OPR-PROTNSW-xxx commands.   |
| • FRCD      | Forces a switch unless another FRCD or LOCKOUT is in effect.   |
| • LOCKOUT   | Locks the facility out of switching. The system cannot switch to this facility to carry service.   |
| • MAN       | Requests a manual switch of the facility.  |

## 16.9 OPR-PROTNSW-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate Protection Switch for OC3, OC12, OC48, OC192, or OC768 (OPR-PROTNSW-<OCN\_TYPE>) command initiates a SONET line protection switch request. User switch requests initiated with this command remain active until they are released via the RLS-PROTNSW-OCN command or are overridden by a higher priority protection switch request.

**Usage Guidelines**

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

The switch commands; MAN (Manual Switch), FRCD (Forced Switch), and LOCKOUT (Lockout) are supported by the ONS 15454.

- Manual Switch of Protection Line (to Working Line). If the AID identifies the protection line in a 1+1 protection group, then service will be transferred from the protection line to the working line, unless a request of equal or higher priority is in effect.
- Manual Switch of Working Line (to Protection Line). If the AID identifies a working line, then service will be switched from the working line to the protection line unless a request of equal or higher priority is in effect.
- Force Switch of Protection Line (to Working Line). If the AID identifies the protection line, then (only in the 1+1 architecture) service will be transferred from the protection line to the working line unless a request of equal or higher priority is in effect.
- Force Switch of Working Line (to Protection Line). If the AID identifies a working line, then service will be transferred from the working line to the protection line unless a request of equal or higher priority is in effect. A lockout of protection and a signal fail of protection have higher priority than a Force switch command.
- Lockout of Protection Line. If the AID identifies the protection line, this switch command will prevent the working line from switching to protection line. If the working line is already in protection, then the protection line will be switched back to its original working line.
- Lockout of Working Line. If the AID identifies the working line, this switch command will prevent the working line from switching to the protection line. If the working line is already in protection, then the working line will be switched back from protection line to its original working line.

The following actions will return error messages:

- This command cannot be used for the common control cards (TCC2/TCC2P/TCC3 or XCVT/XC10G). A query on a common control card will generate an IIAC (Input, Invalid Access Identifier) error message. For common control card switching, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
- Sending this command to electrical cards will return an IIAC error message. For electrical card switching, use the ALW-SWTOPROTN/SWTOWKG-EQPT and INH-SWTOPROTN/SWTOWKG-EQPT commands.
- Sending this command to query on a card that is not in a protection group will return the SNVS (Status, Not in Valid State) error message.
- Sending this command to a working card that is failed or missing will return the SROF error message.
- Sending this command to a protect card that is failed or missing will return the SROF error message.
- Protection for preprovisioned cards will not succeed.
- Sending this command to a card that is already in protection with a higher priority will return the SSRD (Status, Switch Request Denied) error message.
- Sending this command to an OCN line with a switching mode that is already in process will return a SAMS (Already in the Maintenance State) error message.
- Sending this command with the EXERCISE or APS\_CLEAR switch operations will return an error SROF (Invalid Protection Switch Operation) because these operations are not valid according to Telcordia GR-833-CORE. The EX-SW-<OCN\_BLSR> is the correct command to perform the EXERCISE switch over the BLSR line.

- Protection switch will be denied if signal degrade/signal fail (SD/SF) is already present on the switching path. If SD/SF is generated on the switching path after the switch is performed, the switch will be overwritten by the APS\_CLEAR state. The switch will not be overwritten despite an SD or SF condition if the switch is a Lockout of Protection or a Force switch, because these switches have a higher priority than SD and SF.

**Note**

- To get the protection switching state (Manual, Force, and lockout), use the RTRV-COND-ALL or RTRV-ALM-ALL commands.
- If the far end of the same span has a higher protection switching state (for example, the near end is in the Manual protection state and the far end is in the Force protection state) the near-end protection switching state will be preemptive and will have an APS\_CLEAR switching state. The RTRV-PROTNSW-OCN command is used to retrieve the current switching state of a SONET line.
- Sending the following Manual ring switch requests on both east and west sides/spans of a two-fiber or four-fiber BLSR in less than 30 to 45 seconds will cause the system to execute only one (WEST) side BLSR query and preempt the other (EAST) side query.
  - A single TL1 command with both side/span AIDs (in the list AID format) of the same two-fiber or four-fiber ring.
  - The separated (via TL1, CTC, or TL1 and CTC user interfaces) queries on both sides/spans of the same two-fiber or four-fiber ring.

There will be no event messages for the preempted side, whose switching state will be in the APS-CLEAR state.

- DIRN is an optional parameter. A NULL value defaults to BTH for BLSR protection, BTH for 1+1 bidirectional protection, and RCV for 1+1 unidirectional protection.

DIRN follows these rules: TRMT will always fail for all protection groups. For two-fiber and four-fiber BLSR protection groups, both the RCV and TRMT directions will fail.

- DIRN is applicable for both 1+1 and BLSR protection groups. For example, OPR-PROTNSW can be performed on a BLSR span/ring as follows:

```
OPR-PROTNSW-OC48::FAC-5-1:A::LOCKOUT,SPAN:BTH;
```

- A Lockout of Protection command is required before putting the span of either a two-fiber or four-fiber BLSR line in loopback.
  - A span lockout on one side (for example, the east side) of the two-fiber BLSR is required before operating a facility (or terminal) line loopback on the same side (for example, the east side) of the ring.
  - A span lockout on one protection side (for example, the east side) of the four-fiber BLSR is required before operating a facility (or terminal) line loopback on the same side Working line (for example, the east side) of the ring.
- A span lockout on the working port is not supported in ONS 15454.

OPR-PROTNSW-<OCN_TYPE>[:<TID>]:<AID>:<CTAG>::<SC>,[<SWITCHTYPE>][:<DIRN>];
```

**Input Example**

```
OPR-PROTNSW-OC48:CHICKALUMA:FAC-6-1:204::LOCKOUT,SPAN:BTH;
```

**Input Parameters**

|              |   |
|--------------|---|
| <AID>        | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on <a href="#">page 26-42</a> . Identifies the facility in the NE to which the switch request is directed.        |
| <SC>         | Switch command that is to be initiated on the paths. The parameter type is SW.  |
| • APS-CLEAR  | APS-CLEAR switch state. It is a read-only switch state and is not allowed in the OPR-PROTNSW-xxx commands.  |
| • CLEAR      | CLEAR switch state. The CLEAR switch state is not allowed in the OPR-PROTNSW-xxx commands.  |
| • EXERCISE   | EXERCISE switch state. The EXERCISE switch state is not allowed in the OPR-PROTNSW-xxx commands.  |
| • FRCD       | Forces a switch unless another FRCD or LOCKOUT is in effect.  |
| • LOCKOUT    | Locks the facility out of switching. The system cannot switch to this facility to carry service.  |
| • MAN        | Requests a manual switch of the facility.   |
| <SWITCHTYPE> | BLSR switch type. The parameter type is SWITCH_TYPE (switch type).  |
| • RING       | BLSR ring switch type   |
| • SPAN       | BLSR span switch type   |
| <DIRN>       | The direction relative to the entity defined in the AID field. The direction of the switching. DIRN defaults to RCV. The parameter type is DIRECTION (transmit and receive directions). |
| • BTH        | Both transmit and receive directions  |
| • RCV        | Receive direction only  |
| • TRMT       | Transmit direction only   |

## 16.10 OPR-PROTNSW-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate Protection Switch for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (OPR-PROTNSW-<PATH>) command initiates a path protection switch request. User switch requests initiated with this command (forced switch, lockout, and manual switch) remain active until they are released through the RLS-PROTNSW-<PATH> command or overridden by a higher priority protection switch request.

**Usage Guidelines**

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Note**

- This command applies to path protection configurations only.

- The VTAID should be the working or protect AID only.
- If you send this command on the drop AID, a DENY (Invalid AID, should use working/protect AID) message will be returned.
- To retrieve the protection switching state (Manual, Force, lockout), use the RTRV-COND-ALL or RTRV-ALM-ALL commands.
- Telcordia GR-1400 does not allow the LOCKOUT\_OF\_WORKING command on the path protection WORKING path/AID. When sending this command on the path protection WORKING path, a SROF (Invalid Protection Switch Operation) is returned.
- If sending this command with EXERCISE or APS\_CLEAR switch operations, an SROF error will be returned because these operations are not valid according to Telcordia GR-833-CORE.
- A protection switch will be denied if an SD or SF condition is already present on the switching path. If an SD or SF is generated on the switching path after the switch is performed, the switch will be overwritten by the APS\_CLEAR state. The switch is not overwritten if it is a lockout of protection or a Force switch, because these switch types have a higher priority than SD/SF conditions.

| <b>Security</b>         | Maintenance                                     |  |
| <b>Input Format</b>     | OPR-PROTNSW-OTS:[<TID>]:<AID>:<CTAG>::<SW>;     |  |
| <b>Input Example</b>    | OPR-PROTNSW-OTS:VA454-22:LINE-2-2-RX:100::FRCD; |  |
| <b>Input Parameters</b> | <AID>   | The CHAN aid is used to access Optical Channels (OCH) layer of Optical Network/Client units. Applicable only to 15454 for SONET. Format is CHAN-[slot]-[port]-[direction] Values |
|                         | <SW>  | The type of switch to be initiated.  |

## 16.13 OPR-RAMAN

(Cisco ONS 15454) The Operate RAMAN (OPR-RAMAN) command operates the Raman amplifier.

|                         |  |  |
|-------------------------|--|--|
| <b>Usage Guidelines</b> | None   |  |
| <b>Category</b>         | DWDM   |  |
| <b>Security</b>         | Maintenance  |  |
| <b>Input Format</b>     | OPR-RAMAN:[<TID>]:<AID>:<CTAG>:::[RAMANACT=<RAMANACT>],[AID2=<AID2>],[MEASIDX=<MEASIDX>],[RAMANST=<RAMANST>],[LAMBDA=<LAMBDA>],[DELTAPWR=<DELTAPWR>; |  |
| <b>Input Example</b>    | OPR-RAMAN::LINE-2-5-TX:AA:::RAMANACT=DO-TEST,AID2=LINE-2-5-RX,RAMANST=MEASURE,LAMBDA=1,DELTAPWR=0.0;   |  |

## Input Parameters

|   |  |
|---|--|
| <AID>   | The LINE aid is used to access Optical Transport Section (OTS) layer of Optical Network units. Applicable only to 15454 DWDM in SONET. Format is LINE-[slot]-[port]-[direction].   |
| <ul style="list-style-type: none"> <li>LINE[-{1-50}]-{1-5,12-16}-{1-5}-{RX,TX}</li> </ul>   | The receive/transmit Lines (COM=1, OSC=2, LINE=3, DC=4, RAMAN=5) in a OPT-RAMP-C cards. Where format is LINE-[shelf]-[slot]-[port]-[dirn]  |
| <ul style="list-style-type: none"> <li>LINE[-{1-50}]-{1-5,12-16}-{1-5}-ALL</li> </ul>   | All the Lines (COM=1, OSC=2, LINE=3, DC=4, RAMAN=5) in a OPT-RAMP-C cards. Where format is LINE-[shelf]-[slot]-[port]-ALL  |
| <RAMANACT>  | RAMAN action   |
| <ul style="list-style-type: none"> <li>DO-MEASURE</li> <li>DO-RSTSM</li> <li>DO-TEST</li> <li>RESTORE</li> <li>DO-CALCPAR</li> <li>ACCEPT</li> <li>FORCE-UPD</li> </ul> | <ul style="list-style-type: none"> <li>Starts RAMAN Measure.</li> <li>Restarts RAMAN SM.</li> <li>Starts RAMAN test.</li> <li>Restores after RAMAN test.</li> <li>Calculates RAMAN parameters.</li> <li>Accepts tuning parameters.</li> <li>Restores Raman after fiber cut.</li> </ul>                                 |
| <AID2>  | The LINE aid is used to access Optical Transport Section (OTS) layer of Optical Network units. Applicable only to 15454 DWDM in SONET. Format is LINE-[slot]-[port]-[direction]  |
| <ul style="list-style-type: none"> <li>LINE[-{1-50}]-{1-5,12-16}-{1-5}-{RX,TX}</li> </ul>   | The receive/transmit Lines (COM=1, OSC=2, LINE=3, DC=4, RAMAN=5) in a OPT-RAMP-C cards. Where format is LINE-[shelf]-[slot]-[port]-[dirn].   |
| <ul style="list-style-type: none"> <li>LINE[-{1-50}]-{1-5,12-16}-{1-5}-ALL</li> </ul>   | All the Lines (COM=1, OSC=2, LINE=3, DC=4, RAMAN=5) in a OPT-RAMP-C cards. Where format is LINE-[shelf]-[slot]-[port]-ALL.   |
| <MEASIDX>   | The RAMAN measure index.   |
| <RAMANST>   | Indicates the Raman setup state.   |
| <ul style="list-style-type: none"> <li>NOT-TUNED</li> <li>TUNING</li> <li>TUNED</li> <li>FORCE-TUNED</li> <li>ACCEPTED-TUNED</li> <li>TUNED-VERIFIED</li> </ul>         | <ul style="list-style-type: none"> <li>RAMAN is not tuned. Default values are set</li> <li>RAMAN is tuning</li> <li>RAMAN is tuned but not verified</li> <li>RAMAN is tuned with values not measured but calculated</li> <li>RAMAN setup has been accepted by the user</li> <li>RAMAN is tuned and verified</li> </ul> |
| <LAMBDA>  | The enumerate number used to indicate the wavelength inside an optical channel port  |
| <DELTAPWR>  | The delta power to add at each node interested in the Raman setup. DELTAPWR is a float.  |

## 16.14 OPR-SLV-WDMANS

(Cisco ONS 15454) The Operate Span Loss Verification Wavelength Division Multiplexing Automatic Node Set-Up (OPR-SLV-WDMANS) command performs the calculation of the expected span loss verification.

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | None   |
| <b>Category</b>         | DWDM   |
| <b>Security</b>         | Maintenance  |
| <b>Input Format</b>     | OPR-SLV-WDMANS[:<TID>]:<AID>:<CTAG>[:<ROLE>];;   |
| <b>Input Example</b>    | OPR-SLV-WDMANS:VA454-22:WDMSIDE-E:116;   |
| <b>Input Parameters</b> | <AID> Access identifier from the <a href="#">“26.34 WDMANS”</a> section on page 26-62. |

## 16.15 OPR-SYNCNSW

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Operate Synchronization Switch (OPR-SYNCNSW) command initiates a switch to the reference specified by the synchronization reference number if the reference supplied is valid and of the same quality.

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | <p>For manual types of switches, the reference where you want to switch should be of the same quality as the active reference source; otherwise, the command will fail.</p> <p>If you want to switch to a reference of lower quality, use the Force switch option.</p> <p>The Operate Synchronization Switches are released by the RLS-SYNCNSW command or are overridden by a synchronization reference failure.</p> <p>After the switch is effective, the MANSWTOPRI (Manual Switch to Primary or Secondary Reference) minor alarm will be raised.</p> |
|-------------------------|---|

|                      |   |
|----------------------|---|
| <b>Category</b>      | Synchronization   |
| <b>Security</b>      | Maintenance   |
| <b>Input Format</b>  | OPR-SYNCNSW[:<TID>]:[:<AID>]:<CTAG>::<SWITCHTO>,[<SC>]; |
| <b>Input Example</b> | OPR-SYNCNSW:CISCO:SYNC-NE:3::PRI,MAN;                   |

|                         |   |   |
|-------------------------|---|---|
| <b>Input Parameters</b> | <AID>   | Access identifier from the “ <a href="#">26.30 SYNC_REF</a> ” section on page 26-60. The default is SYNC-NE.  |
|                         | <SWITCHTO>  | Access identifier from the “ <a href="#">26.31 SYNC_SW</a> ” section on page 26-60. Identifies the new synchronization reference that will be used.               |
|                         | <SC>  | Switch command to be initiated on the paths. Only MAN and FRCD switches are allowed for this command. The parameter type is SW, which is the type of switch.      |
|                         | <ul style="list-style-type: none"> <li>• FRCD</li> <li>• MAN</li> </ul> | <ul style="list-style-type: none"> <li>Forces a switch unless another FRCD or LOCKOUT is in effect.</li> <li>Requests a manual switch of the facility.</li> </ul> |

## 16.16 OPR-VLB-REP

(Cisco ONS 15454) The Operate VLAN Load Balancing Resilient Ethernet Protocol (OPR-VLB-REP) command manually triggers the VLAN Load Balancing (VLB) on REP segment.

### Usage Guidelines

- Enable VLB on the ports to activate VLB.
- This command is applicable only to GE\_XP and 10GE\_XP cards.

### Category

Ethernet

### Security

Provisioning

### Input Format

OPR-VLB-REP:[<TID>]:<AID>:<CTAG>:::<TRIGGERTYPE>;

### Input Example

OPR-VLB-REP::ETH-16-2-1:1::ACTIVATE;

### Input Parameters

|  |   |
|--|---|
| <AID>  | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.                              |
| <TRIGGERTYPE>  | Indicates the TRIGGERTYPE.  |
| <ul style="list-style-type: none"> <li>• ACTIVATE</li> <li>• DEACTIVATE</li> </ul> | <ul style="list-style-type: none"> <li>Activates manual trigger.</li> <li>De-activates manual trigger.</li> </ul> |

## 16.17 OPR-WDMANS

(Cisco ONS 15454) The Operate Wavelength Division Multiplexing Automatic Node Set Up (OPR-WDMANS) command initiates the Automatic Optical Node Set Up (AONS) application inside the NE to force a recompute of the value assigned to all variable optical attenuators (VOAs) representing the optical path inside the node.

---

**Usage Guidelines** None

---

**Category** DWDM

---

**Security** Maintenance

---

**Input Format** OPR-WDMANS:[<TID>]::<CTAG>[:];

---

**Input Example** OPR-WDMANS:PENNGROVE::114;

# REPT Messages

This chapter provides report (REPT) messages for the Cisco ONS 15454.

**Note**

The REPT commands do not apply to the Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 17.1 REPT ALM <MOD2ALM>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Alarm for 1GFC, 1GFICON, 2GFC, 2GFICON, CLNT, DS1, E100, E1000, E3, E4, EC1, ETH, FSTE, G1000, GFPOS, GIGE, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OCH, OMS, OTS, 10GFC, 8GFC, 10GIGE, 100GIGE, 40GIGE, OC192, OTU1, OTU2, OTU3, OTU4, POS, STM1, STM4, STM16, STM64, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS6C, STS9C, T1, T3, UDCDCC, UDCF, VC3, VC4, VC4-2c, VC4-3c, VC4-4c, VC4-8c, VC4-16c, VC4-64c, VC12, VCG, VT1, VT2, or WLEN (REPT ALM <MOD2ALM>) message reports an alarm condition against a facility, an RPR interface, or a path.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Category

Fault

### Security

**Output Parameters**

| Parameter  | Description  |
|--|--|
| <AID>  | Access identifier from the <a href="#">“26.19 LINE”</a> section on page 26-45 and <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
| <NTFCNCDE>   | Two-letter notification code. The parameter type is NOTIF_CODE, which is a two-character notification code associated with an autonomous message.  |
| <ul style="list-style-type: none"> <li>CL</li> <li>CR</li> <li>MJ</li> <li>MN</li> <li>NA</li> <li>NR</li> </ul> | <ul style="list-style-type: none"> <li>The condition causing the alarm has cleared</li> <li>A critical alarm</li> <li>A major alarm</li> <li>A minor alarm</li> <li>The condition is not alarmed</li> <li>The alarm is not reported</li> </ul>   |
| <CONDTYPE>   | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, Not Alarmed conditions (NA), and Not Reported (NR) conditions. See the <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.  |
| <ul style="list-style-type: none"> <li>NSA</li> <li>SA</li> </ul>  | <ul style="list-style-type: none"> <li>The condition is non-service affecting</li> <li>The condition is service affecting</li> </ul>   |
| <OCRDAT>   | (Optional) Date  |
| <OCRTM>  | (Optional) Time  |
| <DESC>   | (Optional) Condition description.  |
| <AIDDET>   | (Optional) AIDDET uses the same addressing rules as the AID, but specifies AID type and additional details about the entity being managed. The parameter type is EQPT_TYPE, which is the type of equipment being provisioned into a slot.  |
| <ul style="list-style-type: none"> <li>100G-LC-C</li> <li>10X10G-LC</li> </ul>                                   | <ul style="list-style-type: none"> <li>100G-LC-C card</li> <li>10X10G-LC card</li> </ul>   |

| Parameter          | Description   |
|--------------------|---|
| • AR-XPE           | Any rate enhanced xpdoner.  |
| • CFP-LC           | CFP-LC card   |
| • 15216-MD-40-EVEN | Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on even grid |
| • 15216-MD-40-ODD  | Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on odd grid  |
| • 15216-MD-ID-50   | Thermal Interleaver Passive Unit, spaced at 50 GHz grid                   |
| • 15216-FLD4-30-3  | Edge 4-Ch Bi-Directional OADM Module 1530.33 to 1532.68                   |
| • 15216-FLD4-33-4  | Edge 4-Ch Bi-Directional OADM Module 1533.47 to 1535.82                   |
| • 15216-FLD4-36-6  | Edge 4-Ch Bi-Directional OADM Module 1536.61 to 1538.98                   |
| • 15216-FLD4-39-7  | Edge 4-Ch Bi-Directional OADM Module 1539.77 to 1542.14                   |
| • 15216-FLD4-42-9  | Edge 4-Ch Bi-Directional OADM Module 1542.94 to 1545.32                   |
| • 15216-FLD4-46-1  | Edge 4-Ch Bi-Directional OADM Module 1546.12 to 1548.51                   |
| • 15216-FLD4-49-3  | Edge 4-Ch Bi-Directional OADM Module 1549.32 to 1551.72                   |
| • 15216-FLD4-52-5  | Edge 4-Ch Bi-Directional OADM Module 1552.52 to 1554.94                   |
| • 15216-FLD4-55-7  | Edge 4-Ch Bi-Directional OADM Module 1555.75 to 1558.17                   |
| • 15216-FLD4-58-9  | Edge 4-Ch Bi-Directional OADM Module 1558.98 to 1561.42                   |
| • 32DMX-L          | 32-channel demultiplexer for L-band                                       |
| • 32WSS-L          | 32-channel wavelength switch selector for L-band                          |
| • 40G-MXP-C        | 40 Gbit/Sec Multirate Muxponder   |
| • 40-SMR1-C        | The single module 40-channel ROADM on C-band                              |
| • 40-SMR2-C        | The single module 40-channel ROADM with EDFA on C-band                    |
| • 40G-TXP-C        | 40 Gigabits per second Multirate Transponder                              |
| • 80-WXC-C         | 80-channel wavelength cross-connect spaced at 100 GHz grid                |
| • AD-1B            | Optical Add/Drop Multiplexer (OADM) 1-Band Filter                         |
| • AD-1C            | OADM 1-Channel Filter   |
| • AD-2C            | OADM 2-Channel Filter   |
| • AD-4B            | OADM 4-Band Filter  |
| • AD-4C            | OADM 4-Channel Filter   |
| • ADM-10G          | 12 x OC3/OC12/OC48/GIGE and OC192/Trunk ADM 10 Gbit/Sec.                  |
| • AICI             | AIC-I card  |

| Parameter          | Description  |
|--------------------|--|
| • AIP              | Alarm Indication Panel   |
| • ALM-PWR          | Alarm Power  |
| • BP               | The backplane of the NE  |
| • CE-100T-8        | 8-port 100T card   |
| • CE-1000-4        | 4-port GIGE mapper card  |
| • CRFT-TMG         | Craft Timing   |
| • DCC              | The Data Communications Channel                                  |
| • DCU              | Dispersion Compensation Unit                                     |
| • DMX-32           | Optical De/Multiplexed (DMX) 32 Channels                         |
| • DS3i-N-12        | DS3i-N-12 card   |
| • E1               | E1 card  |
| • E1-42            | 42-port E1 card  |
| • E100T-2          | 2-port interface card supporting 1000BaseT Ethernet facilities   |
| • E100T-12         | 12-port interface card supporting 100BaseT Ethernet facilities   |
| • E100T-4          | Four-port interface card supporting 100BaseT Ethernet facilities |
| • E1N              | E1N card   |
| • E3               | E3 card  |
| • FBGDCU-1157      |  |
| • FBGDCU-1322      |  |
| • FBGDCU-165       |  |
| • FBGDCU-1653      |  |
| • FBGDCU-1983      |  |
| • FBGDCU-331       |  |
| • FBGDCU-496       |  |
| • FBGDCU-661       |  |
| • FBGDCU-826       |  |
| • FBGDCU-992       |  |
| • FMEC-155E-1TO1   | The equipment type for FMEC STM1E12 card                         |
| • FMEC-155E-1TO3   | The equipment type for FMEC STM1E12 card with 1:3 protection     |
| • FMEC-155E-UNPROT | The equipment type for FMEC STM1E12 card without protection      |
| • FMEC-SMZ-E1      | FMEC card corresponding to E1 card                               |
| • FMEC-SMZ-E3      | FMEC card corresponding to E3 card                               |
| • FTA              | Fan Tray of the NE   |
| • FTA1             | Fan Tray 1 of the NE   |
| • FTA2             | Fan Tray 2 of the NE   |
| • G1K-4            | G1K-4 card   |

| Parameter             | Description  |
|-----------------------|--|
| • MD-4                | Optical Multiplexer/Demultiplexer with 4 Channels  |
| • MD-48-CM            |  |
| • MD-48-EVEN          |  |
| • MD-48-ODD           |  |
| • MESH-PP-SMR         | The passive unit Patch Panel device used to connect up to four 40-SMR2-C cards.  |
| • ML100X-8            | 8-port 100T card with optical interface  |
| • ML-100T-8           | (Cisco ONS 15454) Exige/Elise mapper card  |
| • ML-1000-2           | (Cisco ONS 15454) Daytona 2-port GigE  |
| • ML-100T-12          | ((Cisco ONS 15454) Daytona) 12-port FSTE   |
| • MRC-12              | !2-port  |
| • MRC-2.5G-4          | 12G (4 * 2.5G) Muxponder card  |
| • MRC-2.5G-12         | 12G (4 * 2.5G) Muxponder card  |
| • MMU                 | Multiring mesh upgrade unit  |
| • MS-ISC-100T         | Fast Ethernet switch card used for internal shelf connection   |
| • MUX-32              | Optical Multiplexer (MUX) 32 Channels  |
| • MXP-2.5G-10G        | 10G (4 * 2.5G) Muxponder card  |
| • MXP-MR-10DME        | 10 Gbps datamux with enhanced FEC  |
| • OC12                | An interface card that supports one or more OC-12 (622 Mbps) optical facilities  |
| • OC12-4              | A four-port OC12 card  |
| • OC12-IR-1           | An interface card that supports one intermediate-range OC-12 (622 Mbps) optical facilities   |
| • OC12-LR-1           | An interface card that supports one long-range OC-12 (622 Mbps) optical facilities   |
| • OC12-SR-1           | An interface card that supports one short-range OC-12 (622 Mbps) optical facilities  |
| • OC192-LR-1          | An interface card that supports one or more OC-192 optical facilities  |
| • OC192-XFP           | OC192 XFP  |
| • OC3                 | An interface card that supports multiple OC-3 (155 Mbps) optical facilities  |
| • OC3-IR-4            | An interface card that supports four intermediate-range OC-3 (155 Mbps) optical facilities   |
| • OC3-SR-4            | An interface card that supports four short-range OC-3 (155 Mbps) optical facilities  |
| • OC3ATM-IR-6         | An interface card that supports six intermediate-range OC-3 (155 Mbps) ATM optical fibers  |
| • OC3IR-STM1SH-1310-8 | An OC3 card which has 8 ports over the lower speed slot of the ONS 15454 with XC10G short-range OC-48 (10 Gbps) optical facilities |
| • OC3POS-SR-4         | An interface card that supports four short-range OC-3 (155 Mbps) POS optical facilities  |

| Parameter            | Description   |
|----------------------|---|
| • OC48               | An interface card that supports one or more OC-48 optical facilities  |
| • OC48-AS-1          | An interface card that supports one short-range OC-48 (10 Gbps) optical facilities that can be provisioned in any input/output (I/O) slot |
| • OC48-ELR-1         | An interface card that supports one short-range OC-48 (2.5 Gbps) optical facility   |
| • OC48-IR-1          | An interface card that supports one intermediate-range OC-48 (10 Gbps) optical facility   |
| • OC48-LR-1          | An interface card that supports one long-range OC-48 (10 Gbps) optical facility   |
| • OC48-SR-1          | An interface card that supports one   |
| • OPT-AMP-L          | Optical preamplifier card for L-band  |
| • OPT-BST            | Optical booster amplifier   |
| • OPT-BST-L          | Optical booster for L-band  |
| • OPT-EDFA-17        | MAL-less EDFA Optical Amplifier - C-band - 17dB Gain  |
| • OPT-EDFA-24        | MAL-less EDFA Optical Amplifier - C-band - 24dB Gain  |
| • OPT-PRE            | Optical Preamplifier  |
| • OPT-RAMP-C         | Raman pump amplifier C-band   |
| • OPT-RAMP-CE        | An extended version of Raman pump amplifier   |
| • OPT-RAMP-COP       | Raman COP card  |
| • OPT-RAMP-CTP       | Raman CTP card  |
| • OPT-RAMP-E         | Raman pump amplifier E-band   |
| • OSC-CSM            | Optical Service Channel with Combiner/Separator Module  |
| • OSCM               | Optical Service Channel (OSC) Module  |
| • OTU2-XP            | A 4x10G transponder that is capable to operate with multiple bit rates - 10G FC, 10GE, and OC192/STM64                                    |
| • PIM-4              | Pluggable interface module with 4 pluggable port module (PPM) slots   |
| • PP-4-SMR           | Patch-Panel, 4 degrees, for SMR cards   |
| • PP-MESH-4          | Patch-Panel, 4 degrees  |
| • PP-MESH-8          | Patch-Panel, 8 degrees  |
| • PPM-1              | Pluggable port module with 1 port SFP module  |
| • PSM                | Protection Service Module card  |
| • PTM-4              | Line card   |
| • PTF-4              | Fabric card   |
| • PTSA               | CPT 50 panel  |
| • PTSYSFan-Out-Group | PTSYS Fan-Out-Group   |
| • SHELF              | Shelf entity  |
| • SHELF-M2           | SHELF-M2  |
| • SHELF-M6           | SHELF-M6  |

| Parameter              | Description  |
|------------------------|--|
| • STM4                 | An interface card that supports one or more STM4 (622 Mbps) optical facilities   |
| • STM4-4               | A four port STM4 card  |
| • STM4-IR-1            | An interface card that supports one intermediate range STM4 (622 Mbps) optical facilities                                  |
| • STM4-LR-1            | An interface card that supports one long range STM4 (622 Mbps) optical facilities  |
| • STM4-SR-1            | An interface card that supports one short range STM4 (622Mbps) optical facilities  |
| • STM64-4              | A four port STM64 card   |
| • STM64-LR-1           | An interface card that supports one or more STM64 optical facilities   |
| • STM1                 | An interface card that supports multiple STM1 (155 Mbps) optical facilities  |
| • STM1-IR-4            | An interface card that supports four intermediate range STM1 (155 Mbps) optical facilities                                 |
| • STM1-SR-4            | An interface card that supports four short range STM1 (155 Mbps) optical facilities  |
| • STM1ATM-IR-6         | An interface card that supports six intermediate range STM1 (155 Mbps) asynchronous transfer mode (ATM) optical fibers     |
| • STM1IR-STM1SH-1310-8 | An STM1 card that has 8 ports over the lower speed slot of the ONS 15454 SDH with XC-VXL-10G/XC-VXL-2.5G                   |
| • STM1POS-SR-4         | An interface card that supports four short range STM1 (155 Mbps) packet-over-SDH (POS) optical facilities                  |
| • STM16                | An interface card that supports one or more STM16 (10 Gbps) optical facilities   |
| • STM16-AS-1           | An interface card that supports one short range OC-48 (10 Gbps) optical facilities that can be provisioned in any I/O slot |
| • STM16-ELR-1          | An interface card that supports one short range STM16 (2.5 Gbps) optical facility  |
| • STM16-IR-1           | An interface card that supports one intermediate range STM16 (10 Gbps) optical facility                                    |
| • STM16-LR-1           | An interface card that supports one long range STM16 (10 Gbps) optical facility  |
| • STM16-SR-1           | An interface card that supports one short range STM16 (10 Gbps) optical facilities   |
| • TCC                  | Timing, Communications, and Control card   |
| • TDC-CC               | Coarse tunable dispersion compensation unit  |
| • TDC-FC               | Fine tunable dispersion compensation unit  |
| • TNC                  | Transport Node Controller card   |
| • TSC                  | Transport Shelf Controller card  |
| • TXP-MR-10G           | 10G Multirate Transponder card   |

| Parameter       | Description                      |
|-----------------|----------------------------------|
| • TXP-MR-2.5G   | Multirate 2.5G Unprotected       |
| • TXPP-MR-2.5G  | Multirate 2.5G Protected         |
| • UNKNOWN       | Unknown equipment type           |
| • UNPROVISIONED | Unprovisioned equipment type     |
| • WSE           | Wire Speed Encryption (WSE) card |
| • XC-VXC-10G    | XC-VXC-10G cross-connect card    |
| • XCVXL-10G     | XC-VXL-10G cross-connect card    |
| • XCVXL-2.5G    | XC-VXL-2.5G cross-connect card   |

## 17.2 REPT ALM BITS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Alarm Building Integrated Timing Supply (REPT ALM BITS) message reports an alarm condition on a BITS facility.

### Usage Guidelines

None

### Category

Synchronization

### Security

Retrieve

### Output Format

```
SID DATE TIME
** ATAG REPT ALM BITS
"<AID>:<NTFCNCDE>,<CONDTYPE>,<SRVEFF>,[<OCRDAT>],[<OCRTM>],[<LOCN>],
[<DIRN>]:[<DESC>]"
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
** 100.100 REPT ALM BITS
"BITS-1:MJ,SYNC,SA,08-01,14-25-59,,:\"LOSS OF TIMING\""
;
```

### Output Parameters

|            |  |
|------------|--|
| <AID>      | Access identifier from the <a href="#">“26.6 BITS” section on page 26-22</a> .   |
| <NTFCNCDE> | Two-letter notification code. The parameter type is NOTIF_CODE, the two-character notification code associated with an autonomous message. |
| • CL       | The condition causing the alarm has cleared.   |
| • CR       | A critical alarm.  |
| • MJ       | A major alarm.   |

|            |  |
|------------|--|
| • MN       | A minor alarm.   |
| • NA       | The condition is not alarmed.  |
| • NR       | The alarm is not reported.   |
| <CONDTYPE> | The condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, Not-Alerted conditions (NA), and Not-Reported (NR) conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <OCRDAT>   | (Optional) Date  |
| <OCRTM>    | (Optional) Time  |
| <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.  |
| • NSA      | The condition is non-service affecting.  |
| • SA       | The condition is service affecting.  |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
| • FEND     | Action occurs on the far end of the facility.  |
| • NEND     | Action occurs on the near end of the facility.   |
| <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH      | Both transmit and receive directions   |
| • RCV      | Receive direction only   |
| <DESC>     | (Optional) Condition description.  |

## 17.3 REPT ALM COM

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Alarm Common (REPT ALM COM) message reports an alarm condition when an AID cannot be given. For example, a fan failure is reported using this message.

**Usage Guidelines** None

**Category** Fault

**Security** Retrieve

**Output Format**

```
SID DATE TIME
** ATAG REPT ALM COM
“[<AID>]:<NTFCNCDE>,<CONDTYPE>,<SRVEFF>,[<OCRDAT>],[<OCRTM>],[<LOCN>],
[<DIRN>]:[<DESC>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
** 100.100 REPT ALM COM
“COM:MJ,FAN,NSA,08-01,14-25-59,,:\“FAN FAILURE””
;
```

**Output Parameters**

|  |   |
|--|---|
| <AID>  | (Optional) Access identifier. Identifies the entity to which the command pertains. Indicates an alarm without AID. AID is a string.   |
| <NTFCNCDE>   | Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
| <ul style="list-style-type: none"> <li>• CL</li> <li>• CR</li> <li>• MJ</li> <li>• MN</li> <li>• NA</li> <li>• NR</li> </ul> | <p>The condition causing the alarm has cleared.</p> <p>A critical alarm.</p> <p>A major alarm.</p> <p>A minor alarm.</p> <p>The condition is not alarmed.</p> <p>The alarm is not reported.</p>   |
| <CONDTYPE>   | The condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether it generates a trouble notification). Reported conditions include alarms, Not-Alerted conditions (NA), and Not-Reported (NR) conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <OCRDAT>   | (Optional) Date   |
| <OCRTM>  | (Optional) Time   |
| <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.   |
| <ul style="list-style-type: none"> <li>• NSA</li> <li>• SA</li> </ul>  | <p>The condition is non-service affecting.</p> <p>The condition is service affecting.</p>   |
| <LOCN>   | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.  |
| <ul style="list-style-type: none"> <li>• FEND</li> <li>• NEND</li> </ul>   | <p>Action occurs on the far end of the facility.</p> <p>Action occurs on the near end of the facility.</p>  |
| <DIRN>   | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.  |
| <ul style="list-style-type: none"> <li>• BTH</li> </ul>  | Both transmit and receive directions  |

|        |                                   |
|--------|-----------------------------------|
| • RCV  | Receive direction only            |
| <DESC> | (Optional) Condition description. |

## 17.4 REPT ALM ENV

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Alarm Environment (REPT ALM ENV) message reports a customer-defined condition on an environmental alarm input.

**Usage Guidelines** None

**Category** Environment

**Security** Retrieve

**Output Format**

```
SID DATE TIME
** ATAG REPT ALM ENV
"<AID>:<NTFCNCDE>,<ALMTYPE>,[<OCRDAT>],[<OCRTM>],[<DESC>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
** 100.100 REPT ALM ENV
"ENV-IN-1:MJ,OPENDR,08-01,14-25-59,\"OPEN DOOR\""
```

|                          |            |   |
|--------------------------|------------|---|
| <b>Output Parameters</b> | <AID>      | Access identifier from the <a href="#">“26.14 ENV” section on page 26-39</a> . Identifies an environmental input.                                 |
|                          | <NTFCNCDE> | Two-letter notification code. The parameter type is NOTIF_CODE, which is a two-character notification code associated with an autonomous message. |
|                          | • CL       | The condition causing the alarm has cleared.  |
|                          | • CR       | A critical alarm.   |
|                          | • MJ       | A major alarm.  |
|                          | • MN       | A minor alarm.  |
|                          | • NA       | The condition is not alarmed.   |
|                          | • NR       | The alarm is not reported.  |
|                          | <ALMTYPE>  | Abbreviated code identifying the alarm. The parameter type is ENV_ALM, which is the environmental alarm types.                                    |
|                          | • AIRCOMPR | Air compressor failure  |
|                          | • AIRCOND  | Air conditioning failure  |

|             |   |
|-------------|---|
| • AIRDRYR   | Air dryer failure   |
| • BATDSCHRG | Battery discharging   |
| • BATTERY   | Battery failure   |
| • CLFAN     | Cooling fan failure   |
| • CPMAJOR   | Centralized power major failure                                 |
| • CPMINOR   | Centralized power minor failure                                 |
| • ENGINE    | Engine failure  |
| • ENGOPRG   | Engine operating  |
| • ENGTRANS  | Standby engine transfer   |
| • EXPLGS    | Explosive gas   |
| • FIRDETR   | Fire detector failure   |
| • FIRE      | Fire  |
| • FLOOD     | Flood   |
| • FUELLEAK  | Fuel leak   |
| • FUSE      | Fuse failure  |
| • GASALARM  | Explosive gas, toxic gas, ventilation fail, or gas monitor fail |
| • HATCH     | Controlled Environment Vault (CEV) hatch fail                   |
| • GEN       | Generator failure   |
| • HIAIR     | High airflow  |
| • HIHUM     | High humidity   |
| • HITEMP    | High temperature  |
| • HIWTR     | High water  |
| • INTRUDER  | Intrusion   |
| • LEVELCON  | Level converter   |
| • LVDADSL   | Secondary ADSL low voltage disconnect                           |
| • LVDBYPAS  | Low voltage disconnect bypass                                   |
| • LWBATVG   | Low battery voltage   |
| • LWFUEL    | Low fuel  |
| • LWHUM     | Low humidity  |
| • LWPRES    | Low cable pressure  |
| • LWTEMP    | Low temperature   |
| • LWWTR     | Low water   |
| • MISC      | Miscellaneous   |
| • OPENDR    | Open door   |
| • POWER     | Commercial power failure  |
| • PUMP      | Pump failure  |
| • PWR-48    | 48 V power supply failure                                       |
| • PWR-139   | -139 V power converter  |
| • PWR-190   | -190 V power converter  |
| • PWRMJ     | Power supply major  |
| • PWRMN     | Power supply minor  |

|              |  |
|--------------|--|
| • RECT       | Rectifier failure  |
| • RECTHI     | Rectifier high voltage   |
| • RECTLO     | Rectifier low voltage  |
| • RINGGENMJ  | Ringling generator major   |
| • RINGGENMN  | Ringling generator minor   |
| • RTACADSL   | AC or AC/rectifier power fail ADSL equipment   |
| • RTACCRIT   | AC or AC/rectifier power fail DCL equipment critical site  |
| • RTACPWR    | AC or AC/rectifier power fail DCL equipment  |
| • RTACPWRENG | Commercial AC fail, site equipped with standby engine  |
| • RTBAYPWR   | AC power loss distributed power RT bay   |
| • RTRVENG    | Retrieve standby engine, commercial AC restored  |
| • SMOKE      | Smoke  |
| • TEMP       | High-low temperature   |
| • TOXICGAS   | Toxic gas  |
| • TREPEATER  | T-repeater shelf   |
| • VENTN      | Ventilation system failure   |
| <OCRDAT>     | (Optional) Date.   |
| <OCRTM>      | (Optional) Time.   |
| <LOCN>       | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place. |
| • FEND       | Action occurs on the far end of the facility.  |
| • NEND       | Action occurs on the near end of the facility.   |
| <DIRN>       | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH        | Both transmit and receive directions   |
| • RCV        | Receive direction only   |
| <DESC>       | (Optional) Condition description.  |

## 17.5 REPT ALM LMP

(Cisco ONS 15454) The Report Alarm Link Management Protocol (REPT ALM LMP) is the autonomous message which is used to report the LMP-FAIL alarms for the control channels and traffic engineering (TE) links.

**Usage Guidelines** None

**Category** Fault

**Security**

Retrieve

**Output Format**

```
SID DATE TIME** ATAG REPT ALM LMP
" [<AID>]:<NTFCNCDE>,<CONDTYPE>,<SRVEFF>,[<OCRDAT>],[<OCRTM>],[<LOCN>],
  [<DIRN>]: [<DESC>]"
;
```

**Output Example**

```
va454-5 1998-06-20 14:30:00

  "CTRL-1:MJ,LMP-FAIL,NSA,08-01,14-25-59,,"LMP Failure\","
;
```

**Output Parameters**

|  |   |
|--|---|
| <AID>  | The LMP control channel AID values.   |
| <ul style="list-style-type: none"> <li>CTRL-ALL</li> <li>CTRL-{1-4}</li> </ul>                                   | <ul style="list-style-type: none"> <li>Specifies all the control channels.</li> <li>Specifies an individual control channel.</li> </ul>   |
| <NTFCNCDE>   | The two-character notification code associated with an autonomous message.  |
| <ul style="list-style-type: none"> <li>CL</li> <li>CR</li> <li>MJ</li> <li>MN</li> <li>NA</li> <li>NR</li> </ul> | <ul style="list-style-type: none"> <li>The condition causing the alarm has cleared.</li> <li>A critical alarm.</li> <li>A major alarm.</li> <li>A minor alarm.</li> <li>The condition is not alarmed.</li> <li>The condition is not reported.</li> </ul>  |
| <CONDTYPE>   | The condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether it generates a trouble notification). Reported conditions include alarms, Not-Alarmed conditions (NA), and Not-Reported (NR) conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | Indicates the effect of the alarm on service.   |
| <ul style="list-style-type: none"> <li>NSA</li> <li>SA</li> </ul>  | <ul style="list-style-type: none"> <li>The condition is non-service affecting.</li> <li>The condition is service affecting.</li> </ul>  |
| <OCRDAT>   | (Optional) Date (YYYY-MM-DD)  |
| <OCRTM>  | (Optional) Time (HH:MM:SS)  |
| <LOCN>   | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.  |
| <ul style="list-style-type: none"> <li>FEND</li> <li>NEND</li> </ul>   | <ul style="list-style-type: none"> <li>Action occurs on the far end of the facility.</li> <li>Action occurs on the near end of the facility.</li> </ul>   |
| <DIRN>   | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.  |

|        |                                      |
|--------|--------------------------------------|
| • BTH  | Both transmit and receive directions |
| • RCV  | Receive direction only               |
| <DESC> | The condition description.           |

## 17.6 REPT ALM EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Alarm Equipment (REPT ALM EQPT) message reports an alarm condition against an equipment unit or slot.

**Usage Guidelines** None

**Category** Equipment

**Security** Retrieve

**Output Format**

```
SID DATE TIME
** ATAG REPT ALM EQPT
"<AID>:<NTFCNCDE>,<CONDITION>,<SRVEFF>,[<OCRDAT>],[<OCRTM>],[<LOCN>],
[<DIRN>],:[<DESC>],[<AIDDET>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
** 100.100 REPT ALM EQPT
"SLOT-7:MJ,CONTR,NSA,08-01,14-25-59,NEND,RCV:\\"CONTROLLER FAILURE\\",TSC"
;
```

| Output Parameters | Parameter  | Description   |
|-------------------|------------|---|
|                   | <AID>      | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39. Equipment AID SLOT- $\{1-17\}$ .                                   |
|                   | <NTFCNCDE> | Two-letter notification code. The parameter type is NOTIF_CODE, which is a two-character notification code associated with an autonomous message. |
|                   | • CL       | The condition causing the alarm has cleared.  |
|                   | • CR       | A critical alarm.   |
|                   | • MJ       | A major alarm.  |
|                   | • MN       | A minor alarm.  |
|                   | • NA       | The condition is not alarmed.   |
|                   | • NR       | The alarm is not reported.  |

| Parameter          | Description  |
|--------------------|--|
| <CONDITION>        | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, Not Alarmed conditions (NA), and Not Reported (NR) conditions. See the <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>           | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.  |
| • NSA              | The condition is non-service affecting.  |
| • SA               | The condition is service affecting.  |
| <OCRDAT>           | (Optional) Date  |
| <OCRTM>            | (Optional) Time  |
| <DESC>             | (Optional) Condition description.  |
| <AIDDET>           | (Optional) AIDDET uses the same addressing rules as the AID, but specifies AID type and additional details about the entity being managed. The parameter type is EQPT_TYPE, which is the type of equipment being provisioned into a slot.  |
| • 100G-LC-C        | 100G-LC-C card   |
| • 10X10G-LC        | 10X10G-LC card   |
| • CFP-LC           | CFP-LC card  |
| • AR-MXP           | Any rate muxponder   |
| • AR-XP            | Any rate xponder   |
| • 15216-MD-40-EVEN | Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on even grid  |
| • 15216-MD-40-ODD  | Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on odd grid   |
| • 15216-MD-ID-50   | Thermal Interleaver Passive Unit, spaced at 50 GHz grid  |
| • 15216-FLD4-30-3  | Edge 4-Ch Bi-Directional OADM Module 1530.33 to 1532.68  |
| • 15216-FLD4-33-4  | Edge 4-Ch Bi-Directional OADM Module 1533.47 to 1535.82  |
| • 15216-FLD4-36-6  | Edge 4-Ch Bi-Directional OADM Module 1536.61 to 1538.98  |
| • 15216-FLD4-39-7  | Edge 4-Ch Bi-Directional OADM Module 1539.77 to 1542.14  |
| • 15216-FLD4-42-9  | Edge 4-Ch Bi-Directional OADM Module 1542.94 to 1545.32  |
| • 15216-FLD4-46-1  | Edge 4-Ch Bi-Directional OADM Module 1546.12 to 1548.51  |
| • 15216-FLD4-49-3  | Edge 4-Ch Bi-Directional OADM Module 1549.32 to 1551.72  |

| Parameter         | Description  |
|-------------------|--|
| • 15216-FLD4-52-5 | Edge 4-Ch Bi-Directional OADM Module 1552.52 to 1554.94          |
| • 15216-FLD4-55-7 | Edge 4-Ch Bi-Directional OADM Module 1555.75 to 1558.17          |
| • 15216-FLD4-58-9 | Edge 4-Ch Bi-Directional OADM Module 1558.98 to 1561.42          |
| • 32DMX-L         | 3- channel demultiplexer for L-band                              |
| • 32WSS-L         | 32-channel wavelength switch selector for L-band                 |
| • 40G-MXP-C       | 40 Gbit/Sec Multirate Muxponder                                  |
| • 40-SMR1-C       | The single module 40-channel ROADM on C-band                     |
| • 40-SMR2-C       | The single module 40-channel ROADM with EDFA on C-band           |
| • 40G-TXP-C       | 40 Gigabits per second Multirate Transponder                     |
| • 80-WXC-C        | 80-channel wavelength cross-connect spaced at 100 GHz grid       |
| • AD-1B           | OADM 1-Band Filter   |
| • AD-1C           | OADM 1-Channel Filter  |
| • AD-2C           | OADM 2-Channel Filter  |
| • AD-4B           | OADM 4-Band Filter   |
| • AD-4C           | OADM 4-Channel Filter  |
| • ADM-10G         | 12 x OC3/OC12/OC48/GIGE and OC192/Trunk ADM 10 Gbit/Sec.         |
| • AICI            | AIC-I card   |
| • AIP             | Alarm Indication Panel   |
| • ALM-PWR         | Alarm Power  |
| • BP              | The backplane of the NE  |
| • CE-100T-8       | 8-port 100T card   |
| • CE-1000-4       | 4-port GIGE mapper card  |
| • CRFT-TMG        | Craft Timing   |
| • DCC             | Data Communications Channel                                      |
| • DCU             | Dispersion Compensation Unit                                     |
| • DMX-32          | Optical DMX 32 Channels  |
| • DS3i-N-12       | DS3i-N-12 card   |
| • E1              | E1 card  |
| • E1-42           | 42-port E1 card  |
| • E1000T-2        | 2-port interface card supporting 1000BaseT Ethernet facilities   |
| • E100T-12        | 12-port interface card supporting 100BaseT Ethernet facilities   |
| • E100T-4         | Four-port interface card supporting 100BaseT Ethernet facilities |
| • E1N             | E1N card   |

| Parameter          | Description  |
|--------------------|--|
| • E3               | E3 card  |
| • FBGDCU-1157      |  |
| • FBGDCU-1322      |  |
| • FBGDCU-165       |  |

| • FBGDCU-1983      |  |
| • FBGDCU-331       |  |
| • FBGDCU-496       |  |
| • FBGDCU-661       |  |
| • FBGDCU-826       |  |
| • FBGDCU-992       |  |
| • FMEC-155E-1TO1   | The equipment type for FMEC STM1E12 card                                       |
| • FMEC-155E-1TO3   | The equipment type for FMEC STM1E12 card with 1:3 protection                   |
| • FMEC-155E-UNPROT | The equipment type for FMEC STM1E12 card without protection                    |
| • FMEC-SMZ-E1      | FMEC card corresponding to E1 card   |
| • FMEC-SMZ-E3      | FMEC card corresponding to E3 card   |
| • FTA              | Fan Tray of the NE   |
| • FTA1             | Fan Tray 1 of the NE   |
| • FTA2             | Fan Tray 2 of the NE   |
| • G1K-4            | G1K-4 card   |
| • MD-4             | Optical Multiplexer/Demultiplexer with 4 Channels                              |
| • MD-48-CM         |  |
| • MD-48-EVEN       |  |
| • MD-48-ODD        |  |
| • MESH-PP-SMR      | The passive unit Patch Panel device used to connect up to four 40-SMR2-C cards |
| • ML100X-8         | 8-port 100X card with optical interface  |
| • ML-100T-8        | 8-port 100T card with optical interface  |
| • MMU              | Multiring mesh upgrade unit  |
| • MS-ISC-100T      | Fast Ethernet switch card used for internal shelf connection                   |
| • MUX-32           | Optical MUX 32 Channels  |
| • MXP-2.5G-10G     | 10G (4 * 2.5G) Muxponder card  |
| • MXP-MR-10DME     | 10 Gbps datamux with enhanced FEC  |
| • OPT-AMP-L        | Optical preamplifier for L-band  |
| • OPT-BST          | Optical booster amplifier  |
| • OPT-BST-L        | Optical booster for L-band   |
| • OPT-EDFA-17      | MAL-less EDFA Optical Amplifier - C-band - 17dB Gain                           |
| • OPT-EDFA-24      | MAL-less EDFA Optical Amplifier - C-band - 24dB Gain                           |
| • OPT-PRE          | Optical Preamplifier   |

| Parameter            | Description  |
|----------------------|--|
| • OPT-RAMP-C         | Raman pump amplifier C-band  |
| • OPT-RAMP-CE        | An extended version of Raman pump amplifier  |
| • OPT-RAMP-COP       | Raman COP card   |
| • OPT-RAMP-CTP       | Raman CTP card   |
| • OPT-RAMP-E         | Raman pump amplifier E-band  |
| • OSC-CSM            | Optical Service Channel with Combiner/Separator Module   |
| • OSCM               | Optical Service Channel Module   |
| • OTU2-XP            | A 4x10G transponder that is capable to operate with multiple bit rates - 10G FC, 10GE, and OC192/STM64 |
| • PIM-4              | Pluggable interface module with 4 PPM slots  |
| • PP-4-SMR           | Patch-Panel, 4 degrees, for SMR cards  |
| • PP-MESH-4          | Patch-Panel, 4 degrees   |
| • PP-MESH-8          | Patch-Panel, 8 degrees   |
| • PPM-1              | Pluggable port module with 1-port SFP module   |
| • PSM                | Protection Service Module card   |
| • PTM-4              | Line card  |
| • PTF-4              | Fabric card  |
| • PTSA               | CPT 50 panel   |
| • PTSYSFan-Out-Group | PTSYS Fan-Out-Group  |
| • SHELF              | Shelf entity   |
| • SHELF-M2           | SHELF-M2   |
| • SHELF-M6           | SHELF-M6   |
| • STM4               | An interface card that supports one or more STM4 (622 Mbps) optical facilities                         |
| • STM4-4             | A four port STM4 card  |
| • STM4-IR-1          | An interface card that supports one intermediate range STM4 (622 Mbps) optical facilities              |
| • STM4-LR-1          | An interface card that supports one long range STM4 (622 Mbps) optical facilities                      |
| • STM4-SR-1          | An interface card that supports one short range STM4 (622 Mbps) optical facilities                     |
| • STM64-4            | A four port STM64 card   |
| • STM64-LR-1         | An interface card that supports one or more STM64 optical facilities                                   |
| • STM1               | An interface card that supports multiple STM1 (155 Mbps) optical facilities                            |
| • STM1-IR-4          | An interface card that supports four intermediate range STM1 (155 Mbps) optical facilities             |
| • STM1-SR-4          | An interface card that supports four short range STM1 (155 Mbps) optical facilities                    |
| • STM1ATM-IR-6       | An interface card that supports six intermediate range STM1 (155 Mbps) ATM optical fibers              |

| Parameter              | Description  |
|------------------------|--|
| • STM1IR-STM1SH-1310-8 | An STM1 card which has 8 ports over the lower speed slot of the ONS 15454 with XC-VXL-10G/XC-VXL-2.5G                      |
| • STM1POS-SR-4         | An interface card that supports four short range STM1 (155 Mbps) POS optical facilities                                    |
| • STM16                | An interface card that supports one or more STM16 (10 Gbps) optical facilities   |
| • STM16-AS-1           | An interface card that supports one short range OC-48 (10 Gbps) optical facilities that can be provisioned in any I/O slot |
| • STM16-ELR-1          | An interface card that supports one short range STM16 (2.5 Gbps) optical facility  |
| • STM16-IR-1           | An interface card that supports one intermediate range STM16 (10 Gbps) optical facility                                    |
| • STM16-LR-1           | An interface card that supports one long range STM16 (10 Gbps) optical facility  |
| • STM16-SR-1           | An interface card that supports one short range STM16 (10 Gbps) optical facilities   |
| • TCC                  | Timing, Communications, and Control card   |
| • TDC-CC               | Coarse tunable dispersion compensation unit  |
| • TDC-FC               | Fine tunable dispersion compensation unit  |
| • TNC                  | Transport Node Controller card   |
| • TSC                  | Transport Shelf Controller card  |
| • TXP-MR-10G           | 10G Multirate Transponder card   |
| • TXP-MR-2.5G          | Multirate 2.5G Unprotected   |
| • TXPP-MR-2.5G         | Multirate 2.5G Protected   |
| • UNKNOWN              | Unknown equipment type   |
| • UNPROVISIONED        | Unprovisioned equipment type   |
| • WSE                  | Wire Speed Encryption (WSE) card   |
| • XC-VXC-10G           | XC-VXC-10G cross-connect card  |
| • XCVXL-10G            | XC-VXL-10G cross-connect card  |
| • XCVXL-2.5G           | XC-VXL-2.5G cross-connect card   |

## 17.7 REPT ALM SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Alarm Security (REPT ALM SECU) reports the occurrence of an alarmed security event against the NE.

### Usage Guidelines

Based on TR-NWT-000835, the AID of the security alarm should be the connection identifier (CID) that is not currently supported.

The COM or user identifier (UID) is an acceptable substitute for the AID.

**Note**

The INTRUSION-PSWD condition is the only condition that is reported as a standing condition instead of a transient condition. It defaults to NA and is reported by the REPT EVT SECU message. However, it can be reprovisioned to be reported at a higher severity. If the severity of this alarm is higher than NA, it is reported by the REPT ALM SECU message.

**Category**

Security

**Security**

Superuser

**Output Format**

```
SID DATE TIME
** ATAG REPT ALM SECU
"<AID>:<NOTIFCODE>,<SECUALMTYPE>"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
** 100.100 REPT ALM SECU
"COM:CR,INTRUSION-PSWD"
;
```

**Output Parameters**

|  |  |
|--|--|
| <AID>  | Access identifier. Identifies an entity with the condition. Defaults to COM. AID is a string.  |
| <NOTIFCODE>  | Two-letter notification code. The parameter type is NOTIF_CODE, which is a two-character notification code associated with an autonomous message.  |
| <ul style="list-style-type: none"> <li>• CL</li> <li>• CR</li> <li>• MJ</li> <li>• MN</li> <li>• NA</li> <li>• NR</li> </ul> | <ul style="list-style-type: none"> <li>The condition causing the alarm has cleared.</li> <li>A critical alarm.</li> <li>A major alarm.</li> <li>A minor alarm.</li> <li>The condition is not alarmed.</li> <li>The alarm is not reported.</li> </ul> |
| <SECUALMTYPE>  | Security alarm type. It is a subset of the CONDITION type. In this release, the only allowable type is INTRUSION-PSWD. The parameter type is SECUALMTYPE (security alarm type).  |
| <ul style="list-style-type: none"> <li>• INTRUSION-PSWD</li> </ul>   | Condition raised after an invalid password is used during login. This condition is raised only if the password is used a specific number of times.   |

## 17.8 REPT ALM SYNCN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Alarm Synchronization (REPT ALM SYNCN) message reports an alarm condition against a synchronization reference.

**Usage Guidelines** None

**Category** Synchronization

**Security** Retrieve

**Output Format**

```
SID DATE TIME
** ATAG REPT ALM SYNCN
  "<AID>:<NTFCNCDE>,<CONDTYPE>,<SRVEFF>,[<OCRDAT>],[<OCRTM>],[<LOCN>],
  [<DIRN>]:[<DESC>],[<EQPTTYPE>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
** 100.100 REPT ALM SYNCN
  "SYNC-NE:MJ,MAN,SA,08-01,14-25-59,,:\"MANUAL SWITCH\",TCC"
;
```

|                          |            |   |
|--------------------------|------------|---|
| <b>Output Parameters</b> | <AID>      | Access identifier from the <a href="#">“26.30 SYNC_REF”</a> section on page 26-60. Identifies a synchronization reference with alarm condition. |
|                          | <NTFCNCDE> | Notification code. The parameter type is NOTIF_CODE, which is a two-character notification code associated with an autonomous message.          |
|                          | • CL       | The condition causing the alarm has cleared.  |
|                          | • CR       | A critical alarm.   |
|                          | • MJ       | A major alarm.  |
|                          | • MN       | A minor alarm.  |
|                          | • NA       | The condition is not alarmed.   |
|                          | • NR       | The alarm is not reported.  |

|                    |  |
|--------------------|--|
| <CONDDTYPE>        | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, Not Alarmed (NA) conditions, and Not Reported (NR) conditions. See the <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>           | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.  |
| • NSA              | The condition is non-service affecting.  |
| • SA               | The condition is service affecting.  |
| <OCRDAT>           | (Optional) Date  |
| <OCRTM>            | (Optional) Time  |
| <DESC>             | (Optional) Condition description.  |
| <EQPTTYPE>         | (Optional) The parameter type is EQPT_TYPE, which is the type of equipment being provisioned into a slot.  |
| • 100G-LC-C        | 100G-LC-C card   |
| • 10X10G-LC        | 10X10G-LC card   |
| • CFP-LC           | CFP-LC card  |
| • AR-MXP           | Any rate muxponder   |
| • AR-XP            | Any rate xponder   |
| • AR-XPE           | Any rate enhanced xponder  |
| • 10GE-XP          | (ONS 15454) 2 x 10 Gbps. muxponder/L2 ethernet switch card   |
| • 15216-MD-40-EVEN | Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on even grid  |

## 17.9 REPT DBCHG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Database Change (REPT DBCHG) message reports any changes on the NE that result from:

- TL1 provisioning commands or their graphical user interface (GUI) equivalents containing the verbs ALW, DLT, ED, ENT, INH, INIT, OPR, RLS, SET, and SW (for example, DLT-EQPT, ENT-CRS-ST51)
- External event such as a board insertion

### Usage Guidelines

- When the secondary state is changed from AINS state to any other state, no REPT DBCHG messages are generated.
- REPT DBCHG is turned off by default. To turn REPT DBCHG on, you must issue the ALW-MSG-DBCHG command.

- REPT DBCHG messages are generated every time a roll is performed. A cross-connect delete and add REPT DBCHG message will not be sent every time a roll is performed; instead a REPT DBCHG message on the roll will be sent.

```

|                          |            |   |
|--------------------------|------------|---|
| <b>Output Parameters</b> | <TIME>     | The time of the message triggered by the NE.  |
|                          | <DATE>     | The date of the message triggered by the NE.  |
|                          | <SOURCE>   | (Optional) An input-command CTAG if present. SOURCE is a string. Maximum length of 20 characters.   |
|                          | <USERID>   | (Optional) The user name or user identifier. USERID is a string. Maximum length of 20 characters.   |
|                          | <DBCHGSEQ> | Identifier or range of identifiers to be retrieved. It is a sequential number of the DBCHGSEQ message. DBCHGSEQ is an integer.  |
|                          | <COMMAND>  | The input command or substitute. Maximum length of 20 characters. COMMAND is a string.  |
|                          | <AID>      | Access identifier. Maximum length of 64 characters. Excess characters will be truncated. AID is a string.   |
|                          | <PSTPSTQ>  | Admin state in the PST-PSTQ format. The parameter type is PST_PSTQ, which is the service state of the entity described by the primary state (SST) and a primary state qualifier (PSTQ). |
|                          | • IS-NR    | In Service and Normal   |
|                          | • OOS-AU   | Out of Service and Autonomous   |
|                          | • OOS-AUMA | Out of Service and Autonomous Management  |
|                          | • OOS-MA   | Out of Service and Management   |
|                          | <SST>      | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
|                          | • AINS     | Automatic In-Service  |

|         |                      |
|---------|----------------------|
| • DSBLD | Disabled             |
| • LPBK  | Loopback             |
| • MEA   | Mismatched Equipment |
| • MT    | Maintenance          |
| • OOG   | Out of Group         |
| • SWDL  | Software Download    |
| • UAS   | Unassigned           |
| • UEQ   | Unequipped           |

## 17.10 REPT EVT <MOD2ALM>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event for 1GFC, 1GFICON, 2GFC, 2GFICON, CLNT, DS1, E100, E1000, E3, E4, EC1, ETH, FSTE, G1000, GFPOS, GIGE, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OCH, OMS, OTS, POS, STM1,STM4,STM16,STM64, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS6C, STS9C, T1, T3, UDCDCC, UDCF, VC3, VC4, VC4-2c, VC4-3c, VC4-4c, VC4-8c, VC4-16c,VC4-64c, VC12, VCG, VT1, VT2, WLEN, or RPRIF (REPT EVT <MOD2ALM>) message reports the occurrence of a nonalarmed event. In Software Release 5.0 and later, REPT EVT <MOD2ALM> can report the remote monitoring (RMON)-managed threshold crossing alarm.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Output Parameters**

|            |  |
|------------|--|
| <AID>      | Access identifier from the “26.1 ALL” section on page 26-1.  |
| <CONDTYPE> | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, Not Alarmed (NA) conditions, and Not Reported (NR) conditions. See the Chapter 27, “Conditions” for a list of conditions. |
| <CONDEFF>  | (Optional) The effect of the event on the condition of the NE. The parameter type is COND_EFF, which is the state of the condition upon the affected unit.   |
| • CL       | Standing condition cleared   |
| • SC       | Standing condition raised  |
| • TC       | Transient condition  |
| <LOCN>     | (Optional) Location associated with a particular command in reference to the entity identified by the AID. The parameter type is LOCATION, which is the location where the action is to take place.  |
| • FEND     | Action occurs on the Far End of the facility.  |
| • NEND     | Action occurs on the Near End of the facility.   |
| <DIRN>     | Direction relative to the entity identified by the AID. Direction of PM relative to the entity identified by the AID. The parameter type is DIRECTION (transmit and receive directions).   |
| • BTH      | Both transmit and receive directions   |
| • RCV      | Receive direction only   |
| • TRMT     | Transmit direction only  |
| <MONVAL>   | (Optional) Monitored value. Value to which the register identified by MONTYPE is to be initialized to or the measured value of a monitored parameter. The value is in the form of numeric counts or rates. MONVAL is a float.  |
| <THLEV>    | (Optional) Threshold level. THLEV is a float.  |
| <TMPER>    | (Optional) Accumulation time period for performance counters. The parameter type is TMPER, which is the accumulation time period for the performance management center.  |
| • 1-DAY    | Performance parameter accumulation interval length; every 24-hours. For SDH PM data only one day of history data is available. For RMON managed PM data seven days of history data are available.  |
| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.   |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.  |

|                    |   |
|--------------------|---|
| • 15-MIN           | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.  |
| • RAW-DATA         | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.   |
| <DESC>             | (Optional) Condition description.   |
| <AIDDET>           | (Optional) AIDDET uses the same addressing rules as the AID, but specifies AID type and additional details about the entity being managed. The parameter type is EQPT_TYPE, which is the type of equipment being provisioned into a slot. |
| • 100G-LC-C        | 100G-LC-C card  |
| • 10X10G-LC        | 10X10G-LC card  |
| • CFP-LC           | CFP-LC card   |
| • AR-XPE           | Any rate enhanced xponder   |
| • 15216-MD-40-EVEN | Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on even grid   |

| • UNKNOWN       | Unknown equipment type                      |
| • UNPROVISIONED | Unprovisioned equipment type                |
| • WSE           | Wire Speed Encryption (WSE) card            |
| • XC-VXC-10G    | XC-VXC-10G cross-connect card               |
| • XCVXL-10G     | XC-VXL-10G cross-connect card               |
| • XCVXL-2.5G    | XC-VXL-2.5G cross-connect card              |

## 17.11 REPT EVT BITS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Building Integrated Timing Supply (REPT EVT BITS) message reports a non-alarmed event against a BITS facility.

### Usage Guidelines

None

### Category

Synchronization

### Security

Retrieve

### Output Format

```
SID DATE TIME
** ATAG REPT EVT BITS
"<AID>:<CONDTYPE>,<CONDEFF>],[<LOCN>],[<DIRN>],[<DESC>]"
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
A 100.100 REPT ALM BITS
"BITS-1:SSM-STU,TC,,,,,,:\“SYNCHRONIZED - TRACEABILITY UNKNOWN\”"
;
```

|                          |            |  |
|--------------------------|------------|--|
| <b>Output Parameters</b> | <AID>      | Access identifier from the “26.6 BITS” section on page 26-22.  |
|                          | <CONDTYPE> | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 node, whether or not the problem is reported (that is, whether it generates a trouble notification). Reported conditions include alarms, Not-Alerted conditions (NA), and Not-Reported (NR) conditions. See Chapter 27, “Conditions” for a list of conditions. |
|                          | <CONDEFF>  | The effect of the event on the condition of the NE. The parameter type is COND_EFF, which is the state of the condition upon the affected unit.  |
|                          | • CL       | Standing condition cleared   |
|                          | • SC       | Standing condition raised  |
|                          | • TC       | Transient condition  |
|                          | <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
|                          | • FEND     | Action occurs on the far end of the facility.  |
|                          | • NEND     | Action occurs on the near end of the facility.   |
|                          | <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
|                          | • BTH      | Both transmit and receive directions   |
|                          | • RCV      | Receive direction only   |
|                          | <DESC>     | (Optional) Condition description.  |

## 17.12 REPT EVT COM

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Common (REPT EVT COM) message reports a nonalarmed event against an NE when there is no AID associated with it.

**Usage Guidelines** None

**Category** Fault

**Security** Retrieve

**Output Format**

TID-000 1998-06-20 14:30:00
A 100.100 REPT EVT COM
  "COM:CLDRESTART,TC,,,,,,,,;\\"COLD RESTART\","
;
```

**Output Parameters**

|  |  |
|--|--|
| <AID>  | (Optional) Access identifier. Identifies the entity to which the command pertains. AID is a string.  |
| <CONDTYPE>   | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, Not-Alerted conditions (NA), and Not-Reported (NR) conditions. See <a href="#">Chapter 27, "Conditions"</a> for a list of conditions. |
| <CONDEFF>  | The effect of the event on the condition of the NE. The parameter type is COND_EFF, which is the state of the condition upon the affected unit.  |
| <ul style="list-style-type: none"> <li>• CL</li> <li>• SC</li> <li>• TC</li> </ul> | <ul style="list-style-type: none"> <li>Standing condition cleared</li> <li>Standing condition raised</li> <li>Transient condition</li> </ul>   |
| <LOCN>   | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
| <ul style="list-style-type: none"> <li>• FEND</li> <li>• NEND</li> </ul>           | <ul style="list-style-type: none"> <li>Action occurs on the far end of the facility.</li> <li>Action occurs on the near end of the facility.</li> </ul>  |
| <DIRN>   | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| <ul style="list-style-type: none"> <li>• BTH</li> <li>• RCV</li> </ul>             | <ul style="list-style-type: none"> <li>Both transmit and receive directions</li> <li>Receive direction only</li> </ul>   |
| <DESC>   | (Optional) Condition description.  |

## 17.13 REPT EVT ENV

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Environment (REPT EVT ENV) message reports the occurrence of a nonalarmed event against an environment alarm input.

**Usage Guidelines**

None

**Category**

Environment

**Security**

Retrieve

**Output Format**

```
SID DATE TIME
A ATAG REPT EVT ENV
"<AID>:<ALMTYPE>,<CONDEFF>],,,,,,<LOCN>,<DIRN>]:<DESC>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
A 100.100 REPT EVT ENV
"ENV-IN-2:OPENDR,TC,,,,,,:\“OPEN DOOR\”"
;
```

**Output Parameters**

|             |   |
|-------------|---|
| <AID>       | Access identifier from the <a href="#">“26.14 ENV” section on page 26-39</a> . Identifies an environmental input. |
| <ALMTYPE>   | Abbreviated code identifying the alarm. The parameter type is ENV_ALM (environmental alarm types).                |
| • AIRCOMPR  | Air compressor failure  |
| • AIRCOND   | Air conditioning failure  |
| • AIRDRYR   | Air dryer failure   |

| • RINGGENMJ  | Ring generator major  |
| • RINGGENMN  | Ring generator minor  |
| • RTACADSL   | AC or AC/rectifier power fail ADSL equipment  |
| • RTACCRIT   | AC or AC/rectifier power fail DCL equipment critical site   |
| • RTACPWR    | AC or AC/rectifier power fail DCL equipment   |
| • RTACPWRENG | Commercial AC fail, site equipped with standby engine   |
| • RTBAYPWR   | AC power loss distributed power RT bay  |
| • RTRVENG    | Retrieve standby engine, commercial AC restored   |
| • SMOKE      | Smoke   |
| • TEMP       | High-low temperature  |
| • TOXICGAS   | Toxic gas   |
| • TREPEATER  | T-repeater shelf  |
| • VENTN      | Ventilation system failure  |
| <CONDEFF>    | The effect of the event on the condition of the NE. The parameter type is COND_EFF, which is the state of the condition upon the affected unit. |
| • CL         | Standing condition cleared  |
| • SC         | Standing condition raised   |
| • TC         | Transient condition   |

|  |  |
|--|--|
| <LOCN>   | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place. |
| <ul style="list-style-type: none"> <li>• FEND</li> <li>• NEND</li> </ul> | <ul style="list-style-type: none"> <li>Action occurs on the far end of the facility.</li> <li>Action occurs on the near end of the facility.</li> </ul>  |
| <DIRN>   | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| <ul style="list-style-type: none"> <li>• BTH</li> <li>• RCV</li> </ul>   | <ul style="list-style-type: none"> <li>Both transmit and receive directions</li> <li>Receive direction only</li> </ul>   |
| <DESC>   | (Optional) Condition description.  |

## 17.14 REPT EVT EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Equipment (REPT EVT EQPT) message reports the occurrence of a nonalarmed event against an equipment unit or slot.

**Usage Guidelines** None

**Category** Equipment

**Security** Retrieve

**Output Format**

```
SID DATE TIME
A ATAG REPT EVT EQPT
“<AID>:<CONDTYPE>,<CONDEFF>],,,,,,<LOCN>,<DIRN>]:<DESC>,<AIDDET>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
A 100.100 REPT EVT EQPT
“SLOT-7:PLUGIN,TC,,,,,:\“EQUIPMENT PLUG-IN”,TCC”
;
```

## Output Parameters

| Parameter  | Description  |
|--|--|
| <AID>  | Access identifier from the “26.15 EQPT” section on page 26-39. Equipment AID SLOT-{1-17}.  |
| <CONDTYPE>   | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, Not Alarmed (NA) conditions, and Not Reported (NR) conditions. See the Chapter 27, “Conditions” for a list of conditions.   |
| <CONDEFF>  | (Optional) The effect of the event on the condition of the NE. The parameter type is COND_EFF, which is the state of the condition upon the affected unit.   |
| <ul style="list-style-type: none"> <li>• CL</li> <li>• SC</li> <li>• TC</li> </ul>   | <ul style="list-style-type: none"> <li>Standing condition cleared</li> <li>Standing condition raised</li> <li>Transient condition</li> </ul>   |
| <DESC>   | (Optional) Condition description.  |
| <AIDDET>   | (Optional) AIDDET uses the same addressing rules as the AID, but specifies AID type and additional details about the entity being managed. The parameter type is EQPT_TYPE, which is the type of equipment being provisioned into a slot.  |
| <ul style="list-style-type: none"> <li>• 100G-LC-C</li> <li>• 10X10G-LC</li> <li>• CFP-LC</li> <li>• AR-MXP</li> <li>• AR-XP</li> <li>• AR-XPE</li> <li>• 15216-MD-40-EVEN</li> <li>• 15216-MD-40-ODD</li> <li>• 15216-MD-ID-50</li> <li>• 15216-FLD4-30-3</li> <li>• 15216-FLD4-33-4</li> <li>• 15216-FLD4-36-6</li> <li>• 15216-FLD4-39-7</li> <li>• 15216-FLD4-42-9</li> <li>• 15216-FLD4-46-1</li> </ul> | <ul style="list-style-type: none"> <li>100G-LC-C card</li> <li>10X10G-LC card</li> <li>CFP-LC card</li> <li>Any rate muxponder</li> <li>Any rate xponder</li> <li>Any rate enhanced xponder</li> <li>Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on even grid</li> <li>Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on odd grid</li> <li>Thermal Interleaver Passive Unit, spaced at 50 GHz grid</li> <li>Edge 4-Ch Bi-Directional OADM Module 1530.33 to 1532.68</li> <li>Edge 4-Ch Bi-Directional OADM Module 1533.47 to 1535.82</li> <li>Edge 4-Ch Bi-Directional OADM Module 1536.61 to 1538.98</li> <li>Edge 4-Ch Bi-Directional OADM Module 1539.77 to 1542.14</li> <li>Edge 4-Ch Bi-Directional OADM Module 1542.94 to 1545.32</li> <li>Edge 4-Ch Bi-Directional OADM Module 1546.12 to 1548.51</li> </ul> |

| Parameter         | Description  |
|-------------------|--|
| • 15216-FLD4-49-3 | Edge 4-Ch Bi-Directional OADM Module 1549.32 to 1551.72          |
| • 15216-FLD4-52-5 | Edge 4-Ch Bi-Directional OADM Module 1552.52 to 1554.94          |
| • 15216-FLD4-55-7 | Edge 4-Ch Bi-Directional OADM Module 1555.75 to 1558.17          |
| • 15216-FLD4-58-9 | Edge 4-Ch Bi-Directional OADM Module 1558.98 to 1561.42          |
| • 32DMX-L         | 32-channel demultiplexer for L-band                              |
| • 32WSS-L         | 32-channel wavelength switch selector for L-band                 |
| • 40G-MXP-C       | 40 Gbit/Sec Multirate Muxponder                                  |
| • 40-SMR1-C       | The single module 40-channel ROADM on C-band                     |
| • 40-SMR2-C       | The single module 40-channel ROADM with EDFA on C-band           |
| • 40G-TXP-C       | 40 Gigabits per second Multirate Transponder                     |
| • 80-WXC-C        | 80-channel wavelength cross-connect spaced at 100 GHz grid       |
| • AD-1B           | OADM 1-Band Filter   |
| • AD-1C           | OADM 1-Channel Filter  |
| • AD-2C           | OADM 2-Channel Filter  |
| • AD-4B           | OADM 4-Bans Filter   |
| • AD-4C           | OADM 4-Channel Filter  |
| • ADM-10G         | 12 x OC3/OC12/OC48/GIGE and OC192/Trunk ADM 10 Gbit/Sec.         |
| • AICI            | AIC-I card   |
| • AIP             | Alarm Indication Panel   |
| • ALM-PWR         | Alarm Power  |
| • BP              | The backplane of the NE  |
| • CE-100T-8       | 8-port 100T card   |
| • CE-1000-4       | 4-port GIGE mapper card  |
| • CRFT-TMG        | Craft Timing   |
| • DCC             | Data Communications Channel                                      |
| • DCU             | Dispersion Compensation Unit                                     |
| • DMX-32          | Optical DMX 32 Channels  |
| • DS3i-N-12       | DS3i-N-12 card   |
| • E1              | E1 card  |
| • E1-42           | 42-port E1 card  |
| • E1000T-2        | 2-port interface card supporting 1000BaseT Ethernet facilities   |
| • E100T-12        | 12-port interface card supporting 100BaseT Ethernet facilities   |
| • E100T-4         | Four-port interface card supporting 100BaseT Ethernet facilities |

| Parameter          | Description  |
|--------------------|--|
| • E1N              | E1N card   |
| • E3               | E3 card  |

| • FMEC-155E-1TO1   | The equipment type for FMEC STM1E12 card                     |
| • FMEC-155E-1TO3   | The equipment type for FMEC STM1E12 card with 1:3 protection |
| • FMEC-155E-UNPROT | The equipment type for FMEC STM1E12 card without protection  |
| • FMEC-SMZ-E1      | FMEC card corresponding to E1 card                           |
| • FMEC-SMZ-E3      | FMEC card corresponding to E3 card                           |
| • FTA              | Fan Tray of the NE   |
| • FTA1             | Fan Tray 1 of the NE   |
| • FTA2             | Fan Tray 2 of the NE   |
| • G1K-4            | G1K-4 card   |
| • MD-4             | Optical Multiplexer/Demultiplexer with 4 Channels            |
| • MD-48-CM         |  |
| • MD-48-EVEN       |  |
| • MD-48-ODD        |  |
| • ML100X-8         | 8-port 100T card with optical interface                      |
| • MMU              | Multiring mesh upgrade unit                                  |
| • MS-ISC-100T      | Fast Ethernet switch card used for internal shelf connection |
| • MUX-32           | Optical MUX 32 Channels                                      |
| • MXP-2.5G-10G     | 10G (4 * 2.5G) Muxponder card                                |
| • MXP-MR-10DME     | 10 Gbps datamux with enhanced FEC                            |
| • OPT-AMP-L        | Optical preamplifier for L-band                              |
| • OPT-BST          | Optical booster amplifier                                    |
| • OPT-BST-L        | Optical booster for L-band                                   |
| • OPT-EDFA-17      | MAL-less EDFA Optical Amplifier - C-band - 17dB Gain         |
| • OPT-EDFA-24      | MAL-less EDFA Optical Amplifier - C-band - 24dB Gain         |
| • OPT-PRE          | Optical Preamplifier   |
| • OPT-RAMP-C       | Raman Pump Amplifier C Band                                  |
| • OPT-RAMP-CE      | An extended version of Raman pump amplifier                  |

| Parameter              | Description   |
|------------------------|---|
| • OPT-RAMP-COP         | Raman COP card  |
| • OPT-RAMP-CTP         | Raman CTP card  |
| • OPT-RAMP-E           | Raman pump amplifier E-band   |
| • OSC-CSM              | Optical Service Channel with Combiner/Separator Module  |
| • OSCM                 | Optical Service Channel Module  |
| • OTU2-XP              | A 4x10G transponder that is capable to operate with multiple bit rates - 10G FC, 10GE, and OC192/STM64    |
| • PIM-4                | Pluggable interface module with 4 PPM slots   |
| • PP-4-SMR             | Patch-Panel, 4 degrees, for SMR cards   |
| • PP-MESH-4            | Patch-Panel, 4 degrees  |
| • PP-MESH-8            | Patch-Panel, 8 degrees  |
| • PPM-1                | Pluggable port module with 1-port SFP module  |
| • PSM                  | Protection Service Module card  |
| • PTM-4                | Line card   |
| • PTF-4                | Fabric card   |
| • PTSA                 | CPT 50 panel  |
| • PTSYSFan-Out-Group   | PTSYS Fan-Out-Group   |
| • SHELF                | Shelf entity  |
| • SHELF-M2             | SHELF-M2  |
| • SHELF-M6             | SHELF-M6  |
| • STM4                 | An interface card that supports one or more STM4 (622 Mbps) optical facilities                            |
| • STM4-4               | A four port STM4 card   |
| • STM4-IR-1            | An interface card that supports one intermediate range STM4 (622 Mbps) optical facilities                 |
| • STM4-LR-1            | An interface card that supports one long range STM4 (622 Mbps) optical facilities                         |
| • STM4-SR-1            | An interface card that supports one short range STM4 (622 Mbps) optical facilities                        |
| • STM64-4              | A four-port STM64 card  |
| • STM64-LR-1           | An interface card that supports one or more STM64 optical facilities                                      |
| • STM1                 | An interface card that supports multiple STM1 (155 Mbps) optical facilities                               |
| • STM1-IR-4            | An interface card that supports four intermediate range STM1 (155 Mbps) optical facilities                |
| • STM1-SR-4            | An interface card that supports four short range STM1 (155 Mbps) optical facilities                       |
| • STM1ATM-IR-6         | An interface card that supports six intermediate range STM1 (155 Mbps) ATM optical fibers                 |
| • STM1IR-STM1SH-1310-8 | An STM1 card which has 8 ports over the lower speed slot of the ONS 15454 SDH with XC-VXL-10G/XC-VXL-2.5G |

| Parameter       | Description  |
|-----------------|--|
| • STM1POS-SR-4  | An interface card that supports four short range STM1 (155 Mbps) POS optical facilities                                    |
| • STM16         | An interface card that supports one or more STM16 (10 Gbps) optical facilities   |
| • STM16-AS-1    | An interface card that supports one short range OC-48 (10 Gbps) optical facilities that can be provisioned in any I/O slot |
| • STM16-ELR-1   | An interface card that supports one short range STM16 (2.5 Gbps) optical facility  |
| • STM16-IR-1    | An interface card that supports one intermediate range STM16 (10 Gbps) optical facility                                    |
| • STM16-LR-1    | An interface card that supports one long range STM16 (10 Gbps) optical facility  |
| • STM16-SR-1    | An interface card that supports one short range STM16 (10 Gbps) optical facilities   |
| • TCC           | Timing, Communications, and Control card   |
| • TDC-CC        | Coarse tunable dispersion compensation unit  |
| • TDC-FC        | Fine tunable dispersion compensation unit  |
| • TNC           | Transport Node Controller card   |
| • TSC           | Transport Shelf Controller card  |
| • TXP-MR-10G    | 10G Multirate Transponder card   |
| • TXP-MR-2.5G   | Multirate 2.5G Unprotected   |
| • TXPP-MR-2.5G  | Multirate 2.5G Protected   |
| • UNKNOWN       | Unknown equipment type   |
| • UNPROVISIONED | Unprovisioned equipment type   |
| • WSE           | Wire Speed Encryption (WSE) card   |
| • XC-VXC-10G    | XC-VXC-10G cross-connect card  |
| • XCVXL-10G     | XC-VXL-10G cross-connect card  |
| • XCVXL-2.5G    | XC-VXL-2.5G cross-connect card   |

## 17.15 REPT EVT FXFR

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Software Download (REPT EVT FXFR) message reports the FTP software download status of the start, completion, and completed percentage.

### Usage Guidelines

- The FXFR\_RSLT is only sent when the FXFR\_STATUS is COMPLD.
- The BYTES\_XFRD is only sent when the FXFR\_STATUS is IP or COMPLD.

### Category

File Transfer

**Security**

Retrieve

**Output Format**

```
SID DATE TIME
A ATAG REPT EVT FXFR
"<FILENAME>,<FXFR_STATUS>,<FXFR_RSLT>,<BYTES_XFRD>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
A 100.100 REPT EVT FXFR
"NEW.PKG,COMPLD,SUCCESS,21215147"
;
```

**Output Parameters**

|               |   |
|---------------|---|
| <FILENAME>    | When a package is being transferred between the FTP server and the controller cards, the filename field will contain the string ACTIVE. Following this transfer, if there is a second common-control card on the NE, the file will be copied over to the second card during which time REPT EVT FXFR messages will be generated with a filename of STANDBY. FILENAME is a string. |
| <FXFR_STATUS> | The status of the file transfer. The parameter type is TX_STATUS, which is the status of the file transfer.   |
| • COMPLD      | The file transmission is completed.   |
| • IP          | The file transmission is in progress.   |
| • START       | The file transmission is started.   |
| <FXFR_RSLT>   | (Optional) The result of the file transfer. The parameter type is TX_RSLT, which is the result of the file transfer.  |
| • FAILURE     | A failed result   |
| • SUCCESS     | A successful result   |
| <BYTES_XFRD>  | (Optional) The percentage of bytes transferred. BYTES_XFRD is a string.   |

## 17.16 REPT EVT IOSCFG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Internet Operating System Configuration File (REPT EVT IPSCFG) message reports the status of copying the Cisco IOS configuration file when the COPY-IOSCFG command is issued.

**Usage Guidelines**

- You can identify if this message is caused by a Cisco IOS configuration file downloading, uploading, or merging by looking at the SRC and DEST fields in the message. See the [“8.1 COPY-IOSCFG” section on page 8-1](#) for more details.
- There is no success/failure in the message to indicate the success or failure of the merge process when merging the startup Cisco IOS config file to the running config file.

**Category** File Transfer

**Security** Retrieve

**Output Format**

```
SID DATE TIME
A ATAG REPT EVT IOSCFG
  "<AID>:<SRC>,<DEST>,<STATUS>,[<RESULT>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
A 100.100 REPT EVT IOSCFG
  "SLOT-1:STARTUP,IOS-CONFIG-FILE-IN-NETWORK,COMPLD,SUCCESS"
;
```

| Output Parameters |           |  |
|-------------------|-----------|--|
| <AID>             |           | Access identifier from the <a href="#">"26.15 EQPT"</a> section on page 26-39. Slot AID for the equipment.           |
| <SRC>             |           | Source access identifier. Specifies where the Cisco IOS configuration file is copied from. SRC is a string.          |
| <DEST>            |           | Destination. Specifies where the Cisco IOS configuration file is copied to. DEST is a string.                        |
| <STATUS>          |           | The status of COPY-IOSCFG. The parameter type is TX_STATUS, which is the status of the file transfer.                |
|                   | • COMPLD  | The file transmission is completed.  |
|                   | • IP      | The file transmission is in progress.  |
|                   | • START   | The file transmission is started.  |
| <RESULT>          |           | (Optional) The result of the file transfer. The parameter type is TX_RSLT, which is the result of the file transfer. |
|                   | • FAILURE | A failed result  |
|                   | • SUCCESS | A successful result  |

## 17.17 REPT EVT SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Security (REPT EVT SECU) message reports the occurrence of a nonalarmed security event against the NE.

### Usage Guidelines

- Based on TR-NWT-000835 in TR-NWT-000835 and the AID of the security alarm should be the CID, which is not supported in this release. The COM or UID is an acceptable substitute for the AID here. CIDs will be supported in a future release.
- For the rule of single failure, single message/alarm, the security alarm will not be reported as REPT ALM COM, because it is reported as REPT ALM SECU.

- Because the NE sends this security message as a transient message, to make all TL1 autonomous messages consistent, the TL1 agent reports the security message into REPT EVT SECU.
- This message is inhibited by default. A Superuser will have to issue the ALW-MSG-SECU to see this message.

Superuser

**Output Format**

```
SID DATE TIME
A ATAG REPT EVT SECU
  "<AID>:<DNFIELD>,<CONDEFF>],[<LOCN>],[<DIRN>],[<SECURITY>:<DNFIELD1>"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
A 100.100 REPT EVT SECU
  "COM:LOGIN-FAILURE-PSWD,TC,,,,,;\\"SECURITY:
  INVALID LOGIN - PASSWORD - SEE AUDIT LOG\\""
;
```

**Output Parameters**

|            |  |
|------------|--|
| <AID>      | Access identifier. Identifies an entity with the condition. Defaults to COM. AID is a string.  |
| <DNFIELD>  | String   |
| <CONDEFF>  | The effect of the event on the condition of the NE. The parameter type is COND_EFF, which is the state of the condition upon the affected unit.  |
| • CL       | Standing condition cleared   |
| • SC       | Standing condition raised  |
| • TC       | Transient condition  |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place. |
| • FEND     | Action occurs on the far end of the facility.  |
| • NEND     | Action occurs on the near end of the facility.   |
| <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH      | Both transmit and receive directions   |
| • RCV      | Receive direction only   |
| <SECURITY> | SECURITY is a string.  |
| <DNFIELD1> | DNFIELD1 is a string.  |

## 17.18 REPT EVT SESSION

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Session (REPT EVT SESSION) message reports a nonalarmed event related to establishing a session with the NE.

### Usage Guidelines

The WARN field might contain different information depending on the type of session-related event.

- If the password aging feature has not been enabled (or the feature is enabled but the password is not close to expiring):  
/\*USER <UID> LOGGED IN <IP/SERIAL PORT\*/
- If the forced password feature is enforced and the user is logging in for the first time (or the password has expired):  
/\*PLEASE CHANGE PASSWORD BEFORE CONTINUING\*/
- If a session is terminated for any reason (except a user timeout), the reason for the session termination is indicated in the WARN field.

### Output Format

```
SID DATE TIME
A ATAG REPT EVT SESSION
  "<AID>:<EXP>,<PCN>"
  "<WARN>"
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
A 100.100 REPT EVT SESSION
  "TCCP:YES,5-DAY"
  "/* USER TERRI LOGGED IN TO TCCP */"
;
```

### Output Parameters

|       |   |
|-------|---|
| <AID> | Access identifier. Identifies the NE with which a session is established. AID is a string.  |
| <EXP> | Indicates whether the password is alive (for example, no password updating is required at the moment), expired, or is about to expire. The parameter type is YES_NO, which indicates whether the user's password is about to expire, the user is logged into the NE, or the user is locked out of the NE. |
| • NO  | No  |

|        |  |
|--------|--|
| • YES  | Yes  |
| <PCN>  | The number of days still remaining before the existing password expires. PCN appears only if EXP=YES and one of the following conditions has been met: <ul style="list-style-type: none"> <li>The warning period has not been exhausted.</li> <li>The user is a new user establishing a session for the first time and the forced password change policy has been activated.</li> </ul> PCN is a string. |
| <WARN> | Free format text containing additional information about the security event. WARN is a string.   |

## 17.19 REPT EVT SYNCN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Event Synchronization (REPT EVT SYNCN) message reports the occurrence of a nonalarmed event against a synchronization entity.

**Usage Guidelines** None

**Category** Synchronization

**Security** Retrieve

**Output Format**

```
SID DATE TIME
A ATAG REPT EVT SYNCN
"<AID>:<CONDTYPE>,<CONDEFF>],,,,,,<LOCN>],[<DIRN>]:<DESC>],[<AIDDET>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
A 100.100 REPT EVT SYNCN
"SYNC-NE:SWTOINT,SC,,,,,,:\“SWITCH TO INTERNAL CLOCK”,TCC”
;
```

## Output Parameters

| Parameter  | Description  |
|--|--|
| <AID>  | Access identifier from the <a href="#">“26.30 SYNC_REF”</a> section on <a href="#">page 26-60</a> .  |
| <CONDTYPE>   | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, Not Alarmed (NA) conditions, and Not Reported (NR) conditions. See the <a href="#">Chapter 27, “Conditions”</a> for a list of conditions.   |
| <CONDEFF>  | (Optional) The effect of the event on the condition of the NE. The parameter type is COND_EFF, which is the state of the condition upon the affected unit.   |
| <ul style="list-style-type: none"> <li>• CL</li> <li>• SC</li> <li>• TC</li> </ul>   | <ul style="list-style-type: none"> <li>Standing condition cleared</li> <li>Standing condition raised</li> <li>Transient condition</li> </ul>   |
| <DESC>   | (Optional) Condition description.  |
| <AIDDET>   | (Optional) AIDDET uses the same addressing rules as the AID, but specifies AID type and additional details about the entity being managed. The parameter type is EQPT_TYPE, which is the type of equipment being provisioned into a slot.  |
| <ul style="list-style-type: none"> <li>• 100G-LC-C</li> <li>• 10X10G-LC</li> <li>• CFP-LC</li> <li>• AR-MXP</li> <li>• AR-XP</li> <li>• AR-XPE</li> <li>• 15216-MD-40-EVEN</li> <li>• 15216-MD-40-ODD</li> <li>• 15216-MD-ID-50</li> <li>• 15216-FLD4-30-3</li> <li>• 15216-FLD4-33-4</li> <li>• 15216-FLD4-36-6</li> <li>• 15216-FLD4-39-7</li> <li>• 15216-FLD4-42-9</li> <li>• 15216-FLD4-46-1</li> </ul> | <ul style="list-style-type: none"> <li>100G-LC-C card</li> <li>10X10G-LC card</li> <li>CFP-LC card</li> <li>Any rate muxponder</li> <li>Any rate xponder</li> <li>Any rate enhanced xponder</li> <li>Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on even grid</li> <li>Thermal Multiplex/Demultiplex Passive Unit, spaced at 50 GHz on odd grid</li> <li>Thermal Interleaver Passive Unit, spaced at 50 GHz grid</li> <li>Edge 4-Ch Bi-Directional OADM Module 1530.33 to 1532.68</li> <li>Edge 4-Ch Bi-Directional OADM Module 1533.47 to 1535.82</li> <li>Edge 4-Ch Bi-Directional OADM Module 1536.61 to 1538.98</li> <li>Edge 4-Ch Bi-Directional OADM Module 1539.77 to 1542.14</li> <li>Edge 4-Ch Bi-Directional OADM Module 1542.94 to 1545.32</li> <li>Edge 4-Ch Bi-Directional OADM Module 1546.12 to 1548.51</li> </ul> |

| Parameter         | Description  |
|-------------------|--|
| • 15216-FLD4-49-3 | Edge 4-Ch Bi-Directional OADM Module 1549.32 to 1551.72          |
| • 15216-FLD4-52-5 | Edge 4-Ch Bi-Directional OADM Module 1552.52 to 1554.94          |
| • 15216-FLD4-55-7 | Edge 4-Ch Bi-Directional OADM Module 1555.75 to 1558.17          |
| • 15216-FLD4-58-9 | Edge 4-Ch Bi-Directional OADM Module 1558.98 to 1561.42          |
| • 32DMX-L         | 32-channel demultiplexer for L-band                              |
| • 32WSS-L         | 32-channel wavelength switch selector for L-band                 |
| • 40G-MXP-C       | 40 Gbit/Sec Multirate Muxponder                                  |
| • 40-SMR1-C       | The single module 40-channel ROADM on C-band                     |
| • 40-SMR2-C       | The single module 40-channel ROADM with EDFA on C-band           |
| • 40G-TXP-C       | 40 Gigabits per second Multirate Transponder                     |
| • 80-WXC-C        | 80-channel wavelength cross-connect spaced at 100 GHz grid       |
| • AD-1B           | OADM 1-Band Filter   |
| • AD-1C           | OADM 1-Channel Filter  |
| • AD-2C           | OADM 2-Channel Filter  |
| • AD-4B           | OADM 4-Bans Filter   |
| • AD-4C           | OADM 4-Channel Filter  |
| • AICI            | AIC-I card   |
| • AIP             | Alarm Indication Panel   |
| • ALM-PWR         | Alarm Power  |
| • BP              | The backplane of the NE  |
| • CE-100T-8       | 8-port 100T card   |
| • CE-1000-4       | 4-port GIGE mapper card  |
| • CRFT-TMG        | Craft Timing   |
| • DCC             | Data Communications Channel                                      |
| • DCU             | Dispersion Compensation Unit                                     |
| • DMX-32          | Optical DMX 32 Channels  |
| • DS3i-N-12       | DS3i-N-12 card   |
| • E1              | E1 card  |
| • E1-42           | 42-port E1 card  |
| • E1000T-2        | 2-port interface card supporting 1000BaseT Ethernet facilities   |
| • E100T-12        | 12-port interface card supporting 100BaseT Ethernet facilities   |
| • E100T-4         | Four-port interface card supporting 100BaseT Ethernet facilities |
| • E1N             | E1N card   |

| Parameter          | Description  |
|--------------------|--|
| • E3               | E3 card  |
| • FBGDCU-1157      |  |
| • FBGDCU-1322      |  |
| • FBGDCU-165       |  |

| • FBGDCU-826       |  |
| • FBGDCU-992       |  |
| • FMEC-155E-1TO3   | The equipment type for FMEC STM1E12 card with 1:3 protection                   |
| • FMEC-155E-UNPROT | The equipment type for FMEC STM1E12 card without protection                    |
| • FMEC-SMZ-E1      | FMEC card corresponding to E1 card   |
| • FMEC-SMZ-E3      | FMEC card corresponding to E3 card   |
| • FTA              | Fan Tray of the NE   |
| • FTA1             | Fan Tray 1 of the NE   |
| • FTA2             | Fan Tray 2 of the NE   |
| • G1K-4            | G1K-4 card   |
| • MD-4             | Optical Multiplexer/Demultiplexer with 4 Channels                              |
| • MD-48-CM         |  |
| • MD-48-EVEN       |  |
| • MD-48-ODD        |  |
| • MESH-PP-SMR      | The passive unit Patch Panel device used to connect up to four 40-SMR2-C cards |
| • ML100X-8         | 8-port 100T card with optical interface  |
| • MMU              | Multiring mesh upgrade unit  |
| • MS-ISC-100T      | Fast Ethernet switch card used for internal shelf connection                   |
| • MUX-32           | Optical MUX 32 Channels  |
| • MXP-2.5G-10G     | 10G (4 * 2.5G) Muxponder card  |
| • MXP-MR-10DME     | 10 Gbps datamux with enhanced FEC  |
| • OPT-AMP-L        | Optical preamplifier for L-band  |
| • OPT-BST          | Optical booster amplifier  |
| • OPT-BST-L        | Optical booster for L-band   |
| • OPT-EDFA-17      | MAL-less EDFA Optical Amplifier - C-band - 17dB Gain                           |
| • OPT-EDFA-24      | MAL-less EDFA Optical Amplifier - C-band - 24dB Gain                           |
| • OPT-PRE          | Optical Preamplifier   |
| • OPT-RAMP-C       | Raman pump amplifier C-band  |
| • OPT-RAMP-CE      | An extended version of Raman pump amplifier                                    |

| Parameter              | Description   |
|------------------------|---|
| • OPT-RAMP-COP         | Raman COP card  |
| • OPT-RAMP-CTP         | Raman CTP card  |
| • OPT-RAMP-E           | Raman pump amplifier E-band   |
| • OSC-CSM              | Optical Service Channel with Combiner/Separator Module  |
| • OSCM                 | Optical Service Channel Module  |
| • OTU2-XP              | A 4x10G transponder that is capable to operate with multiple bit rates - 10G FC, 10GE, and OC192/STM64    |
| • PIM-4                | Pluggable interface module with 4 PPM slots   |
| • PP-4-SMR             | Patch-Panel, 4 degrees, for SMR cards   |
| • PP-MESH-4            | Patch-Panel, 4 degrees  |
| • PP-MESH-8            | Patch-Panel, 8 degrees  |
| • PPM-1                | Pluggable port module with 1-port SFP module  |
| • PSM                  | Protection unit   |
| • PTM-4                | Line card   |
| • PTF-4                | Fabric card   |
| • PTSA                 | CPT 50 panel  |
| • PTSYSFan-Out-Group   | PTSYS Fan-Out-Group   |
| • SHELF                | Shelf entity  |
| • STM4                 | An interface card that supports one or more STM4 (622 Mbps) optical facilities                            |
| • STM4-4               | A four port STM4 card   |
| • STM4-IR-1            | An interface card that supports one intermediate range STM4 (622 Mbps) optical facilities                 |
| • STM4-LR-1            | An interface card that supports one long range STM4 (622 Mbps) optical facilities                         |
| • STM4-SR-1            | An interface card that supports one short range STM4 (622 Mbps) optical facilities                        |
| • STM64-4              | A four-port STM64 card  |
| • STM64-LR-1           | An interface card that supports one or more STM64 optical facilities                                      |
| • STM1                 | An interface card that supports multiple STM1 (155 Mbps) optical facilities                               |
| • STM1-IR-4            | An interface card that supports four intermediate range STM1 (155 Mbps) optical facilities                |
| • STM1-SR-4            | An interface card that supports four short range STM1 (155 Mbps) optical facilities                       |
| • STM1ATM-IR-6         | An interface card that supports six intermediate range STM1 (155 Mbps) ATM optical fibers                 |
| • STM1IR-STM1SH-1310-8 | An STM1 card which has 8 ports over the lower speed slot of the ONS 15454 SDH with XC-VXL-10G/XC-VXL-2.5G |
| • STM1POS-SR-4         | An interface card that supports four short range STM1 (155 Mbps) POS optical facilities                   |

| Parameter       | Description  |
|-----------------|--|
| • STM16         | An interface card that supports one or more STM16 (10 Gbps) optical facilities   |
| • STM16-AS-1    | An interface card that supports one short range OC-48 (10 Gbps) optical facilities that can be provisioned in any I/O slot |
| • STM16-ELR-1   | An interface card that supports one short range STM16 (2.5 Gbps) optical facility  |
| • STM16-IR-1    | An interface card that supports one intermediate range STM16 (10 Gbps) optical facility                                    |
| • STM16-LR-1    | An interface card that supports one long range STM16 (10 Gbps) optical facility  |
| • STM16-SR-1    | An interface card that supports one short range STM16 (10 Gbps) optical facilities   |
| • TCC           | Timing, Communications, and Control card   |
| • TDC-CC        | Coarse tunable dispersion compensation unit  |
| • TDC-FC        | Fine tunable dispersion compensation unit  |
| • TXP-MR-10G    | 10G Multirate Transponder card   |
| • TXP-MR-2.5G   | Multirate 2.5G Unprotected   |
| • TXPP-MR-2.5G  | Multirate 2.5G Protected   |
| • UNKNOWN       | Unknown equipment type   |
| • UNPROVISIONED | Unprovisioned equipment type   |
| • WSE           | Wire Speed Encryption (WSE) card   |
| • XC-VXC-10G    | XC-VXC-10G cross-connect card  |
| • XCVXL-10G     | XC-VXL-10G cross-connect card  |
| • XCVXL-2.5G    | XC-VXL-2.5G cross-connect card   |

## 17.20 REPT PM <MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Performance Monitoring for 10GFC, 10GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, CLNT, D1VIDEO, DS1, DV6000, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, FSTE, G1000, GFPOS, GIGE, HDTV, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OCH, OMS, OTS, 10GFC, 8GFC, 10GIGE, 100GIGE, 40GIGE, OC192, OTU1, OTU2, OTU3, OTU4, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS6C, STS9C, T1, T3, VC12, VC3, VT1, or VT2 (REPT PM <MOD2>) message reports autonomous monitoring statistics as a result of the schedule created by SCHED-PMREPT.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Note

Autonomous performance monitoring (Auto PM) report will have all PM paths reported without any filtering. If a particular parameter is not applicable to that card or circuit, then the value of MONVAL and VLDTY will be NA.

**Category** Performance

| • UAS-SM    | OTN—Unavailable Second—Section Monitor Point   |
| • UASV      | Unavailable Second—VT Path   |
| • UNC-WORDS | Forward Error Correction (FEC)—Uncorrectable Words   |
| • VPC       | Valid Packet Count   |
| <MONVAL>    | The value to which the register identified by MONTYPE is to be initialized to or the measured value of a monitored parameter. The value is in the form of numeric counts or rates. MONVAL is a string.   |
| <VLDTY>     | Indicates whether the information for the specified time period was accumulated over the entire time period or a portion of that time period. Validity indicator for the reported PM data. The parameter type is VALIDITY, which is the response validity. |
| • COMPL     | Complete response  |
| • PRTL      | Partial response   |
| <LOCN>      | Location associated with a particular command in reference to the entity identified by the AID. The parameter type is LOCATION, which is the location where the action is to take place.   |
| • FEND      | Action occurs on the far end of the facility.  |
| • NEND      | Action occurs on the near end of the facility.   |
| <DIRN>      | Direction relative to the entity identified by the AID. Direction of PM relative to the entity identified by the AID. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH       | Both transmit and receive directions   |

|            |   |
|------------|---|
| • RCV      | Receive direction only  |
| • TRMT     | Transmit direction only   |
| <TMPER>    | Accumulation time period for performance counters. The parameter type is TMPER, which is the accumulation time period for the performance management center.  |
| • 1-DAY    | Performance parameter accumulation interval length; every 24 hours. For SONET PM data only one day of history data is available. For RMON managed PM data seven days of history data are available. |
| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.                                    |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.                                     |
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.                                  |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.   |
| <MONDAT>   | The beginning date of the PM or storage register period specified in TMPER. The format is MM-DD. MONDAT is a string.  |
| <MONTM>    | The beginning time of day of the PM or storage register period specified in TMPER. The format is HH-MM. MONTM is a string.  |

## 17.21 REPT SW

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Report Switch (REPT SW) message reports the autonomous switching of a unit in a duplex equipment pair to the standby state and its mate unit to the active state. An automatic report for the occurrence or clearance of an alarm or event that triggers the switch might be associated with the message.

**Usage Guidelines** None

**Category** Protection

**Security** Retrieve

**Output Format**

```
SID DATE TIME
A ATAG REPT SW
  "<ACTID>,<STDBYID>"
;
```

---

**Output Example**      TID-000 1998-06-20 14:30:00  
A 100.100 REPT SW  
  “SLOT-8,SLOT-10”  
  ;

---

|                          |           |  |
|--------------------------|-----------|--|
| <b>Output Parameters</b> | <ACTID>   | Identifies the equipment unit from the “ <a href="#">26.15 EQPT</a> ” section on <a href="#">page 26-39</a> that was placed in the active state. Parameter grouping cannot be used with this parameter.  |
|                          | <STDBYID> | Identifies the equipment unit from the “ <a href="#">26.15 EQPT</a> ” section on <a href="#">page 26-39</a> that was placed in the standby state. Parameter grouping cannot be used with this parameter. |

---

## RLS Commands

---

### Note

The terms "Unidirectional Path Switched Ring" and "UPSR" may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as "Path Protected Mesh Network" and "PPMN," refer generally to Cisco's path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

---

This chapter provides release (RLS) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

---

## 18.1 RLS-CPS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Release Control Plane Service (RLS-CPS) command is used to deactivate a Control Plane Service parameter.

---

### Usage Guidelines

- Specify only the source port to identify the CPS
- Specify both the source AIDs, if the CPS is of type ADD 2WAY
- If the AID is invalid, an IIAC (invalid AID) error message is returned
- The ALL AID is invalid for this command
- CLIENT cps type support FAC and VFAC AID type.
- TRUNK cps type support CHAN AID type.
- ADD cps type support CHAN, PCHAN, and LINEWL AID type.

---

### Category

DWDM

---

### Security

Provisioning

**Input Format** RLS-CPS:[<TID>]:<SRC>:<CTAG>::[:CKTID=<CKTID>][:];

**Input Example** RLS-CPS::PCHAN-8-8-RX&PCHAN-8-8-TX:8::;

|                         |         |   |
|-------------------------|---------|---|
| <b>Input Parameters</b> | <SRC>   | Source AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on <a href="#">page 26-31</a> . |
|                         | <CKTID> | Circuit identification parameter can be used to filter this command                                   |

## 18.2 RLS-EXT-CONT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Release External Control (RLS-EXT-CONT) command releases a forced contact state and returns the control of the contact to an AUTOMATIC control state. In AUTOMATIC control state, the contact can be opened or closed depending on triggers that might be provisioned in the network element (NE). Therefore, issuing an RLS might not produce any contact state change.

### Usage Guidelines

The NE defaults to having no triggers provisioned for external controls, which consequently produces default open contacts. An NE with this default provisioning will always produce an open contact with a RLS-EXT-CONT command.

#### Note

- The duration is not supported; it defaults to CONTS.
- In an automatic state, the contact could be opened or closed depending on the provisioned trigger. Therefore, issuing an OPR-EXT-CONT command followed by an RLS-EXT-CONT command might not produce any contact state change.
- The RLS-EXT-CONT is not allowed during the MNTRY duration. The command is allowed for the CONTS duration. The length of MNTRY duration is set to be 2 seconds.
- RLS-EXT-CONT cannot change the contact state to Automatic if the existing state is Manual Open.

**Category** Environment

**Security** Maintenance

**Input Format** RLS-EXT-CONT:[<TID>]:<AID>:<CTAG>[::,];

**Input Example** RLS-EXT-CONT:CISCO:ENV-OUT-2:123;

|                         |       |   |
|-------------------------|-------|---|
| <b>Input Parameters</b> | <AID> | Access identifier from the “26.14 ENV” section on page 26-39. Identifies the external control being released. |
|-------------------------|-------|---|

## 18.3 RLS-LPBK-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Release Loopback for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 4GFC, 2GFICON, 5GIB, 8GFC, CLNT, D1VIDEO, DS1, DV6000, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, EQPT, FSTE, G1000, GFPOS, GIGE, HDTV, ISC1, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU2, OTU3, OTU4, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, or ISC3STP2G (RLS-LPBK-<MOD2>) command releases a signal loopback on a multiservice or a cross-connect card.

### Usage Guidelines

The command supports the modifier 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

- The value CRS for the LPBKTYPE parameter is applicable only for the STS modifier. The FACILITY and TERMINAL values for LPBKTYPE parameter are applicable to the ports.
- The optional LPBKTYPE field defaults to the current existing loopback type.
- The TERMINAL loopback type is supported on the DS1 path of DS3XM cards.
- FEAC loopbacks can be released by specifying LINE as the loopback type and NEND as the location.
- FEAC loopbacks on the DS1 interface of a DS3XM card can be applied only if a Virtual Tributary (VT) connection has been created on it. An attempt to operate or release FEAC loopbacks in the absence of a VT connection will result in an error message.
- Only the following MOD2 fields are supported in this release: DS1 EC1, G1000, FSTE, OC12, OC192, OC3, OC48, OCH, T1, T3, STS1, STS12C, STS192C, STS24C, STS3C, STS36C, STS48C, STS6C, STS9C, E1, 1GFC, 2GFC, 4GFC, 10GFC, 1GFICON, 2GFICON, 4GFICON, GIGE, 10GIGE, ESCON, STS18C, DV6000, ETRCLO, ISCCOMPAT, ISC3PEER1G, ISC3PEER2R, PASSTHRU, ISC3PEER2G.
- RLS-LPBK-EQPT uses the backplane loopback type to unprovision the loopback provisioned.
- You can run the command even if the loopback type is not specified in the command.
- When the backplane loopback provisioned on the equipment is released, it unprovisions all the ports present on the equipment loopback.

|---------------------|--|

**Input Example**

```
RLS-LPBK-3GVIDEO:PTREYES:VFAC-1-2-5-1:203::NEND,,FACILITY;
RLS-LPBK-EQPT::SLOT-2:1::NEND,,BACKPLANE-TERMINAL;
```

**Input Parameters**

|   |   |
|---|---|
| <SRC>   | Source access identifier from the “26.1 ALL” section on page 26-1. The valid values for AID are FACILITY, DS1, and STS. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier.   |
| <LOCATION>  | The location where the operation is to be carried out. LOCATION defaults to NEND. The parameter type is LOCATION, which is the location where the action is to take place.  |
| <ul style="list-style-type: none"> <li>FEND</li> <li>NEND</li> </ul>  | <ul style="list-style-type: none"> <li>Action occurs on the far end of the facility.</li> <li>Action occurs on the near end of the facility.</li> </ul>   |
| <LPBKTYPE>  | Type of loopback signal. The parameter type is LPBK_TYPE, which indicates the type of loopback that is to be operated or released.  |
| <ul style="list-style-type: none"> <li>BACKPLANE-FACILITY</li> <li>BACKPLANE-TERMINAL</li> <li>CRS</li> <li>FACILITY</li> <li>TERMINAL</li> </ul> | <ul style="list-style-type: none"> <li>Puts the 100G-LC-C, 10x10G-LC, and CFP-LC cards in facility loopback.</li> <li>Puts the 100G-LC-C, 10x10G-LC, and CFP-LC cards in Terminal loopback.</li> <li>Path-level loopback that is established at the cross-connect matrix level. A VC level cross-connect loopback causes an AIS-P to be sent on the outgoing direction of transmission.</li> <li>Type of loopback that connects the incoming received signal immediately following the optical-to-electrical conversion (after descrambling) to the associated transmitter in the return direction.</li> <li>A loopback that connects the signal that is about to be transmitted (after scrambling but before the electrical-to-optical conversion) and is connected to the associated, incoming receiver.</li> </ul> |

## 18.4 RLS-LPBK-EFM

(Cisco ONS 15454) The Release Loopback Edit Ethernet in the First Mile (RLS-LPBK-EFM) command releases the loopback that is provisioned on the Edit Ethernet in the First Mile (EFM) enabled port.

**Usage Guidelines**

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

**Category**

Ports

**Security**

Provisioning

---

**Input Format** RLS-LPBK-EFM:[<TID>]:<AID>:<CTAG>;

---

**Input Example** RLS-LPBK-EFM::ETH-12-1-1:1;

---

**Input Parameters** <AID> [Access identifier from the “26.16 ETH” section on page 26-41.](#)

---

## 18.5 RLS-PROTNSW-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454) The Release Protection Switch for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 8GFC, D1VIDEO, DV6000, DVBASI, ETRCLO, FSTE, GIGE, HDTV, ISC1, ISC3, OTU3, PASSTHRU, 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, OTU4, ISC3STP1G, or ISC3STP2G (RLS-PROTNSW-<MOD2DWDMPAYLOAD>) command releases a SONET line protection switch request.

---

**Usage Guidelines** The command supports the modifier 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, ISC3STP2G.

---

**Category** DWDM

---

**Security** Maintenance

---

**Input Format** RLS-PROTNSW-<MOD2DWDMPAYLOAD>:[<TID>]:<SRC>:<CTAG>[::];

---

**Input Example** RLS-PROTNSW-3GVIDEO:CISCO:VFAC-1-1-1:100;

---

**Input Parameters** <SRC> [Source access identifier from the “26.17 FACILITY” section on page 26-42.](#) The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier.

---

## 18.6 RLS-PROTNSW-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Release Protection Switch for OC3, OC12, OC48, OC192, or OC768 (RLS-PROTNSW-<OCN\_TYPE>) command releases a SONET line protection switch request.

**Usage Guidelines**

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

The release of a protection switch request is applicable only to the OPR-PROTNSW protection switch commands, which are the user-initiated switch protection commands.

The following actions will return error messages:

- This command is not used for the common control (TCC2/TCC2P/TCC3 or XCVT/XC10G) cards. Sending a command on a common control card will return an IIAC (Input, Invalid Access Identifier) error message. To query the common control card switching commands, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
- Sending this command to electrical cards will return an IIAC (Input, Invalid Access Identifier) error message. For electrical card switching, use the ALW-SWTOPROTN/SWTOWKG-EQPT and INH-SWTOPROTN/SWTOWKG-EQPT commands.
- Sending this command to query on a card that is not in a protection group will return the SNVS (Status, Not in Valid State) error message.
- Sending this command to a working card that is failed or missing will return the SWFA (Status, Working unit Failed) error message.
- Sending this command to a protect card that is failed or missing will return the SPFA (Status, Protection unit Failed) error message.
- Sending this command to a card that is not in protection will return the SNPR (Status, Not in Protection State) error message.
- Sending this command to an OC-N line that is already in clear mode will return a SAMS (Already in Clear Maintenance State) error message.

**Note**

- To get the protection switching state (manual, lockout, forced), use the RTRV-COND-ALL or RTRV-ALM-ALL command.
- DIRN is an optional parameter. A NULL value defaults to BTH for a bidirectional line switched ring (BLSR), BTH for a 1+1 bidirectional protection group, and RCV for 1+1 unidirectional protection group.

DIRN follows these rules: TRMT will always fail for any kind of protection groups. For two-fiber and four-fiber BLSR protection groups, both the RCV and TRMT directions will fail.

- DIRN is applicable for both 1+1 and BLSR protection groups. OPR-PROTNSW applies to a BLSR span/ring as shown by the following command:

```
RLS-PROTNSW-OC48::FAC-5-1:A::BTH;
```

This command instructs the NE to release a line protection switch request between a working line and a protection line

**Category**

Protection

**Security**

Maintenance

**Input Format**

```
RLS-PROTNSW-<OCN_TYPE>[:<TID>]:<AID>:<CTAG>[:<DIRECTION>];
```

**Input Example** RLS-PROTNSW-OC48:PETALUMA:FAC-6-1:209::BTH;

|                         |             |   |
|-------------------------|-------------|---|
| <b>Input Parameters</b> | <AID>       | Access identifier from the “26.17 FACILITY” section on page 26-42. Identifies the facility in the NE to which the switch request is directed. |
|                         | <DIRECTION> | Direction. Defaults to RCV. The parameter type is DIRECTION (transmit and receive direction)  |
|                         | • BTH       | Both transmit and receive directions  |
|                         | • RCV       | Receive direction only  |
|                         | • TRMT      | Transmit direction only   |

## 18.7 RLS-PROTNSW-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Release Protection Switch for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (RLS-PROTNSW-<PATH>) command releases a SONET path protection switch request that was established with the OPR-PROTNSW-<PATH> command. This command assumes that only one user-initiated switch is active per AID.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Note**

- This command applies to path protection configuration only.
- The VTAID should be the working or protect AID only.
- If sending this command on the drop AID, a DENY (Invalid AID, should use working/protect AID) message will be returned.
- To get the protection switching state (manual, lockout, forced), use the RTRV-COND-ALL or RTRV-ALM-ALL command.

**Category** Protection

**Security** Maintenance

**Input Format** RLS-PROTNSW-<PATH>:[<TID>]:<SRC>:<CTAG>[::];

**Input Example** RLS-PROTNSW-ST1:CISCO:STS-2-1-1:123;

|                         |       |   |
|-------------------------|-------|---|
| <b>Input Parameters</b> | MSRC> | Source access identifier from the “ <a href="#">26.11 CrossConnectId</a> ” section on page 26-27. |
|-------------------------|-------|---|

## 18.8 RLS-PROTNSW-OCH

(Cisco ONS 15454) The Release Protection Switch Optical Channel (RLS-PROTNSW-OCH) command releases the protection switch on a TXPP\_MR\_2.5G card.

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | None   |
| <b>Category</b>         | DWDM   |
| <b>Security</b>         | Maintenance  |
| <b>Input Format</b>     | RLS-PROTNSW-OCH:[<TID>]:<AID>:<CTAG>;  |
| <b>Input Example</b>    | RLS-PROTNSW-OCH:VA454-22:CHAN-2-2:1;   |
| <b>Input Parameters</b> | <AID> Access identifier from the “ <a href="#">26.8 CHANNEL</a> ” section on page 26-23. |

## 18.9 RLS-PROTNSW-OTS

(Cisco ONS 15454) The Release Protection Switch OTS (RLS-PROTNSW-OTS) command releases the protection switch on a TXPP\_MR\_2.5G card or a protection switch unit or a OTU2-XP card.

When Y-cable protection is provisioned on the OTU2-XP, this command releases a Y-cable protection switch.

|                         |             |
|-------------------------|-------------|
| <b>Usage Guidelines</b> | None        |
| <b>Category</b>         | DWDM        |
| <b>Security</b>         | Maintenance |

---

**Input Format** RLS-PROTNSW-OTS:[<TID>]:<AID>:<CTAG>;

---

**Input Example** RLS-PROTNSW-OTS:VA454-22:CHAN-2-2:1;

---

**Input Parameters** <AID> Access identifier from the [“26.8 CHANNEL”](#) section on page 26-23.

---

## 18.10 RLS-SYNCNSW

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Release Synchronization Switch (RLS-SYNCNSW) command releases the previous synchronization reference provided by the OPR-SYNCNSW command.

---

**Usage Guidelines** In a nonrevertive system, the use of the RLS-SYNCNSW command might not be appropriate. All the switching between synchronization references should be initiated with the OPR-SYNCNSW command. When a switch is released, the MANSWTOPRI (Manual Switch to Primary Reference or Secondary...) or FRDCSWTOPRI (Forced Switch to Primary Reference or Secondary...) minor alarm will be cleared.

---

**Category** Synchronization

---

**Security** Maintenance

---

**Input Format** RLS-SYNCNSW:[<TID>]:<AID>:<CTAG>;

---

**Input Example** RLS-SYNCNSW:CISCO:SYNC-NE:3;

---

**Input Parameters** <AID> Access identifier from the [“26.30 SYNC\\_REF”](#) section on page 26-60 Defaults to SYNC-NE.

---

## RMV Commands

This chapter provides remove (RMV) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

### 19.1 RMV-<MOD2>

The Remove 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 5GIB, 8GFC, CLNT, D1VIDEO, DS1, DV6000, DVBASI, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, FSTE, G1000, GFPOS, GIGE, HDTV, ISC1, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU3, OTU4, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VC12, VC3, VT1, VT2, 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, or ISC3STP2G (RMV-<MOD2>) command removes a facility from service.

#### Usage Guidelines

The command supports the modifier 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G.

See [Table 28-1 on page 28-1](#) for other supported modifiers by platform.

#### Category

Ports

#### Security

Maintenance

#### Input Format

RMV-<MOD2>:[<TID>]:<AID>:<CTAG>[::];

#### Input Example

RMV-OTU1:ROCCIANERA:VFAC-14-3-1:123;

|                         |       |  |
|-------------------------|-------|--|
| <b>Input Parameters</b> | <AID> | Access identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> . The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
|-------------------------|-------|--|

## 19.2 RMV-EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Remove Equipment (RMV-EQPT) command removes equipment from the In Service (IS) state and places it into the Maintenance (MT) state.

**Usage Guidelines** This command is only applicable to equipment that is in transition from the IS state to the MT state.

**Note**

This command can be executed only if the equipment is in IS-NR, OOS-AU,MEA or OOS-AU,UEQ state.

**Category** Equipment

**Security** Maintenance

**Input Format** RMV-EQPT:[<TID>]:<AID>:<CTAG>[::];

**Input Example** RMV-EQPT:CISCO:SLOT-1:1;

|                         |       |   |
|-------------------------|-------|---|
| <b>Input Parameters</b> | <AID> | Access identifier from the <a href="#">“26.15 EQPT” section on page 26-39</a> . |
|-------------------------|-------|---|

## RST Commands

This chapter provides restore (RST) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

### 20.1 RST-<MOD2>

The Restore 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 5GIB, 8GFC, CLNT, D1VIDEO, DS1, DV6000, DVBAS1, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, FSTE, G1000, GFPOS, GIGE, HDTV, ISC1, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU3, OTU4, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VC12, VC3, VT1, VT2, 3GVIDEO, SDSDI, HDSDI, AUTO, OTU1, ISC3STP1G, or ISC3STP2G (RST-<MOD2>) command provisions a facility as In-Service (IS).

#### Usage Guidelines

The command supports the modifier 3GVIDEO, SDSDI, HDSDI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G. See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Note

This command can only be executed when the port is in the Out of Service and Maintenance (OOS,MT) state.

#### Category

Ports

#### Security

Maintenance

#### Input Format

RST-<MOD2>:[<TID>]:<AID>:<CTAG>:::[<PST>[,<SST>]];

**Input Example** RST-OTU1:ROCCIANERA:VFAC-14-3-1:123:::IS,AINS;

| Input Parameters |         |   |
|------------------|---------|---|
| <AID>            |         | Access identifier from the “26.1 ALL” section on page 26-1. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
| <PST>            |         | Primary state. Defaults to IS. The parameter type is PST, which indicates the current overall service condition of an entity.   |
|                  | • IS    | In service  |
|                  | • OOS   | Out of service  |
| <SST>            |         | Secondary state. Defaults to AINS. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
|                  | • AINS  | Automatic In-Service  |
|                  | • DSBLD | Disabled  |
|                  | • LPBK  | Loopback  |
|                  | • MEA   | Mismatch of Equipment   |
|                  | • MT    | Maintenance   |
|                  | • OOG   | Out of Group  |
|                  | • SWDL  | Software Download   |
|                  | • UAS   | Unassigned  |
|                  | • UEQ   | Unequipped  |

## 20.2 RST-EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Restore Equipment (RST-EQPT) command provisions equipment into the IS state from the Maintenance (MT) state.

**Usage Guidelines** This command is only applicable to equipment that is in transition from the Maintenance state to the In-Service state.

**Category** Equipment

**Security** Maintenance

**Input Format** RST-EQPT:[<TID>]:<AID>:<CTAG>[:];

**Input Example** RST-EQPT:CISCO:SLOT-1:1;

---

**Input Parameters**

&lt;AID&gt;

Access identifier from the [“26.15 EQPT”](#) section on page 26-39.

---

## RTRV Commands

---

### Note

The terms "Unidirectional Path Switched Ring" and "UPSR" may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as "Path Protected Mesh Network" and "PPMN," refer generally to Cisco's path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

This chapter provides retrieve (RTRV) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 21.1 RTRV-100GIGE

The retrieve 100GIGE (RTRV-100GIGE) command retrieves the attributes of provisioned 100GIGE facility.

---

### Usage Guidelines

The new parameter NUMOFLANES is added for payloads provisioned on CFP-LC cards.

---

### Category

Ports

---

### Security

---

### Input Format

RTRV-100GIGE:[<TID>]:<AID>:<CTAG>[:::];

---

### Input Example

RTRV-100GIGE::VFAC-5-1-1:1;

|   |  |       |  |        |   |  |   |          |  |   |   |        |   |           |   |  |  |

|               |  |
|---------------|--|
| <SENDDUS>     | (Optional) The facility will send the Do Not Use for Synchronization (DUS) value in 0x0f bit pattern as the synchronization status message for that facility. Defaults to N. The parameter type is ON_OFF (disable or enable an attribute) |
| • N           | Disable an attribute.  |
| • Y           | Enable an attribute.   |
| <ADMSSM>      | (Optional) SSM selectable value. Only displayed when SSM is disabled. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SDH.   |
| • DUS_SDH     | Do Not Use For Synchronization   |
| • G811        | G811 Standard  |
| • RES_SDH     | Reserved For Network Synchronization Use   |
| • G812T       | G812T Standard   |
| • STU_SDH     | Synchronized, Traceability Unknown   |
| • G812TL      | G812TL Standard  |
| • SETS        | Synchronous Equipment Timing Source  |
| <PROVIDESYNC> | (Optional) Indicates whether the facility provides synchronization. Defaults to N.   |
| • Y           | Yes  |
| • N           | No   |
| <NUMOFLANES>  | Identifies the number of sublanes provisioned on the main Aggregate port. Values are 1 or 4.   |

## 21.2 RTRV-CPS

This command can be used to retrieve Control Plane Service parameter. The user needs to specify only the source port to identify the CPS. ALL and group AID are allowed.

### Usage Guidelines

- If the AID is invalid, an IIAC (invalid AID) error message is returned
- The ALL AID and group AID are valid for this command
- In case of ADD 2-WAY with two source AIDs use only one aid to avoid a double response: one for each AID specified
- CLIENT cps type support FAC and VFAC AID type.
- TRUNK cps type support CHAN AID type.
- ADD cps type support CHAN, PCHAN, and LINEWL AID type.
- In case of 1WAY, unidirectional connection, SRC and DST are single AIDs. In case of 2WAY, bidirectional connection, SRC and DST are double AIDs. However, in case of CLIENT or TRUNK cpstype, src and dst are single AID and the connection is of type 2WAY because of bidirectional ports hence this rule is not applicable.

**Input Example**

RTRV-CPS::PCHAN-1-1-RX:8::;

**Input Parameters**

|         |   |
|---------|---|
| <SRC>   | Source AID from the “26.12 CrossConnectId1” section on page 26-31.  |
| <CKTID> | Circuit identification parameter can be used to filter this command |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<SRCAID>:<DSTADDR>,<DSTCID>,<WCT>,<CPSTYPE>:[<CKTID>],[<VALMODE>],[<VALZ
ONE>],[<VALMODESEC>],[<VALZONESEC>],[<CPSSTATUS>],[<ACTVALZONE>],[<RESTTYP
E>],[<REVERTMODE>],[<SOAKTIME>],[<RESTSTS>]:<PST>,[<SST>]”
;
```

**Output Example**

```
tcc232 2011-08-05 16:37:44
M 8 COMPLD
“CHAN-4-2:10.64.107.36,CHAN-7-2,1WAY,ADD:CKTID=,VALMODE=NONE,CPSSTATUS=INAC
TIVE,RESTTYPE=NONE,RESTSTATUS=NONE:OOS,DSBLD”
;
```

**Output Parameters**

|           |  |
|-----------|--|
| <SRC>     | Source access identifier from the “26.1 ALL” section on page 26-1. Listable.   |
| <DSTADDR> | Identifies the destination node IP address.  |
| <DST>     | Destination AID from the “26.1 ALL” section on page 26-1.  |
| <WCT>     | Identifies the wavelength connection type. <ul style="list-style-type: none"> <li>1WAY A unidirectional connection from a source to a destination port. Default is 1WAY</li> <li>2WAY A bidirectional connection between the two ports.</li> </ul>                         |
| <CPSTYPE> | Identifies the type of CPS. <ul style="list-style-type: none"> <li>CLIENT CPS End Point are client ports</li> <li>TRUNK CPS End Point are trunk ports</li> <li>ADD CPS Source End Point is an ADD port</li> <li>DROP Not applicable</li> <li>TNA Not applicable</li> </ul> |

|                |   |
|----------------|---|
| <CKTID>        | (Optional) Circuit identification parameter contains the Common Language Circuit ID or other alias of the circuit being provisioned. Does not contain blank spaces. CKTID is a string of ASCII characters. The maximum length of CKTID can be 48. |
| <VALMODE>      | Identifies the validation mode.   |
| • NONE         | No Optical validation is performed.   |
| • FULL         | The optical validation is performed as indicated in VALZONE parameter.  |
| <VALZONE>      | Identifies the validation operate zone.   |
| • UNKNOWN      | Not evaluated   |
| • GREEN        | Margin > 3 sigma  |
| • YELLOW       | 1 < margin < 3 sigma  |
| • ORANGE       | 0 < margin < 1 sigma  |
| • RED          | -3 < margin < 0 sigma   |
| • OUT          | Margin < -3 sigma   |
| <CPSSTATUS>    | Identifies the Control Plane Service status.  |
| • INACTIVE     | CPS is not active   |
| • ACTIVE       | CPS is active   |
| • ACTIVATING   | CPS activation is started   |
| • DEACTIVATING | CPS deactivation is started   |
| • FAILED       | CPS circuit failed (i.e. link down, node down)  |
| • DEGRADED     | CPS trail failed (i.e. PSM working or protected is down or fail)  |
| • RECOVERING   | temporary reboot status at CPS restart  |
| • HANOVER      | Not applicable  |
| • REPAIRING    | CPS repair is started (i.e. node IP changed)  |
| <ACTVALZONE>   | Identifies the actual validation operate zone.  |
| • UNKNOWN      | Not evaluated   |
| • GREEN        | Margin > 3 sigma  |
| • YELLOW       | 1 < margin < 3 sigma  |
| • ORANGE       | 0 < margin < 1 sigma  |
| • RED          | -3 < margin < 0 sigma   |
| • OUT          | Margin < -3 sigma   |
| <VALMODESEC>   | Identifies the validation mode for secondary circuit  |
| <VALZONESEC>   | Identifies the validation operate zone for secondary circuit  |
| <<RESTTYPE>>   | Specifies the restoration type on CPS circuit or UNI configuration. Parameter type is RESTTYPE.   |
| • NONE         | The circuit restoration type is none for WSON circuits.   |
| • RESTORE      | The circuit restoration type is Restore for WSON circuits.  |
| • REVERT       | The circuit restoration type is Revert for WSON circuits.   |
| < RESTSTS>     | Specifies the restoration status. Parameter type is RESTSTS.  |
| • FAILED       | Restoration failed.   |
| • NONE         | Restoration none.   |

|              |   |
|--------------|---|
| • RESTORED   | The circuit is restored.  |
| • RESTORING  | The circuit is in restoring state.                                  |
| • REVERTIBLE | The circuit is revertible.  |
| • REVERTING  | The circuit is reverting back to the original path.                 |
| <REVERTMODE> | Specifies the revertive mode type. Parameter type is REVERTMODE.    |
| • AUTO       | Automatic revertive mode.   |
| • MANUAL     | Manual revertive mode.  |
| • NONE       | None.   |
| <SOAKTIME>   | Time after which the circuit switches back to the original circuit. |

## 21.3 RTRV-HOP-CPS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve HOP Control Plane Service (RTRV-HOP-CPS) command is used to retrieve the HOPs route constraint of the Control Plane Services.

### Usage Guidelines

- Specify only the source port to identify the CPS.
- ALL and group AID are allowed.
- Optional parameters can be used as filter to the command.
- CLIENT cps type support FAC and VFAC AID type.
- TRUNK cps type support CHAN AID type.
- ADD cps type support CHAN, PCHAN, and LINEWL AID type.
- In case of 1WAY, unidirectional connection, SRC and DST are single AIDs. In case of 2WAY, bidirectional connection, SRC and DST are double AIDs. However, in case of CLIENT or TRUNK cps type, src and dst are single AID and the connection is of type 2WAY because of bidirectional ports hence this rule is not applicable.

### Input Parameters

|               |   |
|---------------|---|
| <SRC>         | Source AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31.  |
| <CIRCUITTYPE> | Identifies the target circuit. Allowed values are PRIMARY, SECONDARY.   |
| <ROUTETYPE>   | Identifies the target circuit route. Allowed values are MAINROUTE, BRIDGEROUTE.   |
| <POSITION>    | Identifies the position of the hop in the item list. Default value is 0. <ul style="list-style-type: none"> <li>• If action=ADD and position=0 than append at the end;</li> <li>• If action=REMOVE and position=0 than remove all matching items;</li> <li>• If action=REMOVE and position&lt;&gt;0 than hop values are ignored;</li> <li>• If action=MODIFY and position&lt;&gt;0 than replace the item in the position indicated;</li> <li>• If action=CLEARALL than clears the list ignoring position and other parameters;</li> </ul> |
| <HOPTYPE>     | Type of hop constraint. Allowed values are STRICT, LOOSE, EXCLUDE <ul style="list-style-type: none"> <li>• STRICT The next hop of the path must be the indicated node and side</li> <li>• LOOSE The path must cross the indicated node and side</li> <li>• EXCLUDE The path must exclude the indicated node</li> </ul>  |
| <HOPNODE>     | IP address of the target node.  |
| <HOPSIDE>     | Hop constraint target WDM side.   |

|---------------|--|
| <SRC>         | Source access identifier from the <a href="#">“26.1 ALL” section on page 26-1.</a> Listable. |
| <DSTADDR>     | Identifies the destination node IP address.  |
| <DST>         | Destination AID from the <a href="#">“26.1 ALL” section on page 26-1.</a>                    |
| <CIRCUITTYPE> | Identifies the target circuit. Allowed values are PRIMARY,SECONDARY.                         |
| <ROUTETYPE>   | Identifies the target circuit route. Allowed values are MAINROUTE, BRIDGEROUTE.              |
| <POSITION>    | Identifies the position of the hop in the item list.   |
| <HOPTYPE>     | Type of hop constraint. Allowed values are STRICT, LOOSE, EXCLUDE.                           |
| • STRICT      | The next hop of the path must be the indicated node and side.                                |
| • LOOSE       | The path must cross the indicated node and side.   |
| • EXCLUDE     | The path must exclude the indicated node.  |

|           |                                 |
|-----------|---------------------------------|
| <HOPNODE> | IP address of the target node.  |
| <HOPSIDE> | Hop constraint target WDM side. |

## 21.4 RTRV-<MOD1FCPAYLOAD>

(Cisco ONS 15454) The Retrieve 1GFC, 2GFC, 4 GFC, 5GIB, 8GFC, or 10GFC (RTRV-<MOD1FCPAYLOAD>) command retrieves the attributes related with the Fibre Channel port.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Category

Ports

### Security

Retrieve

### Input Format

RTRV-<MOD1FCPAYLOAD>[:<TID>]:<AID>:<CTAG>[::::];

### Input Example

RTRV-1GFC:CISCO:FAC-6-1:888;

### Input Parameters

<AID> Access identifier from the [“26.17 FACILITY”](#) section on [page 26-42](#).

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AID>:.,[<ROLE>],[<STATUS>]:LINKRATE=<LINKRATE>,LINKSTATE=<LINKSTATE>,
[LINKRCVRY=<LINKRCVRY>],[DISTEXTN=<DISTEXTN>],
[LINKCREDITS=<LINKCREDITS>],[MFS=<MFS>],[ENCAP=<ENCAP>],[NAME=<NAME>],
[SOAK=<SOAK>],[SOAKLEFT=<SOAKLEFT>],[FREQ=<FREQ>],[LOSSB=<LOSSB>],[SQUELCHMODE=<SQUELCHMODE>]:<PST_PSTQ>,[<SST>]”
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FAC-1-1:.,WORK,ACT:LINKRATE=1GFC,LINKSTATE=UP,LINKRCVRY=Y,
DISTEXTN=NONE,LINKCREDITS=0,MFS=2148,ENCAP=GFP-T,
NAME=“FC PORT”,SOAK=32,SOAKLEFT=“12-25”,FREQ=1550,
LOSSB=LR-1:OOS-MA,MT,SQUELCHMODE=SQUELCH:OOS-MA,DSBLD”
;
```

| Output Parameters |   |
|-------------------|---|
| <AID>             | Access identifier from the “26.17 FACILITY” section on page 26-42.  |
| <ROLE>            | (Optional) The port role in Y-cable protection (WORK or PROT). The parameter type is SIDE, which is the role played by the unit in the protection group.  |
| • PROT            | The entity is a protection unit in the protection group.  |
| • WORK            | The entity is a working unit in the protection group.   |
| <STATUS>          | (Optional) A port status in Y-cable protection (ACT or STBY). The parameter type is STATUS, which is the status of the unit in the protection pair.   |
| • ACT             | The entity is the active unit in the shelf.   |
| • NA              | Status is unavailable.  |
| • STBY            | The entity is the standby unit in the shelf.  |
| <MFS>             | (Optional) Maximum frame size. MFS is an integer.   |
| • GFP_F           | Generic framing procedure (GFP) frame mode  |
| • GFP_T           | GFP transparent mode  |
| • HDLC            | High-level data link control (HDLC) frame mode  |
| • HDLC_LEX        | HDLC LAN extension frame mode   |
| • HDLC_X86        | HDLC X.86 frame mode  |
| <ENCAP>           | (Optional) Frame encapsulation type. The parameter type is ENCAP, which is the frame encapsulation type.  |
| • GFP             | GFP frame mode.   |
| • CBR             | Constant Bit Rate mode.   |
| • TRP             | Transparent mode.   |
| • GMP             | GMP mapping mode.   |
| <SOAK>            | (Optional) OOS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer.  |
| <SOAKLEFT>        | (Optional) Time remaining for the transition from OOS-AINS to IS measured in 1 minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for <SOAKLEFT> are as follows: <ul style="list-style-type: none"> <li>• When the port is in OOS, OOS_MT or IS state, the parameter will not appear.</li> <li>• When the port is in OOS_AINS state but the countdown has not started due to a fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in OOS_AINS state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <FREQ>            | (Optional) Parameter type is OPTICAL_WLEN (optical wavelength).   |
| • 1310            | Wavelength 1310   |
| • 1470            | Wavelength 1470   |
| • 1490            | Wavelength 1490   |
| • 1510            | Wavelength 1510   |

|           |                    |
|-----------|--------------------|
| • 1528.77 | Wavelength 1528.77 |
| • 1529.55 | Wavelength 1529.55 |
| • 1529.94 | Wavelength 1529.94 |
| • 1530    | Wavelength 1530    |
| • 1530.33 | Wavelength 1530.33 |
| • 1530.73 | Wavelength 1530.73 |
| • 1531.12 | Wavelength 1531.12 |
| • 1531.51 | Wavelength 1531.51 |
| • 1531.90 | Wavelength 1531.90 |
| • 1532.29 | Wavelength 1532.29 |
| • 1532.68 | Wavelength 1532.68 |
| • 1533.07 | Wavelength 1533.07 |
| • 1533.47 | Wavelength 1533.47 |
| • 1533.86 | Wavelength 1533.86 |
| • 1534.25 | Wavelength 1534.25 |
| • 1534.64 | Wavelength 1534.64 |
| • 1535.04 | Wavelength 1535.04 |
| • 1535.43 | Wavelength 1535.43 |
| • 1535.82 | Wavelength 1535.82 |
| • 1536.22 | Wavelength 1536.22 |
| • 1536.61 | Wavelength 1536.61 |
| • 1537    | Wavelength 1537    |
| • 1537.40 | Wavelength 1537.40 |
| • 1537.79 | Wavelength 1537.79 |
| • 1538.19 | Wavelength 1538.19 |
| • 1538.58 | Wavelength 1538.58 |
| • 1538.98 | Wavelength 1538.98 |
| • 1539.37 | Wavelength 1539.37 |
| • 1539.77 | Wavelength 1539.77 |
| • 1540.16 | Wavelength 1540.16 |
| • 1540.56 | Wavelength 1540.56 |
| • 1540.95 | Wavelength 1540.95 |
| • 1541.35 | Wavelength 1541.35 |
| • 1541.75 | Wavelength 1541.75 |
| • 1542.14 | Wavelength 1542.14 |
| • 1542.35 | Wavelength 1542.35 |
| • 1542.54 | Wavelength 1542.54 |
| • 1542.94 | Wavelength 1542.94 |
| • 1543.33 | Wavelength 1543.33 |
| • 1543.73 | Wavelength 1543.73 |
| • 1544.13 | Wavelength 1544.13 |

|           |                    |
|-----------|--------------------|
| • 1544.53 | Wavelength 1544.53 |
| • 1544.92 | Wavelength 1544.92 |
| • 1545.32 | Wavelength 1545.32 |
| • 1545.72 | Wavelength 1545.72 |
| • 1546.12 | Wavelength 1546.12 |
| • 1546.52 | Wavelength 1546.52 |
| • 1546.92 | Wavelength 1546.92 |
| • 1547.32 | Wavelength 1547.32 |
| • 1547.72 | Wavelength 1547.72 |

| • 1602.31 | Wavelength 1602.31 |
| • 1602.74 | Wavelength 1602.74 |
| • 1603.17 | Wavelength 1603.17 |

|               |  |
|---------------|--|
| • 1603.60     | Wavelength 1603.60   |
| • 1604.03     | Wavelength 1604.03   |
| • 1610        | Wavelength 1610  |
| • USE-TWL1    | Use Tunable Wavelength 1   |
| <LOSSB>       | (Optional) Parameter type is REACH (reach values).   |
| • AUTOPROV    | Autoprovisioning   |
| • 40GBASE-SR4 | Reach supported on 40GIGE payload on CFP-LC card.  |
| • CX          | Reach CX   |
| • CX1         | Reach CX1  |
| • DX          | Reach DX   |
| • HX          | Reach HX   |
| • I1          | Reach I1   |
| • IR-1        | Reach IR-1   |
| • IR-2        | Reach IR-2   |
| • L1          | Reach L1   |
| • L2          | Reach L2   |
| • L3          | Reach L3   |
| • LR-1        | Reach LR-1   |
| • LR-2        | Reach LR-2   |
| • LR-3        | Reach LR-3   |
| • LX          | Reach LX   |
| • S1          | Reach S1   |
| • S2          | Reach S2   |
| • SR          | Reach SR   |
| • SR-1        | Reach SR-1   |
| • SX          | Reach SX   |
| • T           | Reach T  |
| • TEN-GE-ER   | 10 GE extended range   |
| • TEN-GE-LR   | 10 GE long range   |
| • TEN-GE-SR   | 10 GE short range  |
| • VX          | Reach VX   |
| • ZX          | Reach ZX   |
| <SQUELCHMODE> | Shuts down the far-end laser in response to certain defects.   |
| • SQUELCH     | Squelch is enabled   |
| • NONE        | No Squelch   |
| • NOS         | Squelch is disabled  |
| <PST_PSTQ>    | Primary state of the entity. The parameter type is PST_PSTQ, which is the service state of the entity described by primary state (PST) and primary state qualifier (PSTQ). |
| • IS_NR       | In Service and Normal  |
| • OOS-AU      | Out of Service and Autonomous  |
| • OOS-AUMA    | Out of Service and Autonomous Management   |

|          |  |
|----------|--|
| • OOS-MA | Out of Service and Management  |
| <SST>    | (Optional) Secondary state of the entity. The parameter type is secondary state (SST), which provides additional information pertaining to PST and PSTQ. |
| • AINS   | Automatic In-Service   |
| • DSBLD  | Disabled   |
| • LPBK   | Loopback   |
| • MEA    | Mismatch of Equipment  |
| • MT     | Maintenance  |
| • OOG    | Out of Group   |
| • SWDL   | Software Download  |
| • UAS    | Unassigned   |
| • UEQ    | Unequipped   |

## 21.5 RTRV-<MOD1FICONPAYLOAD>

(Cisco ONS 15454) The Retrieve 1GFICON, 2GFICON, or 4GFICON (RTRV-<MOD1FICONPAYLOAD>) command returns Fibre Channel-specific settings for ports that have been configured to carry FICON traffic using the ENT-FICON command.

### Usage Guidelines

The MXPP\_MR\_2.5G card only supports the GFP-T frame type.  
See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Category

### Output Parameters

|             |   |
|-------------|---|
| <AID>       | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.  |
| <ROLE>      | (Optional) The port role in Y-cable protection (WORK or PROT). The parameter type is SIDE, which is the role that the unit is playing in the protection group.                      |
| • PROT      | The entity is a protection unit in the protection group.  |
| • WORK      | The entity is a working unit in the protection group.   |
| <STATUS>    | (Optional) A port status in Y-cable protection (ACT or STBY). The parameter type is STATUS, which is the status of the unit in the protection pair.                                 |
| • ACT       | The entity is the active unit in the shelf.   |
| • NA        | Status is unavailable.  |
| • STBY      | The entity is the standby unit in the shelf.  |
| <LINKRATE>  | The actual rate running on the Fibre Channel port. It can differ from the payload type provisioned. The parameter type is LINKRATE, which is the link rate on a Fibre Channel port. |
| • 1GFC      | 1-Gigabit Fibre Channel payload   |
| • 1GFICON   | 1-Gigabit fiber connectivity payload  |
| • 2GFC      | 2-Gigabit Fibre Channel payload   |
| • 2GFICON   | 2-Gigabit fiber connectivity payload  |
| • UNKNOWN   | The rate is unknown.  |
| • UNPLUGGED | The SFP is not plugged into the Fibre Channel port so the link rate cannot be detected.   |
| <LINKSTATE> | Link state. The parameter type is DIRN, which specifies the discriminating level for the requested monitored parameter.   |
| • DN        | Monitored parameter with values equal to or greater than the level of LEV will be reported.   |
| • UP        | Monitored parameter with values equal or less than the value of LEV will be reported.   |
| <LINKRCVRY> | Link recovery. The parameter type is ON_OFF (disable or enable an attribute).   |

|               |  |
|---------------|--|
| • N           | Disable an attribute.  |
| • Y           | Enable an attribute.   |
| <DISTEXTN>    | (Optional) Distance extension. The parameter type is DISTANCE_EXTENSION (distance extension).  |
| • B2B         | Buffer to buffer flow control  |
| • NONE        | No distance extension  |
| <LINKCREDITS> | (Optional) Number of link credits. LINKCREDITS is an integer.  |
| <MFS>         | (Optional) Maximum frame size. MFS is an integer.  |
| <ENCAP>       | (Optional) Frame encapsulation type. The parameter type is ENCAP (frame encapsulation type).   |
| • GFP_F       | GFP frame mode   |
| • GFP_T       | GFP transparent mode   |
| • HDLC        | HDLC frame mode  |
| • HDLC_LEX    | HDLC LAN extension frame mode  |
| • HDLC_X86    | HDLC X.86 frame mode   |
| <NAME>        | (Optional) Identifies the port name. NAME is a string.   |
| <SOAK>        | (Optional) OOS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer.   |
| <SOAKLEFT>    | (Optional) Time remaining for the transition from OOS-AINS to IS measured in 1 minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for <SOAKLEFT> are as follows: <ul style="list-style-type: none"> <li>• When the port is in OOS, OOS_MT, or IS state, the parameter will not appear.</li> <li>• When the port is in OOS_AINS state but the countdown has not started due to a fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in OOS_AINS state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <FREQ>        | (Optional) Parameter type is OPTICAL_WLEN (optical wavelength).  |
| • 1310        | Wavelength 1310  |
| • 1470        | Wavelength 1470  |
| • 1490        | Wavelength 1490  |
| • 1510        | Wavelength 1510  |
| • 1528.77     | Wavelength 1528.77   |
| • 1529.16     | Wavelength 1529.16   |
| • 1529.55     | Wavelength 1529.55   |
| • 1529.94     | Wavelength 1529.94   |
| • 1530        | Wavelength 1530  |
| • 1530.33     | Wavelength 1530.33   |
| • 1530.73     | Wavelength 1530.73   |
| • 1531.12     | Wavelength 1531.12   |

|           |                    |
|-----------|--------------------|
| • 1531.51 | Wavelength 1531.51 |
| • 1531.90 | Wavelength 1531.90 |
| • 1532.29 | Wavelength 1532.29 |
| • 1532.68 | Wavelength 1532.68 |
| • 1533.07 | Wavelength 1533.07 |
| • 1533.47 | Wavelength 1533.47 |
| • 1533.86 | Wavelength 1533.86 |
| • 1534.25 | Wavelength 1534.25 |
| • 1534.64 | Wavelength 1534.64 |
| • 1535.04 | Wavelength 1535.04 |
| • 1535.43 | Wavelength 1535.43 |
| • 1535.82 | Wavelength 1535.82 |
| • 1536.22 | Wavelength 1536.22 |
| • 1536.61 | Wavelength 1536.61 |
| • 1537    | Wavelength 1537    |
| • 1537.40 | Wavelength 1537.40 |
| • 1537.79 | Wavelength 1537.79 |
| • 1538.19 | Wavelength 1538.19 |
| • 1538.58 | Wavelength 1538.58 |
| • 1538.98 | Wavelength 1538.98 |
| • 1539.37 | Wavelength 1539.37 |
| • 1539.77 | Wavelength 1539.77 |
| • 1540.16 | Wavelength 1540.16 |
| • 1540.56 | Wavelength 1540.56 |
| • 1540.95 | Wavelength 1540.95 |
| • 1541.35 | Wavelength 1541.35 |
| • 1541.75 | Wavelength 1541.75 |
| • 1542.14 | Wavelength 1542.14 |
| • 1542.35 | Wavelength 1542.35 |
| • 1542.54 | Wavelength 1542.54 |
| • 1542.94 | Wavelength 1542.94 |
| • 1543.33 | Wavelength 1543.33 |
| • 1543.73 | Wavelength 1543.73 |
| • 1544.13 | Wavelength 1544.13 |
| • 1544.53 | Wavelength 1544.53 |
| • 1544.92 | Wavelength 1544.92 |
| • 1545.32 | Wavelength 1545.32 |
| • 1545.72 | Wavelength 1545.72 |
| • 1546.12 | Wavelength 1546.12 |
| • 1546.52 | Wavelength 1546.52 |
| • 1546.92 | Wavelength 1546.92 |

|           |                    |
|-----------|--------------------|
| • 1547.32 | Wavelength 1547.32 |
| • 1547.72 | Wavelength 1547.72 |
| • 1548.12 | Wavelength 1548.12 |
| • 1548.51 | Wavelength 1548.51 |
| • 1548.92 | Wavelength 1548.92 |
| • 1549.32 | Wavelength 1549.32 |
| • 1549.71 | Wavelength 1549.71 |
| • 1550    | Wavelength 1500    |
| • 1550.12 | Wavelength 1550.12 |
| • 1550.52 | Wavelength 1550.52 |
| • 1550.92 | Wavelength 1550.92 |
| • 1551.32 | Wavelength 1551.32 |
| • 1551.72 | Wavelength 1551.72 |
| • 1552.12 | Wavelength 1552.12 |
| • 1552.52 | Wavelength 1552.52 |
| • 1552.93 | Wavelength 1552.93 |
| • 1553.33 | Wavelength 1553.33 |
| • 1553.73 | Wavelength 1553.73 |
| • 1554.13 | Wavelength 1554.13 |
| • 1554.13 | Wavelength 1554.13 |
| • 1554.94 | Wavelength 1554.94 |
| • 1555.34 | Wavelength 1555.34 |
| • 1555.75 | Wavelength 1555.75 |
| • 1556.15 | Wavelength 1556.15 |
| • 1556.55 | Wavelength 1556.55 |
| • 1556.96 | Wavelength 1556.96 |
| • 1557.36 | Wavelength 1557.36 |
| • 1557.77 | Wavelength 1557.77 |
| • 1558.17 | Wavelength 1558.17 |
| • 1558.58 | Wavelength 1558.58 |
| • 1558.98 | Wavelength 1558.98 |
| • 1559.39 | Wavelength 1559.39 |
| • 1559.79 | Wavelength 1559.79 |
| • 1560.20 | Wavelength 1560.20 |
| • 1560.61 | Wavelength 1560.61 |
| • 1561.01 | Wavelength 1561.01 |
| • 1561.42 | Wavelength 1561.42 |
| • 1561.83 | Wavelength 1561.83 |
| • 1562.23 | Wavelength 1562.23 |
| • 1562.64 | Wavelength 1562.64 |
| • 1563.05 | Wavelength 1563.05 |

|           |                    |
|-----------|--------------------|
| • 1563.45 | Wavelength 1563.45 |
| • 1563.86 | Wavelength 1563.86 |
| • 1564.27 | Wavelength 1564.27 |
| • 1564.68 | Wavelength 1564.68 |
| • 1565.09 | Wavelength 1565.09 |
| • 1565.50 | Wavelength 1565.50 |
| • 1565.90 | Wavelength 1565.90 |
| • 1566.31 | Wavelength 1566.31 |
| • 1566.72 | Wavelength 1566.72 |
| • 1570    | Wavelength 1570    |
| • 1570.83 | Wavelength 1570.83 |
| • 1571.24 | Wavelength 1571.24 |
| • 1571.65 | Wavelength 1571.65 |

| • 1595.49 | Wavelength 1595.49 |
| • 1596.34 | Wavelength 1596.34 |
| • 1596.76 | Wavelength 1596.76 |
| • 1597.19 | Wavelength 1597.19 |
| • 1597.62 | Wavelength 1597.62 |
| • 1598.04 | Wavelength 1598.04 |
| • 1598.47 | Wavelength 1598.47 |
| • 1598.89 | Wavelength 1598.89 |
| • 1599.32 | Wavelength 1599.32 |
| • 1599.75 | Wavelength 1599.75 |
| • 1600.06 | Wavelength 1600.06 |
| • 1601.03 | Wavelength 1601.03 |

|               |  |
|---------------|--|
| • 1601.46     | Wavelength 1601.46   |
| • 1601.88     | Wavelength 1601.88   |
| • 1602.31     | Wavelength 1602.31   |
| • 1602.74     | Wavelength 1602.74   |
| • 1603.17     | Wavelength 1603.17   |
| • 1603.60     | Wavelength 1603.60   |
| • 1604.03     | Wavelength 1604.03   |
| • 1610        | Wavelength 1610  |
| • USE-TWL1    | Use Tunable Wavelength 1   |
| <LOSSB>       | (Optional) Parameter type is REACH (reach values).   |
| • AUTOPROV    | Autoprovisioning   |
| • 40GBASE-SR4 | Reach supported on 40GIGE payload on CFP-LC card.  |
| • CX          | Reach CX   |
| • CX1         | Reach CX1  |
| • DX          | Reach DX   |
| • HX          | Reach HX   |
| • I1          | Reach I1   |
| • IR-1        | Reach IR-1   |
| • IR-2        | Reach IR-2   |
| • L1          | Reach L1   |
| • L2          | Reach L2   |
| • L3          | Reach L3   |
| • LR-1        | Reach LR-1   |
| • LR-2        | Reach LR-2   |
| • LR-3        | Reach LR-3   |
| • LX          | Reach LX   |
| • S1          | Reach S1   |
| • S2          | Reach S2   |
| • SR          | Reach SR   |
| • SR-1        | Reach SR-1   |
| • SX          | Reach SX   |
| • T           | Reach T  |
| • TEN-GE-ER   | 10 GE extended range   |
| • TEN-GE-LR   | 10 GE long range   |
| • TEN-GE-SR   | 10 GE short range  |
| • VX          | Reach VX   |
| • ZX          | Reach ZX   |
| <PST_PSTQ>    | Primary state of the entity. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and PSTQ. |
| • IS_NR       | In Service and Normal  |
| • OOS-AU      | Out of Service and Autonomous  |
| • OOS-AUMA    | Out of Service and Autonomous Management   |

|          |  |
|----------|--|
| • OOS-MA | Out of Service and Management  |
| <SST>    | (Optional) Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS   | Automatic In-Service   |
| • DSBLD  | Disabled   |
| • LPBK   | Loopback   |
| • MEA    | Mismatch of Equipment  |
| • MT     | Maintenance  |
| • OOG    | Out of Group   |
| • SWDL   | Software Download  |
| • UAS    | Unassigned   |
| • UEQ    | Unequipped   |

## 21.6 RTRV-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454) The Retrieve D1VIDEO, DV6000, DVBASI, ETRCLO, HDTV, ISCCOMPAT, ISC1, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, PASSTHRU, 3GVIDEO, SDSDI, HSDSI, AUTO, OTL, OTU1, ISC3STP1G, and ISC3STP2G (RTRV-<MOD2DWDMPAYLOAD>) command retrieves the configuration parameter of a dense wavelength division multiplexing (DWDM) client.

### Usage Guidelines

The command supports the modifier 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G. The RTRV-OTL command retrieves the Current values on sublanes of 100G-LC-C and retrieves only state of the facility on CFP-LC cards.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Category

Ports

### Security

Maintenance

### Input Format

RTRV-<MOD2DWDMPAYLOAD>:[<TID>]:<AID>:<CTAG>[:::];

### Input Example

RTRV-SDSDI::VFAC-3-2-1:321;

### Input Parameters

|       |  |
|-------|--|
| <AID> | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
|-------|--|

**Output Format**

```
SID DATE TIME M CTAG COMPLD
"<AIDUNIONID>,<AIDTYPE>:.,[<ROLE>],[<STATUS>]:[NAME=<NAME>],[LBCL=<LBCL>],
[OPT=<OPT>],[OPR=<OPR>],[FREQ=<FREQ>],[LOSSB=<LOSSB>],[SQUELCHMODE=,SQUEL
CHMODE.]:<PSTPSTQ>,[<SST>]" ;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 321 COMPLD
"VFAC-3-2-1,SDSDI:.,WORK,ACT:NAME="NY PORT",LBCL=10.0,OPT=10.0,OPR=10.0,
FREQ=1550,LOSSB=LR-1,SQUELCHMODE=SQUELCH:OOS-AU,AINS" ;
```

**Output Parameters**

|              |   |
|--------------|---|
| <AIDUNIONID> | Access identifier from the <a href="#">“26.2 AidUnionId”</a> section on page 26-13  |
| <AIDTYPE>    | A type of access identifier. The parameter type is MOD2DWDMPAYLOAD, which contains the payload types applicable to DWDM ports.                            |
| • 100GIGE    | 100 Gigabit Ethernet.   |
| • 10GFC      | 10-Gigabit Fibre Channel payload  |
| • 10GIGE     | 10-Gigabit Ethernet   |
| • 40GIGE     | 40-Gigabit Ethernet   |
| • 1GFC       | 1-Gigabit Fibre Channel payload   |
| • 1GFICON    | 1-Gigabit fiber connectivity payload  |
| • 2GFC       | 2-Gigabit Fibre Channel payload   |
| • 2GFICON    | 2-Gigabit fiber connectivity payload  |
| • 5GIB       | 5Gbps InfiniBand (IB_5G) payload  |
| • 8GFC       | 8-Gigabit Fibre Channel payload   |
| • D1VIDEO    | D1Video payload   |
| • DV6000     | DV6000 payload  |
| • DVBASI     | DVBASI payload  |
| • ETRCLO     | ETR_CLO payload   |
| • GIGE       | Gigabit Ethernet payload  |
| • HDTV       | High definition television (HDTV) payload   |
| • ISC1       | ISC1 payload  |
| • ISC3       | ISC3 payload  |
| • OTL        | Optical Channel Transport Lane.   |
| • OTU1       | Optical Transport Unit Level 1  |
| • OTU3       | Optical Transport Unit Level 3  |
| • OTU4       | Optical Transport Unit Level 4  |
| • PASSTHRU   | Any pass-through (2R) payload   |
| <ROLE>       | (Optional) The port role in Y-cable protection (WORK or PROT). The parameter type is SIDE, which is the role the unit is playing in the protection group. |
| • PROT       | The entity is a protection unit in the protection group.  |

|           |   |
|-----------|---|
| • WORK    | The entity is a working unit in the protection group.   |
| <STATUS>  | (Optional) A port status in Y-cable protection (ACT or STBY). The parameter type is STATUS, which is the status of the unit in the protection pair. |
| • ACT     | The entity is the active unit in the shelf.   |
| • NA      | Status is unavailable.  |
| • STBY    | The entity is the standby unit in the shelf.  |
| <NAME>    | (Optional) Identifies the port name. NAME is a string.  |
| <LBCL>    | (Optional) Displays the current value of the laser current. LBCL is a float.  |
| <OPT>     | (Optional) Displays the current value of the transmitted optical power. OPT is a float.   |
| <OPR>     | (Optional) Displays the current value of the received optical power. OPR is a float.  |
| <FREQ>    | (Optional) Parameter type is OPTICAL_WLEN (optical wavelength).   |
| • 1310    | Wavelength 1310   |
| • 1470    | Wavelength 1470   |

## 21.7 RTRV-<MOD\_RING>

(Cisco ONS 15454) The Retrieve Bidirectional Line Switched Ring (RTRV-<MOD\_RING>) command retrieves the bidirectional line switched ring (BLSR) information of the NE. A two-fiber or four-fiber BLSR can be retrieved.

### Usage Guidelines

Output examples:

4F BLSR:

```
"BLSR-N43AB::RINGID=N43AB,NODEID=3,MODE=4F,RVRTV=Y,RVTM=5.0,SRVRTV=Y,
SRVTM=5.0,EASTWORK=FAC-5-1,WESTWORK=FAC-6-1,EASTPROT=FAC-12-1,
WESTPROT=FAC-13-1"
```

2F BLSR:

```
"BLSR-N12EF::RINGID=N12EF,NODEID=2,MODE=2F,RVRTV=Y,RVTM=5.0,
EASTWORK=FAC-5-1,WESTWORK=FAC-6-1"
```

- The following actions will return error messages:
  - If the system fails on getting IOR, a SROF (Get IOR Failed) error message is returned.
  - If the AID is invalid, an IIAC (Invalid AID) error message is returned.
  - If the BLSR does not exist, a SRQN (BLSR Does Not Exist) error message is returned.
- Only ALL, NULL, BLSR-ALL, or BLSR-RINGID is allowed for this command.
- A NULL AID defaults to the AID ALL.
- The list AID format is supported.

### Category

BLSR

**Security** Retrieve

**Input Format** RTRV-<MOD\_RING>:[<TID>]:[<AID>]:<CTAG>[:[::]];

**Input Example** RTRV-BLSR:PETALUMA:ALL:123;

**Input Parameters**

|       |  |
|-------|--|
| <AID> | Access identifier from the “26.3 AidUnionId1” section on page 26-21. Identifies the BLSR of the NE. Only ALL, null, or a list of BLSR-# is allowed. A null value is equivalent to ALL. |
|-------|--|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD

“[<AID>]:[:<RINGID>],[<NODEID>],[<MODE>],[<RVRTV>],[<RVTM>],[<SRVRTV>],[<SRVTM>],
[<EASTWORK>],[<WESTWORK>],[<EASTPROT>],[<WESTPROT>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“BLSR-43::RINGID=43,NODEID=3,MODE=4F,RVRTV=Y,RVTM=5.0,SRVRTV=Y,SRVTM=5.0,
EASTWORK=FAC-5-1,WESTWORK=FAC-6-1,EASTPROT=FAC-12-1,WESTPROT=FAC-13-1”
;
```

**Output Parameters**

|          |   |
|----------|---|
| <AID>    | (Optional) Access identifier from the “26.3 AidUnionId1” section on page 26-21. Identifies the BLSR of the NE.  |
| <RINGID> | (Optional) The BLSR ID of the NE. String of up to six characters. Valid characters are A-Z and 0-9.   |
| <NODEID> | (Optional) The BLSR node ID of the NE. NODEID is a string and ranges from 0 to 31.  |
| <MODE>   | (Optional) Mode with which the command is to be implemented. Identifies the BLSR mode; either two-fiber or four-fiber. The parameter type is BLSR_MODE (BLSR mode). |
| • 2F     | Two-fiber BLSR  |
| • 4F     | Four-fiber BLSR   |

|               |  |
|---------------|--|
| <RVRTV>       | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| • N           | Does not revert service to original line after restoration.  |
| • Y           | Reverts service to original line after restoration.  |
| <RVTM>        | Revertive time. RVTM is not allowed to be set while RVRTV is N. The parameter type is REVERTIVE_TIME.  |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.   |
| <SRVRTV>      | The span revertive mode for four-fiber BLSR only. The parameter type is ON_OFF (disable or enable an attribute).   |
| • N           | Disable an attribute.  |
| • Y           | Enable an attribute.   |
| <SRVTM>       | The span revertive time for four-fiber BLSR only. SRVTM is not allowed to be set while SRVRTV is N. The parameter type is REVERTIVE_TIME.  |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.   |
| <EASTWORK>    | East working facility. AID from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.  |
| <WESTWORK>    | West working facility. AID from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.  |
| <EASTPROT>    | East protecting facility. AID from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.   |
| <WESTPROT>    | West protecting facility. AID from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.   |

## 21.8 RTRV-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve OC3, OC12, OC48, or OC192 command retrieves the attributes (for example, service parameters) and the state of an OC-N facility.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

Both RINGID and BLSRTYPE identify the OC-N port connected with a BLSR. These attributes are only presented for the OC-12, OC-48, and OC-192 ports within a BLSR connection. The RTRV-<MOD\_RING> command with the AID BLSR-RINGID can provide more information about a BLSR.

### Note

This command does not show the WVLEN attribute if the OC-N port has a zero value.

### Category

Ports

**Security** Retrieve

**Input Format** RTRV-<OCN\_TYPE>[:<TID>]:<AID>:<CTAG>[:::];

**Input Example** RTRV-OC48:PENNGROVE:FAC-6-1:236;

**Input Parameters** <AID> Access identifier from the [“26.17 FACILITY”](#) section on page 26-42.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:.,[<ROLE>],[<STATUS>]:[DCC=<DCC>],[AREA=<AREA>],[TMGREF=<TMGREF>],

**Output Parameters**

|        |  |
|--------|--|
| <AID>  | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.                                       |
| <ROLE> | (Optional) An OC-N port role. The parameter type is SIDE, which is the role the unit is playing in the protection group. |
| • PROT | The entity is a protection unit in the protection group.   |
| • WORK | The entity is a working unit in the protection group.  |

|           |   |
|-----------|---|
| <STATUS>  | (Optional) An OC-N port status. The parameter type is STATUS, which is the status of the unit in the protection pair.   |
| • ACT     | The entity is the active unit in the shelf.   |
| • NA      | Status is unavailable.  |
| • STBY    | The entity is the standby unit in the shelf.  |
| <DCC>     | (Optional) Indicates whether or not the Section data communications channel (DCC) is to be used. The parameter type is EXT_RING, which indicates whether the ring supports the extended K1/K2/K3 protocol.  |
| • N       | The ring does not support the extended K1/K2/K3 protocol.   |
| • Y       | The ring does support the extended K1/K2/K3 protocol.   |
| <AREA>    | (Optional) Area ID. Shows up only if the DCC is enabled. AREA is a string.  |
| <TMGREF>  | (Optional) The termination to be used, whether primary or secondary. Identifies if an OC-N port has a timing reference. Defaults to N. The parameter type is ON_OFF (disable or enable an attribute).   |
| • N       | Disable an attribute.   |
| • Y       | Enable an attribute.  |
| <SYNCMSG> | Synchronization status message. The parameter type is EXT_RING, which indicates whether the ring supports the extended K1/K2/K3 protocol.   |
| • N       | The ring does not support the extended K1/K2/K3 protocol.   |
| • Y       | The ring does support the extended K1/K2/K3 protocol.   |
| <SENDDUS> | (Optional) The facility will send the DUS (Do not use for Synchronization) value in 0x0f bits pattern as the synchronization status message for that facility. Defaults to N. The parameter type is ON_OFF (disable or enable an attribute).  |
| • N       | Disable an attribute.   |
| • Y       | Enable an attribute.  |
| <PJMON>   | (Optional) Identifies an OC-N port PJMON. Defaults to 0 (zero). PJMON is an integer. Set a valid STS number of the optical port.<br><br><b>Note</b> The PJMON number displayed in TL1 interface does not correspond to the PJVC4MON number in CTC, but instead corresponds to the STS number of the optical port. |
| <SFBER>   | (Optional) An OC-N port signal failure threshold. Defaults to 1E-4. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.  |
| • 1E-3    | SFBER is 1E-3.  |
| • 1E-4    | SFBER is 1E-4.  |
| • 1E-5    | SFBER is 1E-5.  |
| <SDBER>   | (Optional) An OC-N port signal degrade threshold. Defaults 1E-7. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.   |
| • 1E-5    | SDBER is 1E-5.  |
| • 1E-6    | SDBER is 1E-6.  |

|                 |   |
|-----------------|---|
| • 1E-7          | SDBER is 1E-7.  |
| • 1E-8          | SDBER is 1E-8.  |
| • 1E-9          | SDBER is 1E-9.  |
| <MODE>          | (Optional) OC-N port mode. Defaults to SONET. The parameter type is OPTICAL_MODE, which is the facility's optical mode.   |
| • SINGLESHELF   | The NE contains only one shelf and the AID representation does not consider the shelf identifier for command requests/response and autonomous reports.  |
| • MULTISHELF    | The AID representation considers the shelf identifier for command requests/response and autonomous reports. This means the NE has more than one shelf configured or the user wants to use the new AID style.  |
| • MULTISHELFETH | The AID representation considers the shelf identifier for command requests/response and autonomous reports. This means the NE has more than one shelf configured or the user wants to use the new AID style. The shelves are connected by means of an external Ethernet switch. |
| <WVLEN>         | (Optional) An OC-N port wavelength in nanometers. For example, WVLEN=1310.00 means it operates at 1310 nm in the DWDM application. WVLEN is a float.  |
| <RINGID>        | (Optional) The BLSR RINGID with which the port is connected. RINGID ranges from 0 to 9999. RINGID is an integer.  |
| <BLSRTYPE>      | (Optional) The BLSR type with which the port is connected. The parameter type is BLSR_TYPE, which is the BLSR type of an OC-N port.   |
| • EASTPROT      | The OC-N port is an east protecting port.   |
| • EASTWORK      | The OC-N port is an east working port.  |
| • WESTPROT      | The OC-N port is an west protecting port.   |
| • WESTWORK      | The OC-N port is an west working port.  |
| <MUX>           | (Optional) BLSR extension byte. The parameter type is MUX_TYPE, which is the BLSR extension byte.   |
| • E2            | E2 byte (orderwire)   |
| • F1            | F1 byte (user)  |
| • K3            | K3 byte   |
| • Z2            | Z2 byte   |
| <UNIC>          | (Optional) Indicates if the port connects to the UCP. The parameter type is ON_OFF (disable or enable an attribute).  |
| • N             | Disable an attribute.   |
| • Y             | Enable an attribute.  |
| <SOAK>          | (Optional) OOS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer.  |

|            |  |
|------------|--|
| <SOAKLEFT> | (Optional) Time remaining for the transition from OOS-AINS to IS measured in 1-minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for <SOAKLEFT> are as follows: <ul style="list-style-type: none"> <li>• When the port is in OOS, OOS_MT, or IS state, the parameter will not appear.</li> <li>• When the port is in OOS_AINS but the countdown has not started due to a fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in OOS_AINS state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <SSMRCV>   | (Optional) Displays the quality of the individual port. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET.   |
| • DUS      | Do Not Use For Synchronization   |
| • PRS      | Primary Reference Source, Stratum 1 Traceable  |
| • RES      | Reserved For Network Synchronization Use   |
| • SMC      | SONET Minimum Clock Traceable  |
| • ST2      | Stratum 2 Traceable  |
| • ST3      | Stratum 3 Traceable  |
| • ST3E     | Stratum 3E Traceable   |
| • ST4      | Stratum 4 Traceable  |
| • STU      | Synchronized, Traceability Unknown   |
| • TNC      | Transit Node Clock (2nd Generation Only)   |
| <OSPF>     | (Optional) The Open Shortest Path First protocol. The parameter type is ON_OFF (disable or enable an attribute).   |
| • N        | Disable an attribute.  |
| • Y        | Enable an attribute.   |
| <LDCC>     | (Optional) The Line DCC connection on the port. The parameter type is EXT_RING, which indicates if the ring supports the extended K1/K2/K3 protocol.   |
| • N        | The ring does not support the extended K1/K2/K3 protocol.  |
| • Y        | The ring does support the extended K1/K2/K3 protocol.  |
| <NAME>     | (Optional) Port Name. NAME is a string.  |
| <LBCL>     | (Optional) Displays the current value of the laser current. LBCL is a float.   |
| <OPT>      | (Optional) Displays the current value of the transmitted optical power. OPT is only displayed for DWDM cards. OPT is a float.  |
| <OPR>      | (Optional) Received optical power. OPR is a float.   |
| <EXPTRC>   | (Optional) Expected path trace content. EXPTRC is a string.  |
| <TRC>      | (Optional) Path trace message to be transmitted. TRC is a string.  |
| <TRCMODE>  | (Optional) Path trace mode. Applicable only to STS-level Paths in SONET. Defaults to the OFF mode. The parameter type is TRCMODE (trace mode).   |

|                        |  |
|------------------------|--|
| • AUTO                 | Use the previously received path trace string as the expected string. Not applicable to MXP/TXP cards.   |
| • AUTO-NO-AIS          | Use the previously received path trace string as the expected string and do not turn on alarm indication signal (AIS) and remote defect indication (RDI) if TIM-P is detected.   |
| • MAN                  | Use the provisioned expected string as the expected string.  |
| • MAN-NO-AIS           | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.  |
| • OFF                  | Turn off path trace capability. Nothing will be reported.  |
| <TRCFORMAT>            | (Optional) Trace message size. The parameter type is TRCFORMAT (trace format).   |
| • 1-BYTE               | 1-byte trace message   |
| • 16-BYTE              | 16-byte trace message  |
| • 64-BYTE              | 64-byte trace message  |
| • Y                    | Enable an attribute.   |
| <ADMSSM>               | (Optional) SSM selectable value. Only displayed when SSM is disabled. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET.   |
| • DUS                  | Do Not Use For Synchronization   |
| • PRS                  | Primary Reference Source, Stratum 1 Traceable  |
| • RES                  | Reserved For Network Synchronization Use   |
| • SMC                  | SONET Minimum Clock Traceable  |
| • ST2                  | Stratum 2 Traceable  |
| • ST3                  | Stratum 3 Traceable  |
| • ST3E                 | Stratum 3E Traceable   |
| • ST4                  | Stratum 4 Traceable  |
| • STU                  | Synchronized, Traceability Unknown   |
| • TNC                  | Transit Node Clock (2nd Generation Only)   |
| <SENDDUSFF>            | (Optional) Indicates that the facility will send the DUS value in 0xff bits pattern as the synchronization status message for that facility. Defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| • N                    | Disable an attribute.  |
| • Y                    | Enable an attribute.   |
| <AISONLPBK>            | (Optional) AIS on loopback. The parameter type is AIS_ON_LPBK, which indicates whether AIS is sent on a loopback.  |
| • AIS_ONLPBK_FACILITY  | AIS is sent on facility loopbacks.   |
| • AIS_ON_LPBK_ALL      | AIS is sent on all loopbacks.  |
| • AIS_ON_LPBK_OFF      | AIS is not sent on loopbacks.  |
| • AIS_ON_LPBK_TERMINAL | AIS is sent on terminal loopbacks.   |
| <FREQ>                 | (Optional) Parameter type is OPTICAL_WLEN (optical wavelength).  |

|           |                    |
|-----------|--------------------|
| • 1310    | Wavelength 1310    |
| • 1470    | Wavelength 1470    |
| • 1490    | Wavelength 1490    |
| • 1510    | Wavelength 1510    |
| • 1528.77 | Wavelength 1528.77 |
| • 1529.16 | Wavelength 1529.16 |
| • 1529.55 | Wavelength 1529.55 |
| • 1529.94 | Wavelength 1529.94 |
| • 1530    | Wavelength 1530    |
| • 1530.33 | Wavelength 1530.33 |
| • 1530.73 | Wavelength 1530.73 |
| • 1531.12 | Wavelength 1531.12 |
| • 1531.51 | Wavelength 1531.51 |
| • 1531.90 | Wavelength 1531.90 |
| • 1532.29 | Wavelength 1532.29 |
| • 1532.68 | Wavelength 1532.68 |
| • 1533.07 | Wavelength 1533.07 |
| • 1533.47 | Wavelength 1533.47 |
| • 1533.86 | Wavelength 1533.86 |
| • 1534.25 | Wavelength 1534.25 |

| • UEQ      | Unequipped   |

## 21.9 RTRV-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (RTRV-<PATH>) command retrieves the attributes associated with an STS/VT path.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

Supported AIDs are: ALL, SLOT-N (N=1,2,...,ALL), and STS/VT-specific AIDs.

The SFBER, SDBER, RVRTV, RVTM, SWPDIP, HOLDOFTIMER, and UPSRPTHSTATE parameters only apply to path protection configurations.

The path trace message is a 64 character string including the terminating CR (carriage return) and LF (line feed) that is transported in the J1 byte of the SONET STS Path overhead.

The EXPTRC indicates that the contents of the expected incoming path trace are provisioned by the user in the ED-STIS\_PATH command. The TRC indicates the contents of the outgoing path trace message. The INCTRC indicates the contents of the incoming path trace message.

The path trace mode has three modes: OFF, MANUAL, and AUTO. The mode defaults to OFF. The MANUAL mode performs the comparison of the received string with the user entered expected string. The AUTO mode performs the comparison of the present received string with an expected string set to a previously received string. If there is a mismatch, the TIM-P alarm is raised. When the path trace mode is in OFF mode, there is no path trace processing, and all the alarm and state conditions are reset.

When the expected string is queried under the OFF path trace mode, the expected string is a copy of the provisioned string or NULL. When an expected string is queried under the MANUAL path trace mode, the expected string is a copy of the user entered string. When an expected string is queried under the AUTO path trace mode, the expected string is a copy of the acquired received string or NULL if the string has not been acquired.

When the incoming string is queried under the OFF path trace mode, the incoming string is NULL. When an incoming string is queried under the MANUAL or AUTO path trace mode, the incoming string is a copy of the received string or NULL if the string has not been received.

J1 (EXPTRC) is implemented on the DS1/DS1N, DS3E/DS3NE, DS3XM, EC1, DS3/EC1-48, OC3, OC48AS, OC192, MRC-12, and OC192-XFP cards.

TRC and INCTRC are supported on DS1N, DS3NE, DS3/EC1-48, and DS3XM cards.

The following actions will result in error messages:

- If you send this command while BLSRPTHTYPE=PCA, whether there is a BLSR switch or not, the protection channel access (PCA) path J1/C2 data will be returned (if there is PCA circuit on the AID).
- Sending this command with an STS AID that does not have circuits and where no BLSR is switched on the STS will return an error message.
- In LAN to WAN card mode, ALL aid is not supported for RTRV-VC464c.

#### Note

- An optional input parameter, BLSRPTHTYPE, is introduced into this command to provide more options to retrieve the J1/C2 of a particular BLSR path. This field is valid only if the queried AID port has BLSR. The BLSRPTHTYPE defaults to the “non-pca” path type if the BLSR is switched, or defaults to all BLSR path types if there is no BLSR switching.
- An optional output parameter, BLSRPTHSTATE, is introduced into this command output. Each J1/C2 output data of this command will include the BLSR path state information.
- After BLSR switching, the J1/IPPM/C2 data can be retrieved over the protection path. J1 trace string, trace mode, or threshold is not allowed on the protection path.
- HOLDOFFTIMER is not specific to a path. Instead, it is applicable to the path protection selector.
- VT1.5 J2 path trace provisioning is supported on the DS3XM-12 card and the ONS 15454 CE-100T-8 card VT1.5 path using the ED-VT1, RTRV-VT1, and RTRV-PTHTRC-VT1 commands.
- For the selector path on a BLSR, the SWPDIP path attribute is not editable and is always in the ON state.
- SFBER and SDBER are applied for the ONS 15454 when the ONS 15454 has an XC-VXC-10G card.

|                |  |
|----------------|--|
| • STS24C       | Synchronous transport signal/module level 24 concatenated (1244.16 Mbps)   |
| • STS36C       | Synchronous transport signal/module level 36 concatenated (1866.24 Mbps)   |
| • STS48C       | Synchronous transport signal/module level 48 concatenated (2488.32 Mbps)   |
| • STS192C      | Synchronous transport signal/module level 192 concatenated (9953.28 Mbps)  |
| <SFBER>        | (Optional) An STS path signal failure threshold that only applies to path protection. Applicable only to STS-level paths in SONET. Defaults to 1E-4. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.  |
| • 1E-3         | SFBER is 1E-3.   |
| • 1E-4         | SFBER is 1E-4.   |
| • 1E-5         | SFBER is 1E-5.   |
| <SDBER>        | (Optional) An STS path signal degrade threshold that only applies to path protection. Applicable only to STS-level paths in SONET. Defaults 1E-6. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.   |
| • 1E-5         | SDBER is 1E-5.   |
| • 1E-6         | SDBER is 1E-6.   |
| • 1E-7         | SDBER is 1E-7.   |
| • 1E-8         | SDBER is 1E-8.   |
| • 1E-9         | SDBER is 1E-9.   |
| <RVRTV>        | Revertive mode. Only applies to path protection. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| • N            | Does not revert service to original line after restoration.  |
| • Y            | Reverts service to original line after restoration.  |
| <RVTM>         | Revertive time. Only applies to path protection. The parameter type is REVERTIVE_TIME.   |
| • 0.5 to 12.0  | Revertive time is 0.5 to 12.0 minutes.   |
| <SWPDIP>       | (Optional) Switch on PDI-P. Applicable only to STS-level paths in SONET. The parameter type is ON_OFF (disable or enable an attribute).  |
| • N            | Disable an attribute.  |
| • Y            | Enable an attribute.   |
| <HOLDOFFTIMER> | (Optional) Hold off timer. HOLDOFFTIMER is an integer.   |

|                |  |
|----------------|--|
| <EXPTRC>       | (Optional) Expected path trace content. Indicates the expected path trace message (J1) contents. EXPTRC is any 64-character ASCII string, including the terminating CR (carriage return) and LF (line feed). Applicable to STS-level paths in SONET. Defaults to NULL when a path protection path is created. EXPTRC is a string.  |
| <TRC>          | (Optional) The path trace message to be transmitted. The trace byte (J1) continuously transmits a 64-byte, fixed length ASCII string, one byte at a time. A null value defaults to the NE transmitting 62 null characters (hex 00) and CR and LF. A null value defaults to the NE transmitting null characters (Hex 00). Applicable to STS-level paths in SONET. Applicable to VT-level paths for the DS3XM-12 card on the ONS 15454. TRC is a string. |
| <INCTRC>       | (Optional) The incoming path trace message contents. INCTRC is any combination of 64 characters. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). Defaults to null when a path protection path is created. INCTRC is a string.   |
| <TRCMODE>      | (Optional) Path trace mode. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). Defaults to OFF when a path protection path is created. The parameter type is TRCMODE (trace mode).   |
| • AUTO         | Use the previously received path trace string as the expected string (not applicable to MXP_2.5G_10G and TXP_MR_10G cards).  |
| • AUTO-NO-AIS  | Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIM-P detected.   |
| • MAN          | Use the provisioned expected string as the expected string.  |
| • MAN-NO-AIS   | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P detected.   |
| • OFF          | Turn off path trace capability. Nothing will be reported.  |
| <TRCFORMAT>    | (Optional) Trace message size. The parameter type is TRCFORMAT (trace format).   |
| • 1-BYTE       | 1-byte trace message   |
| • 16-BYTE      | 16-byte trace message  |
| • 64-BYTE      | 64-byte trace message  |
| • Y            | Enable an attribute.   |
| <TACC>         | (Optional) Test access. Indicates whether the digroup being provisioned is to be used as a test access digroup. Defaults to N.   |
| <TAPTYPE>      | (Optional) TAP type. The parameter type is TAPTYPE, which is the test access point type  |
| • DUAL         | Dual FAD   |
| • SINGLE       | Single FAD   |
| <UPSRPTHSTATE> | (Optional) Indicates whether a given AID is the working or standby path of a path protection cross-connect. The parameter type is STATUS, which is the status of the unit in the protection pair.  |
| • ACT          | The entity is the active unit in the shelf.  |
| • NA           | Status is unavailable.   |
| • STBY         | The entity is the standby unit in the shelf.   |

|        |   |
|--------|---|
| <C2>   | (Optional) The C2 byte hex code. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). The parameter type is C2_BYTE, which is the C2 byte hex code. |
| • 0X00 | Unequipped  |
| • 0X01 | Equipped Non-Specific payload   |
| • 0X02 | VT-Structured STS-1 synchronous payload envelope (SPE)  |
| • 0X03 | Locked VT Mode  |
| • 0X04 | Asynchronous Mapping for DS3  |
| • 0X12 | Asynchronous Mapping for DS4 North American (NA)  |
| • 0X13 | Mapping for ATM   |
| • 0X14 | Mapping for DQDB  |
| • 0X15 | Asynchronous Mapping for FDDI   |
| • 0X16 | HDLC-Over-SONET Mapping   |
| • 0XE1 | VT-structured STS-1 SPE with 1VTx payload defect  |
| • 0XE2 | VT-structured STS-1 SPE with 2VTx payload defects   |
| • 0XE3 | VT-structured STS-1 SPE with 3VTx payload defects   |
| • 0XE4 | VT-structured STS-1 SPE with 4VTx payload defects   |
| • 0XE5 | VT-structured STS-1 SPE with 5VTx payload defects   |
| • 0XE6 | VT-structured STS-1 SPE with 6VTx payload defects   |
| • 0XE7 | VT-structured STS-1 SPE with 7VTx payload defects   |
| • 0XE8 | VT-structured STS-1 SPE with 8VTx payload defects   |
| • 0XE9 | VT-structured STS-1 SPE with 9VTx payload defects   |
| • 0XEA | VT-structured STS-1 SPE with 10VTx payload defects  |
| • 0XEB | VT-structured STS-1 SPE with 11VTx payload defects  |
| • 0XEC | VT-structured STS-1 SPE with 12VTx payload defects  |
| • 0XED | VT-structured STS-1 SPE with 13VTx payload defects  |
| • 0XEE | VT-structured STS-1 SPE with 14VTx payload defects  |
| • 0XEF | VT-structured STS-1 SPE with 15VTx payload defects  |
| • 0XF0 | VT-structured STS-1 SPE with 16VTx payload defects  |
| • 0XF1 | VT-structured STS-1 SPE with 17VTx payload defects  |
| • 0XF2 | VT-structured STS-1 SPE with 18VTx payload defects  |
| • 0XF3 | VT-structured STS-1 SPE with 19VTx payload defects  |
| • 0XF4 | VT-structured STS-1 SPE with 20VTx payload defects  |
| • 0XF5 | VT-structured STS-1 SPE with 21VTx payload defects  |
| • 0XF6 | VT-structured STS-1 SPE with 22VTx payload defects  |
| • 0XF7 | VT-structured STS-1 SPE with 23VTx payload defects  |
| • 0XF8 | VT-structured STS-1 SPE with 24VTx payload defects  |
| • 0XF9 | VT-structured STS-1 SPE with 25VTx payload defects  |
| • 0XFA | VT-structured STS-1 SPE with 26VTx payload defects  |
| • 0XFB | VT-structured STS-1 SPE with 27VTx payload defects  |
| • 0XFC | VT-structured STS-1 SPE with 28VTx payload defects  |
| • 0XFE | O.181 Test Signal (TSS1 to TSS3) Mapping  |

|                |  |
|----------------|--|
| • 0XFF         | Reserved, however, C2 is 0XFF if an AIS-L is being generated by an optical card or cross-connect downstream.   |
| <BLSRPTHSTATE> | (Optional) The BLSR path state only if the port is on the BLSR. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). The parameter type is BLSR_PTH_STATE, which is the BLSR path state only if the port is on the BLSR. |
| • PCAPTHACT    | Indicates the BLSR is not switched and its PCA path is in the active state.  |
| • PCAPTHSTB    | Indicates the BLSR is switched and its PCA path is in the standby state.   |
| • PROTPTHACT   | Indicates the BLSR is switched and its protection path is in the active state.   |
| • WKGPTHACT    | Indicates the BLSR is not switched and its working path is in the active state.  |
| • WKGPTHSTB    | Indicates the BLSR is switched and its working path is in the standby state.   |
| <PST_PSTQ>     | Administrative state in the PST_PSTQ format. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and PSTQ.   |
| • IS-NR        | In Service and Normal  |
| • OOS-AU       | Out of Service and Autonomous  |
| • OOS-AUMA     | Out of Service and Autonomous Management   |
| • OOS-MA       | Out of Service and Management  |
| <SSTQ>         | (Optional) Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
| • AINS         | Automatic In-Service   |
| • DSBLD        | Disabled   |
| • LPBK         | Loopback   |
| • MEA          | Mismatch of Equipment  |
| • MT           | Maintenance  |
| • OOG          | Out of Group   |
| • SWDL         | Software Download  |
| • UAS          | Unassigned   |
| • UEQ          | Unequipped   |

## 21.10 RTRV-10GIGE

(Cisco ONS 15454) The Retrieve 10GIGE (RTRV-10GIGE) command retrieves the 10 Gbps-specific parameters for a port that has been configured to support the Gigabit Ethernet payload with the ENT-10GIGE command.

### Usage Guidelines

None

|                          |   |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |

The parameter type is SIDE, which is the role the unit is playing in the protection group. | • PROT | The entity is a protection unit in the protection group. | • WORK | The entity is a working unit in the protection group. | <STATUS> | (Optional) A port status in Y-cable protection (ACT or STBY). The parameter type is STATUS, which is the status of the unit in the protection pair. | • ACT | The entity is the active unit in the shelf. | • NA | Status is unavailable. | • STBY | The entity is the standby unit in the shelf. |
| <AID>                    | Access identifier from the “26.17 FACILITY” section on page 26-42.  |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |
| <ROLE>                   | (Optional) The port role in Y-cable protection (WORK or PROT). The parameter type is SIDE, which is the role the unit is playing in the protection group.   |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |
| • PROT                   | The entity is a protection unit in the protection group.  |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |
| • WORK                   | The entity is a working unit in the protection group.   |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |
| <STATUS>                 | (Optional) A port status in Y-cable protection (ACT or STBY). The parameter type is STATUS, which is the status of the unit in the protection pair.   |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |
| • ACT                    | The entity is the active unit in the shelf.   |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |
| • NA                     | Status is unavailable.  |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |
| • STBY                   | The entity is the standby unit in the shelf.  |       |  |        |   |        |  |        |   |          |   |       |   |      |                        |        |  |

|               |   |
|---------------|---|
| <NAME>        | (Optional) Port name. NAME is a string.   |
| <MTU>         |   |
| <ENCAP>       |   |
| <ENCAP>       | (Optional) Frame encapsulation type. The parameter type is ENCAP, which is the frame encapsulation type.  |
| • GFP         | GFP frame mode  |
| • HDLC        | HDLC frame mode   |
| • WIS         |   |
| • CBR         |   |
| • TRP         |   |
| <SOAK>        | (Optional) Locked-AutomaticInService to Unlocked transition soak time as measured in 15-minute intervals.   |
| <SYNCSMSG>    | (Optional) Indicates if the BITS facility supports synchronization status message. Default is on (Y). The parameter type is EXT_RING, which indicates if the ring supports the extended K1/K2/K3 protocol.  |
| • N           | The ring does not support the extended K1/K2/K3 protocol.   |
| • Y           | The ring does support the extended K1/K2/K3 protocol.   |
| <SENDDUS>     | (Optional) The facility sends out a Do Not Use for Synchronization Message. This does not apply to the TXPD-10G card. This applies to an MXPDP-10G card only if the payload is SDH and the card termination mode is as follows: <ul style="list-style-type: none"> <li>• TRANSPARENT: All client ports are available for all timing selections. No trunk ports are available.</li> <li>• LINE: All ports are available for all timing selections.</li> </ul> The parameter type is ON_OFF (disable or enable an attribute). |
| • N           | Disable an attribute.   |
| • Y           | Enable an attribute.  |
| <ADMSSM>      | (Optional) SSM selectable. Only applicable to BITS-IN when SSM is disabled. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SDH.  |
| • DUS_SDH     | Do Not Use For Synchronization  |
| • G811        | ITU-T G.811 Standard  |
| • RES_SDH     | Reserved For Network Synchronization Use  |
| • G812T       | ITU-T G.812T Standard   |
| • STU_SDH     | Synchronized, Traceability Unknown  |
| • G812TL      | ITU-T G.812TL Standard  |
| • SETS        | Synchronous Equipment Timing Source   |
| <PROVIDESYNC> | (Optional) Indicates whether the facility provides synchronization. Defaults to N.  |
| • Y           | Yes   |
| • N           | No  |

|           |   |
|-----------|---|
| <MACADDR> | (Optional) The MAC address for the 10-Gigabit Ethernet payload. MACADDR is a string.    |
| <LBCL>    | (Optional) Displays the current value of the laser current. LBCL is a float.            |
| <OPT>     | (Optional) Displays the current value of the transmitted optical power. OPT is a float. |
| <OPR>     | (Optional) Displays the current value of the received optical power. OPR is a float.    |
| <FREQ>    | (Optional) Parameter type is OPTICAL_WLEN (optical wavelength).                         |
| • 1310    | Wavelength 1310   |
| • 1470    | Wavelength 1470   |
| • 1490    | Wavelength 1490   |
| • 1510    | Wavelength 1510   |
| • 1529.55 | Wavelength 1529.55  |
| • 1529.94 | Wavelength 1529.94  |
| • 1530    | Wavelength 1530   |
| • 1530.33 | Wavelength 1530.33  |
| • 1530.73 | Wavelength 1530.73  |
| • 1531.12 | Wavelength 1531.12  |
| • 1531.51 | Wavelength 1531.51  |
| • 1531.90 | Wavelength 1531.90  |
| • 1532.29 | Wavelength 1532.29  |
| • 1532.68 | Wavelength 1532.68  |
| • 1533.07 | Wavelength 1533.07  |
| • 1533.47 | Wavelength 1533.47  |
| • 1533.86 | Wavelength 1533.86  |
| • 1534.25 | Wavelength 1534.25  |
| • 1534.64 | Wavelength 1534.64  |
| • 1535.04 | Wavelength 1535.04  |
| • 1535.43 | Wavelength 1535.43  |
| • 1535.82 | Wavelength 1535.82  |
| • 1536.22 | Wavelength 1536.22  |
| • 1536.61 | Wavelength 1536.61  |
| • 1537    | Wavelength 1537   |
| • 1537.40 | Wavelength 1537.40  |
| • 1537.79 | Wavelength 1537.79  |
| • 1538.19 | Wavelength 1538.19  |
| • 1538.58 | Wavelength 1538.58  |
| • 1538.98 | Wavelength 1538.98  |
| • 1539.37 | Wavelength 1539.37  |

| • TEN-GE-SR | 10 GE short range  |
| • VX        | Reach VX   |
| • ZX        | Reach ZX   |
| <PST_PSTQ>  | Administrative state in the PST_PSTQ format. The parameter type is PST_PSTQ, which is the service state of the entity described by the SST and PSTQ. |
| • IS-NR     | In Service and Normal  |
| • OOS-AU    | Out of Service and Autonomous  |
| • OOS-AUMA  | Out of Service and Autonomous Management   |
| • OOS-MA    | Out of Service and Management  |
| <SSTQ>      | (Optional) Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.               |
| • AINS      | Automatic In-Service   |
| • DSBLD     | Disabled   |
| • LPBK      | Loopback   |
| • MEA       | Mismatch of Equipment  |
| • MT        | Maintenance  |
| • OOG       | Out of Group   |
| • SWDL      | Software Download  |
| • UAS       | Unassigned   |
| • UEQ       | Unequipped   |

## 21.11 RTRV-ALM-<MOD2ALM>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Alarm for (10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 4GFC, 4GFICON, 5GIB, 8GFC, CHGRP, DS1, DS31, DVBASI, E1, E100, E1000, E3, E4, EC1, ETH, FSTE, G1000, GFPOS, GIGE, HDLC, ILK, ISCCOMPAT, ISC1, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, MSISC, OC12, OC192, OC3, OC48, OC768, OCH, ODU0, OMS, OTS, OTL, OTU2, OTU3, OTU4, POS, RPRIF, STM1, STM4, STM16, STM64, STM1E, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, UDCDCC, UDCF, VC3, VC4, VC4-2c, VC4-3c, VC4-4c, VC4-16c, VC4-64c, VC11, VC12, VC3, VCG, VT1, VT2, WLEN, 3GVIDEO, HSDSI, ISC3STP1G, ISC3STP2G, OTU1, or SDSDI (RTRV-ALM-<MOD2ALM>) command retrieves and sends the current status of alarm conditions. The alarm condition or severity to be retrieved can be specified by using the input parameters as a filter.

### Usage Guidelines

The command supports the modifier 3GVIDEO, OTU1, SDSDI, HSDSI, ISC3STP1G, and ISC3STP2G.

- VT1-n-n-n replaces PS\_VC12-n-n-n for the VC12 alarm AID.
- The [<AIDTYPE>] shows VC3 for VC alarms.
- The RTRV-ALM-OTL command retrieves the alarms raised on sublanes of 100G-LC-C and CFP-LC cards.
- RTRV-ALM-ODU0 command retrieves the alarms raised on the ODU0's on AR-XPE card only.

**Category** Fault

**Security** Retrieve

**Input Format** RTRV-ALM-<MOD2ALM>:[<TID>]:<AID>:<CTAG>::[<NTFCNCDE>],[<CONDTYPE>],[<SRVEFF>],[<LOCN>],[<DIRN>][,];

**Input Example** RTRV-ALM-OTU1::VFAC-5-3-1:1::MN,,NSA,NEND,RCV;

|                         |            |   |
|-------------------------|------------|---|
| <b>Input Parameters</b> | <AID>      | Access identifier from the “26.1 ALL” section on page 26-1. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier.   |
|                         | <NTFCNCDE> | Two-letter notification code. A null value is equivalent to ALL. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.  |
|                         | • CL       | The condition causing the alarm has cleared.  |
|                         | • CR       | A critical alarm.   |
|                         | • MJ       | A major alarm.  |
|                         | • MN       | A minor alarm.  |
|                         | • NA       | The condition is not alarmed.   |
|                         | • NR       | The alarm is not reported.  |
|                         | <CONDTYPE> | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
|                         | <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service. A null value is equivalent to ALL.  |
|                         | • NSA      | The condition is non-service affecting.   |
|                         | • SA       | The condition is service affecting.   |
|                         | <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.  |
|                         | • FEND     | Action occurs on the far end of the facility.   |
|                         | • NEND     | Action occurs on the near end of the facility.  |
|                         | <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.  |
|                         | • BTH      | Both transmit and receive directions  |
|                         | • RCV      | Receive direction only  |

**Output Parameters**

|           |   |
|-----------|---|
| <AID>     | Access identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> .      |
| <AIDTYPE> | (Optional) Type of access identifier. The parameter type is MOD2ALM (alarm type). |
| • 100GIGE | 100 Gigabit Ethernet.   |
| • 1GFC    | 1-Gigabit Fibre Channel payload   |
| • 1GFICON | 1-Gigabit fiber connectivity payload  |
| • 1GISC3  | 1-Gigabit ISC3 compatible   |
| • 2GFC    | 2-Gigabit Fibre Channel payload   |
| • 2GFICON | 2-Gigabit fiber connectivity payload  |
| • 3GVIDEO | 3G-SDI video payload.   |
| • 4GFC    | 4-Gigabit Fibre Channel payload   |
| • 4GFICON | 4-Gigabit fiber connectivity payload  |
| • 40GIGE  | 40-Gigabit Ethernet   |
| • 5GIB    | 5Gbps InfiniBand (IB_5G) payload  |
| • 8GFC    | 8-Gigabit Fibre Channel payload   |
| • CLNT    | Client facility for MXP/TXP cards   |
| • CHGRP   | Channel group   |
| • CPS     | CPS modifier signifies WSON control plane circuits.                               |
| • DS1     | DS1 alarm   |
| • DS3I    | DS3I alarm  |
| • DVBASI  | Digital Video Broadband Asynchronous Serial Interface (DVBASI) payload            |
| • E100    | E100 alarm  |
| • E1000   | E1000 alarm   |
| • EC1     | EC1 alarm   |
| • FSTE    | Fast Ethernet Port alarm  |
| • G1000   | G1000 alarm   |

|              |  |
|--------------|--|
| • GFPOS      | Generic framing protocol over packet over SONET virtual port alarm |
| • GIGE       | Gigabit Ethernet port alarm  |
| • HDSDI      | 1.5G HD-SDI video payload.   |
| • ISC1       | InterSystem Channel, a protocol defined by IBM (ISC1) payload      |
| • ISC3PEER1G | 1-Gigabit ISC3 Peer  |
| • ISC3PEER2G | 2-Gigabit ISC3 Peer  |
| • ISC3PEER2R | 1-Gigabit or 2-Gigabit ISC3 peer used in transparent (2R) mode     |
| • ISC3STP1G  | ISC-3 STP 1G video payload.  |
| • ISC3STP2G  | ISC-3 STP 2G video payload.  |
| • ISCCOMPAT  | 1-Gigabit ISC1, ISC2, and ISC3 compatibility                       |
| • ML1000-2   | (ONS 15454) ML-Series two port Gigabit Ethernet card               |
| • MSISC      | MSISC  |
| • OC3        | OC3 alarm  |
| • OC12       | OC12 alarm   |
| • OC48       | OC48 alarm   |
| • OC192      | OC192 alarm  |
| • OC768      | OC768 alarm  |
| • OCH        | Optical channel  |
| • ODU0       | Optical Data Unit Level 0  |
| • OCHTERM    | OCH termination  |
| • ODU0       | Optical Data Unit Level 0  |

| • STS36C     | STS36c alarm   |
| • STS48C     | STS48c alarm   |
| • STS192C    | STS192c alarm  |
| • T1         | T1 alarm   |
| • T3         | T3 alarm   |

|            |   |
|------------|---|
| • UDCDCC   | UDC-DCC alarm   |
| • UDCF     | UCD-F alarm   |
| • VCG      | Virtual concatenation group alarm   |
| • VT1      | VT1 alarm   |
| • VT2      | VT2 alarm   |
| • WLEN     | Wavelength path provisioning  |
| <NTFCNCDE> | Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
| • CL       | The condition causing the alarm has cleared.  |
| • CR       | A critical alarm.   |
| • MJ       | A major alarm.  |
| • MN       | A minor alarm.  |
| • NA       | The condition is not alarmed.   |
| • NR       | The alarm is not reported.  |
| <CONDTYPE> | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.   |
| • NSA      | The condition is non-service affecting.   |
| • SA       | The condition is service affecting.   |
| <OCRDAT>   | (Optional) Date when the specific event or violation occurred, MM-DD.   |
| <OCRM>     | (Optional) Time when the specific event or violation occurred, HH-MM-SS.  |
| <LOCN>     | Location associated with a particular command in reference to the entity identified by the AID. A null value defaults to NEND. The parameter type is LOCATION, which is the location where the action is to take place.   |
| • FEND     | Action occurs on the far end of the facility.   |
| • NEND     | Action occurs on the near end of the facility.  |
| <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.  |
| • BTH      | Both transmit and receive directions  |
| • RCV      | Receive direction only  |
| <DESC>     | (Optional) A condition description. DESC is a string.   |

## 21.12 RTRV-ALMTYPE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Alarm Type command retrieves all system and user-defined alarm types.

**Usage Guidelines** None

**Category** System

**Security** Retrieve

**Input Format** RTRV-ALMTYPE:[<TID>]::<CTAG>;

**Input Example** RTRV-ALMTYPE:CISCONODE::1;

**Input Parameters** None.

**Output Format**  
 SID DATE TIME  
 M CTAG COMPLD  
 "<TYPEOFALM>,<ALMTYPE>"  
 ;

**Output Examples**  
 CISCONODE 2007-06-26 14:30:00  
 M 1 COMPLD  
 "SYSTEMDEFINED,AIRCOMPR"  
 ;

|                          |                 |   |
|--------------------------|-----------------|---|
| <b>Output Parameters</b> | <TYPEOFALM>     | Specifies the type of alarm, that is, system or user-defined.                                   |
|                          | • SYSTEMDEFINED | Specifies a system-defined alarm type.  |
|                          | • USERDEFINED   | Specifies a user-defined alarm type.  |
|                          | <ALMTYPE>       | Specifies user-defined alarm types associated with virtual wires in environmental alarm inputs. |

## 21.13 RTRV-ALM-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Alarm All (RTRV-ALM-ALL) command retrieves and sends the current status of all active alarm conditions. The alarm condition or severity to be retrieved is specified using the input parameters as a filter.

### Usage Guidelines

According to Telcordia GR-833, the RTRV-ALM-ALL command only reports EQPT, COM, T1, T3, OCN, EC1, STSN, VT1, DS1, E100, E1000, G1000, ML-Series, TXP, and MXP alarms. To retrieve all the NE alarms, issue all of the following commands:

```
RTRV-ALM-ALL
RTRV-ALM-BITS
RTRV-ALM-ENV
RTRV-ALM-SYNCN
```

### Category

Fault

### Security

Retrieve

### Input Format

```
RTRV-ALM-ALL:[<TID>]:[<AID>]:<CTAG>::[<NTFCNCDE>],
[<CONDITION>],[<SRVEFF>],[<LOCN>],[<DIRN>],[,];
```

### Input Example

```
RTRV-ALM-ALL:COTATI:ALL:229::MN,PWRRESTART,NSA,NEND,RCV;
```

### Input Parameters

|  |  |
|--|--|
| <AID>  | Access identifier from the “26.1 ALL” section on page 26-1. A null value is equivalent to ALL. AID is a string.  |
| <NTFCNCDE>   | Two-letter notification code. A null value is equivalent to ALL. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
| <ul style="list-style-type: none"> <li>• CR</li> <li>• MJ</li> <li>• MN</li> </ul> | <p>A critical alarm.</p> <p>A major alarm.</p> <p>A minor alarm.</p>   |
| <CONDITION>  | The type of alarm condition. A null value is equivalent to ALL. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service. A null value is equivalent to ALL.   |
| <ul style="list-style-type: none"> <li>• NSA</li> </ul>                            | The condition is non-service affecting.  |

|        |  |
|--------|--|
| • SA   | The condition is service affecting.  |
| <LOCN> | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place. |
| • FEND | Action occurs on the far end of the facility.  |
| • NEND | Action occurs on the near end of the facility.   |
| <DIRN> | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH  | Both transmit and receive directions   |
| • RCV  | Receive direction only   |

**Output Format**

| • POS        | Packet over SONET (POS) port alarm                              |
| • REP        | Resilient Ethernet Protocol                                     |
| • SDSDI      | 270M SDI video payload  |
| • STS1       | STS1 alarm  |
| • STS3C      | STS3c alarm   |
| • STS6C      | STS6c alarm   |

|            |   |
|------------|---|
| • STS9C    | STS9c alarm   |
| • STS18C   | STS18c alarm  |
| • STS12C   | STS12c alarm  |
| • STS24C   | STS24c alarm  |
| • STS36C   | STS36c alarm  |
| • STS48C   | STS48c alarm  |
| • STS192C  | STS192c alarm   |
| • SYNCN    | SYNCN alarm   |
| • T1       | T1 alarm  |
| • T3       | T3 alarm  |
| • TCC      | TCC alarm   |
| • VT1      | VT1 alarm   |
| • VT2      | VT2 alarm   |
| <NTFCNCDE> | Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
| • CL       | The condition causing the alarm has cleared.  |
| • CR       | A critical alarm.   |
| • MJ       | A major alarm.  |
| • MN       | A minor alarm.  |
| • NA       | The condition is not alarmed.   |
| • NR       | The alarm is not reported.  |
| <CONDTYPE> | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.   |
| • NSA      | The condition is non-service affecting.   |
| • SA       | The condition is service affecting.   |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.  |
| • FEND     | Action occurs on the far end of the facility.   |
| • NEND     | Action occurs on the near end of the facility.  |
| <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.  |
| • BTH      | Both transmit and receive directions  |
| • RCV      | Receive direction only  |

|          |  |
|----------|--|
| <OCRDAT> | (Optional) Date when the specific event or violation occurred, MM-DD.  |
| <OCRTM>  | (Optional) Time when the specific event or violation occurred, HH-MM-SS.   |
| <DESC>   | (Optional) A condition description. DESC is a string.  |
| <AIDDET> | (Optional) AIDDET uses the same addressing rules as the AID, but specifies AID type and additional details about the entity being managed. The supplementary equipment identification. |

## 21.14 RTRV-ALM-BITS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Alarm Building Integrated Timing Supply (RTRV-ALM-BITS) command retrieves and sends the current status of alarm conditions associated with the BITS facility. The alarm condition or severity retrieved is specified using the input parameters as a filter.

**Usage Guidelines** None

**Category** Synchronization

**Security** Retrieve

**Input Format** RTRV-ALM-BITS:[<TID>]:<AID>:<CTAG>:[<NTFCNCDE>],[<CONDTYPE>],[<SRVEFF>],[<LOCN>],[<DIRN>];

**Input Example** RTRV-ALM-BITS:ELVERANO:BITS-1:228::CR,LOS,SA;

|                         |            |  |
|-------------------------|------------|--|
| <b>Input Parameters</b> | <AID>      | Access identifier from the <a href="#">“26.6 BITS”</a> section on page 26-22.  |
|                         | <NTFCNCDE> | Two-letter notification code. A null value is equivalent to ALL. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message. |
|                         | • CL       | The condition causing the alarm has cleared.   |
|                         | • CR       | A critical alarm.  |
|                         | • MJ       | A major alarm.   |
|                         | • MN       | A minor alarm.   |
|                         | • NA       | The condition is not alarmed.  |
|                         | • NR       | The alarm is not reported.   |

|            |  |
|------------|--|
| <CONDTYPE> | The condition type for an alarm or reported event. A null value is equivalent to ALL. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service. A null value is equivalent to ALL.   |
| • NSA      | The condition is non-service affecting.  |
| • SA       | The condition is service affecting.  |

| • SDSDI      | 270M SDI video payload   |

|             |   |
|-------------|---|
| • STS1      | STS1 alarm  |
| • STS3C     | STS3c alarm   |
| • STS6C     | STS6c alarm   |
| • STS9C     | STS9c alarm   |
| • STS18C    | STS18c alarm  |
| • STS12C    | STS12c alarm  |
| • STS24C    | STS24c alarm  |
| • STS36C    | STS36c alarm  |
| • STS48C    | STS48c alarm  |
| • STS192C   | STS192c alarm   |
| • SYNCN     | SYNCN alarm   |
| • T1        | T1 alarm  |
| • T3        | T3 alarm  |
| • TCC       | TCC alarm   |
| • VT1       | VT1 alarm   |
| • VT2       | VT2 alarm   |
| <NTFCNCDE>  | Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
| • CL        | The condition causing the alarm has cleared.  |
| • CR        | A critical alarm.   |
| • MJ        | A major alarm.  |
| • MN        | A minor alarm.  |
| • NA        | The condition is not alarmed.   |
| • NR        | The alarm is not reported.  |
| <CONDTYPE>  | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>    | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.   |
| • NSA       | The condition is non-service affecting.   |
| • SA        | The condition is service affecting.   |
| <LOCATION>  | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.  |
| • FEND      | Action occurs on the far end of the facility.   |
| • NEND      | Action occurs on the near end of the facility.  |
| <DIRECTION> | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.  |

|        |   |
|--------|---|
| • BTH  | Both transmit and receive directions                  |
| • RCV  | Receive direction only                                |
| <DESC> | (Optional) A condition description. DESC is a string. |

## 21.15 RTRV-ALM-CPS

(Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6) The Retrieve Alarm Control Plane Service (RTRV-ALM-CPS) command retrieves the alarm reported on the control plane service.

### Usage Guidelines

- Specify ALL AID to retrieve the alarms.
- Specify the notification code, condition type, service effecting, location, and direction parameters to retrieve the particular type of alarm.
- The command is applicable only to WSON alarms.
- <INDEX> got from the response is used as the input parameter in DLT-ALM-CPS.

### Category

DWDM

### Security

Retrieve

### Input Format

RTRV-ALM-CPS:[<TID>]:<AID>:<CTAG>:[<NTFCNCDE>],[<CONDTYPE>],[<SRVEFF>],[<LOCN>],[<DIRN>][,];

### Input Example

RTRV-ALM-CPS::ALL:1;

| Parameter  | Description   |
|------------|---|
| <AID>      | Only ALL AID is supported.  |
| <NTFCNCDE> | (Optional) Two-letter notification code. A null value is equivalent to ALL. The parameter type is NOTIF_CODE, which is a two-character notification code associated with an autonomous message. |
| • CL       | The condition causing the alarm has cleared   |
| • CR       | A critical alarm.   |
| • MJ       | A major alarm.  |
| • MN       | A minor alarm.  |
| • NA       | The condition is not alarmed  |
| • NR       | The alarm is not reported   |

| Parameter  | Description  |
|------------|--|
| <CONDTYPE> | (Optional) The condition type for an alarm or reported event. A null value is equivalent to ALL. The parameter type is CONDITION, which is any problem detected on an Cisco ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Table 27-1</a> for a list of conditions |
| <SRVEFF>   | (Optional) The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service. A null value is equivalent to ALL.  |
| • NSA      | The condition is non-service affecting.  |
| • SA       | The condition is service affecting.  |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
| • FEND     | Action occurs on the far end of the facility.  |
| • NEND     | Action occurs on the near end of the facility.   |
| <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH      | Both transmit and receive directions   |
| • RCV      | Receive direction only   |

## 21.16 RTRV-ALM-ENV

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Alarm Environment (RTRV-ALM-ENV) command retrieves the environmental alarms.

### Usage Guidelines

None

### Category

Environment

### Security

Retrieve

### Input Format

RTRV-ALM-ENV:[<TID>]:<AID>:<CTAG>::[<NTFCNCDE>],[<ALMTYPE>];

**Input Example**

RTRV-ALM-ENV:CISCO:ENV-IN-1:123::MJ,OPENDR;

**Input Parameters**

|             |   |
|-------------|---|
| <AID>       | Access identifier from the “26.14 ENV” section on page 26-39.<br><b>Note</b> For RTRV-ALM-ENV, only ENV-IN-{1-4} is a valid AID for ONS 15454. ENV-OUT-{1,6} is not a valid AID for RTRV-ALM-ENV. |
| <NTFCNCDE>  | Two-letter notification code. A null value is equivalent to ALL. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.            |
| • CL        | The condition causing the alarm has cleared.  |
| • CR        | A critical alarm.   |
| • MJ        | A major alarm.  |
| • MN        | A minor alarm.  |
| • NA        | The condition is not alarmed.   |
| • NR        | The alarm is not reported.  |
| <ALMTYPE>   | The alarm type for the environmental alarm. A null value is equivalent to ALL. The parameter type is ENV_ALM, which is the environmental alarm types.   |
| • AIRCOMPR  | Air compressor failure  |
| • AIRCOND   | Air conditioning failure  |
| • AIRDRYR   | Air dryer failure   |
| • BATDSCHRG | Battery discharging   |
| • BATTERY   | Battery failure   |
| • CLFAN     | Cooling fan failure   |
| • CPMAJOR   | Centralized power major failure   |
| • CPMINOR   | Centralized power minor failure   |
| • ENGINE    | Engine failure  |
| • ENGOPRG   | Engine operating  |
| • ENGTRANS  | Standby engine transfer   |
| • EXPLGS    | Explosive gas   |
| • FIRDETR   | Fire detector failure   |
| • FIRE      | Fire  |
| • FLOOD     | Flood   |
| • FUELLEAK  | Fuel leak   |
| • FUSE      | Fuse failure  |
| • GASALARM  | Explosive gas, toxic gas, ventilation fail, or gas monitor fail   |
| • HATCH     | Controlled Environment Vault (CEV) hatch fail   |
| • GEN       | Generator failure   |
| • HIAIR     | High airflow  |
| • HIHUM     | High humidity   |
| • HITEMP    | High temperature  |
| • HIWTR     | High water  |

|              |   |
|--------------|---|
| • INTRUDER   | Intrusion   |

## 21.17 RTRV-ALM-EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Alarm Equipment (RTRV-ALM-EQPT) command retrieves and sends the current status of alarm conditions associated with the equipment units. The alarm condition or severity to be retrieved is specified using the input parameters as a filter.

**Usage Guidelines** None

**Category** Equipment

**Security** Retrieve

**Input Format** RTRV-ALM-EQPT:[<TID>]:<AID>:<CTAG>::[<NTFCNCDE>],[<CONDTYPE>],[<SRVEFF>],[<LOCN>],[<DIRN>];

**Input Example** RTRV-ALM-EQPT:TWOROCK:SLOT-7:227::MJ,HITEMP,NSA;

|                         |            |  |
|-------------------------|------------|--|
| <b>Input Parameters</b> | <AID>      | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.   |
|                         | <NTFCNCDE> | Two-letter notification code. A null value is equivalent to ALL. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
|                         | • CL       | The condition causing the alarm has cleared.   |
|                         | • CR       | A critical alarm.  |
|                         | • MJ       | A major alarm.   |
|                         | • MN       | A minor alarm.   |
|                         | • NA       | The condition is not alarmed.  |
|                         | • NR       | The alarm is not reported.   |
|                         | <CONDTYPE> | The condition type for an alarm or a reported event. A null value is equivalent to ALL. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |

| • VT2      | VT2 alarm   |
| <NTFCNCDE> | Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
| • CL       | The condition causing the alarm has cleared.  |
| • CR       | A critical alarm.   |
| • MJ       | A major alarm.  |
| • MN       | A minor alarm.  |
| • NA       | The condition is not alarmed.   |
| • NR       | The alarm is not reported.  |
| <CONDTYPE> | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.   |
| • NSA      | The condition is non-service affecting.   |
| • SA       | The condition is service affecting.   |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.  |
| • FEND     | Action occurs on the far end of the facility.   |
| • NEND     | Action occurs on the near end of the facility.  |
| <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.  |
| • BTH      | Both transmit and receive directions  |

|          |  |
|----------|--|
| • RCV    | Receive direction only   |
| <OCRDAT> | (Optional) Date when the specific event or violation occurred, MM-DD.    |
| <OCR TM> | (Optional) Time when the specific event or violation occurred, HH-MM-SS. |
| <DESC>   | (Optional) A condition description. DESC is a string.                    |

## 21.18 RTRV-ALM-SYNCN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Alarm Synchronization (RTRV-ALM-SYNCN) command retrieves and sends the current status of alarm conditions associated with a synchronization facility. The alarm condition or severity to be retrieved can be specified by using the input parameters as a filter.

**Usage Guidelines** None

**Category** Synchronization

**Security** Retrieve

**Input Format** RTRV-ALM-SYNCN:[<TID>]:<AID>:<CTAG>::[<NTFCNCDE>],[<CONDTYPE>],[<SRVEFF>],[<LOCN>],[<DIRN>];

**Input Example** RTRV-ALM-SYNCN:FULTON:SYNC-NE:226::CR,FAILTOSW,SA;

|                         |            |  |

## 21.19 RTRV-ALMTH-<MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Alarm Threshold for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 5GIB, 8GFC, CLNT, D1VIDEO, DS1, DV6000, DVBASI, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, FSTE, G1000, GFPOS, GIGE, HDTV, ISC1, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU3, OTU4, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS6C, STS9C, T1, T3, VC12, VC3, VT1, VT2, 3GVIDEO, SDSDI, HDSDI, AUTO, OTU1, OTL, ISC3STP1G, or ISC3STP2G (RTRV-ALMTH-<MOD2>) command retrieves the alarm threshold values. The only applicable MOD2 values are OC3, OC12, OC48, OC192, OCH, OMS, and OTS.

### Usage Guidelines

The command supports 3GVIDEO, SDSDI, HDSDI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G modifiers.

- OTL is the new modifier added for the sublanes of 100G-LC-C and CFP-LC cards.
- RTRV-ALMTH-OTL retrieves optical thresholds only on Sublanes of 100G-LC-C card. RTRV-ALMTH-OTL with single montype is denied for sublanes of CFP-LC card.
- RTRV-ALMTH-<MOD2> on 100G-LC-C card is denied as the optical thresholds are retrieved on sublanes of 100G-LC-C.
- RTRV-ALMTH-<100GIGE/40GIGE/OTU4/OTU3> on CFP-LC card retrieves optical thresholds.
- RTRV-ALMTH-<MOD2> does not retrieve any optical thresholds on virtual ports as they are retrieved by CFP ports of CFP-LC.
- RTRV-ALMTH-OCH should retrieve optical thresholds for non OTU Payloads on 100G-LC-C, 10x10G-LC, and CFP-LC cards. For OTU payloads RTRV-ALMTH-<MOD2> retrieves optical thresholds.

| • VT2        | VT2 path   |
| <CONDTYPE>   | Condition type for an alarm or a reported event. The parameter type is ALM_THR, which is the alarm threshold list for MXP_2.5G_10G, TXP_MR_10G, OSCM, OSC-CSM, OPT-PRE, OPT-BST, 4MD-xx.x, 32MUX-O, 32DMX-O, AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x, AD-1B-xx.x, and AD-4B-xx.x cards. |
| • BATV-EHIGH | Battery Voltage—Extremely High   |
| • BATV-ELow  | Battery Voltage—Extremely Low  |
| • BATV-HIGH  | Battery Voltage—High   |
| • BATV-LOW   | Battery Voltage—Low  |
| • CD-LOW     | Low Threshold value for Chromatic Dispersion. Measured value -70000dBm to +70000dBm.   |
| • CD-HIGH    | High Threshold value for Chromatic Dispersion. Measured value -70000dBm to +70000dBm.  |
| • GAIN-HDEG  | Gain not reached—High Degrade Threshold  |
| • GAIN-HFAIL | Gain not reached—High Failure Threshold  |
| • GAIN-LDEG  | Gain not reached—Low Degrade Threshold   |
| • GAIN-LFAIL | Gain not reached—Low Failure Threshold   |
| • LBCL-HIGH  | Laser Bias Current in microA as one tenth of a percent. High Warning Threshold, Low Warning Threshold. Measured value (0.0 percent, 100.0 percent).  |
| • OPR-HIGH   | Receive power in one tenth of a microwatt. Measured value (-0.0 dBm, +30.0 dBm).   |

|              |  |
|--------------|--|
| • OPR-LOW    | Receive power in one tenth of a microwatt. Measured value (–0.0 dBm, +30.0 dBm).         |
| • OPT-HIGH   | Transmit power in one tenth of a microwatt. Measured value (–0.0 dBm, +30.0 dBm).        |
| • OPT-LOW    | Transmit power in one tenth of a microwatt. Measured value (–0.0 dBm, +30.0 dBm).        |
| • OPWR-HDEG  | Optical Power—High Degrade Threshold   |
| • OPWR-HFAIL | Optical Power—High Failure Threshold   |
| • OPWR-LDEG  | Optical Power—Low Degrade Threshold  |
| • OPWR-LFAIL | Optical Power—Low Failure Threshold  |
| • OSNR-LOW   | Low Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.  |
| • OSNR-HIGH  | High Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm. |
| • PMD-LOW    | Low Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm.  |
| • PMD-HIGH   | High Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm. |
| • VOA-HDEG   | VOA Attenuation—High Degrade Threshold   |
| • VOA-HFAIL  | VOA Attenuation—High Failure Threshold   |
| • VOA-LDEG   | VOA Attenuation—Low Degrade Threshold  |
| • VOA-LFAIL  | VOA Attenuation—Low Failure Threshold  |
| <THLEVEL>    | Threshold level. THLEVEL is a float.   |

## 21.20 RTRV-ALMTH-EQPT

(Cisco ONS 15454) The Retrieve Alarm Threshold Equipment (RTRV-ALMTH-EQPT) command retrieves the alarm thresholds for the power level monitoring on an NE.

**Usage Guidelines** None

**Category** Equipment

**Security** Retrieve

**Input Format** RTRV-ALMTH-EQPT:[<TID>]:[<AID>]:<CTAG>::[<CONDTYPE>][,,:];

**Input Example** RTRV-ALMTH-EQPT::1::BATV-HIGH;  
RTRV-ALMTH-EQPT::SHELF-2:1::BATV-HIGH;

## Input Parameters

|              |   |
|--------------|---|
| <AID>        | The node or shelf access identifier from the “ <a href="#">26.26 SHELF</a> ” section on page 26-55. If omitted it addresses the node or first shelf of the node.  |
| <CONDTYPE>   | Must not be null. The parameter type is ALM_THR, which is the alarm threshold list for MXP_2.5G_10G, TXP_MR_10G, OSCM, OSC-CSM, OPT-PRE, OPT-BST, 4MD-xx.x, 32MUX-O, 32DMX-O, AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x, AD-1B-xx.x, and AD-4B-xx.x cards. |
| • BATV-EHIGH | Battery Voltage—Extremely High  |
| • BATV-ELow  | Battery Voltage—Extremely Low   |
| • BATV-HIGH  | Battery Voltage—High  |
| • BATV-LOW   | Battery Voltage—Low   |
| • CD-LOW     | Low Threshold value for Chromatic Dispersion. Measured value -70000dBm to +70000dBm.  |
| • CD-HIGH    | High Threshold value for Chromatic Dispersion. Measured value -70000dBm to +70000dBm.   |
| • GAIN-HDEG  | Gain not reached—High Degrade Threshold   |
| • GAIN-HFAIL | Gain not reached—High Failure Threshold   |
| • GAIN-LDEG  | Gain not reached—Low Degrade Threshold  |
| • GAIN-LFAIL | Gain not reached—Low Failure Threshold  |
| • LBCL-HIGH  | Laser Bias Current in microA as one tenth of a percent. High Warning Threshold, Low Warning Threshold Measured value (0.0 percent, 100.0 percent)   |
| • OPR-HIGH   | Receive power in one tenth of a microwatt. Measured value (-0.0 dBm, +30.0 dBm).  |
| • OPR-LOW    | Receive power in one tenth of a microwatt. Measured value (-0.0 dBm, +30.0 dBm).  |
| • OPT-HIGH   | Transmit power in one tenth of a microwatt. Measured value (-0.0 dBm, +30.0 dBm).   |
| • OPT-LOW    | Transmit power in one tenth of a microwatt. Measured value (-0.0 dBm, +30.0 dBm).   |
| • OPWR-HDEG  | Optical Power—High Degrade Threshold  |
| • OPWR-HFAIL | Optical Power—High Failure Threshold  |
| • OPWR-LDEG  | Optical Power—Low Degrade Threshold   |
| • OPWR-LFAIL | Optical Power—Low Failure Threshold   |
| • OSNR-LOW   | Low Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.   |
| • OSNR-HIGH  | High Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.  |
| • PMD-LOW    | Low Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm.   |
| • PMD-HIGH   | High Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm.  |
| • VOA-HDEG   | VOA Attenuation—High Degrade Threshold  |
| • VOA-HFAIL  | VOA Attenuation—High Failure Threshold  |

|             |                                       |
|-------------|---------------------------------------|
| • VOA-LDEG  | VOA Attenuation—Low Degrade Threshold |
| • VOA-LFAIL | VOA Attenuation—Low Failure Threshold |

|              |   |
|--------------|---|
| • LBCL-HIGH  | Laser Bias Current in microA as one tenth of a percent. High Warning Threshold, Low Warning Threshold. Measured value (0.0 percent, 100.0 percent). |
| • OPR-HIGH   | Receive power in one tenth of a microwatt. Measured value (–0.0 dBm, +30.0 dBm).  |
| • OPR-LOW    | Receive power in one tenth of a microwatt. Measured value (–0.0 dBm, +30.0 dBm).  |
| • OPT-HIGH   | Transmit power in one tenth of a microwatt. Measured value (–0.0 dBm, +30.0 dBm).   |
| • OPT-LOW    | Transmit power in one tenth of a microwatt. Measured value (–0.0 dBm, +30.0 dBm).   |
| • OPWR-HDEG  | Optical Power—High Degrade Threshold  |
| • OPWR-HFAIL | Optical Power—High Failure Threshold  |
| • OPWR-LDEG  | Optical Power—Low Degrade Threshold   |
| • OPWR-LFAIL | Optical Power—Low Failure Threshold   |
| • OSNR-LOW   | Low Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.   |
| • OSNR-HIGH  | High Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.  |
| • PMD-LOW    | Low Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm.   |
| • PMD-HIGH   | High Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm.  |
| • VOA-HDEG   | VOA Attenuation—High Degrade Threshold  |
| • VOA-HFAIL  | VOA Attenuation—High Failure Threshold  |
| • VOA-LDEG   | VOA Attenuation—Low Degrade Threshold   |
| • VOA-LFAIL  | VOA Attenuation—Low Failure Threshold   |
| <DNFIELD>    | DNFIELD is a float.   |

## 21.21 RTRV-ALS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Automatic Laser Shutoff (RTRV-ALS) command retrieves the ALS attributes of an OC-N facility and all the facilities that support the ALS feature. This command is used to retrieve the ALS parameter of the OC48 and OC192 ports on the MXP\_2.5G\_10E, TXP\_MR\_10E, TXP\_MR\_2.5G, TXPP\_MR\_2.5G, MXP\_2.5G\_10G, and TXP\_MR\_10G cards.

### Usage Guidelines

RTRV-ALS on 10x10G-LC, 100G-LC-C, and CFP-LC cards retrieves ALS attributes on the OCH interface for non-OTU payloads and on payloads interfaces for OTU payloads.

### Category

Ports

**Security** Retrieve

|---------------|--|
| • STS12C      | STS12c path  |
| • STS24C      | STS24c path  |
| • STS36C      | STS36c path  |
| • STS48C      | STS48c path  |
| • STS192C     | STS192c path   |
| • T1          | T1/DS1 facility/line   |
| • T3          | T1/DS1 facility/line   |
| • VT1         | VT1 path   |
| • VT2         | VT2 path   |
| <ALSMODE>     | ALS is enabled or disabled. The parameter type is ALS_MODE, which is the working mode for automatic laser shutdown.  |
| • AUTO        | Automatic  |
| • DISABLED    | Disabled   |
| • MAN         | Manual   |
| • MAN-RESTART | Manual restart for test  |
| <ALSRCINT>    | (Optional) ALS interval. The range is 60 to 300 seconds. ALSRCINT is an integer.   |
| <ALSRCPW>     | (Optional) ALS recovery pulse width. The range is 2.0 to 100.00 seconds, in increments of 100 ms. ALSRCPW is a float.  |
| <LSRSTAT>     | (Optional) Status of the laser. The parameter type is LASER_STATUS (laser status).   |
| • APR         | Laser is switched on but is working automatic power reduction.   |
| • OFF         | Laser is switched off.   |
| • ON          | Laser is switched on.  |
| <OSRI>        | (Optional) OSRI enabled or disabled. Present only on a port where the safety is supported. Defaults to off. The parameter type is ON_OFF (disable or enable an attribute). |
| • N           | Disable an attribute.  |
| • Y           | Enable an attribute.   |

## 21.22 RTRV-APC

(Cisco ONS 15454) The Operate Amplifier Power Control (RTRV-APC) command retrieves the APC application attributes.

**Usage Guidelines** None

**Category** DWDM

**Security** Maintenance

**Input Format** RTRV-APC:[<TID>]::<CTAG>;

**Input Example** RTRV-APC:PENNGROVE:WDMSIDE-A:114;

**Input Parameters** None that require description

**Output Format** SID DATE TIME  
M CTAG COMPLD  
“::[APCENABLE=<APCENABLE>],[APCSTATE=<APCSTATE>]”  
;

**Output Example** TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“::APCENABLE=Y,APCSTATE=WORKING”  
;

|                          |   |   |
|--------------------------|---|---|
| <b>Output Parameters</b> | <WDMSIDE>   | The AID is used to access the WDM side of an MSTP node.   |
|                          | <ul style="list-style-type: none"> <li>WDMSIDE-{UNKNOWN,A, B,C,D,E,F,G,H}</li> </ul>                                | MSTP side identifier  |
|                          | <APCENABLE>   | (Optional) Enable or disable the APC application. The parameter type is ON_OFF (disable or enable an attribute).  |
|                          | <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>  | <ul style="list-style-type: none"> <li>Disable an attribute.</li> <li>Enable an attribute.</li> </ul>   |
|                          | <APCSTATE>  | (Optional) Indicates the status of the APC application. The parameter type is APC_STATE (APC status).   |
|                          | <ul style="list-style-type: none"> <li>DISABLE</li> <li>FORCED-DISABLE</li> <li>WORKING</li> <li>PASSIVE</li> </ul> | <ul style="list-style-type: none"> <li>The APC is disabled by the user and is not working.</li> <li>The APC has been internally disabled by the node and is not working.</li> <li>The APC is enabled by the user and is working.</li> <li>The APC is in the passive state.</li> </ul> |

## 21.23 RTRV-ATTR-CONT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Attribute Control (RTRV-ATTR-CONT) command retrieves and sends the attributes associated with an external control. These attributes are used when an external control is operated or released. To set these attributes, use the SET-ATTR-CONT command.

**Usage Guidelines** None

**Category** Environment

**Security** Retrieve

**Input Format** RTRV-ATTR-CONT:[<TID>]:<AID>:<CTAG>[:<CONTTYPE>];

**Input Example** RTRV-ATTR-CONT:CISCO:ENV-OUT-2:123::AIRCOND;

|                         |            |   |
|-------------------------|------------|---|
| <b>Input Parameters</b> | <AID>      | Access identifier from the “26.14 ENV” section on page 26-39. Identifies the external control for which attributes are being set.       |
|                         | <CONTTYPE> | Environmental control type. A null value is equivalent to ALL. The parameter type is CONTTYPE, which is the environmental control type. |
|                         | • AIRCOND  | Air conditioning  |
|                         | • ENGINE   | Engine  |
|                         | • FAN      | Fan   |
|                         | • GEN      | Generator   |
|                         | • HEAT     | Heat  |
|                         | • LIGHT    | Light   |
|                         | • MISC     | Miscellaneous   |
|                         | • SPKLR    | Sprinkler   |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:[<CONTTYPE>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“ENV-OUT-2:AIRCOND”
;
```

|                          |            |   |
|--------------------------|------------|---|
| <b>Output Parameters</b> | <AID>      | Access identifier from the “26.14 ENV” section on page 26-39. Identifies the external control for which attributes are being set.       |
|                          | <CONTTYPE> | Environmental control type. A null value is equivalent to ALL. The parameter type is CONTTYPE, which is the environmental control type. |
|                          | • AIRCOND  | Air conditioning  |
|                          | • ENGINE   | Engine  |

|         |               |
|---------|---------------|
| • FAN   | Fan           |
| • GEN   | Generator     |
| • HEAT  | Heat          |
| • LIGHT | Light         |
| • MISC  | Miscellaneous |
| • SPKLR | Sprinkler     |

## 21.24 RTRV-ATTR-ENV

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Attribute Environment (RTRV-ATTR-ENV) command retrieves the attributes associated with an environmental alarm.

### Usage Guidelines

None

### Category

Environment

### Security

Retrieve

### Input Format

RTRV-ATTR-ENV:[<TID>]:<AID>:<CTAG>::[<NTFCNCDE>],[<ALMTYPE>];

### Input Example

RTRV-ATTR-ENV:CISCO:ENV-IN-1:123::MJ,OPENDR;

### Input Parameters

|            |  |
|------------|--|
| <AID>      | Access identifier from the <a href="#">“26.14 ENV” section on page 26-39</a> .   |
| <NTFCNCDE> | Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.  |
| • CL       | The condition causing the alarm has cleared.   |
| • CR       | A critical alarm.  |
| • MJ       | A major alarm.   |
| • MN       | A minor alarm.   |
| • NA       | The condition is not alarmed.  |
| • NR       | The alarm is not reported.   |
| <ALMTYPE>  | The alarm type for the environmental alarm. A null value is equivalent to ALL. The parameter type is ENV_ALM, which is the environmental alarm type. |
| • AIRCOMPR | Air compressor failure   |
| • AIRCOND  | Air conditioning failure   |

|             |   |
|-------------|---|
| • AIRDRYR   | Air dryer failure   |
| • BATDSCHRG | Battery discharging   |
| • BATTERY   | Battery failure   |
| • CLFAN     | Cooling fan failure   |
| • CPMAJOR   | Centralized power major failure                                 |
| • CPMINOR   | Centralized power minor failure                                 |
| • ENGINE    | Engine failure  |
| • ENGOPRG   | Engine operating  |
| • ENGTRANS  | Standby engine transfer   |
| • EXPLGS    | Explosive gas   |
| • FIRDETR   | Fire detector failure   |
| • FIRE      | Fire  |
| • FLOOD     | Flood   |
| • FUELLEAK  | Fuel leak   |
| • FUSE      | Fuse failure  |
| • GASALARM  | Explosive gas, toxic gas, ventilation fail, or gas monitor fail |
| • HATCH     | CEV hatch fail  |
| • GEN       | Generator failure   |
| • HIAIR     | High airflow  |
| • HIHUM     | High humidity   |
| • HITEMP    | High temperature  |
| • HIWTR     | High water  |
| • INTRUDER  | Intrusion   |
| • LEVELCON  | Level converter   |
| • LVDADSL   | Secondary ADSL low voltage disconnect                           |
| • LVDBYPAS  | Low voltage disconnect bypass                                   |
| • LWBATVG   | Low battery voltage   |
| • LWFUEL    | Low fuel  |
| • LWHUM     | Low humidity  |
| • LWPRES    | Low cable pressure  |
| • LWTEMP    | Low temperature   |
| • LWWTR     | Low water   |
| • MISC      | Miscellaneous   |
| • OPENDR    | Open door   |
| • POWER     | Commercial power failure  |
| • PUMP      | Pump failure  |
| • PWR-48    | 48 V power supply failure                                       |
| • PWR-139   | -139 V power converter  |
| • PWR-190   | -190 V power converter  |
| • PWRMJ     | Power supply major  |
| • PWRMN     | Power supply minor  |

|              |   |
|--------------|---|
| • RECT       | Rectifier failure   |
| • RECTHI     | Rectifier high voltage                                    |
| • RECTLO     | Rectifier low voltage                                     |
| • RINGGENMJ  | Ring generator major                                      |
| • RINGGENMN  | Ring generator minor                                      |
| • RTACADSL   | AC or AC/rectifier power fail ADSL equipment              |
| • RTACCRIT   | AC or AC/rectifier power fail DCL equipment critical site |
| • RTACPWR    | AC or AC/rectifier power fail DCL equipment               |
| • RTACPWRENG | Commercial AC fail, site equipped with standby engine     |
| • RTBAYPWR   | AC power loss distributed power RT bay                    |
| • RTRVENG    | Retrieve standby engine, commercial AC restored           |
| • SMOKE      | Smoke   |
| • TEMP       | High-low temperature                                      |
| • TOXICGAS   | Toxic gas   |
| • TREPEATER  | T-repeater shelf  |
| • VENTN      | Ventilation system failure                                |

**Output Format**

| • PUMP      | Pump failure   |
| • PWR-48    | 48V power supply failure                                       |
| • PWR-139   | -139 V power converter   |
| • PWR-190   | -190 V power converter   |
| • PWRMJ     | Power supply major   |
| • PWRMN     | Power supply minor   |

|              |   |
|--------------|---|
| • RECT       | Rectifier failure   |
| • RECTHI     | Rectifier high voltage                                    |
| • RECTLO     | Rectifier low voltage                                     |
| • RINGGENMJ  | Ring generator major                                      |
| • RINGGENMN  | Ring generator minor                                      |
| • RTACADSL   | AC or AC/rectifier power fail ADSL equipment              |
| • RTACCRIT   | AC or AC/rectifier power fail DCL equipment critical site |
| • RTACPWR    | AC or AC/rectifier power fail DCL equipment               |
| • RTACPWRENG | Commercial AC fail, site equipped with standby engine     |
| • RTBAYPWR   | AC power loss distributed power RT bay                    |
| • RTRVENG    | Retrieve standby engine, commercial AC restored           |
| • SMOKE      | Smoke   |
| • TEMP       | High-low temperature                                      |
| • TOXICGAS   | Toxic gas   |
| • TREPEATER  | T-repeater shelf  |
| • VENTN      | Ventilation system failure                                |
| <DESC>       | (Optional) Alarm description. DESC is a string.           |

## 21.25 RTRV-AUDIT-LOG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Audit Log (RTRV-AUDIT-LOG) command retrieves the contents of the audit log stored in the NE. Audit records contain information for user operations such as login, logout, change of provisioning parameters and other changes a user might make when connected to the NE. Audit records do not store operations related to parameter retrieval.

**Usage Guidelines** None

**Category** Log

**Security** Superuser

**Input Format** RTRV-AUDIT-LOG:[<TID>]::<CTAG>;

**Input Example** RTRV-AUDIT-LOG:::1;

**Input Parameters** None that require description

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“ <ENTRYNUM>,<OCRDAT>,<OCRTM>,<TASKID>,<TXSTATUS>,<DESCRIPTION>”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“ 17172,2004-10-05,09-52-44, TPROVMGR,COMPLD,
\17172,2004-10-05,09-52-44, TPROVMGR,COMPLD,\"DESCRIPTION\"”
;
```

**Output Parameters**

|               |   |
|---------------|---|
| <ENTRYNUM>    | Entry number. ENTRYNUM is an integer.   |
| <OCRDAT>      | Date when the specific event or violation occurred, MM-DD.  |
| <OCRTM>       | Time when the specific event or violation occurred, HH-MM-SS.   |
| <TASKID>      | Task ID. TASKID is a string.  |
| <TXSTATUS>    | Parameter type is TX_STATUS, which indicates the status of the transferred file.  |
| • COMPLD      | The file transmission is completed.   |
| • IP          | The file transmission is in process.  |
| • START       | The file transmission is started.   |
| <DESCRIPTION> | Description of event. Description format varies depending on the event and can include parameters used during the event. DESCRIPTION is a string. |

## 21.26 RTRV-AUTO

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Auto (RTRV-AUTO) command retrieves the AUTO ports provisioned. Port bandwidth changes to OC3/OC12/OC48 as per the incoming signal when auto sense is enabled. Default being OC48 when auto sense is disabled.

**Usage Guidelines**

None

**Category**

DWDM

**Security**

Provisioning

**Input Format**

RTRV-AUTO:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;;

**Input Example** RTRV-AUTO:CISCO:VFAC-2-1-1:1;

**Input Parameters** None that require description

**Output Format** SID DATE TIME

;

**Output Example** M 1 COMPLD  
"VFAC-15-1-1,DETECTEDPAYLOAD=OC48,AUTONSENSE=N"  
;

|                                |   |
|--------------------------------|---|
| <b>Output Parameters</b> <AID> | The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
| <DETECTEDPAYLOAD>              | Payload detected.   |
| • 100GIGE                      | 100 Gigabit Ethernet.   |
| • 3GVIDEO                      | 3G-SDI video payload.   |
| • AUTO                         | Auto  |
| • ISC3STP1G                    | ISC-3 STP 1G video payload.   |
| • ISC3STP2G                    | ISC-3 STP 2G video payload.   |
| • HDSDI                        | 1.5G HD-SDI video payload.  |
| • OTU1                         | Optical Transport Unit Level 1.                                     |
| • OTU4                         | Optical Transport Unit Level 4.                                     |
| • SDSDI                        | 270M SDI video payload.   |
| <AUTONSENSE>                   | Specifies if auto sense is enabled or disabled.                     |
| • Y                            | Enable Autosensing.   |
| • N                            | Disable Autosensing.  |

## 21.27 RTRV-BFDLPM-<MOD2>

(Cisco ONS 15454) The Retrieve BFDL Performance Monitoring (DS1, T1) command retrieves the BFDL (enhanced 24-hour ES, UAS, BES, CSS, and LOFC) performance monitoring parameters and applies to the DS3XM-12 card DS1 under BFDL mode. This command returns the current 15-minute and current 24-hour BFDL performance monitoring (PM) parameters and the 96 15-minute history requested type PM parameters.

**Usage Guidelines** For example, the following input:

```
RTRV-BFDLPM-DS1::DS1-14-1-1:1::REQTYPE=ENH-24HR-ES;
```

Will retrieve the following output:

```
DS1-14-1-1:ES,30,CURR-15MIN-INV DS1-14-1-1:UAS,40,CURR-15MIN-INV
DS1-14-1-1:BES,50,CURR-15MIN-INV DS1-14-1-1:SES,60,CURR-15MIN-INV
DS1-14-1-1:CSS,70,CURR-15MIN-INV DS1-14-1-1:LOFC,80,CURR-15MIN-INV
DS1-14-1-1:ES,30,CURR-24HR-INV DS1-14-1-1:UAS,40,CURR-24HR-INV
DS1-14-1-1:BES,50,CURR-24HR-INV DS1-14-1-1:SES,60,CURR-24HR-INV
DS1-14-1-1:CSS,70,CURR-24HR-INV DS1-14-1-1:LOFC,80,CURR-24HR-INV
DS1-14-1-1:ES,30,1-15MIN-INV DS1-14-1-1:ES,40,2-15MIN-INV
DS1-14-1-1:ES,50,3-15MIN-INV
DS1-14-1-1:ES,80,96-15MIN-INV
```

Sending this command with a REQTYPE of ENH-24HR-CSS-AND-LOFC will retrieve 96 15-minute PM parameters for both CSS and LOFC. The command is applied on the DS3XM-12 DS1 under BFDL mode, ESF frame format, C-BIT IS port with an IS VT circuit configuration.

| <b>Output Parameters</b> | <AID>     | Access identifier from the <a href="#">“26.13 DS1”</a> section on page 26-38.  |
|                          | <MONTYPE> | Monitored type which includes: BES, CSS, ES, LOFC, SES, UAS. MONTYPE is a string.  |
|                          | <MONVAL>  | The value to which the register identified by MONTYPE is to be initialized to or the measured value of a monitored parameter. The value is in the form of numeric counts or rates. MONVAL is a string. |
|                          | <BUCKET>  | The BIN of each BFDL PM. BUCKET is a string.   |

## 21.28 RTRV-BITS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Building Integrated Timing Supply (RTRV-BITS) command retrieves the BITS configuration command. For BITS facility, 64 K and 6 MHz are only applicable to the ONS 15454.

**Usage Guidelines** None

**Category** Synchronization

**Security** Retrieve

**Input Format** RTRV-BITS:[<TID>]:<AID>:<CTAG>[:[:]];

**Input Example** RTRV-BITS:SONOMA:BITS-1:782;

**Input Parameters**

|       |   |
|-------|---|
| <AID> | Access identifier from the <a href="#">“26.6 BITS”</a> section on page 26-22. |
|-------|---|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
  "<AID>::[LINECDE=<LINECDE>],[FMT=<FMT>],[LBO=<LBO>],
  [SYNCSMSG=<SYNCSMSG>],[AISTHRSHLD=<AISTHRSHLD>],[SABIT=<SABIT>],
  [IMPEDANCE=<IMPEDANCE>],[BITSFAC=<BITSFAC>],[ADMSSM=<ADMSSM>]:[<PST>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"BITS-1::LINECDE=AMI,FMT=ESF,LBO=0-133,SYNCSMSG=N,AISTHRSHLD=PRS,
SABIT=BYTE-4,IMPEDANCE=120-OHM,BITSFAC=T1,ADMSSM=PRS:IS"
;
```

**Output Parameters**

|              |  |
|--------------|--|
| <AID>        | Access identifier from the <a href="#">“26.6 BITS”</a> section on page 26-22   |
| <LINECDE>    | (Optional) Line code. The parameter type is LINE_CODE.   |
| • AMI        | Line code value is AMI.  |
| • B3ZS       | Bipolar with three-zero substitution   |
| • B6ZS       | Line code value is B6ZS.   |
| • B8ZS       | Line code value is B8ZS.   |
| • JBZS       | JBZS   |
| • ZBTSI      | ZBTSI  |
| <FMT>        | (Optional) Digital signal frame format. The parameter type is FRAME_FORMAT, which is the frame format for a T1 port.   |
| • AUTOPROV   | AUTOPROV   |
| • CBIT       | C-BIT line type applies to the DS3XM and DS3E cards.   |
| • D4         | Frame format is D4.  |
| • DS2 FRAMED | DS2 FRAMED   |
| • E2 FRAMED  | E2 FRAMED  |
| • E3-FRAME   | E3-FRAME   |
| • E3-PLCP    | E3-PLCP  |
| • ESF        | Frame format is ESF.   |
| • FRAMENA    | FRAMENA  |
| • G-751      | G-751  |
| • G-832      | G-832  |
| • M13        | M13 line type applies to the DS3XM and DS3E cards.   |
| • M23        | M23  |
| • SYNTRAN    | SYNTRAN  |
| • UNFRAMED   | Frame format is unframed.  |
| <LBO>        | (Optional) Line buildout settings. BITS line buildout. Default value is 0 to 133. LBP is an integer. The parameter type is BITS_LineBuildOut, which is the BITS line buildout.             |
| • 0–133      | BITS line buildout range is 0–133.   |
| • 134–266    | BITS line buildout range is 134–266.   |
| • 267–399    | BITS line buildout range is 267–399.   |
| • 400–533    | BITS line buildout range is 400–533.   |
| • 534–655    | BITS line buildout range is 534–655.   |
| <SYNCSMSG>   | Indicates if the BITS facility supports synchronization status message. Default is Y. The parameter type is EXT_RING, which indicates if the ring supports the extended K1/K2/K3 protocol. |

|              |   |
|--------------|---|
| • N          | The ring does not support the extended K1/K2/K3 protocol.   |
| • Y          | The ring does support the extended K1/K2/K3 protocol.   |
| <AISTHRSHLD> | (Optional) Alarm indication signal threshold. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET.  |
| • DUS        | Do Not Use For Synchronization  |
| • PRS        | Primary Reference Source, Stratum 1 Traceable   |
| • RES        | Reserved For Network Synchronization Use  |
| • SMC        | SONET Minimum Clock Traceable   |
| • ST2        | Stratum 2 Traceable   |
| • ST3        | Stratum 3 Traceable   |
| • ST3E       | Stratum 3E Traceable  |
| • ST4        | Stratum 4 Traceable   |
| • STU        | Synchronized, Traceability Unknown  |
| • TNC        | Transit Node Clock (2nd Generation Only)  |
| <SABIT>      | (Optional) When the frame format selection is E1, SABIT is the BIT used to receive and transmit the SSM. The parameter type is SABITS (SA BITS).  |
| • BYTE-4     | SABIT is BYTE-4.  |
| • BYTE-5     | SABIT is BYTE-5.  |
| • BYTE-6     | SABIT is BYTE-6.  |
| • BYTE-7     | SABIT is BYTE-7.  |
| • BYTE-8     | SABIT is BYTE-8.  |
| <IMPEDANCE>  | (Optional) When the frame format selection is E1, IMPEDANCE is the terminal impedance of the BITS-IN port. The parameter type is IMPEDANCE, which is the terminal impedance of the BITS-IN port |
| • 120-OHM    | Impedance of 120 ohms   |
| • 75-OHM     | Impedance of 75 ohms  |
| <BITSFAC>    | (Optional) BITS facility settings. The parameter type is BITS_FAC, which is the BITS facility rate. 64 K and 6 MHz are only applicable to the ONS 15454.  |
| • 2 M        | 2 MHz rate  |
| • 64 K       | 64 K rate   |
| • 6 M        | 6 MHz rate  |
| • E1         | E1 rate   |
| • T1         | T1 rate   |
| <ADMSSM>     | (Optional) SSM selectable. Only applicable to BITS-IN when SSM is disabled.<br><br>The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET.       |
| • DUS        | Do Not Use For Synchronization  |
| • PRS        | Primary Reference Source, Stratum 1 Traceable   |
| • RES        | Reserved For Network Synchronization Use  |

|        |  |
|--------|--|
| • SMC  | SONET Minimum Clock Traceable  |
| • ST2  | Stratum 2 Traceable  |
| • ST3  | Stratum 3 Traceable  |
| • ST3E | Stratum 3E Traceable   |
| • ST4  | Stratum 4 Traceable  |
| • STU  | Synchronized, Traceability Unknown   |
| • TNC  | Transit Node Clock (2nd Generation Only)   |
| <PST>  | (Optional) Primary state. The parameter type is PST, which indicates the current overall service condition of an entity. |
| • IS   | In Service   |
| • OOS  | Out of Service   |

## 21.29 RTRV-AWCFG

(Cisco ONS 15454, Cisco ONS 15454 M2, Cisco ONS 15454 M6) The Retrieve Alien Wavelength Configuration (RTRV-AWCFG) retrieves the alien wavelength attributes configured.

**Usage Guidelines** None

**Category** DWDM

**Security** Provisioning

**Input Format** RTRV-AWCFG:[<TID>]:<src>:<CTAG>::[:];

**Input Example** RTRV-AWCFG::CHAN-3-5-RX:1;

**Table 21-1** Parameter Support

| Parameter | Description                                   |
|-----------|---|
| <SRC>     | AID from the “26.1 ALL” section on page 26-1. |

**Output Format**

```

SID DATE TIME
M CTAG COMPLD
“”<AID>:<ALIENID>,<FECMODE>”
;

```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"CHAN-3-4-RX:40G DWDM ITU-T TXP,FECMODE=ENHANCED14"
;
```

**Table 21-2** Output Parameter Support

| Parameter | Description   |
|-----------|---|
| <AID>     | AID from the <a href="#">“26.1 ALL”</a> section on page 26-1.           |
| <ALIENID> | Indicates the operating mode for alien wavelength. ALIENID is a STRING. |
| <FECMODE> | Specifies the FEC mode for alien wavelength.                            |
| • ENH     | Enhanced FEC is enabled.  |
| • ENH-I4  | Enhanced FEC 1.4 is enabled.  |
| • ENH-I7  | Enhanced FEC 1.7 is enabled.  |
| • HG-7    | 7% High Gain FEC is enabled.  |
| • HG-20   | 20% High Gain FEC is enabled.   |
| • OFF     | FEC is disabled.  |
| • STD     | Standard FEC is enabled.  |

## 21.30 RTRV-BULKROLL-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Bulkroll for OC12, OC192, OC3, OC48, or OC768 (RTRV-BULKROLL-<OCN\_TYPE>) command retrieves roll data parameters on a line.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Category** Bridge and Roll

**Security** Provisioning

**Input Format** RTRV-BULKROLL-<OCN\_TYPE>:[<TID>]:<SRC>:<CTAG>;

**Input Example** RTRV-BULKROLL-OC12:CISCO:FAC-3-1:1;

**Input Parameters** <SRC> Source AID from the [“26.17 FACILITY”](#) section on page 26-42.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<FROM>:RFROM=<RFROM>,RTO=<RTO>,[RMODE=<RMODE>],VLDSIG=<VLDSIG>"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"STS-3-1-1:RFROM=STS-3-1-1,RTO=STS-5-1-1,RMODE=AUTO,VLDSIG=Y"
;
```

**Output Parameters**

|   |  |
|---|--|
| <FROM>  | One of the end points. Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42 for line level rolling and bulk rolling.                                      |
| <RFROM>   | The termination point of the existing cross-connect that is to be rolled. The AID is from the <a href="#">“26.12 CrossConnectId1”</a> section on page 26-31 (except VCM and FACILITY). |
| <RTO>   | The termination point that will become a leg of the new cross-connection. The AID is from the <a href="#">“26.12 CrossConnectId1”</a> section on page 26-31 (except VCM and FACILITY). |
| <RMODE>   | (Optional) The rolling mode of operation. The parameter type is RMODE, which specifies the roll mode.  |
| <ul style="list-style-type: none"> <li>AUTO</li> </ul>        | Automatic. When a valid signal is available, the roll under AUTO mode will automatically delete the previous end-point.  |
| <ul style="list-style-type: none"> <li>MAN</li> </ul>         | Manual. Enter the corresponding delete roll/bulkroll command to delete the previous end-point.   |
| <ul style="list-style-type: none"> <li>MAN</li> </ul>         | Manual   |
| <ul style="list-style-type: none"> <li>MAN-RESTART</li> </ul> | Manual Restart for Test  |
| <VLDSIG>  | (Optional) The rolling mode of operation. The parameter type is ON_OFF (disable or enable an attribute).   |
| <ul style="list-style-type: none"> <li>N</li> </ul>           | Disable an attribute.  |
| <ul style="list-style-type: none"> <li>Y</li> </ul>           | Enable an attribute.   |

## 21.31 RTRV-BWP-ETH

(Cisco ONS 15454)

This command is used to retrieve a BandWidth Profile entry in BWP DB. The BWP DB is a collection of BWP used in a Network Element.

**Usage Guidelines**

The “ALL” AID is supported by this command.

If the AID is invalid, an IIAC (Invalid AID) error message is returned.

**Category** Ethernet

**Security** Retrieve

**Input Format** RTRV-BWP-ETH:[<TID>]:<AID>:<CTAG>[:::];

**Input Example** RTRV-BWP-ETH:ROCKS:BWP-10000:1;

### Input Parameter

**Table 21-3** Input Parameter Support

| Parameter       | Description   |
|-----------------|---|
| <AID>           | This AID is used to access BWP.                                   |
| • BWP-ALL       | All aid for BWP.  |
| • BWP-{1-10000} | Single AID for BWP. The valid identifiers ranges from 1 to 10000. |

**Output Format** SID DATE TIME  
M CTAG COMPLD  
  
" <AID>::[NAME=<NAME>],[CIR=<CIR>],[CBS=<CBS>],[PBS=<PBS>],[PIR=<PIR>],[CFMSTATE=<CFM\_STATE>]:";  
;

**Output Example** TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
"BWP-10000::NAME="MyBWP",CIR=10,CBS=1M,PBS=1M,PIR=20,CFMSTATE=Y:";  
;

### Output Parameters

**Table 21-4** Output Parameter Support

| Parameter       | Description   |
|-----------------|---|
| <AID>           | This AID is used to access BWP.                                   |
| • BWP-ALL       | All aid for BWP.  |
| • BWP-{1-10000} | Single AID for BWP. The valid identifiers ranges from 1 to 10000. |
| <NAME>          | The BWP name. BWP name is a String.                               |

**Table 21-4 Output Parameter Support**

| Parameter  | Description  |
|------------|--|
| <CIR>      | Ingress committed information rate. This is a value between 0.0 and 100.0. Default value is 100.0. |
| <CBS>      | Ingress committed burst bucket size.   |
| • 4K       | 4 Kbit bucket size   |
| • 8K       | 16 Kbit bucket size  |
| • 16K      | 32 Kbit bucket size  |
| • 32K      | 64 Kbit bucket size  |
| • 64K      | 128 Kbit bucket size   |
| • 128K     | 256 Kbit bucket size   |
| • 256K     | 512 Kbit bucket size   |
| • 512K     | 1 Mbit bucket size   |
| • 1M       | 2 Mbit bucket size   |
| • 2M       | 4 Mbit bucket size   |
| • 4M       | 8 Mbit bucket size   |
| • 8M       | 16 Mbit bucket size  |
| • 16M      | 16 Kbit bucket size  |
| <PBS>      | Ingress peak burst bucket size   |
| • 4K       | 4 Kbit bucket size   |
| • 8K       | 8 Kbit bucket size   |
| • 16K      | 16 Kbit bucket size  |
| • 32K      | 32 Kbit bucket size  |
| • 64K      | 64 Kbit bucket size  |
| • 128K     | 128 Kbit bucket size   |
| • 256K     | 256 Kbit bucket size   |
| • 512K     | 512 Kbit bucket size   |
| • 1M       | 1 Mbit bucket size   |
| • 2M       | 2 Mbit bucket size   |
| • 4M       | 4 Mbit bucket size   |
| • 8M       | 8 Mbit bucket size   |
| • 16M      | 16 Mbit bucket size  |
| <PIR>      | Peak information rate. This is a value between 0.0 and 100.0. Default value is 100.0.              |
| <CFMSTATE> | Link Integrity status  |
| • Y        | Enabled  |
| • N        | Disabled   |

## 21.32 RTRV-CFM

(Cisco ONS 15454) The Retrieve Connectivity Fault Management (RTRV-CFM) command retrieves the Connectivity Fault Management (CFM) protocol state at the port level.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Port

### Security

Retrieve

### Input Format

RTRV-CFM:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-CFM:454-156:ETH-1-1-1;1;

### Input Parameter

<AID> Access identifier from the [“26.16 ETH”](#) section on page 26-41.

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AID>,<STATE>”
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“ETH-7-1-1,STATE=ENABLE”
;
```

### Output Parameters

|             |   |
|-------------|---|
| <AID>       | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH”</a> section on page 26-41. |
| <CFM_STATE> | Indicates whether the CFM is enabled or disabled on the port.   |
| • ENABLE    | Indicates the CFM is enabled on the port.   |
| • DISABLE   | Indicates the CFM is disabled on the port.  |

## 21.33 RTRV-CHGRP

(Cisco ONS 15454) The Retrieve Channel Group (RTRV-CHGRP) command retrieves the layer 2 channel group information of GE\_XP and 10GE\_XP ethernet cards.

**Category** Channel Group

**Security** Retrieve

**Input Format** RTRV-CHGRP:[<TID>]:<aid>:<CTAG>[:::];

**Input Example** RTRV-CHGRP::CHGRP-1-2:1;

**Input Parameters** <AID> Access identifier from the [“26.9 CHGRP”](#) section on page 26-26.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:[LACPMODE=<LACPMODE>],[HASHINGALGO=<HASHINGALGO>],[NIMODE=<NIMODE>],[MACLEARNING=<MACLEARNING>],[INGRESSCOS=<INGRESSCOS>],[ETHERCETYPE=<ETHERCETYPE>],[ETHERSTYPER=<ETHERSTYPER>],[ETHERSTYPER=>ETHERSTYPER],[BPDU=<BPDU>],[QNQMODE=<QNQMODE>],[MTU=<MTU>],[FLOWCTRL=<FLOWCTRL>],[SPEED=<SPEED>],[EXPSPEED=<EXPSPEED>],[CIR=<CIR>],[CBS=<CBS>],[EBS=<EBS>]:<PST>,<SST>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
```

```
“CHGRP-1-1:LACPMODE=ACTIVE,HASHINGALGO=HASHING_SA_DA_VLAN_INCOMING_P
ORT,NIMODE=UNI,MACLEARNING=N,INGRESSCOS=0,ETHERCETYPE=8100,ETHERSTYPER
=8100,BPDU=Y,QNQMODE=SELECTIVE,MTU=9700,FLOWCTRL=ASYMMETRIC,
SPEED=AUTO,EXPSPEED=AUTO,CIR=100,CBS=4K,EBS=4K:OOS-MA,DSBLD”
;
```

**Output Parameters**

|            |  |
|------------|--|
| <AID>      | Access identifier from the <a href="#">“26.9 CHGRP”</a> section on page 26-26. |
| <NIMODE>   | Identifies the Ethernet Network Interface Mode.                                |
| • NNI      | (Default) Network-Network Interface Mode                                       |
| • UNI      | User-Network Interface Mode  |
| <LACPMODE> | LACP mode values   |

|  |   |
|--|---|
| • ON                                   | Manual mode of LACP   |
| • ACTIVE                               | Active mode of LACP   |
| • PASSIVE                              | Passive mode of LACP  |
| <HASHINGALGO>                          | Hashing algorithm value   |
| • HASHING_SA_VLAN_INCOMIN<br>G_PORT    | The Hashing Algorithm value is<br>HASHING_SA_VLAN_INCOMING_PORT.  |
| • HASHING_DA_VLAN_INCOMIN<br>G_PORT    | The Hashing Algorithm is<br>HASHING_DA_VLAN_INCOMING_PORT.  |
| • HASHING_SA_DA_VLAN_INCO<br>MING_PORT | The Hashing Algorithm is<br>HASHING_SA_DA_VLAN_INCOMING_PORT.   |
| • HASHING_SRC_IP_TCP_UDP               | The Hashing Algorithm is HASHING_SRC_IP_TCP_UDP.  |
| • HASHING_DST_IP_TCP_UDP               | The Hashing Algorithm is HASHING_DST_IP_TCP_UDP.  |
| • HASHING_SRC_DST_<br>IP_TCP_UDP       | The Hashing Algorithm is<br>HASHING_SRC_DST_IP_TCP_UDP.   |
| <MTU>                                  | (Optional) Maximum transport unit. The parameter type is<br>MTU_TYPE, which indicates the maximum transport unit<br>used by an Ethernet card. Defaults to 9600. |
| • 10004                                | 10004. Indicates jumbo size.  |
| • 1500                                 | 1500  |
| • 1548                                 | 1548  |
| • 9600                                 | 9600. Indicates jumbo size.   |
| • 64                                   | 64  |
| • 9700                                 | 9700. Indicates jumbo size.   |
| <ATTACH >                              | Ethernet AID for the front end CE-MR-6 cards. Ethernet<br>AID for the ethernet port on GE_XP and 10GE_XP card.  |
| <DETACH>                               | To remove or detach the port.   |
| <SPEED>                                | (Optional) The parameter type is ETHER_SPEED, which<br>indicates Ethernet speed. Defaults to AUTO.  |
| • 100_MBPS                             | 100 Megabits per second   |
| • 10_GBPS                              | 10 Gigabits per second  |
| • 10_MBPS                              | 10 Megabits per second  |
| • 1_GBPS                               | 1 Gigabit per second  |
| <EXPSPEED>                             | (Optional) Ethernet speed. The parameter type is<br>ETHER_SPEED, which is the Ethernet speed.   |
| • 100_MBPS                             | 100 Megabits per second   |
| • 10_GBPS                              | 10 Gigabits per second  |
| • 10_MBPS                              | 10 Megabits per second  |
| • 1_GBPS                               | 1 Gigabit per second  |
| • 40_GBPS                              | 40 Gigabit per second   |
| • AUTO_FDX                             | Enable auto negotiation with full duplex  |
| • AUTO                                 | Auto  |
| <CIR>                                  | Ingress committed information rate. This is a value between<br>0.0 and 100.0. Default value is 100.0.   |
| <CBS>                                  | Ingress committed burst bucket size.  |

|               |  |
|---------------|--|
| • 4K          | 4 Kbit bucket size   |
| • 8K          | 16 Kbit bucket size  |
| • 16K         | 32 Kbit bucket size  |
| • 32K         | 64 Kbit bucket size  |
| • 64K         | 128 Kbit bucket size   |
| • 128K        | 256 Kbit bucket size   |
| • 256K        | 512 Kbit bucket size   |
| • 512K        | 1 Mbit bucket size   |
| • 1M          | 2 Mbit bucket size   |
| • 2M          | 4 Mbit bucket size   |
| • 4M          | 8 Mbit bucket size   |
| • 8M          | 16 Mbit bucket size  |
| • 16M         | 16 Kbit bucket size  |
| <EBS>         | Ingress excess burst bucket size.  |
| <MACLEARNING> | MAC Address Learning Mode. This activates the MAC address learning on the interface to avoid packet broadcasting.  |
| • Y           | Enables the MAC learning on the interface.   |
| • N           | Disables the MAC learning on the interface.  |
| <INGRESSCOS>  | Identifies the COS value set in the S-VLAN tag.  |
| • 0 to 7      | Set a Cos value  |
| • TRUST       | Use the Customer COS   |
| • VLAN        | The COS will be provisioned on CVLAN basis (QinQ selective mode)   |
| <ETHERCETYPE> | Identifies a customer foreseen Ethernet type. If the customer uses a non-standard Ethernet type, the incoming packets will be accepted only if the CE-VLAN Ethernet type matches this parameter. |
| <ETHERSTYPE>  | Identifies a customer foreseen Ethernet type. If the customer uses a non-standard Ethernet type, the incoming packets will be accepted only if the CE-VLAN Ethernet type matches this parameter. |
| <BPDU>        | BPDU (Bridge Protocol Data Unit) management mode; Drop/Passthrough BPDU tagged packets.  |
| • Y           | Enables the BPDU tag.  |
| • N           | Disables the BPDU tag.   |
| <QNQMODE>     | This is used to represent the QinQ mode operations.  |
| • Selective   | The S-VLAN tag is added only on specified CE-VLANs. The other packets are dropped.   |
| • Transparent | The S-VLAN tag is always performed where all packets having the S-VLAN-ID identified by TRNSPSVLAN parameter are allowed.  |

|              |   |
|--------------|---|
| <TRNSPSVLAN> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <NAME>       | (Optional) NAME is a string. User-assigned port name.   |

## 21.34 RTRV-CMD-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Command Security (RTRV-CMD-SECU) command retrieves the current command security level of the command specified in the AID field.

|                         |  |       |  |

|                          | • SEC_USER  | Security user.  |

## 21.35 RTRV-COND-<MOD2ALM>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Condition for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 4GFC, 4GFICON, 5GIB, 8GFC, CHGRP, DS1, DS3I, DVBASI, E1, E100, E1000, E3, E4, EC1, ETH, FSTE, G1000, HDLC, ETH, GFPOS, GIGE, ILK, ISCCOMPAT, ISC1, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, MSISC, OC12, OC192, OC3, OC48, OC768, OCH, ODU0, OMS, OTS, OTL, OTU2, OTU3, OTU4, POS, RPRIF, STM1, STM4, STM16, STM64, STM1E, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, UDCDCC, UDCF, VC11, VC12, VC3, VC4, VC4-2c, VC4-3c, VC4-4c, VC4-8c, VC4-16c, VC4-64c, VCG, VT1, VT2, WLEN, RPRIF, 3GVIDEO, HSDSI, ISC3STP1G, ISC3STP2G, OTU1, or SDSDI (RTRV-COND-<MOD2ALM>) command retrieves the current standing condition and state associated with an entity.

### Usage Guidelines

The command supports the modifiers 3GVIDEO, OTU1, SDSDI, HSDSI, ISC3STP1G, and ISC3STP2G. The RTRV-COND-OTL command retrieves the conditions raised on sublanes of 100G-LC-C and CFP-LC Cards.

RTRV-COND-ODU0 command retrieves the conditions raised on the ODU0's on AR-XPE card only.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Category

Fault

### Security

Retrieve

### Input Format

RTRV-COND-<MOD2ALM>:[<TID>]:<AID>:<CTAG>:[:<TYPEREQ>],[<LOCN>],[<DIRN>];

### Input Example

RTRV-COND-OTU1::VFAC-14-3-1:1::OTUK-IAE;

| Input Parameters |  |
|------------------|--|
| <AID>            | Access identifier from the “26.1 ALL” section on page 26-1. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier.  |
| <TYPEREQ>        | The type of condition to be retrieved. A null value is equivalent to ALL. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See Chapter 27, “Conditions” for a list of conditions. |
| <LOCN>           | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
| • FEND           | Action occurs on the far end of the facility.  |
| • NEND           | Action occurs on the near end of the facility.   |
| <DIRN>           | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH            | Both transmit and receive directions   |
| • RCV            | Receive direction only   |

**Output Format**

**Output Parameters**

|           |   |
|-----------|---|
| <AID>     | Access identifier from the “26.1 ALL” section on page 26-1.   |
| <AIDTYPE> | (Optional) Type of access identifier. Specifies the type of facility, link or other addressable entity targeted by the message. The parameter type is MOD2ALM, which is the alarm type. |
| • 100GIGE | 100 Gigabit Ethernet  |
| • 10GIGE  | 10 Gigabit Ethernet   |
| • 1GFC    | 1-Gigabit Fibre Channel payload   |
| • 1GFICON | 1-Gigabit fiber connectivity payload  |
| • 1GISC3  | 1-Gigabit ISC3 compatible   |
| • 2GFC    | 2-Gigabit Fibre Channel payload   |
| • 2GFICON | 2-Gigabit fiber connectivity payload  |
| • 3GVIDEO | 3G-SDI video payload.   |
| • 4GFC    | 4-Gigabit Fibre Channel payload   |

|              |  |
|--------------|--|
| • 4GFICON    | 4-Gigabit fiber connectivity payload                                   |
| • 40GIGE     | 40-Gigabit Ethernet  |
| • 5GIB       | 5Gbps InfiniBand (IB_5G) payload                                       |
| • 8GFC       | 8-Gigabit Fibre Channel payload  |
| • CLNT       | Client facility for MXP/TXP cards                                      |
| • CHGRP      | Channel group  |
| • CPS        | CPS modifier signifies WSON control plane circuits.                    |
| • DS1        | DS1 alarm  |
| • DS3I       | DS3I alarm   |
| • DVBASI     | Digital Video Broadband Asynchronous Serial Interface (DVBASI) payload |
| • E100       | E100 alarm   |
| • E1000      | E1000 alarm  |
| • EC1        | EC1 alarm  |
| • FSTE       | Fast Ethernet Port alarm   |
| • G1000      | G1000 alarm  |
| • GFPOS      | Generic framing protocol over packet over SONET virtual port alarm     |
| • GIGE       | Gigabit Ethernet port alarm  |
| • HDSDI      | 1.5G HD-SDI video payload.   |
| • ISC1       | InterSystem Channel, a protocol defined by IBM (ISC1) payload          |
| • ISC3PEER1G | 1-Gigabit ISC3 Peer  |
| • ISC3PEER2G | 2 Gbps ISC3 Peer   |
| • ISC3PEER2R | 1 Gbps or 2 Gbps ISC3 peer used in transparent (2R) mode               |
| • ISC3STP1G  | ISC-3 STP 1G video payload.  |
| • ISC3STP2G  | ISC-3 STP 2G video payload.  |
| • ISCCOMPAT  | 1 Gbps ISC1, ISC2, and ISC3 compatibility                              |
| • MSISC      | MSISC  |
| • OC3        | OC3 alarm  |
| • OC12       | OC12 alarm   |
| • OC48       | OC48 alarm   |
| • OC192      | OC192 alarm  |
| • OC768      | OC768 alarm  |
| • OCH        | Optical channel  |
| • OCHTERM    | OCH termination  |
| • ODU0       | Optical Data Unit Level 0  |
| • OMS        | Optical Multiplex Section  |
| • OTS        | Optical Transport Section  |
| • OTL        | Optical Channel Transport Lane.  |
| • OTU1       | Optical Transport Unit Level 1   |
| • OTU3       | Optical Transport Unit Level 3   |
| • OTU4       | Optical Transport Unit Level 4   |

|            |  |
|------------|--|
| • POS      | POS port alarm   |
| • SDSDI    | 270M SDI video payload.  |
| • STS1     | STS1 alarm   |
| • STS3C    | STS3c alarm  |
| • STS6C    | STS6c alarm  |
| • STS9C    | STS9c alarm  |
| • STS18C   | STS18c alarm   |
| • STS12C   | STS12c alarm   |
| • STS24C   | STS24c alarm   |
| • STS36C   | STS36c alarm   |
| • STS48C   | STS48c alarm   |
| • STS192C  | STS192c alarm  |
| • T1       | T1 alarm   |
| • T3       | T3 alarm   |
| • UDCDCC   | UDC-DCC alarm  |
| • UDCF     | UCD-F alarm  |
| • VCG      | Virtual concatenation group alarm  |
| • VT1      | VT1 alarm  |
| • VT2      | VT2 alarm  |
| • WLEN     | Wavelength path provisioning   |
| <NTFCNCDE> | (Optional) Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
| • CL       | The condition causing the alarm has cleared.   |
| • CR       | A critical alarm.  |
| • MJ       | A major alarm.   |
| • MN       | A minor alarm.   |
| • NA       | The condition is not alarmed.  |
| • NR       | The alarm is not reported.   |
| <TYPEREP>  | The condition itself. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | (Optional) The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.   |
| • NSA      | The condition is non-service affecting.  |
| • SA       | The condition is service affecting.  |
| <OCRDAT>   | (Optional) Date when the specific event or violation occurred, MM-DD.  |
| <OCRTM>    | (Optional) Time when the specific event or violation occurred, HH-MM-SS.   |

|             |  |
|-------------|--|
| <LOCN>      | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place. |
| • FEND      | Action occurs on the far end of the facility.  |
| • NEND      | Action occurs on the near end of the facility.   |
| <DIRECTION> | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH       | Both transmit and receive directions   |
| • RCV       | Receive direction only   |
| <DESC>      | (Optional) Condition description. DESC is a string.  |

## 21.36 RTRV-COND-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Condition All (RTRV-COND-ALL) command retrieves the current standing condition for all entities.

### Usage Guidelines

According to Telcordia GR-833, the RTRV-COND-ALL command only reports EQPT, COM, and rr (T1, T3, OCn, EC1, STSn, VT1, DS1, E100, E1000, G1000, ML-Series, TXP and MXP) alarms.

This command does not return all conditions that are returned by other, more specific RTRV-COND commands; RTRV-COND-ALL returns a subset of these conditions. Telcordia GR-253-CORE, Section 6.2.1.8.4 states a retrieval that returns ALL conditions from a node (RTRV-COND-ALL) must omit any conditions that are “same root cause” as other raised conditions. The section also states any retrieval of a subset of the conditions from a node, regardless of how the subsetting occurs, should not omit these “same root cause” conditions.

RTRV-COND-STS1, for example, includes “same root cause” conditions in the set it returns and RTRV-COND-ALL does not.

To retrieve all the NE conditions, issue all of the following commands:

```
RTRV-COND-ALL
RTRV-COND-ENV
RTRV-COND-BITS
RTRV-COND-SYNCN
```

### Category

### Input Format

RTRV-COND-ALL:[<TID>]:[<AID>]:<CTAG>::[<TYPEREQ>],[<LOCN>],[<DIRN>];

### Input Example

RTRV-COND-ALL:DXT:ALL:229::FORCE-REQ;

| Input Parameters |  |  |
|------------------|--|--|
| <AID>            |  | Access identifier from the “26.1 ALL” section on page 26-1. String. A null value is equivalent to ALL.   |
| <TYPEREQ>        |  | The type of condition to be retrieved. A null value is equivalent to ALL. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See Chapter 27, “Conditions” for a list of conditions. |
| <LOCN>           |  | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
|                  | <ul style="list-style-type: none"> <li>• FEND</li> <li>• NEND</li> </ul> | <ul style="list-style-type: none"> <li>Action occurs on the far end of the facility.</li> <li>Action occurs on the near end of the facility.</li> </ul>  |
| <DIRN>           |  | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
|                  | <ul style="list-style-type: none"> <li>• BTH</li> <li>• RCV</li> </ul>   | <ul style="list-style-type: none"> <li>Both transmit and receive directions</li> <li>Receive direction only</li> </ul>   |

| • SYNCN    | SYNCN alarm   |
| • T1       | T1 alarm  |
| • T3       | T3 alarm  |
| • TCC      | TCC alarm   |
| • VT1      | VT1 alarm   |
| • VT2      | VT2 alarm   |
| <NTFCNCDE> | (Optional) Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.  |
| • CL       | The condition causing the alarm has cleared.  |
| • CR       | A critical alarm.   |
| • MJ       | A major alarm.  |
| • MN       | A minor alarm.  |
| • NA       | The condition is not alarmed.   |
| • NR       | The alarm is not reported.  |
| <TYPEREP>  | The type of condition to be retrieved. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | (Optional) The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.  |
| • NSA      | The condition is non-service affecting.   |
| • SA       | The condition is service affecting.   |
| <OCRDAT>   | (Optional) Date when the specific event or violation occurred, MM-DD.   |
| <OCRTM>    | (Optional) Time when the specific event or violation occurred, HH-MM-SS.  |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.  |
| • FEND     | Action occurs on the far end of the facility.   |
| • NEND     | Action occurs on the near end of the facility.  |
| <DIRN>     | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.  |
| • BTH      | Both transmit and receive directions  |
| • RCV      | Receive direction only  |
| <DESC>     | (Optional) Condition description. DESC is a string.   |

## 21.38 RTRV-COND-ENV

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Environmental Condition (RTRV-COND-ENV) command retrieves the environmental conditions.

**Usage Guidelines** None

**Category** Environment

**Security** Retrieve

**Input Format** RTRV-COND-ENV:[<TID>]:<AID>:<CTAG>::[<NTFCNCDE>],[<ALMTYPE>],[<LOCN>],[<DIRN>];

**Input Example** RTRV-COND-ENV:CISCO:ENV-IN-1:123::MJ,OPENDR;

|                         |             |   |
|-------------------------|-------------|---|
| <b>Input Parameters</b> | <AID>       | Access identifier from the “26.14 ENV” section on page 26-39.<br><br><b>Note</b> For RTRV-ALM-ENV, only ENV-IN-{1-4} is a valid AID for ONS 15454. ENV-OUT-{1,6} is not a valid AID for RTRV-ALM-ENV. |
|                         | <NTFCNCDE>  | Two-letter notification code. A null value is equivalent to ALL. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.                |
|                         | • CL        | The condition causing the alarm has cleared.  |
|                         | • CR        | A critical alarm.   |
|                         | • MJ        | A major alarm.  |
|                         | • MN        | A minor alarm.  |
|                         | • NA        | The condition is not alarmed.   |
|                         | • NR        | The alarm is not reported.  |
|                         | <ALMTYPE>   | The alarm type for the environmental alarm. A null value is equivalent to ALL. The parameter type is ENV_ALM, which is the environmental alarm type.  |
|                         | • AIRCOMPR  | Air compressor failure  |

**Output Parameters**

|            |  |
|------------|--|
| <AID>      | Access identifier from the <a href="#">“26.14 ENV” section on page 26-39</a> .   |
| <NTFCNCDE> | (Optional) Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message. |
| • CL       | The condition causing the alarm has cleared.   |
| • CR       | A critical alarm.  |
| • MJ       | A major alarm.   |
| • MN       | A minor alarm.   |
| • NA       | The condition is not alarmed.  |

|             |   |
|-------------|---|
| • NR        | The alarm is not reported.  |
| <ALMTYPE>   | The alarm type for the environmental alarm. The parameter type is ENV_ALM, which is the environmental alarm type. |
| • AIRCOMPR  | Air compressor failure  |
| • AIRCOND   | Air conditioning failure  |
| • AIRDRYR   | Air dryer failure   |
| • BATDSCHRG | Battery discharging   |
| • BATTERY   | Battery failure   |
| • CLFAN     | Cooling fan failure   |
| • CPMAJOR   | Centralized power major failure   |
| • CPMINOR   | Centralized power minor failure   |
| • ENGINE    | Engine failure  |

| • TOXICGAS   | Toxic gas  |
| • TREPEATER  | T-repeater shelf   |
| • VENTN      | Ventilation system failure   |
| <OCRDAT>     | (Optional) Date when the specific event or violation occurred, MM-DD.  |
| <OCRTM>      | (Optional) Time when the specific event or violation occurred, HH-MM-SS.   |
| <LOCN>       | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place. |
| • FEND       | Action occurs on the far end of the facility.  |
| • NEND       | Action occurs on the near end of the facility.   |
| <DIRN>       | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH        | Both transmit and receive directions   |
| • RCV        | Receive direction only   |
| <DESC>       | (Optional) Condition description. DESC is a string.  |

## 21.39 RTRV-COND-EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Condition Equipment (RTRV-COND-EQPT) command retrieves the equipment conditions.

**Usage Guidelines** None

**Category** Equipment

**Security** Retrieve

**Input Format** RTRV-COND-EQPT:[<TID>]:<AID>:<CTAG>::[<TYPEREQ>],[<LOCN>],[<DIRN>];

**Input Example** RTRV-COND-EQPT:TID:SLOT-1:229::LOS;

|                         |           |  |
|-------------------------|-----------|--|
| <b>Input Parameters</b> | <AID>     | Access identifier from the “26.15 EQPT” section on page 26-39 that has an alarm condition.   |
|                         | <TYPEREQ> | The type of condition to be retrieved. A null value is equivalent to ALL. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See Chapter 27, “Conditions” for a list of conditions. |
|                         | <LOCN>    | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
|                         | • FEND    | Action occurs on the far end of the facility.  |
|                         | • NEND    | Action occurs on the near end of the facility.   |
|                         | <DIRN>    | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
|                         | • BTH     | Both transmit and receive directions   |
|                         | • RCV     | Receive direction only   |

| <DIRN>   | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| <ul style="list-style-type: none"> <li>• BTH</li> <li>• RCV</li> </ul>   | <p>Both transmit and receive directions</p> <p>Receive direction only</p>  |
| <DESC>   | (Optional) Condition description. DESC is a string.  |

## 21.40 RTRV-COND-SYNCN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Condition Synchronization (RTRV-COND-SYNCN) command retrieves the synchronization condition.

**Usage Guidelines** None

**Category** Synchronization

**Security** Retrieve

**Input Format** RTRV-COND-SYNCN:[<TID>]:<AID>:<CTAG>::[<TYPEREQ>],[<LOCN>],[<DIRN>];

**Input Example** RTRV-COND-SYNCN:TID:SYNC-NE:229::LOS;

|                         |           |  |
|-------------------------|-----------|--|
| <b>Input Parameters</b> | <AID>     | Access identifier from the “26.30 SYNC_REF” section on page 26-60 that has an alarm condition.   |
|                         | <TYPEREQ> | The type of condition to be retrieved. A null value is equivalent to ALL. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See Chapter 27, “Conditions” for a list of conditions. |
|                         | <LOCN>    | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
|                         | • FEND    | Action occurs on the far end of the facility.  |
|                         | • NEND    | Action occurs on the near end of the facility.   |
|                         | <DIRN>    | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
|                         | • BTH     | Both transmit and receive directions   |
|                         | • RCV     | Receive direction only   |

| • ISC3STP1G  | ISC-3 STP 1G video payload.                              |
| • ISC3STP2G  | ISC-3 STP 2G video payload.                              |
| • ISCCOMPAT  | 1 Gbps ISC1, ISC2, and ISC3 compatibility                |
| • MSISC      | MSISC  |
| • OC3        | OC3 alarm  |
| • OC12       | OC12 alarm   |
| • OC48       | OC48 alarm   |
| • OC192      | OC192 alarm  |
| • OC768      | OC768 alarm  |
| • OCH        | Optical channel  |
| • ODU0       | Optical Data Unit Level 0                                |
| • OMS        | Optical Multiplex Section                                |
| • OTS        | Optical Transport Section                                |
| • OTU1       | Optical Transport Unit Level 1                           |
| • OTU3       | Optical Transport Unit Level 3                           |
| • OTU4       | Optical Transport Unit Level 4                           |
| • POS        | POS port alarm   |
| • REP        | Resilient Ethernet Protocol                              |
| • SDSDI      | 270M SDI video payload                                   |

|            |   |
|------------|---|
| • STS1     | STS1 alarm  |
| • STS3C    | STS3c alarm   |
| • STS6C    | STS6c alarm   |
| • STS9C    | STS9c alarm   |
| • STS18C   | STS18c alarm  |
| • STS12C   | STS12c alarm  |
| • STS24C   | STS24c alarm  |
| • STS36C   | STS36c alarm  |
| • STS48C   | STS48c alarm  |
| • STS192C  | STS192c alarm   |
| • SYNCN    | SYNCN alarm   |
| • T1       | T1 alarm  |
| • T3       | T3 alarm  |
| • TCC      | TCC alarm   |
| • VT1      | VT1 alarm   |
| • VT2      | VT2 alarm   |
| <NTFCNCDE> | (Optional) Two-letter notification code. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.  |
| • CL       | The condition causing the alarm has cleared.  |
| • CR       | A critical alarm.   |
| • MJ       | A major alarm.  |
| • MN       | A minor alarm.  |
| • NA       | The condition is not alarmed.   |
| • NR       | The alarm is not reported.  |
| <TYPEREP>  | The type of condition to be retrieved. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, “Conditions”</a> for a list of conditions. |
| <SRVEFF>   | (Optional) The effect on service caused by the standing alarm or condition. The parameter type is SERV_EFF, which is the effect of the alarm on service.  |
| • NSA      | The condition is non-service affecting.   |
| • SA       | The condition is service affecting.   |
| <OCRDAT>   | (Optional) Date when the specific event or violation occurred, MM-DD.   |
| <OVRTM>    | (Optional) Time when the specific event or violation occurred, HH-MM-SS.  |

|  |  |
|--|--|
| <LOCN>   | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place. |
| <ul style="list-style-type: none"> <li>• FEND</li> <li>• NEND</li> </ul> | <p>Action occurs on the far end of the facility.</p> <p>Action occurs on the near end of the facility.</p>   |
| <DIRN>   | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| <ul style="list-style-type: none"> <li>• BTH</li> <li>• RCV</li> </ul>   | <p>Both transmit and receive directions</p> <p>Receive direction only</p>  |
| <DESC>   | (Optional) Condition description. DESC is a string.  |

## 21.41 RTRV-CONSOLE-PORT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Console Port (RTRV-CONSOLE-PORT) command retrieves the status of the console port from the ML-Series cards.

**Usage Guidelines** None

**Category** Security

**Security** Retrieve

**Input Format** RTRV-CONSOLE-PORT:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-CONSOLE-PORT:CISCONODE:SLOT-2:123;

**Input Parameters** <AID> Access identifier from the [“26.15 EQPT”](#) section on page 26-39.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<EQPT>:[PORT=<PORT>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“SLOT-2:PORT=ENABLED”
;
```

|                          |   |  |
|--------------------------|---|--|
| <b>Output Parameters</b> | <EQPT>  | Identifies the slot number for the data card. EQPT is a string.  |
|                          | <PORT>  | (Optional) Status of the console port on the data card. The parameter type is PORTSTAT, which is the status of the console port on the card. |
|                          | <ul style="list-style-type: none"> <li>DISABLED</li> <li>ENABLED</li> </ul> | <p>The port is disabled.</p> <p>The port is enabled.</p>   |

## 21.42 RTRV-COS-ETH

(Cisco ONS 15454) The Retrieve Cost of Service Ethernet (RTRV-COS-ETH) command retrieves the egress parameters of a CoS table associated to an L2 Ethernet port.

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | None  |
| <b>Category</b>         | Ethernet  |
| <b>Security</b>         | Provisioning  |
| <b>Input Format</b>     | RTRV-COS-ETH:[<TID>]:<AID>:<CTAG>[::::];  |
| <b>Input Example</b>    | RTRV-COS-ETH:TID:ETH-1-1-1:CTAG;  |
| <b>Input Parameters</b> | <p>&lt;AID&gt;</p> <p>Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH”</a> section on page 26-41.</p> |

|                       |   |
|-----------------------|---|
| <b>Output Format</b>  | <pre> SID DATE TIME M CTAG COMPLD   “&lt;AID&gt;::[QOSENABLED=&lt;QOSENABLED&gt;],[BW0=&lt;BWO&gt;], [WEIGHT0=&lt;WEIGHT0&gt;],[BW1=&lt;BW1&gt;],[WEIGHT1=&lt;WEIGHT1&gt;],[BW2=&lt;BW2&gt;], [WEIGHT2=&lt;WEIGHT2&gt;],[BW3=&lt;BW3&gt;],[WEIGHT3=&lt;WEIGHT3&gt;],[BW4=&lt;BW4&gt;], [WEIGHT4=&lt;WEIGHT4&gt;],[BW5=&lt;BW5&gt;],[WEIGHT5=&lt;WEIGHT5&gt;],[BW6=&lt;BW6&gt;], [WEIGHT6=&lt;WEIGHT6&gt;],[BW7=&lt;BW7&gt;],[WEIGHT7=&lt;WEIGHT7&gt;][::]” ; </pre> |
| <b>Output Example</b> | <pre> TID-000 1998-06-20 14:30:00 M 001 COMPLD   “ETH-5-1-1::QOSENABLED=Y,BW0=10,WEIGHT0=0,BW1=20,WEIGHT1=2,BW2=40, </pre>  |

```
WEIGHT2=4,BW3=60,WEIGHT3=6,BW4=70,WEIGHT4=8,BW5=80,WEIGHT5=10,BW6=85,
WEIGHT6=12,BW7=100,WEIGHT7=15;"
;
```

**Output Parameters**

|              |   |
|--------------|---|
| <AID>        | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.                     |
| <QOSENABLED> | Used to enable or disable the egress quality of service (QoS) policy of an L2 Ethernet port.  |
| • N          | Disable the service   |
| • Y          | Enable the service  |
| <BW0>        | Bandwidth percentage, a value between 0 and 100   |
| <WEIGHT0>    | Value represents the weighted round-robin (WRR) weight associated to the CoS values. It is an integer value ranging between 0 and 15. |
| <BW1>        | Bandwidth percentage, a value between 0 and 100   |
| <WEIGHT1>    | Value represents the WRR weight associated to the CoS values. It is an integer value ranging between 0 and 15.                        |
| <BW2>        | Bandwidth percentage, a value between 0 and 100   |
| <WEIGHT2>    | Value represents the WRR weight associated to the CoS values. It is an integer value ranging between 0 and 15.                        |
| <BW3>        | Bandwidth percentage, a value between 0 and 100   |
| <WEIGHT3>    | Value represents the WRR weight associated to the CoS values. It is an integer value ranging between 0 and 15.                        |
| <BW4>        | Bandwidth percentage, a value between 0 and 100   |
| <WEIGHT4>    | Value represents the WRR weight associated to the CoS values. It is an integer value ranging between 0 and 15.                        |
| <BW5>        | Bandwidth percentage, a value between 0 and 100   |
| <WEIGHT5>    | Value represents the WRR weight associated to the CoS values. It is an integer value ranging between 0 and 15.                        |
| <BW6>        | Bandwidth percentage, a value between 0 and 100   |
| <WEIGHT6>    | Value represents the WRR weight associated to the CoS values. It is an integer value ranging between 0 and 15.                        |
| <BW7>        | Bandwidth percentage, a value between 0 and 100   |
| <WEIGHT7>    | Value represents the WRR weight associated to the CoS values. It is an integer value ranging between 0 and 15.                        |

## 21.43 RTRV-CRS

(Cisco ONS 15454) The Retrieve Cross-Connect (RTRV-CRS) command retrieves all the cross-connections based on the required PATH types.

**Usage Guidelines**

- This command retrieves all the STS and/or VT cross-connections on the NE, or on the specified shelf, card, or port.

- A NULL AID defaults to ALL (NE).
- A NULL PATH defaults to all the existing cross-connections.
- Both DRITYPE and DRINODE optional fields are available to support MSSPR-DRI. DRITYPE is applied only if the cross-connect is a drop-and-continue connection (1WAYDC or 2WAYDC), and defaults to SNCP for the DRI. DRINODE must be specified only if at least one end of the connection is on the MS-SPRing, and defaults to NA.
- CKTID is a string of ASCII characters. The maximum length of CKTID is 48. If the CKTID is EMPTY or NULL it will not appear.
- VC values in CRS\_TYPE are not supported in this command.

**Category**

Cross Connections

**Security**

Retrieve

**Input Format**

RTRV-CRS:[&lt;TID&gt;]:[&lt;AID&gt;]:&lt;CTAG&gt;:::[CRSTYPE=&lt;CRSTYPE&gt;][:];

**Input Example**

RTRV-CRS:CISCO:ALL:123:::CRSTYPE=STS;

**Input Parameters**

|                        |   |
|------------------------|---|
| <b>&lt;AID&gt;</b>     | Access identifier from the <a href="#">“26.12 CrossConnectId1”</a> section on <a href="#">page 26-31</a> that can be EQPT, Facility, STS, VT, or ALL. The ALL AID defaults to NE, which means it reports all the existing cross-connections on the NE. A null value is equivalent to ALL. |
| <b>&lt;CRSTYPE&gt;</b> | The cross-connection type. Defaults to all existing cross-connections. A null value is equivalent to ALL. The parameter type is PATH, which is the modifier for path commands.<br><br><b>Note</b> The cross-connection type cannot be VT, if the AID specified is an STS AID.             |
| • STS1                 | Synchronous transport signal/module level 1 (51.84 Mbps)  |
| • STS3C                | Synchronous transport signal/module level 3 concatenated (155.52 Mbps)  |
| • STS6C                | Synchronous transport signal/module level 6 (311.04 Mbps)   |
| • STS9C                | Synchronous transport signal/module level 9 concatenated (466.56 Mbps)  |
| • STS12C               | Synchronous transport signal/module level 12 concatenated (622.08 Mbps)   |
| • STS18C               | Synchronous transport signal/module level 18 concatenated (933.12 Mbps)   |
| • STS24C               | Synchronous transport signal/module level 24 concatenated (1244.16 Mbps)  |
| • STS36C               | Synchronous transport signal/module level 36 concatenated (1866.24 Mbps)  |

|           |   |
|-----------|---|
| • STS48C  | Synchronous transport signal/module level 48 concatenated (2488.32 Mbps)  |
| • STS192C | Synchronous transport signal/module level 192 concatenated (9953.28 Mbps) |
| • VT1     | Virtual Tributary 1   |
| • VT2     | Virtual Tributary 2   |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<SRC>,<DST>:<CCT>,<CRSTYPE>:[DRITYPE=<DRITYPE>],[DRINODE=<SYNCSW>],
[CKTID=<CKTID>]:<PST_PSTQ>,[<SSTQ>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"STS-5-1-2&STS-6-1-2,STS-12-1-2&STS-13-1-2:1WAYDC,STS1:DRITYPE=BLSR,
DRINODE=PRI,CKTID=CKTID:OOS-AU,AINS"
;
```

**Output Parameters**

|           |  |
|-----------|--|
| <SRC>     | Source access identifier from the <a href="#">“26.11 CrossConnectId”</a> section on page 26-27. Indicates the source AID(s) of the cross-connection. SRC is listable.  |
| <DST>     | Destination AID of the cross-connection from the <a href="#">“26.11 CrossConnectId”</a> section on page 26-27. DST is listable.  |
| <CCT>     | Type of connection. Used for specifying one or two-way connections. The parameter type is CCT, which is the type of cross-connect to be created.   |
| • 1WAY    | A unidirectional connection from a source tributary to a destination tributary   |
| • 1WAYDC  | Path Protection multicast drop with one-way continue   |
| • 1WAYEN  | Path Protection multicast end node with one-way continue   |
| • 1WAYMON | A bidirectional connection between the two tributaries   |
|           | <b>Note</b> In ONS 15454 Software Release 3.0 and later, 1WAYMON is not supported with TL1. However, it is still supported from Cisco Transport Controller (CTC). Using CTC, you can create 1WAYMON cross-connects that can be retrieved with TL1. |
| • 1WAYPCA | A unidirectional connection from a source tributary to a destination tributary on the protection path/fiber  |
| • 2WAY    | A bidirectional connection between the two tributaries   |
| • 2WAYDC  | A bidirectional drop and continue connection applicable only to path protection traditional and integrated DRIs  |
| • 2WAYPCA | A bidirectional connection between the two tributaries on the extra protection path/fiber  |

|                        |  |
|------------------------|--|
| • DIAG                 | Diagnostics cross-connect. Supports BERT (BLSR PCA diagnostics cross-connect).   |
| <CRSTYPE>              | The cross-connection type. The parameter type is CRS_TYPE, which is the cross-connection type.<br><br><b>Note</b> The cross-connection type cannot be VT, if the AID specified is an STS AID.  |
| • STS                  | Indicates all the STS cross-connections  |
| • STS1                 | STS1 cross-connect   |
| • STS3C                | STS3c cross-connect  |
| • STS6C                | STS6c cross-connect  |
| • STS9C                | STS9c cross-connect  |
| • STS12C               | STS12c cross-connect   |
| • STS18C               | STS18c cross-connect   |
| • STS24C               | STS24c cross-connect   |
| • STS36C               | STS36c cross-connect   |
| • STS48C               | STS48c cross-connect   |
| • STS192C              | STS192c cross-connect  |
| • VT                   | Indicates all the VT1 cross-connections  |
| • VT1                  | VT1 cross-connect  |
| • VT2                  | VT2 cross-connect  |
| <DRITYPE>              | (Optional) The DRI connection type. It is applied only if the cross-connection is a drop-and-continue connection type (1WAYDC or 2WAYDC), and defaults to path protection for the DRI configuration. The parameter type is DRITYPE (DRI type). |
| • BLRS                 | BLSR DRI type  |
| • Path Protection      | Path Protection DRI type   |
| • Path Protection-BLSR | Path Protection-BLSR hand-off DRI type   |
| <DRINODE>              | (Optional) Synchronization switch AID from the <a href="#">“26.31 SYNC SW” section on page 26-60</a> .   |
| <CKTID>                | (Optional) Circuit identification parameter that contains a common language ID or other alias of the circuit being provisioned. It cannot contain blank spaces. CKTID is a string.   |
| <PST_PSTQ>             | Primary state and primary state qualifier separated by a colon. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and PSTQ.  |
| • IS-NR                | In Service and Normal  |
| • OOS-AU               | Out of Service and Autonomous  |
| • OOS-AUMA             | Out of Service and Autonomous Management   |
| • OOS-MA               | Out of Service and Management  |
| <SSTQ>                 | (Optional) One or more secondary states separated by “&”, in alphabetical order. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| • AINS                 | Automatic In-Service   |
| • DSBLD                | Disabled   |

|        |                       |
|--------|-----------------------|
| • LPBK | Loopback              |
| • MEA  | Mismatch of Equipment |
| • MT   | Maintenance           |
| • OOG  | Out of Group          |
| • SWDL | Software Download     |
| • UAS  | Unassigned            |
| • UEQ  | Unequipped            |

## 21.44 RTRV-CRS-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Cross-Connect for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (RTRV-CRS-<PATH>) command retrieves any connections associated with the entered AID(s) or AID range. The information on both ends is returned along with the type of connection.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

#### Note

- The path protection STS cross-connection can be retrieved by using “&” in the AID fields of this command.
  - To retrieve a 1-way selector or 2-way selector and bridge cross-connection with:
    - from points: F1, F2
    - to points: T1
    - the output will be:
      - 1-way
      - “F1&F2,T1:CCT,STS3C”
      - 2-way
    - If retrieved on point F1 or F2, the output format is the same as the 1-way output.
    - If retrieved on point T1, the output will be:
      - “T1,F1&F2:CCT,STS3C”
  - To retrieve a 1-way bridge or 2-way selector and bridge cross-connection with:
    - from point: F1
    - to points: T1, T2
    - the output will be:
      - 1-way
      - “F1,T1&T2:CCT,STS3C”
      - 2-way
      - “T1&T2,F1:CCT,STS3C”
  - To retrieve a 1-way subtending path protection connection or 2-way subtending path protection cross-connection with:

from point: F1, F2

to points: T1, T2

the output will be:

1-way:

“F1&F2,T1&T2:CCT,STS3C”

2-way:

If retrieved on point F1 or F2, the output format is the same as the 1-way output.

If retrieved on point T1 or T2, the output will be:

“T1&T2,F1&F2:CCT,STS3C”

- To retrieve a 2-way selector and bridge cross-connection with:  
ENT-CRS-<PATH>::F1&F2,S1&S2:<CTAG>::2WAY;  
from points: F1, F2 (F1 is the working side, F2 is the protect side)  
selector: S1, S2 (S1 is the working side, S2 is the protect side)  
the output will be:  
If retrieved on point F1 or F2, the output will be:  
“F1&F2,S1&S2:CCT,STS3C”  
If retrieved on selector S1 or S2, the output will be:  
“S1&S2,F1&F2:CCT,STS3C”
- To retrieve a path protection IDRI cross-connect with:  
from points: F1, F2  
to points: T1, T2  
the output will be:  
“F1&F2,T1&T2:CCT,STS3C”
- To retrieve a path protection DRI cross-connect with:  
from points: F1, F2  
to points: T1  
the output will be:  
“F1&F2,T1:CCT,STS3C”

- All A&B AIDs in the TL1 cross-connection command are in the format of WorkingAID&ProtectAID.
- STS\_PATH does not include STS for the RTRV-CRS command because STS is not a standard designator as defined by Telcordia GR-833, Section A-2.
- Both the 1WAYPCA and 2WAYPCA is used to specify a PCA cross-connection.
- The facility AID is only valid on slots with a G1K-4 card.
- The virtual facility AID (VFAC) is only valid on slots holding the ML-Series card.
- Both DRITYPE and DRINODE optional fields are available to support BLSR-DRI. DRITYPE is applied only if the cross-connect is a drop-and-continue connection (1WAYDC or 2WAYDC), and defaults to path protection for the DRI. DRINODE must be specified only if at least one end of the connection is on the BLSR, and defaults to NA.

- The DS3XM-12 card allows portless STS1/VT1.5 cross-connection provisioning on the PORTLESS ports.

|              |   |
|--------------|---|
| • 1WAYMON    | A bidirectional connection between the two tributaries<br><b>Note</b> With ONS 15454 Software R3.0 and later, 1WAYMON is not supported with TL1. However, it is still supported from CTC. Using CTC, you can create 1WAYMON cross-connects and can be retrieved by TL1. |
| • 1WAYPCA    | A unidirectional connection from a source tributary to a destination tributary on the protection path/fiber   |
| • 2WAY       | A bidirectional connection between the two tributaries  |
| • 2WAYDC     | A bidirectional drop and continue connection applicable only to path protection traditional and integrated dual-ring interconnects  |
| • 2WAYPCA    | A bidirectional connection between the two tributaries on the extra protection path/fiber   |
| • DIAG       | Diagnostics cross-connect. Supports BERT (BLSR PCA diagnostics cross-connect)   |
| <MOD>        | The connection path bandwidth. The parameter type is MOD2, which is the line/path modifier.   |
| • 10GFC      | 10-Gigabit Fibre Channel payload  |
| • 10GIGE     | 10-Gigabit Ethernet   |
| • 1GFC       | 1-Gigabit Fibre Channel payload   |
| • 1GFICON    | 1-Gigabit fiber connectivity payload  |
| • 2GFC       | 2-Gigabit Fibre Channel payload   |
| • 2GFICON    | 2-Gigabit fiber connectivity payload  |
| • 3GVIDEO    | 3G-SDI video payload.   |
| • 4GFC       | 4-Gigabit Fibre Channel payload   |
| • 4GFICON    | 4-Gigabit fiber connectivity payload  |
| • D1VIDEO    | D1 Video  |

| • OCHTERM              | OCH termination  |
| • OMS                  | Optical Multiplex Section  |
| • OTS                  | Optical Transport Section  |
| • POS                  | POS port   |
| • STS1                 | STS1 path  |
| • STS3C                | STS3c path   |
| • STS6C                | STS6c path   |
| • STS9C                | STS9c path   |
| • STS18C               | STS18c path  |
| • STS12C               | STS12c path  |
| • STS24C               | STS24c path  |
| • STS36C               | STS36c path  |
| • STS48C               | STS48c path  |
| • STS192C              | STS192c path   |
| • T1                   | T1/DS1 facility/line   |
| • T3                   | T1/DS1 facility/line   |
| • VT1                  | VT1 path   |
| • VT2                  | VT2 path   |
| <DRITYPE>              | (Optional) The DRI connection type. It is applied only if the cross-connection is a drop-and-continue connection type (1WAYDC or 2WAYDC), and defaults to path protection for the DRI configuration. The parameter type is DRITYPE (DRI type). |
| • BLRS                 | BLSR DRI type  |
| • Path Protection      | Path Protection DRI type   |
| • Path Protection-BLSR | Path Protection-BLSR hand-off DRI type   |
| <SYNCSW>               | (Optional) Synchronization switch AID from the <a href="#">“26.31 SYNCSW” section on page 26-60</a> .  |
| <CKTID>                | (Optional) A string of ASCII characters. Maximum length is 48. CKTID is a string.  |
| <PST_PSTQ>             | Primary state and primary state qualifier separated by a colon. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and PSTQ.  |
| • IS-NR                | In Service and Normal  |
| • OOS-AU               | Out of Service and Autonomous  |
| • OOS-AUMA             | Out of Service and Autonomous Management   |

|          |   |
|----------|---|
| • OOS-MA | Out of Service and Management   |
| <SSTQ>   | (Optional) One or more secondary states separated by “&”, in alphabetical order. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS   | Automatic In-Service  |
| • DSBLD  | Disabled  |
| • LPBK   | Loopback  |
| • MEA    | Mismatch of Equipment   |
| • MT     | Maintenance   |
| • OOG    | Out of Group  |
| • SWDL   | Software Download   |
| • UAS    | Unassigned  |
| • UEQ    | Unequipped  |

## 21.45 RTRV-CRS-ETH

(Cisco ONS 15454)

This command retrieve an Ethernet Connection between two or more ethernet connection end points within ethernet facilities.

### Usage Guidelines

This command accept the ALL AID. Use one of the specified ethernet end points and the connection end point identifier associated in order to identify a cross-connection inside the node.

### Category

ETHERNET

### Security

Retrieve

### Input Format

RTRV-CRS-ETH:[<TID>]:<aid>:<CTAG>[:];

### Input Example

```
RTRV-CRS-ETH:TID:ALL:CTAG;
RTRV-CRS-ETH:TID:ETH-5-1-1-ALL:CTAG;
RTRV-CRS-ETH:TID:ETH-1-1-1-11:CTAG;
```

### Input Parameters

Table 21-5 Input Parameter Support

| Parameter  | Description   |
|--|---|
| <AID>  | Ethernet connection identifier AIDs used to access L2 ethernet connection end point.      |
| <ul style="list-style-type: none"> <li>ALL</li> </ul>  | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands. |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]-{1-5,12-16}-{1-22}-1-{1-20}</li> </ul> | Ethernet connection end point aid for GE-XP card.   |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]-{1-6,12-17}-{1-4}-1-{1-20}</li> </ul>  | Facility aid for 10GE-XP card.  |

**Output Format**

SID DATE TIME

M CTAG COMPLD

" &lt;SRC&gt;, &lt;DST&gt;: &lt;ECT&gt;: [CKTID=&lt;CKTID&gt;]: &lt;PSTPSTQ&gt;, [ &lt;SSTQ&gt; ]";

**Output Example**

TID-000 1998-06-20 14:30:00

M 001 COMPLD

"ETH-1-1-1-13,ETH-1-21-1-13&amp;ETH-1-22-1-13:2WAY:CKTID=ETHERNET:IS-NR";

**Output Parameters**

|   |   |
|---|---|
| <SRC>   | Ethernet connection identifier AIDs used to access L2 ethernet connection end point.                                      |
| <ul style="list-style-type: none"> <li>ALL</li> </ul>   | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands.                                 |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]-{1-5,12-16} -{1-22}-1-{1-20}</li> </ul> | Ethernet connection end point aid for GE-XP card.   |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]-{1-6,12-17} -{1-4}-1-{1-20}</li> </ul>  | Facility aid for 10GE-XP card.  |
| <DST>   | Ethernet connection identifier AIDs used to access L2 ethernet connection end point.                                      |
| <ul style="list-style-type: none"> <li>ALL</li> </ul>   | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands.                                 |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]-{1-5,12-16} -{1-22}-1-{1-20}</li> </ul> | Ethernet connection end point aid for GE-XP card.   |
| <ul style="list-style-type: none"> <li>ETHID[-{1-12}]-{1-6,12-17} -{1-4}-1-{1-20}</li> </ul>  | Facility aid for 10GE-XP card.  |
| <ECT>   | Defines the type of cross-connect to be created. It is a subset of the CCT.   |
| <ul style="list-style-type: none"> <li>2WAY</li> </ul>  | A bidirectional connection between the two tributaries  |
| <CKTID>   | Circuit identification parameter contains the Common Language Circuit ID or other alias of the circuit being provisioned. |
| <PST-PSTQ >   | Service State of the entity described by the Primary State (PST) and a Primary State Qualifier (PSTQ)                     |

|                             |   |
|-----------------------------|---|
| • IS-NRorUnlocked-Enabled   | In Service - Normal   |
| • OOS-AUorUnlocked-Disabled | Out of Service - Autonomous   |
| • OOS-AUMAorLocked-Disabled | Out of Service - Autonomous and Management  |
| • OOS-MTorLocked-Enabled    | Out of Service - Management   |
| <SST>                       | Secondary State. This parameter provides additional information pertaining to PST and PSTQ. |
| AINSorAutomaticInService    | Automatic In Service State Transition.  |
| DSBLDorDisabled             | Disabled  |

## 21.46 RTRV-DFLT-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Default Security (RTRV-DFLT-SECU) command retrieves the system-wide default values associated with several security parameters.

### Usage Guidelines

None

### Category

Security

### Security

Superuser

### Input Format

RTRV-DFLT-SECU:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-DFLT-SECU:CISCO:ALL:123;

### Input Parameters

<AID> Access identifier. ALL is the only acceptable value. AID is a string.

### Output Format

SID DATE TIME  
M CTAG COMPLD

“<NE>:PAGE=<PAGE>,PCND=<PCND>,MXINV=<MXINV>,DURAL=<DURAL>,TMOUT=<TMOUT>,UOUT=<UOUT>,PFRCD=<PFRCD>,POLD=<POLD>,PINT=<PINT>,LOGIN=<LOGIN>,[PRIVLVL=<PRIVLVL>],[PDIF=<PDIF>],[PWDCHRULE=<PWDCHRULE>],[PWDMINLEN=<PWDMINLEN>],[PWDMAXLEN=<PWDMAXLEN>]”  
;

**Output Example**

```

TID-000 1998-06-20 14:30:00
M 001 COMPLD
“TCC2:PAGE=40,PCND=5,MXINV=5,DURAL=30,TMOU=0,UOUT=60,PFRCD=NO,
  POLD=5,PINT=20,LOGIN=MULTIPLE,PRIVLVL=RTRV,PDIF=1”
;
TID-000 1998-06-20 14:30:00
M 001 COMPLD

“107161:PAGE=0,PCND=0,MXINV=5,DURAL=30,TMOU=0,UOUT=0,PFRCD=NO,POLD=1,PIN
T=0,LOGIN=MULTIPLE,PRIVLVL=RTRV,PDIF=1,PWDCHRULE=ANY_CHAR,PWDMINLEN=2,
PWDMAXLEN=20”
;

```

**Output Parameters**

|         |  |
|---------|--|
| <NE>    | The node name of the NE where the system values are to be retrieved.   |
| <PAGE>  | Password aging interval. It is the number of days before a user is prompted to change his or her password. 0 indicates the policy is turned off and is the default. If PAGE is turned on for all privilege levels and is not specified for each privilege level, it defaults to 45 days. PAGE ranges from 20 to 90 days. PAGE is an integer.   |
| <PCND>  | Number of days a password can be used before a new one is mandatory (for example, the warning period). Default is 5 days. PCND ranges from 2 to 20 days. PCND is an integer.   |
| <MXINV> | Maximum number of consecutive and invalid session set up attempts allowed to occur before an intrusion attempt is suspected (for example, “Failed Logins Before Lockout” from CTC). 0 indicates the policy is turned off. Default is 5. MXINV ranges from 0 to 10. MXINV is an integer.  |
| <DURAL> | Time interval (in seconds) during which a user ID is locked out when an intrusion attempt is suspected (for example, the “Lockout Duration”). If the user is locked out until unlocked by a Superuser, DURAL=INFINITE. Default is 30 seconds. DURAL ranges from 0 to 600 seconds. DURAL is 0 for RTRV users, 60 minutes for MAINT users, 30 minutes for PROV users, and 15 minutes for SUPER users. DURAL is a string. |
| <TMOU>  | Interval (in minutes) after which a session is terminated if no messages are exchanged between the user and the NE. 0 indicates that the session will not timeout. TMOU is an integer.   |
| <UOUT>  | UID aging interval, expressed in days. If a userid has not been used in UOUT days, the user will be forced to change his/her password (or logout) at the next login. No other command is allowed until the password has been changed. 0 indicates the policy is turned off and is the default. UOUT ranges from 1 to 99 days. UOUT is an integer.  |

|   |  |
|---|--|
| <PFRCD>   | Indicates if a password change is required when a new user establishes a session to the NE for the first time. (For example, “Require password change on 1st login”). Default is NO. The parameter type is YES_NO, which indicates whether the user’s password is about to expire, the user is logged into the NE or the user is locked out of the NE.                         |
| • NO  | Password change is not required.   |
| • YES   | Password change is required.   |
| <POLD>  | Number of prior passwords that cannot be reused (for example, “Prevent reusing last X passwords”). Default is 1. POLD ranges from 0 to 10. POLD is an integer.   |
| <PINT>  | Number of days that must pass before a password can be changed. If PINT is 0, the policy is turned off. Default is off. PINT ranges from 20 to 95 days. PINT is an integer.  |
| <LOGIN>   | Number of times a user can log into an NE. LOGIN is either SINGLE or MULTIPLE. If LOGIN is SINGLE, a user can only log into an NE one time with any given userid, regardless of the method of login (for example, CTC, TL1, etc.). Default is MULTIPLE. The parameter type is USER_LOGINS, which is the number of times a user can log into the same NE with the same user ID. |
| • MULTIPLE  | A user can log into the same NE many times.  |
| • SINGLE  | A user can log into the NE only once (includes both CTC and TL1 sessions).   |
| <PRIVLVL>   | Parameter type is PRIVILEGE, which is the security level.  |
| • MAINT   | Maintenance security level. Unlimited idle time.   |
| • PROV  | Provision security level. 60 minutes of idle time.   |
| • RTRV  | Retrieve security level. 30 minutes of idle time.  |
| • SUPER   | Superuser security level. 15 minutes of idle time.   |
| • ROOT_USER   | Root user.   |
| • SEC_SUPER   | Security super user.   |
| • SEC_USER  | Security user.   |
| <PDIF>  | (Optional) Indicates how many characters must differ between old and new passwords. Default minimum character difference is 1. Ranges from 0 to 5 characters. PDIF is an integer.  |
| <PWDCHRULE>   | (Optional) Password Characters Rule. Indicates the password characters rule for the specified minimum length of the password.  |
| • ONE_EACH_OF_LETTER_N<br>UM_TL1SPECIAL                 | One letter, one number, and one TL1 special character (% , # , +).   |
| • ONE_EACH_OF_LETTER_N<br>UM_SPECIAL                    | One letter, one number, and one special character.   |
| • TWO_EACH_OF_TWO_OF_<br>UPPER_LOWER_NUM_T<br>L1SPECIAL | Two each of any of the two numbers, upper, lower, or TL1 special characters.   |
| • TWO_EACH_OF_TWO_OF_<br>UPPER_LOWER_NUM_S<br>PECIAL    | Two each of any of the two numbers, upper, lower, or special characters.   |
| • ANY_CHAR  | Any character.   |

|             |  |
|-------------|--|
| <PWDMINLEN> | (Optional) Password Minimum Length. Indicates the minimum number of characters that can be set for password configuration. The values are 2, 4, 6, 8, 10 and 12. |
| <PWDMAXLEN> | (Optional) Password Maximum Length. Indicates the maximum number of characters that can be set for password configuration. The values are 20 or 80.              |

## 21.47 RTRV-DS1

(Cisco ONS 15454) The Retrieve DS1 (RTRV-DS1) command retrieves the test access attributes on a DS1 layer of a DS3XM card.

### Note

Frame format is not applicable to even port less ports on DS3XM-12 card and cannot be retrieved through RTRV-DS1 command.

### Usage Guidelines

- Both the MODE and the FMT fields of this command are applied for the DS3XM-12 card only.
- If the DS1 mode of the DS3XM-12 is ATT, the DS1 path can retrieve AT&T/54016 FEND PM counts up to 96 15-minute intervals; if the DS1 mode of the DS3XM-12 is FDL, the DS1 path can retrieve FDL/T1-403 FEND PM counts up to 32 15-minute intervals in RTRV-PM-DS1.
- For the DS3XM-12 card, the DS1 frame format NE default is AUTO\_PROV\_FMT for the first 30 seconds to determine the real format. After 30 seconds, the DS1 frame format is the detected frame. If the frame format is not determined, it will be in the UNFRAMED format.
- For the preprovisioning DS3XM-12 card, its DS1 frame format defaults to UNFRAMED.
- For the DS3XM-12 card, the DS1-configurable attributes (PM, TH, alarm, etc.) only apply to the ported ports (1 to 12) and the VT-mapped (odd) portless ports in xxx-xxx-DS1 commands. Provisioning or retrieving DS1 attributes on the DS3-mapped (even) portless ports in xxx-xxx-DS1 commands is not allowed.
- The parameters BERTMODE, BERTPATTERN, BERTERRCOUNT, BERTERRRATE, and BERTSYNCSTATUS apply only to DS1/E1-56 and DS3XM-12 cards
- BERT is implemented on a single port.

BERTSYNCSTATUS=N";
```

**Output Parameters**

|                        |  |
|------------------------|--|
| <AID>                  | (Optional) Access identifier from the “26.13 DS1” section on page 26-38.   |
| <TACC>                 | (Optional) Indicates whether the digroup being provisioned is to be used as a test access digroup. Default is N. TACC is an integer. |
| <TAPTYPE>              | (Optional) TAP type. The parameter type is TAPTYPE, which is the test access point type.   |
| • DUAL                 | Dual FAD   |
| • SINGLE               | Single FAD   |
| <AISONLPBK>            | (Optional) AIS on loopback. The parameter type is AIS_ON_LPBK, which indicates if an AIS is sent on a loopback.                      |
| • AIS_ONLPBK_FACILITY  | AIS is sent on facility loopbacks.   |
| • AIS_ON_LPBK_ALL      | AIS is sent on all loopbacks.  |
| • AIS_ON_LPBK_OFF      | AIS is not sent on loopbacks.  |
| • AIS_ON_LPBK_TERMINAL | AIS is sent on terminal loopbacks.   |
| <MODE>                 | (Optional) Mode. The parameter type is DS1MODE, which is the DS1 path mode of the DS3XM-12 card                                      |
| • ATT                  | Indicates the DS1 path of the DS3XM-12 is in AT&T 54016 mode.  |
| • FDL                  | Indicates the DS1 path of the DS3XM-12 is in FDL T1-403 mode.  |
| <FMT>                  | (Optional) Digital signal frame format. The parameter type is FRAME_FORMAT, which is the frame format for a T1 port.                 |
| • AUTOPROV             | AUTOPROV   |
| • CBIT                 | C-BIT line type applies to the DS3XM and DS3E cards.   |
| • D4                   | Frame format is D4.  |
| • DS2 FRAMED           | DS2 FRAMED   |
| • E2 FRAMED            | E2 FRAMED  |
| • E3-FRAME             | E3-FRAME   |
| • E3-PLCP              | E3-PLCP  |

|                    |  |
|--------------------|--|
| • ESF              | Frame format is ESF.   |
| • FRAMENA          | FRAMENA  |
| • G-751            | G-751  |
| • G-832            | G-832  |
| • M13              | M13 line type applies to the DS3XM and DS3E cards.   |
| • M23              | M23  |
| • SYNTRAN          | SYNTRAN  |
| • UNFRAMED         | Frame format is unframed.  |
| <BERTMODE>         | Specifies the mode [Test Pattern Generator (TPG) or Test Pattern Monitor (TPM)] of the port for BERT.                      |
| • NONE             | BERT mode not enabled.   |
| • TPGM-L           | Test pattern generator and monitor on line side.   |
| • TPGM-B           | Test pattern generator and monitor on backplane.   |
| • TPG-L            | Test pattern generator on line side.   |
| • TPM-L            | Test pattern monitor on line side.   |
| • TPG-B            | Test pattern generator on backplane.   |
| • TPM-B            | Test pattern monitor on backplane.   |
| <BERTPATTERN>      | Specifies the error pattern to be injected for BERT.   |
| • NONE             | BERT pattern not enabled.  |
| • PRBS15           | PRBS15 test pattern.   |
| • PRBS20           | PRBS20 test pattern.   |
| • PRBS23           | PRBS23 test pattern.   |
| • QRSS             | QRSS test pattern.   |
| • ALT-ONE-ALT-ZERO | Alternate one and zero pattern.  |
| <BERTERRCOUNT>     | Integer value. Value -1 indicates that BERT is disabled/not supported.   |
| <BERTERRRATE>      | Specifies the BERT error rate received.  |
| • NONE             | No bit errors.   |
| • SINGLE           | Single bit error.  |
| • 1E-3             | Bit errors in 1E-3 rate.   |
| • 1E-4             | Bit errors in 1E-4 rate.   |
| • 1E-5             | Bit errors in 1E-5 rate.   |
| • 1E-6             | Bit errors in 1E-6 rate.   |
| <BERTSYNCSTATUS>   | Synchronization status of BERT values. The parameter type is Y_N, which specifies if synchronization status is up or down. |
| • Y                | BERT synchronization status is up.   |
| • N                | BERT synchronization status is down.   |

## 21.48 RTRV-DSCP-<MOD2>

(Cisco ONS 15454) The RTRV-DSCP-<MOD2> command retrieves Differentiated Service Code Points (DSCP) to COS conversion table associated to a L2 ethernet port or a channel group.

**Usage Guidelines** This command is applicable when the INGRESSCOS parameter is set to DSCP value on the ethernet port or channel group.

**Category** Ethernet or Channel Group

**Security** Retrieve

**Input Format** RTRV-DSCP-MOD2:[<TID>]:<AID>:<CTAG>::[<COS>][::];

**Input Example** RTRV-DSCP-ETH::ETH-5-1-1:1234;  
RTRV-DSCP-CHGRP::CHGRP-1-1:1234::3;

| Input Parameters | Input Parameters  | Description   |
|------------------|---|---|
|                  | <AID>   | Access identifier.  |
|                  | <ul style="list-style-type: none"> <li>Ethernet</li> </ul>      | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “ <a href="#">26.16 ETH</a> ” section on page 26-41. |
|                  | <ul style="list-style-type: none"> <li>Channel Group</li> </ul> | Access identifier from the “ <a href="#">26.9 CHGRP</a> ” section on page 26-26.  |

**Output Format** SID DATE TIME  
M CTAG COMPLD  
“AID>:<COS>:[DSCPFIRST=<DSCP\_FIRST>],[DSCPLAST=<DSCP\_LAST>];”  
;

**Output Example** TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“ETH-5-1-1:0:DSCPFIRST=0,DSCPLAST=9;”  
;

TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“CHGRP-5-1-1:0:DSCPFIRST=0,DSCPLAST=9;”  
;

| Output Parameters | Output Parameters   | Description   |
|-------------------|---|---|
|                   | <AID>   | Access identifier.  |
|                   | <ul style="list-style-type: none"> <li>Ethernet</li> </ul>      | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “ <a href="#">26.16 ETH</a> ” section on page 26-41. |
|                   | <ul style="list-style-type: none"> <li>Channel Group</li> </ul> | Access identifier from the “ <a href="#">26.9 CHGRP</a> ” section on page 26-26.  |

|   |  |
|---|--|
| <INGRESSCOS>  | Identifies the COS value set in the S-VLAN tag.  |
| <ul style="list-style-type: none"> <li>• 0 to 7</li> <li>• DSCP</li> <li>• TRUST</li> <li>• VLAN</li> </ul> | <ul style="list-style-type: none"> <li>Cos value</li> <li>The COS set according to DSCP to COS mapping table.</li> <li>The Customer COS</li> <li>The COS provisioned on CVLAN basis (QinQ selective mode)</li> </ul> |
| <DSCPFIRST>   | DSCP range. Indicates a DSCP value used in the ethernet frame to define the QoS in L3 ethernet transport. It is a number in the range 0..64. Default values is 0   |
| <DSCPLAST>  | DSCP range. Indicates a DSCP value used in the ethernet frame to define the QoS in L3 ethernet transport. It is a number in the range 0..64. Default values is 0.  |

## 21.49 RTRV-EC1

(Cisco ONS 15454) The Retrieve Electrical Carrier (RTRV-EC1) command retrieves the facility status of an EC1 card.

**Usage Guidelines** None

**Category** Ports

**Security** Retrieve

**Input Format** RTRV-EC1:[<TID>]:<AID>:<CTAG>[:::];

**Input Example** RTRV-EC1:CISCO:FAC-1-1:1234;

**Input Parameters** <AID> Access identifier from the [“26.17 FACILITY”](#) section on page 26-42.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>::[PJMON=<PJMON>],[LBO=<LBO>],[RXEQUAL=<RXEQUAL>],[SOAK=<SOAK>],
[SOAKLEFT=<SOAKLEFT>],[SFBER=<SFBER>],[SDBER=<SDBER>],[NAME=<NAME>],
[EXPTRC=<EXPTRC>],[TRC=<TRC>],[TRCMODE=<TRCMODE>],
[TRCFORMAT=<TRCFORMAT>],[AISONLPBK=<AISONLPBK>]:<PSTPSTQ>,<SSTQ>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
  "FAC-1-1::PJMON=0,LBO=0-225,RXEQUAL=Y,SOAK=52,SOAKLEFT=12-25,SFBER=1E-4,
  SDBER=1E-7,NAME=\"EC1 PORT\",EXPTRC=\"AAA\",TRC=\"AAA\",TRCMODE=MAN,
  TRCFORMAT=16-BYTE,AISONLPBK=AIS_ON_LPBK_ALL:IS-NR,AINS\"
;
```

**Output Parameters**

|            |  |
|------------|--|
| <AID>      | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.   |
| <PJMON>    | (Optional) A SONET pointer monitor attribute of an EC1 port. PJMON is an integer.  |
| <LBO>      | (Optional) Line buildout settings. LBO is an integer. The parameter type is E_LBO, which is the electrical signal line buildout.   |
| • 0–225    | Electrical signal line buildout range is 0–225.  |
| • 226–450  | Electrical signal line buildout range is 226–450.  |
| <RXEQUAL>  | (Optional) Parameter type is EXT_RING, which indicates if the ring supports the extended K1/K2/K3 protocol.  |
| • N        | The ring does not support the extended K1/K2/K3 protocol.  |
| • Y        | The ring does support the extended K1/K2/K3 protocol.  |
| <SOAK>     | IS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer.   |
| <SOAKLEFT> | (Optional) Time remaining for the transition from OOS-AINS to IS measured in 1-minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for SOAKLEFT are as follows: <ul style="list-style-type: none"> <li>• When the port is in OOS, OOS_MT, or IS state, the parameter will not appear.</li> <li>• When the port is in IS-AINS but the countdown has not started due to fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in IS_AINS state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <SFBER>    | (Optional) Signal failure threshold. The default value is 1E-4. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.   |
| • 1E-3     | SFBER is 1E-3.   |
| • 1E-4     | SFBER is 1E-4.   |
| • 1E-5     | SFBER is 1E-5.   |
| <SDBER>    | (Optional) Signal degrade threshold. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.  |
| • 1E-5     | SDBER is 1E-5.   |
| • 1E-6     | SDBER is 1E-6.   |
| • 1E-7     | SDBER is 1E-7.   |
| • 1E-8     | SDBER is 1E-8.   |

|                        |  |
|------------------------|--|
| • 1E-9                 | SDBER is 1E-9.   |
| <NAME>                 | (Optional) Port Name. NAME is a string.  |
| <EXPTRC>               | (Optional) EXPTRC is a string.   |
| <TRC>                  | (Optional) TRC is a string.  |
| <TRCMODE>              | (Optional) Trace mode. The parameter type is TRCMODE.  |
| • AUTO                 | Use the previously received path trace string as the expected string. Not applicable to MXP/TXP cards.   |
| • AUTO-NO-AIS          | Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIM-P is detected.                            |
| • MAN                  | Use the provisioned expected string as the expected string.  |
| • MAN-NO-AIS           | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.                                      |
| • OFF                  | Turn off path trace capability. Nothing will be reported.  |
| <TRCFORMAT>            | (Optional) Trace message size. The parameter type is TRCFORMAT (trace format).   |
| • 1-BYTE               | 1-byte trace message   |
| • 16-BYTE              | 16-byte trace message  |
| • 64-BYTE              | 64-byte trace message  |
| • Y                    | Enable an attribute.   |
| <AISONLPBK>            | (Optional) AIS on loopback. The parameter type is AIS_ON_LPBK, which indicates if an AIS is sent on a loopback.                                      |
| • AIS_ONLPBK_FACILITY  | AIS is sent on facility loopbacks.   |
| • AIS_ON_LPBK_ALL      | AIS is sent on all loopbacks.  |
| • AIS_ON_LPBK_OFF      | AIS is not sent on loopbacks.  |
| • AIS_ON_LPBK_TERMINAL | AIS is sent on terminal loopbacks.   |
| <PST_PSTQ>             | Administrative state in the PST_PSTQ format. The parameter type is PST_PSTQ, which is the service state of the entity described by the SST and PSTQ. |
| • IS-NR                | In Service and Normal  |
| • OOS-AU               | Out of Service and Autonomous  |
| • OOS-AUMA             | Out of Service and Autonomous Management   |
| • OOS-MA               | Out of Service and Management  |
| <SSTQ>                 | (Optional) Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.               |
| • AINS                 | Automatic In-Service   |
| • DSBLD                | Disabled   |
| • LPBK                 | Loopback   |
| • MEA                  | Mismatch of Equipment  |
| • MT                   | Maintenance  |
| • OOG                  | Out of Group   |
| • SWDL                 | Software Download  |
| • UAS                  | Unassigned   |
| • UEQ                  | Unequipped   |

## 21.50 RTRV-EFM

(Cisco ONS 15454) The Retrieve Edit Ethernet in the First Mile (RTRV-EFM) command retrieves the Edit Ethernet in the First Mile (EFM) state on the port and EFM protocol parameters associated with that port.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Ports

### Security

Retrieve

### Input Format

RTRV-EFM:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-EFM::ETH-12-1-1:1;

### Input Parameters

<AID> Access identifier from the “[26.16 ETH](#)” section on [page 26-41](#).

### Output Format

```
SID DATE TIME
M CTAG COMPLD
  “AID>:[STATE=<STATE>], [MODE=<MODE>],
  [LFACTION=<LFACTION>],[DGACTION=<DGACTION>],[SESSIONTIMER=<SESSIONTIMER>
  ],[EFMREMOTELPBK=<EFMREMOTELPBK>];”
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“ETH-7-1-1,STATE=DISABLE,MODE=ACTIVE,LFACTION=NONE,SESSIONTIMER=5,EFMREM
OTELPBK=N:”
;
```

### Output Parameters

<AID> Access identifier from the “[26.16 ETH](#)” section on [page 26-41](#).

<STATE> Indicates whether the EFM is enabled or disabled on the port.

- ENABLE Indicates the EFM is enabled on the port.

|                 |   |
|-----------------|---|
| • DISABLE       | Indicates the EFM is disabled on the port.                  |
| <MODE>          | Indicates the mode of the EFM port.                         |
| • ACTIVE        | The port is in the active state.                            |
| • PASSIVE       | The port is in the passive state.                           |
| <LFACTION>      | Action to be taken for the failure of the link on the port. |
| • RFACTION-NONE | No action.  |
| • ERROR-BLOCK   | Block the port.   |
| <SESSIONTIMER>  | Session expire timer for EFM (in seconds).                  |
| <EFMREMOTELPBK> | Indicates the EFM remote loopback state on the port.        |
| • Y             | Loopback is enabled on the remote port.                     |
| • N             | Loopback is disabled on the remote Port.                    |

## 21.51 RTRV-EQPT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Equipment (RTRV-EQPT) command retrieves the data parameters and state parameters associated with a card or shelf. The command retrieves the card type, equipped state, and the state of that card. The command modifies the provision details of AR-MXP, AR-XP, and AR-XPE cards and its facilities.

### Usage Guidelines

This command returns the PRTYPE, PROTID, RVTM, and RVRTV parameters for a card inside a protection group according to the following scenarios:

- A working AID/card within a 1:1 protection group will return PRTYPE, PROTID, RVTM, and RVRTV.
- A protection/AID card within a 1:1 protection group will return PRTYPE, RVTM, and RVRTV.
- A working AID/card within a 1:N protection group will return PRTYPE, PROTID, RVTM, and RVRTV=Y.
- A protection AID/card of a 1:1 protection group will return PRTYPE, RVTM, and RVRTV=Y.
- An unprotected AID/card will return the AID type, equip (equip/unequip), status (act/standby), and state (IS/OOS) values.
- Preprovisioned cards (without being plugged in) will display OOS,AINS for PST and SST. After the card is plugged in and has gone through its initialization sequence, the card automatically goes to IS state (PST).
- The CARDMODE parameter is displayed for ML-Series Ethernet, FC\_MR-4, DS1/E1-56, and DWDM xponder cards.
- The RETIME parameter is only displayed for the DS1/E1-56 (ONS 15454) card.
- The TRANSMODE parameter is only displayed for the DS1/E1-56 card.

Error conditions:

- The NE will generate an error when the equipment is not provisioned.

**Output Parameters**

|            |  |
|------------|--|
| <AID>      | Access identifier from the “26.15 EQPT” section on page 26-39.   |
| <AIDTYPE>  | The type of facility, link or other addressable entity targeted by the message. The parameter type is EQUIPMENT-TYPE (equipment type).             |
| • 10GE-XP  | (ONS 15454) 2 x 10 Gbps. muxponder/L2 ethernet switch card   |
| • 32-DMX   | (ONS 15454) 32 channel optical demultiplexer   |
| • 32-DMX-L | (ONS 15454) 32 channel optical demultiplexer for L-band  |
| • 32-MUX-O | (ONS 15454) 32 channel unidirectional optical multiplexer<br>This overrides the old equipment type MUX-32 present in the 4.6 and earlier releases. |
| • 32-WSS   | (ONS 15454) 32 channel optical wavelength selective switch for C Band  |

|               |  |
|---------------|--|
| • 40-DMX-C    | (ONS 15454) 40 channel optical demultiplexer for C Band                              |
| • 40-MUX-C    | (ONS 15454) 40 channel optical multiplexer for C Band                                |
| • 40-WSS-C    | (ONS 15454) 40 channel optical wavelength switch selector for C Band                 |
| • 40-WXC-C    | (ONS 15454) 40 channel optical wavelength cross-connect/wavelength router for C Band |
| • AD-1B       | (ONS 15454) Optical add/drop multiplexed (OADM) 1 band filter                        |
| • AD-1C       | (ONS 15454) Optical add/drop multiplexed (OADM) 1 channel filter                     |
| • AD-2C       | (ONS 15454) Optical add/drop multiplexed (OADM) 2 channels filter                    |
| • AD-4B       | (ONS 15454) Optical add/drop multiplexed (OADM) 4 bands filter                       |
| • AD-4C       | (ONS 15454) Optical add/drop multiplexed (OADM) 4 channels filter                    |
| • ADM-10G     | (ONS 15454) 16 x OC3/OC12/OC48/GIGE and OC192/Trunk ADM 10 Gbps card                 |
| • AIC         | (ONS 15454) AIC card   |
| • AICI        | (ONS 15454) AICI Card  |
| • CE-1000-4   | (ONS 15454) Modena mapper card   |
| • CE-100T-8   | (ONS 15454) Exige/Elise mapper card  |
| • CE-MR-10    | (ONS 15454, ONS 15454 SDH) Lotus20g ce2 card   |
| • DS1-E1-56   | (ONS 15454) DS1-E1-56 card   |
| • DSII        | (ONS 15454) DSII card  |
| • DS3I        | (ONS 15454) DS3I card  |
| • DS3IN       | (ONS 15454) DS3IN card   |
| • E1-42       | (ONS 15454) 42 port E1 card  |
| • E1000T      | (ONS 15454) E1000T card  |
| • E100T       | (ONS 15454) E100T card   |
| • E3          | (ONS 15454) E3 card  |
| • FC-MR-4     | (ONS 15454) FC-MR-4 card   |
| • FILLER-CARD | (ONS 15454) Blank filler card  |
| • G1000-4     | (ONS 15454) A 4-port G1000 card  |
| • GE-XP       | (ONS 15454) 20 x 1 Gbps muxponder/L2 ethernet switch card                            |
| • MD-4        | (ONS 15454) Four channel optical multiplexer/demultiplexer                           |
| • ML-100T-8   | (ONS 15454) Exige/Elise mapper card  |
| • ML1000-2    | (ONS 15454) Daytona 2-port GigE  |
| • ML100T-12   | (ONS 15454) Daytona 12-port FSTE   |
| • ML100X-8    | (ONS 15454) 8-port 100T card with optical interface                                  |
| • MRC-12      | (ONS 15454) Humvee - 12-port multirate optical card                                  |

|                  |  |
|------------------|--|
| • MRC-2.5G-4     | (ONS 15454) 4-port MRC 2.5G (Hummer 4 15454-ANSI card)                         |
| • MRC-2.5G-12    | (ONS 15454) 12-port MRC 2.5G (Hummer 12 15454-ETSI card)                       |
| • MXP-2.5G-10E   | (ONS 15454) Monviso 10G (4 * 2.5G) muxponder card with enhanced FEC            |
| • MXP-2.5G-10EX  | (ONS 15454) Cengalo 10G (4 * 2.5G) muxponder with enhanced FEC card            |
| • MXP-2.5G-10G   | (ONS 15454) Skane 10G (4 * 2.5G) muxponder card                                |
| • MXP-MR-2.5G    | (ONS 15454) Bernina multirate 2.5G muxponder unprotected                       |
| • MXPP-MR-2.5G   | (ONS 15454) Bernina multirate 2.5G muxponder protected                         |
| • MXPP-MR-10DME  | (ONS 15454) Multirate 10Gbps datamux   |
| • MXPP-MR-10DMEX | (ONS 15454) Multirate 10Gbps datamux with enhanced dispersion                  |
| • ML-MR-10       | (Cisco ONS 15454 SDH)  |
| • OPT-AMP-17-C   | (ONS 15454) Optical booster/pre-amplifier for C band 17 dBm                    |
| • OPT-AMP-23-C   | (ONS 15454) Optical booster/pre-amplifier for C band 23 dBm                    |
| • OPT-AMP-L      | (ONS 15454) Optical booster/pre-amplifier for L band                           |
| • OPT-AMP-C      | (ONS 15454) Optical booster/pre-amplifier for C band                           |
| • OPT-BST        | (ONS 15454) Optical booster amplifier  |
| • OPT-BST-E      | (ONS 15454) Optical booster enhanced amplifier for C band                      |
| • OPT-BST-L      | (ONS 15454) Optical booster amplifier for L band                               |
| • OPT-PRE        | (ONS 15454) Optical pre-amplifier  |
| • OSC-CSM        | (ONS 15454) Optical service channel (OSC) with combiner/separator module (SCM) |
| • OSCM           | (ONS 15454) Optical service channel (OSC) module                               |
| • PPM-1          | (ONS 15454) Pluggable port module with one SFP port                            |
| • STM1E-12       | (ONS 15454 SDH) STM1E-12 card  |
| • TCC            | (ONS 15454) TCC card   |
| • TXP-MR-10E     | (ONS 15454) Skane 10G multirate transponder card with enhanced FEC             |
| • TXP-MR-10G     | (ONS 15454) Skane 10G multirate transponder card                               |
| • TXP-MR-2.5G    | (ONS 15454) Rockwell multirate 2.5G unprotected                                |
| • TXPP-MR-2.5G   | (ONS 15454) Rockwell multirate 2.5G protected                                  |
| • XC             | (ONS 15454) XC card  |
| • XC10G          | (ONS 15454) XC10G card   |
| • XCVT           | (ONS 15454) XCVT card  |
| • XCVXC-10G      | (ONS 15454) XCVXC-10G card   |
| • XCVXC-2.5G     | (ONS 15454) XCVXC-2.5G card  |
| • XCVXL-10G      | (ONS 15454) XCVXL-10G card   |

|               |   |
|---------------|---|
| • XCVXL-2.5G  | (ONS 15454) XCVXL-2.5G card   |
| <EQUIP>       | Indicates if the equipment is physically present. The parameter type is EQUIP, which is the presence of a plug-in unit.   |
| • EQUIP       | The unit is equipped—present.   |
| • UNEQUIP     | The unit is unequipped—absent.  |
| • <ROLE>      | Identifies the port role in a Y-cable protection scheme. The parameter type is SIDE, which is the role the unit is playing in the protection group.   |
| • PROT        | The entity is a protection unit in the protection group.  |
| • WORK        | The entity is a working unit in the protection group.   |
| <STATUS>      | (Optional) Indicates a status. SDH card status is shown on its card level. The parameter type is STATUS, which is the status of the unit in the protection pair.  |
| • ACT         | The entity is the active unit in the shelf.   |
| • NA          | Status is unavailable.  |
| • STBY        | The entity is the standby unit on the shelf.  |
| • <PROTID>    | (Optional) Protection group name. PROTID is a string.   |
| <PRTYPE>      | Identifies the protection group type values.  |
| • 1-1         | 1 to 1 protection   |
| • 1-N         | 1 to N protection   |
| <RVRTV>       | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. Only applies to SNCP. The parameter type is ON_OFF, which disables or enables an attribute.   |
| • N           | Does not revert service to original line after restoration.   |
| • Y           | Reverts service to original line after restoration.   |
| <RVTM>        | (Optional) Revertive time. RVTM is not allowed to be set while RVRTV is N. Only applies to SNCP. The parameter type is REVERTIVE_TIME (revertive time).   |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.  |
| <CARDNAME>    | (Optional) Contains the manufacturing name of the card when it is different from the EQUIPMENT_TYPE.  |
| <IOSCFG>      | (Optional) Displays the information about startup IOS config file for the ML series card. A example of this field is "TL1,11.22.33.44//DIR/IOS.CONF,2002/1/1 9:1:1 EST". The following information is included in this field: 1) Where the config file is from: TL1, or CTC/CTM/CLI/TCC; 2) The host (IP address)/directory/file name, if the config file is downloaded from the network; 3) When the startup config file is created (by copying from the network, for example). This field only applies to ML series card. IOSCFG is a string. |

|                           |   |
|---------------------------|---|
| <CARDMODE>                | (Optional) Card mode. The parameter type is CARDMODE (card mode). Card mode is applicable to cards that have multiple capabilities, for example, the ML-Series card can operate in two distinct modes: Linear Mapper mode and L2/L3 mode. |
| • 10GLANWAN-LINE-SQUELCH  | Changes the card mode from LAN to WAN.  |
| • AMPL-BST                | The optical amplifier is working as an optical booster.   |
| • AMPL-PRE                | The optical amplifier is working as an optical preamplifier.  |
| • CEMR-AUTO               | CE-MR-10 (Cisco ONS 15454 SDH Only) cards supports auto-allocation of back-end channels.  |
| • CEMR-MANUAL             | CE-MR-10 (Cisco ONS 15454 SDH Only) cards supports manual-allocation of back-end channels.  |
| • CE-MR-10                | (Cisco ONS 15454, Cisco ONS 15454 SDH) Lotus20g ce2 card  |
| • CE-MR-6                 | (ONS 15454, ONS 15454 SDH) Lotus20g ce2 card  |
| • DS1E1-DS1ONLY           | DS1 mode on DS1/E1 card   |
| • DS1E1-E1ONLY            | E1 mode on DS1/E1 card  |
| • DWDM-LINE               | Line terminating mode   |
| • DWDM-SECTION            | Section terminating mode  |
| • DWDM-TRANS-AIS          | Transparent mode AIS  |
| • DWDM-TRANS-SQUELCH      | Transparent mode SQUELCH  |
| • FCMR-DISTEXTN           | FC_MR-4 card with distance extension support  |
| • FCMR-LINERATE           | FC_MR-4 card without distance extension support   |
| • ML-GFP                  | ML-Series card in DOS FPGA using GFP framing type   |
| • ML-HDLC                 | ML-Series card in DOS FPGA using HDLC framing type  |
| • ML-IEEE-RPR             | ML-Series card in DOS FPGA which supports Resilient Packet Ring (RPR).  |
| • MXPMR10DME-4GFC         | 4-Gbps Fibre Channel/FICON mode for the Cisco ONS 15454 SDH MXP_MR_10DME_C or MXP_MR_10DME_L card supported on Ports 1 and 5  |
| • MXPMR10DME-4GFC-FCGEISC | 4-Gbps Fibre Channel/FICON supported on port one and Fibre Channel, GIGE and ISC modes for the Cisco ONS 15454 SDH MXP_MR_10DME_C or MXP_MR_10DME_L card supported on Ports 5 to 8  |
| • MXPMR10DME-FCGEISC      | Fibre Channel, GIGE, and ISC modes for the Cisco ONS 15454 SDH 1MXP_MR_10DME_C or MXP_MR_10DME_L card supported on all eight ports  |
| • MXPMR10DME-FCGEISC-4GFC | Fibre Channel, GIGE, and ISC modes for the Cisco ONS 15454 SDH MXP_MR_10DME_C or MXP_MR_10DME_L card supported on Ports 1 to 4 and 4 Gbps Fibre Channel/FICON supported on Port 5   |
| • MXPMR10G-FCGEISC        | Fibre Channel, GIGE, and ISC modes for the Cisco ONS 15454 SDH MXP_MR_10DME_C or MXP_MR_10DME_L card supported on all eight ports   |

|                          |   |
|--------------------------|---|
| • MXP_MR10G-4GFC         | 4-Gbps Fibre Channel/FICON mode for the Cisco ONS 15454 SDH MXP_MR_10DME_C or MXP_MR_10DME_L card supported on Ports 1 and 5  |
| • MXP_MR10G-FCGEISC-4GFC | Fibre Channel, GIGE, and ISC modes for the Cisco ONS 15454 SDH MXP_MR_10DME_C or MXP_MR_10DME_L card supported on Ports 1 to 4 and 4-Gbps Fibre Channel/FICON supported on Port 5 |
| • MXP_MR10G-4GFC-FCGEISC | 4-Gbps Fibre Channel/FICON supported on Port 1 and Fibre Channel, GIGE and ISC modes for the Cisco ONS 15454 SDH MXP_MR_10DME_C or MXP_MR_10DME_L card supported on Ports 5 to 8  |
| • MXP_MR25G-ESCON        | ESCON mode for the Cisco ONS 15454 SDH MXP_2.5G_10G card  |
| • MXP_MR25G-FCGE         | Fibre channel or GIGE mode for the MXP_2.5G_10G card  |
| • MXP_MR25G-MIXED        | Mixed Fibre Channel, GIGE and ESCON modes for the Cisco ONS 15454 SDH MXP_2.5G_10G card   |
| • PSM-NORMAL             | PSM working in classic configuration.   |
| • PSM-STANDALONE         | PSM working in stand-alone mode.  |
| • WXC80-BIDI             | 80-WXC-C working in bidirectional mode.   |
| • WXC80-DMX              | 80-WXC-C working as demultiplexer.  |
| • WXC80-MUX              | 80-WXC-C working as multiplexer.  |
| • 40G-MXP-MUXPONDER      | 40G-MXP-MUXPONDER working as multiplexer.   |
| • 40G-MXP-UNIDIR-REGEN   | 40G-MXP-UNIDIR-REGEN working as regenerator.  |
| <PEERID>                 | Indicates the peer trunk facility of the regeneration group on the OTU2-XP card. Accessed using the CHAN AID.   |
| <REGENNAME>              | Indicates the name of a regeneration group. Applicable only to DWDM flavored cards, which support regeneration group. Regenname is a string. The default value is "NULL".         |
| <PEERNAME>               | Indicates the name of a peer group.   |
| <TRANSMODE>              | Transition Mode.  |
| • AU3                    | Au3 mode.   |
| • AU4                    | Au4 mode.   |
| • SONET                  | Sonnet mode.  |
| <RETIME>                 | (Optional) Indicates the RETIME function for all the facilities on this card. Applies only to the DS1/E1-56 card. The parameter type is ON_OFF (disable or enable an attribute).  |
| • N                      | Disable an attribute.   |
| • Y                      | Enable an attribute.  |
| <SHELFROLE>              | The role of the shelf in the context of the node. When it is omitted it defaults to SC. The parameter is SHELF_ROLE.  |
| <FRPROLE>                | Indicates the fast ring protection enable mode for GE-XP/10GE-XP units involved in a protection scheme.   |
| • MASTER                 | Role is of card master of the ring.   |
| • SLAVE                  | Role is of card slave of the ring.  |

|                      |  |
|----------------------|--|
| <FRPSTATE>           | Indicates the fast ring protection enable state.   |
| • DISABLED           | Disabled protection  |
| • ENABLED            | Enabled protection   |
| • FORCED             | Forced protection  |
| <FRPHOLDOFFTIME>     | Indicates the hold off timer value. The protection do not start until the hold off expire.   |
| • 100-MSEC           | Indicates the hold off timer value as 100 milliseconds.  |
| • 1-MSEC             | Indicates the hold off timer value as 1milisecond.   |
| • 200-MSEC           | Indicates the hold off timer value as 200 milliseconds.  |
| • 2-MSEC             | Indicates the hold off timer value as 2 milliseconds.  |
| • 500-MSEC           | Indicates the hold off timer value as 500 milliseconds.  |
| • 50-MSEC            | Indicates the hold off timer value as 50 milliseconds.   |
| • 5-MSEC             | Indicates the hold off timer value as 50 milliseconds.   |
| • DISABLED           | Indicates that the hold off timer is disabled.   |
| <ADMINCVLAN>         | Customer VLAN identifier for REP. ADMINCVLAN is a number between 1 and 4096. The value 0 is reserved to untagged VLAN.                       |
| <ADMINSVLAN<br>>     | Service provider VLAN identifier for REP. ADMINSVLAN is a number between 1 and 4096. The value 0 is reserved to untagged VLAN.               |
| <CFMSTATE>           | Link Integrity status.   |
| • Y                  | Enabled  |
| • N                  | Disabled   |
| <CCTIMER>            | Indicates continuity check message timer.  |
| • ONE-MIN            | 1 minute.  |
| • ONE-SEC            | 1 second.  |
| • TEN-SEC            | 10 seconds.  |
| <PROTOPMODE>         | PROTOPMODE   |
| <SWITCHWITHCRCALARM> | Switch the GZ card with CRC Alarms   |
| <CRCTHR>             | CRC threshold values beyond which alarms are raised. The available threshold values are 10E-2, 10E-3, and 10E-4.                             |
| <CRCPOLLINTRVL>      | Interval of time after which the polling starts.   |
| <CRCSOAKCNT>         | Number of poll cycles during which defect is integrated. The value ranges from 3 to 10.  |
| <USB>                | Identifies the USB Port where a passive unit is connected.   |
| <PST>                | (Optional) Primary state of the entity. The parameter type is PST, which indicates the current overall service condition of an entity.       |
| • Unlocked           | In Service   |
| • Locked             | Out of Service   |
| <SST>                | Secondary state of the entity. SST is listable. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AutomaticInService | Automatic in service   |

|                            |                                      |
|----------------------------|--------------------------------------|
| • Disabled                 | Disabled                             |
| • Loopback                 | Loopback                             |
| • MismatchofEquipmentAlarm | Mismatch of equipment and attributes |
| • Maintenance              | Maintenance mode                     |
| • OutOfGroup               | Out of group                         |
| • SoftwareDownload         | Software downloading                 |
| • Unassigned               | Unassigned                           |
| • NotInstalled             | Unequipped                           |

## 21.52 RTRV-ESCON

(Cisco ONS 15454) The Retrieve Enterprise System Connection (RTRV-ESCON) command retrieves the Fibre Channel-specific settings for ports that have been configured to carry ESCON traffic using the ENT-ESCON command.

**Usage Guidelines** None

**Category** Ports

**Security** Retrieve

**Input Format** RTRV-ESCON:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-ESCON::CISCO:FAC-1-1:123;

**Input Parameters** <AID> Access identifier from the [“26.17 FACILITY”](#) section on page 26-42.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:.,[<ROLE>],[<STATUS>]:[ENCAP=<ENCAP>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FAC-1-1:.,WORK,ACT:ENCAP=GFP-T”
;
```

|                          |  |   |
|--------------------------|--|---|
| <b>Output Parameters</b> | <AID>  | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.  |
|                          | <ROLE>   | (Optional) The port role in Y-cable protection (WORK or PROT). The parameter type is SIDE, which is the role the unit is playing in the protection group. |
|                          | <ul style="list-style-type: none"> <li>• PROT</li> <li>• WORK</li> </ul>   | <p>The entity is a protection unit in the protection group.</p> <p>The entity is a working unit in the protection group.</p>                              |
|                          | <STATUS>   | (Optional) A port status in Y-cable protection (ACT or STBY). The parameter type is STATUS, which is the status of the unit in the protection pair.       |
|                          | <ul style="list-style-type: none"> <li>• ACT</li> <li>• NA</li> <li>• STBY</li> </ul>  | <p>The entity is the active unit in the shelf.</p> <p>Status is unavailable.</p> <p>The entity is the standby unit in the shelf.</p>                      |
|                          | <ENCAP>  | (Optional) Encapsulation frame type. The parameter type is ENCAP, which is the frame encapsulation type.  |
|                          | <ul style="list-style-type: none"> <li>• GFP_F</li> <li>• GFP_T</li> <li>• HDLC</li> <li>• HDLC_LEX</li> <li>• HDLC_X86</li> </ul> | <p>GFP Frame Mode</p> <p>GFP Transparent Mode</p> <p>HDLC Frame Mode</p> <p>HDLC LAN Extension Frame Mode</p> <p>HDLC X.86 Frame Mode</p>                 |

## 21.53 RTRV-ETH

(Cisco ONS 15454) The Retrieve Ethernet (RTRV-ETH) command retrieves the front-end port information of an Ethernet card.

### Usage Guidelines

This command retrieves the front-end port information of 10/100/1000 Mbps Ethernet cards. However, RTRV-POS will display the MTU, which is common for front and backend ports.

The SELECTIVEAUTO parameter is applicable only when EXPSPEED and EXPDUPLEX are not set to AUTO mode.

### Note

This command is available in Software Release 8.0.1 and later. It is not available in R8.0.0 and later.

### Category

Ethernet

### Security

Provisioning

### Input Format

RTRV-ETH:[<TID>]:<AID>:<CTAG>[::];

**Input Example** RTRV-ETH:TID:FAC-1-1:CTAG;

**Input Parameters** <AID> Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<AID>:.[LINKSTATE=<LINKSTATE>],[FLOWCTRL=<FLOWCTRL>],[DUPLEX=<DUPLEX>],
[SPEED=<SPEED>],[FLOW=<FLOW>],[EXPDUPLICATION=<EXPDUPLICATION>],
[EXPSPEED=<EXPSPEED>],[VLANCOS=<VLANCOS>],[IPTOS=<IPTOS>],
[OPTICS=<OPTICS>],[NAME=<NAME>],[SOAK=<SOAK>],[SOAKLEFT=<SOAKLEFT>],
[SELECTIVEAUTO=<SELECTIVEAUTO>],[LIENABLE=<LIENABLE>],[LITIMER=<LITIMER>]:
<PST_PSTQ>,[<SSTQ>]";
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"FAC-1-1::LINKSTATE=DOWN,FLOWCTRL=SYMMETRIC,
DUPLEX=AUTO,SPEED=AUTO,FLOW=FLOW,EXPDUPLICATION=AUTO,
EXPSPEED=AUTO,VLANCOS=7,IPTOS=255,OPTICS=1000-BASE-LX,
NAME=\"ETH PORT\",SOAK=32,SOAKLEFT=\"12-25\",
SELECTIVEAUTO=N,LIENABLE=Y,LITIMER=200:OOS-AU,
AINS";
```

|                                |  |
|--------------------------------|--|
| <b>Output Parameters</b> <AID> | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.                              |
| <LINKSTATE>                    | Link state. The parameter type is UP_DOWN, which indicates an up or down value.  |
| • DOWN                         | Down   |
| • UP                           | Up   |
| <FLOWCTRL>                     | Flow control. The parameter is FLOW, which indicates the type of flow control that has been negotiated for an Ethernet port. Defaults to NONE. |
| • ASYMMETRIC                   | Asymmetric flow control  |
| • ASYMMETRIC_LOCAL             | Asymmetric local flow control  |
| • NONE                         | No flow control  |
| • PASSTHRU                     | Pass-through flow control  |
| • SYMMETRIC                    | Symmetric flow control   |
| <DUPLEX>                       | The parameter is ETHER_DUPLEX, which indicates duplex mode. Defaults to AUTO.  |
| • AUTO                         | Auto mode  |
| • FULL                         | Full mode  |
| • HALF                         | Half mode  |

|                 |  |
|-----------------|--|
| <SPEED>         | The parameter type is ETHER_SPEED which indicates Ethernet speed. Defaults to AUTO.  |
| • 100_MBPS      | 100 Megabits per seconds   |
| • 10_GBPS       | 10 Gigabits per second   |
| • 10_MBPS       | 10 Megabits per second   |
| • 1_GBPS        | 1 Gigabit per second   |
| • 40_GBPS       | 40 Gigabit per second  |
| • AUTO_FDX      | Enable auto negotiation with full duplex   |
| • AUTO          | Automatic  |
| <FLOW>          | (Optional) Flow. The parameter type is ON_OFF (disable or enable an attribute).  |
| • N             | Disable an attribute.  |
| • Y             | Enable an attribute.   |
| <EXPDUPLX>      | (Optional) Ethernet duplex mode. The parameter type is ETHER_DUPLEX, which is the duplex mode.   |
| • AUTO          | Auto mode  |
| • FULL          | Full mode  |
| • HALF          | Half mode  |
| <EXPSPEED>      | (Optional) Expected speed. Due to the auto-negotiation feature, actual speed may differ from expected speed. The parameter type is ETHER_SPEED, which is the Ethernet speed. |
| • 100_MBPS      | 100 Megabits per second  |
| • 10_GBPS       | 10 Gigabits per second   |
| • 10_MBPS       | 10 Megabits per second   |
| • 1_GBPS        | 1 Gigabit per second   |
| • AUTO          | Auto   |
| <SELECTIVEAUTO> | (Optional) Selective auto-negotiation. The parameter is Y or N (enable or disable auto-negotiation) This indicates selective auto-negotiation of EXPSPEED and EXPDUPLX only. |
| • Y             | Enable selective auto-negotiation.   |
| • N             | Disable selective auto-negotiation. The default value is N.  |
| <VLANCOS>       | (Optional) Priority queuing threshold based on VLAN class of service for incoming Ethernet packets. VLANCOS is an integer.   |
| <IPTOS>         | (Optional) Priority queuing threshold based on IP type of service for incoming Ethernet packets. IPTOS is an integer.  |
| <OPTICS>        | (Optional) Optics. The parameter type is OPTICS, which is the type of Gigabit Ethernet optics being used.  |
| • 1000_BASE_CX  | 1000BaseCX   |
| • 1000_BASE_LX  | 1000BaseLX   |
| • 1000_BASE_SX  | 1000BaseSX   |
| • 1000_BASE_ZX  | 1000BaseZX   |
| • CWDM_1470     | CWDM 1470  |
| • CWDM_1490     | CWDM 1490  |

| • ITU_100G_1560_61 | ITU-100G 1560.61   |
| • UNKNOWN          | Unknown Optical Type   |
| • UNPLUGGED        | Unplugged  |
| <NAME>             | (Optional) Name. NAME is a string.   |
| <SOAK>             | (Optional) OOS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer. |

|                            |   |
|----------------------------|---|
| <SOAKLEFT>                 | <p>(Optional) Time remaining for the transition from Locked-AutomaticInService to Unlocked measured in 1 minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for SOAKLEFT are as follows:</p> <ul style="list-style-type: none"> <li>• When the port is in Locked;Locked,Maintenance; or Unlocked state, the parameter is not displayed.</li> <li>• When the port is in Locked,AutomaticInService state but the countdown has not started due to a fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in Locked,AutomaticInService state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <LIENABLE>                 | <p>(Optional) Enable or Disable link integrity timer. Takes either Y or N. Value Y enables the LITIMER and value N disables LITIMER. By default LITIMER is enabled.</p> <p><b>Note</b> The LIENABLE parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.</p>   |
| <LITIMER>                  | <p>(Optional) Link integrity timer duration in the range between 200 ms and 10000 ms in multiples on 100 ms.</p> <p><b>Note</b> The LITIMER parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.</p>   |
| <PSTPSTQ>                  | <p>Administrative state in the PST_PSTQ format. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and the PSTQ.</p>   |
| • Unlocked-Enabled         | In service and normal   |
| • Unlocked-Disabled        | Out of service and autonomous   |
| • Locked-Disabled          | Out of service, autonomous and management   |
| • Locked-Enabled           | Out of service and management   |
| <SSTQ>                     | <p>(Optional) Secondary state of the entity. the parameter type is SST, which provides additional information pertaining to PST and PSTQ.</p>   |
| • AutomaticInService       | Automatic in service  |
| • Disabled                 | Disabled  |
| • Loopback                 | Loopback  |
| • MismatchofEquipmentAlarm | Mismatch of equipment and attributes  |
| • Maintenance              | Maintenance mode  |
| • OutOfGroup               | Out of group  |
| • SoftwareDownload         | Software downloading  |
| • Unassigned               | Unassigned  |
| • NotInstalled             | Unequipped  |

## 21.54 RTRV-EXT-CONT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve External Control (RTRV-EXT-CONT) command retrieves the control state of an external control. The command can be used to audit the result of an OPR-EXT-CONT or a RLS-EXT-CONT command.

### Usage Guidelines

- If the CONTTYPE is null, the existing CONTTYPE on this AID will be returned.
- The duration is not supported. It defaults to CONTS.

### Category

Environment

### Security

Retrieve

### Input Format

RTRV-EXT-CONT:[<TID>]:<AID>:<CTAG>[:<CONTTYPE>];

### Input Example

RTRV-EXT-CONT:CISCO:ENV-OUT-2:123::AIRCOND;

### Input Parameters

|            |   |
|------------|---|
| <AID>      | Access identifier from the <a href="#">“26.14 ENV” section on page 26-39</a> . The only valid AID for RTRV-EXT-CONT is ENV-OUT-{1-2}.   |
| <CONTTYPE> | Environmental control type. A null value is equivalent to ALL. The parameter type is CONTTYPE, which is the environmental control type. |
| • AIRCOND  | Air conditioning  |
| • ENGINE   | Engine  |
| • FAN      | Fan   |
| • GEN      | Generator   |
| • HEAT     | Heat  |
| • LIGHT    | Light   |
| • MISC     | Miscellaneous   |
| • SPKLR    | Sprinkler   |

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AID>:[<CONTTYPE>],<DUR>,[<CONTSTATE>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"ENV-OUT-2:AIRCOND,CONTS,OPEN"
;
```

| Output Parameters |           |   |
|-------------------|-----------|---|
| <AID>             |           | Access identifier from the “26.14 ENV” section on page 26-39. Identifies the external control for which the control state is being retrieved. |
| <CONTTYPE>        |           | (Optional) Environmental control type. The parameter type is CONTTYPE, which is the environmental control type.                               |
|                   | • AIRCOND | Air conditioning  |
|                   | • ENGINE  | Engine  |
|                   | • FAN     | Fan   |
|                   | • GEN     | Generator   |
|                   | • HEAT    | Heat  |
|                   | • LIGHT   | Light   |
|                   | • MISC    | Miscellaneous   |
|                   | • SPKLR   | Sprinkler   |
| <DUR>             |           | Duration of operation. The duration for which the external control can be operated. The parameter type is Duration.                           |
|                   | • CONTS   | Continuous duration   |
| <CONTSTATE>       |           | (Optional) Control state of the external control. The parameter type is CONT_MODE, which is the current state of the environmental control.   |
|                   | • NA      | Not applicable (for example, duration is MNTRY).  |
|                   | • OPER    | The environmental control state is CLOSE.   |
|                   | • RLS     | The environmental control state is OPEN.  |

## 21.55 RTRV-FAC

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Facility (RTRV-FAC) command retrieves the payload type of the facility. It can also dump all the facilities on a given card and is applicable to all cards.

**Usage Guidelines** None

**Category** Ports

**Security** Retrieve

**Input Format** RTRV-FAC:[<TID>]:<SRC>:<CTAG>[:::];

**Input Example** RTRV-FAC:CISCO:FAC-2-9:2223;

**Input Parameters**

|       |   |
|-------|---|
| <SRC> | Source access identifier from the “26.17 FACILITY” section on page 26-42. |
|-------|---|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<SRC>::PAYLOAD=<PAYLOAD>:<PST_PSTQ>,[<SSTQ>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FAC-2-9::PAYLOAD=E4-FRAMED:OOS-AU,AINS”
;
```

**Output Parameters**

|           |  |
|-----------|--|
| <SRC>     | Source access identifier from the “26.17 FACILITY” section on page 26-42.                              |
| <PAYLOAD> | (Optional) Payload type of the facility. The parameter type is PAYLOAD, which identifies payload type. |
| • 100GIGE | 100 Gigabit Ethernet.  |
| • 10GFC   | 10-Gigabit Fibre Channel payload   |
| • 10GIGE  | 10-Gigabit Ethernet  |
| • 1GFC    | 1-Gigabit Fibre Channel payload  |
| • 1GFICON | 1-Gigabit fiber connectivity payload   |
| • 2GFC    | 2-Gigabit Fibre Channel payload  |
| • 2GFICON | 2-Gigabit fiber connectivity payload   |
| • 3GVIDEO | 3G-SDI video payload.  |
| • 5GIB    | 5Gbps InfiniBand (IB_5G) payload   |
| • 8GFC    | 8-Gigabit Fibre Channel payload  |
| • 40GIGE  | 40-Gigabit Ethernet  |
| • AUTO    | Auto   |
| • DS3     | DS3 mode   |
| • DS3XM   | DS3XM payload mode for DS3XM card  |
| • DV6000  | Video mode   |
| • DVBASI  | DVBASI payload   |
| • EC1     | EC1 mode   |
| • ESCON   | ESCON mode   |
| • ETRCLO  | ETR_CLO payload mode   |

|                |  |
|----------------|--|
| • GIGE         | Gigabit Ethernet Payload   |
| • HDLC         | High-level data link control (HDLC) frame mode.  |
| • HDSDI        | 1.5G HD-SDI video payload.   |
| • HDTV         | HDTV mode  |
| • ISC1         | ISC1 Mode  |
| • ISC3         | ISC3 Mode  |
| • ISC3STP1G    | ISC-3 STP 1G video payload.  |
| • ISC3STP2G    | ISC-3 STP 2G video payload.  |
| • OC12         | SONET OC12 mode  |
| • OC3          | SONET OC3 mode   |
| • OC48         | SONET OC48 mode  |
| • OC768        | SONET OC768 mode   |
| • OTL          | Optical Channel Transport Lane.  |
| • OTU1         | Optical Transport Unit Level 1   |
| • OTU2         | Optical Transport Unit Level 2   |
| • OTU3         | Optical Transport Unit Level 3   |
| • OTU4         | Optical Transport Unit Level 4   |
| • PASS-THROUGH | Pass through mode  |
| • SDI-D1-VIDEO | SDI-D1-Video mode  |
| • SONET        | SONET Payload Mode   |
| • SDSDI        | 270M SDI video payload.  |
| <PST_PSTQ>     | Administrative state in the PST-PSTQ format. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and PSTQ. |
| • IS-NR        | In Service and Normal  |
| • OOS-AU       | Out of Service and Autonomous  |
| • OOS-AUMA     | Out of Service and Autonomous Management   |
| • OOS-MA       | Out of Service and Management  |
| <SSTQ>         | (Optional) Secondary state. SSTQ is a string.  |

## 21.56 RTRV-FFP

(Cisco ONS 15454) The Retrieve Facility Protection Group (RTRV-FFP) command retrieves all optical 1+1 protection groups.

**Usage Guidelines** None

**Category** Protection

**Security** Retrieve

**Input Format** RTRV-FFP:[<TID>]:<AID>:<CTAG>[:[:[:]]];

**Input Example** RTRV-FFP:HERNDON:FAC-1-1:1;

**Input Parameters**

|     |   |
|-----|---|
| AID | Optical facility access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|-----|---|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<WORK>,<PROTECT>:<LEVEL>:[PROTID=<PROTID>],[RVRTV=<RVRTV>],
[RVTM=<RVTM>],[PSDIRN=<PSDIRN>],[VRGRDTM=<VRGRDTM>],
[DTGRDTM=<DTGRDTM>],[RCGRDTM=<RCGRDTM>],[OPOTYPE=<OPOTYPE>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FAC-2-1,FAC-1-1:OC48:PROTID="PROT_NAME",RVRTV=Y,RVTM=1.0,PSDIRN=BI,
VRGRDTM=0.5,DTGRDTM=1.0,RCGRDTM=1.0,OPOTYPE=OPTIMIZED”
;
```

**Output Parameters**

|             |  |
|-------------|--|
| <WORK>      | The working port access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
| <PROTECT>   | The protected port access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
| <PROTOTYPE> | (Optional) Protection group type. PROTOTYPE is a string.   |
| <LEVEL>     | Optical rate the protection group was defined against. The parameter type is OCN_TYPE, which is the modifier used to differentiate various levels of OC-N. |
| • OC12      | Optical Carrier level 12 (622 Mbps)  |
| • OC192     | Optical Carrier level 192 (10 Gbps)  |
| • OC3       | Optical Carrier level 3 (155 Mbps)   |
| • OC48      | Optical Carrier level 48 (2.4 Gbps)  |
| <PROTID>    | (Optional) Protection group name. PROTID is a string.  |

|               |   |
|---------------|---|
| <RVRTV>       | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Defaults to N, non-revertive. |
| • N           | Does not revert service to original line after restoration.   |
| • Y           | Reverts service to original line after restoration.   |
| <RVTM>        | (Optional) Revertive time. The parameter type is REVERTIVE_TIME.  |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.  |
| <PSDIRN>      | (Optional) Protection switch operation. Direction of reversion. The parameter type is UNI_BI, which is the unidirectional and bidirectional switch operations.  |
| • BI          | Bidirectional protection switching  |
| • UNI         | Unidirectional protection switching   |
| <VRGRDTM>     | (Optional) Verification guard timer. Only applies to optimized 1+1. The parameter type is VERIFICATION_GUARD_TIMER, which is the optimized 1+1 verification guard timer.  |
| • 0.5         | 500 ms  |
| • 1.0         | 1 second  |
| <DTGRDTM>     | (Optional) Detection guard timer. Only applies to optimized 1+1. The parameter type is DETECTION_GUARD_TIMER, which is the optimized 1+1 detection guard timer.   |
| • 0.0         | 0 seconds   |
| • 0.05        | 50 ms   |
| • 0.1         | 100 ms  |
| • 0.5         | 500 ms  |
| • 1.0         | 1 second  |
| • 2.0         | 2 seconds   |
| • 3.0         | 3 seconds   |
| • 4.0         | 4 seconds   |
| • 5.0         | 5 seconds   |
| <RCGRDTM>     | (Optional) Recovery guard timer. Only applies to optimized 1+1. The parameter type is RECOVERY_GUARD_TIMER, which is the optimized 1+1 recovery guard timer.  |
| • 0.0         | 0 seconds   |
| • 0.05        | 50 ms   |
| • 0.1         | 100 ms  |
| • 0.5         | 500 ms  |
| • 1.0         | 1 second  |
| • 2.0         | 2 seconds   |
| • 3.0         | 3 seconds   |
| • 4.0         | 4 seconds   |

|             |   |
|-------------|---|
| • 5.0       | 5 seconds   |
| • 6.0       | 6 seconds   |
| • 7.0       | 7 seconds   |
| • 8.0       | 8 seconds   |
| • 9.0       | 9 seconds   |
| • 10.0      | 10 seconds  |
| <OPOTYPE>   | (Optional) 1+1 protection type. The parameter type is ONE_PLUS_ONE, which is the 1+1 protection type. |
| • OPTIMIZED | Optimized 1+1   |
| • STANDARD  | Standard 1+1  |

## 21.57 RTRV-FFP-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454) The Retrieve Facility Protection Group for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 5GIB, 8GFC, D1VIDEO, DV6000, DVBASI, ETRCLO, FSTE, GIGE, HDTV, ISC1, ISC3, OTU2, OTU3, OTU4, PASSTHRU, OTU1, ISC3STP1G, or ISC3STP2G (RTRV-FFP-<MOD2DWDMPAYLOAD>) command retrieves the values facility protection that exists on that port.

### Usage Guidelines

The command does not support 3GVIDEO, SDSDI, HSDSI, and AUTO payloads on AR-MXP, AR-XP, and AR-XPE cards.

### Category

Performance

### Security

Retrieve

### Input Format

RTRV-FFP-<MOD2DWDMPAYLOAD>:[<TID>]:<SRC>:<CTAG>[:::];

### Input Example

RTRV-FFP-GIGE:CISCO:VFAC-3-1-1:1;

### Input Parameters

|       |   |
|-------|---|
| <SRC> | Source access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
|-------|---|

### Output Format

```
SID DATE TIME M CTAG COMPLD
"<AID>,[<AIDTYPE>]:<NTFCNCDE>,<CONDTYPE>,<SRVEFF>,[<OCRDAT>],
[<OCRMTM>],[<LOCN>],[<DIRN>]:[<DESC>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"VFAC-1-1-1,VFAC-2-1-1::PROTOTYPE=Y-CABLE,PROTID=\"DC-METRO\",
RVRTV=N,RVTM=1.0,PSDIRN=BI"
;
```

**Output Parameters**

|   |  |
|---|--|
| <AIDUNIONID>  | Access identifier from the “26.17 FACILITY” section on page 26-42.   |
| <AIDUNIONID1>   | Access identifier from the “26.17 FACILITY” section on page 26-42.   |
| <PROTOTYPE>   | (Optional) The type of facility protection. The parameter type is PROTOTYPE, which is the protection type for DWDM client facilities.  |
| <ul style="list-style-type: none"> <li>Y-CABLE</li> </ul>         | Y-cable protection for the client ports on TXP_MR_10G, MXP_2.5G_10G, TXP_MR_2.5G, and TXPP_MR_2.5G cards.  |
| <PROTID>  | (Optional) Y-cable protection group identifier. PROTID is a string.  |
| <RVRTV>   | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>    | Does not revert service to original line after restoration.<br>Reverts service to original line after restoration.   |
| <RVTM>  | (Optional) Revertive time. Defaults to 5.0 minutes. The parameter type is REVERTIVE_TIME.  |
| <ul style="list-style-type: none"> <li>0.5 to 12.0</li> </ul>     | Revertive time is 0.5 to 12.0 minutes.   |
| <PSDIRN>  | (Optional) Protection switch operation. Identifies the switching mode. Defaults to UNI. The parameter type is UNI_BI, which is the unidirectional and bidirectional switch operations.   |
| <ul style="list-style-type: none"> <li>BI</li> <li>UNI</li> </ul> | Bidirectional protection switching<br>Unidirectional protection switching  |

## 21.58 RTRV-FFP-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Facility Protection Group for OC3, OC12, OC48, OC192, or OC768 (RTRV-FFP-<OCN\_TYPE>) command retrieves the optical facility protection information.

**Usage Guidelines**

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Note**

Optimized 1+1 and related attributes only apply to the ONS 15454.

**Category**

Protection

**Security** Retrieve

**Input Format** RTRV-FFP-<OCN\_TYPE>:[<TID>]:<AID>:<CTAG>[:::];

**Input Example** RTRV-FFP-OC3:PETALUMA:OC3-1-1:1;

**Input Parameters**

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|-------|--|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<WORK>,<PROTECT>::[PROTOTYPE=<PROTOTYPE>],[PROTID=<PROTID>],
[RVRTV=<RVRTV>],[RVTM=<RVTM>],[PSDIRN=<PSDIRN>],[VRGRDTM=<VRGRDTM>],
[DTGRDTM=<DTGRDTM>],[RCGRDTM=<RCGRDTM>],[OPOTYPE=<OPOTYPE>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FAC-2-1,FAC-1-1::PROTOTYPE=Y-CABLE,PROTID="PROT_NAME",RVRTV=Y,RVTM=1.0,
PSDIRN=BI,VRGRDTM=0.5,DTGRDTM=1.0,RCGRDTM=1.0,OPOTYPE=OPTIMIZED”
;
```

**Output Parameters**

|             |  |
|-------------|--|
| <WORK>      | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. Identifies the working port.  |
| <PROTECT>   | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. Identifies the protection port.   |
| <PROTOTYPE> | (Optional) Protection group type. Applicable only to DWDM cards. The parameter type is PROTOTYPE, which is the protection type for DWDM client facilities. |
| • Y-CABLE   | Y-cable protection for the client ports on TXP_MR_10G, MXP_2.5G_10G, TXP_MR_2.5G, and TXPP_MR_2.5G cards.  |
| <PROTID>    | (Optional) Free-form text string name given to the 1+1 protection group. PROTID is a string.   |

|               |   |
|---------------|---|
| <RVRTV>       | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Defaults to N, non-revertive. |
| • N           | Does not revert service to original line after restoration.   |
| • Y           | Reverts service to original line after restoration.   |
| <RVTM>        | (Optional) Revertive time. Defaults to 5.0 minutes. The parameter type is REVERTIVE_TIME.   |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.  |
| <PSDIRN>      | (Optional) Protection switch operation. Identifies the switching mode. Defaults to UNI. The parameter type is TRANS_MODE, which is the G1000 transponder mode.  |
| • BI          | Bidirectional   |
| • NONE        | Not in transponder mode   |
| • UNI         | Unidirectional  |
| <VRGRDTM>     | (Optional) Verification guard timer. Only applies to optimized 1+1. The parameter type is VERIFICATION_GUARD_TIMER, which is the optimized 1+1 verification guard timer.  |
| • 0.5         | 500 ms  |
| • 1.0         | 1 second  |
| <DTGRDTM>     | (Optional) Detection guard timer. Only applies to optimized 1+1. The parameter type is DETECTION_GUARD_TIMER, which is the optimized 1+1 detection guard timer.   |
| • 0.0         | 0 seconds   |
| • 0.05        | 50 ms   |
| • 0.1         | 100 ms  |
| • 0.5         | 500 ms  |
| • 1.0         | 1 second  |
| • 2.0         | 2 seconds   |
| • 3.0         | 3 seconds   |
| • 4.0         | 4 seconds   |
| • 5.0         | 5 seconds   |
| <RCGRDTM>     | (Optional) Recovery guard timer. Only applies to optimized 1+1. The parameter type is RECOVERY_GUARD_TIMER, which is the optimized 1+1 recovery guard timer.  |
| • 0.0         | 0 seconds   |
| • 0.05        | 50 ms   |
| • 0.1         | 100 ms  |
| • 0.5         | 500 ms  |
| • 1.0         | 1 second  |
| • 2.0         | 2 seconds   |
| • 3.0         | 3 seconds   |

|             |   |
|-------------|---|
| • 4.0       | 4 seconds   |
| • 5.0       | 5 seconds   |
| • 6.0       | 6 seconds   |
| • 7.0       | 7 seconds   |
| • 8.0       | 8 seconds   |
| • 9.0       | 9 seconds   |
| • 10.0      | 10 seconds  |
| <OPOTYPE>   | (Optional) 1+1 protection type. The parameter type is ONE_PLUS_ONE, which is the 1+1 protection type. |
| • OPTIMIZED | Optimized 1+1   |
| • STANDARD  | Standard 1+1  |

## 21.59 RTRV-FFP-OCH

(Cisco ONS 15454) The Retrieve Facility Protection Group Optical Channel (RTRV-FFP-OCH) command retrieves the protection group information for the TXP\_MR\_2.5G and TXPP\_MR\_2.5G card trunk port.

**Usage Guidelines** None

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-FFP-OCH:[<TID>]:<AID>:<CTAG>[:[:[:]]];

**Input Example** RTRV-FFP-OCH:VA454-22:CHAN-2-2:100;

**Input Parameters** <AID> Access identifier from the [“26.8 CHANNEL”](#) section on page 26-23.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<WORK>,<PROTECT>::[PROTOTYPE=<PROTOTYPE>],[PROTID=<PROTID>],
[RVRTV=<RVRTV>],[RVTM=<RVTM>],[PSDIRN=<PSDIRN>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"CHAN-2-2,CHAN-2-3::PROTOTYPE=SPLITTER,PROTID=\“TRUNK PROT\”,RVRTV=Y,
RVTM=1.0,PSDIRN=UNI"
;
```

**Output Parameters**

|               |   |
|---------------|---|
| <WORK>        | The working port access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23.   |
| <PROTECT>     | The protected port access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23.   |
| <PROTOTYPE>   | (Optional) Protection group type. PROTOTYPE is a string.  |
| <PROTID>      | (Optional) Protection group name. PROTID is a string.   |
| <RVRTV>       | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Defaults to N. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| • N           | Does not revert service to original line after restoration.   |
| • Y           | Reverts service to original line after restoration.   |
| <RVTM>        | (Optional) Revertive time. The parameter type is REVERTIVE_TIME.  |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.  |
| <PSDIRN>      | (Optional) Protection switch operation. Direction of reversion. The parameter type is UNI_BI, which is the unidirectional and bidirectional switch operations.  |
| • BI          | Bidirectional protection switching  |
| • UNI         | Unidirectional protection switching   |

## 21.60 RTRV-FFP-OTS

(Cisco ONS 15454) The Retrieve Facility Protection Group OTS (RTRV-FFP-OTS) command retrieves the protection group information for the TXP\_MR\_2.5G and TXPP\_MR\_2.5G card trunk port and OTU2-XP and optical protection switching unit.

**Usage Guidelines**

None

**Category**

DWDM

**Security**

Retrieve

**Input Format** RTRV-FFP-OTS:[<TID>]:<AID>:<CTAG>[:::];

**Input Example** RTRV-FFP-OTS:VA454-22:CHAN-2-2:100;

**Input Parameters**

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23. |
|-------|--|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<WORK>,<PROTECT>::[PROTOTYPE=<PROTOTYPE>],[PROTID=<PROTID>],
[RVRTV=<RVRTV>],[RVTM=<RVTM>],[PSDIRN=<PSDIRN>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“CHAN-2-2,CHAN-2-3::PROTOTYPE=SPLITTER,PROTID=“TRUNK PROT”,RVRTV=Y,
RVTM=1.0,PSDIRN=UNI”
;
```

**Output Parameters**

|               |   |
|---------------|---|
| <WORK>        | The working port access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23.   |
| <PROTECT>     | The protected port access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23.   |
| <PROTOTYPE>   | (Optional) Protection group type. PROTOTYPE is a string.  |
| <PROTID>      | (Optional) Protection group name. PROTID is a string.   |
| <RVRTV>       | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Defaults to N. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| • N           | Does not revert service to original line after restoration.   |
| • Y           | Reverts service to original line after restoration.   |
| <RVTM>        | (Optional) Revertive time. The parameter type is REVERTIVE_TIME.  |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes.  |
| <PSDIRN>      | (Optional) Protection switch operation. Direction of reversion. The parameter type is UNI_BI, which is the unidirectional and bidirectional switch operations.  |
| • BI          | Bidirectional protection switching  |
| • UNI         | Unidirectional protection switching   |

## 21.61 RTRV-FOG

(Cisco ONS 15454) The Retrieve Fan-Out-Group (ENT-FOG) command retrieves Fan-Out-Groups.

### Usage Guidelines

- This command is applicable to PTSYS.
- Retrieves the CPT 50 panel provisioning information.
- Retrieves all the provisioned FOGs or specific FOG with the “ALL” AID.

### Category

Equipment

### Security

Retrieve

### Input Format

RTRV-FOG:[<TID>]:<AID>:<CTAG>;

### Input Examples

RTRV-FOG::ALL:1;

### Input Parameters

<AID>                      Access identifier from the [“26.15 EQPT” section on page 26-39](#).

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AID>:[PTSYSID=<PTSYSID>],[FOGID=<FOGID>],[FOMEM=<FOMEM>],
[<PEERMEM=<PEERMEM>],[STATE=<STATE>],[QUEUEMODE=<QUEUEMODE>],[PBNAME=
<PBNAME>]”;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FOG-1-36:PTSYSID=1,FOGID=36,FOMEM=FAC-2-2-1,STATE=UNKNOWN”
```

### Output Parameters

| Parameter    | Description  |
|--------------|--|
| <AID>        | AID of the FOG to be retrieved.  |
| <PTSYSID>    | PTSYS number or ID.  |
| <FOGID>      | This is AID of the provisioned FOG. The valid range is [-{1}]-{36-55}. |
| <FOMEM>      | Ports of line and fabric cards.  |
| <PEERMEM>    | Ports of CPT 50 panel.   |
| <STATE>      | FOG state.   |
| • Discovered | Discovered state.  |

| Parameter   | Description     |
|-------------|-----------------|
| • Invalid   | Not discovered. |
| • UNKNOWN   | Not known       |
| <QUEUEMODE> | QUEUEMODE       |
| • NOPRI     | NOPRI           |
| • STRICT    | STRICT          |
| <PBNAME>    | PBNAME          |

## 21.62 RTRV-FSTE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Fast Ethernet (RTRV-FSTE) command retrieves the front-end port information of a Fast Ethernet (10/100 Mbps) card. MTU is not displayed for the ML-100T-8 and CE-100T-8 cards.

### Usage Guidelines

This command retrieves the front-end port information of Fast Ethernet (10/100 Mbps) cards. MTU is not displayed for CE-100T-8 and ML-100T-8. However, RTRV-POS will display the MTU, which is common for front and backend ports.

The SELECTIVEAUTO parameter is applicable only when EXPSPEED and EXPDUPLEX are not set to AUTO mode.

### Category

Ports

### Security

Retrieve

### Input Format

RTRV-FSTE:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-FSTE:TID:FAC-1-1:CTAG;

### Input Parameters

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|-------|--|

### Output Format

```
SID DATE TIME M CTAG COMPLD
"<AID>:[<ROLE>],[<STATUS>]:[<ADMINSTATE>],[<LINKSTATE>],[<MTU>],[<FLOWCTRL>],[
<OPTICS>],[<DUPLEX>],[<SPEED>],[<FLOW>],[<EXPDUPLEX>],[<EXPSPEED>],[<VLANCOS
THRESHOLD>],[<IPTOSTHRESHOLD>],[<NAME>],[<SUPPRESS>],[<SOAK>],[<SOAKLEFT>],
[<SELECTIVEAUTO>],[<LIENABLE>],[<LITIMER>],[<LBCL>],[<OPT>],[<OPR>],[<FREQ>],[

```

;

**Output Example**

```
TCC2 2002-02-07 05:37:40
```

```
M 1 COMPLD
```

```
"VFAC-4-1-1:WORK,STBY:MTU=9700,DUPLEX=FULL,SPEED=100_MBPS,SOAK=32,FREQ=US
E-TWL1,LOSSB=AUTOPROV,AUTONEG=Y,SQUELCHMODE=SQUELCH:OOS-MA,DSBLD"
```

```
;
```

**Output Parameters**

|                    |   |
|--------------------|---|
| <AID>              | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
| <ROLE>             | Identifies the port role in a Y-cable protection scheme. The parameter type is SIDE, which is the role the unit is playing in the protection group. |
| <STATUS>           | Identifies a port status in a Y-cable protection scheme. The parameter type is STATUS, which is the status of the unit in the protection pair.      |
| <ADMINSTATE>       | (Optional) Administration type. The parameter type is UP_DOWN (up or down).   |
| • DOWN             | Down  |
| • UP               | Up  |
| <LINKSTATE>        | (Optional) Link protocol. The parameter type is UP_DOWN (up or down).   |
| • DOWN             | Down  |
| • UP               | Up  |
| <MTU>              | (Optional) Maximum transmission unit. MTU is an integer.  |
| <FLOWCTRL>         | (Optional) Flow control. The parameter type is FLOW, which is the type of flow control that has been negotiated for an Ethernet port.               |
| • ASYMMETRIC       | Asymmetric flow control   |
| • ASYMMETRIC_LOCAL | Asymmetric local flow control   |
| • NONE             | No flow control   |
| • PASSTHRU         | Passthrough flow control  |
| • SYMMETRIC        | Symmetric flow control  |
| <OPTICS>           | (Optional) Optics. The parameter type is OPTICS, which is the type of Gigabit Ethernet optics being used.   |
| • 1000_BASE_CX     | 1000BaseCX  |
| • 1000_BASE_LX     | 1000BaseLX  |
| • 1000_BASE_SX     | 1000BaseSX  |
| • 1000_BASE_ZX     | 1000BaseZX  |
| • CWDM_1470        | CWDM 1470   |
| • CWDM_1490        | CWDM 1490   |
| • CWDM_1510        | CWDM 1510   |
| • CWDM_1530        | CWDM 1530   |
| • CWDM_1550        | CWDM 1550   |
| • CWDM_1570        | CWDM 1570   |

| • ITU_100G_1547_72 | ITU-100G 1547.72  |
| • ITU_100G_1548_51 | ITU-100G 1548.51  |
| • ITU_100G_1550_12 | ITU-100G 1550.12  |
| • ITU_100G_1550_92 | ITU-100G 1550.92  |
| • ITU_100G_1551_72 | ITU-100G 1551.72  |
| • ITU_100G_1552_52 | ITU-100G 1552.52  |
| • ITU_100G_1554_13 | ITU-100G 1554.13  |
| • ITU_100G_1554_94 | ITU-100G 1554.94  |
| • ITU_100G_1555_75 | ITU-100G 1555.75  |
| • ITU_100G_1556_55 | ITU-100G 156.55   |
| • ITU_100G_1558_17 | ITU-100G 1558.17  |
| • ITU_100G_1558_98 | ITU-100G 1558.98  |
| • ITU_100G_1559_79 | ITU-100G 1559.79  |
| • ITU_100G_1560_61 | ITU-100G 1560.61  |
| • UNKNOWN          | Unknown Optical Type  |
| • UNPLUGGED        | Unplugged   |
| <FREQ>             | (Optional) The parameter type is OPTICAL_WLEN, which is the optical wavelength. |
| • 1529.16          | Wavelength 1529.16  |
| • 1562.23          | Wavelength 1562.23  |
| • 1562.64          | Wavelength 1562.64  |
| • 1563.05          | Wavelength 1563.05  |

|                 |  |
|-----------------|--|
| • 1563.45       | Wavelength 1563.45   |
| • 1563.86       | Wavelength 1563.86   |
| • 1564.27       | Wavelength 1564.27   |
| • 1564.68       | Wavelength 1564.68   |
| • 1565.09       | Wavelength 1565.09   |
| • 1565.50       | Wavelength 1565.50   |
| • 1565.90       | Wavelength 1565.90   |
| • 1566.31       | Wavelength 1566.31   |
| • 1566.72       | Wavelength 1566.72   |
| <DUPLEX>        | (Optional) Duplex mode. The parameter type is ETHER_DUPLEX (duplex mode).  |
| • AUTO          | Auto mode  |
| • FULL          | Full mode  |
| • HALF          | Half mode  |
| <SPEED>         | (Optional) Speed. The parameter type is ETHER_SPEED, which is the Ethernet speed.  |
| • 100_MBPS      | 100 Mbps   |
| • 10_GBPS       | 10 Gbps  |
| • 10_MBPS       | 10 Mbps  |
| • 1_GBPS        | 1 Gbps   |
| • 40_GBPS       | 40 Gigabit per second  |
| • AUTO_FDX      | Enable auto negotiation with full duplex   |
| • AUTO          | Auto   |
| <FLOW>          | (Optional) Flow. The parameter type is ON_OFF (disable or enable an attribute).  |
| • N             | Disable an attribute.  |
| • Y             | Enable an attribute.   |
| <EXPDUPLX>      | (Optional) Ethernet duplex mode. The parameter type is ETHER_DUPLEX, which is the duplex mode.   |
| • AUTO          | Auto mode  |
| • FULL          | Full mode  |
| • HALF          | Half mode  |
| <EXPSPEED>      | (Optional) Expected speed. Due to the auto-negotiation feature, actual speed may differ from expected speed. The parameter type is ETHER_SPEED, which is the Ethernet speed. |
| • 100_MBPS      | 100 Mbps   |
| • 10_GBPS       | 10 Gbps  |
| • 10_MBPS       | 10 Mbps  |
| • 1_GBPS        | 1 Gbps   |
| • AUTO          | Auto   |
| <SELECTIVEAUTO> | (Optional) Selective auto-negotiation. The parameter is Y or N (enable or disable auto-negotiation) This indicates selective auto-negotiation of EXPSPEED and EXPDUPLX only. |

|                     |   |
|---------------------|---|
| • Y                 | Enable selective auto-negotiation.  |
| • N                 | Disable selective auto-negotiation. The default value is N.   |
| <VLANCOS>           | (Optional) Priority queuing threshold based on VLAN class of service of incoming Ethernet packets. VLANCOS is an integer in the range 0 to 7. Defaults to 7.  |
| <IPTOS>             | (Optional) Priority queuing threshold based on IP type of service of incoming Ethernet packets. IPTOS is an integer in the range 0 to 255. Defaults to 255.   |
| <NAME>              | (Optional) Facility name. NAME is a string.   |
| <SUPPRESS>          | Pre-service alarm flag for data ports.  |
| • ON                | Enable suppress.  |
| • OFF               | Disable suppress. Default is Off.   |
| <SOAK>              | (Optional) Locked-AutomaticInService to Unlocked transition soak time as measured in 15-minute intervals. SOAK is an integer.   |
| <SOAKLEFT>          | (Optional) Time remaining for the transition from Locked-AutomaticInService to Unlocked measured in 1 minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for SOAKLEFT are as follows: <ul style="list-style-type: none"> <li>• When the port is in Locked, Locked_Maintenance or Unlocked state, the parameter will not appear.</li> <li>• When the port is in Locked_AutomaticInService but the countdown has not started due to a fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in Locked_AutomaticInService state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <LIENABLE>          | (Optional) Enable or Disable link integrity timer. Takes either Y or N. Value Y enables the LITIMER and value N disables LITIMER. By default LITIMER is enabled. <p><b>Note</b> The LIENABLE parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.</p>  |
| <LITIMER>           | (Optional) Link integrity timer duration in the range between 200 ms and 10000 ms in multiples on 100 ms. <p><b>Note</b> The LITIMER parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.</p>  |
| <CIR>               | Ingress committed information rate. The value ranges from 0.0 to 100.0. The default value is 100.0.   |
| <SQUELCHMODE>       | Shuts down the far-end laser in response to certain defects   |
| • NONE              | Transparent   |
| • SQUELCH           | Squelch is enabled  |
| <PSTPSTQ>           | Administrative state in the PST_PSTQ format. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and the PSTQ.  |
| • Unlocked-Enabled  | In service and normal   |
| • Unlocked-Disabled | Out of service and autonomous   |

|                            |  |
|----------------------------|--|
| • Locked-Disabled          | Out of service, autonomous and management  |
| • Locked-Enabled           | Out of service and management  |
| <SSTQ>                     | (Optional) Secondary state of the entity. the parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AutomaticInService       | Automatic in service   |
| • Disabled                 | Disabled   |
| • Loopback                 | Loopback   |
| • MismatchofEquipmentAlarm | Mismatch of equipment and attributes   |
| • Maintenance              | Maintenance mode   |
| • OutOfGroup               | Out of group   |
| • SoftwareDownload         | Software downloading   |
| • Unassigned               | Unassigned   |
| • NotInstalled             | Unequipped   |

## 21.63 RTRV-FTPSEVER

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve FTP Server (RTRV-FTPSEVER) command retrieves FTP server entries.

**Usage Guidelines** FTP server entries cannot be retrieved using the TIMER filter.

**Category** ENE

**Security** Retrieve

**Input Format** RTRV-FTPSEVER:[<TID>]::<CTAG>:::[IPADDR=<IPADDR>],[IPMASK=<IPMASK>],[ENABLE=<ENABLE>];

**Input Example** RTRV-FTPSEVER:::A:::IPADDR=10.20.30.40

|                         |          |   |
|-------------------------|----------|---|
| <b>Input Parameters</b> | <IPADDR> | Specifies the IP address of the FTP server.   |
|                         | <IPMASK> | Specifies the subnet mask of the FTP server.  |
|                         | <ENABLE> | Specifies the enable/disable option of the FTP server. The parameter type is ON_OFF (disable or enable an attribute). |
|                         | • N      | Disable an attribute.   |
|                         | • Y      | Enable an attribute.  |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
",:IPADDR=<IPADDR>,IPMASK=<IPMASK>, ENABLE=<ENABLE>,TIMER=<TIMER>"
;
```

**Output Example**

```
SID DATE TIME
M CTAG COMPLD
",:IPADDR=10.20.30.40,IPMASK=255.0.0.0, ENABLE=Y,TIMER=10"
;
```

|                          |          |   |
|--------------------------|----------|---|
| <b>Output Parameters</b> | <IPADDR> | Specifies the IP address of the FTP Server.   |
|                          | <IPMASK> | Specifies the subnet mask of the FTP Server.  |
|                          | <ENABLE> | Specifies the enable/disable option of the FTP Server. The parameter type is ON_OFF (disable or enable an attribute). |
|                          | • N      | Disable an attribute.   |
|                          | • Y      | Enable an attribute.  |
|                          | <TIMER>  | Specifies the timeout value of the FTP Server in minutes.   |

## 21.64 RTRV-G1000

(Cisco ONS 15454) The Retrieve G1000 Facility (RTRV-G1000) command retrieves the G1000 facilities configuration.

**Usage Guidelines** None

**Category** Ports

**Security** Retrieve

**Input Format** RTRV-G1000:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-G1000:TID:FAC-1-1:CTAG;

**Input Parameters**

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|-------|--|

**Output Format**

```

SID DATE TIME
M CTAG COMPLD
"<AID>::[MFS=<MFS>],[FLOW=<FLOW>],[LAN=<LAN>],[OPTICS=<OPTICS>],
[TRANS=<TRANS>],[TPORT=<TPORT>],[LOWMRK=<LOWMRK>],
[HIWMRK=<HIWMRK>],[AUTONEG=<AUTONEG>],[ENCAP=<ENCAP>],
[NAME=<NAME>],[SOAK=<SOAK>],[SOAKLEFT=<SOAKLEFT>],[LIENABLE=<LIENABLE>],
[LITIMER=<LITIMER>]:<PST_PSTQ>,[<SSTQ>]"
;

```

**Output Example**

```

TID-000 1998-06-20 14:30:00
M 001 COMPLD
"FAC-1-1::MFS=9032,FLOW=N,LAN=ASYMMETRIC,OPTICS=UNKNOWN,TRANS=NONE,
TPORT=FAC-5-1,LOWMRK=20,HIWMRK=492,AUTONEG=Y,ENCAP=GFP_T,
NAME="G1000 PORT",SOAK=32,SOAKLEFT="12-25", LIENABLE=Y,
LITIMER=300:OOS-AU,AINS"
;

```

**Output Parameters**

|   |   |
|---|---|
| <AID>   | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
| <MFS>   | Maximum frame size. The parameter type is MFS_TYPE, which is the maximum frame size used by an Ethernet card.                               |
| <ul style="list-style-type: none"> <li>1548</li> <li>JUMBO</li> </ul>   | Normal frame size<br>Jumbo frame size   |
| <FLOW>  | Flow control. The parameter type is ON_OFF (disable or enable an attribute).  |
| <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>  | Disable an attribute.<br>Enable an attribute.   |
| <LAN>   | (Optional) Local-area network. The parameter type is FLOW, which is the type of flow control that has been negotiated for an Ethernet port. |

| • UNPLUGGED        | Unplugged   |
| <TRANS>            | (Optional) Transponder mode. The parameter type is TRANS_MODE, which is the G1000 transponder mode. |
| • BI               | Bidirectional   |

|            |   |
|------------|---|
| • NONE     | Not in transponder mode   |
| • UNI      | Unidirectional  |
| <TPORT>    | (Optional) Transponding port access identifier from the “26.17 FACILITY” section on page 26-42.   |
| <LOWMRK>   | (Optional) Low watermark value. LOWMRK is an integer.   |
| <HIWMRK>   | (Optional) High watermark value. HIWMRK is an integer.  |
| <AUTONEG>  | (Optional) Automatic negotiation. The parameter type is ON_OFF (disable or enable an attribute).  |
| • N        | Disable an attribute.   |
| • Y        | Enable an attribute.  |
| <ENCAP>    | (Optional) Frame encapsulation type. The parameter type is ENCAP, which is the frame encapsulation type.  |
| • GFP_F    | GFP frame mode  |
| • GFP_T    | GFP transparent mode  |
| • HDLC     | HDLC frame mode   |
| • HDLC_LEX | HDLC LAN extension frame mode   |
| • HDLC_X86 | HDLC X.86 frame mode  |
| • CBR      | CBR mapping mode.   |
| • GFP      | GFP mapping mode.   |
| • GMP      | GMP mapping mode is supported only on 8GFC on 10x10G-LC card.   |
| • TRP      | Transparent mapping mode.   |
| <NAME>     | (Optional) Facility name. NAME is a string.   |
| <SOAK>     | (Optional) OOS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer.  |
| <SOAKLEFT> | (Optional) Time remaining for the transition from OOS-AINS to IS measured in 1-minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for SOAKLEFT are as follows: <ul style="list-style-type: none"> <li>• When the port is in OOS, OOS_MT or IS state, the parameter will not appear.</li> <li>• When the port is in OOS_AINS state but the countdown has not started due to a fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in OOS_AINS state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <LIENABLE> | (Optional) Enable or Disable link integrity timer. Takes either Y or N. Value Y enables the LITIMER and value N disables LITIMER.<br>By default LITIMER is enabled.<br><b>Note</b> The LIENABLE parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.   |

|            |  |
|------------|--|
| <LITIMER>  | (Optional) Link integrity timer duration in the range between 200 ms and 10000 ms in multiples on 100 ms.<br><b>Note</b> The LITIMER parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454. |
| <PSTPSTQ>  | Administrative state in the PST-PSTQ format. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and PSTQ.   |
| • IS-NR    | In Service and Normal  |
| • OOS-AU   | Out of Service and Autonomous  |
| • OOS-AUMA | Out of Service and Autonomous Management   |
| • OOS-MA   | Out of Service and Management  |
| <SSTQ>     | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| • AINS     | Automatic In-Service   |
| • DSBLD    | Disabled   |
| • LPBK     | Loopback   |
| • MEA      | Mismatch of Equipment  |
| • MT       | Maintenance  |
| • OOG      | Out of Group   |
| • SWDL     | Software Download  |
| • UAS      | Unassigned   |
| • UEQ      | Unequipped   |

## 21.65 RTRV-GFP

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Generic Framing Protocol (RTRV-GFP) command retrieves GFP information for the ONS 15454 CE-100T-8 and CE-1000-4 cards.

**Usage Guidelines** None

**Category** Ports

**Security** Retrieve

**Input Format** RTRV-GFP:[<TID>]:<SRC>:<CTAG>;

**Input Example** RTRV-GFP:CISCO:FAC-1-1:123;

|                         |                    |  |
|-------------------------|--------------------|--|
| <b>Input Parameters</b> | <b>&lt;SRC&gt;</b> | Source access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
|                         |                    | <b>Note</b> VFAC AID is used for the CE-100T-8 cards on 15454. ML-100T-8 GFP management is done by the Cisco IOS CLI and not by the TL1 interface. FAC AID is used for ONS 15454 FC_MR-4 |

|                      |   |

| <b>Output Parameters</b> | <b>&lt;AID&gt;</b>   | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
|                          | <b>&lt;FCS&gt;</b>   | (Optional) Payload frame check sequence. The parameter type is FCS, which is the frame check sequence.  |
|                          | <ul style="list-style-type: none"> <li>• FCS-16</li> <li>• FCS-32</li> <li>• NONE</li> </ul> | <ul style="list-style-type: none"> <li>Frame check sequencing using 16 bits</li> <li>Frame check sequencing using 32 bits</li> <li>No frame check sequence</li> </ul> |
|                          | <b>&lt;AUTOTHGFPBUF&gt;</b>  | (Optional) Flag used to indicate whether PDI-P should be generated on the outgoing VT-structured STSs. The parameter type is ON_OFF (disable or enable an attribute). |
|                          | <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>                           | <ul style="list-style-type: none"> <li>Disable an attribute.</li> <li>Enable an attribute.</li> </ul>   |
|                          | <b>&lt;GFPBUF&gt;</b>  | (Optional) GFPBUF is an integer.  |
|                          | <b>&lt;FILTER&gt;</b>  | (Optional) Parameter type is GFP_FILTER, which is the filter.   |
|                          | <ul style="list-style-type: none"> <li>• EGRESS</li> <li>• NONE</li> </ul>                   | <ul style="list-style-type: none"> <li>Activate filter on egress port.</li> <li>Turn off filter.</li> </ul>   |

## 21.66 RTRV-GIGE

(Cisco ONS 15454) The Retrieve Gigabit (GIGE/10GIGE) Ethernet command retrieves the attributes and state of Gigabit Ethernet facilities.

|                         |      |
|-------------------------|------|
| <b>Usage Guidelines</b> | None |
|-------------------------|------|

**Category** Ports

**Security** Retrieve

**Input Format** RTRV-GIGE:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-GIGE:TID:FAC-1-1:CTAG;

**Input Parameters**

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|-------|--|

**Output Format**

```
SID DATE TIME M CTAG COMPLD
"<AID>:.,[<ROLE>],[<STATUS>]:[<ADMINSTATE>],[<LINKSTATE>],[<MTU>],[<MFS>],[<FLOW>],[<FLOWCTRL>],[<AUTONEG>],[<HIWMRK>],[<LOWMRK>],[<OPTICS>],[<DUPLEX>],[<SPEED>],[<NAME>],[<MACADDR>],[<LBCL>],[<OPT>],[<OPR>],[<FREQ>],[<LOSSB>],[<SUPPRESS>],[<SOAK>],[<SOAKLEFT>],[<SQUELCH>],[<CIR>],[<CBS>],[<EBS>],[<LIENABLE>],[<LITIMER>],[<ACTFLOW>],[<ACTDUPLEX>],[<ACTSPEED>],[<OSC>],[<ENCAP>],[<PAUSEFRAME>],[<CLNTDST>],[<SYNCSMSG>],[<SENDDUS>],[<ADMSSM>],[<PROVIDESYNC>],[<ESMC>],[<EXPSPEED>],[<EXPDUPLEX>],[<SELECTIVEAUTO>],[<INTERCONMODE>],[<SQUELCHMODE>]:<PORTMODE>,[<PST>]"

M 1 COMPLD
```

```
"VFAC-4-1-1:.,WORK,STBY:MTU=9700,,AUTONEG=Y,DUPLEX=FULL,SPEED=1_GBPS,MACADDR=08-E5-78-6C-02-7F,FREQ=USE-TWL1,LOSSB=AUTOPROV,SOAK=32,ACTDUPLEX=AUTO,ACTSPEED=AUTO,SYNCSMSG=Y,SENDDUS=N,ADMSSM=STU,PROVIDESYNC=N,ESMC=N,SQUELCHMODE=SQUELCH:OOS-MA,DSBLD"
```

| Output Parameters | Parameter | Description   |
|-------------------|-----------|---|
|                   | <AID>     | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
|                   | <ROLE>    | Identifies the port role in a Y-cable protection scheme. The parameter type is SIDE, which is the role the unit is playing in the protection group. |
|                   | • PROT    | The entity is a protection unit in the protection group.  |
|                   | • WORK    | The entity is a working unit in the protection group.   |

| Parameter          | Description  |
|--------------------|--|
| <STATUS>           | Identifies a port status in a Y-cable protection scheme. The parameter type is STATUS, which is the status of the unit in the protection pair. |
| • ACT              | The entity is the active unit in the shelf.  |
| • NA               | Status is unavailable.   |
| • STBY             | The entity is the standby unit in the shelf.   |
| <ADMINSTATE>       | (Optional) Administration type. The parameter type is UP_DOWN (up or down).  |
| • DOWN             | Down   |
| • UP               | Up   |
| <LINKSTATE>        | (Optional) Link protocol. The parameter type is UP_DOWN (up or down).  |
| • DOWN             | Down   |
| • UP               | Up   |
| <MTU>              | (Optional) Maximum transmission unit. MTU is an integer.   |
| <MFS>              | The max frame size used by an Ethernet card.   |
| <ENCAP>            | (Optional) Encapsulation frame type. The parameter type is ENCAP, which is the frame encapsulation type.                                       |
| • GFP_F            | GFP Frame mode.  |
| • GFP_T            | GFP Transparent mode.  |
| • HDLC             | HDLC Frame mode.   |
| • HDLC_LEX         | HDLC LAN Extension Frame mode.   |
| • HDLC_X86         | HDLC X.86 Frame mode.  |
| • GMP              | GMP mapping mode. Supported only on 8GFC on 10x10G-LC card.  |
| <FLOWCTRL>         | (Optional) Flow control. The parameter type is FLOW, which is the type of flow control that has been negotiated for an Ethernet port.          |
| • ASYMMETRIC       | Asymmetric flow control  |
| • ASYMMETRIC_LOCAL | Asymmetric local flow control  |
| • NONE             | No flow control  |
| • PASSTHRU         | Passthrough flow control   |
| • SYMMETRIC        | Symmetric flow control   |
| <AUTONEG>          | (Optional) Automatic negotiation. The parameter type is ON_OFF (disable or enable an attribute).   |
| • N                | Disable an attribute.  |
| • Y                | Enable an attribute.   |
| <LOWMRK>           | (Optional) Low watermark value. LOWMRK is an integer.  |
| <HIWMRK>           | (Optional) High watermark value. HIWMRK is an integer.   |
| <OPTICS>           | (Optional) Optics type. The parameter type is OPTICS, which is the type of Gigabit Ethernet optics being used.                                 |
| • 1000_BASE_CX     | 1000BaseCX   |
| • 1000_BASE_LX     | 1000BaseLX   |

| Parameter          | Description      |
|--------------------|------------------|
| • 1000_BASE_SX     | 1000BaseSX       |
| • 1000_BASE_T      | 1000BaseT        |
| • 1000_BASE_ZX     | 1000BaseZX       |

| • UNKNOWN          | Unknown Optical Type  |
| • UNPLUGGED        | Unplugged   |
| <DUPLEX>           | (Optional) Duplex mode. The parameter type is ETHER_DUPLEX, which is the duplex mode.         |
| • AUTO             | Auto mode   |
| • FULL             | Full mode   |
| • HALF             | Half mode   |
| <SPEED>            | (Optional) Speed. The parameter type is ALS_MODE, which is the automatic laser shutdown mode. |
| • AUTO             | Automatic   |
| • DISABLED         | Disabled  |
| • MAN              | Manual  |
| • MAN-RESTART      | Manual restart for test   |
| <NAME>             | (Optional) Facility name. NAME is a string.   |
| <FREQ>             | (Optional) The parameter type is OPTICAL_WLEN, which is the optical wavelength.               |
| • 1310             | Wavelength 1310   |
| • 1470             | Wavelength 1470   |
| • 1490             | Wavelength 1490   |
| • 1510             | Wavelength 1510   |
| • 1529.16          | Wavelength 1529.16  |
| • 1529.55          | Wavelength 1529.55  |
| • 1529.94          | Wavelength 1529.94  |
| • 1530             | Wavelength 1530   |
| • 1530.33          | Wavelength 1530.33  |
| • 1530.73          | Wavelength 1530.73  |
| • 1531.12          | Wavelength 1531.12  |
| • 1531.51          | Wavelength 1531.51  |
| • 1531.90          | Wavelength 1531.90  |
| • 1532.29          | Wavelength 1532.29  |
| • 1532.68          | Wavelength 1532.68  |
| • 1533.07          | Wavelength 1533.07  |
| • 1533.47          | Wavelength 1533.47  |
| • 1533.86          | Wavelength 1533.86  |
| • 1534.25          | Wavelength 1534.25  |
| • 1534.64          | Wavelength 1534.64  |

| Parameter | Description        |
|-----------|--------------------|
| • 1535.04 | Wavelength 1535.04 |
| • 1535.43 | Wavelength 1535.43 |
| • 1535.82 | Wavelength 1535.82 |
| • 1536.22 | Wavelength 1536.22 |
| • 1536.61 | Wavelength 1536.61 |
| • 1537    | Wavelength 1537    |
| • 1537.40 | Wavelength 1537.40 |
| • 1537.79 | Wavelength 1537.79 |
| • 1538.19 | Wavelength 1538.19 |
| • 1538.58 | Wavelength 1538.58 |
| • 1538.98 | Wavelength 1538.98 |
| • 1539.37 | Wavelength 1539.37 |
| • 1539.77 | Wavelength 1539.77 |
| • 1540.16 | Wavelength 1540.16 |
| • 1540.56 | Wavelength 1540.56 |
| • 1540.95 | Wavelength 1540.95 |
| • 1541.35 | Wavelength 1541.35 |
| • 1541.75 | Wavelength 1541.75 |
| • 1542.14 | Wavelength 1542.14 |
| • 1542.35 | Wavelength 1542.35 |
| • 1542.54 | Wavelength 1542.54 |
| • 1542.94 | Wavelength 1542.94 |
| • 1543.33 | Wavelength 1543.33 |
| • 1543.73 | Wavelength 1543.73 |
| • 1544.13 | Wavelength 1544.13 |
| • 1544.53 | Wavelength 1544.53 |
| • 1544.92 | Wavelength 1544.92 |
| • 1545.32 | Wavelength 1545.32 |
| • 1545.72 | Wavelength 1545.72 |
| • 1546.12 | Wavelength 1546.12 |
| • 1546.52 | Wavelength 1546.52 |
| • 1546.92 | Wavelength 1546.92 |
| • 1547.32 | Wavelength 1547.32 |
| • 1547.72 | Wavelength 1547.72 |
| • 1548.12 | Wavelength 1548.12 |
| • 1548.51 | Wavelength 1548.51 |
| • 1548.92 | Wavelength 1548.92 |
| • 1549.32 | Wavelength 1549.32 |
| • 1549.71 | Wavelength 1549.71 |
| • 1550    | Wavelength 1500    |

| Parameter | Description        |
|-----------|--------------------|
| • 1550.12 | Wavelength 1550.12 |
| • 1550.52 | Wavelength 1550.52 |
| • 1550.92 | Wavelength 1550.92 |
| • 1551.32 | Wavelength 1551.32 |
| • 1551.72 | Wavelength 1551.72 |
| • 1552.12 | Wavelength 1552.12 |
| • 1552.52 | Wavelength 1552.52 |
| • 1552.93 | Wavelength 1552.93 |
| • 1553.33 | Wavelength 1553.33 |
| • 1553.73 | Wavelength 1553.73 |
| • 1554.13 | Wavelength 1554.13 |
| • 1554.13 | Wavelength 1554.13 |
| • 1554.94 | Wavelength 1554.94 |
| • 1555.34 | Wavelength 1555.34 |
| • 1555.75 | Wavelength 1555.75 |
| • 1556.15 | Wavelength 1556.15 |
| • 1556.55 | Wavelength 1556.55 |
| • 1556.96 | Wavelength 1556.96 |
| • 1557.36 | Wavelength 1557.36 |
| • 1557.77 | Wavelength 1557.77 |
| • 1558.17 | Wavelength 1558.17 |
| • 1558.58 | Wavelength 1558.58 |
| • 1558.98 | Wavelength 1558.98 |
| • 1559.39 | Wavelength 1559.39 |
| • 1559.79 | Wavelength 1559.79 |
| • 1560.20 | Wavelength 1560.20 |
| • 1560.61 | Wavelength 1560.61 |
| • 1561.01 | Wavelength 1561.01 |
| • 1561.42 | Wavelength 1561.42 |
| • 1561.83 | Wavelength 1561.83 |
| • 1562.23 | Wavelength 1562.23 |
| • 1562.64 | Wavelength 1562.64 |
| • 1563.05 | Wavelength 1563.05 |
| • 1563.45 | Wavelength 1563.45 |
| • 1563.86 | Wavelength 1563.86 |
| • 1564.27 | Wavelength 1564.27 |
| • 1564.68 | Wavelength 1564.68 |
| • 1565.09 | Wavelength 1565.09 |
| • 1565.50 | Wavelength 1565.50 |
| • 1565.90 | Wavelength 1565.90 |

| Parameter | Description        |
|-----------|--------------------|
| • 1566.31 | Wavelength 1566.31 |
| • 1566.72 | Wavelength 1566.72 |
| • 1570    | Wavelength 1570    |
| • 1570.83 | Wavelength 1570.83 |
| • 1571.24 | Wavelength 1571.24 |
| • 1571.65 | Wavelength 1571.65 |
| • 1572.06 | Wavelength 1572.06 |
| • 1572.48 | Wavelength 1572.48 |
| • 1572.89 | Wavelength 1572.89 |
| • 1573.30 | Wavelength 1573.30 |
| • 1573.71 | Wavelength 1573.71 |
| • 1574.13 | Wavelength 1574.13 |
| • 1574.54 | Wavelength 1574.54 |
| • 1574.95 | Wavelength 1574.95 |
| • 1575.37 | Wavelength 1575.37 |
| • 1575.78 | Wavelength 1575.78 |
| • 1576.20 | Wavelength 1576.20 |
| • 1576.61 | Wavelength 1576.61 |
| • 1577.03 | Wavelength 1577.03 |
| • 1577.44 | Wavelength 1577.44 |
| • 1577.86 | Wavelength 1577.86 |
| • 1578.27 | Wavelength 1578.27 |
| • 1578.69 | Wavelength 1578.69 |
| • 1579.10 | Wavelength 1579.10 |
| • 1579.52 | Wavelength 1579.52 |
| • 1579.93 | Wavelength 1579.93 |
| • 1580.35 | Wavelength 1580.35 |
| • 1580.77 | Wavelength 1580.77 |
| • 1581.18 | Wavelength 1581.18 |
| • 1581.60 | Wavelength 1581.60 |
| • 1582.02 | Wavelength 1582.02 |
| • 1582.44 | Wavelength 1582.44 |
| • 1582.85 | Wavelength 1582.85 |
| • 1583.27 | Wavelength 1583.27 |
| • 1583.69 | Wavelength 1583.69 |
| • 1584.11 | Wavelength 1584.11 |
| • 1584.53 | Wavelength 1584.53 |
| • 1584.95 | Wavelength 1584.95 |
| • 1585.36 | Wavelength 1585.36 |
| • 1585.78 | Wavelength 1585.78 |

| Parameter | Description        |
|-----------|--------------------|
| • 1586.20 | Wavelength 1586.20 |
| • 1586.62 | Wavelength 1586.62 |
| • 1587.04 | Wavelength 1587.04 |
| • 1587.46 | Wavelength 1587.46 |
| • 1587.88 | Wavelength 1587.88 |
| • 1588.30 | Wavelength 1588.30 |
| • 1588.73 | Wavelength 1588.73 |
| • 1589.15 | Wavelength 1589.15 |
| • 1589.57 | Wavelength 1589.57 |
| • 1589.99 | Wavelength 1589.99 |
| • 1590    | Wavelength 1590    |
| • 1590.41 | Wavelength 1590.41 |
| • 1590.83 | Wavelength 1590.83 |
| • 1591.26 | Wavelength 1591.26 |
| • 1591.68 | Wavelength 1591.68 |
| • 1592.10 | Wavelength 1592.10 |
| • 1592.52 | Wavelength 1592.52 |
| • 1592.95 | Wavelength 1592.95 |
| • 1593.37 | Wavelength 1593.37 |
| • 1593.79 | Wavelength 1593.79 |
| • 1594.22 | Wavelength 1594.22 |
| • 1594.64 | Wavelength 1594.64 |
| • 1595.06 | Wavelength 1595.06 |
| • 1595.49 | Wavelength 1595.49 |
| • 1596.34 | Wavelength 1596.34 |
| • 1596.76 | Wavelength 1596.76 |
| • 1597.19 | Wavelength 1597.19 |
| • 1597.62 | Wavelength 1597.62 |
| • 1598.04 | Wavelength 1598.04 |
| • 1598.47 | Wavelength 1598.47 |
| • 1598.89 | Wavelength 1598.89 |
| • 1599.32 | Wavelength 1599.32 |
| • 1599.75 | Wavelength 1599.75 |
| • 1600.06 | Wavelength 1600.06 |
| • 1601.03 | Wavelength 1601.03 |
| • 1601.46 | Wavelength 1601.46 |
| • 1601.88 | Wavelength 1601.88 |
| • 1602.31 | Wavelength 1602.31 |
| • 1602.74 | Wavelength 1602.74 |
| • 1603.17 | Wavelength 1603.17 |

| Parameter       | Description   |
|-----------------|---|
| • 1603.60       | Wavelength 1603.60  |
| • 1604.03       | Wavelength 1604.03  |
| • 1610          | Wavelength 1610   |
| • USE-TWL1      | Use Tunable Wavelength 1  |
| <LOSSB>         | (Optional) The parameter type is REACH, which is the reach value. |
| • 100GBASE-LR4  | 100GBASE-LR4  |
| • 100GBASE-SR10 | 100GBASE-SR10   |
| • 40GBASE-FR    | 40GBASE-FR  |
| • 40GBASE-LR4   | 40GBASE-LR4   |
| • 40GBASE-SR4   | Reach supported on 40GIGE payload on CFP-LC card.                 |
| • 4I1-9D1F      | 4I1-9D1F  |
| • C4S1-2D1      | C4S1-2D1  |
| • FE-BX         | FE-BX   |
| • FX            | FX  |
| • GE-BX         | GE-BX   |
| • GE-EX         | GE-EX   |
| • LX-10         | LX-10   |
| • TEN-GE-LRM    | TEN-GE-LRM  |
| • TEN-GE-ZR     | TEN-GE-ZR   |
| • VSR2000-3R2   | VSR2000-3R2   |
| • AUTOPROV      | Autoprovisioning  |
| • CWDM-40KM     | CWDM 40 kilometers.   |
| • CX            | Reach CX  |
| • CX1           | Reach CX1   |
| • DX            | Reach DX  |
| • HX            | Reach HX  |
| • I1            | Reach I1  |
| • IR-1          | Reach IR-1  |
| • IR-2          | Reach IR-2  |
| • L1            | Reach L1  |
| • L2            | Reach L2  |
| • L3            | Reach L3  |
| • LR-1          | Reach LR-1  |
| • LR-2          | Reach LR-2  |
| • LR-3          | Reach LR-3  |
| • LX            | Reach LX  |
| • P1I1-2D1      | Long haul 10G Ethernet with 1310 nm wavelength                    |
| • P1L1-1D2      | Longhaul 2.5G Ethernet with 1550 nm wavelength                    |
| • P1L1-2D2      | Long haul 10G Ethernet with 1550 nm wavelength                    |
| • P1S1-1D1      | Shorthaul 2.5G Ethernet with 1310 nm wavelength                   |

| Parameter          | Description   |
|--------------------|---|
| • P1S1-2D1         | Short haul 10G Ethernet in 1310 nm wavelength   |
| • SC               | Reach SC  |
| • S1               | Reach S1  |
| • S2               | Reach S2  |
| • SR               | Reach SR  |
| • SR-1             | Reach SR-1  |
| • SX               | Reach SX  |
| • T                | Reach T   |
| • TEN-GE-ER        | 10 GE extended range  |
| • TEN-GE-LR        | 10 GE long range  |
| • TEN-GE-SR        | 10 GE short range   |
| • ULH              | Reach ULH   |
| • VSR              | Reach VSR   |
| • VX               | Reach VX  |
| • ZX               | Reach ZX  |
| <SOAK>             | (Optional) Locked-AutomaticInService to Unlocked transition soak time as measured in 15-minute intervals. SOAK is an integer.   |
| <LIENABLE>         | (Optional) Enable or disable link integrity timer. Takes either Y or N. Value Y enables the LITIMER and value N disables LITIMER.<br><br>By default LITIMER is enabled.<br><br><b>Note</b> The LIENABLE parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454. |
| <LITIMER>          | (Optional) Link integrity timer duration in the range between 200 ms and 10000 ms in multiples of 100 ms.<br><br><b>Note</b> The LITIMER parameter is supported on only CE-1000-4 and CE-1000T-8 cards on the 15454.  |
| <ACTFLOW>          | The type of flow control.   |
| • ASYMMETRIC       | Asymmetric flow control   |
| • ASYMMETRIC_LOCAL | Asymmetric local flow control.  |
| • NONE             | No flow control   |
| • PASSTHRU         | Pass-through flow control   |
| • SYMMETRIC        | Symmetric flow control  |
| <ACTDUPLEX>        | Ethernet duplex mode. Default value is -AUTO.   |
| • AUTO             | Auto mode   |
| • FULL             | Full mode   |
| • HALF             | Half mode   |
| <ACTSPEED>         | Ethernet speed.   |
| • 100_MBPS         | 100 MBPS  |
| • 10_GBPS          | 10 GBPS   |
| • 10_MBPS          | 10 MBPS   |

| Parameter        | Description   |
|------------------|---|
| • 1_GBPS         | 1 GBPS  |
| • 40_GBPS        | 40 Gigabit per second   |
| • AUTO_FDX       | Enable auto negotiation with full duplex  |
| • AUTO           | AUTO  |
| <SOAKLEFT>       | (Optional) Time remaining for the transition from Locked-AutomaticInService to Unlocked measured in 1 minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for SOAKLEFT are as follows: <ul style="list-style-type: none"> <li>• When the port is in Locked, Locked_Maintenance or Unlocked state, the parameter will not appear.</li> <li>• When the port is in Locked_AutomaticInService but the countdown has not started due to a fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in Locked_AutomaticInService state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <ENCAP>          | (Optional) Frame encapsulation type. The parameter type is ENCAP, which is the frame encapsulation type.  |
| • GFP_F          | GFP frame mode.   |
| • GFP_T          | GFP transparent mode.   |
| • HDLC           | HDLC frame mode.  |
| • HDLC_LEX       | HDLC LAN extension frame mode.  |
| • HDLC_X86       | HDLC X.86 frame mode.   |
| <OSC>            | (Optional) Facility AID from the <a href="#">“26.17 FACILITY” section on page 26-42</a>   |
| <PAUSEFRAME>     | To Enable or Disable the Pause Frame.   |
| • Y              | Enable  |
| • N              | Disable   |
| <EXPSPEED>       | (Optional) Expected speed. Due to the auto-negotiation feature, actual speed may differ from expected speed. The parameter type is ETHER_SPEED, which is the Ethernet speed.  |
| • 100_MBPS       | 100 Mbps  |
| • 10_GBPS        | 10 Gbps   |
| • 10_MBPS        | 10 Mbps   |
| • 1_GBPS         | 1 Gbps  |
| • 40_GBPS        | 40 Gigabit per second   |
| • AUTO           | Automatic   |
| • AUTO_FDX       | Enable auto negotiation with full duplex.   |
| <EXPDUPLICATION> | (Optional) Ethernet duplex mode. The parameter type is ETHER_DUPLEX, which is the duplex mode.  |
| • AUTO           | Auto mode   |

| Parameter  | Description   |
|--|---|
| <ul style="list-style-type: none"> <li>FULL</li> </ul>                     | Full mode   |
| <ul style="list-style-type: none"> <li>HALF</li> </ul>                     | Half mode   |
| <SELECTIVEAUTO>  | (Optional) Selective auto-negotiation. The parameter is Y or N (enable or disable auto-negotiation) This indicates selective auto-negotiation of EXPSPEED and EXPDUPLEX only. |
| <ul style="list-style-type: none"> <li>Y</li> </ul>                        | Enable selective auto-negotiation.  |
| <ul style="list-style-type: none"> <li>N</li> </ul>                        | Disable selective auto-negotiation. The default value is N.   |
| <INTERCONMODE>   | Inter connect mode.   |
| <CLNTDST>  | Client distance in kilometers.  |
| <ul style="list-style-type: none"> <li>10KM</li> </ul>                     | 10 kilometers.  |
| <ul style="list-style-type: none"> <li>30KM</li> </ul>                     | 30 kilometers.  |

## 21.68 RTRV-HDR

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Header (RTRV-HDR) command retrieves the header of a TL1 response message. It is used by TL1 clients to determine if the link to the NE is still active and if the NE is responding to commands.

|                         |                               |

| <b>Category</b>         | System                        |
| <b>Security</b>         | Retrieve                      |
| <b>Input Format</b>     | RTRV-HDR:[<TID>]::<CTAG>;     |
| <b>Input Example</b>    | RTRV-HDR:SONOMA::232;         |
| <b>Input Parameters</b> | None that require description |

## 21.69 RTRV-INV

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Inventory (RTRV-INV) command retrieves a list of the equipment inventory. For each unit in the system, the list identifies the unit's firmware numbers and Common Language Equipment Identifier (CLEI) codes, and the system's product ID and version ID. This command also retrieves the inventory information from pluggable modules using the AID PPM-SLOT-PORT format. For multishelf nodes, the inventory parameters are retrieved by using RTRV-INV command with the BP AID. Because there is more than one shelf, the SHELFID is specified in the BP AID.

| • USE-TWL1       | Use Tunable Wavelength 1   |
| <PLUGINVENDORID> | (Optional) Plugin vendor ID. Integer.  |
| <PLUGINPN>       | (Optional) Third-party plug-in module HW part number. Applicable only to optical service channel cards, optical amplifier cards, dispersion compensation units, multiplexer and demultiplexer cards, and OADM cards. PLUGINPN is a string. |

|               |  |
|---------------|--|
| <PLUGINHWREV> | (Optional) Third-party plug-in module hardware revision. Applicable only to optical service channel cards, optical amplifier cards, dispersion compensation units, multiplexer and demultiplexer cards, and OADM cards. PLUGINHWREV is a string. |
| <PLUGINFWREV> | (Optional) Third-party plug-in module firmware. Applicable only to optical service channel cards, optical amplifier cards, dispersion compensation units, multiplexer and demultiplexer cards, and OADM cards. PLUGINFWREV is a string.          |
| <PLUGINSN>    | (Optional) Third-party plug-in module serial number. Applicable only to optical service channel cards, optical amplifier cards, dispersion compensation units, multiplexer and demultiplexer cards, and OADM cards. PLUGINSW is a string.        |
| <ILOSSREF>    | (Optional) The insertion loss reference calculated by the unit as worst insertion loss of all the unit. The parameter type is REVERTIVE_TIME.  |
| • 0.5 to 12.0 | Revertive time is 0.5 to 12.0 minutes  |
| <PID>         | (Optional) Product ID of the module. PID is a string.  |
| <VID>         | (Optional) Vendor ID. VID is a string.   |
| <FPGA>        | (Optional) FPGA version. FPGA is a string.   |
| <MODULETYPE>  | (Optional) Describes the type of embedded plugin module. String.   |

**Note**

If the SFP contains manufacturing information or data that is not compliant with Telcordia GR-831 (Appendix A), the system automatically adds quotes (\"") around the invalid characters in the TL1 response. TL1 is Telcordia GR-831 compliant after Software Release 7.0.4.

## 21.70 RTRV-L2-ETH

(Cisco ONS 15454) The Retrieve Layer 2 Ethernet (RTRV-L2-ETH) command retrieves the Layer 2 port information of the Ethernet card.

**Usage Guidelines** None

**Category** Ethernet

**Security** Retrieve

**Input Format** RTRV-L2-ETH:[<TID>]:<AID>:<CTAG>[::];

**Input Example** RTRV-L2-ETH:PETALUMA:FAC-1-1:CTAG;

**Input Parameters** <AID> Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:[<NIMODE>],[<MACLEARNING>],[<INGRESSCOS>],[<ETHERCETYPE>],[<ETHERS
TYPE>],[<ALWMACADDR>],[<INHMACADDR>],[<BPDU>],[<BRIDGESTATE>],[<ACTBRIDG
ESTATE>],[<QNQMODE>],[<TRNSPSVLAN>],[<NAME>],[<IGMPROUTER>],[<AISACTION>],[
<PROTACTION>],[<IGMPONCVLAN>],[<IGMPCVLAN>],[<DLF>],[<DLFTHRES>],[<MCAST>]
,[<MCASTTHRES>],[<BCAST>],[<BCASTTHRES>],[<CLRCRCALM>]:”
;
```

**Output Example** MS-55- 2010-11-09 01:26:55

M c COMPLD

"ETH-5-1-22-1::NIMODE=NNI,MACLEARNING=Y,INGRESSCOS=0,ETHERCETYPE=8100,ETHERSTYPER=8100,BPDU=Y,BRIDGESTATE=FORWARDING,ACTBRIDGESTATE=FORWARDING,QNQMODE=SELECTIVE,IGMPROUTER=NONE,AISACTION=AIS-NONE,PROTACTION=PROT-SQUELCH,IGMPONCVLAN=N,DLF=N,DLFTHRES=0,MCAST=N,MCASTTHRES=0,BCAST=N,BCASTTHRES=0,CLRCRCALM=N:"

|                                     |  |
|-------------------------------------|--|
| <b>Output Parameters</b> <ETHERNET> | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “26.16 ETH” section on page 26-41.  |
| <NIMODE>                            | Identifies the Ethernet network interface mode.  |
| • NNI                               | (Default) Network-network interface mode   |
| • UNI                               | User-network interface mode  |
| <MACLEARNING>                       | MAC address learning mode. This activates MAC address learning on the interface to avoid packet broadcasting.  |
| • Y                                 | Enables MAC learning   |
| • N                                 | Disable MAC learning   |
| <INGRESSCOS>                        | Identifies the CoS value set in the service provider VLAN (S-VLAN) tag.  |
| <ETHERCETYPE>                       | Identifies a customer specific Ethernet type. If the customer uses a non-standard Ethernet type, the incoming packets will be accepted only if the customer VLAN (CE-VLAN) Ethernet type matches this parameter. |
| <ETHERSTYPER>                       | Identifies a customer specific Ethernet type. If the customer uses a non-standard Ethernet type, the incoming packets will be accepted only if the CE-VLAN Ethernet type matches this parameter.                 |

|                  |  |
|------------------|--|
| <ALWMACADDR>     | Identifies the allowed MAC addresses filtered out by the L2 Ethernet port. Every single MAC address is in the format of aa-bb-cc-dd-ee-ff, where every digit is in a hexadecimal form.   |
| <INHMACADDR>     | Identifies the inhibited MAC addresses filtered out by the L2 Ethernet port. Every single MAC address is in the format of aa-bb-cc-dd-ee-ff, where every digit is in a hexadecimal form. |
| <BPDU>           | Bridge Protocol Data Unit (BPDU) management mode; Drop/Passthrough BPDU tagged packets.  |
| • Y              | Enables the BPDU tag.  |
| • N              | Disables the BPDU tag.   |
| <BRIDGESTATE>    | Defines if the traffic is blocked on the port.   |
| • UNKNOWN        | Unknown state  |
| • DISABLED       | Disabled state   |
| • BLOCKING       | Blocking state   |
| • LISTENING      | Listening state  |
| • LEARNING       | Learning state   |
| • FORWARDING     | Forwarding state   |
| • BROKEN         | Broken state   |
| <ACTBRIDGESTATE> | Defines if the traffic is blocked on the port.   |
| • UNKNOWN        | Unknown state  |
| • DISABLED       | Disabled state   |
| • BLOCKING       | Blocking state   |
| • LISTENING      | Listening state  |
| • LEARNING       | Learning state   |
| • FORWARDING     | Forwarding state   |
| • BROKEN         | Broken state   |
| <QNQMODE>        | This is used to represent the IEEE 802.1Q tunneling (QinQ) mode operations.  |
| • SELECTIVE      | The S-VLAN tag is added only on specified CE-VLANs. The other packets are dropped.   |
| • TRANSPARENT    | The S-VLAN tag is always added where all packets having the S-VLAN-ID identified by the TRNSPSVLAN parameter are allowed.  |
| <TRNSPSVLAN>     | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.      |
| <NAME>           | (Optional) Facility name. NAME is a string.  |

|   |   |
|---|---|
| <CMDMDE>  | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
| <PST>   | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.   |
| <ul style="list-style-type: none"> <li>• IS</li> <li>• OOS</li> </ul>   | <ul style="list-style-type: none"> <li>In service</li> <li>Out of service</li> </ul>  |
| <SST>   | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.   |
| <ul style="list-style-type: none"> <li>• AINS</li> <li>• DSBLD</li> <li>• LPBK</li> <li>• MEA</li> <li>• MT</li> <li>• OOG</li> <li>• SWDL</li> <li>• UAS</li> <li>• UEQ</li> </ul> | <ul style="list-style-type: none"> <li>Automatic in service</li> <li>Disabled</li> <li>Loopback</li> <li>Mismatch of equipment and attributes</li> <li>Maintenance mode</li> <li>Out of group</li> <li>Software downloading</li> <li>Unassigned</li> <li>Unequipped</li> </ul>  |
| <IGMPCVLAN>   | Indicates the customer VLAN value for IGMP on CVLAN.  |
| <DLF>   | To enable or disable storm control on DLFPC packet.   |
| <DLFTHRES>  | Indicates the DLFPC packet threshold value for storm control.   |
| <MCAST>   | To enable or disable the storm control on multicast packet.   |
| <MCASTTHRES>  | Indicates the multicast packet threshold value for storm control.   |
| <BCAST>   | To enable or disable the storm control on broadcast packet.   |
| <BCASTTHRES>  | Indicates the broadcast packet threshold value for storm control.   |
| <CLRRCALM>  | Clears the DATA-CRC alarm.  |

## 21.71 RTRV-L2-TOPO

(Cisco ONS 15454) The Retrieve Layer 2 topology (RTRV-L2-TOPO) command retrieves the LACP, REP, and EFM topology configuration.

### Usage Guidelines

The RTRV-L2-TOPO command retrieves the normal and detailed logs of a port that is configured with LACP, REP, or EFM topology.

| <b>Category</b>         | Ports   |                  |             |       |  |            |   |                     |   |                 |  |                  |  |                   |                                       |        |                                    |                |               |                  |                |                |               |                        |              |            |                                 |            |           |          |         |              |             |

## 21.72 RTRV-LM-EFM

(Cisco ONS 15454) The Retrieve Link Monitoring Edit Ethernet in the First Mile (RTRV-LM-EFM) command retrieves the Edit Ethernet in the First Mile (EFM) link monitoring parameters and the action associated with each of the parameters.

---

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

---

### Category

Ports

---

### Security

Retrieve

---

### Input Format

RTRV-LM-EFM:[<TID>]:<AID>:<CTAG>;

---

### Input Example

RTRV-LM-EFM::ETH-12-1-1:1;

---

### Input Parameters

|       |   |
|-------|---|
| <AID> | Access identifier from the “ <a href="#">26.16 ETH</a> ” section on page 26-41. |
|-------|---|

---

---

### Output Format

```

SID DATE TIME
M CTAG COMPLD
  “AID>:[IMPARAM=<IMPARAM>], [HIGHTH=<HIGHTH>],
[LOWTH=<LOWTH>],[ACTION=<ACTION>],[WINDOW=<WINDOW>];”
;

```

---

### Output Example

```

TID-000 1998-06-20 14:30:00
M 001 COMPLD
  “ETH-7-1-1,LMPARAM=ERR-FRAME,LOWTH=1,HIGHTH=0,ACTION=NONE,WINDOW=10;”
;

```

| Output Parameters | Parameter       | Description   |
|-------------------|-----------------|---|
|                   | <AID>           | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.  |
|                   | <LMPARAM>       | Name of the link monitoring parameter.  |
|                   | • ERR-FRAME     | Error frames.   |
|                   | • ERR-FRAME-PRD | Error frame period.   |
|                   | • ERR-FRAME-SEC | Error frames second.  |
|                   | <LOWTH>         | The lowest value of the link monitoring parameter. It is an integer.  |
|                   | <HIGHTH>        | The highest value of the link monitoring parameter. It is an integer.   |
|                   | <ACTION>        | Action to be taken when the link monitoring parameter crosses the HIGH value, which is set by the user. The value can be NONE or DISABLED.            |
|                   | <WINDOW>        | This indicates the window associated with each of the link monitoring parameter (number of packets, number of frames or the timer). It is an integer. |

## 21.73 RTRV-LMP

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Link Management Protocol (RTRV-LMP) command retrieves the global LMP protocol attributes.

**Usage Guidelines** This command is only available on platforms that support the LMP protocol.

**Category** LMP

**Security** Provisioning

**Input Format** RTRV-LMP:[<TID>]::<CTAG>;

**Input Example** RTRV-LMP:PETALUMA::704;

**Input Parameters** None.

**Output Format** SID DATE TIME

```
M CTAG COMPLD
  "::ENABLE=<ENABLE>,[WDM=<WDM>],[ROLE=<ROLE>],[NODEID=<NODEID>],
  [OPSTATE=<OPSTATE>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
  "::ENABLE=Y,WDM=Y,ROLE=PEER,NODEID=198.133.219.25,OPSTATE=UP"
;
```

**Output Parameters**

|   |  |
|---|--|
| <ENABLE>  | LMP protocol status  |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>      | <ul style="list-style-type: none"> <li>Protocol is enabled.</li> <li>Protocol is disabled.</li> </ul>  |
| <WDM>   | Determines if the LMP WDM extensions are in effect.  |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>      | <ul style="list-style-type: none"> <li>The LMP WDM extensions are in effect.</li> <li>The LMP WDM extensions are not in effect.</li> </ul>   |
| <ROLE>  | The role the LMP protocol is configured to play.   |
| <ul style="list-style-type: none"> <li>OLS</li> <li>PEER</li> </ul> | <ul style="list-style-type: none"> <li>The LMP protocol is configured to respond as a Optical Line System.</li> <li>The LMP protocol is configured to respond as a peer node.</li> </ul> |
| <NODEID>  | LMP Node ID. NODEID is a stable IP address that is always reachable if there is any connectivity to it. The default LMP node ID value is the IP address of the node.                     |
| <OPSTATE>   | Indicates the operational status of the LMP protocol stack.  |
| <ul style="list-style-type: none"> <li>UP</li> <li>DOWN</li> </ul>  | <ul style="list-style-type: none"> <li>LMP protocol is active.</li> <li>LMP protocol is not active.</li> </ul>   |

## 21.74 RTRV-LMP-CTRL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Link Management Protocol Control Channel (RTRV-LMP-CTRL) command retrieves the attributes of an LMP control channel.

**Usage Guidelines**

This command is only available on platforms that support the LMP protocol.

**Category**

LMP

**Security**

Provisioning

**Input Format**

RTRV-LMP-CTRL:[<TID>]:<SRC>:<CTAG>;

**Input Example** RTRV-LMP-CTRL:PETALUMA:CC-123:704;

|                         |              |  |
|-------------------------|--------------|--|
| <b>Input Parameters</b> | <SRC>        | The LMP control channel AID.             |
|                         | • CTRL-ALL   | Specifies all the control channels.      |
|                         | • CTRL-{1-4} | Specifies an individual control channel. |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<AID>::REMOTEID=<REMOTEID>,LOCALPORT=<LOCALPORT>,REMOTEIP=<REMOTEIP>,
[HELLO=<HELLO>],[HELLOMIN=<HELLOMIN>],[HELLOMAX=<HELLOMAX>],
[DEAD=<DEAD>],[DEADMIN=<DEADMIN>],[DEADMAX=<DEADMAX>],
[OPSTATE=<OPSTATE>]:[<PST>[,<SST>]]
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:0
M 001 COMPLD
"CTRL-2::REMOTEID=15.15.15.115,LOCALPORT=FAC-1-1-1,REMOTEIP=126.0.0.1,HELLO=50,
HELLOMIN=300,HELLOMAX=5000,DEAD=12000,DEADMIN=2000,DEADMAX=20000,
OPSTATE=UP:OOS,DSBLD"
;
```

|                          |             |   |
|--------------------------|-------------|---|
| <b>Output Parameters</b> | <REMOTEID>  | Distinguishes the LMP control channel messages that are using the same local port to send messages.                                 |
|                          | <LOCALPORT> | The pathway that the LMP control channel will use to send and receive messages.   |
|                          | <REMOTEIP>  | Remote IP address with which the LMP control channel sends and receives messages.   |
|                          | <HELLO>     | The time interval within which the LMP protocol sends HELLO messages.   |
|                          | <HELLOMIN>  | Minimum hello time the LMP control channels can send out HELLO messages to the remote node.   |
|                          | <HELLOMAX>  | The maximum amount of time the LMP control channel can wait between HELLO messages.   |
|                          | <DEAD>      | Time interval an LMP control channel will wait for a HELLO message from the remote side before listing the control channel as down. |
|                          | <DEADMIN>   | The minimum amount of time that an LMP control channel can wait before listing the control channel status as down.                  |
|                          | <DEADMAX>   | The maximum amount of time that an LMP control channel can wait before listing the control channel status as down.                  |
|                          | <OPSTATE>   | Indicates the operational status of the LMP protocol stack.   |
|                          | • UP        | The control channel is communicating with its counterpart on the remote node.   |

|              |  |
|--------------|--|
| • DOWN       | The control channel is not communicating with its counterpart on the remote node.  |
| • GOING DOWN | The LMP stack sets the ControlChannelDown bit in all the messages it sends. This is mainly because of administrative action.   |
| • GOING UP   | The control channel is in the process of transitioning to the UP state.  |
| • CFG-SND    | The control channel is in the parameter negotiation state. In this state, the node periodically sends a Config message, and is expecting the other side to reply with either a ConfigAck or ConfigNack message. The control channel Finite State Machine (FSM) does not transition into the ACTIVE state until the remote side positively acknowledges the parameters. |
| • CFG-RCV    | The control channel is in the parameter negotiation state. In this state, the node is waiting for acceptable configuration parameters from the remote side. After these parameters are received and acknowledged, the FSM can transition to the ACTIVE state response.   |
| • ACTIVE     | In this state, the node periodically sends a Hello message and is waiting to receive a valid Hello message. After a valid Hello message is received, it can transition to the UP state.  |
| • ACT-FAILED | Activation of the control channel failed.  |
| • UNKNOWN    | Unknown or unexpected state.   |
| <PST>        | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.  |
| • IS         | In Service   |
| • OOS        | Out of Service   |
| <SST>        | Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.  |
| • AINS       | Automatic In-Service   |
| • DSBLD      | Disabled   |
| • LPBK       | Loopback   |
| • MEA        | Mismatch of Equipment  |
| • MT         | Maintenance  |
| • OOG        | Out of Group   |
| • SWDL       | Software Download  |
| • UAS        | Unassigned   |
| • UEQ        | Unequipped   |

## 21.75 RTRV-LMP-TLINK

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Link Management Protocol (RTRV-LMP-TLINK) command retrieves the attributes of an LMP Traffic Engineering (TE) link.

### Usage Guidelines

This command is limited to nodes where the LMP protocol is supported and has been enabled.

**Category** LMP

**Security** Provisioning

**Input Format** RTRV-LMP-TLINK:[<TID>]:<SRC>:<CTAG>;

**Input Example** RTRV-LMP-TLINK:PETALUMA:TLINK-123:704;

| <b>Input Parameters</b> | <SRC>           | LMP TE link AID values.          |
|-------------------------|-----------------|----------------------------------|
|                         | • TLINK-ALL     | Specifies all the TE links.      |
|                         | • TLINK-{1-256} | Specifies an individual TE link. |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<SRC>::[REMOTEID=<REMOTEID>],[DWDM=<DWDM>],[REMOTETE=<REMOTETE>],
[MUXCAP=<MUXCAP>],[OPSTATE=<OPSTATE>]:[<PST>[,<SST>]]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:0
M CTAG COMPLD
"TLINK-2::REMOTEID=15.15.15.115,DWDM=Y,REMOTETE=3,MUXCAP=LAMBDA,
OPSTATE=UP:IS"
;
```

| <b>Output Parameters</b> | <SRC>           | LMP TE link AID values.                                 |
|--------------------------|-----------------|---|
|                          | • TLINK-ALL     | Specifies all the TE links.                             |
|                          | • TLINK-{1-256} | Specifies an individual TE link.                        |
|                          | <REMOTEID>      | Remote node ID associated with the LMP TE link.         |
|                          | <DWDM>          | Indicates whether or not the LMP TE link supports DWDM. |
|                          | • Y             | The LMP TE link supports DWDM.                          |
|                          | • N             | The LMP TE link does not support DWDM.                  |
|                          | <REMOTETE>      | Remote ID used by the far-end LMP TE link.              |
|                          | <MUXCAP>        | The muxponder capability of the LMP TE link.            |
|                          | • PKTSWITCH1    | Packet Switching 1                                      |
|                          | • PKTSWITCH2    | Packet Switching 2                                      |
|                          | • PKTSWITCH3    | Packet Switching 3                                      |
|                          | • PKTSWITCH4    | Packet Switching 4                                      |
|                          | • LAYER2        | Layer 2 switching                                       |

|            |  |
|------------|--|
| • TDM      | Time-division multiplexing (TDM) switching   |
| • LAMBDA   | Lambda switching   |
| • FIBER    | Fiber switching  |
| <OPSTATE>  | Indicates the operational status of a TE link.   |
| • DEGRADED | In this state, all LMP control channels are down, but the TE link still includes some data links that are allocated to user traffic.   |
| • INIT     | Data links have been allocated to the TE link, but the configuration has not yet been synchronized with the LMP neighbor. A LinkSummary message is periodically transmitted to the LMP neighbor. |
| • UP       | The TE link is communicating with its counterpart on the remote node.  |
| • DOWN     | The TE link is not communicating with its counterpart on the remote node.  |
| • UNKNOWN  | Unknown or unexpected state.   |
| <PST>      | Primary state. This parameter indicates the current overall service condition of an entity.  |
| • IS       | In service   |
| • OOS      | Out of service   |
| <SST>      | Secondary state. This parameter provides additional information pertaining to PST and PSTQ.  |
| • AINS     | Automatic In-Service   |
| • DSBLD    | Disabled   |
| • LPBK     | Loopback   |
| • MEA      | Mismatch of Equipment  |
| • MT       | Maintenance  |
| • OOG      | Out of Group   |
| • SWDL     | Software Download  |
| • UAS      | Unassigned   |
| • UEQ      | Unequipped   |

## 21.76 RTRV-LMP-DLINK

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Link Management Protocol (RTRV-LMP-DLINK) command retrieves the attributes of an LMP data link.

**Usage Guidelines** This command is only applicable on a node where the LMP protocol is supported and enabled.

**Category** LMP

**Security** Provisioning

**Input Format** RTRVD-LMP-DLINK:[<TID>]:<SRC>:<CTAG>;

**Input Example** RTRV-LMP-DLINK:PETALUMA:FAC-14-1-1:704;

**Input Parameters**

|       |  |
|-------|--|
| <SRC> | Access identifier from the <a href="#">“26.17 FACILITY” section on page 26-42.</a> |
|-------|--|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<AID>::[LINKTYPE=<LINKTYPE>],[REMOTEID=<REMOTEID>],[TELINK=<TELINK>],
[OPSTATE=<OPSTATE>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"FAC-14-1-1::LINKTYPE=PORT,REMOTEID=45,TELINK=TLINK-4,OPSTATE=UP-ALLOC"
;
```

**Output Parameters**

|   |  |
|---|--|
| <SRC>   | Access identifier from the <a href="#">“26.17 FACILITY” section on page 26-42.</a>   |
| <LINKTYPE>  | The type of LMP data link.   |
| <ul style="list-style-type: none"> <li>• PORT</li> </ul>      | Port data link.  |
| <ul style="list-style-type: none"> <li>• COMPONENT</li> </ul> | Component data link.   |
| <REMOTEID>  | The remote LMP data link ID.   |
| <TELINK>  | Used to map LMP data links to LMP TE links.  |
| <OPSTATE>   | Indicates the operational status of an LMP data link.  |
| <ul style="list-style-type: none"> <li>• TESTING</li> </ul>   | The data link is being tested. An LMP test message is periodically sent through the link.  |
| <ul style="list-style-type: none"> <li>• DOWN</li> </ul>      | The data link is not communicating with its counterpart on the remote node.  |
| <ul style="list-style-type: none"> <li>• UP-ALLOC</li> </ul>  | The link is up and has been allocated for data traffic.  |
| <ul style="list-style-type: none"> <li>• UP-FREE</li> </ul>   | The link has been successfully tested and is now put in the pool of resources (in-service). The link has not yet been allocated to data traffic. |

## 21.77 RTRV-LNK

(Cisco ONS 15454) The Retrieve Link (RTRV-LNK) command retrieves all the (optical) links created in the NE. The end information is returned along with the type of (optical) link.

**Usage Guidelines** None

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-LNK:[<TID>]::<CTAG>;

**Input Example** RTRV-LNK:PENNGROVE::114;

**Input Parameters** None that require description

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<FROM>,<TO>::[OLNKT=<OLNKT>],[CTYPE=<CTYPE>],[RDIRN=<RDIRN>],
[BAND=<BAND>],[WLEN=<WLEN>]:<PSTPSTQ>,[<SST>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"BAND-6-1-TX,BAND-13-1-RX::OLNKT=HITLESS,CTYPE=PROV,
RDIRN=W_E, BAND=1530.32-1532.68,WLEN=1530.32:OOS-AU,AINS"
;
```

|                          |            |  |
|--------------------------|------------|--|
| <b>Output Parameters</b> | <FROM>     | Access identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> . Identifies an entity at one end of the optical link.        |
|                          | <TO>       | Access identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> . Identifies an entity at the other end of the optical link.  |
|                          | <OLNKT>    | (Optional) Optical link type. The parameter type is OPTICAL_LINK_TYPE, which is the type of optical link between two optical facilities. |
|                          | • ADD-DROP | Link between two points that results in an add/drop connection from a drop point to an add point   |
|                          | • HITLESS  | Link between two OMS points that results in a hitless connection from a drop point to an add point of a consecutive band/channel filter  |
|                          | • MPO      | MPO connector  |
|                          | • OTS      | Link between two OTS points  |

|                      |   |
|----------------------|---|
| • OTS-INTLEAV        | Link between two OTS points interrupted by an interleaver card that the system does not monitor.  |
| <CTYPE>              | (Optional) The type of cross-connection. Indicates if the optical link is provisioned by the user or automatically created by the NE. The parameter type is CREATION_TYPE, which is the optical link creation type. |
| • AUTO               | Automatically created by the NE   |
| • PROV               | Provisioned by the user   |
| <RDIRN>              | (Optional) Ring directionality of the optical line. The parameter type is RDIRN_MODE, which is the optical ring directionality.   |
| • E-W                | The direction of the signal is from east to west (clockwise).   |
| • W-E                | The direction of the signal is from west to east (counterclockwise).  |
| <BAND>               | (Optional) The optical band (group of four contiguous wavelengths) for this optical link. BAND is present only when there is a link between two OMS entities. The parameter type is OPTICAL_BAND.                   |
| • 1530.33 to 1532.68 | Band 1  |
| • 1534.25 to 1536.61 | Band 2  |
| • 1538.19 to 1540.56 | Band 3  |
| • 1542.14 to 1544.53 | Band 4  |
| • 1546.12 to 1548.51 | Band 5  |
| • 1550.12 to 1552.52 | Band 6  |
| • 1554.13 to 1556.55 | Band 7  |
| • 1558.17 to 1560.61 | Band 8  |
| • USE-DEFAULT        | This band is not yet configured/retrieved from the unit.  |
| <WLEN>               | (Optional) Optical wavelength for this optical link. WLEN is present only when there is a link between two OCH entities. The parameter type is OPTICAL_WLEN (optical wavelength).                                   |
| • 1310               | Wavelength 1310   |
| • 1470               | Wavelength 1470   |
| • 1490               | Wavelength 1490   |
| • 1510               | Wavelength 1510   |
| • 1528.77            | Wavelength 1528.77  |
| • 1529.16            | Wavelength 1529.16  |
| • 1529.55            | Wavelength 1529.55  |
| • 1529.94            | Wavelength 1529.94  |
| • 1530               | Wavelength 1530   |
| • 1530.33            | Wavelength 1530.33  |
| • 1530.72            | Wavelength 1530.72  |
| • 1531.12            | Wavelength 1531.12  |
| • 1531.51            | Wavelength 1531.51  |
| • 1531.90            | Wavelength 1531.90  |
| • 1532.29            | Wavelength 1532.29  |
| • 1532.68            | Wavelength 1532.68  |

|           |                    |
|-----------|--------------------|
| • 1533.07 | Wavelength 1533.07 |
| • 1533.47 | Wavelength 1533.47 |
| • 1533.86 | Wavelength 1533.86 |
| • 1534.25 | Wavelength 1534.25 |

## 21.78 RTRV-LNKTERM

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Provisionable Patchcord Termination (RTRV-LNKTERM) command retrieves information about one or more provisionable patchcord (PP) terminations.

### Usage Guidelines

- All the terminations can be retrieved using ALL or LNKTERM-ALL as the AID.
- If the PP termination does not exist, an error message will be returned.

### Category

Provisionable Patchcords

### Security

Retrieve

### Input Format

RTRV-LNKTERM:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-LNKTERM::LNKTERM-2:CTAG;

**Input Parameters** <AID> Access identifier from the “26.21 LNKTERM” section on page 26-53.

**Output Format** SID DATE TIME  
M CTAG COMPLD  
“<AID>::PORT=<PORT>,[REMOTENODE=<REMOTENODE>],  
[REMOTELNKTERMID=<REMOTELNKTERMID>]”  
;

**Output Example** TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“LNKTERM-2::PORT=FAC-3-1,REMOTENODE=172.20.221.225,REMOTELNKTERMID=21”  
;

**Output Parameters** <AID> Access identifier from the “26.21 LNKTERM” section on page 26-53.

<PORT> Access identifier from the “26.2 AidUnionId” section on page 26-13.

<REMOTENODE> (Optional) Remote node. REMOTENODE is a string.

<REMOTELNKTERMID> (Optional) Remote link term ID. REMOTELNKTERMID is a string.

## 21.79 RTRV-LOG

Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Log (RTRV-LOG) command retrieves the alarm log of the NE.

**Usage Guidelines** The only option reported for LOGNM is ALARM.

**Category** Log

**Security** Retrieve

**Input Format** RTRV-LOG:[<TID>]::<CTAG>::<LOGNM>;

**Input Example**

```
RTRV-LOG:CERENT::123::ALARM;
```

**Input Parameters**

|         |   |
|---------|---|
| <LOGNM> | Log to be retrieved. The log name is ALARM. String. |
|---------|---|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<AID>,<ALMNUMBER>:CURRENT=<CURRENT>,[PREVIOUS=<PREVIOUS>],
<CONDITION>,<SRVEFF>,[TIME=<OCRTIME>],[DATE=<OCRDAT>]:<ALMDESCR>"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"FAC-3-1,18:CURRENT=MJ,PREVIOUS=CL,EOC,NSA,TIME=16-33-04,
DATE=1971-02-03:\\"SDCC TERMINATION FAILURE\\""
;
```

**Output Parameters**

|             |   |
|-------------|---|
| <AID>       | Access identifier from the <a href="#">"26.1 ALL" section on page 26-1</a> .  |
| <ALMNUMBER> | Alarm number of the log. ALMNUMBER is an integer.   |
| <CURRENT>   | Current severity. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message.   |
| • CL        | The condition causing the alarm has cleared.  |
| • CR        | A critical alarm.   |
| • MJ        | A major alarm.  |
| • MN        | A minor alarm.  |
| • NA        | The condition is not alarmed.   |
| • NR        | The alarm is not reported.  |
| <PREVIOUS>  | (Optional) Previous severity. The parameter type is COND_EFF, which is the state of the condition upon the affected unit.   |
| • CL        | Standing condition cleared  |
| • SC        | Standing condition raised   |
| • TC        | Transient condition   |
| <CONDITION> | Condition type for an alarm or a reported event. The parameter type is CONDITION, which is any problem detected on an ONS 15454 shelf, whether or not the problem is reported (that is, whether or not it generates a trouble notification). Reported conditions include alarms, NA conditions, and NR conditions. See <a href="#">Chapter 27, "Conditions"</a> for a list of conditions. |
| <OCRTIME>   | (Optional) Time when the specific event or violation occurred, HH-MM-SS. Time when alarm was triggered.   |
| <OCRDAT>    | (Optional) Date when the specific event or violation occurred, MM-DD. Date when alarm was triggered.  |
| <ALMDESCR>  | Alarm description. ALMDESCR is a string.  |

## 21.80 RTRV-MA-CFM

(Cisco ONS 15454) The Retrieve Maintenance Association Connectivity Fault Management (RTRV-MA-CFM) command retrieves the maintenance association present on the card.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Equipment

### Security

Retrieve

### Input Format

RTRV-MA-CFM:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-MA-CFM::SLOT-1:1;

### Input Parameters

| Input Parameters | Description   |
|------------------|---|
| <AID>            | Access identifier from the <a href="#">“26.16 ETH”</a> section on page 26-41. |

### Output Format

```
SID DATE TIME
M CTAG COMPLD
  “AID>:MANAME=<MANAME>, SVLANID=<SVLANID>,
  CCENABLE=<CCENABLE>[:];”
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
  “SLOT-7,MANAME=CISCO,SVLANID=1,CCENABLE=Y”
;
```

### Output Parameters

| Parameter | Description   |
|-----------|---|
| <AID>     | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.                          |
| <MANAME>  | Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters. |

| Parameter  | Description   |
|------------|---|
| <SVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <CCENABLE> | Enable or disable Continuous Check messaging  |
| • Y        | Enable  |
| • N        | Disable   |

## 21.81 RTRV-MACTABLE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The RTRV-MACTABLE command retrieves all the MAC addresses stored in the card, as well as the internal MAC addresses associated with each port of the card.

### Usage Guidelines

- This command is supported on GZ 1.0 and GZ 1.5 TXP/MXP cards.
- The card should be in Layer2 over DMDM mode to retrieve the MAC address.
- VLANID is applicable to the command only during the retrieval of learned MAC address.
- During the retrieval of Card MAC address, port 5 of 10GEXP card and port 23 of GEXP card stands for CPU port.

### Input Format

```
RTRV-MACTABLE:<TID>:<AID>:<CTAG>:::ADDRTYPE=<addrtype>,[VLANIDFROM=<vlanidfrom>],[VLANIDTO=<vlanidto>];
```

### Input Example

```
RTRV-MACTABLE::SLOT-12:1:::ADDRTYPE=LEARNED-MAC, VLANIDFROM=10,
VLANIDTO=20;
```

### Output Format

```
SID DATE TIME
M CTAG COMPLD
"<AID>,<ADDRTYPE>,<PORT>,<VLANID>,<MACADDRESS>"
;
```

### Output Example

```
SID DATE TIME
M CTAG COMPLD
"SLOT-1,ADDRTYPE=LEARNED-MAC,PORT=4,VLANID=199,MACADDRESS=10:10:10:10:10:10";
```

Table 21-6 RTRV-MACTABLE command - Parameter Support

| Parameter   | Description  |
|---|--|
| <AID>   | "ALL" AID is NOT supported for this operation.   |
| <ADDRTYPE>  | Indicates whether the address shown is card MAC address OR dynamically learned MAC address.            |
| <ul style="list-style-type: none"> <li>CARD-MAC</li> <li>LEARNED-MAC</li> </ul> | Internal MAC Address of the card.<br>Dynamically learnt MAC Address.                                   |
| <VLANIDFROM>  | VLAN range. It is the start of the VLANID. Valid range is from 1 to 4096. It is an optional parameter. |
| <VLANIDTO>  | VLAN range. It is the end of the VLANID. Valid range is from 1 to 4096. It is an optional parameter.   |

## 21.82 RTRV-MAP-NETWORK

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Map Network (RTRV-MAP-NETWORK) command retrieves all the NE attributes which are accessible from the GNE (gateway NE). The NE attributes include the node IP address (IPADDR), node name (TID), and the product type of the NE (PRODUCT).

### Usage Guidelines

The product type field in the response will appear as “unknown” for nodes that are not running the same version of software.

### Category

System

### Security

Retrieve

### Input Format

RTRV-MAP-NETWORK:[<TID>]::<CTAG>;

### Input Example

RTRV-MAP-NETWORK:CISCO::123;

### Input Parameters

None that require description

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<IPADDR>,<NODENAME>,<PRODUCT>”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"172.20.222.225,TID-000,15454"
;
```

| Output Parameters |                  |   |
|-------------------|------------------|---|
| <IPADDR>          |                  | Node IP address. IPADDR is a string.  |
| <NODENAME>        |                  | Node name (TID). NODENAME is a string.  |
| <PRODUCT>         |                  | Product type of the NE. The parameter type is PRODUCT_TYPE, which is the product (NE) type. |
|                   | • ONS15454       | ONS 15454   |
|                   | • ONS15454SDH    | ONS 15454 SDH   |
|                   | • ONS15454-M2    | ONS 15454 M2  |
|                   | • ONS15454-M2SDH | ONS 15454 M2 SDH  |
|                   | • ONS15454-M6    | ONS 15454 M6  |
|                   | • ONS15454-M6    | ONS 15454 M6 SDH  |
|                   | • UNKNOWN        | Unknown product type  |

## 21.83 RTRV-MCAST

(Cisco ONS 15454) The Retrieve the Multicast attributes command retrieves the Multicast VLAN Registration attributes.

**Usage Guidelines** None

**Category** Ethernet

**Security** Retrieve

**Input Format** RTRV-MCAST:[<TID>]:<AID>:<CTAG>::[:];

**Input Example** RTRV-MCAST:TID:SLOT-1-5:CTAG;

**Input Parameters**

|       |   |
|-------|---|
| <AID> | Equipment aids are used to access specific cards.                     |
| ALL   | It is only used for RTRV-INV, RTRV-EQPT, RTRV-ALM/COND-EQPT commands. |

|                           |   |
|---------------------------|---|
| SLOT-ALL                  | The NE equipment AIDs.  |
| SLOT[-{1-50}]-{1-6,12-17} | Individual equipment AID of the I/O card units or slots in a 15454. |

**Output Format**

SID DATE TIME

M CTAG COMPLD

“<AID>::[<MVRSTATE>],[<MVRSVLAN>],[<MVRSTARTIP>],[<MVRIPRANGE>],[<IGMPONC VLAN>]:”;

**Output Example**

TID-000 1998-06-20 14:30:00

M 001 COMPLD

“SLOT-1-12::MVRSTATE=Y,MVRSVLAN=132,MVRSTARTIP=230.64.38.55,  
MVRIPRANGE=60:”

;

**Output Parameters**

|   |   |
|---|---|
| <AID>   | Equipment aids used to access specific cards.   |
| <ul style="list-style-type: none"> <li>ALL</li> </ul>                       | It is only used for RTRV-INV, RTRV-EQPT, RTRV-ALM/COND-EQPT commands.   |
| <ul style="list-style-type: none"> <li>SLOT-ALL</li> </ul>                  | All the NE equipment AIDs.  |
| <ul style="list-style-type: none"> <li>SLOT[-{1-50}]-{1-6,12-17}</li> </ul> | Individual equipment AID of the I/O card units or slots.  |
| <MVRSTATE>  | Multicast VLAN Registration status values.  |
| <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>              | Enabled<br>Disabled   |
| <MVRSVLAN>  | Define the SVLAN used to distribute the Multicast stream inside the Network. It is a value in the range 1-4096.   |
| <MVRSTARTIP>  | The first IP Address of the Multicast IP Group.   |
| <MVRIPRANGE>  | MVR IP Range. Indicate the number of IP address starting from mvrStartIp used to identified the multicast IP group. It is a number in the range 1..255. |

## 21.84 RTRV-MD-CFM

(Cisco ONS 15454) The Retrieve Maintenance Domain Connectivity Fault Management (RTRV-MD-CFM) command retrieves the maintenance domain on the card.

**Usage Guidelines**

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

**Category**

Equipment

**Security** Retrieve

**Input Format** RTRV-MD-CFM:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-MD-CFM:454-156:SLOT-1:1;

| Input Parameters | Input Parameters | Description  |
|------------------|------------------|--|
|                  | <AID>            | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39. |

**Output Format** SID DATE TIME  
M CTAG COMPLD  
“AID>:[MDNAME=<MDNAME>],[LEVEL=<LEVEL>]”  
;

**Output Example** TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“SLOT-7,MDNAME=MD1,LEVEL=4”  
;

| Output Parameters | Parameter | Description  |
|-------------------|-----------|--|
|                   | <AID>     | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.                         |
|                   | <MDNAME>  | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters. |
|                   | <LEVEL>   | This indicates the level of the maintenance domain. The value ranges from 0 to 7.                      |

## 21.85 RTRV-MDMAMAP-CFM

(Cisco ONS 15454) The Retrieve Maintenance Domain and Maintenance Association mapping Connectivity Fault Management (RTRV-MDMAMAP-CFM) command retrieves the maintenance domain and maintenance association mapping.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

**Category** Equipment

|                          |  |       |  |          |   |           |   |            |  |     |        |     |         |

## 21.86 RTRV-MEP-CFM

(Cisco ONS 15454) The Retrieve Maintenance End Point Connectivity Fault Management (RTRV-MEP-CFM) command retrieves the maintenance end points on the port.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

**Category** Ports

**Security** Retrieve

**Input Format** RTRV-MEP-CFM:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-MEP-CFM::ETH-1-1-1:1;

| Input Parameters | Input Parameters | Description   |
|------------------|------------------|---|
|                  | <AID>            | Access identifier from the <a href="#">“26.16 ETH”</a> section on page 26-41. |

**Output Format** SID DATE TIME  
M CTAG COMPLD  
“<AID>:[SVLANID=<SVLANID>],[MDNAME=<MDNAME>],  
[LEVEL=<LEVEL>],[MPID=<MPID>];”  
;

**Output Example** TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“ETH-3-4-1,SVLANID=200,MDNAME=D4,LEVEL=4,MPID=314”  
;

|                          |           |   |
|--------------------------|-----------|---|
| <b>Output Parameters</b> | <AID>     | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
|                          | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
|                          | <MDNAME>  | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters.  |
|                          | <LEVEL>   | This indicates the level of the maintenance domain. The value ranges from 0 to 7.   |
|                          | <MPID>    | Maintenance Point Identifier. It is an integer.   |

## 21.87 RTRV-MEPCCDB-CFM

(Cisco ONS 15454) The Retrieve Maintenance End Point Continuity Check Message Data Base Connectivity Fault Management (RTRV-MEPCCDB-CFM) command retrieves the maintenance end point continuity check message data base on a given slot.

**Usage Guidelines**

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

**Category**

Equipment

**Security**

Retrieve

**Input Format**

RTRV-MEPCCDB-CFM:[<TID>]:<AID>:<CTAG>:::[MDNAME=<MDNAME>],[VLANIDFROM=<VLANIDFROM>],[VLANIDTO=<VLANIDTO>];

**Input Example**

RTRV-MEPCCDB-CFM::SLOT-1:1:::MDNAME=D2,VLANIDFROM=99,VLANIDTO=100;

**Input Parameters**

| Input Parameters | Description  |
|------------------|--|
| <AID>            | Access identifier from the “26.15 EQPT” section on page 26-39.   |
| <MDNAME>         | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters. |
| <VLANIDFROM>     | VLAN range. It is the start of the VLANID. Valid range is from 1 to 4096. It is an optional parameter. |
| <VLANIDTO>       | VLAN range. It is the end of the VLANID. Valid range is from 1 to 4096. It is an optional parameter.   |

**Output Format**

SID DATE TIME  
M CTAG COMPLD  
“<AID>:[MPID=<MPID>],[MACADDR=<MACADDR>],[MDNAME=<MDNAME>],[LEVEL=<LEVEL>],[MANAME=<MANAME>],[INPORT=<INPORT>],[CCLIFETIME=<CCLIFETIME>],[AGEOFLASTCC=<AGEOFLASTCC>],[RMTPORSTATE=<RMTPORTSTATE>];”  
;

**Output Example**

TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“SLOT-1,MPID=301,MACADDR=00:19:07:6C:B7:7A,MDNAME=D2,MANAME=M1,SVLANID=100,INPORT=0,CCLIFETIME=0,AGEOFLASTCC=0:”  
;

**Output Parameters**

| Parameter | Description  |
|-----------|--|
| <AID>     | Access identifier from the “26.15 EQPT” section on page 26-39. |
| <MPID>    | Maintenance Point Identifier. It is an integer.                |

| Parameter              | Description  |
|------------------------|--|
| <MACADDR>              | (Optional) The MAC address for the 10 Gigabit Ethernet payload. MACADDR is a string.   |
| <MDNAME>               | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters.   |
| <LEVEL>                | This indicates the level of the maintenance domain. The value ranges from 0 to 7.  |
| <MANAME>               | Maintenance Association Name. It is a string. The MA name length should not exceed more than 43 characters.  |
| <INPORT>               | Ingress port.  |
| <CCLIFETIME>           | Indicates the Continuity Check Message Timer Life Time on the receiving end. It indicates how long the interface has to wait for the CC message expiry. It is 3 times the CCTIMER. |
| <AGEOFLASTCC>          | Age of the last CC timer. This indicates the time interval between the present time and the last time CC message received.   |
| <RMTPORSTATE>          | Indicates the state of the remote port.  |
| • RMTPORT-INVALID      | Invalid state.   |
| • RMTPORT-UP           | Up.  |
| • RMTPORT-DOWN         | Down.  |
| • RMTPORT-TEST         | Test.  |
| • RMTPORT-UNKNOWN      | Unknown port.  |
| • RMTPORT-DORMANT      | In active.   |
| • RMTPORT-NOT-PRESENT  | Port does not exist.   |
| • LOWER-LAYER-DOWN     | Lower layer is down.   |
| • ADMIN-DOWN           | Admin is down.   |
| • REMOTE-EXCESSIVE-ERR | Excessive errors on the remote port.   |
| • LOCAL-EXCESSIVE-ERR  | Excessive errors on the local port.  |

## 21.88 RTRV-MEPSTATS-CFM

(Cisco ONS 15454) The Retrieve Maintenance End Point Statistics Connectivity Fault Management (RTRV-MEPSTATS-CFM) command retrieves the maintenance end point statistics.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

LBRCVDSEQERR=0,LBRCVDBADMSDU=0"
;
```

| Output Parameters | Output Parameters | Description   |
|-------------------|-------------------|---|
|                   | <AID>             | Access identifier from the “26.15 EQPT” section on page 26-39.  |
|                   | <MDNAME >         | Maintenance Domain Name. It is a string. The MD name length should not exceed more than 43 characters.  |
|                   | <SVLANID>         | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
|                   | <MPID>            | Maintenance Point Identifier. It is an integer.   |

|                  |  |
|------------------|--|
| <CCMTRANSMTD>    | Indicates the transmission of continuity check messages. |
| <CCMRCVD>        | Continuity check messages received.                      |
| <CCRCVDSEQERR>   | Continuity check received with sequence errors.          |
| <LTRUNEXPDRCDV>  | Link trace reply received unexpectedly.                  |
| <LBRTRANSMTD>    | Loopback reply transmitted.                              |
| <LBRRCDVINORDER> | Loopback reply received in order.                        |
| <LBRRCDVSEQERR>  | Loopback reply received with sequence error.             |
| <LBRRCDVBADMSDU> | Loopback reply received with bad MSDU.                   |

## 21.89 RTRV-MIP-CFM

(Cisco ONS 15454) The Retrieve Maintenance Intermediate Point Connectivity Fault Management (RTRV-MIP-CFM) command retrieves the maintenance intermediate points on the port.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Ports

### Security

Retrieve

### Input Format

RTRV-MIP-CFM:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-MIP-CFM::ETH-1-1-1:1;

### Input Parameters

<AID> Access identifier from the [“26.16 ETH”](#) section on [page 26-41](#).

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“M CTAG COMPLD; “<<AID>,<VLANID>,<LEVEL>”
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“ETH-17-1-1,VLANID=6,LEVEL=7”
;
```

| Output Parameters | Parameter | Description   |
|-------------------|-----------|---|
|                   | <AID>     | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.  |
|                   | <VLANID > | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
|                   | <LEVEL>   | This indicates the level of the maintenance domain. The value ranges from 0 to 7.   |

## 21.90 RTRV-MIPCCDB-CFM

(Cisco ONS 15454) The Retrieve Maintenance Intermediate Point Continuity Check Message Data Base Connectivity Fault Management (RTRV-MIPCCDB-CFM) command retrieves the continuity check message database (CCDB) of the maintenance intermediate points.

### Usage Guidelines

- This command is applicable only to GE\_XP and 10GE\_XP cards.
- The card should be in Layer2 over DMDM mode.

### Category

Equipment

### Security

Retrieve

### Input Format

RTRV-MIPCCDB-CFM:[<TID>]:<AID>:<CTAG>:::[LEVEL=<LEVEL>],[VLANIDFROM=<VLANIDFROM>],[VLANIDTO=<VLANIDTO>];

### Input Example

RTRV-MIPCCDB-CFM::SLOT-1:1:::MDNAME=D2,VLANIDFROM=10,VLANIDTO=100;

### Input Parameters

|              |  |
|--------------|--|
| <AID>        | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.                         |
| <LEVEL>      | This indicates the level of the maintenance domain. The value ranges from 0 to 7.                      |
| <VLANIDFROM> | VLAN range. It is the start of the VLANID. Valid range is from 1 to 4096. It is an optional parameter. |
| <VLANIDTO>   | VLAN range. It is the end of the VLANID. Valid range is from 1 to 4096. It is an optional parameter.   |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“M CTAG COMPLD;
“<<AID>,<MACADDR>,<SVLANID>,<LEVEL>,<INGRESSPORT>,<MPID>,<ARCHIVETIMER”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“SLOT-4,MACADDR=00:00:00:00:00:00,SVLANID=100,LEVEL=1,INGRESSPORT=0,MPID=300,
ARCHIVETIMER=0”
;
```

**Output Parameters**

| Parameter      | Description   |
|----------------|---|
| <AID>          | Access identifier from the <a href="#">“26.15 EQPT”</a> section on page 26-39.  |
| <MACADDR>      | (Optional) The MAC address for the 10 Gigabit Ethernet payload. MACADDR is a string.  |
| <SVLANID>      | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <LEVEL>        | This indicates the level of the maintenance domain. The value ranges from 0 to 7.   |
| <INGRESSPORT>  | Identifies the ingress port.  |
| <MPID>         | Maintenance Point Identifier. It is an integer.   |
| <ARCHIVETIMER> | Archive Timer for CCDB. The default value is 0.   |

## 21.91 RTRV-NE-APC

(Cisco ONS 15454) The Retrieve Network Amplification Power Control (RTRV-NE-APC) command retrieves the APC application ports involved in node set-up regulation.

**Usage Guidelines**

None

**Category**

System

**Security**

Maintenance

**Input Format**

RTRV-NE-APC:[&lt;TID&gt;]:[&lt;AID&gt;]:&lt;CTAG&gt;;

**Input Example** RTRV-NE-APC:PENNGROVE:CHAN-16-1-RX:114;

**Input Parameters** <AID> Access identifier from the “26.8 CHANNEL” section on page 26-23. A null value is equivalent to ALL.

**Output Format** SID DATE TIME  
M CTAG COMPLD  
“<AID>,<MOD>::[MODIFDAT=<MODIFDAT>],[MODIFTM=<MODIFTM>],  
[CHECKDAT=<CHECKDAT>],[CHECKTM=<CHECKTM>]”  
;

**Output Example** TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“CHAN-16-1-RX,OCH::MODIFDAT=04-11-02,MODIFTM=12-35-00,  
CHECKDAT=04-11-02,CHECKTM=12-55-00”  
;

|                          |              |  |
|--------------------------|--------------|--|
| <b>Output Parameters</b> | <AID>        | Access identifier from the “26.8 CHANNEL” section on page 26-23.   |
|                          | <MOD>        | AID type. The parameter type is MOD20, which is the facility types for MXP_2.5G_10G, TXP_MR_10G, OSCM, OSC-CSM, OPT-PRE, OPT-BST, MD-4, MUX-32, DMX-32, AD-1C, AD-2C, AD-4C, AD-1B, and AD-4B cards. |
|                          | • 100GIGE    | 100 Gigabit Ethernet.  |
|                          | • 3GVIDEO    | 3G-SDI video payload.  |
|                          | • 4GFC       | 4-Gigabit Fibre Channel payload  |
|                          | • 4GFICON    | 4-Gigabit fiber connectivity payload   |
|                          | • 5GIB       | 5Gbps InfiniBand (IB_5G) payload   |
|                          | • 8GFC       | 8-Gigabit Fibre Channel payload  |
|                          | • HDSDI      | 1.5G HD-SDI video payload.   |
|                          | • ISC3PEER1G | 1 Gbps ISC3 peer   |
|                          | • ISC3PEER2G | 2 Gbps ISC3 peer   |
|                          | • ISC3PEER2R | 1 Gbps ISC1, ISC2, and ISC3 compatibility  |
|                          | • ISC3STP1G  | ISC-3 STP 1G video payload.  |
|                          | • ISC3STP2G  | ISC-3 STP 2G video payload.  |
|                          | • ISCCOMPAT  | 1 Gbps or 2 Gbps ISC3 peer used in transparent (2R) mode   |
|                          | • OCH        | Optical channel  |
|                          | • ODU0       | Optical Data Unit Level 0  |
|                          | • OMS        | Optical multiplexer section  |
|                          | • OTS        | Optical trace section  |
|                          | • OTU1       | Optical Transport Unit Level 1   |
|                          | • OTU3       | Optical Transport Unit Level 3   |

|            |  |
|------------|--|
| • OTU4     | Optical Transport Unit Level 4   |
| • SDSDI    | 270M SDI video payload.  |
| <MODIFDAT> | (Optional) The last date when the APC application modified this port. The format of MODIFDAT is MM-DD, where MM (month of year) ranges from 1 to 12 and DD (day of month) ranges from 1 to 31.                 |
| <MODIFTM>  | (Optional) The last time when the APC application modified this port. The format of MODIFTM is HH-MM, where HH (hour of day) ranges from 0 to 23 and MM (minute of hour) ranges from 0 to 59.                  |
| <CHECKDAT> | (Optional) The last date when the APC application controlled and validated this port. The format of CHECKDAT is MM-DD, where MM (month of year) ranges from 1 to 12 and DD (day of month) ranges from 1 to 31. |
| <CHECKTM>  | (Optional) The last time when the APC application controlled and validated this port. The format of CHECKTM is HH-MM, where HH (hour of day) ranges from 0 to 23 and MM (minute of hour) ranges from 0 to 59.  |

## 21.92 RTRV-NE-GEN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Network Element General (RTRV-NE-GEN) command retrieves the general NE attributes.

### Usage Guidelines

ETHIPADDR and ETHIPMASK are disabled in this command. ETHIPADDR and ETHIPMASK are used to show the Ethernet interface address and mask. Both default to the nodes' IP address and masks.

### Category

System

### Security

Retrieve

### Input Format

RTRV-NE-GEN:[<TID>]::<CTAG>;

### Input Example

RTRV-NE-GEN:CISCO::123;

### Input Parameters

None that require description

### Output Format

SID DATE TIME  
M CTAG COMPLD  
“[<IPADDR>],[<IPMASK>],[<DEFRTR>],[<IPV6ADDR>],[<IPV6PREFLEN>],[<IPV6DEFRTR>],[

PM=NO,SERIALPORTECHO=Y,OSIROUTINGMODE=ES,OSIL1BUFSIZE=512,OSIL2BUFSIZE=5
12"
;
```

**Output Parameters**

|               |  |
|---------------|--|
| <IPADDR>      | (Optional) Node IP address. IPADDR is a string.  |
| <IPMASK>      | (Optional) Node IP mask. IPMASK is a string.   |
| <DEFRTR>      | (Optional) Node default router. DEFRTR is a string.                                    |
| <IPV6ADDR>    | Specifies the IPv6 address of the NE. IPV6ADDR is a string.                            |
|               |     |
|               | <b>Note</b> IPV6ADDR parameter can be set only if IPV6ENABLE parameter is set to Y     |
| <IPV6PREFLEN> | Specifies the prefix length for the IPv6 address of the NE. IPV6PREFLEN is an integer. |
| <IPV6DEFRTR>  | Specifies the IPv6 default router address for the NE. IPV6DEFRTR is a string.          |
| <IPV6ENABLE>  | Specifies if the IPv6 enable mode for the NE is enabled or disabled.                   |
| • Y           | Indicates that IPV6 mode is enabled.   |
| • N           | Indicates that IPV6 mode is disabled.  |
| <IIOPPORT>    | (Optional) Node IIO port. IIOOPRT is an integer.                                       |
| <NTP>         | (Optional) Node Network Timing Protocol (NTP) timing source address. NTP is a string.  |
| <ETHIPADDR>   | Not supported in this release.   |
| <ETHIPMASK>   | Not supported in this release.   |
| <NAME>        | (Optional) Facility name. NAME is a string.  |
| <SWVER>       | (Optional) Software version. SWVER is a string.  |
| <LOAD>        | (Optional) Load. LOAD is a string.   |
| <PROTSWVER>   | (Optional) Protect software version. PROTSWVER is a string.                            |
| <PROTLOAD >   | (Optional) Protect load. PROTLOAD is a string.   |

|   |   |
|---|---|
| <DEFDESC>   | (Optional) Provides a default description for the NE. DEFDESC is a string.  |
| <PLATFORM>  | (Optional) Platform. PLATFORM is a string.  |
| <SECUMODE>  | (Optional) Security mode of the NE. The parameter type is NE_SECURE_MODE, which is the security mode of the NE.   |
| <ul style="list-style-type: none"> <li>• REPEATER</li> </ul>      | The front port and backplane are sharing the same IP network.   |
| <ul style="list-style-type: none"> <li>• SECURE</li> </ul>        | The front port and backplane are independent and in different IP subnetworks.   |
| <SUPPRESSIP>  | (Optional) The parameter type is YES_NO, which is whether the user's password is about to expire, the user is logged into the NE, or the user is locked out of the NE.  |
| <ul style="list-style-type: none"> <li>• NO</li> </ul>            | No  |
| <ul style="list-style-type: none"> <li>• YES</li> </ul>           | Yes   |
| <MODE>  | (Optional) Indicates the AID mode to access shelf identifier objects. Defaults to SINGLESHELF. This field is always set to MULTISHELF in the case of DWDM nodes with more than one shelf managed. Parameter type is SHELF_MODE which is the NE mode.                            |
| <ul style="list-style-type: none"> <li>• SINGLESHELF</li> </ul>   | The NE contains only one shelf and the AID representation does not consider the shelf identifier for command requests/response and autonomous reports.  |
| <ul style="list-style-type: none"> <li>• MULTISHELF</li> </ul>    | The AID representation considers the shelf identifier for command requests/response and autonomous reports. This means the NE has more than one shelf configured or the user wants to use the new AID style.  |
| <ul style="list-style-type: none"> <li>• MULTISHELFETH</li> </ul> | The AID representation considers the shelf identifier for command requests/response and autonomous reports. This means the NE has more than one shelf configured or the user wants to use the new AID style. The shelves are connected by means of an external Ethernet switch. |
| <PROXYSRV>  | (Optional) Indicates if the proxy server is enabled or disabled.  |
| <ul style="list-style-type: none"> <li>• Y</li> </ul>             | Proxy server is enabled.  |
| <ul style="list-style-type: none"> <li>• N</li> </ul>             | Proxy server is disabled.   |
| <FIREWALL>  | (Optional) Indicates if the firewall is enabled or disabled.  |
| <ul style="list-style-type: none"> <li>• Y</li> </ul>             | Firewall is enabled.  |
| <ul style="list-style-type: none"> <li>• N</li> </ul>             | Firewall is disabled.   |
| <AUTOPM>  | (Optional) AUTOPM is a flag to indicate if autonomous PM reporting to TL1 clients is enabled or disabled.   |
| <ul style="list-style-type: none"> <li>• Y</li> </ul>             | Auto PM reporting is enabled.   |
| <ul style="list-style-type: none"> <li>• N</li> </ul>             | Auto PM reporting is disabled.  |
| <SERIALPORTECHO>  | (Optional) Indicates if the echo is turned on for TL1 serial port sessions.   |
| <ul style="list-style-type: none"> <li>• Y</li> </ul>             | Echo is turned on.  |
| <ul style="list-style-type: none"> <li>• N</li> </ul>             | Echo is turned off.   |

|   |  |
|---|--|
| <OSIROUTINGMODE>  | Indicates the routing mode of the node.  |
| <ul style="list-style-type: none"> <li>• ES</li> </ul>  | Provisions the node as an OSI ES. The ONS node performs all ES functions and relies upon an IS for communication with other IS nodes inside and outside the ES OSI area.   |
| <ul style="list-style-type: none"> <li>• IS1</li> </ul> | Provisions the node as an OSI IS. The ONS node performs all IS functions including routing data between ISs and ESs, between networks, and between parts of a network.   |
| <ul style="list-style-type: none"> <li>• IS2</li> </ul> | The ONS node performs all IS functions. It communicates with other IS and ES nodes within an OSI area. It also broadcasts ISHs to IS nodes in other areas to which it is connected.  |
| <OSIL1BUFSIZE>  | Level 1 Link State Protocol Data Unit (LSP) buffer size. The default is 512.   |
| <OSIL2BUFSIZE>  | Level 2 Link State Protocol Data Unit (LSP) buffer size. The default is 512.   |
| <NET>   | Network Entity Title of the node. The NET is used in OSI networks to identify the node to end system (ES) or intermediate system (IS) NEs. NETs are allocated from the same name space as the Network Service Address Point (NSAP) address. Whether an address is an NSAP or NET depends on the NSAP Selector value. |

## 21.93 RTRV-NE-IMGSIGN

### Note

The RTRV-NE-IMGSIGN command does not apply to the Cisco ONS 15454 platform.

(Cisco ONS 15454 M2 and Cisco ONS 15454 M6) The Retrieve Network Image Signature (RTRV-NE-IMGSIGN) command retrieves the signature details of a given shelf.

### Usage Guidelines

None

### Category

System

### Security

Maintenance

### Input Format

RTRV-NE-IMGSIGN:[<TID>]:<AID>:<CTAG>[:::];

### Input Example

RTRV-NE-IMGSIGN:PENNGROVE:SHELF-1:CTAG;

|                         |  |
|-------------------------|--|
| <b>Input Parameters</b> | <AID> Shelf access identifier. AID can be ignored if the command is executed on a single shelf. For a multi-shelf configuration, AID can take a shelf value from 1 to 50 (SHELF-{1-50}). |
|-------------------------|--|

|                      |  |
|----------------------|--|
| <b>Output Format</b> | SID DATE TIME<br>M CTAG COMPLD<br>“[<AID>],[PKGTYPE=<PKGTYPE>],[IMGTYPE=<IMGTYPE>],<br>[CMNNAME=<CMNNAME>],[ORGUNIT=<ORGUNIT>],[ORGNAME=<ORGNAME>],[CERTSN=<br><CERTSN>],[HASH=<HASH>],[SIGNALGO=<SIGNALALGO>],[KEYVER=<KEYVER>]”<br>; |
|----------------------|--|

|                       |   |
|-----------------------|---|
| <b>Output Example</b> | SID DATE TIME<br>M CTAG COMPLD<br>“SHELF-1,PKGTYPE=WORKING,IMGTYPE=DEVELOPMENT,CMNNAME=UTS<br>TNC,ORGUNIT=OTBU,ORGNAME=CISCO,CERTSN=10000,HASH=SHA-512,SIGNALGO=RSA-<br>2048,KEYVER=A”; |
|-----------------------|---|

|                          |  |
|--------------------------|--|
| <b>Output Parameters</b> | <AID> Shelf access identifier. AID can be ignored if the command is executed on a single shelf. For a multi-shelf configuration, AID can take a shelf value from 1 to 30 (SHELF-{1-50}). |
| <PKGTYPE>                | Indicates the Package Type. The parameter type is PKGTYPE.   |
| • INVALID                | Indicates that the package type is invalid.  |
| • PROTECT                | Indicates that the package type is a protect package.  |
| • WORKING                | Indicates that the package type is a working package.  |
| <IMGTYPE>                | Indicates the Image Type. The parameter type is IMGTYPE.   |
| • DEVELOPMENT            | Indicates that the IMGTYPE is a DEVELOPMENT Image.   |
| • PRODUCTION             | Indicates that the IMGTYPE is a PRODUCTION Image.  |
| • REVOCATION             | Indicates that the IMGTYPE is a REVOCATION Image.  |
| • UNKNOWN                | Indicates that the IMGTYPE is an UNKNOWN Image.  |
| <CMNNAME>                | Indicates the Common Name.   |
| <ORGUNIT>                | Indicates the Organization Unit.   |
| <ORGNAME>                | Indicates the Organization Name.   |
| <CERTSN>                 | Indicates the Certificate Serial Number.   |
| <HASH>                   | Indicates the hashing Algorithm. The parameter type is HASH_ALGO.  |
| SHA-256                  | Hashing Algorithm is SHA-256.  |
| SHA-512                  | Hashing Algorithm is SHA-512.  |
| UNKNOWN                  | Hashing Algorithm is Unknown.  |
| <SIGNALGO>               | Indicates the signature Algorithm. The parameter type is SIGN_ALGO.  |
| • DSA                    | Signature Algorithm is DSA.  |
| • ECDSA                  | Signature Algorithm is ECDSA.  |
| • RSA-2048               | Signature Algorithm is RSA-2048.   |
| • UNKNOWN                | Signature Algorithm is Unknown.  |
| <KEYVER>                 | Indicates the key Version.   |

## 21.94 RTRV-NE-IPMAP

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Network Element Internet Protocol Map (RTRV-NE-IPMAP) command retrieves the IP address and node name of the NEs that have a DCC connection with this NE.

### Usage Guidelines

This command only reports the discovered DCC link. If there is no discovered DCC link on the port (or the node), the command will return COMPLD without IPMAP information.

### Category

Network

### Security

Retrieve

### Input Format

RTRV-NE-IPMAP:[<TID>]:[<AID>]:<CTAG>;

### Input Example

RTRV-NE-IPMAP:CISCO:FAC-12-1:123;

### Input Parameters

|                    |  |
|--------------------|--|
| <b>&lt;AID&gt;</b> | Access identifier from the <a href="#">“26.17 FACILITY” section on page 26-42</a> . The port of an NE carrying the DCC connection. A null value defaults to the whole NE. A null value is equivalent to ALL. |
|--------------------|--|

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AID>:<IPADDR>,<NODENAME>”
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FAC-12-1:172.20.208.225,NODENAME2”
;
```

### Output Parameters

|                         |  |
|-------------------------|--|
| <b>&lt;AID&gt;</b>      | Access identifier from the <a href="#">“26.17 FACILITY” section on page 26-42</a> . Port of an NE carrying the DCC connection. |
| <b>&lt;IPADDR&gt;</b>   | Node IP address. IPADDR is a string.   |
| <b>&lt;NODENAME&gt;</b> | Network element name. NODENAME is a string.  |

## 21.95 RTRV-NE-KEYINFO

**Note**

The RTRV-NE-KEYINFO command does not apply to the Cisco ONS 15454 platform.

(Cisco ONS 15454 M2 and Cisco ONS 15454 M6) The Retrieve Network Key Information (RTRV-NE-KEYINFO) command retrieves the details of the keys that are stored in a given shelf.

**Usage Guidelines**

None

**Category**

System

**Security**

Maintenance

**Input Format**

RTRV-NE-KEYINFO:[<TID>]:<AID>:<CTAG>[::::];

**Input Example**

RTRV-NE-KEYINFO:PENNGROVE:SHELF-5:CTAG;

**Input Parameters**

<AID> Shelf access identifier. AID can be ignored if the command is executed on a single shelf. For a multi-shelf configuration, AID can take a shelf value from 1 to 50 (SHELF-{1-50}).

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“[<AID>],[KEYTYPE=<KEYTYPE>],[PUBKEY=<PUBKEY>],[EXPN=<EXPN>],
[KEYVER=<KEYVER>],[MOD=<MOD>]”
;
```

**Output Example**

```
SID DATE TIME
M CTAG COMPLD
“SHELF-5,KEYTYPE=DEVELOPMENT,PUBKEY=RSA-2048,EXPN=1000,KEYVER=A,MOD=“0:
1:2:3:4:5:6:7:8:9:a:b:c:d:e:f:10:11:12:13:14:15:16:17:18:19:1a:1b:1c:1d:1e:1f:20:21:22:23:24:25:26:2

```

|                          |               |  |
|--------------------------|---------------|--|
| <b>Output Parameters</b> | <AID>         | Shelf access identifier. AID can be ignored if the command is executed on a single shelf. For a multi-shelf configuration, AID can take a shelf value from 1 to 30 (SHELF-{1-50}). |
|                          | <KEYTYPE>     | Indicates the Key Type. Displays the public key available on the system for verification. The parameter type is KEYTYPE.   |
|                          | • DEVELOPMENT | Indicates that the key type is DEVELOPMENT.  |
|                          | • RELEASE     | Indicates that the key type is RELEASE.  |
|                          | • ROLLOVER    | Indicates that the key type is ROLLOVER.   |
|                          | • UNKNOWN     | Indicates that the key type is Unknown.  |
|                          | <PUBKEY>      | Indicates the Public Key. Displays the name of the algorithm used for public key cryptography.   |
|                          | <EXPN>        | Indicates the Exponential. Displays the exponent of the public key algorithm—release or development keys.  |
|                          | <KEYVER>      | Indicates the Key version. Indicates the key version used to digitally sign the image. A key version is identified with an alphabetical character that ranges from A to Z.         |
|                          | <MOD>         | Indicates the Modulus. Displays the modulus of the public key algorithm with a size of 2048 bits.  |

## 21.96 RTRV-NE-PATH

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Network Element Path (RTRV-NE-PATH) command retrieves the path-level attributes on an NE.

|                         |                                    |
|-------------------------|------------------------------------|
| <b>Usage Guidelines</b> | None                               |
| <b>Category</b>         | System                             |
| <b>Security</b>         | Retrieve                           |
| <b>Input Format</b>     | RTRV-NE-PATH:[<TID>]::<CTAG>[:::]; |
| <b>Input Example</b>    | RTRV-NE-PATH:::CTAG;               |
| <b>Input Parameters</b> | None that require description      |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“[PDIP=<PDIP>],[XCMODE=<XCMODE>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“PDIP=Y,XCMODE=MIXED”
;
```

|                          |          |   |
|--------------------------|----------|---|
| <b>Output Parameters</b> | <PDIP>   | (Optional) Flag used to indicate whether PDI-P should be generated on the outgoing VT-structured STSs. The parameter type is ON_OFF (disable or enable an attribute). |
|                          | • N      | Disable an attribute.   |
|                          | • Y      | Enable an attribute.  |
|                          | <XCMODE> | (Optional) Cross-connect mode. The parameter type is XCMODE, which is applicable only to a node with cross-connect cards that support cross-connect mode change.      |
|                          | • MIXED  | Both VT1 and VT2 cross-connects can be provisioned on the node.   |
|                          | • VT1    | Only VT1 cross-connects can be provisioned on the node.   |
|                          | • VT2    | Only VT2 cross-connects can be provisioned on the node.   |

## 21.97 RTRV-NE-SYNCN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Network Element Synchronization (RTRV-NE-SYNCN) command retrieves the synchronization attributes of the NE.

### Usage Guidelines

- Although mixed mode timing is supported in this release, it is not recommended. Refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TLI Reference Guide* for more information.
- The timing modes are:
  - External mode: The node derives its timing from the BITS inputs.
  - Line mode: The node derives its timing from the SONET line(s).
  - Mixed mode: The node derives its timing from the BITS input or SONET lines.

**Category** Synchronization

**Security** Retrieve

**Input Format** RTRV-NE-SYNCN:[<TID>]:[<AID>]:<CTAG>[:::];

**Input Example**

```
RTRV-NE-SYCN:CISCO:SHELF-2:123;
```

**Input Parameters**

<AID> The node or shelf access identifier from the “[26.26 SHELF](#)” section on page 26-55. If omitted it addresses the node or first shelf of the node.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“[<AID>]:[TMMD=<TMMD>],[SSMGEN=<SSMGEN>],[QRES=<QRES>],
[RVRTV=<RVRTV>],[RVTM=<RVTM>],[SYSTEMN=<SYSTEMN>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“SHELF-2::TMMD=LINE,SSMGEN=GEN1,QRES=ABOVE-G811,RVRTV=Y,RVTM=8.0,
SYSTEMN=SONET”
;
```

**Output Parameters**

|  |  |
|--|--|
| <AID>  | The node or shelf access identifier from the “ <a href="#">26.26 SHELF</a> ” section on page 26-55. If omitted it addresses the node or first shelf of the node. Must not be null  |
| <TMMD>   | (Optional) Timing mode. The parameter type is TIMING_MODE, which is the timing mode for the current node.  |
| <ul style="list-style-type: none"> <li>• EXTERNAL</li> <li>• LINE</li> <li>• MIXED</li> </ul>  | <p>The node derives its clock from the BITS input.</p> <p>The node derives its clock from the SONET lines.</p> <p>The node derives its clock from the mixed timing mode.</p>   |
| <SSMGEN>   | (Optional) Synchronization status message generator. The parameter type is SYNC_GENERATION, which is the synchronization status message set generation.  |
| <ul style="list-style-type: none"> <li>• GEN1</li> <li>• GEN2</li> </ul>   | <p>First generation SSM set</p> <p>Second generation SSM set</p>   |
| <QRES>   | (Optional) Quality of the RES. The parameter type is SYNC_QUALITY_LEVEL, which is the network synchronization quality level.   |
| <ul style="list-style-type: none"> <li>• ABOVE-G811</li> <li>• ABOVE-STU</li> <li>• ABOVE-G812T</li> <li>• ABOVE-G812L</li> <li>• ABOVE-SETS</li> <li>• BELOW-SETS</li> <li>• SAME-AS-DUS</li> </ul> | <p>Better than G811</p> <p>Between STU and G811 (default setting)</p> <p>Between G812T and STU</p> <p>Between G812L and G812T</p> <p>Between SETS and G812L</p> <p>Below SETS but still usable</p> <p>Disable the RES message by equating to DUS</p> |

|  |  |
|--|--|
| <RVRTV>  | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| <ul style="list-style-type: none"> <li>• N</li> <li>• Y</li> </ul>       | <ul style="list-style-type: none"> <li>Does not revert service to original line after restoration.</li> <li>Reverts service to original line after restoration.</li> </ul>   |
| <RVTM>   | (Optional) Revertive time. The parameter type is REVERTIVE_TIME.   |
| <ul style="list-style-type: none"> <li>• 0.5 to 12.0</li> </ul>          | Revertive time is 0.5 to 12.0 minutes.   |
| <SYSTEMN>  | (ONS 15454 only) Identifies the system timing standard used by the node.   |
| <ul style="list-style-type: none"> <li>• SONET</li> <li>• SDH</li> </ul> | <ul style="list-style-type: none"> <li>SONET timing standard</li> <li>SDH timing standard</li> </ul>   |

## 21.98 RTRV-NE-WDMANS

(Cisco ONS 15454) The Retrieve Network Element Wavelength Division Multiplexing Automatic Node Setup (RTRV-NE-WDMANS) command retrieves the optical node setup (WDMANS) application ports involved in node setup regulation.

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | None  |
| <b>Category</b>         | DWDM  |
| <b>Security</b>         | Retrieve  |
| <b>Input Format</b>     | RTRV-NE-WDMANS:[<TID>]:[<AID>]:<CTAG>;  |
| <b>Input Example</b>    | RTRV-NE-WDMANS:PENNGROVE:ALL:114;   |
| <b>Input Parameters</b> | <p>&lt;AID&gt; The access identifier from the “<a href="#">26.1 ALL</a>” section on page 26-1. A null value is equivalent to ALL.</p> |

**Output Format**

```

SID DATE TIME
M CTAG COMPLD
"<AID>,<AIDTYPE>::[REGULATED=<REGULATED>],[PARAM=<PARAM>],[<VALUE>],[<ACT
OR>],[<DATE>],[<TIME>]:"
;

```

**Output Example**

```

TID-000 1998-06-20 14:30:00
M 001 COMPLD
"CHAN-16-1-RX,OCH::REGULATED=OUT-OF-RANGE,PARAM=VOAATTN"
;

```

**Output Parameters**

|            |  |
|------------|--|
| <AID>      | Access identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> . AID is port regulated.  |
| <AIDTYPE>  | Specifies the type of facility, link, or other addressable entity targeted by the message. A type of access identifier. The parameter type is MOD2, which is the line/path modifier. |
| • 100GIGE  | 100 Gigabit Ethernet.  |
| • 10GFC    | 10-Gigabit Fibre Channel payload   |
| • 10GFICON | 10-Gigabit fiber connectivity payload  |
| • 1GFC     | 1-Gigabit Fibre Channel payload  |
| • 1GFICON  | 1-Gigabit fiber connectivity payload   |
| • 1GISC3   | 1-Gigabit ISC3 compatible  |
| • 2GFC     | 2-Gigabit Fibre Channel payload  |
| • 2GFICON  | 2-Gigabit fiber connectivity payload   |
| • 2GISC3   | 2-Gigabit ISC3 compatible  |
| • 3GVIDEO  | 3G-SDI video payload.  |
| • 4GFC     | 4-Gigabit Fibre Channel payload  |
| • 4GFICON  | 4-Gigabit fiber connectivity payload   |
| • 5GIB     | 5Gbps InfiniBand (IB_5G) payload   |
| • 8GFC     | 8-Gigabit Fibre Channel payload  |
| • CHGRP    | Channel group  |
| • D1VIDEO  | D1 video   |
| • DS1      | DS1 line of a DS3XM card   |
| • DS3I     | DS3I line  |
| • DV6000   | DV6000   |
| • EC1      | EC1 facility   |
| • ESCON    | ESCON  |
| • ETRCLO   | ETR_CLO  |
| • FSTE     | FSTE facility  |
| • G1000    | G1000 facility   |
| • GFPOS    | GFP over POS. Virtual ports partitioned using GFP's multiplexing capability.   |

|              |  |
|--------------|--|
| • GIGE       | Gigabit Ethernet   |
| • HDLC       | High-level data link control (HDLC) frame mode.          |
| • HDTV       | HDTV   |
| • HDSDI      | 1.5G HD-SDI video payload.                               |
| • ISC3PEER1G | 1 Gbps ISC3 Peer   |
| • ISC3PEER2G | 2 Gbps ISC3 Peer   |
| • ISC3PEER2R | 1 Gbps or 2 Gbps ISC3 peer used in transparent (2R) mode |
| • ISC3STP1G  | ISC-3 STP 1G video payload.                              |
| • ISC3STP2G  | ISC-3 STP 2G video payload.                              |
| • ISCCOMPAT  | 1 Gbps ISC1, ISC2, and ISC3 compatibility                |
| • MSISC      | MSISC  |
| • OC3        | OC-3 facility  |
| • OC12       | OC-12 facility   |
| • OC48       | OC-48 facility   |
| • OC192      | OC-192 facility  |
| • OCH        | Optical Channel  |
| • OCHCC      | OCH client connection                                    |
| • OCHNC      | OCH network connection                                   |
| • OCHTERM    | OCH termination  |
| • ODU0       | Optical Data Unit Level 0                                |
| • OMS        | Optical Multiplex Section                                |
| • OTS        | Optical Transport Section                                |
| • OTU1       | Optical Transport Unit Level 1                           |
| • OTU3       | Optical Transport Unit Level 3                           |
| • OTU4       | Optical Transport Unit Level 4                           |
| • POS        | POS port   |
| • REP        | Resilient Ethernet Protocol                              |
| • SDSDI      | 270M SDI video payload.                                  |
| • STS1       | STS1 path  |
| • STS3C      | STS3c path   |
| • STS6C      | STS6c path   |
| • STS9C      | STS9c path   |
| • STS18C     | STS18c path  |
| • STS12C     | STS12c path  |
| • STS24C     | STS24c path  |
| • STS36C     | STS36c path  |
| • STS48C     | STS48c path  |
| • STS192C    | STS192c path   |
| • T1         | T1/DS1 facility/line                                     |
| • T3         | T1/DS1 facility/line                                     |
| • VT1        | VT1 path   |

|                            |  |
|----------------------------|--|
| • VT2                      | VT2 path   |
| <REGULATED>                | (Optional) The status of the port after a node setup regulation. The parameter type is REGULATED_PORT_TYPE, which is the optical configuration types for NEs.                        |
| • FAILED                   | WDM-ANS encountered a failure while regulating this port.  |
| • MISSING-INPUT-PWR-PARAM  | Missing input power parameter  |
| • MISSING-OUTPUT-PWR-PARAM | Missing output power parameter   |
| • NOT-APPLICABLE           | WDM-ANS does not foresee any algorithm or does not have any value to set for the parameter.  |
| • OUT-OF-RANGE             | WDM-ANS cannot modify the set point because the calculated value is out of the allowed range.  |
| • PORT-IN-SERVICE          | WDM-ANS cannot modify the set point because the ports are in IS state.   |
| • REGULATED                | WDM-ANS has successfully regulated this port.  |
| • UNCHANGED                | WDM-ANS has not changed this port.   |
| <ACTOR>                    | Regulator Actor is the name of the Network Element application that regulates the WDM-ANS parameter. The parameter type is REGULATED_ACTOR.  |
| • ANS                      | Parameter regulated by the ANS application.  |
| • APC                      | Parameter regulated by the APC application.  |
| • OCHNC                    | Parameter regulated by the OCHNC application.  |
| • RAMAN-WIZARD             | Parameter regulated by the RAMAN Wizard application.   |
| • UNKNOWN                  | The parameter that has been regulated by an unknown application.   |
| <PARAM>                    | (Optional) The regulated parameter inside of the specified port. The parameter type is REGULATED_PARAM_NAME, which is the name of the parameter regulated by the WDMANS application. |
| • AMPLMODE                 | WDM-ANS has regulated the amplifier control mode parameter.  |
| • CHPOWER                  | WDM-ANS has regulated the amplifier per the channel power parameter.   |
| • GAIN                     | WDM-ANS has regulated the amplifier gain parameter.  |
| • OPWR-LFAIL               | WDM-ANS has regulated the OPWR-LFAIL threshold parameter.  |
| • REFTILT                  | WDM-ANS has regulated the amplifier tilt reference parameter.  |
| • VOAREFATTN               | WDM-ANS has regulated the variable optical attenuator (VOA) attenuation reference parameter.   |
| • VOAREFPWR                | WDM-ANS has regulated the VOA power reference parameter.   |
| • DARK-POWER               | WDM-ANS has regulated the port P-Dark power.   |
| • VOA-STARTUP              | WDM-ANS regulated the port VOA startup.  |
| <DATE>                     | Identifies the date. Date is a string. Default value is - current date.  |
| <TIME>                     | Identifies the time. Time is a string. Default value is - current time.  |

## 21.99 RTRV-NETTYPE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Network Element Type (RTRV-NETTYPE) command retrieves the NE's equipment-related information.

**Usage Guidelines** None

**Category** System

**Security** Retrieve

**Input Format** RTRV-NETTYPE:[<TID>]::<CTAG>;

**Input Example** RTRV-NETTYPE:GAUR1::1;

**Input Parameters** None that require description

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<VENDOR>,<MODEL>,<NETYPE>,<SW_ISSUE>”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“CISCO,ONS15454,ADM&MSPP&MSTP,5.00.00”
;
```

|                          |   |  |
|--------------------------|---|--|
| <b>Output Parameters</b> | <VENDOR>  | NE equipment vendor name. VENDOR is a string.  |
|                          | <MODEL>   | NE equipment model. The parameter type is PRODUCT_TYPE, which is the product (NE) type.  |
|                          | <ul style="list-style-type: none"> <li>ONS15454</li> <li>UNKNOWN</li> </ul> | <ul style="list-style-type: none"> <li>ONS 15454</li> <li>Unknown product type</li> </ul>  |
|                          | <NETYPE>  | NE equipment type. Abbreviation of NE type can be used. The grouping sign “&” can be used to indicate multifunction NE type, for example, ADM&MSPP means Add-Drop Multiplexers and Multiservice Provisioning Platform. Listable. The parameter type is NETYPE, which is the NE equipment type. |

|            |   |
|------------|---|
| • ADM      | Add-Drop Multiplexers                                       |
| • DCS      | Digital Cross-Connect System                                |
| • MSPP     | Multiservice Provisioning Platform                          |
| • MSSP     | Multiservice Switching Platform                             |
| • MSTP     | Multiservice Transport Platform                             |
| <SW_ISSUE> | The software release issue of the NE. SW_ISSUE is a string. |

## 21.100 RTRV-NNI-CHGRP

(Cisco ONS 15454) The Retrieve Network-to-Network Interface Channel Group (RTRV-NNI-CHGRP) command retrieves the NNI selective S-VLAN-ID table associated to a channel group.

**Usage Guidelines** This command accepts the ALL AID.

**Category** Channel Group

**Security** Retrieve

**Input Format** RTRV-NNI-CHGRP:[<TID>]:<AID>:<CTAG>::[<SVLANID>][::];

**Input Example** RTRV-NNI-CHGRP:TID:CHGRP-1-1:1::110;

|                         |           |   |
|-------------------------|-----------|---|
| <b>Input Parameters</b> | <AID>     | Access identifier from the <a href="#">“26.9 CHGRP”</a> section on <a href="#">page 26-26</a> .   |
|                         | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:<SVLANID>[::]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“ETH-1-1-1:110::”
;
```

|                          |           |   |
|--------------------------|-----------|---|
| <b>Output Parameters</b> | <AID>     | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “ <a href="#">26.16 ETH</a> ” section on page 26-41.   |
|                          | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 21.101 RTRV-NNI-ETH

(Cisco ONS 15454) The Retrieve Network-to-Network Interface Ethernet (RTRV-NNI-ETH) command retrieves the NNI selective S-VLAN-ID table associated to an L2 Ethernet port.

**Usage Guidelines** This command accepts the ALL AID.

**Category** Ethernet

**Security** Retrieve

**Input Format** RTRV-NNI-ETH:[<TID>]:<AID>:<CTAG>::[<SVLANID>][::];

**Input Example** RTRV-NNI-ETH:TID:ETH-1-1-1:CTAG::110;

|                         |           |   |
|-------------------------|-----------|---|
| <b>Input Parameters</b> | <AID>     | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “ <a href="#">26.16 ETH</a> ” section on page 26-41.   |
|                         | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:<S_VLAN_ID>[::]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“ETH-1-1-1:110::”
;
```

|                          |           |   |
|--------------------------|-----------|---|
| <b>Output Parameters</b> | <AID>     | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the “ <a href="#">26.16 ETH</a> ” section on page 26-41.   |
|                          | <SVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

## 21.102 RTRV-OCM

(Cisco ONS 15454) The Retrieve Optical Channel Monitoring (RTRV-OCM) command retrieves the optical channel monitoring parameters present at OCH layer in a ROADM node.

**Usage Guidelines**

- Primary=Locked and secondary=AutomaticInService states do not apply to Ethernet mode.

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-OCM:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-OCM::OCM-1-16-1-RX-1530.33:12;

**Input Parameters** <AID> Access identifier from the “[26.8 CHANNEL](#)” section on page 26-23.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“[<AID>]::[CHPOWER=<CHPOWER>]:”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“ TID-000 1998-06-20 14:30:00M 001 COMPLD "OCM-1-16-1-RX-1530.33::CHPOWER=9.0”;
```

**Table 21-7 Output Parameter Support**

| Parameter | Description  |
|-----------|--|
| <AID>     | Access identifier from the “ <a href="#">26.8 CHANNEL</a> ” section on page 26-23. |
| <CHPOWER> | (Optional) The per channel optical power. Applicable only to amplified OTS ports.  |

## 21.103 RTRV-OCH

(Cisco ONS 15454) The Retrieve Optical Channel (RTRV-OCH) command retrieves the attributes (service parameters) and state of an OCH facility.

### Usage Guidelines

Refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide* for specific card provisioning rules. SQUELCHMODE, FREQ, LOSSB and PORTMODE are the parameters supported on RTRV-OCH command while retrieving the attributes and state of an OCH facility on 10x10G-LC, 100G-LC-C and CFP-LC Cards.

### Note

Primary=OOS and secondary=AINS states do not apply to Ethernet mode.

### Category

DWDM

### Security

Retrieve

### Input Format

RTRV-OCH:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-OCH:PENNGROVE:CHAN-6-2:236;

### Input Parameters

<AID> Access identifier from the [“26.8 CHANNEL”](#) section on page 26-23.

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AID>:.,[<ROLE>],[<STATUS>]:[<OPTICALPORTTYPE>],[<POWER>],[<EXPWLEN>],[<ACT
WLEN>],[<ILOSS>],[<VOAMODE>],[<VOAATTN>],[<VOAPWR>],[<VOAREFATTN>],[<VOARE
FPWR>],[<REFOPWR>],[<CALOPWR>],[<CHPOWER>],[<CHPOWERFLG>],[<ADDOPWR>],[<

,[<PDLCURR>]:<VOATXPOWER>,[<TXLASERSHUTDN>]:[<PST>][<SST>]”
;
```

### Output Example

100g 2012-05-22 12:31:55

M 1 COMPLD

“CHAN-3-2:.,WORK,STBY:EXPWLEN=USE-TWL1,GCC=N,DWRAP=Y,FEC=STD,OSFBER=1E-5,OSDBER=1E-7,SOAK=32,PORTMODE=DWDM-TRANS-AIS,RXWLEN=USE-TWL1,SYNCMSG=N,SENDDUS=N,ADMSSM=STU,SQUELCHMODE=ODU-AIS,,CDLOW=-70000.0,CDHIGH=70000.0,VOATXPOWER=0.25,TXLASERSHUTDN=N:OOS-MA,DSBLD”

### Output Parameters

| Parameter  | Description   |
|--|---|
| <AID>  | Access identifier from the “26.8 CHANNEL” section on page 26-23.  |
| <ROLE>   | (Optional) Identifies an OCH port role. The parameter type is SIDE, which is the role the unit is playing in the protection group.  |
| <ul style="list-style-type: none"> <li>• PROT</li> <li>• WORK</li> </ul>   | <p>The entity is a protection unit in the protection group.</p> <p>The entity is a working unit in the protection group.</p>  |
| <STATUS>   | (Optional) The port status. The parameter type is STATUS, which is the status of the unit in the protection pair.   |
| <ul style="list-style-type: none"> <li>• ACT</li> <li>• NA</li> <li>• STBY</li> </ul>  | <p>The entity is the active unit in the shelf.</p> <p>Status is unavailable.</p> <p>The entity is the standby unit in the shelf.</p>  |
| <OPTICALPORTTYPE>  | The optical port type. The parameter type is OPTICAL_PORT_TYPE, which qualifies the optical port of a card.   |
| <ul style="list-style-type: none"> <li>• ADD</li> <li>• COM</li> <li>• DROP</li> <li>• EAD</li> <li>• IN-ASE</li> <li>• IN-COM</li> <li>• IN-DC</li> <li>• IN-DFB</li> <li>• IN-EXP</li> <li>• IN-LINE</li> <li>• IN-OSC</li> <li>• OUT-COM</li> <li>• OUT-DC</li> <li>• OUT-DFB</li> <li>• OUT-EXP</li> <li>• OUT-LINE</li> </ul> | <p>The signal is added to the port.</p> <p>Common Port</p> <p>The signal is dropped from the port.</p> <p>Express/Add/Drop port</p> <p>Logical port on Raman CTP card.</p> <p>COM channels (without OSC) that continue the signal from the previous card</p> <p>Input DCU port</p> <p>Rx managed port on Raman CTP card used for span continuity check.</p> <p>The express channel that continues the signal from the previous card</p> <p>All the channels that continue the signal from the previous card</p> <p>OSC channel that continues the signal from the previous card</p> <p>COM channels (without OSC) that continue the signal to the next card</p> <p>Output DCU port</p> <p>Tx managed port on Raman CTP card used for span continuity check.</p> <p>Express channel that continues the signal to the next card</p> <p>All the channels that continue the signal to the next card</p> |

| Parameter | Description  |
|-----------|--|
| <ACTWLEN> | (Optional) The manufacturing optical wavelength for this port. Applicable only to the following cards: OSCM, OSC-CSM, OPT-PRE, OPT-BST, 4MD-xx.x, 32MUX, 32DMX, AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x, AD-1B-xx.x, and AD-4B-xx.x. The parameter type is OPTICAL_WLEN, which is the optical wavelength.   |
| <EXPWLEN> | (Optional) Optical wavelength for this port. Applicable only to the following types of cards: optical service channel cards, optical amplifier cards, dispersion compensation units, multiplexer and demultiplexer cards, and optical add/drop multiplexing (OADM) cards. The parameter type is OPTICAL_WLEN, which is the optical wavelength. |
| • 1310    | Wavelength 1310  |
| • 1470    | Wavelength 1470  |
| • 1490    | Wavelength 1490  |
| • 1510    | Wavelength 1510  |
| • 1528.77 | Wavelength 1528.77   |
| • 1529.16 | Wavelength 1529.16   |
| • 1529.55 | Wavelength 1529.55   |
| • 1529.94 | Wavelength 1529.94   |
| • 1530    | Wavelength 1530  |
| • 1530.33 | Wavelength 1530.33   |
| • 1530.72 | Wavelength 1530.72   |
| • 1531.12 | Wavelength 1531.12   |
| • 1531.51 | Wavelength 1531.51   |
| • 1531.90 | Wavelength 1531.90   |
| • 1532.29 | Wavelength 1532.29   |
| • 1532.68 | Wavelength 1532.68   |
| • 1533.07 | Wavelength 1533.07   |
| • 1533.47 | Wavelength 1533.47   |
| • 1533.86 | Wavelength 1533.86   |
| • 1534.25 | Wavelength 1534.25   |
| • 1534.64 | Wavelength 1534.64   |
| • 1535.04 | Wavelength 1535.04   |
| • 1535.43 | Wavelength 1535.43   |
| • 1535.82 | Wavelength 1535.82   |
| • 1536.22 | Wavelength 1536.22   |
| • 1536.61 | Wavelength 1536.61   |
| • 1537    | Wavelength 1537  |
| • 1537.40 | Wavelength 1537.40   |
| • 1537.79 | Wavelength 1537.79   |
| • 1538.19 | Wavelength 1538.19   |
| • 1538.58 | Wavelength 1538.58   |

| Parameter | Description        |
|-----------|--------------------|
| • 1538.98 | Wavelength 1538.98 |
| • 1539.37 | Wavelength 1539.37 |
| • 1539.77 | Wavelength 1539.77 |
| • 1540.16 | Wavelength 1540.16 |
| • 1540.56 | Wavelength 1540.56 |
| • 1540.95 | Wavelength 1540.95 |
| • 1541.35 | Wavelength 1541.35 |
| • 1541.75 | Wavelength 1541.75 |
| • 1542.14 | Wavelength 1542.14 |
| • 1542.35 | Wavelength 1542.35 |
| • 1542.54 | Wavelength 1542.54 |
| • 1542.94 | Wavelength 1542.94 |
| • 1543.33 | Wavelength 1543.33 |
| • 1543.73 | Wavelength 1543.73 |
| • 1544.13 | Wavelength 1544.13 |
| • 1544.53 | Wavelength 1544.53 |
| • 1544.92 | Wavelength 1544.92 |
| • 1545.32 | Wavelength 1545.32 |
| • 1545.72 | Wavelength 1545.72 |
| • 1546.12 | Wavelength 1546.12 |
| • 1546.52 | Wavelength 1546.52 |
| • 1546.92 | Wavelength 1546.92 |
| • 1547.32 | Wavelength 1547.32 |
| • 1547.72 | Wavelength 1547.72 |
| • 1548.11 | Wavelength 1548.11 |
| • 1548.51 | Wavelength 1548.51 |
| • 1548.91 | Wavelength 1548.91 |
| • 1549.32 | Wavelength 1549.32 |
| • 1549.72 | Wavelength 1549.72 |
| • 1550    | Wavelength 1500    |
| • 1550.12 | Wavelength 1550.12 |
| • 1550.52 | Wavelength 1550.52 |
| • 1550.92 | Wavelength 1550.92 |
| • 1551.32 | Wavelength 1551.32 |
| • 1551.72 | Wavelength 1551.72 |
| • 1552.12 | Wavelength 1552.12 |
| • 1552.52 | Wavelength 1552.52 |
| • 1552.93 | Wavelength 1552.93 |
| • 1553.33 | Wavelength 1553.33 |
| • 1553.73 | Wavelength 1553.73 |

| Parameter | Description        |
|-----------|--------------------|
| • 1554.13 | Wavelength 1554.13 |
| • 1554.13 | Wavelength 1554.13 |
| • 1554.94 | Wavelength 1554.94 |
| • 1555.34 | Wavelength 1555.34 |
| • 1555.75 | Wavelength 1555.75 |
| • 1556.15 | Wavelength 1556.15 |
| • 1556.55 | Wavelength 1556.55 |
| • 1556.96 | Wavelength 1556.96 |
| • 1557.36 | Wavelength 1557.36 |
| • 1557.77 | Wavelength 1557.77 |
| • 1558.17 | Wavelength 1558.17 |
| • 1558.58 | Wavelength 1558.58 |
| • 1558.98 | Wavelength 1558.98 |
| • 1559.39 | Wavelength 1559.39 |
| • 1559.79 | Wavelength 1559.79 |
| • 1560.20 | Wavelength 1560.20 |
| • 1560.61 | Wavelength 1560.61 |
| • 1561.01 | Wavelength 1561.01 |
| • 1561.42 | Wavelength 1561.42 |
| • 1561.83 | Wavelength 1561.83 |
| • 1562.23 | Wavelength 1562.23 |
| • 1562.64 | Wavelength 1562.64 |
| • 1563.05 | Wavelength 1563.05 |
| • 1563.45 | Wavelength 1563.45 |
| • 1563.86 | Wavelength 1563.86 |
| • 1564.27 | Wavelength 1564.27 |
| • 1564.68 | Wavelength 1564.68 |
| • 1565.09 | Wavelength 1565.09 |
| • 1565.50 | Wavelength 1565.50 |
| • 1565.90 | Wavelength 1565.90 |
| • 1566.31 | Wavelength 1566.31 |
| • 1566.72 | Wavelength 1566.72 |
| • 1570    | Wavelength 1570    |
| • 1570.83 | Wavelength 1570.83 |
| • 1571.24 | Wavelength 1571.24 |
| • 1571.65 | Wavelength 1571.65 |
| • 1572.06 | Wavelength 1572.06 |
| • 1572.48 | Wavelength 1572.48 |
| • 1572.89 | Wavelength 1572.89 |
| • 1573.30 | Wavelength 1573.30 |

| Parameter | Description        |
|-----------|--------------------|
| • 1573.71 | Wavelength 1573.71 |
| • 1574.13 | Wavelength 1574.13 |
| • 1574.54 | Wavelength 1574.54 |
| • 1574.95 | Wavelength 1574.95 |
| • 1575.37 | Wavelength 1575.37 |
| • 1575.78 | Wavelength 1575.78 |
| • 1576.20 | Wavelength 1576.20 |
| • 1576.61 | Wavelength 1576.61 |
| • 1577.03 | Wavelength 1577.03 |
| • 1577.44 | Wavelength 1577.44 |
| • 1577.86 | Wavelength 1577.86 |
| • 1578.27 | Wavelength 1578.27 |
| • 1578.69 | Wavelength 1578.69 |

| • VSR2000-3R2 | VSR2000-3R2                                     |
| • AUTOPROV    | Autoprovisioning                                |
| • CWDM-40KM   | CWDM 40 kilometers.                             |
| • CX          | Reach CX  |
| • CX1         | Reach CX1                                       |
| • DX          | Reach DX  |
| • HX          | Reach HX  |
| • I1          | Reach I1  |
| • IR-1        | Reach IR-1                                      |
| • IR-2        | Reach IR-2                                      |
| • L1          | Reach L1  |
| • L2          | Reach L2  |
| • L3          | Reach L3  |
| • LR-1        | Reach LR-1                                      |
| • LR-2        | Reach LR-2                                      |
| • LR-3        | Reach LR-3                                      |
| • LX          | Reach LX  |
| • P1I1-2D1    | Long haul 10G Ethernet with 1310 nm wavelength  |
| • P1L1-1D2    | Longhaul 2.5G Ethernet with 1550 nm wavelength  |
| • P1L1-2D2    | Long haul 10G Ethernet with 1550 nm wavelength  |
| • P1S1-1D1    | Shorthaul 2.5G Ethernet with 1310 nm wavelength |
| • P1S1-2D1    | Short haul 10G Ethernet in 1310 nm wavelength   |
| • SC          | Reach SC  |
| • S1          | Reach S1  |
| • S2          | Reach S2  |
| • SR          | Reach SR  |
| • SR-1        | Reach SR-1                                      |
| • SX          | Reach SX  |
| • T           | Reach T   |
| • TEN-GE-ER   | 10 GE extended range                            |
| • TEN-GE-LR   | 10 GE long range                                |

| Parameter   | Description  |
|---|--|
| <ul style="list-style-type: none"> <li>TEN-GE-SR</li> </ul> | 10 GE short range  |
| <ul style="list-style-type: none"> <li>ULH</li> </ul>       | Reach ULH  |
| <ul style="list-style-type: none"> <li>VSR</li> </ul>       | Reach VSR  |
| <ul style="list-style-type: none"> <li>VX</li> </ul>        | Reach VX   |
| <ul style="list-style-type: none"> <li>ZX</li> </ul>        | Reach ZX   |
| <ILOSS>   | (Optional) Insertion loss expressed in dBm. ILOSS applies to output ports only on the following cards: OSCM, OSC-CSM, OPT-PRE, OPT-BST, 4MD-xx.x, 32MUX, 32DMX, AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x, AD-1B-xx.x, and AD-4B-xx.x. ILOSS is a string.   |
| <VOAATTN>   | (Optional) The transit power attenuation for the VOA expressed in dBm. The range is -24.0 to +2.0 dBm for the MXP_2.5G_10G and TXP_MR_10G cards. VOAATTN is a string.  |
| <VOAPWR>  | (Optional) The value of calibrated output power that the VOA is going to set as a result of its attenuation. Applicable only to the following cards: OSCM, OSC-CSM, OPT-PRE, OPT-BST, 4MD-xx.x, 32MUX, 32DMX, AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x, AD-1B-xx.x, and AD-4B-xx.x. VOAPWR is a float and a string.  |
| <VOAREFATTN>  | (Optional) The value of reference attenuation for the VOA. Applicable only to the following cards: OSCM, OSC-CSM, OPT-PRE, OPT-BST, 4MD-xx.x, 32MUX, 32DMX, AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x, AD-1B-xx.x, and AD-4B-xx.x. VOAREFATTN is a float and a string.  |
| <VOAREFPWR>   | (Optional) The value of reference output power that the VOA is going to set as a result of its attenuation. Applicable only to the following cards: OSCM, OSC-CSM, OPT-PRE, OPT-BST, 4MD-xx.x, 32MUX, 32DMX, AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x, AD-1B-xx.x, and AD-4B-xx.x. VOAREFPWR is a float and a string.  |
| <REFOPWR>   | (Optional) The value of the calculated optical power expected for the output line added to the calibration value which equals the total expected output power. Applicable only to the following cards: OSCM, OSC-CSM, OPT-PRE, OPT-BST, 4MD-xx.x, 32MUX, 32DMX, AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x, AD-1B-xx.x, and AD-4B-xx.x. REFOPWR is a float and a string. |
| <PORTNAME>  | (Optional) Port name. PORTNAME is a string.  |
| <FCS>   | (Optional) First Circuit Startup. An automatic channel startup that operates the VOA when the light is detected on the ingress port.   |
| <ul style="list-style-type: none"> <li>Y</li> </ul>         | Automatic Channel startup enabled.   |
| <ul style="list-style-type: none"> <li>N</li> </ul>         | Automatic Channel startup disabled.  |
| <PROACTPROTECTION>  | To enable or disable the protective protection on the card.  |
| <TRIGGERTH>   | Specifies the trigger threshold value for Proactive Protection Regen. The parameter type is TRIGGER_THRESHOLD.   |
| <ul style="list-style-type: none"> <li>1E-2</li> </ul>      | Trigger threshold is 1E-2.   |
| <ul style="list-style-type: none"> <li>1E-3</li> </ul>      | Trigger threshold is 1E-3.   |

| Parameter | Description                |
|-----------|----------------------------|
| • 1E-4    | Trigger threshold is 1E-4. |
| • 1E-5    | Trigger threshold is 1E-5  |
| • 1E-6    | Trigger threshold is 1E-6. |
| • 1E-7    | Trigger threshold is 1E-7. |
| • 2E-2    | Trigger threshold is 2E-2. |
| • 2E-3    | Trigger threshold is 2E-3. |
| • 2E-4    | Trigger threshold is 2E-4  |
| • 2E-5    | Trigger threshold is 2E-5  |
| • 2E-6    | Trigger threshold is 2E-6. |
| • 2E-7    | Trigger threshold is 2E-7. |
| • 3E-2    | Trigger threshold is 3E-2. |
| • 3E-3    | Trigger threshold is 3E-3. |
| • 3E-4    | Trigger threshold is 3E-4. |
| • 3E-5    | Trigger threshold is 3E-5. |
| • 3E-6    | Trigger threshold is 3E-6. |
| • 3E-7    | Trigger threshold is 4E-7. |
| • 4E-2    | Trigger threshold is 4E-2. |
| • 4E-3    | Trigger threshold is 4E-3. |
| • 4E-4    | Trigger threshold is 4E-4. |
| • 4E-5    | Trigger threshold is 4E-5. |
| • 4E-6    | Trigger threshold is 4E-6. |
| • 4E-7    | Trigger threshold is 4E-7. |
| • 5E-2    | Trigger threshold is 5E-2. |
| • 5E-3    | Trigger threshold is 5E-3. |
| • 5E-4    | Trigger threshold is 5E-4. |
| • 5E-5    | Trigger threshold is 5E-5. |
| • 5E-6    | Trigger threshold is 5E-6. |
| • 5E-7    | Trigger threshold is 5E-7. |
| • 6E-2    | Trigger threshold is 6E-2. |
| • 6E-3    | Trigger threshold is 6E-3. |
| • 6E-4    | Trigger threshold is 6E-4. |
| • 6E-5    | Trigger threshold is 6E-5  |
| • 6E-6    | Trigger threshold is 6E-6. |
| • 6E-7    | Trigger threshold is 6E-7. |
| • 7E-2    | Trigger threshold is 7E-2. |
| • 7E-3    | Trigger threshold is 7E-3. |
| • 7E-4    | Trigger threshold is 7E-4. |
| • 7E-5    | Trigger threshold is 7E-5  |
| • 7E-6    | Trigger threshold is 7E-6. |
| • 7E-7    | Trigger threshold is 7E-7. |

| Parameter  | Description  |
|------------|--|
| • 8E-2     | Trigger threshold is 8E-2.   |
| • 8E-3     | Trigger threshold is 8E-3.   |
| • 8E-4     | Trigger threshold is 8E-4.   |
| • 8E-5     | Trigger threshold is 8E-5.   |
| • 8E-6     | Trigger threshold is 8E-6.   |
| • 8E-7     | Trigger threshold is 8E-7.   |
| • 9E-2     | Trigger threshold is 9E-2.   |
| • 9E-3     | Trigger threshold is 9E-3.   |
| • 9E-4     | Trigger threshold is 9E-4.   |
| • 9E-5     | Trigger threshold is 9E-5.   |
| • 9E-6     | Trigger threshold is 9E-6.   |
| • 9E-7     | Trigger threshold is 9E-7.   |
| <REVERTTH> | Specifies the revert threshold for Proactive Protection Regen. The parameter type is RVRTTH. |
| • 1E-3     | Revert threshold is 1E-3.  |
| • 1E-4     | Revert threshold is 1E-4.  |
| • 1E-5     | Revert threshold is 1E-5.  |
| • 1E-6     | Revert threshold is 1E-6.  |
| • 1E-7     | Revert threshold is 1E-7.  |
| • 2E-3     | Revert threshold is 2E-3.  |
| • 2E-4     | Revert threshold is 2E-4.  |
| • 2E-5     | Revert threshold is 2E-5.  |
| • 2E-6     | Revert threshold is 2E-6.  |
| • 2E-7     | Revert threshold is 2E-7.  |
| • 3E-3     | Revert threshold is 3E-3.  |
| • 3E-4     | Revert threshold is 3E-4.  |
| • 3E-6     | Revert threshold is 3E-6.  |
| • 3E-7     | Revert threshold is 4E-7.  |
| • 4E-3     | Revert threshold is 4E-4.  |
| • 4E-4     | Revert threshold is 4E-4.  |
| • 4E-5     | Revert threshold is 4E-5.  |
| • 4E-6     | Revert threshold is 4E-6.  |
| • 4E-7     | Revert threshold is 4E-7.  |
| • 5E-3     | Revert threshold is 5E-3.  |
| • 5E-4     | Revert threshold is 5E-4.  |
| • 5E-5     | Revert threshold is 5E-5.  |
| • 5E-6     | Revert threshold is 5E-6.  |
| • 5E-7     | Revert threshold is 5E-7.  |
| • 5E-8     | Revert threshold is 5E-8.  |
| • 6E-3     | Revert threshold is 6E-3.  |
| • 6E-4     | Revert threshold is 6E-4.  |

| Parameter    | Description  |
|--------------|--|
| • 6E-5       | Revert threshold is 6E-5   |
| • 6E-6       | Revert threshold is 6E-6.  |
| • 6E-7       | Revert threshold is 6E-7.  |
| • 6E-8       | Revert threshold is 6E-8.  |
| • 7E-3       | Revert threshold is 7E-3.  |
| • 7E-4       | Revert threshold is 7E-4.  |
| • 7E-5       | Revert threshold is 7E-5   |
| • 7E-6       | Revert threshold is 7E-6.  |
| • 7E-7       | Revert threshold is 7E-7.  |
| • 7E-8       | Revert threshold is 7E-8.  |
| • 8E-3       | Revert threshold is 8E-3.  |
| • 8E-4       | Revert threshold is 8E-4.  |
| • 8E-5       | Revert threshold is 8E-5   |
| • 8E-6       | Revert threshold is 8E-6.  |
| • 8E-7       | Revert threshold is 8E-7.  |
| • 8E-8       | Revert threshold is 8E-8.  |
| • 9E-3       | Revert threshold is 9E-3.  |
| • 9E-4       | Revert threshold is 9E-4.  |
| • 9E-5       | Revert threshold is 9E-5   |
| • 9E-6       | Revert threshold is 9E-6.  |
| • 9E-7       | Revert threshold is 9E-7.  |
| • 9E-8       | Revert threshold is 9E-8.  |
| <CALOPWR>    | (Optional) The value of the calibrated optical power expected for the line added to the calculated value, which equals the total expected output power. Expressed in dBm. Defaults to 0 dBm. CALOPWR is a float.           |
| <CHPOWERFLG> | (Optional) Parameter status flag indicating the state of the channel power.  |
| <ADDOPWR>    | (Optional) The value of the ADD optical power to an ADD port of the WSS card. The ADDOPWR is a float.  |
| <GCC>        | Identifies the generic communication channel (GCC) connection of the port.   |
| • Y          | GCC can be utilized.   |
| • N          | GCC cannot be utilized.  |
| <GCCRATE>    | (Optional) The data rate of the GCC traffic. The default is 192 Kbps. For MXP_2.5G_10G and TXP_MR_10G cards, this applies only to the DWDM port. The parameter type is GCCRATE, which is the data rate of the GCC traffic. |
| • 192K       | 192 Kbps   |
| • 400K       | 400 Kbps   |
| • 576K       | 576 Kbps   |

| Parameter          | Description   |
|--------------------|---|
| <DWRAP>            | (Optional) The ITU-T G.709 monitoring digital wrapper. It is either on or off. The system default is ON. For MXP_2.5G_10G and TXP_MR_10G cards, this applies only to the DWDM port. The parameter type is ON_OFF (disable or enable an attribute). To enable ITU-T G.709 monitoring, there should be no GCC on the DWDM port and the payload (in which the card is configured) should not be UNFRAMED. To disable ITU-T G.709 monitoring, there should be no GCC on the DWDM port, the FEC should be turned to off, there should be no overhead circuit created on the DWDM port, and none of the client ports on the card should be part of a Y-cable protection group (muxponder only). |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| <PAYLOADMAP>       | (Optional) The type of payload mapping. It can be enabled only if ITU-T G.709 monitoring is turned ON and FEC is enabled. The parameter type is PAYLOAD_MAPPING, which is the payload mapping mode.   |
| • ASYNCH           | Asynchronous mapping mode   |
| • ODU              | ODU multiplex structure mode  |
| • SYNCH            | Synchronous mapping mode  |
| • NOOPU2FIXEDSTUFF | Mapping with no FIXEDSTUFF  |
| <FEC>              | (Optional) Forward error correction. It can be enabled only if ITU-T G.709 monitoring is turned ON. It is either off or enabled in standard or enhanced mode. The system default is standard FEC enabled. The FEC level PM and thresholds apply if the FEC is turned ON. The parameter type is FEC_MODE, which specifies the type of forward error correction.  |
| • ENH              | Enhanced FEC is enabled.  |
| • ENH-I4           | Enhanced FEC 1.4 is enabled.  |
| • ENH-I7           | Enhanced FEC 1.7 is enabled.  |
| • ENH-20           | 20 % Enhanced FEC supported on fixed trunk port of 100G-LC-C card.  |
| • HG-7             | High Gain 7% FEC.   |
| • OFF              | FEC is disabled.  |
| • STD              | Standard FEC is enabled.  |
| <PEERID>           | Indicates the peer trunk facility of the regeneration group on the OTU2-XP card. Accessed using the CHAN AID.   |
| <REGENNAME>        | Indicates the name of a regeneration group. Applicable only to DWDM flavored cards, which support regeneration group. Regenname is a string. The default value is "NULL".   |
| <PORTMODE>         | Describes the termination mode of each interface on the OTU2-XP card.   |
| • DWDM-LINE        | Line terminating mode.  |
| • DWDM-SECTION     | Section terminating mode.   |
| • DWDM-TRANS-AIS   | Transparent mode AIS.   |

| Parameter  | Description  |
|--|--|
| <ul style="list-style-type: none"> <li>DWDM-TRANS-SQUELCH</li> </ul> | Transparent mode squelch.  |
| <ul style="list-style-type: none"> <li>10GLANWAN-SQUELCH</li> </ul>  | 10G LAN to WAN Squelch.  |
| <ODUTRANSMODE>   | To configure the "ODUk OH" transparency on the OTU2-XP card.   |
| <ul style="list-style-type: none"> <li>CISCO-EXT</li> </ul>          | Cisco Extended. When the Cisco Extended configuration is selected, two bytes of the ODU layer is terminated to guarantee the interoperability with the older Transponder/Muxponder cards.  |
| <ul style="list-style-type: none"> <li>TRANS-STD</li> </ul>          | Transparent Standard Use. The transponder, behaving as a regenerator, terminates the OUT layer and is transparent to the ODU layer. Also in this case the FEC-MISM (FEC Mismatch) alarm is not generated.  |
| <ERRORDECORRELATOR>  | Indicates the presence of the MLSE modules on the card. This applies only to TXP_MR_10EX_C, MXP_2.5G_10EX_C, and MXP_MR_10DMEX_C cards   |
| <ul style="list-style-type: none"> <li>Y</li> </ul>                  | Indicates that the MLSE module is enabled on the card.   |
| <ul style="list-style-type: none"> <li>N</li> </ul>                  | Indicates that the MLSE module is disabled on the card.  |
| <OVRCLK>   | Indicates whether the optical trunk is over-clocked or not. It can be Y or N. The default is N.  |
| <ul style="list-style-type: none"> <li>DQPSK</li> </ul>              | Indicates the D-QPSK modulation format.  |
| <ul style="list-style-type: none"> <li>QPSK</li> </ul>               | Indicates the QPSK modulation format.  |
| <RXWLEN>   | The RX wavelength. It is applicable in unidirectional regeneration mode of a muxponder card. In this case the RX wavelength can be different from the nominal TX wavelength (EXPWLEN). It can be any valid DWDM wavelength value. The default value is USE-TWL1. |
| <OSNR>   | Measure of the optical signal to noise ration  |
| <PMD>  | Measure of the polarization mode value, an average of the 2 polarization modes.  |
| <CHROMDISP>  | Alarm raised when receiver fails in compensating the excessive PMD.  |
| <PST_PSTQ>   | Primary state of the entity. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and PSTQ.   |
| <ul style="list-style-type: none"> <li>IS_NR</li> </ul>              | In Service and Normal  |
| <ul style="list-style-type: none"> <li>OOS-AU</li> </ul>             | Out of Service and Autonomous  |
| <ul style="list-style-type: none"> <li>OOS-AUMA</li> </ul>           | Out of Service and Autonomous Management   |
| <ul style="list-style-type: none"> <li>OOS-MA</li> </ul>             | Out of Service and Management  |
| <SQUELCHMODE>  | Shuts down the far-end laser in response to certain defects.   |
| <ul style="list-style-type: none"> <li>DISABLE</li> </ul>            | Squelch is disabled.   |
| <ul style="list-style-type: none"> <li>AIS</li> </ul>                | AIS  |
| <ul style="list-style-type: none"> <li>SQUELCH</li> </ul>            | Squelch is enabled.  |
| <ul style="list-style-type: none"> <li>NONE</li> </ul>               | No Squelch.  |
| <ul style="list-style-type: none"> <li>ODU-AIS</li> </ul>            | ODU AIS.   |
| <ul style="list-style-type: none"> <li>G-AIS</li> </ul>              | G-AIS  |
| <ul style="list-style-type: none"> <li>NOS</li> </ul>                | NOS  |

| Parameter          | Description  |
|--------------------|--|
| <FECALARMSUPPRESS> | FECALARMSUPPRESS   |
| <CDLOW>            | (Optional) Lower limit of CD working range.  |
| <CDHIGH>           | (Optional) Upper limit of CD working range.  |
| <SOPMDCURR>        | (Optional) Indicates the current value of second order polarization dispersion mode on the fixed trunk of 10x10G-LC card.              |
| <PCRCURR>          | (Optional) Indicates the current value of polarization change rate on fixed trunk of 10x10G-LC card.                                   |
| <PDLCURR>          | (Optional) Indicates the current value of polarization dependent loss on the fixed trunk of 10x10G-LC card.                            |
| <VOATXPOWER>       | (Optional) VOA Transmit Power. The parameter type is VOATXPOWER, indicates the VOA transmit power on the fixed trunk.                  |
| <TXLASERSHUTDN>    | (Optional) Transmit Laser Shut down. The parameter type is TXLASERSHUTDN indicates the transmit laser shut down status as Y or N.      |
| <SSTQ>             | (Optional) Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS             | Automatic In-Service   |
| • DSBLD            | Disabled   |
| • LPBK             | Loopback   |
| • MEA              | Mismatch of Equipment  |
| • MT               | Maintenance  |
| • OOG              | Out of Group   |
| • SWDL             | Software Download  |
| • UAS              | Unassigned   |
| • UEQ              | Unequipped   |

## 21.104 RTRV-OCHCC

(Cisco ONS 15454) The Retrieve Optical Channel Client Connection (RTRV-OCHCC) command retrieves the OCH client connection provisioning information.

**Usage Guidelines** None

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-OCHCC:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-OCHCC:VA454-22:FAC-2-1-1:116;

**Input Parameters**

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|-------|--|

;

**Output Example**

TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“VFAC-3-1-1::PAYLOAD=GIGE,ODU1START=1,ODU1END=1,ODU0START=1,ODU0END=1:IS-NR,”  
;

**Output Parameters**

|            |   |
|------------|---|
| <AID>      | Access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23.  |
| <PAYLOAD>  | Indicates the payload of the connection which is equivalent to the type of the payload configured on the facility port where the connection is originated or terminated. Parameter type is MOD1PAYLOAD. |
| • 100GIGE  | 100 Gigabit Ethernet.   |
| • 10GFC    | 10-Gigabit Fibre Channel payload  |
| • 10GFICON | 10-Gigabit fiber connectivity payload   |
| • 1GFC     | 1-Gigabit Fibre Channel payload   |
| • 1GFICON  | 1-Gigabit fiber connectivity payload  |
| • 1GISC3   | 1-Gigabit ISC3 compatible   |
| • 2GFC     | 2-Gigabit Fibre Channel payload   |
| • 2GFICON  | 2-Gigabit fiber connectivity payload  |
| • 2GISC3   | 2-Gigabit ISC3 compatible   |
| • 3GVIDEO  | 3G-SDI Video payload  |
| • 4GFC     | 4-Gigabit Fibre Channel payload   |
| • 4GFICON  | 4-Gigabit fiber connectivity payload  |
| • 5GIB     | 5Gbps InfiniBand (IB_5G) payload  |
| • 8GFC     | 8-Gigabit Fibre Channel payload   |
| • D1VIDEO  | D1Video payload   |

|                     |  |
|---------------------|--|
| • DV6000            | DV6000 payload   |
| • EC1               | EC1 payload  |
| • ESCON             | ESCON payload  |
| • ETRCLO            | ETRCLO payload   |
| • GIGE              | 1G Ethernet payload  |
| • HDSDI             | 1.5G HD-SDI video payload  |
| • HDTV              | HDTV payload   |
| • ISC3PEER1G        | 1 Gbps ISC3 Peer   |
| • ISC3PEER2G        | 2 Gbps ISC3 Peer   |
| • ISC3PEER2R        | 1 Gbps or 2 Gbps ISC3 peer used in transparent (2R) mode   |
| • ISC3STP1G         | ISC-3 STP 1G video payload   |
| • ISC3STP2G         | ISC-3 STP 2G video payload   |
| • ISCCOMPAT         | 1 Gbps ISC1, ISC2, and ISC3 compatibility  |
| • OC12              | OC12 payload   |
| • OC192             | OC192 payload  |
| • OC3               | OC3 payload  |
| • OC48              | OC48 payload   |
| • OC768             | OC768 payload  |
| • ODU0              | Optical Data Unit Level 0  |
| • OTU1              | Optical Transport Unit Level 1   |
| • OTU2              | Optical Transport Unit Level 2   |
| • OTU3              | Optical Transport Unit Level 3   |
| • OTU4              | Optical Transport Unit Level 4   |
| • SDSDI             | 270M SDI video payload.  |
| • T3                | DS3 payload  |
| <CKTID>             | Cross-connect ID. The default is Blank or None. String of ASCII characters. Maximum length is 48. If CKTID is empty or null the CKTID field will not be displayed. |
| <ODU1START>         | ODU1 Start   |
| <ODU1END>           | ODU1 End   |
| <TSSTART>           | Time Slot Start  |
| <TSEND>             | Time Slot End  |
| <ODU0START>         | (Optional) ODU0 Start  |
| <ODU0END>           | (Optional) ODU0 End  |
| <PSTPSTQ>           | Service state. The parameter is PST_PSTQ, which provides the service state of the entity described by the PST and PSTQ.  |
| • Unlocked-Enabled  | In service and normal  |
| • Unlocked-Disabled | Out of service and autonomous  |
| • Locked-Disabled   | Out of service, autonomous and management  |
| • Locked-Enabled    | Out of service and management  |

## 21.105 RTRV-OCHNC

(Cisco ONS 15454) The Retrieve Optical Channel Network Connection (RTRV-OCHNC) command retrieves the OCH wavelength connection provisioning information.

### Usage Guidelines

None

### Category

DWDM

### Security

Retrieve

### Input Format

RTRV-OCHNC:[<TID>]:<AID>:<CTAG>[:::];

### Input Example

RTRV-OCHNC:VA454-22:CHANWL-1-3-TX-1530.33:116;

### Input Parameters

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23. |
|-------|--|

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<SRC>,<DST>:<WCT>:[CKTID=<CKTID>]::<PSTPSTQ>”
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“CHANWL-1-3-TX-1530.33,LINWL-4-1-RX-1530.33:1WAY:CKTID="OCHNC-1":IS-NR”
;
```

### Output Parameters

|        |   |
|--------|---|
| <SRC>  | Source access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23. In 2-way wavelength connection sources both directions need to be indicated.      |
| <DST>  | Destination access identifier from the <a href="#">“26.20 LINEWL”</a> section on page 26-49. In 2-way wavelength connection sources both directions need to be indicated. |
| <WCT>  | Wavelength connection type. The parameter type is WCT. The default is 1WAY.   |
| • 1WAY | A unidirectional wavelength connection for one specified ring direction.  |

|                     |  |
|---------------------|--|
| • 2WAY              | A bidirectional wavelength connection for both the ring directions.  |
| <CKTID>             | Cross-connect ID. The default is Blank or None. String of ASCII characters. Maximum length is 48. If CKTID is empty or null the CKTID field will not be displayed. |
| <PSTPSTQ>           | Service state. The parameter is PST_PSTQ, which provides the service state of the entity described by the PST and PSTQ.  |
| • Unlocked-Enabled  | In service and normal  |
| • Unlocked-Disabled | Out of service and autonomous  |
| • Locked-Disabled   | Out of service, autonomous and management  |
| • Locked-Enabled    | Out of service and management  |

## 21.106 RTRV-ODU0

(Cisco ONS 15454) The Retrieve Optical Data Unit Level 0 (RTRV-ODU0) command retrieves the list of ODU0 entities on the AR-XPE card.

### Usage Guidelines

- This command is applicable only for AR-XPE card.
- When a static operational mode is created on the AR-XPE card, and if the port is provisioned with GIGE or 1GFC facility, ODU0's will be retrieved by RTRV-ODU0 command even when the OCHCC circuit is not created.
- When a dynamic operational mode is created on the AR-XPE card, the ODU0's are retrieved only when the OCHCC circuits are created on GIGE or 1GFC facility.

### Output Parameters

|                      |  |
|----------------------|--|
| <AID>                | Access identifier from the “26.8 CHANNEL” section on page 26-23.   |
| <RDIRN>              | Ring directionality of the optical line. The parameter type is RDIRN_MODE, which is the optical ring directionality.               |
| • E-W                | The direction of the signal is from east to west (clockwise).  |
| • W-E                | The direction of the signal is from west to east (counterclockwise).   |
| <OPTICALPORTTYPE>    | The optical port type. The parameter type is OPTICAL_PORT_TYPE, which qualifies the optical port of a card.                        |
| • ADD                | The signal is added to the port.   |
| • COM                | Common Port  |
| • DROP               | The signal is dropped from the port.   |
| • EAD                | Express/Add/Drop port  |
| • IN-ASE             | Logical port on Raman CTP card.  |
| • IN-COM             | COM channels (without an OSC) that continue the signal from the previous card.   |
| • IN-DC              | Input dispersion compensation unit (DCU) port.   |
| • IN-DFB             | Rx managed port on Raman CTP card used for span continuity check.  |
| • IN-EXP             | Express channel that continues the signal from the previous card.  |
| • IN-LINE            | All the channels that continue the signal from the previous card.  |
| • IN-OSC             | OSC channel that continues the signal from the previous card.  |
| • OUT-COM            | COM channels (without an OSC) that continue the signal to the next card.   |
| • OUT-DC             | Output DCU port.   |
| • OUT-DFB            | Tx managed port on Raman CTP card used for span continuity check.  |
| • OUT-EXP            | Express channel that continues the signal to the next card.  |
| • OUT-LINE           | All the channels that continue the signal to the next card.  |
| • OUT-OSC            | OSC channel that continue the signal to the next card.   |
| <POWER>              | (Optional) The optical power measured at this port. It can be the input or output power according to port type. POWER is a string. |
| <EXPBAND>            | The expected value of the band for this port. The parameter type is OPTICAL_BAND (optical band).                                   |
| • 1530.33 to 1532.68 | Band 1   |
| • 1534.25 to 1536.61 | Band 2   |
| • 1538.19 to 1540.56 | Band 3   |
| • 1542.14 to 1544.53 | Band 4   |
| • 1546.12 to 1548.51 | Band 5   |
| • 1550.12 to 1552.52 | Band 6   |

|                      |   |
|----------------------|---|
| • 1554.13 to 1556.55 | Band 7  |
| • 1558.17 to 1560.61 | Band 8  |
| • USE-DEFAULT        | This band is not yet configured/retrieved from unit.  |
| <ACTBAND>            | (Optional) Identifies the manufacturing optical band (group of four contiguous wavelengths) for this port. The parameter type is OPTICAL_BAND (optical band).   |
| • 1530.33 to 1532.68 | Band 1  |
| • 1534.25 to 1536.61 | Band 2  |
| • 1538.19 to 1540.56 | Band 3  |
| • 1542.14 to 1544.53 | Band 4  |
| • 1546.12 to 1548.51 | Band 5  |
| • 1550.12 to 1552.52 | Band 6  |
| • 1554.13 to 1556.55 | Band 7  |
| • 1558.17 to 1560.61 | Band 8  |
| • USE-DEFAULT        | This band is not yet configured/retrieved from unit.  |
| <ILOSS>              | (Optional) Insertion loss expressed in dBm. ILOSS applies to output ports only.   |
| <VOAMODE>            | (Optional) The working control mode of the VOA. The parameter type is VOA_CNTR_MODE, which defines the VOA control mode.  |
| • ATTN               | VOA has a fixed attenuation.  |
| • POWER              | VOA controls the attenuation to obtain a fixed output power.  |
| <VOAATTN>            | (Optional) The value of calibrated attenuation for the VOA. VOAATTN is a float and a string.  |
| <VOAPWR>             | (Optional) The value of calibrated output power that the VOA is going to set as a result of its attenuation. VOAPWR is a float and a string.  |
| <VOAREFATTN>         | (Optional) The value of reference attenuation for the VOA. VOAREFATTN is a float and a string.  |
| <VOAREFPWR>          | (Optional) The value of reference output power that the VOA is going to set as a result of its attenuation. VOAREFPWR is a float and a string.  |
| <REFOPWR>            | (Optional) The value of the calculated optical power expected for the output line added to the calibration value which equals the total expected output power. REFOPWR is a float and a string.                                 |
| <CALOPWR>            | (Optional) The value of the calibrated optical power expected for the output added to the calculated value, which equals the total expected output power. Expressed in dBm. Defaults to 0 dBm. CALOPWR is a float and a string. |
| <CHPOWER>            | (Optional) The per-channel optical power. The parameter type is REVERTIVE_TIME.   |
| • 0.5 to 12.0        | Revertive time is 0.5 to 12.0 minutes.  |
| <NAME>               | (Optional) Facility name. NAME is a string.   |
| <PST_PSTQ>           | Primary state of the entity. The parameter type is PST_PSTQ, which is the service state of the entity described by the primary state (PST) and a primary state qualifier (PSTQ).  |

|            |  |
|------------|--|
| • IS_NR    | In Service and Normal  |
| • OOS-AU   | Out of Service and Autonomous  |
| • OOS-AUMA | Out of Service and Autonomous Management   |
| • OOS-MA   | Out of Service and Management  |
| <SSTQ>     | (Optional) Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS     | Automatic In-Service   |
| • DSBLD    | Disabled   |
| • LPBK     | Loopback   |
| • MEA      | Mismatch of Equipment  |
| • MT       | Maintenance  |
| • OOG      | Out of Group   |
| • SWDL     | Software Download  |
| • UAS      | Unassigned   |
| • UEQ      | Unequipped   |

## 21.108 RTRV-OPM

(Cisco ONS 15454) The Retrieve Optical Monitoring Parameter (RTRV-OPM) command retrieves the optical power monitoring parameters present at the OCH layer in a reconfigurable optical add/drop multiplexing (ROADM) node.

**Usage Guidelines** None

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-OPM:[<TID>]:[<AID>]:<CTAG>[:[:]];

**Input Example** RTRV-OPM:VA454-22:OPM-5-1530.33:116;

**Input Parameters** <AID> Access identifier from the [“26.22 OPM”](#) section on page 26-53.

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<AID>::[POWEROUT=<POWEROUT>],[POWERADD=<POWERADD>],
[POWERPT=<POWERPT>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"OPM-5-1530.33::POWEROUT=9.0,POWERADD=10.0,POWERPT=11.0:"
;
```

**Output Parameters**

|            |   |
|------------|---|
| <AID>      | Access identifier from the <a href="#">“26.22 OPM”</a> section on page 26-53.   |
| <POWEROUT> | (Optional) The value of the output power associated to the add or pass-through channel port of a 32WSS card. POWEROUT is a float.   |
| <POWERADD> | (Optional) The value of the input power associated to the add channel port of a 32WSS card. POWERADD is mutually exclusive with the POWERPT parameter. POWERADD is a float.         |
| <POWERPT>  | (Optional) The value of the input power associated to the pass-through channel port of a 32WSS card. POWERPT is mutually exclusive with the POWERADD parameter. POWERPT is a float. |

## 21.109 RTRV-OPMODE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Operation Mode (RTRV-OPMODE) command retrieves the operation modes created on that node. In Trunkport list, the first port number indicates the working port and second port number indicates the protect port number.

**Usage Guidelines**

- In Low-latency and RGN-10G modes, one of the port is represented as Client and the other as Trunk while both are represented as trunks on CTC.
- OPMODE parameter will be retrieved in the command response for all the opmodes on AR-MXP, AR-XP, AR-XPE, 10x10G-LC, 100G-LC-C and CFP-LC Cards.
- PEERSLOTS parameter will be retrieved in the command response for dual card operating modes on only 10x10G-LC, 100G-LC-C, and CFP-LC cards. PEERSLOTS parameter is of syntax SLOT-<SLOTNO>.
- Following are the mandatory parameters for the operating modes on the 10x10G-LC, 100G-LC-C and CFP-LC cards:
  - OPMODE and TRUNKPORT parameters for TXP-10G, RGN-10G, and LOW-LATENCY operating modes on the 10x10G-LC card.
  - OPMODE parameter for TXP-100G and RGN-100G operating modes on the 100G-LC-C card; CFP-MXP and CFP-TXP operating modes on the CFP-LC; MXP-10X10G card mode on the 10x10G-LC card.

**Category** DWDM

**Security** Provisioning

**Input Format** RTRV-OPMODE:[<TID>]:<aid>:<CTAG>;

**Input Example** RTRV-OPMODE::SLOT-2:1;

**Input Parameters** <AID> Access identifier from the [“26.15 EQPT” section on page 26-39](#).

**Output Format** SID DATE TIME  
M CTAG COMPLD  
<AID>,[<OPMODE>],[<PEERSLOTS>],[<TRUNKPORTS>],[<CLIENTPORTS>],[<RATE>],[<CTM  
AP>]  
;

**Output Example** 100g 2012-05-22 12:39:49  
M 1 COMPLD  
"SLOT-2,OPMODE=CFP-TXP,PEERSLOTS=SLOT-3,"  
"SLOT-3,OPMODE=CFP-TXP,PEERSLOTS=SLOT-5&SLOT-2,CLIENTPORTS=1&2,"  
"SLOT-5,OPMODE=CFP-TXP,PEERSLOTS=SLOT-3,"

| Output Parameters | Parameter    | Description  |
|-------------------|--------------|--|
|                   | <AID>        | SLOT Access Identifier   |
|                   | <OPMODE>     | Specifies the oprating mode that exists on CLIENTPORTS and TRUNKPORTS on that RATE and CTMAP |
|                   | • MXP-10x10G | Muxponder mode between 10X10G-LC and 100G-LC-C card.   |
|                   | • RGN-100G   | Regenerator mode between two 100G-LC-C cards.  |
|                   | • RGN-10G    | Ginsu regenerator mode among SFP+ ports on 10X10G-LC card.                                   |
|                   | • CFP-MXP    | Muxponder mode between one CFP-LC and one 100G-LC-C cards.                                   |
|                   | • CFP-TXP    | Transponder mode among SFP+ ports on 10X10G-LC card.   |
|                   | • TXP-10G    | Transponder mode among SFP+ ports on 10X10G-LC card.   |
|                   | • TXP-MR     | Unprotected Multi-rate transponder   |
|                   | • TXPP-MR    | Protected Muti-rate Transponder  |
|                   | • MXP-DME    | Unprotected Data Muxponder   |
|                   | • MXPP-DME   | Protected Data Muxponder   |

| Parameter        | Description   |
|------------------|---|
| • MXP-MR-2.5G    | Unprotected Multi-Rate Muxponder  |
| • MXPP-MR-2.5G   | Protected Multi-Rate Muxponder  |
| • MXP-4x2.5-10G  | OC48/OTU1 Unprotected Muxponder   |
| • MXPP-4x2.5-10G | OC48/OTU1 Protected Muxponder   |
| • MXP-VDC-10G    | Video Muxponder (without Drop & Continue)   |
| • LOW-LATENCY    | Low latency opmode is supported only on 10x10G-LC card.   |
| <PEERSLOTS>      | The slot number of the peer card (100G-LC-C) of the CFP-LC card, which is part of the CFP-TXP and CFP-MXP modes, specified by the SLOT<SLOTNO>. |
| <TRUNKPORTS>     | Specifies the trunk port(s) which are part of that operating mode   |
| <CLIENTPORTS>    | Specifies the client port(s) which are part of that operating mode  |
| <CTMAP>          | The client to trunk mapping that exists on the ports in that operating mode.  |
| <RATE>           | The rate on which the operating mode is created   |
| • HIGH           | High rate (>5G)   |
| • LOW            | Low rate (<5G)  |

## 21.110 RTRV-OPMOD-PTSYS

(Cisco ONS 15454) The Retrieve Operation Mode Packet Transport System (RTRV-OPMOD-PTSYS) command retrieves the operation mode of the CPT 50 panel.

### Usage Guidelines

This command is valid for PTSYS. Retrieves the operation mode of the PTSYS.

### Category

Equipment

### Security

Retrieve

### Input Format

RTRV-OPMOD-PTSYS:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-OPMOD-PTSYS::ALL:1;

### Input Parameters

<AID> PTSYS AID. Access identifier from the [“26.15 EQPT”](#) section on page 26-39.

### Output Format

SID DATE TIME  
M CTAG COMPLD  
“<PTSYS AID>:<MODE>”;

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“PTSYS-1:NMS”;
```

| Output Parameters | Parameter | Description  |
|-------------------|-----------|--|
|                   | <AID>     | AID of the CPT 50 panel for which the operation mode is to be retrieved. |
|                   | <OPMODE>  | Operation mode of the PTSYSTEM.  |
|                   | • NMS     | TCP IPC mode.  |
|                   | • IOS     | IPC mode.  |

## 21.111 RTRV-OTS

(Cisco ONS 15454) The Retrieve Optical Transport System (RTRV-OTS) command retrieves the attributes (service parameters) and state of an OTS facility.

**Usage Guidelines** None

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-OTS:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-OTS:PENNGROVE:LINE-6-1-RX:236;

**Input Parameters**

|       |  |

;
```

**Output Parameters**

|  |   |
|--|---|
| <AID>  | Access identifier from the <a href="#">“26.19 LINE” section on page 26-45</a> .   |
| <RDIRN>  | Ring direction of the optical line. The parameter type is RDIRN_MODE, which is the optical ring direction.  |
| <ul style="list-style-type: none"> <li>E-W</li> <li>W-E</li> </ul>   | <ul style="list-style-type: none"> <li>The direction of the signal is from east to west (clockwise).</li> <li>The direction of the signal is from west to east (counterclockwise).</li> </ul>   |
| <ROLE>   | The role the unit is playing in the protection group.   |
| <ul style="list-style-type: none"> <li>PROT</li> <li>WORK</li> </ul>   | <ul style="list-style-type: none"> <li>The entity is the protection unit in the protection group.</li> <li>The entity is the working unit in the protection group.</li> </ul>   |
| <STATUS>   | The status of the unit in the protection pair.  |
| <ul style="list-style-type: none"> <li>ACT</li> <li>STBY</li> </ul>  | <ul style="list-style-type: none"> <li>The entity is the active unit on the shelf</li> <li>The entity is the standby unit on the shelf</li> </ul>   |
| <OPTICALPORTTYPE>  | The optical port type. The parameter type is OPTICAL_PORT_TYPE, which qualifies the optical port of a card.   |
| <ul style="list-style-type: none"> <li>ADD</li> <li>COM</li> <li>DROP</li> <li>EAD</li> <li>IN-ASE</li> <li>IN-COM</li> <li>IN-DC</li> <li>IN-DFB</li> <li>IN-EXP</li> <li>IN-LINE</li> <li>IN-OSC</li> <li>IN-RAMAN</li> <li>OUT-COM</li> <li>OUT-DC</li> </ul> | <ul style="list-style-type: none"> <li>The signal is added to the port.</li> <li>Common port</li> <li>The signal is dropped from the port.</li> <li>Express/Add/Drop port</li> <li>Logical port on Raman CTP card.</li> <li>COM channels (without OSC) that continue the signal from the previous card</li> <li>Input DCU port</li> <li>Rx managed port on Raman CTP card used for span continuity check.</li> <li>The express channel that continues the signal from the previous card</li> <li>All the channels that continue the signal from the previous card</li> <li>OSC channel that continues the signal from the previous card</li> <li>Input RAMAN line facility</li> <li>COM channels (without OSC) that continue the signal to the next card</li> <li>Output DCU port.</li> </ul> |

|               |  |
|---------------|--|
| • OUT-DFB     | Tx managed port on Raman CTP card used for span continuity check.  |
| • OUT-EXP     | Express channel that continues the signal to the next card   |
| • OUT-LINE    | All the channels that continue the signal to the next card   |
| • OUT-OSC     | OSC channel that continue the signal to the next card  |
| • OUT-RAMAN   | Output RAMAN line facility   |
| <POWER>       | (Optional) The optical power measured at this port. It can be the input or output power according to port type. POWER is a float.  |
| <OSCPWR>      | (Optional) The optical power of the OSC channel inside the OTS port.   |
| <ILOSS>       | (Optional) Insertion loss.   |
| <VOAMODE>     | (Optional) The working control mode of the VOA. The parameter type is VOA_CNTR_MODE, which defines the VOA control mode.   |
| • ATTN        | VOA has a fixed attenuation.   |
| • POWER       | VOA controls the attenuation to obtain a fixed output power.   |
| <VOAATTN>     | (Optional) The value of calibrated attenuation for the VOA. VOAATTN is a float.  |
| <VOAPWR>      | (Optional) The value of calibrated output power that the VOA is going to set as a result of its attenuation. VOAPWR is a float.  |
| <VOAREFATTN>  | (Optional) The value of reference attenuation for the VOA. VOAREFATTN is a float.  |
| <VOAREFPWR>   | (Optional) The value of reference output power that the VOA is going to set as a result of its attenuation. VOAREFPWR is a float.  |
| <OSRI>        | (Optional) OSRI enabled or disabled. Present only on a port where the safety is supported. Defaults to off. The parameter type is ON_OFF (disable or enable an attribute). |
| • N           | Disable an attribute.  |
| • Y           | Enable an attribute.   |
| <AMPLMODE>    | (Optional) The optical amplification control mode. The parameter type is AMPL_MODE, which defines amplifier control mode.  |
| • GAIN        | The amplifier always maintains a fixed gain.   |
| • POWER       | The amplifier maintains the output power to a fixed value.   |
| <AMPLMODEFLG> | (Optional) Parameter status flag indicating the state of the amplifier control mode.   |
| <CHPOWER>     | (Optional) The per channel optical power. Applicable only to amplified OTS ports.  |
| <CHPOWERFLG>  | (Optional) Parameter status flag indicating the state of the channel power.  |
| <GAIN>        | (Optional) The value of the gain of the amplifier. Defaults to 21 dB for a preamplifier and 20 dB for a booster amplifier.   |
| <EXPGAIN>     | (Optional) The expected gain value to be reached from an amplifier when the node is in a DWDM access network. EXPGAIN is a float.  |
| <EXPGAINFLG>  | Parameter status flag indicating the state of the expected gain.   |

|                |  |
|----------------|--|
| <REFOPWR>      | (Optional) The value of the calculated optical power expected for the output line added to the calibration value, which equals the total expected output power. REFOPWR is a float.  |
| <OFFSET>       | (Optional) The value of the calibrated optical power expected for the output line, which is added to the calculated value to have the total expected output power. OFFSET is a float.  |
| <REFTILT>      | (Optional) The calculated tilt value to be added to the user provided calibration value. REFTILT is a float.   |
| <REFTILTFLG>   | Parameter status flag indicating the state of the calculated tilt.   |
| <CALTILT>      | (Optional) The amplifier calibration tilt offset to be added to the calculated reference value. CALTILT is a float.  |
| <ASEOPWR>      | (Optional) The value of the calibrated optical power expected for the output line which is provided by the user, added to the calculated value to have the total expected output power. ASEOPWR is a float.  |
| <DCULOSS>      | (Optional) The value of insertion loss associated to DCU in between the two stages of a preamplifier unit. DCULOSS is a float.   |
| <AWGST>        | (Optional) The status assumed by arrayed waveguide grating (AWG). The parameter value is AWG_STATUS, which is the AWG status list.   |
| • ON           | The AWG is on.   |
| • WARM-UP      | The AWG is warming up.   |
| <HEATST>       | (Optional) The status assumed by the heater. The parameter type is HEATER_STATUS, which is the heater status list.   |
| • OFF          | The heater is off.   |
| • ON           | The heater is on.  |
| <NAME>         | (Optional) Port name. NAME is a string.  |
| <SOAK>         | (Optional) Locked-Automatic In Service to Unlocked transition soak time as measured in 15-minute intervals. SOAK is an integer.  |
| <SOAKLEFT>     | (Optional) Time remaining for the transition from Locked-AutomaticInService to Unlocked measured in 1 minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. Rules for SOAKLEFT are as follows: <ul style="list-style-type: none"> <li>• When the port is in Locked;Locked,Maintenance; or Unlocked state, the parameter is not displayed.</li> <li>• When the port is in Locked,AutomaticInService state but the countdown has not started due to a fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in Locked,AutomaticInService state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <WRKCHANNELS>  | Number of working OCHNC channels carried by the facility.  |
| <RATIO>        | Indicates the Raman Pump Power ratio.  |
| <RAMAN_STATUS> | Indicates the Raman setup state.   |
| • NOT-TUNED    | Raman is not tuned. Default values are set.  |
| • TUNING       | Raman is tuning.   |
| • TUNED        | Raman is tuned but not verified.   |

|                     |   |
|---------------------|---|
| • FORCE-TUNED       | Raman is tuned with values not measured but calculated.                 |
| • ACCEPTED-TUNED    | Raman setup has been accepted by the user.                              |
| • TUNED-VERIFIED    | Raman is tuned and verified.  |
| <RAMAN_QUALITY>     | Indicates the Raman quality setup results.                              |
| • SETUP-GOOD        | Setup good  |
| • SETUP-NEED-ACCEPT | Setup needs acceptance  |
| • SETUP-UNACCEPT    | Setup unaccepted  |
| • SETUP-FORCED      | Setup forced  |
| <TIME>              | Identifies the time. Time is a string. Default value is - current time. |
| <DATE>              | Identifies the date. Date is a string. Default value is - current date. |
| <RAMAN_RESTORE_FC>  | Restores Raman after fiber cut.   |
| • FAILED            | Restores Raman after fiber cut fails.                                   |
| • NOTEXEC           | Restores Raman after fiber cut is not executed.                         |
| • OK                | Restores Raman after fiber cut is OK.                                   |
| • PENDING           | Restores Raman after fiber cut is PENDING.                              |
| <CG>                | TDCU coarse grain value   |
| • 0                 | TDCU coarse grain value   |
| • 110               | TDCU coarse grain value   |
| • -1100             | TDCU coarse grain value   |
| • -1210             | TDCU coarse grain value   |
| • -1320             | TDCU coarse grain value   |
| • -1430             | TDCU coarse grain value   |
| • -1540             | TDCU coarse grain value   |
| • -1650             | TDCU coarse grain value   |
| • -220              | TDCU coarse grain value   |
| • -330              | TDCU coarse grain value   |
| • -440              | TDCU coarse grain value   |
| • -550              | TDCU coarse grain value   |
| • -660              | TDCU coarse grain value   |
| • -770              | TDCU coarse grain value   |
| • -880              | TDCU coarse grain value   |
| • -990              | TDCU coarse grain value   |
| <FG>                | TDCU fine grain value   |
| • 0                 | TDCU fine grain value   |
| • -45               | TDCU fine grain value   |
| • -450              | TDCU fine grain value   |
| • -495              | TDCU fine grain value   |
| • -540              | TDCU fine grain value   |
| • -585              | TDCU fine grain value   |
| • -630              | TDCU fine grain value   |
| • -675              | TDCU fine grain value   |

|                            |  |
|----------------------------|--|
| • -90                      | TDCU fine grain value  |
| • -135                     | TDCU fine grain value  |
| • -180                     | TDCU fine grain value  |
| • -225                     | TDCU fine grain value  |
| • -270                     | TDCU fine grain value  |
| • -315                     | TDCU fine grain value  |
| • -360                     | TDCU fine grain value  |
| • -405                     | TDCU fine grain value  |
| <PST>                      | (Optional) Primary state of the entity. The parameter type is PST, which indicates the current overall service condition of an entity. |
| • Unlocked-Enabled         | In service and normal  |
| • Unlocked-Disabled        | Out of service and autonomous  |
| • Locked-Disabled          | Out of service, autonomous and management  |
| • Locked-Enabled           | Out of service and management  |
| <SST>                      | (Optional) Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AutomaticInService       | Automatic in service   |
| • Disabled                 | Disabled   |
| • Loopback                 | Loopback   |
| • MismatchofEquipmentAlarm | Mismatch of equipment and attributes   |
| • Maintenance              | Maintenance mode   |
| • OutOfGroup               | Out of group   |
| • SoftwareDownload         | Software downloading   |
| • Unassigned               | Unassigned   |
| • NotInstalled             | Unequipped   |

## 21.112 RTRV-OTU

(Cisco ONS 15454) The Retrieve Optical Transport Unit Level (RTRV-OTU) command retrieves the attributes (service parameters) and state of an OTU2 facility.

### Usage Guidelines

The OVRCLK is the new parameter added and applicable for RTRV-OTU command on 10x10G-LC SFP+ ports only.

The RTRV-OTU4 is modified by adding a new parameter NUMOFLANES, which describes the number of sublanes provisioned on Aggregate ports of CFP-LC cards.

M 1 COMPLD
```

```
"VFAC-3-1-1:.,WORK,STBY:GCC=N,FREQ=USE-TWL1,LOSSB=AUTOPROV,SOAK=32,.,SQUEL
CHMODE=ODU-AIS,ADMSSM=STU,NUMOFLANES=10:OOS-MA,DSBLD
```

| Parameter | Description   |
|-----------|---|
| <AID>     | Access identifier from the “26.19 LINE” section on page 26-45.  |
| <ROLE>    | The role the unit is playing in the protection group. <ul style="list-style-type: none"> <li>• PROT The entity is the protection unit in the protection group.</li> <li>• WORK The entity is the working unit in the protection group.</li> </ul>   |
| <STATUS>  | The status of the unit in the protection pair. <ul style="list-style-type: none"> <li>• ACT The entity is the active unit on the shelf.</li> <li>• STBY The entity is the standby unit on the shelf.</li> </ul>   |
| <OSDBER>  | OTN SDBER. Can only be provisioned on the working port. Defaults to 1E-7. Parameter type is SD_BER—the threshold for declaring signal degrade on a facility or path. <ul style="list-style-type: none"> <li>• 1E-5 SDBER is 1E-5</li> <li>• 1E-6 SDBER is 1E-6</li> <li>• 1E-7 SDBER is 1E-7</li> <li>• 1E-8 SDBER is 1E-8</li> <li>• 1E-9 SDBER is 1E-9</li> </ul> |
| <GCC>     | Identifies the generic communication channel (GCC) connection of the port. <ul style="list-style-type: none"> <li>• Y GCC can be utilized.</li> <li>• N GCC cannot be utilized.</li> </ul>  |

|                     |   |
|---------------------|---|
| <DWRAP>             | (Optional) The ITU-T G.709 monitoring digital wrapper. It is either on or off. The system default is ON. For MXP_2.5G_10G and TXP_MR_10G cards, this applies only to the DWDM port. The parameter type is ON_OFF (disable or enable an attribute). To enable ITU-T G.709 monitoring, there should be no GCC on the DWDM port and the payload (in which the card is configured) should not be UNFRAMED. To disable ITU-T G.709 monitoring, there should be no GCC on the DWDM port, the FEC should be turned to off, there should be no overhead circuit created on the DWDM port, and none of the client ports on the card should be part of a Y-cable protection group (muxponder only). |
| • N                 | Disable an attribute.   |
| • Y                 | Enable an attribute.  |
| <FEC>               | (Optional) Forward error correction. It can be enabled only if ITU-T G.709 monitoring is turned ON. It is either off or enabled in standard or enhanced mode. The system default is standard FEC enabled. The FEC level PM and thresholds apply if the FEC is turned ON. The parameter type is FEC_MODE, which specifies the type of forward error correction.  |
| • ENH               | Enhanced FEC is enabled.  |
| • HG-7              | High Gain 7% FEC.   |
| • ENH-20            | 20 % Enhanced FEC supported on fixed trunk port of 100G-LC-C card.  |
| • OFF               | FEC is disabled.  |
| • STD               | Standard FEC is enabled.  |
| <PAYLOADMAP>        | (Optional) The type of payload mapping. It can be enabled only if ITU-T G.709 monitoring is turned ON and FEC is enabled. The parameter type is PAYLOAD_MAPPING, which is the payload mapping mode.   |
| • ASYNCH            | Asynchronous mapping mode   |
| • ODU               | ODU multiplex structure mode  |
| • SYNCH             | Synchronous mapping mode  |
| • NOOPU2FIXED STUFF | Mapping with no FIXEDSTUFF  |
| <FREQ>              | (Optional) The parameter type is OPTICAL_WLEN, which indicates the optical wavelength.  |
| • 1310              | Wavelength 1310   |
| • 1470              | Wavelength 1470   |
| • 1490              | Wavelength 1490   |
| • 1510              | Wavelength 1510   |
| • 1528.77           | Wavelength 1528.77  |
| • 1529.16           | Wavelength 1529.16  |
| • 1529.55           | Wavelength 1529.55  |
| • 1529.94           | Wavelength 1529.94  |
| • 1530              | Wavelength 1530   |
| • 1530.33           | Wavelength 1530.33  |
| • 1530.73           | Wavelength 1530.73  |
| • 1531.12           | Wavelength 1531.12  |
| • 1531.51           | Wavelength 1531.51  |
| • 1531.90           | Wavelength 1531.90  |

|           |                    |
|-----------|--------------------|
| • 1532.29 | Wavelength 1532.29 |
| • 1532.68 | Wavelength 1532.68 |
| • 1533.07 | Wavelength 1533.07 |
| • 1533.47 | Wavelength 1533.47 |
| • 1533.86 | Wavelength 1533.86 |
| • 1534.25 | Wavelength 1534.25 |
| • 1534.64 | Wavelength 1534.64 |
| • 1535.04 | Wavelength 1535.04 |
| • 1535.43 | Wavelength 1535.43 |

| • LX           | Reach LX  |
| • P1I1-2D1     | Long haul 10G Ethernet with 1310 nm wavelength                            |
| • P1L1-1D2     | Longhaul 2.5G Ethernet with 1550 nm wavelength                            |
| • P1L1-2D2     | Long haul 10G Ethernet with 1550 nm wavelength                            |

|                   |  |
|-------------------|--|
| • P1S1-1D1        | Shorthaul 2.5G Ethernet with 1310 nm wavelength  |
| • P1S1-2D1        | Short haul 10G Ethernet in 1310 nm wavelength  |
| • SC              | Reach SC   |
| • S1              | Reach S1   |
| • S2              | Reach S2   |
| • SR              | Reach SR   |
| • SR-1            | Reach SR-1   |
| • SX              | Reach SX   |
| • T               | Reach T  |
| • VX              | Reach VX   |
| • ZX              | Reach ZX   |
| <OVRCLK>          | Indicates whether the optical trunk is over-clocked or not. The default is N.  |
| • Y               | Yes  |
| • N               | No   |
| • OTU1e           | OTU1e is a 10G overlocked payload with a rate of 11.0491 Gbps $\pm$ 100 PPM.   |
| <SQUELCHMOD<br>E> | Shuts down the far-end laser in response to certain defects.   |
| • SQUELCH         | Squelch is enabled   |
| • NONE            | No Squelch   |
| • NOS             | Squelch is disabled  |
| <ADMSSM>          | (Optional) SSM selectable. Only applicable to BITS-IN when SSM is disabled. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET.   |
| • DUS             | Do Not Use For Synchronization   |
| • PRS             | Primary Reference Source, Stratum 1 Traceable  |
| • RES             | Reserved For Network Synchronization Use   |
| • SMC             | SONET Minimum Clock Traceable  |
| • ST2             | Stratum 2 Traceable  |
| • ST3             | Stratum 3 Traceable  |
| • ST3E            | Stratum 3E Traceable   |
| • ST4             | Stratum 4 Traceable  |
| • STU             | Synchronized, Traceability Unknown   |
| • TNC             | Transit Node Clock (2nd Generation Only)   |
| <PORTNAME>        | (Optional) Port name. PORTNAME is a string.  |
| <CMDMDE>          | (Optional) Command mode. Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in Unlocked-Enabled or Locked-Disabled, AutomaticInService service states. |
| <NUMOFLANES>      | Identifies the Number of sublanes on the Aggregate port with values 1 or 4.  |
| <PST_PSTQ>        | Primary state. The parameter type is PST_PSTQ, which is the service state of the entity described by the PST and PSTQ.   |

|                            |  |
|----------------------------|--|
| • Unlocked-Enabled         | In service and normal  |
| • Unlocked-Disabled        | Out of service and autonomous  |
| • Locked-Disabled          | Out of service, autonomous and management  |
| • Locked-Enabled           | Out of service and management  |
| <SSTQ>                     | (Optional) Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AutomaticInService       | Automatic in service   |
| • Disabled                 | Disabled   |
| • Loopback                 | Loopback   |
| • MismatchofEquipmentAlarm | Mismatch of equipment and attributes   |
| • Maintenance              | Maintenance mode   |
| • OutOfGroup               | Out of group   |
| • SoftwareDownload         | Software downloading   |
| • Unassigned               | Unassigned   |
| • NotInstalled             | Unequipped   |

## 21.113 RTRV-PATH-OCH

(ONS 15454) The Retrieve Path Optical Channel (RTRV-PATH-OCH) command retrieves the OCH path inside a node. An OCH path is a list of access identifiers that addresses all the possible facility and internal optical channels that are all associated to the same wavelength.

**Usage Guidelines** None

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-PATH-OCH:[<TID>]:<AID>:<CTAG>[::::];

**Input Example** RTRV-PATH-OCH:PENNGROVE:CHAN-6-2:236;

|                          |  |   |
|--------------------------|--|---|
| <b>Input Parameters</b>  | <AID>  | Access identifier from the “26.8 CHANNEL” section on page 26-23, “26.20 LINEWL” section on page 26-49, and “26.5 BANDWL” section on page 26-21. |
| <b>Output Format</b>     | <pre> SID DATE TIME M CTAG COMPLD "&lt;AID&gt;::[WLEN=&lt;WLEN&gt;],[PATH=&lt;PATH&gt;]:" ; </pre>   |   |
| <b>Output Example</b>    | <pre> TID-000 1998-06-20 14:30:00 M 001 COMPLD "CHAN-6-2::WLEN=1530.33,PATH=LINEWL-1-3-RX-1530.33&amp;LINEWL-1-1-TX-1530.33&amp; LINEWL-3-1-RX-1530.33&amp;CHAN-3-1-TX&amp;CHAN-6-2:" ; </pre> |   |
| <b>Output Parameters</b> | <AID>  | Access identifier from the “26.8 CHANNEL” section on page 26-23, “26.20 LINEWL” section on page 26-49, and “26.5 BANDWL” section on page 26-21. |
|                          | <WLEN>   | Defines the optical wavelength. The parameter type is OPTICAL_WLEN (optical wavelength).  |
|                          | • 1529.16  | Wavelength 1529.16  |
|                          | • 1530.33  | Wavelength C Band - 1/40  |
|                          | • 1530.72  | Wavelength 1530.72  |
|                          | • 1531.12  | Wavelength C Band - 2/40  |
|                          | • 1531.90  | Wavelength C Band - 3/40  |
|                          | • 1532.68  | Wavelength C Band - 4/40  |
|                          | • 1534.25  | Wavelength C Band - 6/40  |
|                          | • 1535.04  | Wavelength C Band - 7/40  |
|                          | • 1535.82  | Wavelength C Band - 8/40  |
|                          | • 1536.61  | Wavelength C Band - 9/40  |
|                          | • 1538.19  | Wavelength C Band - 11/40   |
|                          | • 1538.98  | Wavelength C Band - 12/40   |
|                          | • 1539.77  | Wavelength C Band - 13/40   |
|                          | • 1540.56  | Wavelength C Band - 14/40   |
|                          | • 1542.14  | Wavelength C Band - 16/40   |
|                          | • 1542.94  | Wavelength C Band - 17/40   |
|                          | • 1543.73  | Wavelength C Band - 18/40   |
|                          | • 1544.53  | Wavelength C Band - 19/40   |
|                          | • 1546.12  | Wavelength C Band - 21/40   |
|                          | • 1546.92  | Wavelength C Band - 22/40   |
|                          | • 1547.72  | Wavelength C Band - 23/40   |
|                          | • 1548.11  | Wavelength 1548.11  |

|           |                           |
|-----------|---------------------------|
| • 1548.51 | Wavelength C Band - 24/40 |
| • 1548.91 | Wavelength 1548.91        |
| • 1549.72 | Wavelength 1549.72        |
| • 1550.12 | Wavelength C Band - 26/40 |
| • 1550.92 | Wavelength C Band - 27/40 |
| • 1551.72 | Wavelength C Band - 28/40 |
| • 1552.52 | Wavelength C Band - 29/40 |
| • 1554.13 | Wavelength C Band - 31/40 |
| • 1554.94 | Wavelength C Band - 32/40 |
| • 1555.75 | Wavelength C Band - 33/40 |
| • 1556.55 | Wavelength C Band - 34/40 |
| • 1558.17 | Wavelength C Band - 36/40 |
| • 1558.98 | Wavelength C Band - 37/40 |
| • 1559.79 | Wavelength C Band - 38/40 |
| • 1560.61 | Wavelength C Band - 39/40 |
| • 1562.23 | Wavelength 1562.23        |
| • 1562.64 | Wavelength 1562.64        |
| • 1563.05 | Wavelength 1563.05        |
| • 1563.45 | Wavelength 1563.45        |
| • 1563.86 | Wavelength 1563.86        |
| • 1564.27 | Wavelength 1564.27        |
| • 1564.68 | Wavelength 1564.68        |
| • 1565.09 | Wavelength 1565.09        |
| • 1565.50 | Wavelength 1565.50        |
| • 1565.90 | Wavelength 1565.90        |
| • 1566.31 | Wavelength 1566.31        |
| • 1566.72 | Wavelength 1566.72        |
| • 1577.44 | L-Band Wavelength 1577.44 |
| • 1577.86 | L-Band Wavelength 1577.86 |
| • 1578.27 | L-Band Wavelength 1578.27 |
| • 1578.69 | L-Band Wavelength 1578.69 |
| • 1579.10 | L-Band Wavelength 1579.10 |
| • 1579.52 | L-Band Wavelength 1579.52 |
| • 1579.93 | L-Band Wavelength 1579.93 |
| • 1580.35 | L-Band Wavelength 1580.35 |
| • 1580.77 | L-Band Wavelength 1580.77 |
| • 1581.18 | L-Band Wavelength 1581.18 |
| • 1581.60 | L-Band Wavelength 1581.60 |
| • 1582.02 | L-Band Wavelength 1582.02 |
| • 1582.44 | L-Band Wavelength 1582.44 |
| • 1582.85 | L-Band Wavelength 1582.85 |

|           |  |
|-----------|--|
| • 1583.27 | L-Band Wavelength 1583.27  |
| • 1583.69 | L-Band Wavelength 1583.69  |
| • 1584.11 | L-Band Wavelength 1584.11  |
| • 1584.53 | L-Band Wavelength 1584.53  |
| • 1584.95 | L-Band Wavelength 1584.95  |
| • 1585.36 | L-Band Wavelength 1585.36  |
| • 1585.78 | L-Band Wavelength 1585.78  |
| • 1586.20 | L-Band Wavelength 1586.20  |
| • 1586.62 | L-Band Wavelength 1586.62  |
| • 1587.04 | L-Band Wavelength 1587.04  |
| • 1587.46 | L-Band Wavelength 1587.46  |
| • 1587.88 | L-Band Wavelength 1587.88  |
| • 1588.30 | L-Band Wavelength 1588.30  |
| • 1588.73 | L-Band Wavelength 1588.73  |
| • 1589.15 | L-Band Wavelength 1589.15  |
| • 1589.57 | L-Band Wavelength 1589.57  |
| • 1589.99 | L-Band Wavelength 1589.99  |
| • 1590.41 | L-Band Wavelength 1590.41  |
| • 1590.83 | L-Band Wavelength 1590.83  |
| • 1591.26 | L-Band Wavelength 1591.26  |

| • 1592.10 | L-Band Wavelength 1592.10  |
| • 1592.52 | L-Band Wavelength 1592.52  |
| • 1592.95 | L-Band Wavelength 1592.95  |
| • 1593.37 | L-Band Wavelength 1593.37  |
| • 1593.79 | L-Band Wavelength 1593.79  |
| <PATH>    | Access identifier from the “26.8 CHANNEL” section on page 26-23 or the “26.20 LINEWL” section on page 26-49. |

## 21.114 RTRV-PM-<MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Performance for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 5GIB, 8GFC, CHGRP, CLNT, AUTO, 3GVIDEO, D1VIDEO, DS1, DV6000, DVBASI, E1, E3, E4, EC1, ESCON, ETH, ETRCLO, FSTE, G1000, GFPOS, GIGE, HDLC, HDSDI, HDTV, ISC1, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3STP1G, ISC3PEER2G, ISC3STP2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTL, OTU1, OTU2, OTU3, OTU4, POS, SDSDI, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VC12, VC3, VT1, or VT2 (RTRV-PM-<MOD2>) command retrieves the values of PM parameters for a specified card type.

### Note

The RTRV-PM-<MOD2> command does not retrieve SEFS/RS-OFS PM counter for OC192/STM64 payloads on ADM-10G, 40G/40E (TXP/MXP), and OTU2-XP cards.

**Usage Guidelines**

- See [Table 28-1 on page 28-1](#) for supported modifiers by platform.
- MONLEV is in the format of LEV-DIRN.
- The format of MONDAT is MM-DD, where MM (month of the year) ranges from 1 to 12 and DD (day of the month) ranges from 1 to 31.
- The format for MONTM is HH-MM, where HH (hour of the day) ranges from 0 to 23 and MM (minute of the hour) ranges from 0 to 59.
- If there are no errors to report, the response will be COMPLD (completed).
- If the TMPER is 1-DAY, MONTM is not applicable (null), and is treated as null if MONTM is not null.
- A null value for MONLEV defaults to 1-UP.
- A null value for MONDAT defaults to the current date (MM-DD).
- A null value for MONTM defaults to the current time (HH-MM).
- Unless otherwise stated, DS-1 cards are the only cards that support both the RCV and TRMT directions. All other cards only support the RCV direction.
- After BLSR switching, the working path is switched out, the traffic goes through the protection path, and the IPPM can be retrieved from the protection STS path.
- If there is a STS PCA on the protection path, during the BLSR switching, the PCA path is preemptive; sending this command on the protection path after a BLSR switch, the command returns the PMs from the protection path, not from the PCA path.
- Some MOD2 entities; for example, OCH, CLNT, and Optical (OCn), support negative MONTYPE values. By default, this command defaults to 0-UP (return MONTYPES where the MONVAL is 0 or higher). To retrieve the negative values, you must issue 0-DN in the MONLEV field. The rules are as follows:
  - Client port only-Laser and SONET PMs are applicable and will appear. If the card payload is in SONET mode, then SONET PMs will appear, provided the MONLEV criteria is met.
  - Trunk port Laser PMs are always available. Laser PMs are only for near end. If ITU-T G.709 is enabled, then the OTN PMs will appear. If ITU-T G.709 and FEC are enabled, then the FEC PMs will appear. If the card payload is in SONET mode, then SONET PMs will appear. All PM MONVALUES should pass the MONLEV filter criteria.
- For DWDM cards, the MONLEV filter criteria will not support a floating point. It will be returned and interpreted as an integer.
- If the DS-1 mode of the DS3XM-12 card is FDL, the DS-1 path can retrieve FDL/T.403 FEND PM counts up to 32 15-minute intervals in the RTRV-PM-DS1 command.
- This command can also be used to retrieve the RMON-managed PM data.
- RTRV-PM-OTL retrieves Optical Thresholds only. This command is denied on sublanes of CFP-LC as optical thresholds are retrieved on CFP-LC's aggregate port.
- This command retrieves only OTN/FEC stats on Virtual ports of 100G-LC-C. This command does not retrieve any Optical statistics as they are retrieved on Aggregate ports on CFP-LC.
- This command retrieves optical stats on sublanes on 100G-LC-C only. The command is denied for Aggregate port on CFP-LC.
- RTRV-PM-OCH on Fixed Trunk on 100G-LC-C also retrieves OSNR and PM stats.
- With TMPER=1-MIN and TMPER=1-HR, the command is denied when DATE and TIME are not specified.

- With TMPER=1-MIN and TMPER=1-HR, RMON PMs are retrieved when DATE and TIME are specified.
- With TMPER=15-MIN and TMPER=1-DAY, All PMs except RMON PMs are retrieved without DATE and TIME specified.
- With TMPER=15-MIN and TMPER=1-DAY, All PMs are retrieved with DATE and TIME specified.

**Input Format**

RTRV-PM-<MOD2>:[<TID>]:<AID>:<CTAG>::[<MONTYPE>],[<MONLEV>],[<LOCN>],[<DIRECTION>],[<TMPER>],[<DATE>],[<TIME>];

**Input Example**

RTRV-PM-T1:TID:FAC-2-1:123::CVL,10-UP,NEND,RCV,15-MIN,04-11,12-45;

**Input Parameters**

|           |   |
|-----------|---|
| <AID>     | Access identifier from the “26.1 ALL” section on page 26-1. All of the STS, VT1, Facility, and DS1 AIDs are supported.                                  |
| <MONTYPE> | Monitored type. A null value defaults to all montypes applicable to the modifier. The parameter type is ALL_MONTYPE, which is the monitoring type list. |
| • AISSP   | Alarm Indication Signal Seconds—Path  |
| • ALL     | All possible values   |
| • BBE-PM  | OTN—Background Block Errors—Path Monitor Point  |
| • BBE-SM  | OTN—Background Block Errors—Section Monitor Point   |
| • BBER-PM | OTN—Background Block Error Ratio—Path Monitor Point expressed as one tenth of a percentage  |
| • BBER-SM | OTN—Background Block Error Ratio—Section Monitor Point expressed as one tenth of a percentage   |
| • BIEC    | FEC—Bit Errors Corrected  |
| • BIT-EC  | The number of bit errors corrected by the FEC algorithm   |
| • CGV     | 8B10B—Code Group Violations   |
| • CSSP    | Controlled Slip Seconds—Path (DSXM-12 FDL/T1.403 PM count)  |
| • CVCPP   | Coding Violations—CP-Bit Path   |
| • CVL     | Coding Violations—Line  |
| • CVP     | Coding Violations—Path  |
| • CVS     | Coding Violations—Section   |
| • CVV     | Coding Violations—Section   |
| • DCG     | 8B10B—Data Code Groups  |
| • ESAP    | Errored Second Type A-Path (DS3XM-12 DS1 PM count)  |

|                            |  |
|----------------------------|--|
| • ESBP                     | Errored Second Type B-Path (DS3XM-12 DS1 PM count)   |
| • ESCPP                    | Errored Seconds—CP—Bit Path  |
| • ESL                      | Errored Seconds—Line   |
| • ESNPFE                   | Errored Second—Network Path (DS3XM-12 DS1 PM count)  |
| • ESP                      | Errored Seconds—Path   |
| • ES-PM                    | OTN—Errored Seconds—Path Monitor Point   |
| • ES-SM                    | OTN—Errored Seconds—Section Monitor Point  |
| • ESR                      | Errored Second—Ratio   |
| • ESR-PM                   | Errored Seconds Ratio—Path monitor Point expressed as one tenth of a percentage  |
| • ESR-SM                   | Errored Seconds Ratio—Section monitor Point expressed as one tenth of a percentage   |
| • ESS                      | Errored Seconds—Section  |
| • ESV                      | Errored Seconds—VT Path  |
| • dot3StatsFCSErrors       | A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check.      |
| • dot3StatsFrameTooLong    | A count of frames received on a particular interface that exceed the maximum permitted frame size.                                       |
| • etherStatsBroadcastPkts  | The total number of good packets received that were directed to a multicast address  |
| • etherStatsCollisions     | Number of transmit packets that are collisions   |
| • etherStatsCRCAlignErrors | The total number of packets received that have a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets |
| • etherStatsDropEvents     | Number of received frames dropped at the port level  |
| • etherStatsFragments      | The total number of packets received that were less than 64 octets   |
| • etherStatsJabbers        | The total number of packets received that are longer than 1518 octets  |
| • etherStatsOctets         | The total number of octets of data   |
| • etherStatsOversizePkts   | The total number of packets received that are longer than 1518 octets  |
| • etherStatsPkts           | The total number of packets (including bad packets, broadcast packets, and multicast packets) received                                   |
| • etherStatsUndersizePkts  | The total number of packets received that are less than 64 octets  |
| • FCP                      | Failure Count—Line   |
| • FC-PM                    | OTN—Failure Count—Path Monitor Point   |
| • FC-SM                    | OTN—Failure Count—Section Monitor Point  |
| • HP-AR                    | Availability Ratio   |
| • HP-BBE                   | High-Order Path Background Block Error   |
| • HP-BBER                  | High-Order Path Background Block Error Ratio   |
| • HP-EB                    | High-Order Path Errored Block  |
| • HP-ES                    | High-Order Path Errored Second   |
| • HP-ESA                   | High-Order Path Errored Seconds—A  |
| • HP-ESB                   | High-Order Path Errored Seconds—B  |

|                         |  |
|-------------------------|--|
| • HP-ESR                | High-Order Path Errored Second Ratio   |
| • HP-FC                 | High-Order Path Failure Count  |
| • HP-NPJC-PDET          | High-Order Path Negative Pointer Justification Count, Path Detected                                    |
| • HP-NPJC-PGEN          | High-Order Path, Negative Pointer Justification Count, Path Generated                                  |
| • HP-OI                 | Outage Intensity   |
| • HP-PJCDIFF            | High-Order Path Pointer Justification Count Difference   |
| • HP-PJCS-PDET          | High-Order Path Pointer Justification Count, Path Detected   |
| • HP-PJCS-PGEN          | High-Order Path Pointer Justification Count Seconds, Path Generated                                    |
| • HP-PPJC-PDET          | High-Order Path Positive Pointer Justification Count, Path Detected                                    |
| • HP-PPJC-PGEN          | High-Order Path, Positive Pointer Justification Count, Path Generated                                  |
| • HP-SEPI               | The number of SEP events in available time   |
| • HP-SES                | High-Order Path Severely Errored Seconds   |
| • HP-SESR               | High-Order Path Severely Errored Second Ratio  |
| • HP-UAS                | High-Order Path Unavailable Seconds  |
| • ifInBroadcastPkts     | Number of broadcast packets received since the last counter reset                                      |
| • ifInDiscards          | The number of inbound packets  |
| • ifInErrorBytePkts     | Receive Error Byte   |
| • ifInErrors            | The number of inbound packets (or transmission units) that contained errors                            |
| • ifInFramingErrorPkts  | Receive Framing Error  |
| • ifInJunkInterPkts     | Receive Interpacket Junk   |
| • ifInMulticastPkts     | Number of multicast packets received since the last counter reset                                      |
| • ifInOctets            | Number of bytes transmitted since the last counter reset   |
| • ifInUcastPkts         | Number of unicast packets received since the last counter reset  |
| • ifOutBroadcastPkts    | Number of broadcast packets transmitted  |
| • ifOutDiscards         | The number of outbound packets   |
| • ifOutErrors           | The number of outbound packets (or transmission units) that could not be transmitted because of errors |
| • ifOutMulticastPkts    | Number of multicast packets transmitted  |
| • ifOutPayloadCrcErrors | Received payload CRC errors  |
| • ifOutUcastPkts        | Number of unicast packets transmitted  |
| • IOS                   | 8B10B—Idle Ordered Sets  |
| • IPC                   | Invalid Packet Count   |
| • LBCL-AVG              | Average Laser Bias Current in microA   |
| • LBCL-MAX              | Maximum Laser Bias Current in microA   |
| • LBCL-MIN              | Minimum Laser Bias Current in microA   |
| • LBCN                  | Normalized Laser Bias Current for OC3-8  |
| • LBCN-HWT              | Normalized Laser Bias Current—Higher Threshold   |
| • LBCN-LWT              | Normalized Laser Bias Current—Lower Threshold  |

|               |   |

| • VPC       | Valid Packet Count   |
| • OSNR-MIN  | Minimum Optical Signal To Noise Ratio.   |
| • OSNR-MAX  | Maximum Optical Signal To Noise Ratio.   |
| • OSNR-AVG  | Average Optical Signal To Noise Ratio.   |
| • PMD-MIN   | Minimum Polarization Mode Dispersion.  |
| • PMD-MAX   | Maximum Polarization Mode Dispersion.  |
| • PMD-AVG   | Average Polarization Mode Dispersion.  |
| <MONLEV>    | The discriminating level of the requested monitored parameter in the format of LEVEL-DIRN, where LEVEL is the measured value of the monitored parameter (MONVAL) and DIRN is the type of direction. A null value defaults to 1-UP. MONLEV is a string. |

|  |  |
|--|--|
| <LOCN>   | Location associated with a particular command in reference to the entity identified by the AID. A null value defaults to NEND. The parameter type is LOCATION, which is the location where the action is to take place.  |
| <ul style="list-style-type: none"> <li>• FEND</li> <li>• NEND</li> </ul>   | <p>Action occurs on the far end of the facility</p> <p>Action occurs on the near end of the facility</p>   |
| <DIRECTION>  | Type of direction. The parameter type is DIRECTION (transmit and receive directions).  |
| <ul style="list-style-type: none"> <li>• RCV</li> <li>• TRMT</li> </ul>  | <p>Receive direction only.</p> <p>Transmit direction only.</p>   |
| <TMPER>  | Accumulation time period for performance counters. If TMPER is 1-DAY, MONTM is not applicable (null), and is treated as null. A null value defaults to 15-MIN. The parameter type is TMPER, which is the accumulation time period for the performance management center.   |
| <ul style="list-style-type: none"> <li>• 1-DAY</li> <li>• 1-HR</li> <li>• 1-MIN</li> <li>• 15-MIN</li> <li>• RAW-DATA</li> </ul> | <p>Performance parameter accumulation interval length; every 24-hours. For SONET PM data, only one day of history data is available. For RMON managed PM data, seven days of history data are available.</p> <p>Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.</p> <p>Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.</p> <p>Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.</p> <p>Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.</p> |
| <DATE>   | The beginning date of the PM or storage register period specified in TMPER. The format of DATE is MM-DD, where MM (month of year) ranges from 1 to 12 and DD (day of month) ranges from 1 to 31. A null value defaults to current date.  |
| <TIME>   | The beginning time of day of the PM or storage register period specified in TMPER. The format of TIME is HH-MM, where HH (hour of day) ranges from 0 to 23 and MM (minute of hour) ranges from 0 to 59. A null value defaults to current time.   |

```

**Output Parameters**

|           |   |
|-----------|---|
| <AID>     | Access identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> .  |
| <AIDTYPE> | (Optional) Type of facility, link, or other addressable entity targeted by the message. The parameter type is MOD2B, which is the alarm type. |
| • 100GIGE | 100 Gigabit Ethernet.   |
| • 10GIGE  | 10 Gigabit Ethernet.  |
| • 1GFC    | 1-Gigabit Fibre Channel payload   |
| • 1GFICON | 1-Gigabit fiber connectivity payload  |
| • 2GFC    | 2-Gigabit Fibre Channel payload   |
| • 10GFC   | 10-Gigabit Fibre Channel payload  |
| • 2GFICON | 2-Gigabit fiber connectivity payload  |
| • 3GVIDEO | 3G-SDI video payload.   |
| • Auto    | Auto  |
| • 4GFC    | 4-Gigabit Fibre Channel payload   |
| • 4GFICON | 4-Gigabit fiber connectivity payload  |
| • 40-GIGE | 40-Gigabit ethernet   |
| • 5GIB    | 5Gbps InfiniBand (IB_5G) payload  |
| • 8GFC    | 8-Gigabit Fibre Channel payload   |
| • BITS    | BITS alarm  |
| • CHGRP   | Channel group   |
| • CLNT    | Client facility for MXP/TXP cards   |
| • COM     | Common alarm  |
| • DS1     | DS1 alarm   |
| • DS3I    | DS3I alarm  |
| • DVBASI  | Digital Video Broadband Asynchronous Serial Interface (DVBASI) payload  |
| • E100    | E100 alarm  |
| • E1000   | E1000 alarm   |
| • EC1     | EC1 alarm   |
| • ENV     | ENV alarm   |
| • EQPT    | EQPT alarm  |
| • FSTE    | Fast Ethernet Port alarm  |
| • G1000   | G1000 alarm   |
| • GIGE    | Gigabit Ethernet port alarm   |

|              |   |
|--------------|---|
| • HDLC       | Resilient Ethernet Protocol                                   |
| • HDSDI      | 1.5G HD-SDI video payload                                     |
| • ISC1       | InterSystem Channel, a protocol defined by IBM (ISC1) payload |
| • ISC3PEER1G | 1 Gbps ISC3 Peer  |
| • ISC3PEER2G | 2 Gbps ISC3 Peer  |
| • ISC3PEER2R | 1 Gbps or 2 Gbps ISC3 peer used in transparent (2R) mode      |
| • ISC3STP1G  | ISC-3 STP 1G video payload.                                   |
| • ISC3STP2G  | ISC-3 STP 2G video payload.                                   |
| • ISCCOMPAT  | 1 Gbps ISC1, ISC2, and ISC3 compatibility                     |
| • MSISC      | MSISC   |
| • OC3        | OC3 alarm   |
| • OC12       | OC12 alarm  |
| • OC48       | OC48 alarm  |
| • OC192      | OC192 alarm   |
| • OC768      | OC768 alarm   |
| • OCH        | Optical channel   |
| • ODU0       | Optical Data Unit Level 0                                     |
| • OMS        | Optical Multiplex Section                                     |
| • OTS        | Optical Transport Section                                     |
| • OTL        | Optical Channel Transport Lane.                               |
| • OTU1       | Optical Transport Unit Level 1                                |
| • OTU2       | Optical Transport Unit Level 2                                |
| • OTU3       | Optical Transport Unit Level 3                                |
| • OTU4       | Optical Transport Unit Level 4                                |
| • POS        | POS port alarm  |
| • REP        | Resilient Ethernet Protocol                                   |
| • SDSDI      | 270M SDI video payload.                                       |
| • STS1       | STS1 alarm  |
| • STS3C      | STS3c alarm   |
| • STS6C      | STS6c alarm   |
| • STS9C      | STS9c alarm   |
| • STS18C     | STS18c alarm  |
| • STS12C     | STS12c alarm  |
| • STS24C     | STS24c alarm  |
| • STS36C     | STS36c alarm  |
| • STS48C     | STS48c alarm  |
| • STS192C    | STS192c alarm   |
| • SYNCN      | SYNCN alarm   |
| • T1         | T1 alarm  |
| • T3         | T3 alarm  |
| • TCC        | TCC alarm   |

|                           |   |
|---------------------------|---|
| • VT1                     | VT1 alarm   |
| • VT2                     | VT2 alarm   |
| <MONTYPE>                 | Monitored type. The parameter type is ALL_MONTYPE, which is the monitoring type list.   |
| • AISSP                   | Alarm Indication Signal Seconds—Path  |
| • ALL                     | All possible values   |
| • BBE-PM                  | OTN—Background Block Errors—Path Monitor Point  |
| • BBE-SM                  | OTN—Background Block Errors—Section Monitor Point   |
| • BBER-PM                 | OTN—Background Block Error Ratio—Path Monitor Point expressed as one tenth of a percentage  |
| • BBER-SM                 | OTN—Background Block Error Ratio—Section Monitor Point expressed as one tenth of a percentage                                       |
| • BIEC                    | FEC—Bit Errors Corrected  |
| • BIT-EC                  | The number of bit errors corrected by the FEC algorithm   |
| • CGV                     | 8B10B—Code Group Violations   |
| • CSSP                    | Controlled Slip Seconds—Path (DSXM-12 FDL/T1.403 PM count)  |
| • CVCPP                   | Coding Violations—CP-Bit Path   |
| • CVL                     | Coding Violations—Line  |
| • CVP                     | Coding Violations—Path  |
| • CVS                     | Coding Violations—Section   |
| • CVV                     | Coding Violations—Section   |
| • DCG                     | 8B10B—Data Code Groups  |
| • dot3StatsFCSErrors      | A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check. |
| • dot3StatsFrameTooLong   | A count of frames received on a particular interface that exceed the maximum permitted frame size.                                  |
| • ESAP                    | Errored Second Type A-Path (DS3XM-12 DS1 PM count)  |
| • ESBP                    | Errored Second Type B-Path (DS3XM-12 DS1 PM count)  |
| • ESCPP                   | Errored Seconds—CP—Bit Path   |
| • ESL                     | Errored Seconds—Line  |
| • ESNPFE                  | Errored Second—Network Path (DS3XM-12 DS1 PM count)   |
| • ESP                     | Errored Seconds—Path  |
| • ES-PM                   | OTN—Errored Seconds—Path Monitor Point  |
| • ES-SM                   | OTN—Errored Seconds—Section Monitor Point   |
| • ESR                     | Errored Second—Ratio  |
| • ESR-PM                  | Errored Seconds Ratio—Path monitor Point expressed as one tenth of a percentage   |
| • ESR-SM                  | Errored Seconds Ratio—Section monitor Point expressed as one tenth of a percentage  |
| • ESS                     | Errored Seconds—Section   |
| • ESV                     | Errored Seconds—VT Path   |
| • etherStatsBroadcastPkts | The total number of good packets received that were directed to a multicast address   |

|                             |  |
|-----------------------------|--|
| • etherStatsCollisions      | Number of transmit packets that are collisions   |
| • etherStatsCRCAAlignErrors | The total number of packets received that have a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets |
| • etherStatsDropEvents      | Number of received frames dropped at the port level  |
| • etherStatsFragments       | The total number of packets received that were less than 64 octets   |
| • etherStatsJabbers         | The total number of packets received that are longer than 1518 octets  |
| • etherStatsOctets          | The total number of octets of data   |
| • etherStatsOversizePkts    | The total number of packets received that are longer than 1518 octets  |
| • etherStatsPkts            | The total number of packets (including bad packets, broadcast packets, and multicast packets) received                                   |
| • etherStatsUndersizePkts   | The total number of packets received that are less than 64 octets  |
| • FCP                       | Failure Count—Line   |
| • FC-PM                     | OTN—Failure Count—Path Monitor Point   |
| • FC-SM                     | OTN—Failure Count—Section Monitor Point  |
| • HP-AR                     | Availability Ratio   |
| • HP-BBE                    | High-Order Path Background Block Error   |
| • HP-BBER                   | High-Order Path Background Block Error Ratio   |
| • HP-EB                     | High-Order Path Errored Block  |
| • HP-ES                     | High-Order Path Errored Second   |
| • HP-ESA                    | High-Order Path Errored Seconds—A  |
| • HP-ESB                    | High-Order Path Errored Seconds—B  |
| • HP-ESR                    | High-Order Path Errored Second Ratio   |
| • HP-FC                     | High-Order Path Failure Count  |
| • HP-NPJC-PDET              | High-Order Path Negative Pointer Justification Count, Path Detected  |
| • HP-NPJC-PGEN              | High-Order Path, Negative Pointer Justification Count, Path Generated  |
| • HP-OI                     | Outage Intensity   |
| • HP-PJCDIFF                | High-Order Path Pointer Justification Count Difference   |
| • HP-PJCS-PDET              | High-Order Path Pointer Justification Count seconds, Path Detected   |
| • HP-PJCS-PGEN              | High-Order Path Pointer Justification Count Seconds, Path Generated  |
| • HP-PPJC-PDET              | High-Order Path Positive Pointer Justification Count, Path Detected  |
| • HP-PPJC-PGEN              | High-Order Path, Positive Pointer Justification Count, Path Generated  |
| • HP-SEPI                   | The number of SEP events in available time   |
| • HP-SES                    | High-Order Path Severely Errored Seconds   |
| • HP-SESR                   | High-Order Path Severely Errored Second Ratio  |
| • HP-UAS                    | High-Order Path Unavailable Seconds  |
| • ifInBroadcastPkts         | Number of broadcast packets received since the last counter reset  |

|                         |  |
|-------------------------|--|
| • ifInDiscards          | The number of inbound packets  |
| • ifInErrorBytePkts     | Receive Error Byte   |
| • ifInErrors            | The number of inbound packets (or transmission units) that contained errors                            |
| • ifInFramingErrorPkts  | Receive Framing Error  |
| • ifInJunkInterPkts     | Receive Interpacket Junk   |
| • ifInMulticastPkts     | Number of multicast packets received since the last counter reset                                      |
| • ifInOctets            | Number of bytes transmitted since the last counter reset   |
| • ifInUcastPkts         | Number of unicast packets received since the last counter reset  |
| • ifOutBroadcastPkts    | Number of broadcast packets transmitted  |
| • ifOutDiscards         | The number of outbound packets   |
| • ifOutErrors           | The number of outbound packets (or transmission units) that could not be transmitted because of errors |
| • ifOutMulticastPkts    | Number of multicast packets transmitted  |
| • ifOutPayloadCrcErrors | Received payload CRC errors  |
| • ifOutUcastPkts        | Number of unicast packets transmitted  |
| • IOS                   | 8B10B—Idle Ordered Sets  |
| • IPC                   | Invalid Packet Count   |
| • LBCL-AVG              | Average Laser Bias Current in microA   |
| • LBCL-MAX              | Maximum Laser Bias Current in microA   |
| • LBCL-MIN              | Minimum Laser Bias Current in microA   |
| • LBCN                  | Normalized Laser Bias Current for OC3-8  |
| • LBCN-HWT              | Normalized Laser Bias Current—Higher Threshold   |
| • LBCN-LWT              | Normalized Laser Bias Current—Lower Threshold  |
| • LOSSL                 | Loss of Signal Seconds—Line  |
| • LP-BBE                | Low-Order Path Background Block Error  |
| • LP-BBER               | Low-Order Path Background Block Error Ratio  |
| • LP-EB                 | Low-Order Path Errored Block   |
| • LP-ES                 | Low-Order Path Errored Second  |
| • LP-ESA                | Low-Order Path Errored Seconds-A   |
| • LP-ESB                | Low-Order Path Errored Seconds-B   |
| • LP-ESR                | Low-Order Path Errored Second Ratio  |
| • LP-FC                 | Low-Order Path Failure Count   |
| • LP-NPJC-DET           | Low-Order Negative Pointer Justification Count, Detected   |
| • LP-NPJC-GEN           | Low Order Negative Pointer Justification Count, Generated  |
| • LP-PPJC-DET           | Low-Order Positive Pointer Justification Count, Detected   |
| • LP-PPJC-GEN           | Low-Order positive Pointer Justification Count, Generated  |
| • LP-SEP                | Low-Order Path Severely Errored Period   |
| • LP-SEPI               | Low-Order Path Severely Errored Period Intensity   |
| • LP-SES                | Low-Order Path Severely Errored  |
| • LP-UAS                | Low-Order Path Unavailable Seconds   |
| • MS-PSC                | Protection switch count  |

|             |   |
|-------------|---|
| • MS-PSD    | Protection switch duration  |
| • NIOS      | 8B10B—Non Idle Ordered Sets   |
| • NPJC-PDET | Negative Pointer Justification Count, Path Detected   |
| • NPJC-PGEN | Negative Pointer Justification Count, Path Generated  |
| • OPR-AVG   | Average Receive Power in one tenth of a microwatt   |
| • OPR-MAX   | Maximum Receive Power in one tenth of a microwatt   |
| • OPR-MIN   | Minimum Receive Power in one tenth of a microwatt   |
| • OPRN      | Normalized Optical Receive Power for OC3-8  |
| • OPRN-MAX  | Maximum value for OPRN  |
| • OPRN-MIN  | Minimum value for OPRN  |
| • OPT-AVG   | Average Transmit Power in one tenth of a microwatt  |
| • OPT-MAX   | Maximum Transmit Power in one tenth of a microwatt  |
| • OPT-MIN   | Minimum Transmit Power in one tenth of a microwatt  |
| • OPTN      | Normalized value for Optical Power Transmitted for the OC3-8 card                           |
| • OPTN-MAX  | Maximum value for OPTN  |
| • OPTN-MIN  | Minimum value for OPTN  |
| • OPWR-AVG  | Optical Power—Average Interval Value in one tenth of a dBm                                  |
| • OPWR-MAX  | Optical Power—Maximum Interval Value in one tenth of a dBm                                  |
| • OPWR-MIN  | Optical Power—Minimum Interval Value in one tenth of a dBm                                  |
| • PPJC-PDET | Positive Pointer Justification Count, Path Detected   |
| • PPJC-PGEN | Positive Pointer Justification Count, Path Generated  |
| • PSC       | Protection Switching Count  |
| • PSC-R     | Protection Switching Count—Ring   |
| • PSC-S     | Protection Switching Count—Span   |
| • PSC-W     | Protection Switching Count—Working  |
| • PSD       | Protection Switching Duration   |
| • PSD-R     | Protection Switching Duration—Ring  |
| • PSD-S     | Protection Switching Duration—Span  |
| • PSD-W     | Protection Switching Duration—Working   |
| • SASCPP    | Severely Errored Framing/AIS Second—CP-Bit Path   |
| • SASP      | Severely Errored Framing/AIS Seconds Path   |
| • SEFS      | Severely Errored Framing Seconds  |
| • SEFSP     | Severely Errored Framing Seconds—Path (DS3XM-12 DS1 PM count)                               |
| • SESCOPP   | Severely Errored Second—CP-Bit Path   |
| • SESL      | Severely Errored Second—Line  |
| • SESNPFE   | Severely Errored Second—Network Path (DS3XM-12 DS1 PM count)                                |
| • SESP      | Severely Errored Second—Path  |
| • SES-PM    | OTN—Severely Errored Second—Path  |
| • SESR-PM   | OTN—Severely Errored Second Ratio—Path Monitor Point expressed as one tenth of a percentage |

|             |  |
|-------------|--|
| • SESR-SM   | OTN—Severely Errored Second Ratio—Section Monitor Point expressed as one tenth of a percentage   |
| • SESS      | Severely Errored Second—Section  |
| • SES-SM    | OTN—Severely Errored Second—Section Monitor Point  |
| • SESV      | Severely Errored Second—VT Path  |
| • UASCPP    | Unavailable Second—CP-Bit Path   |
| • UASL      | Unavailable Second—Line  |
| • UASNPFE   | Unavailable Second—Network Path (DS3XM-12 DS1 PM count)  |
| • UASP      | Unavailable Second—Path  |
| • UAS-PM    | OTN—Unavailable Second—Path Monitor Point  |
| • UAS-SM    | OTN—Unavailable Second—Section Monitor Point   |
| • UASV      | Unavailable Second—VT Path   |
| • UNC-WORDS | FEC—Uncorrectable Words  |
| • VPC       | Valid Packet Count   |
| • OSNR-MIN  | Minimum Optical Signal To Noise Ratio.   |
| • OSNR-MAX  | Maximum Optical Signal To Noise Ratio.   |
| • OSNR-AVG  | Average Optical Signal To Noise Ratio.   |
| • PMD-MIN   | Minimum Polarization Mode Dispersion.  |
| • PMD-MAX   | Maximum Polarization Mode Dispersion.  |
| • PMD-AVG   | Average Polarization Mode Dispersion.  |
| <MONVAL>    | The value to which the register identified by MONTYPE is to be initialized to or the measured value of a monitored parameter. The value is in the form of numeric counts or rates. MOVAL is a string.  |
| <VLDTY>     | (Optional) Indicates whether the information for the specified time period was accumulated over the entire time period or some portion thereof. Validity indicator for the reported PM data. The parameter type is VALIDITY, which is the response validity. |
| • COMPL     | Complete response  |
| • PRTL      | Partial response   |
| <LOCN>      | (Optional) Location associated with a particular command. The parameter type is LOCATION, which is the location where the action is to take place  |
| • FEND      | Action occurs on the far end of the facility.  |
| • NEND      | Action occurs on the near end of the facility.   |
| <DIRECTION> | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH       | Both transmit and receive directions   |
| • RCV       | Receive direction only   |
| • TRMT      | Transmit direction only  |
| <TMPER>     | (Optional) Accumulation time period for performance counters. The parameter type is TMPER, which is the accumulation time period for the performance management center.  |

|            |   |
|------------|---|
| • 1-DAY    | Performance parameter accumulation interval length; every 24-hours. For SONET PM data, only one day of history data is available. For RMON managed PM data, seven days of history data are available.                                 |
| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.  |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.   |
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.  |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.   |
| <MONDAT>   | (Optional) The beginning date of the PM or storage register period specified in TPER. The format of MONDAT is MM-DD, where MM (month of year) ranges from 1 to 12 and DD (day of month) ranges from 1 to 31. MONDAT is a string.      |
| <MONTM>    | (Optional) The beginning time of day of the PM or storage register period specified in TPER. The format of MONTM is HH-MM, where HH (hour of day) ranges from 0 to 23 and MM (minute of hour) ranges from 0 to 59. MONTM is a string. |

## 21.115 RTRV-PM-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Performance Monitoring All (RTRV-PM-ALL) command retrieves the values of all the performance monitoring parameters for the specified AID. When the ALL AID is used, the response will include the PM parameters for all cards and ports in the chassis.

### Usage Guidelines

- The format of MONLEV is LEV-DIRN.
- The format of MONDAT is MM-DD, where MM (month of the year) ranges from 1 to 12 and DD (day of the month) ranges from 1 to 31.
- The format for MONTM is HH-MM, where HH (hour of the day) ranges from 0 to 23 and MM (minute of the hour) ranges from 0 to 59.
- If the TPER is 1-DAY, MONTM is not applicable (null), and is treated as null if MONTM is not null.
- A null value for MONLEV defaults to 1-UP.
- A null value for MONDAT defaults to the current date (MM-DD).
- A null value for MONTM defaults to the current time (HH-MM).
- Unless otherwise stated, DS-1 cards are the only cards that support both the RCV and TRMT directions. All other cards only support the RCV direction.

- After BLSR switching, the working path is switched out, the traffic goes through the protection path, and the IPPM can be retrieved from the protection STS path.
- If there is a STS PCA on the protection path, during the BLSR switching, the PCA path is preemptive; sending this command on the protection path after a BLSR switch, the command returns the PMs from the protection path, not from the PCA path.
- Some MOD2 entities; for example, OCH, CLNT, and Optical (OCn), support negative MONTYPE values. By default, this command defaults to 0–UP (return MONTYPES where the MONVAL is 0 or higher). To retrieve the negative values, you must issue 0–DN in the MONLEV field. The rules are as follows:
  - Client port only–Laser and SONET PMs are applicable and will appear. If the card payload is in SONET mode, then SONET PMs will appear, provided the MONLEV criteria is met.
  - Trunk port Laser PMs are always available. Laser PMs are only for near end. If ITU-T G.709 is enabled, then the OTN PMs will appear. If ITU-T G.709 and FEC are enabled, then the FEC PMs will appear. If the card payload is in SONET mode, then SONET PMs will appear. All PM MONVALUES should pass the MONLEV filter criteria.
- For DWDM cards, the MONLEV filter criteria will not support a floating point. It will be returned and interpreted as an integer.
- If the DS-1 mode of the DS3XM-12 card is FDL, the DS-1 path can retrieve FDL/T.403 FEND PM counts up to 32 15-minute intervals in the RTRV-PM-DS1 command.
- BTH is not supported for the direction. A null value for direction should take care of TRMT and RCV.
- RTRV-PM-ALL command can also be used to retrieve the RMON managed PM data.
- With TMPER=1-MIN and TMPER=1-HR, RMON PMs are retrieved when DATE and TIME are specified.
- With TMPER=15-MIN and TMPER=1-DAY, All PMs except RMON PMs are retrieved without DATE and TIME specified.
- With TMPER=15-MIN and TMPER=1-DAY, All PMs are retrieved with DATE and TIME specified.

| • SEFSP     | Severely Errored Framing Seconds—Path (DS3XM-12 DS1 PM count)                                  |
| • SESCOPP   | Severely Errored Second—CP-Bit Path  |
| • SESL      | Severely Errored Second—Line   |
| • SESNPFE   | Severely Errored Second—Network Path (DS3XM-12 DS1 PM count)                                   |
| • SESP      | Severely Errored Second—Path   |
| • SES-PM    | OTN—Severely Errored Second—Path   |
| • SESR-PM   | OTN—Severely Errored Second Ratio—Path Monitor Point expressed as one tenth of a percentage    |
| • SESR-SM   | OTN—Severely Errored Second Ratio—Section Monitor Point expressed as one tenth of a percentage |
| • SESS      | Severely Errored Second—Section  |
| • SES-SM    | OTN—Severely Errored Second—Section Monitor Point  |
| • SESV      | Severely Errored Second—VT Path  |
| • UASCPP    | Unavailable Second—CP-Bit Path   |

|             |  |
|-------------|--|
| • UASL      | Unavailable Second—Line  |
| • UASNPFE   | Unavailable Second—Network Path (DS3XM-12 DS1 PM count)  |
| • UASP      | Unavailable Second—Path  |
| • UAS-PM    | OTN—Unavailable Second—Path Monitor Point  |
| • UAS-SM    | OTN—Unavailable Second—Section Monitor Point   |
| • UASV      | Unavailable Second—VT Path   |
| • UNC-WORDS | FEC—Uncorrectable Words  |
| • VPC       | Valid Packet Count   |
| • OSNR-MIN  | Minimum Optical Signal To Noise Ratio.   |
| • OSNR-MAX  | Maximum Optical Signal To Noise Ratio.   |
| • OSNR-AVG  | Average Optical Signal To Noise Ratio.   |
| • PMD-MIN   | Minimum Polarization Mode Dispersion.  |
| • PMD-MAX   | Maximum Polarization Mode Dispersion.  |
| • PMD-AVG   | Average Polarization Mode Dispersion.  |
| <MONLEV>    | The discriminating level of the requested monitored parameter in the format of LEVEL-DIRN, where LEVEL is the measured value of the monitored parameter (MONVAL) and DIRN is the type of direction. A null value defaults to 1-UP. MONLEV is a string.                     |
| <LOCN>      | Location associated with a particular command in reference to the entity identified by the AID. A null value defaults to NEND. The parameter type is LOCATION, which is the location where the action is to take place.  |
| • FEND      | Action occurs on the far end of the facility   |
| • NEND      | Action occurs on the near end of the facility  |
| <DIRECTION> | Type of direction. Must not be null. The parameter type is DIRECTION (transmit and receive directions).  |
| • BTH       | Both transmit and receive directions.  |
| • RCV       | Receive direction only.  |
| • TRMT      | Transmit direction only.   |
| <TMPPER>    | Accumulation time period for performance counters. If TMPPER is 1-DAY, MONTM is not applicable (null), and is treated as null. A null value defaults to 15-MIN. The parameter type is TMPPER, which is the accumulation time period for the performance management center. |
| • 1-DAY     | Performance parameter accumulation interval length; every 24-hours. For SONET PM data, only one day of history data is available. For RMON managed PM data, seven days of history data are available.  |
| • 1-HR      | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.   |
| • 1-MIN     | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.  |
| • 15-MIN    | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.   |

|            |  |
|------------|--|
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.  |
| <DATE>     | The beginning date of the PM or storage register period specified in TEMPLER. The format of DATE is MM-DD, where MM (month of year) ranges from 1 to 12 and DD (day of month) ranges from 1 to 31. A null value defaults to current date.        |
| <TIME>     | The beginning time of day of the PM or storage register period specified in TEMPLER. The format of TIME is HH-MM, where HH (hour of day) ranges from 0 to 23 and MM (minute of hour) ranges from 0 to 59. A null value defaults to current time. |

**Output Format**

```

SID DATE TIME
M CTAG COMPLD
"<AID>,[<AIDTYPE>]:<MONTYPE>,<MONVAL>,[<VLDTY>],[<LOCN>],[<DIRECTION>],
[<TEMPLER>],[<MONDAT>],[<MONTM>]"
;

```

**Output Example**

```

TID-000 1998-06-20 14:30:00
M 001 COMPLD
"FAC-2-1,DS1-14:CVL,21,COMPL,NEND,RCV,15-MIN,04-11,12-45"
;

```

**Output Parameters**

|           |   |
|-----------|---|
| <AID>     | The DS1 AID is used access DS1 frame layer of the DS3XM. Format is DS1-[SLOT]-[DS3PORT]-[DS1PORT].  |
| <AIDTYPE> | (Optional) Type of facility, link, or other addressable entity targeted by the message. The parameter type is MOD2B, which is the alarm type. |
| • 100GIGE | 100 Gigabit Ethernet  |
| • 10GIGE  | 10 Gigabit Ethernet   |
| • 40GIGE  | 40 Gigabit Ethernet   |
| • 1GFC    | 1-Gigabit Fibre Channel payload   |
| • 1GFICON | 1-Gigabit fiber connectivity payload  |
| • 2GFC    | 2-Gigabit Fibre Channel payload   |
| • 10GFC   | 10-Gigabit Fibre Channel payload  |
| • 2GFICON | 2-Gigabit fiber connectivity payload  |
| • 3GVIDEO | 3G-SDI video payload.   |
| • 4GFC    | 4-Gigabit Fibre Channel payload   |
| • 4GFICON | 4-Gigabit fiber connectivity payload  |
| • 8GFC    | 8-Gigabit Fibre Channel payload   |
| • BITS    | BITS alarm  |
| • CLNT    | Client facility for MXP/TXP cards   |
| • COM     | Common alarm  |

|              |  |
|--------------|--|
| • DS1        | DS1 alarm  |
| • DS3I       | DS3I alarm   |
| • E100       | E100 alarm   |
| • E1000      | E1000 alarm  |
| • EC1        | EC1 alarm  |
| • ENV        | ENV alarm  |
| • EQPT       | EQPT alarm   |
| • FSTE       | Fast Ethernet Port alarm                                 |
| • G1000      | G1000 alarm  |
| • GIGE       | Gigabit Ethernet port alarm                              |
| • HDSDI      | 1.5G HD-SDI video payload                                |
| • ISC3PEER1G | 1-Gbps ISC3 Peer   |
| • ISC3PEER2G | 2 Gbps ISC3 Peer   |
| • ISC3PEER2R | 1 Gbps or 2 Gbps ISC3 peer used in transparent (2R) mode |
| • ISC3STP1G  | ISC-3 STP 1G video payload.                              |
| • ISC3STP2G  | ISC-3 STP 2G video payload.                              |
| • ISCCOMPAT  | 1 Gbps ISC1, ISC2, and ISC3 compatibility                |
| • OC3        | OC3 alarm  |
| • OC12       | OC12 alarm   |
| • OC48       | OC48 alarm   |
| • OC192      | OC192 alarm  |
| • OCH        | Optical channel  |
| • OMS        | Optical Multiplex Section                                |
| • OTS        | Optical Transport Section                                |
| • OTL        | Optical Channel Transport Lane.                          |
| • OTU1       | Optical Transports Unit Level 1                          |
| • OTU2       | Optical Transports Unit Level 2                          |
| • OTU3       | Optical Transports Unit Level 3                          |
| • OTU4       | Optical Transports Unit Level 4                          |
| • POS        | POS port alarm   |
| • SDSDI      | 270M SDI video payload.                                  |
| • STS1       | STS1 alarm   |
| • STS3C      | STS3c alarm  |
| • STS6C      | STS6c alarm  |
| • STS9C      | STS9c alarm  |
| • STS18C     | STS18c alarm   |
| • STS12C     | STS12c alarm   |
| • STS24C     | STS24c alarm   |
| • STS36C     | STS36c alarm   |
| • STS48C     | STS48c alarm   |
| • STS192C    | STS192c alarm  |

|                           |   |
|---------------------------|---|
| • SYNCN                   | SYNCN alarm   |
| • T1                      | T1 alarm  |
| • T3                      | T3 alarm  |
| • TCC                     | TCC alarm   |
| • VT1                     | VT1 alarm   |
| • VT2                     | VT2 alarm   |
| <MONTYPE>                 | Monitored type. The parameter type is ALL_MONTYPE, which is the monitoring type list.         |
| • AISSP                   | Alarm Indication Signal Seconds—Path  |
| • ALL                     | All possible values   |
| • BBE-PM                  | OTN—Background Block Errors—Path Monitor Point  |
| • BBE-SM                  | OTN—Background Block Errors—Section Monitor Point   |
| • BBER-PM                 | OTN—Background Block Error Ratio—Path Monitor Point expressed as one tenth of a percentage    |
| • BBER-SM                 | OTN—Background Block Error Ratio—Section Monitor Point expressed as one tenth of a percentage |
| • BIEC                    | FEC—Bit Errors Corrected  |
| • BIT-EC                  | The number of bit errors corrected by the FEC algorithm                                       |
| • CGV                     | 8B10B—Code Group Violations   |
| • CSSP                    | Controlled Slip Seconds—Path (DS3XM-12 FDL/T1.403 PM count)                                   |
| • CVCPP                   | Coding Violations—CP-Bit Path   |
| • CVL                     | Coding Violations—Line  |
| • CVP                     | Coding Violations—Path  |
| • CVS                     | Coding Violations—Section   |
| • CVV                     | Coding Violations—Section   |
| • DCG                     | 8B10B—Data Code Groups  |
| • ESAP                    | Errored Second Type A-Path (DS3XM-12 DS1 PM count)  |
| • ESBP                    | Errored Second Type B-Path (DS3XM-12 DS1 PM count)  |
| • ESCPP                   | Errored Seconds—CP—Bit Path   |
| • ESL                     | Errored Seconds—Line  |
| • ESNPFE                  | Errored Second—Network Path (DS3XM-12 DS1 PM count)   |
| • ESP                     | Errored Seconds—Path  |
| • ES-PM                   | OTN—Errored Seconds—Path Monitor Point  |
| • ES-SM                   | OTN—Errored Seconds—Section Monitor Point   |
| • ESR                     | Errored Second—Ratio  |
| • ESR-PM                  | Errored Seconds Ratio—Path monitor Point expressed as one tenth of a percentage               |
| • ESR-SM                  | Errored Seconds Ratio—Section monitor Point expressed as one tenth of a percentage            |
| • ESS                     | Errored Seconds—Section   |
| • ESV                     | Errored Seconds—VT Path   |
| • etherStatsBroadcastPkts | The total number of good packets received that were directed to a multicast address           |

|                             |  |
|-----------------------------|--|
| • etherStatsCollisions      | Number of transmit packets that are collisions   |
| • etherStatsCRCAAlignErrors | The total number of packets received that have a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets |
| • etherStatsDropEvents      | Number of received frames dropped at the port level  |
| • etherStatsFragments       | The total number of packets received that were less than 64 octets   |
| • etherStatsJabbers         | The total number of packets received that are longer than 1518 octets  |
| • etherStatsOctets          | The total number of octets of data   |
| • etherStatsOversizePkts    | The total number of packets received that are longer than 1518 octets  |
| • etherStatsPkts            | The total number of packets (including bad packets, broadcast packets, and multicast packets) received                                   |
| • etherStatsUndersizePkts   | The total number of packets received that are less than 64 octets  |
| • FCP                       | Failure Count—Line   |
| • FC-PM                     | OTN—Failure Count—Path Monitor Point   |
| • FC-SM                     | OTN—Failure Count—Section Monitor Point  |
| • HP-AR                     | Availability Ratio   |
| • HP-BBE                    | High-Order Path Background Block Error   |
| • HP-BBER                   | High-Order Path Background Block Error Ratio   |
| • HP-EB                     | High-Order Path Errored Block  |

| • OSNR-MAX  | Maximum Optical Signal To Noise Ratio.   |
| • OSNR-AVG  | Average Optical Signal To Noise Ratio.   |
| • PMD-MIN   | Minimum Polarization Mode Dispersion.  |
| • PMD-MAX   | Maximum Polarization Mode Dispersion.  |
| • PMD-AVG   | Average Polarization Mode Dispersion.  |
| <MONVAL>    | The value to which the register identified by MONTYPE is to be initialized to or the measured value of a monitored parameter. The value is in the form of numeric counts or rates. MONVAL is a string.   |
| <VLDTY>     | (Optional) Indicates whether the information for the specified time period was accumulated over the entire time period or some portion thereof. Validity indicator for the reported PM data. The parameter type is VALIDITY, which is the response validity. |
| • COMPL     | Complete response  |
| • PRTL      | Partial response   |
| <LOCN>      | (Optional) Location associated with a particular command. The parameter type is LOCATION, which is the location where the action is to take place  |
| • FEND      | Action occurs on the far end of the facility.  |
| • NEND      | Action occurs on the near end of the facility.   |
| <DIRECTION> | The PM count retrieval direction. The parameter type is DIRECTION, which is the transmit and receive directions.   |
| • BTH       | Both transmit and receive directions   |
| • RCV       | Receive direction only   |
| • TRMT      | Transmit direction only  |
| <TMPER>     | (Optional) Accumulation time period for performance counters. The parameter type is TMPER, which is the accumulation time period for the performance management center.  |

|            |  |
|------------|--|
| • 1-DAY    | Performance parameter accumulation interval length; every 24-hours. For SONET PM data, only one day of history data is available. For RMON managed PM data, seven days of history data are available.                                  |
| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.   |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.  |
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.   |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.  |
| <MONDAT>   | (Optional) The beginning date of the PM or storage register period specified in TPPER. The format of MONDAT is MM-DD, where MM (month of year) ranges from 1 to 12 and DD (day of month) ranges from 1 to 31. MONDAT is a string.      |
| <MONTM>    | (Optional) The beginning time of day of the PM or storage register period specified in TPPER. The format of MONTM is HH-MM, where HH (hour of day) ranges from 0 to 23 and MM (minute of hour) ranges from 0 to 59. MONTM is a string. |

## 21.116 RTRV-PMODE-<STS\_PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Performance Mode of PM Data Collection for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, or STS9C (RTRV-PMODE-<STS\_PATH>) command retrieves the type of PM mode that has been previously set in the NE. This command can be used to identify whether the PM parameters are Section, Line or Path type, and to identify whether or not the PMs are being collected by the NE.

### Usage Guidelines

- See [Table 28-1 on page 28-1](#) for supported modifiers by platform.
- The PM mode and state of an entity is set by using the SET-PMODE command.
- This command returns the categories that are enabled only.
- This near-end monitoring of the intermediate-path performance monitoring (IPPM) only supports OC3, OC12, OC48, OC192, and EC1 on the STS Path.
- The far-end IPPM data collection is supported by MRC-12 and ADM-10G cards only.
- This release of software will support only the Path (P) mode type PM parameters with this command, that is, this command will not be applicable for Line (L) and Section (S) mode types. Note that the PM monitoring for Line (L) and Section (S) are supported by the ONS 15454, and the storing PM data is always performed.
- This command only returns the categories that are enabled (pmstate is ON), and does not return the categories that are disabled (pmstate is OFF).

|                          | <MODETYPE>       | The type of PM parameters that the entity or the subentity is to store as a result of an attribute change. The parameter type is PM_MODE, which is the type of PM parameters.   |
|                          | • P              | Transport Path PM parameters.   |

## 21.117 RTRV-PMODE-<VT\_PATH>

The Retrieve Performance Mode of PM Data Collection for VT1 and VT2 (RTRV-PMODE-<VT\_PATH>) command retrieves the type of PM mode that has been previously set in the NE. This command can be used to identify whether the PM parameters are Section, Line, or Path type, and to identify whether or not the PMs are being collected by the NE.

### Usage Guidelines

- The PM mode and state of an entity is set by using the SET-PMODE command.
- This command returns the categories that are enabled (pmstate is ON) only. It does not return the categories that are disabled (pmstate is OFF).
- This release of software will support only the Path (P) mode type PM parameters with this command, that is, this command will not be applicable for Line (L) and Section (S) mode types.

;
```

**Output Parameters**

|           |   |
|-----------|---|
| <AID>     | Access identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> .  |
| <AIDTYPE> | (Optional) Type of facility, link or other addressable entity targeted by the message. The parameter type is MOD2, which is the line/path modifier. |
| • 100GIGE | 100 Gigabit Ethernet.   |
| • 10GFC   | 10-Gigabit Fibre Channel payload  |
| • 10GIGE  | 10-Gigabit Ethernet   |
| • 40GIGE  | 40-Gigabit Ethernet   |
| • 1GFC    | 1-Gigabit Fibre Channel payload   |
| • 1GFICON | 1-Gigabit fiber connectivity payload  |
| • 2GFC    | 2-Gigabit Fibre Channel payload   |
| • 2GFICON | 2-Gigabit fiber connectivity payload  |
| • 3GVIDEO | 3G-SDI video payload.   |
| • 4GFC    | 4-Gigabit Fibre Channel payload   |
| • 4GFICON | 4-Gigabit fiber connectivity payload  |
| • 5GIB    | 5Gbps InfiniBand (IB_5G) payload  |
| • 8GFC    | 8-Gigabit Fibre Channel payload   |
| • D1VIDEO | D1 Video  |
| • DS1     | DS1 line of a DS3XM card  |
| • DS3I    | DS3I line   |
| • DV6000  | DV6000  |
| • DVBASI  | Digital Video Broadband Asynchronous Serial Interface (DVBASI) payload  |
| • EC1     | EC1 facility  |
| • ESCON   | ESCON   |
| • ETRCLO  | ETR_CLO   |
| • FSTE    | FSTE facility   |
| • G1000   | G1000 facility  |
| • GFPOS   | GFP over POS. Virtual ports partitioned using GFP's multiplexing capability.  |
| • GIGE    | Gigabit Ethernet  |

|              |   |
|--------------|---|
| • HDTV       | HDTV  |
| • HDSDI      | 1.5G HD-SDI video payload.  |
| • ISC1       | InterSystem Channel, a protocol defined by IBM (ISC1) payload   |
| • ISC3PEER1G | 1 Gbps ISC3 Peer  |
| • ISC3PEER2G | 2 Gbps ISC3 Peer  |
| • ISC3PEER2R | 1 Gbps or 2 Gbps ISC3 peer used in transparent (2R) mode  |
| • ISC3STP1G  | ISC-3 STP 1G video payload.   |
| • ISC3STP2G  | ISC-3 STP 2G video payload.   |
| • ISCCOMPAT  | 1 Gbps ISC1, ISC2, and ISC3 compatibility   |
| • OC3        | OC3 facility  |
| • OC12       | OC12 facility   |
| • OC48       | OC48 facility   |
| • OC192      | OC192 facility  |
| • OC768      | OC768 facility  |
| • OCH        | Optical channel   |
| • OCHCC      | OCH client connection   |
| • OCHNC      | OCH network connection  |
| • OCHTERM    | OCH termination   |
| • OMS        | Optical Multiplex Section   |
| • OTS        | Optical Transport Section   |
| • OTU1       | Optical Transport Unit Level 1  |
| • OTU2       | Optical Transport Unit Level 2  |
| • OTU3       | Optical Transport Unit Level 3  |
| • OTU4       | Optical Transport Unit Level 4  |
| • POS        | POS port  |
| • SDSDI      | 270M SDI video payload.   |
| • STS1       | STS1 path   |
| • STS3C      | STS3c path  |

| • STS12C     | STS12c path   |
| • STS24C     | STS24c path   |
| • STS36C     | STS36c path   |
| • STS48C     | STS48c path   |
| • STS192C    | STS192c path  |
| • T1         | T1/DS1 facility/line  |
| • T3         | T1/DS1 facility/line  |
| • VT1        | VT1 path  |
| • VT2        | VT2 path  |
| <REPTINVL>   | Reporting interval. How often a report is to be generated and sent to the appropriate NE. REPTINVL is a string. |

|            |   |
|------------|---|
| <REPTDAT>  | Report date. Date for the next report. REPTDAT is a string.   |
| <REPTTM>   | Report time. The time of day for the next PM report. REPTTM is a string.<br><br><b>Note</b> PM schedule processing is performed every 5 minutes. Therefore, specifying a REPTINVL of 5-MIN or less would be processed at the earliest every 5 minutes.  |
| <NUMINVL>  | (Optional) The remaining number of intervals over which the PM will be reported. NUMINVL is an integer.   |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode will be retrieved. The parameter type is LOCATION, which is the location where the action is to take place.   |
| • FEND     | Action occurs on the far end of the facility.   |
| • NEND     | Action occurs on the near end of the facility.  |
| <TMPER>    | (Optional) Accumulation time period for performance counters. The parameter type is TMPER, which is the accumulation time period for the performance management center.   |
| • 1-DAY    | Performance parameter accumulation interval length; every 24 hours. For SONET PM data, only one day of history data is available. For RMON managed PM data, seven days of history data are available.   |
| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.  |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.   |
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.  |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.   |
| <TMOFST>   | (Optional) Time offset between reporting/diagnostics/exercises; from the end of the last complete accumulation time period to the beginning of the accumulation time period specified by TMPER. TMOFST is a string.   |
| <INHMODE>  | (Optional) Indicates whether a function is inhibited by an INH command. Indicates whether the reporting of PM data is inhibited (by the INH-PMREPT-ALL command) or is allowed (by the ALW-PMREPT-ALL command). The parameter type is INH_MODE, which indicates whether the function is inhibited. |
| • ALW      | Function is allowed.  |
| • INH      | Function is inhibited.  |

## 21.119 RTRV-PMSCHED-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Performance Schedule All (RTRV-PMSCHED-ALL) command retrieves all the PM reporting schedules that were set for the NE by the SCHED-PMREPT command.

**Usage Guidelines** None

**Category** Performance

**Security** Retrieve

**Input Format** RTRV-PMSCHED-ALL:[<TID>]::<CTAG>;

**Input Example** RTRV-PMSCHED-ALL:CISCO-NODE::123;

**Input Parameters** None that require description

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>,[<AIDTYPE>]:<REPTINVL>,<REPTDAT>,<REPTTM>,[<NUMINVL>],,
[<MONLEV>],<LOCN>.,[<TMPER>],<TMOFST>,[<INHMODE>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00

| <REPTINVL> | Reporting interval. How often a report is to be generated and sent to the appropriate NE. REPTINVL is a string.  |
| <REPTDAT>  | Report date. Date for the next report. REPTDAT is a string.  |
| <REPTTM>   | Report time. The time of day for the next PM report. REPTTM is a string.   |
| <NUMINVL>  | (Optional) The remaining number of intervals over which PM is to be reported. NUMINVL is an integer.   |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. The parameter type is LOCATION, which is the location where the action is to take place. |
| • FEND     | Action occurs on the far end of the facility.  |
| • NEND     | Action occurs on the near end of the facility.   |
| <TMPER>    | (Optional) Accumulation time period for performance counters. The parameter type is TMPER, which is the accumulation time period for the performance management center.                                    |
| • 1-DAY    | Performance parameter accumulation interval length; every 24 hours. For SONET PM data, only one day of history data is available. For RMON managed PM data, seven days of history data are available.      |

|            |   |
|------------|---|
| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.  |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.   |
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.  |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.   |
| <TMOFST>   | (Optional) Time offset between reporting/diagnostics/exercises; from the end of the last complete accumulation time period to the beginning of the accumulation time period specified by TPER. TMOFST is a string.  |
| <INHMODE>  | (Optional) Indicates whether a function is inhibited by an INH command. Indicates whether the reporting of PM data is inhibited (by the INH-PMREPT-ALL command) or is allowed (by the ALW-PMREPT-ALL command). The parameter type is INH_MODE, which indicates whether the function is inhibited. |
| • ALW      | Function is allowed.  |
| • INH      | Function is inhibited.  |

## 21.120 RTRV-POS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Packet Over SONET (RTRV-POS) command retrieves the back-end port information for the Ethernet card when the back-end port is working in POS mode.

### Usage Guidelines

- This command is supported for the ML-Series cards.
- For the ML-Series card, the EDGE, RPRSPAN, JUMBO, ADMINSTATE, ENCAP, and NAME parameters are valid when the card mode is ML-IEEE-RPR. Other parameters, including PST and SST, are not valid in this mode.
- This command is supported for the ASAP card, but ADMINSTATE information will not appear.
- Because the back-end port is virtual, the Virtual Facility (VFAC) AID should be used when issuing the command.

Retrieve

**Input Format** RTRV-POS:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-POS:TID:VFAC-1-1:CTAG;

**Input Parameters**

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|-------|--|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>::[ADMINSTATE=<ADMINSTATE>],[JUMBO=<MTU>],[ENCAP=<ENCAP>],
[RPRSPAN=<RPRSPAN>],[EDGE=<EDGE>],[NAME=<NAME>].”;
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“VFAC-1-1::ADMINSTATE=DOWN,JUMBO=N,ENCAP=RPR-GFP-F,RPRSPAN=EAST,
EDGE=Y,NAME=\"RPR\".”;
;
```

**Output Parameters**

|              |  |
|--------------|--|
| <AID>        | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
| <ADMINSTATE> | (Optional) Administration type. The parameter type is UP_DOWN (up or down).        |
| • DOWN       | Down   |
| • UP         | Up   |
| <ENCAP>      | Frame encapsulation  |
| • RPR-GFP-F  | RPR-over-GFP frame mode  |
| • CBR        | CBR mapping mode.  |
| • GFP        | GFP mapping mode.  |
| • GMP        | GMP mapping mode is supported only on 8GFC on 10x10G-LC card.                      |
| • TRP        | Transparent mapping mode.  |
| <JUMBO>      | Jumbo frame values   |
| • Y          | Yes  |
| • N          | No   |
| <RPRSPAN>    | RPR span values  |
| • EAST       | East direction   |
| • WEST       | West direction   |
| <EDGE>       | RPR edge values  |
| • Y          | Yes  |

|        |  |
|--------|--|
| • N    | No   |
| <NAME> | Port name, facility name, or VCAT group name |

## 21.121 RTRV-PROTNSW-<MOD2DWDMPAYLOAD>

(Cisco ONS 15454) The Retrieve Protection Switch for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 8GFC, D1VIDEO, DV6000, DVBASI, ETRCLO, FSTE, GIGE, HDTV, ISC1, ISC3, OTU3, OTU4, PASSTHRU, 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, or ISC3STP2G (RTRV-PROTNSW-<MOD2DWDMPAYLOAD>) command retrieves the protection switch status of client facilities.

### Usage Guidelines

The command supports the modifier 3GVIDEO, SDSDI, HSDSI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G.

### Category

Performance

### Security

Retrieve

### Input Format

RTRV-PROTNSW-<MOD2DWDMPAYLOAD>:[<TID>]:<SRC>:<CTAG>[:::];

### Input Example

RTRV-PROTNSW-ISC3STP1G:CISCO:VFAC-13-5-7-1:007;

### Input Parameters

|       |   |
|-------|---|
| <SRC> | Source access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier. |
|-------|---|

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AIDUNIONID>:<SC>,[<SWITCHTYPE>]”
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FAC-1-1-1:FRCD,MANWKSWBK”
;
```

| Output Parameters |  |   |
|-------------------|--|---|
| <AIDUNIONID>      |  | Access identifier from the “26.17 FACILITY” section on page 26-42.  |
| <SC>              |  | Switch command to be initiated on the paths. The parameter type is SW, which is the type of switch to be initiated.   |
| • APS-CLEAR       |  | APS-CLEAR switch state. It is a read-only switch state and is not allowed in the OPR-PROTNSW-xxx commands.  |
| • CLEAR           |  | CLEAR switch state. CLEAR switch state is not allowed in the OPR-PROTNSW-xxx commands.  |
| • EXERCISE        |  | EXERCISE switch state. EXERCISE switch state is not allowed in the OPR-PROTNSW-xxx commands.  |
| • FRCD            |  | Forces a switch unless another FRCD or LOCKOUT is in effect.  |
| • LOCKOUT         |  | Locks the facility out of switching. The system cannot switch to this facility to carry service.  |
| • MAN             |  | Requests a manual switch of the facility.   |
| <SWITCHTYPE>      |  | (Optional) Switch type. The parameter type is SWITCH_TYPE, which is the BLSR switch type. MANWKSWBK, MANWKSWPR, FRCDWKSWBK, FRCDWKSWPR, LOCKOUTOFPR, and LOCKOUTOFWK are retrieve-only values for RTRV-PROTNSW-OCn commands. They are not applicable for the OPR-PROTNSW-OCn commands. RING and SPAN are the only allowed values for BLSR protection. |
| • FRCDWKSWBK      |  | Working unit is forced to switch back to working.   |
| • FRCDWKSWPR      |  | Working unit is forced to switch to the protection unit.  |
| • LOCKOUTOFPR     |  | Lockout of protection.  |
| • LOCKOUTOFWK     |  | Lockout of working.   |
| • MANWKSWBK       |  | Manual switch of working unit back to working.  |
| • MANWKSWPR       |  | Manual switch of working unit back to the protection unit.  |
| • RING            |  | BLSR ring switch type.  |
| • SPAN            |  | BLSR span switch type.  |

## 21.122 RTRV-PROTNSW-<OCN\_TYPE>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Protection Switch for OC3, OC12, OC48, OC192, OC768 (RTRV-PROTNSW-<OCN\_TYPE>) command retrieves the switching state of a SONET line specified in the AID.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Category** Protection

**Security** Retrieve

**Input Format** RTRV-PROTNSW-<OCN\_TYPE>:[<TID>]:<AID>:<CTAG>[:::];

**Input Example** RTRV-PROTNSW-OC48:CISCO:FAC-5-1:123;

**Input Parameters**

|       |  |
|-------|--|
| <AID> | Access identifier from the “26.17 FACILITY” section on page 26-42. |
|-------|--|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:<SC>,[<SWITCHTYPE>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“FAC-5-1:MAN,MANWKSWBK”
;
```

**Output Parameters**

|               |   |
|---------------|---|
| <AID>         | Access identifier from the “26.17 FACILITY” section on page 26-42.  |
| <SC>          | Switch command to be initiated on the paths. The parameter type is SW, which is the type of switch to be initiated.   |
| • APS-CLEAR   | APS-CLEAR switch state. It is a read-only switch state and is not allowed in the OPR-PROTNSW-xxx commands.  |
| • CLEAR       | CLEAR switch state. CLEAR switch state is not allowed in the OPR-PROTNSW-xxx commands.  |
| • EXERCISE    | EXERCISE switch state. EXERCISE switch state is not allowed in the OPR-PROTNSW-xxx commands.  |
| • FRCD        | Forces a switch unless another FRCD or LOCKOUT is in effect.  |
| • LOCKOUT     | Locks the facility out of switching. The system cannot switch to this facility to carry service.  |
| • MAN         | Requests a manual switch of the facility.   |
| <SWITCHTYPE>  | (Optional) Switch type. The parameter type is SWITCH_TYPE, which is the BLSR switch type. MANWKSWBK, MANWKSWPR, FRCDWKSWBK, FRCDWKSWPR, LOCKOUTOFPR, and LOCKOUTOFWK are retrieve-only values for RTRV-PROTNSW-OCn commands. They are not applicable for the OPR-PROTNSW-OCn commands. RING and SPAN are the only allowed values for BLSR protection. |
| • FRCDWKSWBK  | Working unit is forced to switch back to working.   |
| • FRCDWKSWPR  | Working unit is forced to switch to the protection unit.  |
| • LOCKOUTOFPR | Lockout of protection.  |
| • LOCKOUTOFWK | Lockout of working.   |

|             |  |
|-------------|--|
| • MANWKSWBK | Manual switch of working unit back to working.             |
| • MANWKSWPR | Manual switch of working unit back to the protection unit. |
| • RING      | BLSR ring switch type.                                     |
| • SPAN      | BLSR span switch type.                                     |

## 21.123 RTRV-PROTNSW-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Protection Switch for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (RTRV-PROTNSW-<PATH>) command retrieves the switching state of a SONET path protection STS path specified in the AID. Because Telcordia GR-1400 does not allow LOCKOUT\_OF\_WORKING on the path protection WORKING path/AID, the “AID:LOCKOUT,LOCKOUTOFWK” does not appear in this protection switch retrieval result.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

#### Note

RTRV-PROTNSW-VT1 accepts STS-1 AID when STS-1 cross connection is made using the DS1 card. This will allow the user to retrieve all the VT1 conditions/alarms that are raised by DS-1 card when STS-1 cross connect is created.

**Output Parameters**

|               |  |
|---------------|--|
| <AID>         | Access identifier from the <a href="#">“26.8 CHANNEL”</a> section on page 26-23.   |
| <SW>          | Indicates the switch operation. The parameter type is SW, which is the type of switch to be initiated.   |
| • APS-CLEAR   | APS-CLEAR switch state. It is a read-only switch state and is not allowed in the OPR-PROTNSW-xxx commands.   |
| • CLEAR       | CLEAR switch state. CLEAR switch state is not allowed in the OPR-PROTNSW-xxx commands.   |
| • EXERCISE    | EXERCISE switch state. EXERCISE switch state is not allowed in the OPR-PROTNSW-xxx commands.   |
| • FRCD        | Forces a switch unless another FRCD or LOCKOUT is in effect.   |
| • LOCKOUT     | Locks the facility out of switching. The system cannot switch to this facility to carry service.   |
| • MAN         | Requests a manual switch of the facility.  |
| <SWITCHTYPE>  | Indicates the switch type operation. The parameter type is SWITCH_TYPE, which is the BLSR switch type. MANWKSWBK, MANWKSWPR, FRCDWKSWBK, FRCDWKSWPR, LOCKOUTOFPR, and LOCKOUTOFWK are retrieve-only values for RTRV-PROTNSW-OCn commands. They are not applicable for the OPR-PROTNSW-OCn commands. RING and SPAN are the only allowed values for BLSR protection. |
| • FRCDWKSWBK  | Working unit is forced to switch back to working.  |
| • FRCDWKSWPR  | Working unit is forced to switch to the protection unit.   |
| • LOCKOUTOFPR | Lockout of protection.   |
| • LOCKOUTOFWK | Lockout of working.  |
| • MANWKSWBK   | Manual switch of working unit back to working.   |
| • MANWKSWPR   | Manual switch of working unit back to the protection unit.   |
| • RING        | BLSR ring switch type.   |
| • SPAN        | BLSR span switch type.   |

## 21.126 RTRV-PROTOCOL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Protocol (RTRV-PROTOCOL) command retrieves the status of a protocol or service supported in the NE. Valid protocols include SHELL, EMS, TL1, and SNMP. If the AID is not specified, the status of all the protocols is retrieved.

**Usage Guidelines**

If the AID is TL1, the status can be retrieved to show if the protocol is in SECURE or UNSECURE mode.

**Category** Security

**Security** Retrieve

**Input Format** RTRV-PROTOCOL:[<TID>]:[<AID>]:<CTAG>;

**Input Example** RTRV-PROTOCOL::EMS:123;

|                         |         |  |
|-------------------------|---------|--|
| <b>Input Parameters</b> | <AID>   | (Optional) Identifies the protocol or service to which the command pertains. Defaults to ALL. A null value is equivalent to ALL. The parameter type is PROTOCOLAID, which is the AID for the protocol/service. |
|                         | • EMS   | CTC/CTM protocol/service   |
|                         | • SHELL | Shell/file system access protocol  |
|                         | • SNMP  | SNMP protocol/service  |
|                         | • TL1   | TL1 protocol service   |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<PROTOCOLAID>:<PROTOCOLSTAT>"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"EMS:UNSECURE"
;
```

|                          |              |   |
|--------------------------|--------------|---|
| <b>Output Parameters</b> | PROTOCOLAID  | Identifies the protocol or service to which the command pertains. The parameter type is PROTOCOLAID, which is the AID for the protocol/service. |
|                          | • EMS        | CTC/CTM protocol/service  |
|                          | • SHELL      | Shell/file system access protocol   |
|                          | • SNMP       | SNMP protocol/service   |
|                          | • TL1        | TL1 protocol/service  |
|                          | PROTOCOLSTAT | Identifies the status of the protocol or service. The parameter type is PROTOCOLSTAT, which is the status of the protocol.                      |

|            |  |
|------------|--|
| • DISABLED | The protocol cannot be used.   |
| • SECURE   | The protocol is enabled and communications using the protocol are secure, for example, through SSH. Not applicable for SNMP protocols. |
| • UNSECURE | The protocol is enabled but communication is not secure, for example, through Telnet.  |

## 21.127 RTRV-PTHTRC-<PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Path Trace for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VT1, or VT2 (RTRV-PTHTRC-<PATJ>) command retrieves the contents of the SONET path trace message.

### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

The path trace message is a 64-character string with the last two characters reserved for the terminating CR (carriage return) and the LF (line feed). The message can be an incoming path trace message, an expected incoming path trace message, or an outgoing path trace message, which is inserted into the path overhead of the outgoing signal.

The path trace mode has three modes: OFF, MANUAL, and AUTO. The path trace mode defaults to OFF mode. The MANUAL mode performs the comparison of the received string with the user-entered expected string. The AUTO mode performs the comparison of the present received string with an expected string set to a previously received string. If there is a mismatch, the TIM-P alarm is raised. When the path trace mode is in OFF mode, there is no path trace processing, and all the alarm and state conditions are reset.

When the expected string is queried under the OFF path trace mode, the expected string is a copy of the provisioned string or NULL. When an expected string is queried under the MANUAL path trace mode, the expected string is a copy of the user-entered string. When an expected string is queried under the AUTO path trace mode, the expected string is a copy of the acquired received string or NULL if the string has not been acquired.

When the incoming string is queried under the OFF path trace mode, the incoming string is NULL. When an incoming string is queried under the MANUAL or AUTO path trace mode, the incoming string is a copy of the received string or NULL if the string has not been received.

When the transmitted string is queried under the OFF, MANUAL, or AUTO path trace mode, the transmitted string is the provisioned transmit string.

### Note

- A null value for the MSGTYPE defaults to INCTRC.
- Only the NEND location value is supported. A null value of the location defaults to NEND.
- Sending a FEND of the location with this command will return an “unsupported locn value” error message.
- J1 (EXPTRC/INCTRC) is implemented on the DS1/DS1N, DS3E/DS3NE, DS3XM, EC1, OC3, OC48A, OC192, OC192-XFP, and MRC-12 cards.
- TRC is supported only on DS1(N), DS3(N)E, and DS3XM cards.
- The VCAF AID is only valid on slots holding ML-Series cards.

- After the BLSR switch, the working path is switched out and the traffic goes through the protection path. The J1 trace message can be retrieved from the protection STS path.
- If there is an STS PCA on the protection path during the BLSR switch, the PCA path is preemptive. If this command is sent on the protection path after a BLSR switch, the command will return the trace message off of the protection path and not from the PCA path.
- The J2 path trace on the VT1.5 is supported on the VT1.5 cross-connection of the DS3XM-12 card in Software R5.0 and later.
- The VT2 modifier is not supported in this release.
- According to Telcordia GR-833, RTRV-PTHTRC-<PATH> can only have a single output row, therefore you cannot specify multiple AIDs using '&' with this command because each AID would require it's own output row. You also cannot use the AIDs that end in ALL because this might also result in multiple output rows.

---

**Category** Troubleshooting and Test Access

---

**Security** Retrieve

---

**Input Format** RTRV-PTHTRC-<PATH>:[<TID>]:<SRC>:<CTAG>::[<MSGTYPE>][:<LOCN>];

---

**Input Example** RTRV-PTHTRC-ST51:CISCO:STS-2-1-1:123::EXPTRC:NEND;

---

|                         |           |  |
|-------------------------|-----------|--|
| <b>Input Parameters</b> | <SRC>     | Source access identifier from the <a href="#">“26.11 CrossConnectId”</a> section on page 26-27.  |
|                         | <MSGTYPE> | Type of autonomous message to be retrieved. A null value defaults to INCTRC. The parameter type is MSGTYPE, which is the type of trace message.  |
|                         | • EXPTRC  | Expected incoming path trace message   |
|                         | • INCTRC  | Incoming path trace message  |
|                         | • TRC     | Outgoing path trace message  |
|                         | <LOCN>    | Location associated with a particular command in reference to the entity identified by the AID. The parameter type is LOCATION, which is the location where the action is to take place. |
|                         | • FEND    | Action occurs on the far end of the facility.  |
|                         | • NEND    | Action occurs on the near end of the facility.   |

---

---

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<TRACMSG>”
;
```

---

**Output Example**      TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“TRACMSG”  
;

---

**Output Parameters**      <TRACMSG>      The path trace message returned to the requester. The message can be up to 64 characters in length with the last two characters reserved for the CR (carriage return) and the LF (line feed). TRACMSG is a string.

---

## 21.128 RTRV-PTSYS

(Cisco ONS 15454) The Retrieve Packet Transport System (RTRV-PTSYS) command retrieves the provisioned information of the CPT 50 panel.

---

**Usage Guidelines**      This command is valid for CPT 50 panel. Retrieves the PTSYS information provisioned on the Node.

---

**Category**      Equipment

---

**Security**      Retrieve

---

**Input Format**      RTRV-PTSYS:[<TID>]:<AID>:<CTAG>;

---

**Input Example**      PTSYS-1:PTSYSID=1,OPMODE=NMS,MEMLIST="\SLOT-3-36&SLOT-2&PTSA;

---

**Input Parameters**      <AID>      AID of the PTSYS.

---

---

**Output Format**      SID DATE TIME  
M CTAG COMPLD  
“<PTSYS AID>:<MODE>,<MEMLIST>,<FOGLIST>”  
;

---

**Output Example**      TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“PTSYS-1:PTSYSID=1,OPMODE=NMS,MEMLIST="\SLOT-3&PTSA-37",FOGLIST="\FOG-1-36”  
;

| Output Parameters | Parameter | Description                              |
|-------------------|-----------|--|
|                   | <AID>     | AID of the CPT 50 panel to be retrieved. |
|                   | <PTSYSID> | PTSYS number or ID.                      |
|                   | <OPMODE>  | Operation mode of the PTSYSTEM.          |
|                   | • NMS     | TCP IPC mode.                            |
|                   | • IOS     | IPC mode.                                |
|                   | <MEMLIST> | Defines the slot of the PT systme.       |
|                   | <FOGLIST> | Defines the FOG members.                 |

## 21.129 RTRV-QNQ-CHGRP

(Cisco ONS 15454) The Retrieve QinQ Channel Group (RTRV-QNQ-CHGRP) command retrieves the IEEE 802.1Q tunneling (QinQ) relationship between the CE-VLAN and the S-VLAN for Gigabit Ethernet uniprot provisioning associated to a channel group.

|                         |   |       |  |                 |   |                |   |

| <AID>        | Access identifier from the <a href="#">“26.9 CHGRP”</a> section on page 26-26.  |
| <SVLANID>    | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <INGRESSCOS> | Identifies the COS value set in the S-VLAN tag.   |
| • 0 to 7     | Set a Cos value   |
| • DSCP       | The COS is set according to DSCP to COS mapping table.  |
| • TRUST      | Use the Customer COS  |
| • VLAN       | The COS will be provisioned on CVLAN basis (QinQ selective mode)  |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<AID>:<FIRSTCEVLANID>,<LASTCEVLANID>,<SVLANID>:RULE=<RULE>,[INTERNALVL
AN=<INTERNAL_VLAN_ID>],[INGRESSCOS=<INGRESSCOS>[:];
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"CHGRP-1-1:110,111,1208:RULE=DOUBLE-ADD,INTERNALVLAN=18,INGRASSCOS="
;
```

**Output Parameters**

|                 |   |
|-----------------|---|
| <AID>           | Access identifier from the <a href="#">26.9 CHGRP</a> , page 26-26.   |
| <FIRSTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.         |
| <LASTCEVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.         |
| <SVLANID>       | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs.         |
| <RULE>          | Used to represent the Rules allowed for VLAN tagging operations. Default is ADD.  |
| • ADD           | The S-VLAN tag is added to the CE-VLAN tag.   |
| • XLTE          | The S-VLAN tag substitutes the CE-VLAN tag (single Q).  |
| • XLTE-ADD      | XLTE and ADD rule applied together. This rule request to supply an internal S-VLAN. First the Internal VLAN substitutes the Customer VLAN, then Service Provider VLAN TAG (S-VLAN) is added |

|                    |   |
|--------------------|---|
| • DOUBLE-ADD       | ADD rule applied two times. This rule request to supply an internal S-VLAN. First the Internal VLAN is added, then Service Provider VLAN TAG (S-VLAN) is added to have a double tag |
| <INTERNAL_VLAN_ID> | Internal VLAN ID  |
| <INGRESSCOS>       | Identifies the COS value set in the S-VLAN tag.   |
| • 0 to 7           | Set a Cos value   |
| • DSCP             | The COS is set according to DSCP to COS mapping table.  |
| • TRUST            | Use the Customer COS.   |
| • VLAN             | The COS provisioned on CVLAN basis (QinQ selective mode)  |

## 21.130 RTRV-QNQ-ETH

(Cisco ONS 15454) The Retrieve QinQ Ethernet (RTRV-QNQ-ETH) command retrieves the IEEE 802.1Q tunneling (QinQ) relationship between the CE-VLAN and the S-VLAN for Gigabit Ethernet uniport provisioning associated to an L2 Ethernet port.

### Usage Guidelines

None

### Category

Ethernet

### Security

Retrieve

### Input Format

RTRV-QNQ-ETH:[<TID>]:<AID>:<CTAG>::<FIRSTCEVLANID>,<LASTCEVLANID>,<SVLANID>[:];

### Input Example

RTRV-QNQ-ETH:PETALUMA:ETH-1-1-1:236::110,110,1208;

### Input Parameters

|                 |  |
|-----------------|--|
| <AID>           | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH” section on page 26-41.</a>  |
| <FIRSTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The Access identifier from the <a href="#">“26.17 FACILITY” section on page 26-42.</a> Value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

|                |   |
|----------------|---|
| <LASTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <SVLANID>      | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |

**Output Format**

;
```

**Output Parameters**

|                 |   |
|-----------------|---|
| <AID>           | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">"26.16 ETH" section on page 26-41</a> .  |
| <FIRSTCEVLANID> | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <LASTCEVLANID>  | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <SVLANID>       | VLAN identifier. A VLAN ID is a number between 1 and 4096. The value 0 is reserved for untagged VLANs. This identifier is used for customer VLAN IDs and service provider VLAN IDs. |
| <RULE>          | Used to represent the Rules allowed for VLAN tagging operations. Default is ADD.  |
| • ADD           | The S-VLAN tag is added to the CE-VLAN tag.   |
| • XLTE          | The S-VLAN tag substitutes the CE-VLAN tag (single Q).  |

## 21.131 RTRV-RAMAN

(Cisco ONS 15454)

Retrieve RAMAN retrieves the attributes of a RAMAN measure.

**Usage Guidelines**

None

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-RAMAN:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-RAMAN:PENNGROVE:LINE-6-1-TX:236;

**Input Parameter**

|   |  |
|---|--|
| <AID>                                     | The LINE AID is used to access Optical Transport Section (OTS) layer of Optical Network units. |
| • LINE[-{1-12}]-{1-5,12-16}-{1-5}-{RX,TX} | The receive/transmit Lines (COM=1, OSC=2, LINE=3, DC=4, RAMAN=5) in a OPT-RAMP-C card.         |
| • LINE[-{1-12}]-{1-5,12-16}-{1-5}-ALL     | All the Lines (COM=1,OSC=2,LINE=3, DC=4, RAMAN=5) in a OPT-RAMP-C card.                        |

**Output Format**

SID DATE TIME  
M CTAG COMPLD  
“<AID>:<MEAS\_INDEX>:<MINRAMANLEV>,<MAXRAMANLEV>,<DATE>,<TIME>”;  
;

**Output Example**

TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“LINE-6-1-TX:1:MINRAMANLEV=1.0,MAXRAMANLEV=2.0,TIME=00-00-00,DATE=02-02-07;”  
;

**Output Parameters**

|   |  |
|---|--|
| <AID>                                     | The LINE aid is used to access Optical Transport Section (OTS) layer of Optical Network units. |
| • LINE[-{1-12}]-{1-5,12-16}-{1-5}-{RX,TX} | The receive/transmit Lines (COM=1, OSC=2, LINE=3, DC=4, RAMAN=5) in a OPT-RAMP-C card.         |
| • LINE[-{1-12}]-{1-5,12-16}-{1-5}-ALL     | All the Lines (COM=1,OSC=2,LINE=3, DC=4, RAMAN=5) in a OPT-RAMP-C card.                        |
| <MEAS_INDEX >                             | Raman measure Index.   |
| <MINRAMANLEV>                             | Power measured with MIN raman power level.   |
| <MAXRAMANLEV >                            | Power measured with MAX raman power level.   |
| <DATE>                                    | Identifies the date. Date is a string. Default value is - “current date”.                      |
| <TIME>                                    | Identifies the time. Time is a string. Default value is - “current time.”                      |

## 21.132 RTRV-REP

(Cisco ONS 15454) The Retrieve Resilient Ethernet Protocol (RTRV-REP) command retrieves the Resilient Ethernet Protocol (REP) configuration on the ethernet port of GE\_XP or 10GE\_XP card.

### Usage Guidelines

- This command accept the ALL AID.
- This command is applicable only to GE\_XP and 10GE\_XP cards.

### Category

Ethernet

### Security

Retrieve

### Input Format

RTRV-REP:[<TID>]:<AID>:<CTAG>;

### Input Example

RTRV-REP:PENNGROVE:CHAN-16-1-RX:114;

### Input Parameters

<AID> Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the [“26.16 ETH” section on page 26-41](#).

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AID>::[SEGMENTID=<SEGMENTID>],[EDGE=<EDGE>],[PORTROLE=<PORTROLE>],[PREF
ERRED=<PREFERRED>],[PREEMPTDELAY=<PREEMPTDELAY>][:]”
;
```

### Output Example

```
SID DATE TIME
M CTAG COMPLD
ETH-16-1-1::SEGMENTID=1,EDGE=Y,PORTROLE=NO_NEIGHBOR,PREFERRED=N,
REEMPTDELAY=0”
;
```

### Output Parameters

|             |  |
|-------------|--|
| <AID>       | Ethernet AIDs are used to access L2 Ethernet ports. Access identifier from the <a href="#">“26.16 ETH” section on page 26-41</a> . |
| <SEGMENTID> | Indicates the segment ID for REP segment. The valid range is from 0 to 1024.   |
| <EDGE>      | Configures the port as an edge port.   |
| • Y         | To configure the port as an edge port.   |
| • N         | Not to configure the port as an edge port.   |

|                               |   |
|-------------------------------|---|
| <PORTROLE>                    | The parameter type is REP_PORT_ROLE, which indicates the port's role in a REP Segment for the ethernet ports. |
| • PRIMARY                     | Indicates that the port is a primary port.  |
| • NO_NEIGHB<br>OR             | Indicates that the port has no neighbor port in the segment.  |
| • NO_NEIGHB<br>OR_PRIMA<br>RY | Indicates that the port is a primary port and has no neighbor port in the segment.                            |
| • REGULAR                     | Indicates that the port is a regular port.  |
| • None                        | Indicates that the port is an edge port.  |
| <PREFERRED>                   | Indicates that the port is the preferred alternate port. Or the preferred port for VLAN load balancing.       |
| • Y                           | Yes   |
| • N                           | No  |

## 21.133 RTRV-RMONTH-<MOD2\_RMON>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Remote Monitoring Threshold for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 4GFC, 4GFICON, 8GFC, CHGRP, FSTE, G1000, ETH, GFP, GFPOS, GIGE, HDLC, ISCCOMPAT, ISC3PEER1G, ISC3PEER2G, OCH, POS, 3GVIDEO, SDSDI, HDSDI, AUTO, ISC3STP1G, or ISC3STP2G (RTRV-RMONTH-<MOD2\_RMON>) command retrieves an entry in the remote monitoring (RMON) alarm table for the threshold of data statistics managed by the RMON engine.

### Usage Guidelines

The command supports the modifier 3GVIDEO, SDSDI, HDSDI, AUTO, OTU1, ISC3STP1G, ISC3STP2G, and OTU2.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Category

Performance

### Security

Provisioning

### Input Format

```
RTRV-RMONTH-<MOD2_RMON>:[<TID>]:<SRC>:<CTAG>::<MONTYPE>],,,[<INTVL>]:[RISE
=<RISE>],[FALL=<FALL>],[SAMPLE=<SAMPLE>],[STARTUP=<STARTUP>][:];
```

### Input Example

```
RTRV-RMONTH-ISC3STP1G::VFAC-4-1-1:1::MEDIAINSTATSRXLCVERRORS,,,10:RISE=10,F
ALL=1,SAMPLE=ABSOLUTE;
```

## Input Parameters

|                           |   |
|---------------------------|---|
| <AID>                     | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on <a href="#">page 26-42</a> . AID for the facility that the data statistic is managed by. |
| <MONTYPE>                 | Monitored type. Type of RMON monitored data statistic. A null value is equivalent to ALL. The parameter type is ALL_MONTYPE, which is the monitoring type list.   |
| • AISSP                   | Alarm Indication Signal Seconds—Path  |
| • ALL                     | All possible values   |
| • BBE-PM                  | OTN—Background Block Errors—Path Monitor Point  |
| • BBE-SM                  | OTN—Background Block Errors—Section Monitor Point   |
| • BBER-PM                 | OTN—Background Block Error Ratio—Path Monitor Point expressed as one tenth of a percentage.   |
| • BBER-SM                 | OTN—Background Block Error Ratio—Section Monitor Point expressed as one tenth of a percentage.  |
| • BIEC                    | FEC—Bit Errors Corrected  |
| • CGV                     | 8B10B—Code Group Violations   |
| • CSSP                    | Controlled Slip Seconds—Path (DSXM-12 FDL/T1.403 PM count)  |
| • CVCPP                   | Coding Violations—CP-Bit Path   |
| • CVL                     | Coding Violations—Line  |
| • CVP                     | Coding Violations—Path  |
| • CVS                     | Coding Violations—Section   |
| • CVV                     | Coding Violations—Section   |
| • DCG                     | 8B10B—Data Code Groups  |
| • ESAP                    | Errored Second Type A-Path (DS3XM-12 DS1 PM count)  |
| • ESBP                    | Errored Second Type B-Path (DS3XM-12 DS1 PM count)  |
| • ESCPP                   | Errored Seconds—CP—Bit Path   |
| • ESL                     | Errored Seconds—Line  |
| • ESNPFE                  | Errored Second—Network Path (DS3XM-12 DS1 PM count)   |
| • ESP                     | Errored Seconds—Path  |
| • ES-PM                   | OTN—Errored Seconds—Path Monitor Point  |
| • ES-SM                   | OTN—Errored Seconds—Section Monitor Point   |
| • ESR                     | Errored Second—Ratio  |
| • ESR-PM                  | Errored Seconds Ratio—Path monitor Point expressed as one tenth of a percentage   |
| • ESR-SM                  | Errored Seconds Ratio—Section monitor Point expressed as one tenth of a percentage  |
| • ESS                     | Errored Seconds—Section   |
| • ESV                     | Errored Seconds—VT Path   |
| • dot3StatsFCSErrors      | A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check.                               |
| • dot3StatsFrameTooLong   | A count of frames received on a particular interface that exceed the maximum permitted frame size.  |
| • etherStatsBroadcastPkts | The total number of good packets received that were directed to a multicast address   |

|                             |  |
|-----------------------------|--|
| • etherStatsCollisions      | Number of transmit packets that are collisions   |
| • etherStatsCRCAAlignErrors | The total number of packets received that have a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets |
| • etherStatsDropEvents      | Number of received frames dropped at the port level  |
| • etherStatsFragments       | The total number of packets received that were less than 64 octets   |
| • etherStatsJabbers         | The total number of packets received that are longer than 1518 octets  |
| • etherStatsOctets          | The total number of octets of data   |
| • etherStatsOversizePkts    | The total number of packets received that are longer than 1518 octets  |
| • etherStatsPkts            | The total number of packets (including bad packets, broadcast packets, and multicast packets) received                                   |
| • etherStatsUndersizePkts   | The total number of packets received that are less than 64 octets  |
| • FCP                       | Failure Count—Line   |
| • FC-PM                     | OTN—Failure Count—Path Monitor Point   |
| • FC-SM                     | OTN—Failure Count—Section Monitor Point  |
| • HP-AR                     | Availability Ratio   |
| • HP-BBE                    | High-Order Path Background Block Error   |
| • HP-BBER                   | High-Order Path Background Block Error Ratio   |
| • HP-EB                     | High-Order Path Errored Block  |
| • HP-ES                     | High-Order Path Errored Second   |
| • HP-ESA                    | High-Order Path Errored Seconds—A  |
| • HP-ESB                    | High-Order Path Errored Seconds—B  |
| • HP-ESR                    | High-Order Path Errored Second Ratio   |
| • HP-FC                     | High-Order Path Failure Count  |
| • HP-NPJC-PDET              | High-Order Path Negative Pointer Justification Count, Path Detected  |
| • HP-NPJC-PGEN              | High-Order Path, Negative Pointer Justification Count, Path Generated  |
| • HP-OI                     | Outage Intensity   |
| • HP-PJCDIFF                | High-Order Path Pointer Justification Count Difference   |
| • HP-PJCS-PDET              | High-Order Path Pointer Justification Count Seconds, Path Detected   |
| • HP-PJCS-PGEN              | High-Order Path Pointer Justification Count Seconds, Path Generated  |
| • HP-PPJC-PDET              | High-Order Path Positive Pointer Justification Count, Path Detected  |
| • HP-PPJC-PGEN              | High-Order Path, Positive Pointer Justification Count, Path Generated  |
| • HP-SEPI                   | The number of SEP events in available time   |
| • HP-SES                    | High-Order Path Severely Errored Seconds   |
| • HP-SESR                   | High-Order Path Severely Errored Second Ratio  |
| • HP-UAS                    | High-Order Path Unavailable Seconds  |
| • ifInBroadcastPkts         | Number of broadcast packets received since the last counter reset  |

|                         |  |
|-------------------------|--|
| • ifInDiscards          | The number of inbound packets  |
| • ifInErrorBytePktss    | Receive Error Byte   |
| • ifInErrors            | The number of inbound packets (or transmission units) that contained errors                            |
| • ifInFramingErrorPkts  | Receive Framing Error  |
| • ifInJunkInterPkts     | Receive Interpacket Junk   |
| • ifInMulticastPkts     | Number of multicast packets received since the last counter reset                                      |
| • ifInOctets            | Number of bytes transmitted since the last counter reset   |
| • ifInUcastPkts         | Number of unicast packets received since the last counter reset  |
| • ifOutBroadcastPkts    | Number of broadcast packets transmitted  |
| • ifOutDiscards         | The number of outbound packets   |
| • ifOutErrors           | The number of outbound packets (or transmission units) that could not be transmitted because of errors |
| • ifOutMulticastPkts    | Number of multicast packets transmitted  |
| • ifOutPayloadCrcErrors | Received payload CRC errors  |
| • ifOutUcastPkts        | Number of unicast packets transmitted  |
| • IOS                   | 8B10B—Idle Ordered Sets  |
| • IPC                   | Invalid Packet Count   |
| • LBCL-AVG              | Average Laser Bias Current in microA   |
| • LBCL-MAX              | Maximum Laser Bias Current in microA   |
| • LBCL-MIN              | Minimum Laser Bias Current in microA   |
| • LBCN                  | Normalized Laser Bias Current for OC3-8  |
| • LBCN-HWT              | Normalized Laser Bias Current—Higher Threshold   |
| • LBCN-LWT              | Normalized Laser Bias Current—Lower Threshold  |
| • LOSSL                 | Loss of Signal Seconds—Line  |
| • LP-BBE                | Low-Order Path Background Block Error  |
| • LP-BBER               | Low-Order Path Background Block Error Ratio  |
| • LP-EB                 | Low-Order Path Errored Block   |
| • LP-ES                 | Low-Order Path Errored Second  |
| • LP-ESA                | Low-Order Path Errored Seconds-A   |
| • LP-ESB                | Low-Order Path Errored Seconds-B   |
| • LP-ESR                | Low-Order Path Errored Second Ratio  |
| • LP-FC                 | Low-Order Path Failure Count   |
| • LP-NPJC-DET           | Low-Order Negative Pointer Justification Count, Detected   |
| • LP-NPJC-GEN           | Low Order Negative Pointer Justification Count, Generated  |
| • LP-PPJC-DET           | Low-Order Positive Pointer Justification Count, Detected   |
| • LP-PPJC-GEN           | Low-Order Positive Pointer Justification Count, Generated  |
| • LP-SEP                | Low-Order Path Severely Errored Period   |
| • LP-SEPI               | Low-Order Path Severely Errored Period Intensity   |
| • LP-SES                | Low-Order Path Severely Errored  |
| • LP-UAS                | Low-Order Path Unavailable Seconds   |
| • MS-PSC                | Protection switch count  |

|             |   |
|-------------|---|
| • MS-PSD    | Protection switch duration  |
| • NIOS      | 8B10B—Non Idle Ordered Sets   |
| • NPJC-PDET | Negative Pointer Justification Count, Path Detected   |
| • NPJC-PGEN | Negative Pointer Justification Count, Path Generated  |
| • OPR-AVG   | Average Receive Power in one tenth of a microwatt   |
| • OPR-MAX   | Maximum Receive Power in one tenth of a microwatt   |
| • OPR-MIN   | Minimum Receive Power in one tenth of a microwatt   |
| • OPRN      | Normalized Optical Receive Power for OC3-8  |
| • OPRN-MAX  | Maximum value for OPRN  |
| • OPRN-MIN  | Minimum value for OPRN  |
| • OPT-AVG   | Average Transmit Power in one tenth of a microwatt  |
| • OPT-MAX   | Maximum Transmit Power in one tenth of a microwatt  |
| • OPT-MIN   | Minimum Transmit Power in one tenth of a microwatt  |
| • OPTN      | Normalized value for Optical Power Transmitted for the OC3-8 card                           |
| • OPTN-MAX  | Maximum value for OPTN  |
| • OPTN-MIN  | Minimum value for OPTN  |
| • OPWR-AVG  | Optical Power—Average Interval Value in one tenth of a dBm                                  |
| • OPWR-MAX  | Optical Power—Maximum Interval Value in one tenth of a dBm                                  |
| • OPWR-MIN  | Optical Power—Minimum Interval Value in one tenth of a dBm                                  |
| • PPJC-PDET | Positive Pointer Justification Count, Path Detected   |
| • PPJC-PGEN | Positive Pointer Justification Count, Path Generated  |
| • PSC       | Protection Switching Count  |
| • PSC-R     | Protection Switching Count—Ring   |
| • PSC-S     | Protection Switching Count—Span   |

| • PSD-R     | Protection Switching Duration—Ring  |
| • PSD-S     | Protection Switching Duration—Span  |
| • PSD-W     | Protection Switching Duration—Working   |
| • SASCPP    | Severely Errored Framing/AIS Second—CP-Bit Path   |
| • SASP      | Severely Errored Framing/AIS Seconds Path   |
| • SEFS      | Severely Errored Framing Seconds  |
| • SEFSP     | Severely Errored Framing Seconds—Path (DS3XM-12 DS1 PM count)                               |
| • SESCOPP   | Severely Errored Second—CP-Bit Path   |
| • SESL      | Severely Errored Second—Line  |
| • SESNPFE   | Severely Errored Second—Network Path (DS3XM-12 DS1 PM count)                                |
| • SESP      | Severely Errored Second—Path  |
| • SES-PM    | OTN—Severely Errored Second—Path  |
| • SESR-PM   | OTN—Severely Errored Second Ratio—Path Monitor Point expressed as one tenth of a percentage |

|                     |  |
|---------------------|--|
| • SESR-SM           | OTN—Severely Errored Second Ratio—Section Monitor Point expressed as one tenth of a percentage   |
| • SESS              | Severely Errored Second—Section  |
| • SES-SM            | OTN—Severely Errored Second—Section Monitor Point  |
| • SESV              | Severely Errored Second—VT Path  |
| • UASCPP            | Unavailable Second—CP-Bit Path   |
| • UASL              | Unavailable Second—Line  |
| • UASNPFE           | Unavailable Second—Network Path (DS3XM-12 DS1 PM count)  |
| • UASP              | Unavailable Second—Path  |
| • UAS-PM            | OTN—Unavailable Second—Path Monitor Point  |
| • UAS-SM            | OTN—Unavailable Second—Section Monitor Point   |
| • UASV              | Unavailable Second—VT Path   |
| • UNC-WORDS         | FEC—Uncorrectable Words  |
| • VPC               | Valid Packet Count   |
| <INTVL>             | The interval in seconds during which the data is sampled and compared with the rising and falling threshold. A valid value is any integer larger than or equal to 10 (seconds). A null value is equivalent to ALL.   |
| <RISE>              | The rising threshold for the sampled statistic. A valid value is any integer. A null value is equivalent to ALL  |
| <FALL>              | The falling threshold. A valid value is any integer smaller than the rising threshold. A null value is equivalent to ALL.  |
| <SAMPLE>            | The method of calculating the value to be compared to the thresholds. A null value is equivalent to ALL. The parameter type is SAMPLE_TYPE, which describes how the data will be calculated during the sampling period.  |
| • ABSOLUTE          | Comparing directly   |
| • DELTA             | Comparing with the current value of the selected variable subtracted by the last sample  |
| <STARTUP>           | Dictates whether an event will generate if the first valid sample is greater than or equal to the rising threshold, less than or equal to the falling threshold, or both. A null value is equivalent to ALL. The parameter type is STARTUP_TYPE, which indicates whether an event will be generated when the first valid sample is crossing the rising or falling threshold. |
| • FALLING           | Generates the event when the sample is smaller than or equal to the falling threshold.   |
| • RISING            | Generates the event when the sample is greater than or equal to the rising threshold.  |
| • RISING-OR-FALLING | Generates the event when the sample is crossing the rising threshold, or the falling threshold.  |

**Output Format**

```
RTRV-RMONTH-SDSDI:CISCO:VFAC-2-5-1:1234::MEDIANDSTATSRXLCVERRORS,,100:RIS
E=1000, FALL=100,SAMPLE=DELTA,STARTUP=RISING;
```

**Output Example**

```

| • UASV      | Unavailable Second—VT Path  |
| • UNC-WORDS | FEC—Uncorrectable Words   |
| • VPC       | Valid Packet Count  |
| <INTVL>     | The interval in seconds over which the data is sampled and compared with the rising and falling threshold. A valid value is any integer larger than or equal to 10 (seconds). |
| <INDEX>     | The index for the threshold created by the system in the RMON threshold table. INDEX is an integer.   |

|                     |   |
|---------------------|---|
| <RISE>              | The rising threshold for the sampled statistic. A valid value is any integer.   |
| <FALL>              | The falling threshold. A valid value is any integer smaller than the rising threshold. AID is an integer  |
| <SAMPLE>            | The method of calculating the value to be compared to the thresholds. The parameter type is SAMPLE_TYPE, which describes how the data will be calculated during the sampling period   |
| • ABSOLUTE          | Comparing directly  |
| • DELTA             | Comparing with the current value of the selected variable subtracted from the last sample   |
| <STARTUP>           | Dictates whether an event will generate if the first valid sample is greater than or equal to the rising threshold, less than or equal to the falling threshold, or both. The parameter type is STARTUP_TYPE, which indicates whether an event will be generated when the first valid sample is crossing the rising or falling threshold. |
| • FALLING           | Generates the event when the sample is smaller than or equal to the falling threshold.  |
| • RISING            | Generates the event when the sample is greater than or equal to the rising threshold.   |
| • RISING-OR-FALLING | Generates the event when the sample is crossing the rising threshold or the falling threshold.  |

## 21.134 RTRV-ROLL-<MOD\_PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Roll for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, VC11, VC12, VC3, VT1, or VT2 (RTRV-ROLL-<MOD\_PATH>) command retrieves roll data parameters.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Category** Bridge and Roll

**Security** Retrieve

**Input Format** RTRV-ROLL-<MOD\_PATH>:[<TID>]:<SRC>:<CTAG>;

**Input Example** RTRV-ROLL-STs1:CISCO:STS-1-1-1:6;

|                          |   |   |
|--------------------------|---|---|
| <b>Input Parameters</b>  | <SRC>   | Source access identifier from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31 (except VCM and FACILITY). Roll path (STS or VT).                               |
| <b>Output Format</b>     | <pre> SID DATE TIME M CTAG COMPLD “&lt;FROM&gt;,&lt;TO&gt;:RFROM=&lt;RFROM&gt;,RTO=&lt;RTO&gt;,[RMODE=&lt;RMODE&gt;], VLDSIG=&lt;VLDSIG&gt;” ; </pre> |   |
| <b>Output Example</b>    | <pre> TID-000 1998-06-20 14:30:00 M 001 COMPLD “STS-1-1-1,STS-2-1-1:RFROM=STS-2-1-1,RTO=STS-3-1-1,RMODE=AUTO,VLDSIG=N” ; </pre>                       |   |
| <b>Output Parameters</b> | <FROM>  | One of the termination points (legs) of the existing cross-connection. AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31 (except VCM and FACILITY).    |
|                          | <TO>  | One of the termination points (legs) of the existing cross-connection. AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31 (except VCM and FACILITY).    |
|                          | <RFROM>   | The termination point of the existing cross-connect that is to be rolled. AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31 (except VCM and FACILITY). |
|                          | <RTO>   | The termination point that will become a leg of the new cross-connection. AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31 (except VCM and FACILITY). |
|                          | <RMODE>   | (Optional) The rolling mode of operation. The parameter type is RMODE, which specifies the roll mode.   |
|                          | <ul style="list-style-type: none"> <li>AUTO</li> </ul>  | Automatic. When a valid signal is available, the roll under AUTO mode will automatically delete the previous end-point.   |
|                          | <ul style="list-style-type: none"> <li>MAN</li> </ul>   | Manual. Enter the corresponding delete roll/bulkroll command to delete the previous end-point.  |
|                          | <VLDSIG>  | Shows whether or not the roll has received a valid signal. VLDSIG is Y if the signal is valid and N if it is not. The parameter type is ON_OFF (disable or enable an attribute).  |
|                          | <ul style="list-style-type: none"> <li>N</li> <li>Y</li> </ul>  | <ul style="list-style-type: none"> <li>Disable an attribute.</li> <li>Enable an attribute.</li> </ul>   |

## 21.135 RTRV-ROUTE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Route (RTRV-ROUTE) command retrieves static routes.

**Usage Guidelines**

- There is no DNS service available on the node. Only numeric IP addresses will be accepted.
- The optional parameters DESTIP, IPMASK, NXTHOP, and COST are used to filter the retrieved static routes. In the absence of any optional parameter, all the static routes on the node will be retrieved.

**Category**

System

**Security**

Retrieve

**Input Format**

RTRV-ROUTE:[&lt;TID&gt;]::&lt;CTAG&gt;::[&lt;DESTIP&gt;],[&lt;IPMASK&gt;],[&lt;NXTHOP&gt;],[&lt;COST&gt;];

**Input Example**

RTRV-ROUTE:CISCO::123::10.64.72.57,255.255.255.0,10.64.10.1,200;

**Input Parameters**

|          |   |
|----------|---|
| <DESTIP> | Destination tip. DESTIP is a string. A null value is equivalent to ALL.               |
| <IPMASK> | IP mask. IPMASK is a string. A null value is equivalent to ALL.                       |
| <NXTHOP> | Next hop. NXTHOP is a string. A null value is equivalent to ALL.                      |
| <COST>   | Unsigned integer. Valid range is from 1 to 32,797. A null value is equivalent to ALL. |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“;,<DESTIP>,<IPMASK>,<NXTHOP>,<COST>”
;
```

**Output Example**

**Output Parameters**

|          |                                      |
|----------|--------------------------------------|
| <DESTIP> | Destination tip. DESTIP is a string. |
| <IPMASK> | IP mask. IPMASK is a string.         |
| <NXTHOP> | Next hop. NXTHOP is a string.        |
| <COST>   | Cost. COST is a string.              |

## 21.136 RTRV-ROUTE-GRE

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Route Generic Routing Encapsulation (RTRV-ROUTE-GRE) command displays the existing GRE tunnels.

**Usage Guidelines** None

**Category** System

**Security** Retrieve

**Input Format** RTRV-ROUTE-GRE:[<TID>]::<CTAG>[:::];

**Input Example** RTRV-ROUTE-GRE:CISCO::123;

**Input Parameters** None that require description

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“,:IPADDR=<IPADDR>,IPMASK=<IPMASK>,NSAP=<NSAP>,COST=<COST>”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“,:IPADDR=10.64.72.57,IPMASK=255.255.255.0,
NSAP=39840F80FFFFFFF0000DDDDAA000010CFB4910200,COST=110”
;
```

| Output Parameters | Description  |
|-------------------|--|
| <IPADDR>          | IP address of the tunnel endpoint. IPADDR is a string.       |
| <IPMASK>          | Subnet mask for the tunnel endpoint. IPMASK is a string.     |
| <NSAP>            | NSAP address for the tunnel endpoint. NSAP is a string.      |
| <COST>            | Routing cost associated with the tunnel. COST is an integer. |

## 21.137 RTRV-SHELFSTAT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The RTRV-SHELFSTAT command retrieves and reports the temperature and voltage of the shelf.

**Usage Guidelines** None

**Category** Equipment

**Security** Retrieve

**Input Format** RTRV-SHELFSTAT:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-SHELFSTAT:CISCO454::1;

**Output Format** SID DATE TIME  
M CTAG COMPLD  
"AID:AIDTYPE,TEMPERATURE= <TEMPERATURE>,VOLTAGEA= <VOLTAGEA>,VOLTAGEB=  
<VOLTAGEB>[,VOLTAGEC= <VOLTAGEC>,VOLTAGED= <VOLTAGED>]"  
;

**Output Example** TID-000 2008-07-19 18:57:00  
M 001 COMPLD  
":SHELF,TEMPERATURE=22C,VOLTAGEA=51760,VOLTAGEB=51783,VOLTAGEC=51760,VOLT  
AGED=51783"  
;

**Table 21-8** Output Parameter Support

| Parameter     | Description  |
|---------------|--|
| <Temperature> | Temperature of the shelf (in degrees Celsius).                           |
| <VOLTAGEA>    | Voltage of the shelf that corresponds to power supply A (in millivolts). |
| <VOLTAGEB>    | Voltage of the shelf that corresponds to power supply B (in millivolts). |
| <VOLTAGEC>    | Voltage of the shelf that corresponds to power supply C (in millivolts). |
| <VOLTAGED>    | Voltage of the shelf that corresponds to power supply D (in millivolts). |

## 21.138 RTRV-SLV-WDMANS

(Cisco ONS 15454) The Retrieve Span Loss Verification Wavelength Division Multiplexing Automatic Node Setup (RTRV-SLV-WDMANS) command retrieves the expected span loss verification provisioned by the ED-SLV-WDMANS command.

|                          |  |       |  |              |  |             |  |
|--------------------------|--|-------|--|--------------|--|-------------|--|
| <b>Usage Guidelines</b>  | None   |       |  |              |  |             |  |
| <b>Category</b>          | DWDM   |       |  |              |  |             |  |
| <b>Security</b>          | Retrieve   |       |  |              |  |             |  |
| <b>Input Format</b>      | RTRV-SLV-WDMANS:[<TID>]:<AID>:<CTAG>;  |       |  |              |  |             |  |
| <b>Input Example</b>     | RTRV-SLV-WDMANS:VA454-22:WDMANS-E:116;   |       |  |              |  |             |  |

| <AID>                    | Access identifier from the <a href="#">“26.34 WDMANS”</a> section on page 26-62.   |       |  |              |  |             |  |
| <HIGHSLVEXP>             | (Optional) The high range value of the expected span loss verification. HIGHSLVEXP is a float.   |       |  |              |  |             |  |
| <LOWSLVEXP>              | (Optional) The low range value of the expected span loss verification. LOWSLVEXP is a float.   |       |  |              |  |             |  |

|              |   |
|--------------|---|
| <SLVACT>     | (Optional) The value of the calculated span loss verification. SLVACT is a float.                               |
| <RESOLUTION> | (Optional) The value of the resolution applied to the calculated span loss verification. RESOLUTION is a float. |

## 21.139 RTRV-STCN-REP

(Cisco ONS 15454) The RTRV Segment Topology Change Notification Resilient Ethernet Protocol (RTRV-STCN-REP) command retrieves the Segment Topology Change Notification (STCN) for REP Segment on the ethernet ports.

### Usage Guidelines

- REP must be configured on the ethernet port.
- This command is applicable only to GE\_XP and 10GE\_XP cards.

### Category

Ethernet

### Security

Retrieve

### Input Format

RTRV-STCN-REP:[<TID>]:<AID>:<CTAG>[:::];

### Input Example

RTRV-STCN-REP:CISCO:ETH-16-1-1:1;

### Input Parameters

|       |  |
|-------|--|
| <AID> | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
|-------|--|

### Output Format

```
SID DATE TIME
M CTAG COMPLD
“<AID>::[STCNENABLED=<STCNENABLED>],[SEGRANGE=<SEGRANGE>],[STCNPORT=<S
TCNPORT>]”
;
```

### Output Example

```
SID DATE TIME
M CTAG COMPLD
“ETH-16-1-1::STCNENABLED=Y,SEGRANGE=\" 1000-1020\"&1020-1021,
STCNPORT=ETH-16-2-1”
```

| Output Parameters |     |   |
|-------------------|-----|---|
| <AID>             |     | Access identifier from the “ <a href="#">26.17 FACILITY</a> ” section on page 26-42.  |
| <STCNENABLED>     |     | To enable or disable the Segment Topology Notification on ethernet entity for REP.  |
|                   | • Y | Enables STCN on the ethernet port.  |
|                   | • N | Disables STCN on the ethernet port.   |
| <SEGRANGESTART>   |     | Indicates the segment range start value for the STCN. The valid range is from 0 to 1024.                                    |
| <SEGRANGEEND>     |     | Indicates the segment range end value for the STCN. The valid range is from 0 to 1024.                                      |
| <STCNPORT>        |     | Determines on which ethernet port the STCN should be sent. STCNPORT is an AID, it takes ETH AID value. The default is NULL. |

## 21.140 RTRV-STS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Synchronous Transport Signal (RTRV-STS) command retrieves the attributes associated with an STS path based on the granularity level of NE/SLOT-specific STSs.

### Usage Guidelines

- Supported AIDs are ALL, SLOT-N (N=1,2,...,ALL), STS-<SLOT>[-<PORT>]-<STS NUMBER>.
- The SFBER, SDBER, RVRTV, RVTM, SWPDIP, HOLDOFFTIMER, and UPSRPTHSTATE parameters only apply to path protection.
- The path trace message is a 64-character string including the terminating CR (carriage return) and LF (line feed) that is transported in the J1 byte of the SONET STS Path overhead.
- The EXPTRC indicates that the contents of the expected incoming path trace are provisioned by the user in the ED-STS\_PATH command. The TRC indicates the contents of the outgoing path trace message. The INCTRC indicates the contents of the incoming path trace message.
- The path trace mode has three modes: OFF, MANUAL, and AUTO. The mode defaults to OFF. The MANUAL mode compares the received string with the user entered expected string. The AUTO mode compares the present received string with an expected string set to a previously received string. If there is a mismatch, the TIM-P alarm is raised. When the path trace mode is in OFF mode, there is no path trace processing, and all the alarm and state conditions are reset.
- When the expected string is queried under the OFF path trace mode, the expected string is a copy of the provisioned string or NULL. When an expected string is queried under the MANUAL path trace mode, the expected string is a copy of the user entered string. When an expected string is queried under the AUTO path trace mode, the expected string is a copy of the acquired received string or NULL if the string has not been acquired.
- When the incoming string is queried under the OFF path trace mode, the incoming string is NULL. When an incoming string is queried under the MANUAL or AUTO path trace mode, the incoming string is a copy of the received string or NULL if the string has not been received.
- J1 (EXPTRC) is implemented on the DS1/DS1N, DS3E/DS3NE, DS3XM, EC1, DS3-EC1-48 OC3, OC12-4, OC48AS, OC192, OC192-XFP, and MRC-12 cards.

- TRC and INCTRC are supported on DS1(N), DS3(N)E, DS3-EC1-48, DS3XM, OC192-XFP and MRC-12 cards.
- In Software R5.0 and later, the ED-VT1 command is only supported to edit the J2 path trace on the VT1.5 cross-connection of the DS3XM-12 card.

| <b>Output Parameters</b> | <p>&lt;AID&gt; Access identifier from the <a href="#">“26.2 AidUnionId”</a> section on page 26-13.</p> <p>&lt;LEVEL&gt; (Optional) The rate of the cross-connect. Applicable only to STS paths in SONET. The parameter type is STS_PATH, which is the modifier for some STS commands.</p> <ul style="list-style-type: none"> <li>• STS1 Synchronous Transport Signal level 1 (51 Mbps)</li> <li>• STS12C Synchronous Transport Signal level 12 Concatenated (622 Mbps)</li> </ul>                      |

|                |   |
|----------------|---|
| • STS18C       | Synchronous Transport Signal level 18 Concatenated (933 Mbps)   |
| • STS192C      | Synchronous Transport Signal level 192 (9952 Mbps)  |
| • STS24C       | Synchronous Transport Signal level 24 Concatenated (1240 Mbps)  |
| • STS36C       | Synchronous Transport Signal level 36 Concatenated (1866 Mbps)  |
| • STS3C        | Synchronous Transport Signal level 3 Concatenated (155 Mbps)  |
| • STS48C       | Synchronous Transport Signal level 48 Concatenated (2488 Mbps)  |
| • STS6C        | Synchronous Transport Signal level 3 Concatenated (310 Mbps)  |
| • STS9C        | Synchronous Transport Signal level 9 Concatenated (465 Mbps)  |
| <SFBER>        | (Optional) An STS path SFBER that applies only to path protection and only to STS-level paths in SONET. Defaults to 1E-4. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.  |
| • 1E-3         | SFBER is 1E-3.  |
| • 1E-4         | SFBER is 1E-4.  |
| • 1E-5         | SFBER is 1E-5.  |
| <SDBER>        | (Optional) An STS path SDBER that applies only to path protection and only to STS-level paths in SONET. Defaults to 1E-6. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.  |
| • 1E-5         | SDBER is 1E-5.  |
| • 1E-6         | SDBER is 1E-6.  |
| • 1E-7         | SDBER is 1E-7.  |
| • 1E-8         | SDBER is 1E-8.  |
| • 1E-9         | SDBER is 1E-9.  |
| <RVRTV>        | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. Only applies to path protection. The parameter type is ON_OFF (disable or enable an attribute). |
| • N            | Does not revert service to original line after restoration.   |
| • Y            | Reverts service to original line after restoration.   |
| <RVTM>         | Revertive time. RVTM is not allowed to be set while RVRTV is N. Only applies to path protection. The parameter type is REVERTIVE_TIME.  |
| • 0.5 to 12.0  | Revertive time is 0.5 to 12.0 minutes.  |
| <SWPDIP>       | (Optional) Switch on PDI-P. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). The parameter type is ON_OFF (disable or enable an attribute).   |
| • N            | Disable an attribute.   |
| • Y            | Enable an attribute.  |
| <HOLDOFFTIMER> | (Optional) Hold off timer. HOLDOFFTIMER is an integer.  |

|                |   |
|----------------|---|
| <EXPTRC>       | (Optional) Expected path trace content. A 64-character ASCII string including the terminating CR (carriage return) and LF (line feed). Indicates the expected path trace message (J1) contents. Applicable only to STS-Level Paths in SONET. Defaults to null when path protection path is created.   |
| <TRC>          | (Optional) The path trace message to be transmitted. The trace byte (J1) continuously transmits a 64-byte, fixed length ASCII string, one byte at a time. A null value defaults to the NE transmitting 62 null characters (hex 00) and CR and LF. A null value defaults to the NE transmitting null characters (Hex 00). Applicable to STS-level paths in SONET (STS <sub>n</sub> ). TRC is a string. |
| <INCTRC>       | (Optional) Identifies the incoming path trace message contents. Can be any combination of 64-characters. Applicable only to STS-level paths in SONET. Defaults to null when a path protection path is created. INCTRC is a string.  |
| <TRCMODE>      | (Optional) Path trace mode. Applicable only to STS-level Paths in SONET (STS <sub>n</sub> ). Defaults to the OFF mode. The parameter type is TRCMODE (trace mode).  |
| • AUTO         | Use the previously received path trace string as the expected string. Not applicable to MXP/TXP cards.  |
| • AUTO-NO-AIS  | Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
| • MAN          | Use the provisioned expected string as the expected string.   |
| • MAN-NO-AIS   | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.   |
| • OFF          | Turn off path trace capability. Nothing will be reported.   |
| <TACC>         | (Optional) Indicates whether the digroup being provisioned is to be used as a test access digroup. Default is N. TACC is an integer.  |
| <TAPTYPE>      | (Optional) TAP type. The parameter type is TAPTYPE, which is the test access point type.  |
| • DUAL         | Dual FAD  |
| • SINGLE       | Single FAD  |
| <UPSRPTHSTATE> | (Optional) Indicates whether a given AID is the working or standby path of a path protection cross-connect. The parameter type is STATUS, which is the status of the unit in the protection pair.   |
| • ACT          | The entity is the active unit in the shelf.   |
| • NA           | Status is unavailable.  |
| • STBY         | The entity is the standby unit in the shelf.  |
| <C>            | (Optional) The C2 byte hex code. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). The parameter type is C2_BYTE, which is the C2 byte hex code.   |
| • 0X00         | Unequipped  |
| • 0X01         | Equipped-Non-Specific payload   |
| • 0X02         | VT-Structured STS-1 SPE   |
| • 0X03         | Locked VT Mode  |

| • UEQ       | Unequipped   |

## 21.141 RTRV-SRVTYPE

(Cisco ONS 15454 M2 and Cisco ONS 15454 M6) The Retrieve Service Type (RTRV-SRVTYPE) command retrieves the service type on the ports of the TNC card.

**Category** Ports

**Security** Retrieve

**Input Format** RTRV-SRVTYPE:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-SRVTYPE::ALL:CTAG;

|                          |  |       |                          |           |   |       |                                 |        |                                 |        |                                  |

| • NONE                   | To set the service type to NONE.   |       |                          |           |   |       |                                 |        |                                 |        |                                  |

## 21.142 RTRV-SYNCN

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Synchronization command retrieves the synchronization reference list used to determine the sources for the NE's reference clock and the BITS output clock. For each clock, up to three synchronization sources can be specified (for example, PRIMARY, SECOND, THIRD).

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | <ul style="list-style-type: none"> <li>To retrieve/set the timing mode, SSM message Set or Quality of RES information, use the RTRV-NE-SYNCN and ED-NE-SYNCN commands.</li> <li>The output example shown here is under line timing mode.</li> </ul> |
|-------------------------|---|

| <b>Input Format</b> | RTRV-SYNCN:[<TID>]:<AID>:<CTAG>[::::]; |
|---------------------|--|

|                      |                               |
|----------------------|-------------------------------|
| <b>Input Example</b> | RTRV-SYNCN:BOYES:SYNC-NE:234; |
|----------------------|-------------------------------|

|                          |   |  |
|--------------------------|---|--|
| <b>Input Parameters</b>  | <AID>   | Access identifier from the “ <a href="#">26.30 SYNC_REF</a> ” section on page 26-60.   |
| <b>Output Format</b>     | <pre> SID DATE TIME M CTAG COMPLD “&lt;AID&gt;:&lt;REF&gt;,&lt;REFVAL&gt;,&lt;QREF&gt;,&lt;STATUS&gt;,&lt;PROTECTSTATUS&gt;” ; </pre> |  |
| <b>Output Example</b>    | <pre> TID-000 1998-06-20 14:30:00 M 001 COMPLD “SYNC-NE:PRI,FAC-1-2,WORK,ACT,PRS” ; </pre>  |  |
| <b>Output Parameters</b> | <AID>   | Access identifier from the “ <a href="#">26.30 SYNC_REF</a> ” section on page 26-60.   |
|                          | <REF>   | Rank of synchronization reference. Access identifier from the “ <a href="#">26.31 SYNCSW</a> ” section on page 26-60.  |
|                          | <REFVAL>  | Value of a synchronization reference. “ <a href="#">26.29 SYN_SRC</a> ” section on page 26-59.   |
|                          | <QREF>  | (Optional) Indicates whether the working or protect card (in a protection group) provides timing. This parameter has no significance if the reference source is BITS or INTERNAL and is left blank. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level for SONET. |
|                          | • DUS   | Do Not Use For Synchronization   |
|                          | • PRS   | Primary Reference Source, Stratum 1 Traceable  |
|                          | • RES   | Reserved For Network Synchronization Use   |
|                          | • SMC   | SONET Minimum Clock Traceable  |
|                          | • SSM-FAILED  | Incoming timing signal cannot be used for synchronization as it has an alarm like LOS, LOF, AIS-L.   |
|                          | • ST2   | Stratum 2 Traceable  |
|                          | • ST3   | Stratum 3 Traceable  |
|                          | • ST3E  | Stratum 3E Traceable   |
|                          | • ST4   | Stratum 4 Traceable  |
|                          | • STU   | Synchronized, Traceability Unknown   |
|                          | • TNC   | Transit Node Clock (2nd Generation Only)   |
|                          | <STATUS>  | (Optional) Status. The parameter type is STATUS, which is the status of the unit in the protection pair.   |
|                          | • ACT   | The entity is the active unit in the shelf.  |
|                          | • NA  | Status is unavailable.   |
|                          | • STBY  | The entity is the standby unit in the shelf.   |

|                 |   |
|-----------------|---|
| <PROTECTSTATUS> | (Optional) Applicable to 1+1. Designates the role of the entity in the protection group. Either it is the working or the protect entity. The parameter type is SIDE, which is the role the unit is playing in the protection group. |
| • PROT          | The entity is a protection unit in the protection group.  |
| • WORK          | The entity is a working unit in the protection group.   |

## 21.143 RTRV-T1

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve T1 Facility (RTRV-T1) command retrieves the DS-1 facilities configuration.

### Usage Guidelines

- The parameters SYNCMAP, ADMSSM, VTMAP, INHFELPBK, AND PROVIDESYNC are only displayed on the DS1/E1-56 card (ONS 15454).
- The parameters BERTMODE, BERTPATTERN, BERTERRCOUNT, BERTERRRATE, and BERTSYNCSTATUS apply only to DS1/E1-56 and DS3XM-12 cards.
- BERT is implemented on a single port.
- SENDDUS and RETIME are not supported on the ONS 15454.

**Output Parameters**

|                   |  |
|-------------------|--|
| <AID>             | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.                                   |
| <CLKSRC>          | <CLKSRC>   |
| • INTERNAL        | INTERNAL   |
| • LOOPBACK TIMING | LOOPBACK TIMING  |
| • SYNCE           | SYNCE  |
| • ADAPTIVE        | ADAPTIVE   |
| <LINECDE>         | (Optional) Line code. The parameter type is LINE_CODE.   |
| • AMI             | Line code value is AMI.  |
| • B3ZS            | Bipolar with three-zero substitution   |
| • B6ZS            | Line code value is B6ZS.   |
| • B8ZS            | Line code value is B8ZS.   |
| • JBZS            | JBZS   |
| • ZBTSI           | ZBTSI  |
| <FMT>             | (Optional) Digital signal frame format. The parameter type is FRAME_FORMAT, which is the frame format for a T1 port. |
| • AUTOPROV        | AUTOPROV   |
| • CBIT            | C-BIT line type applies to the DS3XM and DS3E cards.   |
| • D4              | Frame format is D4.  |
| • DS2 FRAMED      | DS2 FRAMED   |
| • E2 FRAMED       | E2 FRAMED  |
| • E3-FRAME        | E3-FRAME   |
| • E3-PLCP         | E3-PLCP  |
| • ESF             | Frame format is ESF.   |
| • FRAMENA         | FRAMENA  |
| • G-751           | G-751  |
| • G-832           | G-832  |
| • M13             | M13 line type applies to the DS3XM and DS3E cards.   |
| • M23             | M23  |
| • SYNTRAN         | SYNTRAN  |
| • UNFRAMED        | Frame format is unframed.  |

|            |  |
|------------|--|
| <LBO>      | (Optional) Line buildout settings. LBP is an integer. The parameter type is LINE_BUILDOUT.   |
| • 0-133    | Line buildout range is 0-133   |
| • 133-266  | Line buildout range is 133-266   |
| • 266-399  | Line buildout range is 266-399   |
| • 399-533  | Line buildout range is 399-533   |
| • 533-655  | Line buildout range is 533-655   |
| <TAP>      | (Optional) Defines the STS as a test access port with a selected unique TAP number. The TAP number is within a range of 0, 1 to 999. When TACC is 0 (zero), the TAP is deleted. Default is N.  |
| <TAPTYPE>  | (Optional) TAP type. The parameter type is TAPTYPE, which is the test access point type.   |
| • DUAL     | Dual FAD   |
| • SINGLE   | Single FAD   |
| <SOAK>     | (Optional) OOS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer.   |
| <SOAKLEFT> | (Optional) Time remaining for the transition from OOS-AINS to IS measured in 1 minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. SOAKLEFT is a string. Rules for SOAKLEFT are as follows: <ul style="list-style-type: none"> <li>• When the port is in OOS, OOS_MT, or IS state, the parameter will not appear.</li> <li>• When the port is in OOS_AINS but the countdown has not started due to fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in OOS_AINS state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <SFBER>    | (Optional) The port signal failure threshold. Defaults to 1E-4. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.   |
| • 1E-3     | SFBER is 1E-3.   |
| • 1E-4     | SFBER is 1E-4.   |
| • 1E-5     | SFBER is 1E-5.   |
| <SDBER>    | (Optional) Port signal degrade threshold. Defaults to 1E-7. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.   |
| • 1E-5     | SDBER is 1E-5.   |
| • 1E-6     | SDBER is 1E-6.   |
| • 1E-7     | SDBER is 1E-7.   |
| • 1E-8     | SDBER is 1E-8.   |
| • 1E-9     | SDBER is 1E-9.   |
| <NAME>     | (Optional) Port name. NAME is a string.  |
| <SYNCMSG>  | Synchronization status messaging is enabled or disabled on the T1 facility.  |
| • N        | Disable an attribute.  |

|                        |  |
|------------------------|--|
| • Y                    | Enable an attribute.   |
| <SENDDUS>              | The facility will send the DUS value as the sync status message for that facility.   |
| • N                    | Disable an attribute.  |
| • Y                    | Enable an attribute.   |
| <RETIME>               | (Optional) Indicates if retiming is needed.<br><br>The parameter type is YES_NO, which is whether the user's password is about to expire, the user is logged into the NE, or the user is locked out of the NE. |
| • NO                   | No   |
| • YES                  | Yes  |
| • FDL                  | Indicates the DS1 path of the DS3XM-12 is in FDL T1-403 mode.  |
| <AISONLPBK>            | (Optional) Defaults to AIS_ON_LPBK_ALL. The parameter type is AIS_ON_LPBK, which indicates if AIS is sent on a loopback  |
| • AIS_ONLPBK_FACILITY  | AIS is sent on facility loopbacks.   |
| • AIS_ON_LPBK_ALL      | AIS is sent on all loopbacks.  |
| • AIS_ON_LPBK_OFF      | AIS is not sent on loopbacks.  |
| • AIS_ON_LPBK_TERMINAL | AIS is sent on terminal loopbacks.   |
| <AISVON AIS>           | (Optional) Defaults to N. The parameter type is ON_OFF (disable or enable an attribute).   |
| • N                    | Disable an attribute.  |
| • Y                    | Enable an attribute.   |
| <AISVON LOF>           | (Optional) The parameter type is ON_OFF (disable or enable an attribute).  |
| • N                    | Disable an attribute.  |
| • Y                    | Enable an attribute.   |
| <MODE>                 | (Optional) Mode. Default value is FDL. The parameter type is DS1MODE, which is the DS1 path mode of the DS3XM-12 card  |
| • ATT                  | Indicates the DS1 path of the DS3XM-12 is in AT&T 54016 mode.  |
| • FDL                  | Indicates the DS1 path of the DS3XM-12 is in FDL T1-403 mode.  |
| <SYN CMAP>             | (Optional) The synchronous mapping for the DS1 facility. Defaults to ASYNC. Only supported on ONS 15454. The parameter type is SYN CMAP, which is the synchronous mapping type.                                |
| • ASYNC                | Asynchronous   |
| • BYTE                 | Byte   |
| • JBYTE                | Jbyte  |
| <ADM SSM>              | (Optional) The administrative synchronization status message. Only supported on the ONS 15454. The parameter type is SYNC_CLOCK_REF_QUALITY_LEVEL, which is the clock source quality level.                    |
| • DUS                  | Do Not Use For Synchronization   |
| • PRS                  | Primary Reference Source, Stratum 1 Traceable  |
| • RES                  | Reserved For Network Synchronization Use   |
| • SMC                  | SONET Minimum Clock Traceable  |

|                    |   |
|--------------------|---|
| • ST2              | Stratum 2 Traceable   |
| • ST3              | Stratum 3 Traceable   |
| • ST3E             | Stratum 3E Traceable  |
| • ST4              | Stratum 4 Traceable   |
| • STU              | Synchronized, Traceability Unknown  |
| • TNC              | Transit Node Clock (2nd Generation Only)  |
| <PROVIDESYNC>      | (Optional) Indicates whether the facility provides synchronization. Only supported on ONS 15454. The parameter type is ON_OFF (disable or enable an attribute).           |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| <VTMAP>            | (Optional) The port to VT mapping type for that particular STS. Only supported on ONS 15454. Defaults to GR253. The parameter type is VTMAP, which is the VT mapping.     |
| • GR253            | Mapping based on Telcordia GR-253.  |
| • INDUSTRY         | Mapping based on industry standard.   |
| <INHFPBK>          | (Optional) Indicates whether far end loopbacks are inhibited on the facility. Only supported on ONS 15454. The parameter type is ON_OFF (disable or enable an attribute). |
| • N                | Disable an attribute.   |
| • Y                | Enable an attribute.  |
| <BERTMODE>         | Specifies the mode [Test Pattern Generator (TPG) or Test Pattern Monitor (TPM)] of the port for BERT.   |
| • NONE             | BERT mode not enabled.  |
| • TPGM-L           | Test pattern generator and monitor on line side.  |
| • TPGM-B           | Test pattern generator and monitor on backplane.  |
| • TPG-L            | Test pattern generator on line side.  |
| • TPM-L            | Test pattern monitor on line side.  |
| • TPG-B            | Test pattern generator on backplane.  |
| • TPM-B            | Test pattern monitor on backplane.  |
| <BERTPATTERN>      | Specifies the error pattern to be injected for BERT.  |
| • NONE             | BERT pattern not enabled.   |
| • PRBS15           | PRBS15 test pattern.  |
| • PRBS20           | PRBS20 test pattern.  |
| • PRBS23           | PRBS23 test pattern.  |
| • QRSS             | QRSS test pattern.  |
| • ALT-ONE-ALT-ZERO | Alternate one and zero pattern.   |
| <BERTERRCOUNT>     | Integer value. Value -1 indicates that BERT is disabled/not supported.  |
| <BERTERRRATE>      | Specifies the BERT error rate received.   |
| • NONE             | No bit errors.  |
| • SINGLE           | Single bit error.   |
| • 1E-3             | Bit errors in 1E-3 rate.  |

|                  |   |
|------------------|---|
| • 1E-4           | Bit errors in 1E-4 rate.  |
| • 1E-5           | Bit errors in 1E-5 rate.  |
| • 1E-6           | Bit errors in 1E-6 rate.  |
| <BERTSYNCSTATUS> | Synchronization status of BERT values. The parameter type is Y_N, which specifies if synchronization status is up or down.  |
| Y                | BERT synchronization status is up.  |
| N                | BERT synchronization status is down.  |
| <PST>            | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.               |
| • IS             | In Service  |
| • OOS            | Out of Service  |
| <SST>            | Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS           | Automatic In-Service  |
| • DSBLD          | Disabled  |
| • LPBK           | Loopback  |
| • MEA            | Mismatch of Equipment   |
| • MT             | Maintenance   |
| • OOG            | Out of Group  |
| • SWDL           | Software Download   |
| • UAS            | Unassigned  |
| • UEQ            | Unequipped  |

## 21.144 RTRV-T3

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve T3 (RTRV-T3) command retrieves the facility properties of a DS3 or a DS3XM card.

### Usage Guidelines

- CTC can set the FMT attribute of a DS3NE line to AUTOPROVISION, to set the framing based on the incoming framing. This would result in the FMT field being blanked out for a few seconds or blanked out forever for a preprovisioned DS3NE card on CTC.
- The autoprovision is not considered a valid DS3 framing type. It is used only to trigger an autosense and subsequent autoprovisioning of a valid DS3 framing type (unframed, M23, C-BIT).
- TL1 does not have the autoprovision mode according to Telcordia GR-199. TL1 maps/returns the autoprovision to be unframed.
- For the DS3XM-12 card, the DS3/T3 configurable attributes (PM, TH, alarm, etc.) only apply on the ported ports (1 to 12) and the DS3-mapped (even) portless ports in xxx-xxx-T3 commands. If you attempt to provision or retrieve DS3/T3 attributes on the VT-mapped (odd) portless port in xxx-xxx-T3 commands, an error message will be returned.
- For the DS3XM-12 card, if the administrative state is already set for a portless port the state setting operation over its associated ported port is an invalid operation.
- The parameters BERTMODE, BERTPATTERN, BERTERRCOUNT, BERTERRRATE, and BERTSYNCSTATUS apply only to DS1/E1-56 and DS3XM-12 cards.

- BERT is implemented on a single port.

**Output Parameters**

|                       |   |
|-----------------------|---|
| <b>&lt;AID&gt;</b>    | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42.                  |
| <b>&lt;CLKSRC&gt;</b> | <b>&lt;CLKSRC&gt;</b>   |
| • INTERNAL            | INTERNAL  |
| • LOOPBACK TIMING     | LOOPBACK TIMING   |
| • SYNCE               | SYNCE   |
| • ADAPTIVE            | ADAPTIVE  |
| <b>&lt;FMT&gt;</b>    | (Optional) Digital signal format. The parameter type is DS_LINE_TYPE, which is the DS123 line type. |
| • AUTOPROV            | AUTOPROV  |

|              |  |
|--------------|--|
| • CBIT       | C-BIT line type applies to the DS3XM and DS3E cards.   |
| • DS2 FRAMED | DS2 FRAMED   |
| • E2 FRAMED  | E2 FRAMED  |
| • E3-FRAME   | E3-FRAME   |
| • E3-PLCP    | E3-PLCP  |
| • FRAMENA    | FRAMENA  |
| • G-751      | G-751  |
| • G-832      | G-832  |
| • M13        | M13 line type applies to the DS3XM and DS3E cards.   |
| • M23        | M23  |
| • SYNTRAN    | SYNTRAN  |
| • UNFRAMED   | Frame format is unframed.  |
| <LINECDE>    | (Optional) Line code. The parameter type is DS_LINE_CODE, which is the DS123 line code.  |
| • B3ZS       | Bipolar with three-zero substitution   |
| • B6ZS       | B6ZS   |
| • JBZS       | JBZS   |
| • ZBTSI      | ZBTSI  |
| <LBO>        | (Optional) Line buildout settings. LBO is an integer. The parameter type is E_LBO, which is the electrical signal line buildout.   |
| • 0–225      | Electrical signal line buildout range is 0–225.  |
| • 226–450    | Electrical signal line buildout range is 226–450.  |
| <INHFELPBK>  | (Optional) Far-end loopback inhibition attribute of the port. If it is Y, the automatic far-end loopbacks are inhibited. It is either on or off. The system default is N. The parameter type is ON_OFF (disable or enable an attribute). |
| • N          | Disable an attribute.  |
| • Y          | Enable an attribute.   |
| <TAP>        | (Optional) Defines the STS as a test access port with a selected unique TAP number. The TAP number is within a range of 0, 1 to 999. When TACC is 0 (zero), the TAP is deleted. Default is N.  |
| <TAPTYPE>    | (Optional) TAP type. The parameter type is TAPTYPE, which is the test access point type.   |
| • DUAL       | Dual FAD   |
| • SINGLE     | Single FAD   |
| <SOAK>       | (Optional) OOS-AINS to IS transition soak time as measured in 15-minute intervals. SOAK is an integer.   |

|                        |  |
|------------------------|--|
| <SOAKLEFT>             | (Optional) Time remaining for the transition from OOS-AINS to IS measured in 1 minute intervals. The format is HH-MM where HH ranges from 00 to 48 and MM ranges from 00 to 59. SOAKLEFT is a string. Rules for <SOAKLEFT> are as follows: <ul style="list-style-type: none"> <li>• When the port is in OOS, OOS_MT, or IS state, the parameter will not appear.</li> <li>• When the port is in OOS_AINS but the countdown has not started due to fault signal, the value will be SOAKLEFT=NOT-STARTED.</li> <li>• When the port is in OOS_AINS state and the countdown has started, the value will be shown in HH-MM format.</li> </ul> |
| <SFBER>                | (Optional) The port signal failure threshold. Defaults to 1E-4. The parameter type is SF_BER, which is the threshold for declaring signal failure on a facility or path.   |
| • 1E-3                 | SFBER is 1E-3.   |
| • 1E-4                 | SFBER is 1E-4.   |
| • 1E-5                 | SFBER is 1E-5.   |
| <SDBER>                | (Optional) Port signal degrade threshold. Defaults to 1E-7. The parameter type is SD_BER, which is the threshold for declaring signal degrade on a facility or path.   |
| • 1E-5                 | SDBER is 1E-5.   |
| • 1E-6                 | SDBER is 1E-6.   |
| • 1E-7                 | SDBER is 1E-7.   |
| • 1E-8                 | SDBER is 1E-8.   |
| • 1E-9                 | SDBER is 1E-9.   |
| <NAME>                 | (Optional) Port name. NAME is a string.  |
| <AISONLPBK>            | (Optional) AIS on loopback. The parameter type is AIS_ON_LPBK, which indicates if AIS is sent on a loopback.   |
| • AIS_ONLPBK_FACILITY  | AIS is sent on facility loopbacks.   |
| • AIS_ON_LPBK_ALL      | AIS is sent on all loopbacks.  |
| • AIS_ON_LPBK_OFF      | AIS is not sent on loopbacks.  |
| • AIS_ON_LPBK_TERMINAL | AIS is sent on terminal loopbacks.   |
| <BERTMODE>             | Specifies the mode [Test Pattern Generator (TPG) and Test Pattern Monitor (TPM)] of the port for BERT.   |
| • NONE                 | BERT mode not enabled.   |
| • TPGM-L               | Test pattern generator and monitor on line-side.   |
| • TPGM-B               | Test pattern generator and monitor on backplane.   |
| • TPG-L                | Test pattern generator on line-side.   |
| • TPM-L                | Test pattern monitor on line-side.   |
| • TPG-B                | Test pattern generator on backplane.   |
| • TPM-B                | Test pattern monitor on backplane.   |
| <BERTPATTERN>          | Specifies the error pattern to be injected for BERT.   |
| • NONE                 | BERT pattern not enabled.  |
| • PRBS15               | PRBS15 test pattern.   |

|                    |   |
|--------------------|---|
| • PRBS20           | PRBS20 test pattern.  |
| • PRBS23           | PRBS23 test pattern.  |
| • QRSS             | QRSS test pattern.  |
| • ALT-ONE-ALT-ZERO | Alternate one and zero pattern.   |
| <BERTERRCOUNT>     | Integer value. Value –1 indicates that BERT is disabled/not supported.  |
| <BERTERRRATE>      | Specifies the BERT error rate received.   |
| • NONE             | No bit errors.  |
| • SINGLE           | Single bit error.   |
| • 1E-3             | Bit errors in 1E-3 rate.  |
| • 1E-4             | Bit errors in 1E-4 rate.  |
| • 1E-5             | Bit errors in 1E-5 rate.  |
| • 1E-6             | Bit errors in 1E-6 rate.  |
| <BERTSYNCSTATUS>   | Synchronization status of BERT values. The parameter type is Y_N, which specifies if synchronization status is up or down.  |
| Y                  | BERT synchronization status is up.  |
| N                  | BERT synchronization status is down.  |
| <PST>              | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.               |
| • IS               | In Service  |
| • OOS              | Out of Service  |
| <SST>              | Secondary state of the entity. The parameter type is SST, which provides additional information pertaining to PST and PSTQ. |
| • AINS             | Automatic In-Service  |
| • DSBLD            | Disabled  |
| • LPBK             | Loopback  |
| • MEA              | Mismatch of Equipment   |
| • MT               | Maintenance   |
| • OOG              | Out of Group  |
| • SWDL             | Software Download   |
| • UAS              | Unassigned  |
| • UEQ              | Unequipped  |

## 21.145 RTRV-TACC

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Test Access (RTRV-TACC) command retrieves details associated with a TAP. The TAP is identified by the TAP number. The ALL input TAP value means that the command will return all the configured TACCs in the NE.

### Note

The RTRV-TACC command displays the working path AID irrespective of whether TACC is connected to the working or protect path of the path protected circuit.

|                          |   |   |
|--------------------------|---|---|
| <b>Usage Guidelines</b>  | None  |   |
| <b>Category</b>          | Troubleshooting and Test Access   |   |
| <b>Security</b>          | Retrieve  |   |
| <b>Input Format</b>      | RTRV-TACC:[<TID>]:<TAP>:<CTAG>;   |   |
| <b>Input Example</b>     | RTRV-TACC:CISCO:241:CTAG;   |   |
| <b>Input Parameters</b>  | <TAP>   | The assigned number for AID being used as a test access point. TAP must be an integer within a range of 1 to 999. The ALL TAP value returns all the configured TACCs in this NE. TAP is a string.             |
| <b>Output Format</b>     | <pre> SID DATE TIME M CTAG COMPLD "&lt;TAP&gt;:&lt;TACC_AIDA&gt;,&lt;TACC_AIDB&gt;,[&lt;MD&gt;],[&lt;CROSSCONNECTID1&gt;], &lt;AIDUNIONID&gt;,&lt;PATHWIDTH&gt;" ; </pre> |   |
| <b>Output Example</b>    | <pre> TID-000 1998-06-20 14:30:00 M 001 COMPLD "241:STS-2-1-1,STS-2-1-2,MONE,STS-12-1-1,STS-13-1-1,STS1" ; </pre>   |   |
| <b>Output Parameters</b> | <TAP>   | The assigned number for the AID being used as a test access point. TAP is an integer.   |
|                          | <TACC_AIDA>   | Access identifier from the <a href="#">"26.11 CrossConnectId" section on page 26-27</a> . The A path of the test access point. The first STS/VT path of the TAP.  |
|                          | <TACC_AIDB>   | Access identifier from the <a href="#">"26.11 CrossConnectId" section on page 26-27</a> . The B path of the test access point. The second STS/VT path of the TAP. For single FAD TAP this path will be empty. |
|                          | <MD>  | (Optional) Test access mode. It identifies the mode of access between the TAP and the circuit connected to the TAP. The parameter type is TACC_MODE, which is the test access mode.                           |

|                   |   |
|-------------------|---|
| • LOOPE           | Indicates to split both the A and B paths. Connect the line incoming from E direction to the line outgoing in the E direction, and connect this looped configuration to the FAD. The line outgoing in the F direction will have a QRS connected, and the line incoming from the F direction shall be terminated by the nominal characteristic impedance of the line. Intrusive test access mode.  |
| • LOOPF           | Indicates to split both the A and B paths. Connect the line incoming from F direction to the line outgoing in the F direction, and connect this looped configuration to the FAD. The line outgoing in the E direction shall have a QRS connected, and the line incoming from the E direction shall be terminated by the nominal characteristic impedance of the line. Intrusive test access mode. |
| • MONE            | Indicates that a monitor connection is to be provided from the FAD to the A transmission path of the accessed circuit.  |
| • MONEF           | Indicates that a monitor connection is to be provided from the FAD1 to a DFAD, or from the odd pair of a FAP to the A transmission path and from FAD2 of the same DFAD, or from the even pair of a FAP to the B transmission path of the accessed circuit.  |
| • MONF            | Indicates that a monitor connection is to be provided from the FAD to the B transmission path of the accessed circuit.  |
| • SPLTA           | Indicates that a connection is to be provided from both the E and F sides of the A transmission path of the circuit under test to the FAD and split the A transmission path. Intrusive test access mode.  |
| • SPLTB           | Indicates that a connection is to be provided from both the E and F sides of the B transmission path of the circuit under test to the FAD and split the B transmission path. Intrusive test access mode.  |
| • SPLTE           | Indicates to split both the A and B paths and connect the E side of the accessed circuit to the FAD. The line outgoing in the F direction shall have a QRS connected, and the line incoming from the F direction shall have a QRS connected, and the line incoming from the E direction shall be terminated by the nominal characteristic impedance of the line. Intrusive test access mode.      |
| • SPLTEF          | Indicates to split both the A and B paths, and connect the E side of the accessed circuit to FAD1 and the F side to FAD2. Intrusive test access mode.   |
| • SPLTF           | Indicates to split both the A and B paths, and connect the F side of the accessed circuit to the FAD. The line outgoing in the E direction shall have a QRS connected, and the line incoming in the E direction shall have a QRS connected, and the line incoming from the E direction shall be terminated by the nominal characteristic impedance of the line. Intrusive test access mode.       |
| <CROSSCONNECTID1> | (Optional) Access identifier from the <a href="#">“26.11 CrossConnectId” section on page 26-27</a> . The E path of the cross-connect.   |
| <PATHWIDTH>       | The cross-connection width. The parameter type is CRS_TYPE, which is the cross-connection type.   |
| • STS             | Indicates all the STS cross-connections.  |
| • STS1            | STS1 cross-connect  |
| • STS3C           | STS3C cross-connect   |

|                   |  |
|-------------------|--|
| • STS6C           | STS6C cross-connect  |
| • STS9C           | STS9C cross-connect  |
| • STS12C          | STS12C cross-connect   |
| • STS18C          | STS18C cross-connect   |
| • STS24C          | STS24C cross-connect   |
| • STS36C          | STS36C cross-connect   |
| • STS48C          | STS48C cross-connect   |
| • STS192C         | STS192C cross-connect  |
| • VT              | Indicates all the VT1 cross-connections.   |
| • VT1             | VT1 cross-connect  |
| • VT2             | VT2 cross-connect  |
| <CROSSCONNECTID2> | (Optional) Access identifier from the “ <a href="#">26.11 CrossConnectId</a> ” section on page 26-27. The F path of the cross-connect. |

## 21.146 RTRV-TADRMAP

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Target Identifier Address Mapping (RTRV-TADRMAP) command retrieves the contents of the TADRMAP table.

### Usage Guidelines

When MODE is NSAP, TID name of the NODE can be specified to trigger TARP.

### Category

System

### Security

Retrieve

### Input Format

RTRV-TADRMAP:[<TID>]:[<AID>]:<CTAG>[:::MODE=<MODE>];

### Input Example

RTRV-TADRMAP:CISCO:AIP:100:::MODE=PROV;

Additional input examples:

- To retrieve another node's NSAP (TID=NODE-1) while using a TL1 session on the local node (TID=NODE-2), follow this input example:

```
RTRV-TADRMAP:NODE-2:NODE-1:1:::MODE=NSAP;
```

Output example:

```
NODE-2 2006-01-26 14:47:30
```

```
M 1 COMPLD
```

```
"TIDNAME=NODE-1,NSAP=TARP request has been initiated. Check again later."
```

```
;
```

- ```
RTRV-TADRMAP:NODE-2::123;
  NODE-2 2006-01-26 14:47:38
M 123 COMPLD
  "TIDNAME=NODE-2,IPADDR=10.92.24.146,"
  "TIDNAME=NODE-1,NSAP=39840F8000000000000000000000000010010CFCE5A0200"
;
```
2. To retrieve the NSAP address of a node (TID=NODE-2) itself, follow this input example:
- ```
RTRV-TADRMAP:NODE-2:NODE-2:1::MODE=NSAP;
Output example:
  NODE-2 2006-01-26 14:48:07
M 1 COMPLD
  "TIDNAME=NODE-2,NSAP=39840F800000000000000000000000001000BFCF8A88500"
;
```
3. To retrieve the local TARP data cache (TDC) of a node (no AID required) follow this input example:
- ```
RTRV-TADRMAP:NODE-2::123::MODE=NSAP;
Output example:
  NODE-2 2006-01-26 13:47:38
M 123 COMPLD
  "TIDNAME=FOREIGN-NODE-1,NSAP=39840F800000000000000000000000001000075DE520800"
  "TIDNAME=FOREIGN-NODE-2,NSAP=39840F800000000000000000000000001000075D07A4A00"
  "TIDNAME=NODE-1,NSAP=39840F8000000000000000000000000010010CFCE5A0200"
;
```

**Input Parameters**

|        |                                                                                                                                               |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>  | AID is a target identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> . AID is a string. If AID is not null, MODE must be NSAP. |
| <MODE> | Must not be null. The parameter type is MODE, which determines the category of addresses to return.                                           |
| • ALL  | Discovered and provisioned addresses                                                                                                          |
| • DISC | Discovered addresses                                                                                                                          |
| • IP   | IP addresses                                                                                                                                  |
| • NSAP | NSAP addresses                                                                                                                                |
| • PROV | Provisioned                                                                                                                                   |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
  “[TID=<TID>],[IP ADDRESS =<IPADDRESS>],[NSAP=<NSAP>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
  "TID=RANGERS1,IP ADDRESS = 64.101.245.5,
  NSAP=39840FFFFFFFOOOODDDAA01D00F0400000700"
;
```

**Output Parameters**

|             |                                                |
|-------------|------------------------------------------------|
| <TID>       | (Optional) Target identifier. TID is a string. |
| <IPADDRESS> | (Optional) IP address. IPADDRESS is a string.  |
| <NSAP>      | (Optional) NSAP address. NSAP is a string.     |

## 21.147 RTRV-TH-<MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Threshold for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 4GFC, 2GFICON, 5GIB, 8GFC, CLNT, D1VIDEO, DS1, DV6000, DVBA5I, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, FSTE, G1000, GFPOS, GIGE, HDTV, ISC1, ILK, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTL, OTU2, OTU3, OTU4, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VT1, VT2, 3GVIDEO, SDSDI, HSDI, AUTO, OTU1, ISC3STP1G, or ISC3STP2G (RTRV-TH-<MOD2>) command retrieves the threshold level of one or more monitored parameters.

**Usage Guidelines**

The command supports the modifier 3GVIDEO, SDSDI, HSDI, AUTO, OTU1, ISC3STP1G, and ISC3STP2G.

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

**Note**

- After the BLSR switch, the working path is switched out, the traffic goes through the protection path, and the threshold can be retrieved from the protection path.
- If there is an STS PCA on the protection path during BLSR switching, the PCA path is preemptive; sending this command on the protection path after the BLSR switch, the command returns the PMs off the protection path, not from the PCA path.
- The message is issued to retrieve the thresholds for PM and alarm thresholds. If it is used to retrieve the alarm thresholds, the time-period is not applicable.
- The presentation rules are as follows:
  - Client port only—Laser, Alarm and SONET Thresholds are applicable and will appear. Laser and alarm thresholds are only for near end. If the card payload is in SONET mode, then SONET thresholds will appear. The Receiver Temperature Montypes (RXT) are only applicable to the Trunk Port. The Transceiver Voltage Montypes (XCVR) are not applicable, though it might be displayed or handled.
  - Laser and Alarm thresholds are always available. Laser and alarm thresholds are only for near end. If ITU-T G.709 is enabled, then the OTN thresholds will appear. If ITU-T G.709 is enabled and FEC is enabled, then the FEC thresholds will appear. If the card payload is in SONET mode, then SONET thresholds will appear. The Transceiver Voltage Montypes (XCVR) are not applicable, though it is displayed or handled.

- Refer to the *Cisco ONS SDH and Cisco ONS 15600 SONET TL1 Reference Guide* for specific card provisioning rules.
- The RTRV-TH-OTL retrieves Optical Thresholds. This command is denied on sublanes of CFP-LC card, as optical thresholds are retrieved on aggregate port. The command retrieves optical thresholds on sublanes of 100G-LC-C card.
- The RTRV-TH-<MOD2> is denied when retrieving optical thresholds on Aggregate port of 100G-LC-C card.
- The RTRV-TH-<MOD2> is denied on virtual ports of 100G-LC-C as they are retrieved on Aggregate port of CFP-LC card.
- RTRV-TH-OCH on fixed trunk of the 100G-LC-C card also retrieves OSNR and PMD TCA thresholds.

| • PMD-MAX   | Maximum Polarization Mode Dispersion.                                                          |
| • PMD-AVG   | Average Polarization Mode Dispersion.                                                          |

|            |                                                                                                                                                                                                                                                               |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <LOCN>     | Location associated with a particular command in reference to the entity identified by the AID. LOCN defaults to NEND (near end). A null value is equivalent to ALL. The parameter type is LOCATION, which is the location where the action is to take place. |
| • FEND     | Action occurs on the far end of the facility.                                                                                                                                                                                                                 |
| • NEND     | Action occurs on the near end of the facility.                                                                                                                                                                                                                |
| <TMPER>    | Accumulation time period for performance counters. Defaults to 15-MIN. Must not be null. The parameter type is TMPER, which is the accumulation time period for the performance management center                                                             |
| • 1-DAY    | Performance parameter accumulation interval length; every 24-hours. For SONET PM data only one day of history data is available. For RMON managed PM data seven days of history data are available.                                                           |
| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.                                                                                              |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.                                                                                               |
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.                                                                                            |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.                                                                                                       |

| • PMD-MIN   | Minimum Polarization Mode Dispersion.                                                                                                              |
| • PMD-MAX   | Maximum Polarization Mode Dispersion.                                                                                                              |
| • PMD-AVG   | Average Polarization Mode Dispersion.                                                                                                              |
| <LOCN>      | (Optional) Location associated with a particular command. The parameter type is LOCATION, which is the location where the action is to take place. |
| • FEND      | Action occurs on the far end of the facility.                                                                                                      |
| • NEND      | Action occurs on the near end of the facility.                                                                                                     |

|            |                                                                                                                                                                                                       |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <THELV>    | Threshold level. THLEV is a float.                                                                                                                                                                    |
| <TMPER>    | (Optional) Accumulation time period for performance counters. The parameter type is TMPER, which is the accumulation time period for the performance management center.                               |
| • 1-DAY    | Performance parameter accumulation interval length; every 24-hours. For SONET PM data, only one day of history data is available. For RMON managed PM data, seven days of history data are available. |
| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.                                      |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.                                       |
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.                                    |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.                                               |

## 21.148 RTRV-TH-ALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Threshold All (RTRV-TH-ALL) command retrieves the threshold level of all monitored parameters on the NE.

### Usage Guidelines

- After a BLSR switch, the working path is switched out, the traffic goes through the protection path, and the threshold can be retrieved from the protection STS path.
- If there is an STS PCA on the protection path during BLSR switching, the PCA path is preemptive; sending this command on the protection path after a BLSR switch, the command returns the PMs from the protection path, not from the PCA path.
- Multiple RTRV completion codes will appear after the execution of this command according to Telcordia GR-1831-CORE for bulk retrievals. The final completion code after the multiple RTRV codes is COMPLD.
- Some monitored types are not available for some cards or cross-connect types. In that case, a 0 value will appear for the monitored type. This will happen only when a user requests the thresholds of a specific monitored parameter on the NE, and the monitored type does not apply to that card or cross-connect type. When the user does not filter by monitored type, the applicable thresholds will be retrieved.
- If the user requests the thresholds of a particular monitored type and if the monitored type is not applicable to some of the entities, DENY will not be returned.

| • PMD-MAX   | Maximum Polarization Mode Dispersion.                                                                                                                                                              |
| • PMD-AVG   | Average Polarization Mode Dispersion.                                                                                                                                                              |
| <LOCATION>  | The location. A null value defaults to NEND. The parameter type is LOCATION, which is the location where the action is to take place.                                                              |
| • FEND      | Action occurs on the far end of the facility.                                                                                                                                                      |
| • NEND      | Action occurs on the near end of the facility.                                                                                                                                                     |
| <TMPER>     | The accumulation time period for performance counters. A null value defaults to 15-MIN. The parameter type is TMPER, which is the accumulation time period for the performance management counter. |
| • 1-DAY     | Performance parameter accumulation interval length is every 24 hours.                                                                                                                              |
| • 1-HR      | Performance parameter accumulation interval length is every 1 hour.                                                                                                                                |
| • 1-MIN     | Performance parameter accumulation interval length is every 1 minute.                                                                                                                              |
| • 15-MIN    | Performance parameter accumulation interval length is every 15 minutes.                                                                                                                            |
| • RAW-DATA  | Performance parameter accumulation interval length starts from the last time the counters were cleared. This is only applicable to RMON-managed PMs.                                               |

**Output Parameters**

|           |                                                                                                                                                                                   |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>     | Access identifier from the <a href="#">“26.2 AidUnionId”</a> section on page 26-13.                                                                                               |
| <AIDTYPE> | Specifies the type of facility, link, or other addressable entity targeted by the message. The parameter type is MOD2B, which is the alarm type for certain generic TL1 commands. |
| • 10GIGE  | 10 Gigabit Ethernet.                                                                                                                                                              |
| • 100GIGE | 100 Gigabit Ethernet.                                                                                                                                                             |
| • 1GFC    | 1-Gigabit Fibre Channel payload                                                                                                                                                   |
| • 1GFICON | 1-Gigabit fiber connectivity payload                                                                                                                                              |
| • 2GFC    | 2-Gigabit Fibre Channel payload                                                                                                                                                   |
| • 10GFC   | 10-Gigabit Fibre Channel payload                                                                                                                                                  |
| • 2GFICON | 2-Gigabit fiber connectivity payload                                                                                                                                              |
| • 3GVIDEO | 3G-SDI video payload.                                                                                                                                                             |
| • 4GFC    | 4-Gigabit Fibre Channel payload                                                                                                                                                   |
| • 4GFICON | 4-Gigabit fiber connectivity payload                                                                                                                                              |
| • 40GIGE  | 40-Gigabit Ethernet                                                                                                                                                               |
| • 5GIB    | 5Gbps InfiniBand (IB_5G) payload                                                                                                                                                  |
| • 8GFC    | 8-Gigabit Fibre Channel payload                                                                                                                                                   |
| • BITS    | BITS alarm                                                                                                                                                                        |
| • CHGRP   | Channel group                                                                                                                                                                     |
| • CLNT    | Client facility for MXP/TXP cards                                                                                                                                                 |
| • COM     | Common alarm                                                                                                                                                                      |
| • DS1     | DS1 alarm                                                                                                                                                                         |
| • DS3I    | DS3I alarm                                                                                                                                                                        |
| • DVBASI  | Digital Video Broadband Asynchronous Serial Interface (DVBASI) payload                                                                                                            |
| • E100    | E100 alarm                                                                                                                                                                        |
| • E1000   | E1000 alarm                                                                                                                                                                       |
| • EC1     | EC1 alarm                                                                                                                                                                         |
| • ENV     | ENV alarm                                                                                                                                                                         |
| • EQPT    | EQPT alarm                                                                                                                                                                        |
| • FC      | Fibre Channel alarm                                                                                                                                                               |
| • FSTE    | FSTE alarm                                                                                                                                                                        |
| • G1000   | G1000 alarm                                                                                                                                                                       |
| • GIGE    | GIGE alarm                                                                                                                                                                        |
| • HDLC    | High-level data link control (HDLC) frame mode.                                                                                                                                   |
| • HDSDI   | 1.5G HD-SDI video payload                                                                                                                                                         |

|              |                                                                                                                     |
|--------------|---------------------------------------------------------------------------------------------------------------------|
| • ISC1       | InterSystem Channel, a protocol defined by IBM (ISC1) payload                                                       |
| • ISC3PEER1G | 1 Gbps ISC3 Peer                                                                                                    |
| • ISC3PEER2G | 2 Gbps ISC3 Peer                                                                                                    |
| • ISC3PEER2R | 1 Gbps or 2 Gbps ISC3 peer used in transparent (2R) mode                                                            |
| • ISC3STP1G  | ISC-3 STP 1G video payload.                                                                                         |
| • ISC3STP2G  | ISC-3 STP 2G video payload.                                                                                         |
| • ISCCOMPAT  | 1 Gbps ISC1, ISC2, and ISC3 compatibility                                                                           |
| • MSISC      | MSISC                                                                                                               |
| • OC3        | OC3 alarm                                                                                                           |
| • OC12       | OC12 alarm                                                                                                          |
| • OC48       | OC48 alarm                                                                                                          |
| • OC192      | OC192 alarm                                                                                                         |
| • OC768      | OC768 alarm                                                                                                         |

| • OSNR-AVG  | Average Optical Signal To Noise Ratio.                                                                                                                                                             |
| • PMD-MIN   | Minimum Polarization Mode Dispersion.                                                                                                                                                              |
| • PMD-MAX   | Maximum Polarization Mode Dispersion.                                                                                                                                                              |
| • PMD-AVG   | Average Polarization Mode Dispersion.                                                                                                                                                              |
| <LOCATION>  | The location. A null value defaults to NEND. The parameter type is LOCATION, which is the location where the action is to take place.                                                              |
| • FEND      | Action occurs on the far end of the facility.                                                                                                                                                      |
| • NEND      | Action occurs on the near end of the facility.                                                                                                                                                     |
| <THLEV>     | Threshold level. Indicates the threshold value. THLEV is a float.                                                                                                                                  |
| <TMPER>     | The accumulation time period for performance counters. A null value defaults to 15-MIN. The parameter type is TMPER, which is the accumulation time period for the performance management counter. |
| • 1-DAY     | Performance parameter accumulation interval length is every 24 hours.                                                                                                                              |
| • 1-HR      | Performance parameter accumulation interval length is every 1 hour.                                                                                                                                |
| • 1-MIN     | Performance parameter accumulation interval length is every 1 minute.                                                                                                                              |
| • 15-MIN    | Performance parameter accumulation interval length is every 15 minutes.                                                                                                                            |
| • RAW-DATA  | Performance parameter accumulation interval length starts from the last time the counters were cleared. This is only applicable to RMON-managed PMs.                                               |

## 21.149 RTRV-TOD

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Time of Day (RTRV-TOD) command retrieves the system date and time at the instant when the command was executed. The time returned is in Coordinated Universal Time (UTC).

**Usage Guidelines** None

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |        |                                              |         |                                                                 |       |                                                              |        |                                                              |          |                                                                   |          |                                                                     |              |                                                                                                          |        |                    |        |                    |        |                      |        |                    |        |                    |        |                    |        |                    |        |                    |        |                    |

## 21.151 RTRV-TRC-<OCN\_BLSR>

(Cisco ONS 15454) The Retrieve Trace Client for OC12, OC192, OC48, or OC768 (RTRV-TRC-<OCN\_BLSR>) command retrieves the valid J1 expected trace string, retrieved trace string, trace mode, C2 byte, and STS bandwidth of the OC-N port only if the port has a BLSR.

### Usage Guidelines

- See [Table 28-1 on page 28-1](#) for supported modifiers by platform.
- This command only applies to OC48AS and OC192 cards.

- Sending this command over unsupported BLSR path trace cards, or unequipped cards will result in a J1 Trace Not Supported On This Card (IIAC) error.

| • STS9C                  | Synchronous Transport Signal level 9 Concatenated (465 Mbps)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |       |                                                                               |         |                                                                                                                        |        |                                                |          |                                                               |          |                                                               |           |                                                    |          |                                                                |          |                                                                |         |                                                              |          |                                                                |         |                                                              |         |                                                              |

|               |                                                                                                                                                                                                                                  |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <EXPTRC>      | (Optional) Expected path trace content. Indicates the expected path trace message (J1) contents. EXPTRC is any 64-character ASCII string, including the terminating CR (carriage return) and LF (line feed). EXPTRC is a string. |
| <INCTRC>      | (Optional) The incoming path trace message contents. INCTRC is any combination of 64 characters including CR and LF. INCTRC is a string.                                                                                         |
| <TRCMODE>     | (Optional) Trace mode. The parameter type is TRCMODE (trace mode).                                                                                                                                                               |
| • AUTO        | Use the previously received path trace string as the expected string. Not applicable to MXP/TXP cards.                                                                                                                           |
| • AUTO-NO-AIS | Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIM-P is detected.                                                                                                        |
| • MAN         | Use the provisioned expected string as the expected string                                                                                                                                                                       |
| • MAN-NO-AIS  | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.                                                                                                                  |
| • OFF         | Turn off path trace capability. Nothing will be reported                                                                                                                                                                         |
| <C2>          | (Optional) The C2 byte hex code. Applicable only to STS-level paths in SONET (STS <sub>n</sub> ). The parameter type is C2_BYTE, which is the C2 byte hex code.                                                                  |

| • 0XFF | Reserved, however, C2 is 0XFF if AIS-L is being generated by an optical card or cross-connect downstream. |

## 21.152 RTRV-TRC-OCH

(Cisco ONS 15454) The Retrieve Trace Optical Channel (RTRV-TRC-OCH) command retrieves the sent trace string, expected trace string, received trace string, trace mode, and the trace level for the SONET J0 Section, the TTI PATH and SECTION monitoring levels of the DWDM facility.

### Usage Guidelines

The following rules apply:

- Client port—only the J0 Section trace applies.
- The J0 Section trace applies only if the card termination mode is not transparent and the payload is SONET.
- On the DWDM port, the J0 Section trace, the TTI Path, Section trace monitoring point traces are allowed.
- The J0 Section trace is allowed only if the payload for the card is set to SONET.
- The J0 Section trace is allowed only if the card termination mode is not transparent.
- The TTI Path, Section trace is allowed only if the ITU-T G.709 (DWRAP) is enabled.

Depending on the settings, the following filtering applies:

- If no TRCLEVEL is provided, all TRCLEVELs are reported as applicable.
- If TRCLEVEL is provided and no MSGTYPE is provided, all applicable MSGTYPEs for the given level are displayed.
- If no MSGTYPE is provided, all MSGTYPEs are reported as applicable.
- If a MSGTYPE is provided with out a TRCLEVEL, then the given MSGTYPE for all TRCLEVELs are displayed.

**Category** DWDM

**Security** Retrieve

**Input Format** RTRV-TRC-OCH:[<TID>]:<SRC>:<CTAG>::[<MSGTYPE>],[<TRCLEVEL>][::];

**Input Example** RTRV-TRC-OCH:CISCO:CHAN-2-2:100::EXPTRC,TTI-PM;

| • T3          | T1/DS1 facility/line                                                                                                                                                                                                                                          |
| • VT1         | VT1 path                                                                                                                                                                                                                                                      |
| • VT2         | VT2 path                                                                                                                                                                                                                                                      |
| <TRCLEVEL>    | (Optional) The trace level to be managed. The parameter type is TRCLEVEL, which is the trace mode options.                                                                                                                                                    |
| • J0          | Identifies the SONET J0 Section trace level.                                                                                                                                                                                                                  |
| • TTI-PM      | Identifies the TTI Path monitoring point.                                                                                                                                                                                                                     |
| • TTI-SM      | Identifies the TTI Section monitoring point.                                                                                                                                                                                                                  |
| <EXPTRC>      | (Optional) Expected path trace content. A 64 character ASCII string.                                                                                                                                                                                          |
| <TRC>         | (Optional) The path trace message to be transmitted. The trace byte continuously transmits a 64 byte, fixed length ASCII string, one byte at a time. A null value defaults to the NE transmitting 62 null characters (hex 00) and CR and LF. TRC is a string. |
| <INCTRC>      | (Optional) The incoming path trace message contents. INCTRC is a string.                                                                                                                                                                                      |
| <TRCMODE>     | (Optional) Trace mode. The parameter type is TRCMODE (trace mode).                                                                                                                                                                                            |
| • AUTO        | Use the previously received path trace string as the expected string. Not applicable to MXP/TXP cards.                                                                                                                                                        |
| • AUTO-NO-AIS | Use the previously received path trace string as the expected string and do not turn on AIS and RDI if TIM-P is detected.                                                                                                                                     |

|              |                                                                                                                                                                                                              |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| • MAN        | Use the provisioned expected string as the expected string.                                                                                                                                                  |
| • MAN-NO-AIS | Use the provisioned expected string as the expected string and do not turn on AIS and RDI if TIM-P is detected.                                                                                              |
| • OFF        | Turn off path trace capability. Nothing will be reported.                                                                                                                                                    |
| <TRCFORMAT>  | (Optional) The size of the trace message. If in SONET mode, only 1 or 16 bytes is applicable for the J0 section trace. The TTI level trace is only 64 bytes. The parameter type is TRCFORMAT (trace format). |
| • 1-BYTE     | 1 byte trace message                                                                                                                                                                                         |
| • 16-BYTE    | 16 byte trace message                                                                                                                                                                                        |
| • 64-BYTE    | 64 byte trace message                                                                                                                                                                                        |
| • Y          | Enable an attribute.                                                                                                                                                                                         |

## 21.153 RTRV-TRC-OTU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Trace Optical Transport Unit Level (RTRV-TRC-OTU) command retrieves the sent trace string, expected trace string, received trace string, trace mode, and the trace level for the SDH J0 section and the TTI PATH and SECTION monitoring levels of the DWDM facility.

### Usage Guidelines

- On the client port:
  - Only the J0 section trace applies.
  - The J0 section trace applies only if the card termination mode is not transparent and the payload is SDH.
- On the DWDM port:
  - The J0 section trace and the TTI path and section trace monitoring point traces are allowed.
  - The J0 section trace is allowed only if the payload for the card is set to SDH.
  - The J0 section trace is allowed only if the card termination mode is not transparent. The TTI path and section trace is allowed only if ITU-T G.709 (DWRAP) is enabled.
- Depending on the settings, the following filtering applies:
  - If no TRCLEVEL is provided, all TRCLEVELs are reported as applicable.
  - If TRCLEVEL is provided and no MSGTYPE is provided, all applicable MSGTYPEs for the given level are displayed.
  - If no MSGTYPE is provided, all MSGTYPEs are reported as applicable.
  - If an MSGTYPE is provided with out a TRCLEVEL, then the given MSGTYPE for all TRCLEVELs are displayed.

| <TRCFORMAT>                                                                                                                         | (Optional) The size of the trace message. If in SDH mode, only 1 or 16 bytes is applicable for the J0 section trace. The TTI level trace is only 64 bytes. The parameter type is TRCFORMAT, which is the trace format.                                                                                                                                                                                                                                                                                                                                     |
| <ul style="list-style-type: none"> <li>• 1-BYTE</li> </ul>                                                                          | 1-byte trace message                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**Table 21-9** Output Parameter Support

| Parameter | Description           |
|-----------|-----------------------|
| • 16-BYTE | 16-byte trace message |
| • 64-BYTE | 64-byte trace message |

## 21.154 RTRV-TUNNEL-FIREWALL

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Tunnel Firewall (RTRV-TUNNEL-FIREWALL) command retrieves the contents of the firewall tunnel table.

### Usage Guidelines

None

### Category

System

### Security

Retrieve

### Input Format

RTRV-TUNNEL-FIREWALL:[<TID>]::<CTAG>;

### Input Example

RTRV-TUNNEL-FIREWALL:TID::CTAG;

### Input Parameters

None that require description

### Output Format

```
SID DATE TIME
M CTAG COMPLD
"[SRC ADDR=<SRCADDR>],[SRC MASK=<SRCMASK>],[DEST ADDR=<DESTADDR>],
[DEST MASK=<DESTMASK>]"
;
```

### Output Example

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"SRC ADDR=64.101.150.10,SRC MASK=255.255.255.0,DEST ADDR=64.101.144.7,
DEST MASK=255.255.255.0"
;
```

**Table 21-10** Output Parameter Support

|            |                                                          |
|------------|----------------------------------------------------------|
| <SRCADDR>  | (Optional) Source IP address. SRCADDR is a string.       |
| <SRCMASK>  | (Optional) Source mask. SRCMASK is a string.             |
| <DESTADDR> | (Optional) Destination IP address. DESTADDR is a string. |
| <DESTMASK> | (Optional) Destination mask. DESTMASK is a string.       |

## 21.155 RTRV-TUNNEL-PROXY

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Tunnel Proxy command retrieves the contents of the proxy tunnel table.

**Usage Guidelines** None

**Category** System

**Security** Retrieve

**Input Format** RTRV-TUNNEL-PROXY:[<TID>]::<CTAG>;

**Input Example** RTRV-TUNNEL-PROXY:TID::CTAG;

**Input Parameters** None that require descriptions

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"[SRC ADDR=<SRCADDR>],[SRC MASK=<SRCMASK>],[DEST ADDR=<DESTADDR>],
[DEST MASK=<DESTMASK>]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"SRC ADDR=64.101.150.10,SRC MASK=255.255.255.0,DEST ADDR=64.101.144.7,
DEST MASK=255.255.255.0"
;
```

**Table 21-11 Output Parameter Support**

|            |                                                          |
|------------|----------------------------------------------------------|
| <SRCADDR>  | (Optional) Source IP address. SRCADDR is a string.       |
| <SRCMASK>  | (Optional) Source mask. SRCMASK is a string.             |
| <DESTADDR> | (Optional) Destination IP address. DESTADDR is a string. |
| <DESTMASK> | (Optional) Destination mask. DESTMASK is a string.       |

## 21.156 RTRV-UNICFG

(Cisco ONS 15454, Cisco ONS 15454 M2, Cisco ONS 15454 M6) The Retrieve User Network Interface Configuration (RTRV-UNICFG) command retrieves the attributes and service parameters of the UNI configuration created.

### Usage Guidelines

- With the VALMODE parameter value as NONE, the VALZONE parameter is not applicable, and hence not displayed.

### Category

DWDM

### Security

Provisioning

### Input Format

RTRV-UNICFG:[<TID>]:<src>:<CTAG>::[:];

### Input Example

RTRV-UNICFG::LINE-2-3:1;

**Table 21-12 Input Parameter Support**

| Parameter | Description                                          |
|-----------|------------------------------------------------------|
| <SRC>     | Source AID from the “26.1 ALL” section on page 26-1. |

### Output Format

SID DATE TIME  
M CTAG COMPLD

“<SRC>:<RVRS AID>,<RSYSIP>,<RIFCIP>,<MSTPIP>,<COMMIP>,<VALMODE>,<VALZONE>,<DESCR>,<ADMINSTATE>,<RESTTYPE>”

;

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
```

```
“LINE-2-1:LINE-4-3,10.11.12.13,14.15.16.17,18.19.20.21,22.23.24.25,VALMODE=FULL,VALZONE=GREEN,DESCR=CISCO”
```

```
;
```

**Table 21-13 Output Parameter Support**

| Parameter    | Description                                                            |
|--------------|------------------------------------------------------------------------|
| <SRC>        | Source AID from the “26.1 ALL” section on page 26-1.                   |
| <RVRS AID>   | Destination AID from the “26.1 ALL” section on page 26-1.              |
| <RSYSIP>     | Remote system IP.                                                      |
| <RIFCIP>     | Remote interface IP.                                                   |
| <MSTPIP>     | MSTP interface IP.                                                     |
| <COMMIP>     | Communication IP.                                                      |
| <VALMODE>    | Identifies the validation mode.                                        |
| • NONE       | No optical validation is performed.                                    |
| • FULL       | The optical validation is performed as indicated in VALZONE parameter. |
| <VALZONE>    | Identifies the validation operate zone.                                |
| • UNKNOWN    | Not evaluated.                                                         |
| • GREEN      | Margin > 3 sigma.                                                      |
| • YELLOW     | 1 < margin < 3 sigma.                                                  |
| • ORANGE     | 0 < margin < 1 sigma.                                                  |
| • RED        | -3 < margin < 0 sigma.                                                 |
| • OUT        | Margin < -3 sigma.                                                     |
| <ADMINSTATE> | Identifies the adminstate is UP or DOWN.                               |
| • UP         | Indicates Adminstate is UP and UNI Services can be activated.          |
| • DOWN       | Indicates Adminstate is DOWN and UNI Services cannot be activated.     |
| <RESTTYPE>   | Identifies the restoration type on UNI configuration.                  |
| • NONE       | None restoration type for UNICFG.                                      |
| • RESTORE    | Restore restoration type for UNICFG.                                   |

## 21.157 RTRV-USER-SECU

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve User Security (RTRV-USER-SECU) command retrieves the security information of a specified user or list of users. The keyword ALL can be used to obtain a list of all users. For security reasons the password cannot be retrieved.

**Usage Guidelines**

- A Superuser can retrieve any user's security information. A user with MAINT, PROV, or RTRV privileges can only retrieve their own information.
- When using the keyword ALL, all users created for the system are displayed. This includes users created outside of the TL1 environment as well. Users displayed through the RTRV-USER-SECU command, these users shall also be able to log into the TL1 environment.

**Category**

Security

**Security**

Retrieve

**Note**

Maintenance, Provisioning and Retrieve users can retrieve their own information only.

**Input Format**

RTRV-USER-SECU:[&lt;TID&gt;]:&lt;UID&gt;:&lt;CTAG&gt;;

**Input Example**

RTRV-USER-SECU::CISCO15:1;

**Input Parameters**

|       |                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------|
| <UID> | User identifier. The user ID or the keyword ALL. A non-Superuser can only specify his own user ID. Must not be null. UID is a string. |
|-------|---------------------------------------------------------------------------------------------------------------------------------------|

**Output Format**

```

SID DATE TIME
M CTAG COMPLD
"<UID>:,<PRIVILEGE>:LOGGEDIN=<LOGGEDIN>,[NUMSESSIONS=<NUMSESS>],[
  [LOCKEDOUT=<LOCKEDOUT>],[DISABLED=<DISABLED>]"
;

```

**Output Example**

```

TID-000 1998-06-20 14:30:00
M 001 COMPLD
"CISCO15:.,SUPER:LOGGEDIN=YES,NUMSESSIONS=1,LOCKEDOUT=NO,DISABLED=NO"
;

```

**Output Parameters**

|             |                                                                                                |
|-------------|------------------------------------------------------------------------------------------------|
| <UID>       | User identifier. The user ID that was retrieved. UID is a string.                              |
| <PRIVILEGE> | The privilege level of the user. The parameter type is PRIVILEGE, which is the security level. |
| • MAINT     | Maintenance security level. 60 minutes of idle time.                                           |
| • PROV      | Provision security level. 30 minutes of idle time.                                             |
| • RTRV      | Retrieve security level. Unlimited idle time.                                                  |
| • SUPER     | Superuser security level. 15 minutes of idle time.                                             |
| • ROOT_USER | Root user.                                                                                     |

|             |                                                                                                                                                                                                                                   |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| • SEC_SUPER | Security super user.                                                                                                                                                                                                              |
| • SEC_USER  | Security user.                                                                                                                                                                                                                    |
| <LOGGEDIN>  | Indicates whether the user is logged in to the NE. The parameter type is YES_NO, which indicates whether the user's password is about to expire, the user is logged into the NE, or the user is locked out of the NE.             |
| • NO        | No                                                                                                                                                                                                                                |
| • YES       | Yes                                                                                                                                                                                                                               |
| <NUMSESS>   | (Optional) The number of times the user is logged into the NE. NUMSESS is an integer.                                                                                                                                             |
| <LOCKEDOUT> | (Optional) Indicates whether the user is locked out of the NE. The parameter type is YES_NO, which indicates whether the user's password is about to expire, the user is logged into the NE, or the user is locked out of the NE. |
| • NO        | No                                                                                                                                                                                                                                |
| • YES       | Yes                                                                                                                                                                                                                               |
| <DISABLED>  | (Optional) Indicates if the user is disabled. The parameter type is YES_NO, which indicates whether the user's password is about to expire, the user is logged into the NE, or the user is locked out of the NE.                  |
| • NO        | No                                                                                                                                                                                                                                |
| • YES       | Yes                                                                                                                                                                                                                               |

## 21.158 RTRV-VCG

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Retrieve Virtual Concatenation Group (RTRV-VCG) command retrieves all the attributes provisioned for a VCG.

**Usage Guidelines** None

**Category** VCAT

**Security** Retrieve

**Input Format** RTRV-VCG:[<TID>]:<SRC>:<CTAG>[:::];

**Input Example** RTRV-VCG:NODE1:FAC-1-1:1234;

|                          | <TXCOUNT>                                                                                                                                                                                          | Number of VCG members in the transmit (Tx) direction. For ML1000-2 and ML100T-12 cards, the only valid value is 2. For the FC_MR-4 card, the only valid value is 8. TXCOUNT is an integer.                                                                                                                                  |

|            |                                                                                                                                                                                                                                          |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <CCT>      | Type of connection; one-way or two-way. Cross-connect type for the VCG member cross-connects. The parameter type is CCT, which is the type of cross-connect to be created.                                                               |
| • 1WAY     | A unidirectional connection from a source tributary to a destination tributary                                                                                                                                                           |
| • 1WAYDC   | Path Protection multicast drop with one-way continue                                                                                                                                                                                     |
| • 1WAYEN   | Path Protection multicast end node with one-way continue                                                                                                                                                                                 |
| • 1WAYMON  | A bidirectional connection between the two tributaries<br><br><b>Note</b> 1WAYMON is not supported with TL1. However, it is still supported from CTC. Using CTC, you can create 1WAYMON cross-connects that can be retrieved by TL1.     |
| • 1WAYPCA  | A unidirectional connection from a source tributary to a destination tributary on the protection path/fiber                                                                                                                              |
| • 2WAY     | A bidirectional connection between the two tributaries                                                                                                                                                                                   |
| • 2WAYDC   | A bidirectional drop and continue connection applicable only to path protection traditional and integrated dual-ring interconnects                                                                                                       |
| • 2WAYPCA  | A bidirectional connection between the two tributaries on the extra protection path/fiber                                                                                                                                                |
| • DIAG     | Diagnostics cross-connect. Supports BERT (BLSR PCA diagnostics cross-connect).                                                                                                                                                           |
| <LCAS>     | (Optional) Link capacity adjustment scheme. The parameter type is LCAS, which is the link capacity adjustment scheme mode for the VCG created.                                                                                           |
| • LCAS     | LCAS is enabled.                                                                                                                                                                                                                         |
| • NONE     | No LCAS.                                                                                                                                                                                                                                 |
| • SW-LCAS  | Supports the temporary removal of a VCG member during the member failure. Only supported by the ML1000-2 and ML100T-12 cards.                                                                                                            |
| <BUFFERS>  | (Optional) Buffer type. The default value is DEFAULT. The FC_MR-4 card supports DEFAULT and EXPANDED buffers. Other data cards support DEFAULT buffers only. The parameter type is BUFFER_TYPE, which is the buffer type (used in VCAT). |
| • DEFAULT  | Default buffer value                                                                                                                                                                                                                     |
| • EXPANDED | Expanded buffer value                                                                                                                                                                                                                    |
| <NAME>     | (Optional) Name of the VCAT group. NAME is a string.                                                                                                                                                                                     |
| <PST>      | (Optional) Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.                                                                                                                 |
| • IS       | In Service                                                                                                                                                                                                                               |
| • OOS      | Out of Service                                                                                                                                                                                                                           |

## 21.159 RTRV-VLAN

(Cisco ONS 15454) The Retrieve Virtual LAN (RTRV-VLAN) command retrieves a virtual LAN entry from the VLAN database. The VLAN database is a collection of VLANs used in an NE.

**Usage Guidelines**

- If the AID is invalid, an IIAC (Invalid AID) error message is returned.

**Category**

Ethernet

**Security**

Retrieve

**Input Format**

RTRV-VLAN:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;[::::];

**Input Example**

RTRV-VLAN:ROCKS:VLAN-4096:1;

**Input Parameters**

|                 |                                                                        |
|-----------------|------------------------------------------------------------------------|
| <AID>           | The AID is used to access the VLAN.                                    |
| • VLAN-{0-4096} | The AID for a single VLAN. The value 0 is reserved for untagged VLANs. |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<AID>::[NAME=<NAME>],[PROTN=<PROTN>]:"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
"VLAN-4096::NAME="MYVLAN",PROTN=Y:"
;
```

**Output Parameters**

|                 |                                                                        |
|-----------------|------------------------------------------------------------------------|
| <AID>           | Aid is used to access the VLAN.                                        |
| • VLAN-{0-4096} | The AID for a single VLAN. The value 0 is reserved for untagged VLANs. |
| <NAME>          | Indicates the VLAN name.                                               |
| <PROTN>         | Indicates the VLAN protection (enabled or disabled).                   |
| • Y             | VLAN protection is enabled.                                            |
| • N             | (Default) VLAN protection is disabled.                                 |

## 21.160 RTRV-VLAN-ETH

(Cisco ONS 15454)

The VLAN attributes on a L2 ethernet port command retrieves the VLAN Profile associated to the couple L2 Ethernet port - VLAN.

It retrieves also the Alarm status of a VLAN associated to a L2 ethernet port and the Multicast Mac address list.

**Usage Guidelines**

This command accept the ALL AID.

**Category**

ETHERNET

**Security**

Retrieve

**Input Format**

RTRV-VLAN-ETH[:<TID>]:<AID>:<CTAG>[:<VLAN\_ID>],[<VLAN\_TYPE>][:];

**Input Example**

RTRV-VLAN-ETH:TID:ETH-1-1-1:CTAG::110;

**Input Parameters**

|                                                                                     |                                                                                                               |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <AID>                                                                               | Ethernet aids used to access L2 Ethernet ports.                                                               |
| <ul style="list-style-type: none"> <li>ALL</li> </ul>                               | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands.                     |

|                          | <IGMPIP>                          | IGMP IP address. Is the Multicast IP address indicating the IGMP group activated on a L2 Ethernet port to provide multicast stream through a specific S-Vlan. Default value is -                                                |

## 21.161 RTRV-VT

(Cisco ONS 15454) The Retrieve Virtual Tributary (RTRV-VT) command retrieves the attributes associated with a VT path based on the granularity level of NE- or slot-specific VTs.

### Usage Guidelines

- Supported AIDs are ALL, SLOT-N (N=1,2,...ALL), VT-<SLOT>[-<PORT>]-<STS NUMBER>-<VT GROUP>-<VT NUMBER>.
- The RVRTV, RVTM, HOLDOFTIMER, and UPSRPTHSTATE parameters only apply to UPSR.

### Input Format

RTRV-VT:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-VT:TID:VT1-1-1-1-1:1;

**Input Parameters** <AID> Access identifier from the “26.2 AidUnionId” section on page 26-13.

**Output Format** SID DATE TIME  
M CTAG COMPLD  
“<AID>::[LEVEL=<LEVEL>],[RVRTV=<RVRTV>],[RVTM=<RVTM>],  
[HOLDOFFTIMER=<HOLDOFFTIMER>],[TACC=<TACC>],[TAPTYPE=<TAPTYPE>],  
[UPSRPTHSTATE=<UPSRPTHSTATE>]:[<PST>],[<SST>]”  
;

**Output Example** TID-000 1998-06-20 14:30:00  
M 001 COMPLD  
“VT1-1-1-1-1-1::LEVEL=VT1,RVRTV=Y,RVTM=1.0,HOLDOFFTIMER=2000,TACC=8,  
TAPTYPE=SINGLE,UPSRPTHSTATE=ACT:OOS,AINS”  
;

|                                |                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Output Parameters</b> <AID> | Access identifier from the “26.2 AidUnionId” section on page 26-13.                                                                                                                                                                                                                                                                                                                                        |
| <LEVEL>                        | (Optional) The rate of the cross-connect. Indicates the rate of the cross-connected channel. Applicable only to VT1 path in SONET. The parameter type is VT_PATH, which is the modifier for some VT commands.                                                                                                                                                                                              |
| • VT1                          | Virtual Tributary 1                                                                                                                                                                                                                                                                                                                                                                                        |
| • VT2                          | Virtual Tributary 2                                                                                                                                                                                                                                                                                                                                                                                        |
| <RVRTV>                        | (Optional) Revertive mode. The value Y indicates that protection switching system reverts service to the original line after restoration. The value N indicates that protection switching system does not revert service to the original line after restoration. RVRTV is applicable only for 1+1 protection switching. Null defaults to N. The parameter type is ON_OFF (disable or enable an attribute). |
| • N                            | Does not revert service to original line after restoration.                                                                                                                                                                                                                                                                                                                                                |
| • Y                            | Reverts service to original line after restoration.                                                                                                                                                                                                                                                                                                                                                        |
| <RVTM>                         | (Optional) Revertive time. Only applies to path protection. Defaults to empty because RVRTV is N when a path protection path is created. The parameter type is REVERTIVE_TIME.                                                                                                                                                                                                                             |
| • 0.5 to 12.0                  | Revertive time is 0.5 to 12.0 minutes.                                                                                                                                                                                                                                                                                                                                                                     |
| <HOLDOFFTIMER>                 | (Optional) Hold off timer. HOLDOFFTIMER is an integer.                                                                                                                                                                                                                                                                                                                                                     |
| <TACC>                         | (Optional) Test access. Indicates whether the digroup being provisioned is to be used as a test access digroup. Defaults to N.                                                                                                                                                                                                                                                                             |
| <TAPTYPE>                      | (Optional) TAP type. The parameter type is TAPTYPE, which is the test access point type.                                                                                                                                                                                                                                                                                                                   |
| • DUAL                         | Dual FAD                                                                                                                                                                                                                                                                                                                                                                                                   |

|                |                                                                                                                                                                                                   |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| • SINGLE       | Single FAD                                                                                                                                                                                        |
| <UPSRPTHSTATE> | (Optional) Indicates whether a given AID is the working or standby path of a path protection cross-connect. The parameter type is STATUS, which is the status of the unit in the protection pair. |
| • ACT          | The entity is the active unit in the shelf.                                                                                                                                                       |
| • NA           | Status is unavailable.                                                                                                                                                                            |
| • STBY         | The entity is the standby unit in the shelf.                                                                                                                                                      |
| <PST>          | Primary state. The parameter type is PST, which indicates the current overall service condition of an entity.                                                                                     |
| • IS           | In Service                                                                                                                                                                                        |
| • OOS          | Out of Service                                                                                                                                                                                    |
| <SST>          | Secondary state. The parameter type is SST, which provides additional information pertaining to PST and PSTQ.                                                                                     |
| • AINS         | Automatic In-Service                                                                                                                                                                              |
| • DSBLD        | Disabled                                                                                                                                                                                          |
| • LPBK         | Loopback                                                                                                                                                                                          |
| • MEA          | Mismatch of Equipment                                                                                                                                                                             |
| • MT           | Maintenance                                                                                                                                                                                       |
| • OOG          | Out of Group                                                                                                                                                                                      |
| • SWDL         | Software Download                                                                                                                                                                                 |
| • UAS          | Unassigned                                                                                                                                                                                        |
| • UEQ          | Unequipped                                                                                                                                                                                        |

## 21.162 RTRV-VLB-REP

(Cisco ONS 15454) The Retrieve VLAN Load Balancing Resilient Ethernet Protocol (RTRV-VLB-REP) command retrieves the VLAN Load Balancing (VLB) for REP Segment on the ethernet ports.

### Usage Guidelines

- REP must be configured on the ethernet port.
- This command is applicable only to GE\_XP and 10GE\_XP cards.

### Category

Ethernet

### Security

Retrieve

### Input Format

RTRV-VLB-REP:[<TID>]:<AID>:<CTAG>[:::];

### Input Example

RTRV-VLB-REP:CISCO:ETH-16-2-1:1;

|                         |       |                                                                    |

| <REPPORTID>                                                               | Determines the REP port to trigger VLB.                                                                                                                                                             |

## 21.163 RTRV-WDMANS

(Cisco ONS 15454) The Retrieve Wavelength Division Multiplexing Automatic Node Setup (RTRV-WDMANS) command edits the Automatic Optical Node Setup (AONS) application attributes.

**Usage Guidelines** None

**Category** DWDM

**Security** Maintenance

**Input Format** RTRV-WDMANS:[<TID>]:<AID>:<CTAG>:[<WLEN>];;

**Input Example** RTRV-WDMANS::LINE-1-13-2-TX:77::1530.33;

|                         |                                                           |                                                                                               |
|-------------------------|-----------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Input Parameters</b> | <AID>                                                     | The AID is used to access the WDM node or a single port of the DWDM node.                     |
|                         | <ul style="list-style-type: none"> <li>WDMNODE</li> </ul> | Indicates the WDM node of an MSTP and accesses the NTWTYPE and DITHER WDMANS node parameters. |
|                         | <ul style="list-style-type: none"> <li>LINE</li> </ul>    | The optical transport section port.                                                           |

**Output Parameters**

|           |                                                                                               |
|-----------|-----------------------------------------------------------------------------------------------|
| <AID>     | The AID is used to access the WDM node or a single port of the DWDM node.                     |
| • WDMNODE | Indicates the WDM node of an MSTP and accesses the NTWTYPE and DITHER WDMANS node parameters. |
| • LINE    | The optical transport section port.                                                           |
| • BAND    | The optical multiplex section port.                                                           |
| • CHAN    | The optical channel port.                                                                     |
| <WLEN>    | (Optional) The parameter type is OPTICAL_WLEN, which indicates the optical wavelength.        |
| • 1310    | Wavelength 1310                                                                               |
| • 1470    | Wavelength 1470                                                                               |
| • 1490    | Wavelength 1490                                                                               |
| • 1510    | Wavelength 1510                                                                               |
| • 1528.77 | Wavelength 1528.77                                                                            |
| • 1529.16 | Wavelength 1529.16                                                                            |
| • 1529.55 | Wavelength 1529.55                                                                            |
| • 1529.94 | Wavelength 1529.94                                                                            |
| • 1530    | Wavelength 1530                                                                               |
| • 1530.33 | Wavelength 1530.33                                                                            |
| • 1530.73 | Wavelength 1530.73                                                                            |
| • 1531.12 | Wavelength 1531.12                                                                            |

| • 1602.31         | Wavelength 1602.31                                                                                                                               |
| • 1602.74         | Wavelength 1602.74                                                                                                                               |
| • 1603.17         | Wavelength 1603.17                                                                                                                               |
| • 1603.60         | Wavelength 1603.60                                                                                                                               |
| • 1604.03         | Wavelength 1604.03                                                                                                                               |
| • 1610            | Wavelength 1610                                                                                                                                  |
| <VOAATTN>         | The value of calibrated attenuation for the VOA expressed in dBm. The range is 0.0 to +30.0. VOAATTN is a float.                                 |
| <VOAATTNFLG>      | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <POWEROSC>        | WDM-ANS OSC power parameter.                                                                                                                     |
| <POWEROSCFLG>     | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <NTWTYPE>         | WDM-ANS network type parameter.                                                                                                                  |
| <NTWTYPEFLG>      | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <CHLOSS>          | WDM-ANS channel loss parameter.                                                                                                                  |
| <CHLOSSFLG>       | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <GAIN>            | WDM-ANS amplifier gain parameter.                                                                                                                |
| <GAINFLG>         | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <TILT>            | WDM-ANS amplifier tilt parameter.                                                                                                                |
| <TILTFLG>         | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <CHPWR>           | WDM-ANS channel power parameter.                                                                                                                 |
| <CHPWRFLG>        | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <AMPLMODE>        | WDM-ANS amplifier mode parameter.                                                                                                                |
| <AMPLMODEFLG>     | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <RATIO>           | WDM-ANS Raman amplifier pump ratio parameter.                                                                                                    |
| <RATIOFLG>        | .Status flag indicating the state of the WDMANS parameter.                                                                                       |
| <OSCCLOSS>        | WDM-ANS OSC channel loss parameter.                                                                                                              |
| <OSCCLOSSFLG>     | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <OPTICALNODETYPE> | (Optional) The optical configuration type for the NE. The parameter type is OPTICAL_NODE_TYPE, which is the optical configuration types for NEs. |
| <DITHER>          | WDM-ANS WXC dithering parameter.                                                                                                                 |
| <DITHERFLG>       | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <TOTALPWR>        | WDM-ANS Raman amplifier total power in mW.                                                                                                       |
| <TOTALPWRFLG>     | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <HIGHSLVEXP>      | Span loss verification—high value.                                                                                                               |
| <HIGHSLVEXPFLG>   | Status flag indicating the state of the WDMANS parameter.                                                                                        |
| <LOWSLVEXP>       | Span loss verification—low value.                                                                                                                |
| <LOWSLVEXPFLG>    | Status flag indicating the state of the WDMANS parameter.                                                                                        |

|               |                                                                                                                                                                                                             |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <LASTRUNDAT>  | (Optional) The last date when the WDMANS application calculated the parameters. The format is MM-DD, where MM (month of year) ranges from 1 to 12 and DD (day of month) ranges from 1 to 31.                |
| <LASTRUNTM>   | (Optional) The last time when the WDMANS application calculated the parameters. The format is HH-MM, where HH (hour of day) ranges from 1 to 23 and MM (minute of hour) ranges from 0 to 59.                |
| <LASTCALCDAT> | (Optional) The last date when the WDMANS application was run automatically or by user request. The format is MM-DD, where MM (month of year) ranges from 1 to 12 and DD (day of month) ranges from 1 to 31. |
| <LASTCALSTM>  | (Optional) The last time when the WDMANS application was run automatically or by user request. The format is HH-MM, where HH (hour of day) ranges from 1 to 23 and MM (minute of hour) ranges from 0 to 59. |

## 21.164 RTRV-WDMSIDE

(Cisco ONS 15454) The Retrieve Wavelength Division Multiplexing Side (RTRV-WDMSIDE) command retrieves the WDM side and defines its attributes.

**Usage Guidelines** None

**Category** DWDM

**Security** Maintenance

**Input Format** RTRV-WDMSIDE:[<TID>]:<AID>:<CTAG>[::::];

**Input Example** RTRV-WDMSIDE:PENNGROVE:WDMSIDE-A:114;

|                         |                             |                                                                                                                      |
|-------------------------|-----------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>Input Parameters</b> | <AID>                       | The AID is used to access the WDM side of an DWDM node. This is applicable to WDMANS and APC applications of the NE. |
|                         | • WDMSIDE-{A,B,C,D,E,F,G,H} | DWDM side identifier.                                                                                                |

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
"<AID>::LINEIN=<LINEIN>,LINEOUT=<LINEOUT>,[OCS=<OSC>][:]"
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
  "WDMSIDE-A::LINEIN=LINE-1-3-RX,LINEOUT=LINE-1-3-TX,OSC=FAC-8-1"
;
```

**Output Parameters**

|                                              |                                                                                                                                                                                 |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>                                        | The AID is used to access the WDM side of an DWDM node. This is applicable to WDMANS and APC applications of the NE.                                                            |
| • WDMSIDE-{A,B,C,D,E,F,G,H}                  | DWDM side identifier.                                                                                                                                                           |
| <LINEIN>                                     | (Optional) Used to access the OTS layer of optical network units.                                                                                                               |
| • ALL                                        | Indicates all the OTSs of the NE. The ALL AID is applicable only for retrieve commands.                                                                                         |
| • LINE[-{1-8}]-{1-6,12-17}-{1-3}<br>-ALL     | All the lines (COM=1, OSC=2, LINE=3) in OPT-BST, OPT-BST-E, OPT-BST-L, OPT-AMP-17-C, and OPT-AMP-23-C cards where the format is LINE-[SHELF]-[SLOT]-[PORT]-ALL.                 |
| • LINE[-{1-8}]-{1-6,12-17}-{1-3}<br>-{RX,TX} | The receive/transmit lines (COM=1, OSC=2, LINE=3) in OPT-BST, OPT-BST-E, OPT-BST-L, OPT-AMP-17-C, and OPT-AMP-23-C cards where the format is LINE-[SHELF]-[SLOT]-[PORT]-[DIRN]. |
| <LINEOUT>                                    | (Optional) Used to access the OTS layer of optical network units.                                                                                                               |
| • ALL                                        | Indicates all the OTSs of the NE. The ALL AID is applicable for retrieve-only commands.                                                                                         |
| • LINE[-{1-8}]-{1-6,12-17}-{1-3}<br>-ALL     | All the lines (COM=1, OSC=2, LINE=3) in OPT-BST, OPT-BST-E, OPT-BST-L, OPT-AMP-17-C, and OPT-AMP-23-C cards where the format is LINE-[SHELF]-[SLOT]-[PORT]-ALL.                 |
| • LINE[-{1-8}]-{1-6,12-17}-{1-3}<br>-{RX,TX} | The receive/transmit lines (COM=1, OSC=2, LINE=3) in OPT-BST, OPT-BST-E, OPT-BST-L, OPT-AMP-17-C, and OPT-AMP-23-C cards where the format is LINE-[SHELF]-[SLOT]-[PORT]-[DIRN]. |
| <OSC>                                        | Facility AID from the <a href="#">“26.17 FACILITY”</a> section on <a href="#">page 26-42</a> .                                                                                  |

## 21.165 RTRV-WLEN

(Cisco ONS 15454) The Retrieve Wavelength (RTRV-WLEN) command retrieves the wavelength provisioning information.

**Usage Guidelines**

None

**Category**

DWDM

**Security** Retrieve

**Input Format** RTRV-WLEN:[<TID>]:<AID>:<CTAG>;

**Input Example** RTRV-WLEN:PENNGROVE:WLEN-A-ADD-1530.33:114;

**Input Parameters**

|       |                                                                |
|-------|----------------------------------------------------------------|
| <AID> | Access identifier from the “26.35 WLEN” section on page 26-62. |
|-------|----------------------------------------------------------------|

**Output Format**

```
SID DATE TIME
M CTAG COMPLD
“<AID>:<CCT>:[SIZE=<SIZE>],[CKTID=<CKTID>],[TOSIDE=<TOSIDE>],[SRC=<SRC>],
[DST=<DST>]:<PST_PSTQ>,[<SSTQ>]”
;
```

**Output Example**

```
TID-000 1998-06-20 14:30:00
M 001 COMPLD
“WLEN-A-ADD-1530.33:1WAY:SIZE=MULTI-RATE,CKTID=CKTID,SRC=CHAN-4-1-RX,
DST=LINEWL-1-3-TX-1530.33:OOS-AU,AINS”
;
```

## SCHED Commands

This chapter provides schedule (SCHED) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

### 22.1 SCHED-PMREPT-<MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Schedule Performance Monitoring Report for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 2GFICON, 5GIB, 8GFC, CHGRP, CLNT, D1VIDEO, DS1, DV6000, DVBAISI, E1, E3, E4, EC1, ESCON, ETRCLO, ETH, FSTE, G1000, GFPOS, GIGE, HDLC, HDTV, ISC1, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU3, OTU4, POS, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VC12, VC3, VT1, or VT2 (SCHED-PMREPT-<MOD2>) command schedules/reschedules the network element (NE) to report the performance monitoring (PM) data for a line facility or for a synchronous transport signal (STS) path periodically, using the automatic REPT PM message. This command can also remove the previously created schedule.

#### Usage Guidelines

See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

The automatic PM reporting scheduled by this command is inhibited by default. ALW-PMREPT-ALL can be used to allow the NE to send the PM report. INH-PMREPT-ALL can be used to stop the NE from sending the PM report. The schedules created for the NE can be retrieved by RTRV-PMSCHED command.

The deletion of the schedule for the automatic PM reporting can be done by issuing SCHED-PMREPT-<MOD2> with the NUMREPT parameter equal to zero.

**Note**

- The current maximum number of schedules allowed to be created for a NE is 1000. If this number of schedules has been created for the NE, an error message “Reach Limits Of MAX Schedules Allowed. Can Not Add More” will be returned if another schedule creation is attempted on the NE. Frequent use of automatic PM reporting will significantly degrade the performance of the NE.

- A schedule cannot be created if the card associated with the schedule is not provisioned, or if the cross-connection associated with the schedule has not been created. However, a schedule is allowed to be deleted even if a card is not provisioned, or if the cross-connection has not been created.
- The number of outstanding PM reports counter (NUMREPT) will not be decremented, and the scheduled automatic PM reporting will not start if the card associated with the schedule is not physically plugged into the slot.
- An expired schedule would not be automatically removed. The SCHED-PMREPT command has to be issued with the NUMREPT parameter equal to zero in order to delete the expired schedule.
- Identical schedules for an NE are not allowed. Two schedules are considered identical if they have the same AID, MOD2 type, performance monitor type, performance monitor level, location, direction, and time period.

An error message “Duplicate Schedule” is returned if you try to create a schedule that is a duplicate of a existing schedule. However, if the existing schedule expires (with the parameter NUMINVL equal to zero when retrieved by the RTRV-PMSCHED command, that is, no more PM reporting is sent) the new schedule with the identical parameters will replace the existing schedule.

- When a electrical or optical card is unprovisioned by the DLT-EQPT command, or a cross-connection is deleted by the DLT-CRS command, the schedules associated with that card or that cross-connection will be removed silently by the NE. This removal prevents another type of card or cross-connection with the same AID to be provisioned on the NE, and prevents the NE from trying to send automatic PM reports based on the existing schedules.

The card or cross-connect can be unprovisioned or deleted through CTC. The schedules associated with that card or that cross-connection will also be removed silently by the NE.

- VT1 level schedules cannot be created on Optical ports. The VT-level PMs are monitored only on the path terminating ports.

|                      |                                                                                                                           |

|--------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <REPTINVL>                                                               | <p>Reporting interval. How often a report is to generated and sent to the appropriate operating system (OS). Specifies how often a PM report is generated. The format is VAL-UN, where valid values for VAL (value) are 1 to 31 if UN (units of time) is DAY, 1 to 24 if UN is HR, or 1 to 1440 if UN is MIN. Examples are 10-DAY, 12-HR, and 100-MIN. A null value for the input defaults to 15-MIN. REPTINVL is a string.</p> <p><b>Note</b> PM schedule processing is performed every 5 minutes. Therefore, specifying a REPTINVL of 5-MIN or less would be processed at the earliest every 5 minutes.</p> |
| <REPTSTATM>                                                              | <p>The start time for the PM report. The format is HOD-MOH, where HOD (hour of day) ranges from 0 to 23, and MOH (minute of hour) ranges from 0 to 59. If the input value of the starting time is smaller than the current time, for example, the input value is 5-30 (5:30 in the morning), and the current time is 10:30, the reporting will be scheduled to start at 5:30 the next day. A null value defaults to the current time of day. REPTSTATM is a string.</p>                                                                                                                                       |
| <NUMREPT>                                                                | <p>The number of reports that the schedule is expected to produce. A value of 0 is used to delete a existing identical schedule. If NUMREPT is null, the schedule will be kept in effect until it is deleted. The value of NUMREPT will continue to be decremented even though the automatic PM reporting is inhibited. NUMREPT is an integer.</p>                                                                                                                                                                                                                                                            |
| <MONLEV>                                                                 | <p>The discriminating level of the requested monitored parameter. It applies to all MONTYPE of the scheduled PM report. The null input defaults to 1-UP. MONLEV is a string. The format is LEV-DIRN, where valid values for LEV are decimal numbers, and valid values for DIRN are as follows:</p> <ul style="list-style-type: none"> <li>• UP monitored parameter with values equal to or greater than the value of LEV will be reported.</li> <li>• DN monitored parameter with values equal to or less than the value of LEV will be reported.</li> </ul>                                                  |
| <LOCN>                                                                   | <p>Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. A null input defaults to NEND. FEND is not supported by all MOD2 types. The parameter type is LOCATION, which is the location where the action is to take place.</p>                                                                                                                                                                                                                                                                                                                     |
| <ul style="list-style-type: none"> <li>• FEND</li> <li>• NEND</li> </ul> | <p>Action occurs on the far end of the facility.</p> <p>Action occurs on the near end of the facility.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| • 1-HR     | Performance parameter accumulation interval length; every 1 hour. This is only applicable to RMON managed PM data. There are 24 hours of history data available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| • 1-MIN    | Performance parameter accumulation interval length; every 1 minute. This is only applicable to RMON managed PM data. There are 60 minutes of history available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <TMOFST>   | <p>Time offset between reporting/diagnostics/exercises; from the end of the last complete accumulation time period to the beginning of the accumulation time period specified by TMPER. The format is DAY-HR-MIN where DAYS (days) ranges from 0 to 99, HR (hours) ranges from 0 to 23, and MIN (minutes) ranges from 1 to 59. A null value defaults to 0-0-0. Grouping of this parameter is not supported.</p> <p>If the value specified is larger than the maximum length of PM history the system is saving, there will be no PM report for the PM schedule generated. For example, if a PM schedule for OC48 is created with TMOFST of 2-1-0 (format: day-hour-minute), no report will be generated because the system can only hold two days worth of PM history. For setting 15-MIN schedules, the system can only hold 32 15-MIN buckets, which totals eight hours. Therefore, a schedule greater than 0-8-0 will not result in PM schedules being generated. TMOFST is a string.</p> |

## SET Commands

This chapter provides set (SET) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

### Note

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

### 23.1 SET-ALMTH-<MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Set Alarm Threshold for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 4GFC, 2GFICON, 5GIB, 8GFC, CLNT, D1VIDEO, DS1, DV6000, DVBASI, EC1, ESCON, ETRCLO, ETH, FSTE, GIGE, HDTV, ISC1, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU3, T1, T3, OTL, OTU1, OTU2, OTU4, SDSDI, HDSDI, 3GVIDEO, ISC3STP1G, and ISC3STP2G (SET-ALMTH-<MOD2>) command sets the alarm thresholds on the following cards/ports/channels: MXP\_2.5G\_10G, TXP\_MR\_10G, optical service channel (OSC), optical amplifier, dispersion compensation unit (DCU), multiplexer, demultiplexer, and optical add/drop multiplexing (OADM).

#### Usage Guidelines

- This command is used to set the alarm thresholds on a facilities, ports, channels, for example. Not all MOD2 types are supported.
- This command supports the modifier OTU1, SDSDI, HDSDI, 3GVIDEO, ISC3STP1G, and ISC3STP2G.
- Tx alarm thresholds is blocked on Rx Video pluggables and vice-versa.
- Tx alarm thresholds is not applicable on ESCON payload.
- The SET-ALMTH-OTL is denied on backplane virtual ports of 100G-LC-C.
- The SET-ALMTH-OTL is denied on sublanes of CFP-LC but sets the alarms thresholds on first sublane of 100G-LC-C card.
- SET-ALMTH-<MOD2> on 100G-LC-C, 10x10G-LC, and CFP-LC cards use MOD2, and the following AID:
  - OCH modifier (CHAN AID) for non-OTU payloads on 100G-LC-C and 10x10G-LC fixed trunk ports.

- MOD2 modifier on the OTU payloads of 10x10G-LC card on the VFAC AID.
- OCH modifier (ACHAN AID) on the non-OTU payloads of the 100G-LC-C aggregate port.
- MOD2 modifier (VLINE AID) on the first sublane of the 100G-LC-C card.
- OCH modifier (CHAN AID) on the CFP-LC ports.
- Alarm threshold cannot be set on the sublanes (VLINE) of the CFP-LC cards.

Provisioning

**Input Format**

SET-ALMTH-&lt;MOD2&gt;:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::&lt;CONDTYPE&gt;,&lt;THLEV&gt;[,,,];

**Input Example**

SET-ALMTH-OTL:100G-LC-C:VLINE-3-1-1-2:1::OPT-LOW,-9;

**Input Parameters**

|              |                                                                                                                                                                                                                                                     |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>        | Access identifier from the <a href="#">“26.1 ALL” section on page 26-1</a> . Must not be null. The AR-MXP, AR-XP, and AR-XPE cards use the VFAC Access Identifier.                                                                                  |
| <CONDTYPE>   | Condition type for an alarm or a reported event. The parameter type is ALM_THR, which is the alarm threshold list for MXP_2.5G_10G, TXP_MR_10G, OSCM, OSC-CSM, OPT-PRE, OPT-BST, MD-4, MUX-32, DMX-32, AD-1C, AD-2C, AD-4C, AD-1B, and AD-4B cards. |
| • ADD-HDEG   | ADD Power - High Degrade                                                                                                                                                                                                                            |
| • ADD-HFAIL  | ADD Power - High Failure                                                                                                                                                                                                                            |
| • ADD-LDEG   | ADD Power - Low Degrade                                                                                                                                                                                                                             |
| • ADD-LFAIL  | ADD Power - Low Failure                                                                                                                                                                                                                             |
| • BATV-EHIGH | Battery Voltage—Extremely High                                                                                                                                                                                                                      |
| • BATV-ELow  | Battery Voltage—Extremely Low                                                                                                                                                                                                                       |
| • BATV-HIGH  | Battery Voltage—High                                                                                                                                                                                                                                |
| • BATV-LOW   | Battery Voltage—Low                                                                                                                                                                                                                                 |
| • CD-LOW     | Low Threshold value for Chromatic Dispersion. Measured value -70000dBm to +70000dBm.                                                                                                                                                                |
| • CD-HIGH    | High Threshold value for Chromatic Dispersion. Measured value -70000dBm to +70000dBm.                                                                                                                                                               |
| • GAIN-HDEG  | Gain not reached—High Degrade Threshold                                                                                                                                                                                                             |
| • GAIN-HFAIL | Gain not reached—High Failure Threshold                                                                                                                                                                                                             |
| • GAIN-LDEG  | Gain not reached—Low Degrade Threshold                                                                                                                                                                                                              |
| • GAIN-LFAIL | Gain not reached—Low Failure Threshold                                                                                                                                                                                                              |

|              |                                                                                                                                                       |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| • LBCL-HIGH  | Laser Bias current in microA as one tenth of a percentage. High Warning Threshold, Low Warning Threshold. Measured value (0.0 percent, 100.0 percent) |
| • OPR-HIGH   | Receive power in one tenth of a microW. Measured value (–40.0 dBm, +30.0 dBm)                                                                         |
| • OPR-LOW    | Receive power in one tenth of a microW. Measured value (–40.0 dBm, +30.0 dBm)                                                                         |
| • OPT-HIGH   | Transmit power in one tenth of a microW. Measured value (–40.0 dBm, +30.0 dBm)                                                                        |
| • OPT-LOW    | Transmit power in one tenth of a microW. Measured value (–40.0 dBm, +30.0 dBm)                                                                        |
| • OPWR-HDEG  | Optical Power—High Degrade Threshold                                                                                                                  |
| • OPWR-HFAIL | Optical Power—High Failure Threshold                                                                                                                  |
| • OPWR-LDEG  | Optical Power—Low Degrade Threshold                                                                                                                   |
| • OPWR-LFAIL | Optical Power—Low Failure Threshold                                                                                                                   |
| • OSNR-LOW   | Low Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.                                                               |
| • OSNR-HIGH  | High Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.                                                              |
| • PMD-LOW    | Low Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm.                                                               |
| • PMD-HIGH   | High Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm.                                                              |
| • VOA-HDEG   | VOA Attenuation—High Degrade Threshold                                                                                                                |
| • VOA-HFAIL  | VOA Attenuation—High Failure Threshold                                                                                                                |
| • VOA-LDEG   | VOA Attenuation—Low Degrade Threshold                                                                                                                 |
| • VOA-LFAIL  | VOA Attenuation—Low Failure Threshold                                                                                                                 |
| <THLEVEL>    | Threshold level. THLEVEL is a float.                                                                                                                  |

## 23.2 SET-ALMTH-EQPT

(Cisco ONS 15454) The Set Alarm Threshold Equipment (SET-ALMTH-EQPT) command sets the alarm thresholds to manage the power level monitoring on an NE.

**Usage Guidelines** None

**Category** Equipment

**Security** Provisioning

**Input Format**

```
SET-ALMTH-EQPT:[<TID>]:[<AID>]:<CTAG>::<ALMTHTYPE>,<THLEV>[,,,];
```

**Input Example**

```
SET-ALMTH-EQPT::SHELF-2:1::BATV-HIGH,-53.5;
SET-ALMTH-EQPT:::1::BATV-HIGH,-53.5;
```

**Input Parameters**

|              |                                                                                                                                                                                                                          |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>        | The node or shelf access identifier from the “ <a href="#">26.26 SHELF</a> ” section on page 26-55. If omitted it addresses the node or first shelf of the node. Must not be null                                        |
| <CONDTYPE>   | Alarm threshold type. The parameter type is ALM_THR, which is the alarm threshold list for MXP_2.5G_10G, TXP_MR_10G, OSCM, OSC-CSM, OPT-PRE, OPT-BST, MD-4, MUX-32, DMX-32, AD-1C, AD-2C, AD-4C, AD-1B, and AD-4B cards. |
| • BATV-EHIGH | Battery Voltage—Extremely High                                                                                                                                                                                           |
| • BATV-ELow  | Battery Voltage—Extremely Low                                                                                                                                                                                            |
| • BATV-HIGH  | Battery Voltage—High                                                                                                                                                                                                     |
| • BATV-LOW   | Battery Voltage—Low                                                                                                                                                                                                      |
| • CD-LOW     | Low Threshold value for Chromatic Dispersion. Measured value -70000dBm to +70000dBm.                                                                                                                                     |
| • CD-HIGH    | High Threshold value for Chromatic Dispersion. Measured value -70000dBm to +70000dBm.                                                                                                                                    |
| • GAIN-HDEG  | Gain not reached—High Degrade Threshold                                                                                                                                                                                  |
| • GAIN-HFAIL | Gain not reached—High Failure Threshold                                                                                                                                                                                  |
| • GAIN-LDEG  | Gain not reached—Low Degrade Threshold                                                                                                                                                                                   |
| • GAIN-LFAIL | Gain not reached—Low Failure Threshold                                                                                                                                                                                   |
| • LBCL-HIGH  | Laser Bias current in microA as one tenth of a percentage High Warning Threshold, Low Warning Threshold. Measured value (0.0 percent, 100.0 percent)                                                                     |
| • OPR-HIGH   | Receive power in one tenth of a microW. Measured value (-40.0 dBm, +30.0 dBm)                                                                                                                                            |
| • OPR-LOW    | Receive power in one tenth of a microW. Measured value (-40.0 dBm, +30.0 dBm)                                                                                                                                            |
| • OPT-HIGH   | Transmit power in one tenth of a microW. Measured value (-40.0 dBm, +30.0 dBm)                                                                                                                                           |
| • OPT-LOW    | Transmit power in one tenth of a microW. Measured value (-40.0 dBm, +30.0 dBm)                                                                                                                                           |
| • OPWR-HDEG  | Optical Power—High Degrade Threshold                                                                                                                                                                                     |
| • OPWR-HFAIL | Optical Power—High Failure Threshold                                                                                                                                                                                     |
| • OPWR-LDEG  | Optical Power—Low Degrade Threshold                                                                                                                                                                                      |
| • OPWR-LFAIL | Optical Power—Low Failure Threshold                                                                                                                                                                                      |
| • OSNR-LOW   | Low Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.                                                                                                                                  |
| • OSNR-HIGH  | High Threshold value for Optical Signal to Noise Ratio. Measured value +40dBm to +80dBm.                                                                                                                                 |

|             |                                                                                          |
|-------------|------------------------------------------------------------------------------------------|
| • PMD-LOW   | Low Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm.  |
| • PMD-HIGH  | High Threshold value for Polarization Mode for Dispersion. Measured value +0 to +100dBm. |
| • VOA-HDEG  | VOA Attenuation—High Degrade Threshold                                                   |
| • VOA-HFAIL | VOA Attenuation—High Failure Threshold                                                   |
| • VOA-LDEG  | VOA Attenuation—Low Degrade Threshold                                                    |
| • VOA-LFAIL | VOA Attenuation—Low Failure Threshold                                                    |
| <THLEVEL>   | Threshold level. THLEV is a float.                                                       |

## 23.3 SET-ATTR-CONT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Set Attribute Control (SET-ATTR-CONT) command sets the attributes associated with an external control. The attributes are used when an external control is operated or released. To send the attributes, use the RTRV-ATTR-CONT command.

### Usage Guidelines

- If the CONTTYPE parameter is not specified, the control specified by AID is unprovisioned.
- A control should be unprovisioned before it is reprovisioned to another type of control.

### Category

Environment

### Security

Provisioning

### Input Format

SET-ATTR-CONT:[<TID>]:<AID>:<CTAG>[:<CONTTYPE>];

### Input Example

SET-ATTR-CONT:CISCO:ENV-OUT-1:123::AIRCOND;

### Input Parameters

|            |                                                                                                                                                          |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>      | Access identifier from the <a href="#">“26.14 ENV” section on page 26-39</a> . Identifies the external control for which attributes are being retrieved. |
| <CONTTYPE> | Environmental control type. A null value is equivalent to ALL. The parameter type is CONTTYPE, which is the environmental control type.                  |
| • AIRCOND  | Air conditioning                                                                                                                                         |
| • ENGINE   | Engine                                                                                                                                                   |
| • FAN      | Fan                                                                                                                                                      |
| • GEN      | Generator                                                                                                                                                |

|         |               |
|---------|---------------|
| • HEAT  | Heat          |
| • LIGHT | Light         |
| • MISC  | Miscellaneous |
| • SPKLR | Sprinkler     |

## 23.4 SET-ATTR-ENV

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Set Attribute Environment (SET-ATTR-ENV) command sets the attributes associated with an external control.

### Usage Guidelines

- If the NTFCNCDE, ALMTYPE, and ALMMSG parameters are omitted, the environmental alarm specified by AID is unprovisioned.
- An alarm should be unprovisioned and you should wait for any raised alarm to clear before reprovisioning the alarm to another alarm type.
- CL in NOTIF\_CODE is not valid for provisioning commands. It is only valid for autonomous messages.

### Category

Environment

### Security

Provisioning

### Input Format

SET-ATTR-ENV:[<TID>]:<AID>:<CTAG>::[<NTFCNCDE>],[<ALMTYPE>],[<ALMMSG>];

### Input Example

SET-ATTR-ENV:CISCO:ENV-IN-1:123::MJ,OPENDR,\"OPEN DOOR\";

### Input Parameters

|            |                                                                                                                                                                       |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>      | Access identifier from the <a href="#">“26.14 ENV”</a> section on page 26-39. Must not be null.                                                                       |
| <NTFCNCDE> | Two-letter notification code. Must not be null. The parameter type is NOTIF_CODE, which is the two-character notification code associated with an autonomous message. |
| • CL       | The condition causing the alarm has cleared.                                                                                                                          |
| • CR       | A critical alarm.                                                                                                                                                     |
| • MJ       | A major alarm.                                                                                                                                                        |
| • MN       | A minor alarm.                                                                                                                                                        |
| • NA       | The condition is not alarmed.                                                                                                                                         |
| • NR       | The alarm is not reported.                                                                                                                                            |

|             |                                                                                                                                     |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <ALMTYPE>   | The alarm type for the environmental alarm. Must not be null. The parameter type is ENV_ALM, which is the environmental alarm type. |
| • AIRCOMPR  | Air compressor failure                                                                                                              |
| • AIRCOND   | Air conditioning failure                                                                                                            |
| • AIRDRYR   | Air dryer failure                                                                                                                   |
| • BATDSCHRG | Battery discharging                                                                                                                 |
| • BATTERY   | Battery failure                                                                                                                     |
| • CLFAN     | Cooling fan failure                                                                                                                 |
| • CPMAJOR   | Centralized power major failure                                                                                                     |
| • CPMINOR   | Centralized power minor failure                                                                                                     |
| • ENGINE    | Engine failure                                                                                                                      |
| • ENGOPRG   | Engine operating                                                                                                                    |
| • ENGTRANS  | Standby engine transfer                                                                                                             |
| • EXPLGS    | Explosive gas                                                                                                                       |
| • FIRDETR   | Fire detector failure                                                                                                               |
| • FIRE      | Fire                                                                                                                                |
| • FLOOD     | Flood                                                                                                                               |
| • FUELLEAK  | Fuel leak                                                                                                                           |
| • FUSE      | Fuse failure                                                                                                                        |
| • GASALARM  | Explosive gas, toxic gas, ventilation fail, or gas monitor fail                                                                     |
| • HATCH     | Controlled Environment Vault (CEV) hatch fail                                                                                       |
| • GEN       | Generator failure                                                                                                                   |
| • HIAIR     | High airflow                                                                                                                        |
| • HIHUM     | High humidity                                                                                                                       |
| • HITEMP    | High temperature                                                                                                                    |
| • HIWTR     | High water                                                                                                                          |
| • INTRUDER  | Intrusion                                                                                                                           |
| • LEVELCON  | Level converter                                                                                                                     |
| • LVDADSL   | Secondary ADSL low voltage disconnect                                                                                               |
| • LVDBYPAS  | Low voltage disconnected bypass                                                                                                     |
| • LWBATVG   | Low battery voltage                                                                                                                 |
| • LWFUEL    | Low fuel                                                                                                                            |
| • LWHUM     | Low humidity                                                                                                                        |
| • LWPRES    | Low cable pressure                                                                                                                  |
| • LWTEMP    | Low temperature                                                                                                                     |
| • LWWTR     | Low water                                                                                                                           |
| • MISC      | Miscellaneous                                                                                                                       |
| • OPENDR    | Open door                                                                                                                           |
| • POWER     | Commercial power failure                                                                                                            |
| • PUMP      | Pump failure                                                                                                                        |
| • PWR-48    | 48 V power supply failure                                                                                                           |

|              |                                                           |
|--------------|-----------------------------------------------------------|
| • PWR-139    | -139 V power converter                                    |
| • PWR-190    | -190 V power converter                                    |
| • PWRMJ      | Power supply major                                        |
| • PWRMN      | Power supply minor                                        |
| • RECT       | Rectifier failure                                         |
| • RECTHI     | Rectifier high voltage                                    |
| • RECTLO     | Rectifier low voltage                                     |
| • RINGGENMJ  | Ring generator major                                      |
| • RINGENMN   | Ring generator minor                                      |
| • RTACADSL   | AC or AC/rectifier power fail ADSL equipment              |
| • RTACCRIT   | AC or AC/rectifier power fail DCL equipment critical site |
| • RTACPWR    | AC or AC/rectifier power fail DCL equipment               |
| • RTACPWRENG | Commercial AC fail, site equipped with standby engine     |
| • RTBAYPWR   | AC power loss distributed power RT bay                    |
| • RTRVENG    | Retrieve standby engine, commercial AC restored           |
| • SMOKE      | Smoke                                                     |
| • TEMP       | High-low temperature                                      |
| • TOXICGAS   | Toxic gas                                                 |
| • TREPEATER  | T-repeater shelf                                          |
| • VENTN      | Ventilation system failure                                |
| >ALMMSG>     | Alarm message. ALMMSG is a string. Must not be null.      |

## 23.5 SET-ATTR-SECUDFLT

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Set Attribute Security Default (SET-ATTR-SECUDFLT) command sets the system-wide default values associated with several security parameters.

### Usage Guidelines

- The following parameters are set on a system-wide basis for all users and all privilege levels: MXINV, DURAL, UOUT, PFRCD, POLD, PINT, and LOGIN. The PRIVLVL keyword cannot be used to set these parameters for a specific privilege level.
- The following parameters are set on a privilege-level basis: PAGE, PCND, and TMOUT. If any of these values are specified, the PRIVLVL keyword must also be present. If none of these parameters are specified, the PRIVLVL keyword cannot be used.

### Note

Password aging can only be enabled/disabled for all privilege levels. The PRIVLVL keyword cannot be used with PAGE=0 to disable a specific user privilege level.

- When system-level and privilege-level keywords are combined in the same command, system-level parameters are still set for all privilege levels, regardless of the value specified by PRIVLVL. Privilege-level parameters are only set for the privilege level specified by PRIVLVL.

**Note**

If PAGE and PINT both have values greater than 0, PINT must be less than PAGE.

The order of keywords is not restricted. Commas are only needed to separate keywords. If no keywords are specified, all parameters are left as-is.

- When PWDMINLEN parameter value is 2, then it is mandatory to set the value of PWDCHRULE parameter to ANY\_CHAR rule.
- When PWDCHRULE parameter value is set to ANY\_CHAR, then the PWDMINLEN parameter can be set to 2 or 4, or 6 or 8, or 10 or 12.

**Category**

Security

**Security**

Superuser

**Input Format**

```
SET-ATTR-SECUDFLT:[<TID>]::<CTAG>::[PAGE=<PAGE>],[PCND=<PCND>],[MXINV=<MXINV>],[DURAL=<DURAL>],[TMOUT=<TMOUT>],[UOUT=<UOUT>],[PFRCD=<PFRCD>],[POLD=<POLD>],[PINT=<PINT>],[LOGIN=<LOGIN>],[PRIVLVL=<UAP>],[PDIF=<PDIF>],[PWDCHRULE=<PWDCHRULE>],[PWDMINLEN=<PWDMINLEN>],[PWXMAXLEN=<PWXMAXLEN>];
```

**Input Example**

```
SET-ATTR-SECUDFLT:CISCO::123::PAGE=45,PCND=5,MXINV=5,DURAL=30,
TMOUT=0,UOUT=20,PFRCD=NO,POLD=5,PINT=20,LOGIN=MULTIPLE,
PRIVLVL=RTRV,PDIF=1;
```

```
SET-ATTR-SECUDFLT:::1::PWDCHRULE=ANY_CHAR,PWDMINLEN=2,PWXMAXLEN=20;
```

**Input Parameters**

|         |                                                                                                                                                                                                                                                                                                                                                |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <PAGE>  | Password aging interval. It is the number of days before a user is prompted to change his/her password. 0 indicates that the policy is turned off and is the default. If PAGE is turned on for all privilege levels and is not specified for each privilege level, it defaults to 45 days. PAGE ranges from 20 to 90 days. PAGE is an integer. |
| <PCND>  | Number of days a password can be used before a new one is mandatory (for example, the warning period). Default is 5 days. PCND ranges from 2 to 20 days. PCND is an integer.                                                                                                                                                                   |
| <MXINV> | Maximum number of consecutive and invalid session setup attempts allowed to occur before an intrusion attempt is suspected (for example, "Failed Logins Before Lockout" from Cisco Transport Controller [CTC]). 0 indicates the policy is turned off. Default is 5. MXINV ranges from 0 to 10. MXINV is an integer.                            |
| <DURAL> | Time interval (in seconds) during which a user ID is locked out when an intrusion attempt is suspected (for example, "Lockout Duration"). If the user is locked out until unlocked by a Superuser, DURAL=INFINITE. Default is 30 seconds. DURAL ranges from 0 to 600 seconds. DURAL is a string.                                               |

|             |                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <TMOUT>     | Interval (in minutes) after which a session is terminated if no messages are exchanged between the user and the NE. 0 indicates that the session will not timeout. TMOUT ranges from 0 minutes to 999 minutes. Defaults are 0 (no timeout) for RTRV users, 60 minutes for MAINT users, 30 minutes for PROV users, and 15 minutes for SUPER users. TMOUT is an integer.          |
| <UOUT>      | UID aging interval, expressed in days. If a user ID has not been used in UOUT days, the user will be forced to change his/her password (or logout) at the next login. No other command is allowed until the password has been changed. 0 indicates the policy is turned off and is the default. UOUT ranges from 0 to 99 days. UOUT is an integer.                              |
| <PFRCD>     | Indicates that a password change is required when a new user establishes a session to the NE for the first time (for example, "Require password change on 1st login"). Default is NO. The parameter type is YES_NO, which indicates whether the user's password is about to expire, the user is logged into the NE, or the user is locked out of the NE.                        |
| • NO        | No                                                                                                                                                                                                                                                                                                                                                                              |
| • YES       | Yes                                                                                                                                                                                                                                                                                                                                                                             |
| <POLD>      | Number of prior passwords that cannot be reused (for example, "Prevent reusing last X passwords"). Default is 1. POLD ranges from 1 to 10. POLD is an integer.                                                                                                                                                                                                                  |
| <PINT>      | Number of days that must pass before a password can be changed. If PINT is 0, the policy is turned off. Default is off. PINT ranges from 20 to 95 days. PINT is an integer.                                                                                                                                                                                                     |
| <LOGIN>     | Number of times a user can log into an NE. LOGIN is either SINGLE or MULTIPLE. If LOGIN is SINGLE, a user can only log into an NE one time with any given user ID, regardless of the method of login (for example, CTC, TL1, etc.). Default is MULTIPLE. The parameter type is USER_LOGINS, which is the number of times a user can log into the same NE with the same user ID. |
| • MULTIPLE  | A user can log into the same NE many times.                                                                                                                                                                                                                                                                                                                                     |
| • SINGLE    | A user can log into the NE only once (includes both CTC and TL1 sessions).                                                                                                                                                                                                                                                                                                      |
| <PRIVLVL>   | User's access privilege. The parameter type is PRIVILEGE, which is the security level.                                                                                                                                                                                                                                                                                          |
| • MAINT     | Maintenance security level. 60 minutes of idle time.                                                                                                                                                                                                                                                                                                                            |
| • PROV      | Provision security level. 30 minutes of idle time.                                                                                                                                                                                                                                                                                                                              |
| • RTRV      | Retrieve security level. Unlimited idle time.                                                                                                                                                                                                                                                                                                                                   |
| • SUPER     | Superuser security level. 15 minutes of idle time.                                                                                                                                                                                                                                                                                                                              |
| • ROOT_USER | Root user.                                                                                                                                                                                                                                                                                                                                                                      |
| • SEC_SUPER | Security super user.                                                                                                                                                                                                                                                                                                                                                            |
| • SEC_USER  | Security user.                                                                                                                                                                                                                                                                                                                                                                  |
| <PDIF>      | Indicates how many characters must differ between the old and new password. Default minimum character difference is 1. PDIF ranges from 1 to 5 characters. PDIF is a rangeable integer.                                                                                                                                                                                         |

|                                                 |                                                                                                                                                                  |
|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <PWDCHRULE>                                     | (Optional) Password Characters Rule. Indicates the password characters rule for the specified minimum length of the password.                                    |
| • ONE_EACH_OF_LETTER_NUM_TL1SPECIAL             | One letter, one number, and one TL1 special character (% , # , +).                                                                                               |
| • ONE_EACH_OF_LETTER_NUM_SPECIAL                | One letter, one number, and one special character.                                                                                                               |
| • TWO_EACH_OF_TWO_OF_UPPER_LOWER_NUM_TL1SPECIAL | Two each of any of the two numbers, upper, lower, or TL1 special characters.                                                                                     |
| • TWO_EACH_OF_TWO_OF_UPPER_LOWER_NUM_SPECIAL    | Two each of any of the two numbers, upper, lower, or special characters.                                                                                         |
| • ANY_CHAR                                      | Any character.                                                                                                                                                   |
| <PWDMINLEN>                                     | (Optional) Password Minimum Length. Indicates the minimum number of characters that can be set for password configuration. The values are 2, 4, 6, 8, 10 and 12. |
| <PWDMAXLEN>                                     | (Optional) Password Maximum Length. Indicates the maximum number of characters that can be set for password configuration. The values are 20 or 80.              |

## 23.6 SET-HOP-CPS

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Set HOP Control Plane Service (SET-HOP-CPS) command is used to add, remove and modify an HOP route constraint of a Control Plane Service.

### Usage Guidelines

- Specify only the source port to identify the CPS.
- Specify both the source AIDs, if the CPS is of type ADD 2WAY.
- CLIENT cps type support FAC and VFAC AID type.
- TRUNK cps type support CHAN AID type.
- ADD cps type support CHAN, PCHAN, and LINEWL AID type.
- In case of 1WAY, unidirectional connection, SRC and DST are single AIDs. In case of 2WAY, bidirectional connection, SRC and DST are double AIDs. However, in case of CLIENT or TRUNK cps type, src and dst are single AID and the connection is of type 2WAY because of bidirectional ports hence this rule is not applicable.

Provisioning

**Input Format**

```
SET-HOP-CPS:[<TID>]:<SRC>:<CTAG>::<CIRCUITTYPE>,<ROUTETYPE>,<HOPACTION>,[<POSITION>],<HOPTYPE>,<HOPNODE>,[<HOPSIDE>][:];
```

**Input Example**

```
SET-HOP-CPS::VFAC-1-5-2:8::PRIMARY,MAINROUTE,ADD,,LOOSE,10.20.33.44;
```

**Input Parameters**

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <SRC>         | Source AID from the “ <a href="#">26.12 CrossConnectId1</a> ” section on page 26-31.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <CIRCUITTYPE> | Identifies the target circuit. Allowed values are PRIMARY, SECONDARY.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <ROUTETYPE>   | Identifies the target circuit route. Allowed values are MAINROUTE, BRIDGEROUTE.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <HOPACTION>   | Identifies the action to perform on the hop item. Allowed values are ADD, REMOVE, MODIFY, CLEARALL                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <POSITION>    | Identifies the position of the hop in the item list. Default value is 0. <ul style="list-style-type: none"> <li>• If action=ADD and position=0 than append at the end;</li> <li>• If action=REMOVE and position=0 than remove all matching items;</li> <li>• If action=REMOVE and position&lt;&gt;0 than hop values are ignored;</li> <li>• If action=MODIFY and position&lt;&gt;0 than replace the item in the position indicated;</li> <li>• If action=CLEARALL than clears the list ignoring position and other parameters;</li> </ul> |
| <HOPTYPE>     | Type of hop constraint. Allowed values are STRICT, LOOSE, EXCLUDE <ul style="list-style-type: none"> <li>• STRICT—The next hop of the path must be the indicated node and side</li> <li>• LOOSE—The path must cross the indicated node and side</li> <li>• EXCLUDE—The path must exclude the indicated node</li> </ul>                                                                                                                                                                                                                    |
| <HOPNODE>     | IP address of the target node.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <HOPSIDE>     | Hop constraint target WDM side.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 23.7 SET-OPMOD-PTSYS

(Cisco ONS 15454) The Set Operation Mode Packet Transport System (SET-OPMOD-PTSYS) sets the operation mode for the CPT 50 panel.

**Usage Guidelines**

- Sets the operation mode for the PTSYS.
- OPMODE can be set as NMS or IOS.
- RETAINDB can be set only for IOS.

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |       |                   |          |                                 |       |               |       |           |            |                      |  |                                       |   |                       |   |                               |

## 23.8 SET-PMODE-<STS\_PATH>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Set Performance Mode of PM Data Collection for STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, or STS9C (SET-PMODE-<STS\_PATH>) command sets the mode and turns the performance monitoring (PM) data collection mode on or off.

**Usage Guidelines** See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

### Note

- The PM mode and state of an entity are retrieved by using the RTRV-PMODE command.
- The near-end monitoring of the intermediate-path performance monitoring (IPPM) only supports OC3, OC12, OC48, OC192, and EC-1 on STS Path.
- The far-end IPPM data collection is supported by MRC-12 and ADM-10G cards only.
- This release of software will support only the Path (P) mode type PM parameters with this command, that is, this command is not applicable for Line (L) and Section (S) mode types. PM monitoring for Line (L) and Section (S) are supported by the ONS 15454, and the storing PM data is always performed.

**Input Format**

```
SET-PMODE-<STS_PATH>:[<TID>]:<SRC>:<CTAG>::<LOCN>,<MODETYPE>,
[<PMSTATE>];
```

**Input Example**

```
SET-PMODE-STS1:CISCO:STS-4-1-2:123::NEND,P,ON;
```

**Input Parameters**

|            |                                                                                                                                                                                                                                                           |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <SRC>      | Source access identifier from the “26.11 CrossConnectId” section on page 26-27.                                                                                                                                                                           |
| <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be retrieved. Only near-end PM data collection is supported. The parameter type is LOCATION, which is the location where the action is to take place. |
| • NEND     | Action occurs on the near end of the facility.                                                                                                                                                                                                            |
| <MODETYPE> | The type of PM parameters that the entity or the sub entity is to store as a result of an attribute change. Only the path (P) PM parameter is supported. The parameter type is PM_MODE, which is the type of PM parameter.                                |
| • P        | Transport Path PM parameters                                                                                                                                                                                                                              |
| <PMSTATE>  | Directs the named PM mode type to turn on or off. A null value defaults to on. The parameter type is PM_STATE, which directs the named PM mode type (P) state.                                                                                            |
| • OFF      | Disable the mode                                                                                                                                                                                                                                          |
| • ON       | Enable the mode                                                                                                                                                                                                                                           |

## 23.9 SET-PMODE-<VT\_PATH>

The Set Performance Mode of PM Data Collection for VT1 and VT2 (SET-PMODE-<VT\_PATH>) command sets the mode and turns the performance monitoring (PM) data collection mode on or off.

**Usage Guidelines**

- The PM mode and state of an entity is retrieved by using the RTRV-PMODE command.
- This release of software will support only the Path (P) mode type PM parameters with this command, that is, this command will not be applicable for Line (L) and Section (S) mode types.

| <b>Input Parameters</b> | <SRC>      | Source access identifier from the “26.12 CrossConnectId1” section on page 26-31. Must not be null.                                                                                                                                                                          |
|                         | <LOCN>     | Location associated with a particular command. Identifies the location from which the PM mode is to be set. Only near end (NEND)PM data collection is supported. The parameter type is LOCATION, which is the location where the action is to take place. Must not be null. |
|                         | • NEND     | Action occurs on the near end of the facility.                                                                                                                                                                                                                              |
|                         | <MODETYPE> | The type of PM parameters that the entity or the subentity is to store as a result of an attribute change. Only the path (P) type is supported. The parameter type is PM_MODE, which is the type of PM parameters.                                                          |
|                         | • P        | Transport Path PM parameters.                                                                                                                                                                                                                                               |
|                         | <PMSTATE>  | Directs the named PM mode type to turn on or off. A null value defaults to on. The parameter type is PM_STATE, which directs the named PM mode type (P) state.                                                                                                              |
|                         | • OFF      | Disable the mode                                                                                                                                                                                                                                                            |
|                         | • ON       | Enable the mode                                                                                                                                                                                                                                                             |

## 23.10 SET-SRVTYPE

(Cisco ONS 15454 M2 and Cisco ONS 15454 M6) The Set Service Type (SET-SRVTYPE) command allows you to set the service type in the TNC card to carry User Data Channel (UDC) or voice over IP (VOIP) traffic.

### Usage Guidelines

- You can configure UDC or VoIP on the two SFP ports present on the TNC card. The TNC card supports the UDC/VoIP configuration only when OSC is provisioned on the SFP ports.
- You can configure UDC or VoIP on only one SFP port at a time per TNC card. If you want to configure UDC or VoIP on the second SFP port, set NONE for the first port and then set UDC or VoIP for the second port.

|-------------------------|-----------|-------------------------------------------------|
| <b>Input Parameters</b> | <AID>     | FAC-<Shelf>-<Slot>-<PPM>-<Port>.                |
|                         | <SRVTYPE> | Indicates the service type set on the TNC port. |
|                         | • UDC     | To set the service type to UDC.                 |
|                         | • VOIP    | To set the service type to VOIP                 |
|                         | • NONE    | To set the service type to NONE.                |

## 23.11 SET-TH-<MOD2>

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Set Threshold for 10GFC, 10GIGE, 40GIGE, 100GIGE, 1GFC, 1GFICON, 2GFC, 4GFC, 2GFICON, 5GIB, 8GFC, CLNT, D1VIDEO, DS1, DS3I, DV6000, DVBASI, E1, E3, E4, EC1, ESCON, ETRCLO, FSTE, G1000, GFPOS, GIGE, HDTV, ISC1, ISCCOMPAT, ISC3PEER2R, ISC3PEER1G, ISC3PEER2G, OC12, OC192, OC3, OC48, OC768, OCH, OMS, OTS, OTU3, POS, STM1E, STS1, STS12C, STS18C, STS192C, STS24C, STS36C, STS3C, STS48C, STS96C, STS6C, STS9C, T1, T3, VC11, VC12, VC3, VT1, VT2, OTL, OTU1, OTU2, OTU4, SDSDI, HSDSDI, 3GVIDEO, ISC3STP1G, or ISC3STP2G (SET-TH-<MOD2>) command sets the threshold for PMs and sets the alarm thresholds for the MXP\_2.5G\_10G and TXP\_MR\_10G cards. If this command is used to set the alarm thresholds on, the time period is not applicable. This command sets alarm thresholds on AR-MXP, AR-XP, and AR-XPE cards and ports, and optical add/drop multiplexing (OADM).

### Usage Guidelines

The command supports the modifier OTU1, SDSDI, HSDSDI, 3GVIDEO, ISC3STP1G, and ISC3STP2G. See [Table 28-1 on page 28-1](#) for supported modifiers by platform.

The Tx power is blocked on Rx Video pluggables and vice-versa. The Tx power is not applicable on ESCON payload.

The rules are as follows:

- The PM Thresholds have a default of NEND for the location. The Alarm Thresholds do not require or interpret the location.
- The TMPER is not applicable to alarm thresholds. The TMPER default is 15-MIN.
- The client ports only accept SONET, Laser, and alarm MONTYPES. The trunk ports accept SONET, Laser, alarm, FEC, OTN, and 8B10B MONTYPES.
- The SET-TH-OTL is denied on backplane virtual ports of 100G-LC-C for optical thresholds only.
- The SET-TH-OTL is denied on sublanes of CFP-LC. The command sets the alarms thresholds on first sublane of 100G-LC-C card.
- The SET-TH-<MOD2> on 100G-LC-C, 10x10G-LC, and CFP-LC ports use MOD2 and the following AID:
  - OCH (CHAN AID for non-OTU payloads on 100G-LC-C, 10x10G-LC, and CFP-LC fixed trunk ports. ACHAN for non-OTU payloads on the 100G-LC-C card using the CXP pluggable).
  - MOD2 (VFAC AID for OTU payloads on 10x10G-LC and CFP-LC ports. ACHAN for OTU payloads on the 100G-LC-C card using the CXP pluggable).
  - TCA threshold cannot be set on sublanes (VLINE) of CFP-LC cards.

| • 15-MIN   | Performance parameter accumulation interval length; every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length. |
| • RAW-DATA | Performance parameter accumulation interval length; starting from the last time the counters were cleared. This is only applicable to RMON managed PMs.            |

## 23.12 SET-TOD

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) The Set Time of Day (SET-TOD) command sets the system date and time for the NE. The year should be entered using four digits while the hour should be entered using a 24-hour time period (for example, military time).

### Usage Guidelines

None

### Category

System

### Security

Provisioning

### Input Format

SET-TOD:[<TID>]::<CTAG>::<YEAR>,<MONTH>,<DAY>,<HOUR>,<MINUTE>,<SECOND>,<DIFFERENCE>[:DST=<DST>];

### Input Example

SET-TOD:CAZADERO::240::1998,05,08,13,18,55,480:DST=Y;

### Input Parameters

|              |                                                                                       |
|--------------|---------------------------------------------------------------------------------------|
| <YEAR>       | The current calendar year. YEAR is an integer.                                        |
| <MONTH>      | The month of the year. Ranges from 01 to 12. MONTH is an integer.                     |
| <DAY>        | The day of the month. Ranges from 01 to 31. DAY is an integer.                        |
| <HOUR>       | The hour of the day. Ranges from 00 to 23. HOUR is an integer.                        |
| <MINUTE>     | The minute of the hour. Ranges from 00 to 59. MINUTE is an integer.                   |
| <SECOND>     | The second of the minute. Ranges from 00 to 59. SECOND is an integer.                 |
| <DIFFERENCE> | The number of minutes off UTC. DIFFERENCE is an integer.                              |
| <DST>        | Daylight savings time. The parameter type is ON_OFF (disable or enable an attribute). |
| • N          | Disable an attribute.                                                                 |
| • Y          | Enable an attribute.                                                                  |

## SW Commands

---

This chapter provides switch (SW) commands for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

**Note**

---

All commands supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

---

### 24.1 SW-DX-EQPT

(Cisco ONS 15454) The Switch Duplex Equipment (SW-DX-EQPT) command switches a cross-connect card with the mate card within the NE.

---

**Usage Guidelines**

If sending a mode parameter with a value other than NORM, FRCD, or NULL, the IDNV (Input, Data Not Valid) error message will be returned.

---

**Category**

Equipment

---

**Security**

Maintenance

---

**Input Format**

SW-DX-EQPT:[<TID>]:<AID>:<CTAG>::[<MODE>][,];

---

**Input Example**

SW-DX-EQPT:CISCO:SLOT-1:123::NORM;

|                         |        |                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Input Parameters</b> | <AID>  | Access identifier from the “26.15 EQPT” section on page 26-39. Identifies the equipment unit in the network element (NE) that is to be switched with its mate.                                                                                                                                                                                                                    |
|                         | <MODE> | The parameter type is command mode (CMDMDE). Normal (NORM) mode is the default behavior for all commands but you can specify forced (FRCD) mode to force the system to override a state where the command would normally be denied. The FRCD mode of operation is applicable to delete a virtual concatenated (VCAT) member cross-connect in IS-NR or OOS-AU,AINS service states. |
|                         | • FRCD | Force the system to override a state where the command would normally be denied. (FRCD is not supported in this command).                                                                                                                                                                                                                                                         |
|                         | • NORM | Execute the command normally. Do not override any conditions that could make the command fail.                                                                                                                                                                                                                                                                                    |

## 24.2 SW-TOPROTN-EQPT

(Cisco ONS 15454) The Switch to Protection Equipment (SW-TOPROTN-EQPT) command performs an equipment unit protection switch.

### Usage Guidelines

This command is used for electrical cards (for example, DS1, DS3, DS3XM, and EC1). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection.

This command will switch the traffic from the working card specified in the AID to the protect card.

There is a priority for the switch to protection commands. In a 1:N protection group with  $N > 1$ , consider two working cards: A and B. Card A is switched to the protect card with the SW-TOPROTN command. If Card B is pulled from the system, the protect card will carry the traffic of Card B and Card A will raise the FAILTOSW condition and carry traffic. When Card B is replaced and the revert timer expires, Card B will carry traffic and Card A will switch to the protect card. The FAILTOSW condition on Card A will be cleared. Note that 1:N protection groups in the system are always revertive.

In a revertive protection group, the unit specified by the AID will raise the standing condition of WKSWPR if the command were executed without an error. In a nonrevertive protection group, the unit specified by the AID will raise the transient condition of WKSWPR if the command were executed without an error.

The following actions will return error messages:

- Sending this command to a card that is not in a protection group will return the SNVS (Status, Not in Valid State) error message.
- Sending this command to a missing working card will return the SWFA (Status, Working Unit Failed) error message.
- Sending this command to a protection card will return the IIAC (Input, Invalid Access Identifier) error message.
- Sending a mode parameter with a value other than NORM, FRCD, or null will return the IDNV (Input, Data Not Valid) error message.
- Sending this command to a working card when the working card has raised INHSWPR will return the SWLD (Status, Working Unit Locked) error message.

- Sending this command to a working card when the protection card has raised INHSWPR will return the SPLD (Status, Protection Unit Locked) error message.
- Sending this command to an active working card when the protect card is already carrying traffic (this only occurs in a 1:N protection group where N is greater than 1) will return the SNVS (Status, Not in Valid State) error message.
- Sending this command to an active working card when the protect card is failed or missing will return the SPFA (Status, Protection Unit Failed) error message.
- Sending this command to a standby working card will return the SNVS (Status, Not in Valid State) error message.

**Note**

- The default PROTID is the protect unit if there is only one protect unit per protection group in the NE. Otherwise, a DENY error message will be responded.
- This command only supports the BTH or null value of the DIRN parameter. A command with any other value is considered an incorrect use of the command and will return An IDNV (Input, Data Not Valid) error message.
- This command is not used for the common control (TCC2/TCC2P/TCC3 or XCVT/XC10G) cards. A command on a common control card will return an IIAC (Input, Invalid Access Identifier) error message. To use the switch common control cards, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
- This command is not used for SONET (OC-N) cards. A command on a SONET card will return an IIAC (Input, Invalid Access Identifier) error message. To switch a SONET card, use the OPR-PROTNSW and RLS-PROTNSW commands.

SW-TOPROTN-EQPT:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::[&lt;MODE&gt;],[&lt;PROTID&gt;],[&lt;DIRN&gt;];

**Input Example**

SW-TOPROTN-EQPT:CISCO:SLOT-1:123::FRCD,SLOT-3,BTH;

| Input Parameters |                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------|----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>            |                                                          | Access identifier from the “ <a href="#">26.15 EQPT</a> ” section on page 26-39. Specifies the working unit which will have traffic switched to protection.                                                                                                                                                                                                                                                                                                                                                            |
| <MODE>           |                                                          | Mode with which the command is to be implemented. The parameter will only support the NORM value. A null value defaults to NORM. Sending the FRCD value will generate the same switching behavior as sending the NORM value. The parameter type is CMDMDE, which forces the system to execute a given command regardless of any standing conditions. Normal mode is the default behavior for all commands but you can specify FRCD to force the system to override a state where the command would normally be denied. |
|                  | <ul style="list-style-type: none"> <li>• FRCD</li> </ul> | Force the system to override a state where the command would normally be denied.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                  | <ul style="list-style-type: none"> <li>• NORM</li> </ul> | Execute the command normally. Do not override any conditions that could make the command fail.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <PROTID>         |                                                          | (Optional) Access identifier from the “ <a href="#">26.24 PRSLOT</a> ” section on page 26-54. Identifies the protection unit to be switched when there is more than one protection unit within the NE.                                                                                                                                                                                                                                                                                                                 |
| <DIRN>           |                                                          | The direction relative to the entity defined in the AID field. The direction of the switching. This command only supports the BTH value of this parameter. DIRN defaults to BTH. The parameter type is DIRECTION, which is the transmit and receive directions.                                                                                                                                                                                                                                                        |
|                  | <ul style="list-style-type: none"> <li>• BTH</li> </ul>  | Both transmit and receive directions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 24.3 SW-TOWKG-EQPT

(Cisco ONS 15454) The Switch to Working Equipment (SW-TOWKG-EQPT) command switches the protected working unit back to working unit.

### Usage Guidelines

This command is used for electrical cards (for example, DS1, DS3, DS3XM, and EC1). DS1 and DS3 cards have 1:1 and 1:N equipment protection. DS3XM and EC1 cards have only 1:1 equipment protection cards.

This command will switch the traffic from the protection card to the working card specified by the AID.

In a revertive protection group, the unit specified by the AID will clear the standing condition of WKSWPR if the command were executed without an error. In a nonrevertive protection group, the unit specified by the AID will raise the transient condition of WKSWBK if the command were executed without an error.

The following actions will return error messages:

- Sending this command to a card that is not in a protection group will return the SNVS (Status, Not in Valid State) error message.
- Sending this command to a missing working card will return the SWFA (Status, Working Unit Failed) error message.
- Sending this command to a protection card will return the IIAC (Input, Invalid Access Identifier) error message.

- Sending a mode parameter with a value other than NORM, FRCD, or null will return the IDNV (Input, Data Not Valid) error message.
- Sending this command to a working card when the working card has raised INHSSWWKG will return the SWLD (Status, Working Unit Locked) error message.
- Sending this command to a working card when the protection card has raised INHSSWWKG will return the SPLD (Status, Protection Unit Locked) error message.
- Sending this command to an active working card will return the SNVS (Status, Not in Valid State) error message.

**Note**

- This command only supports the BTH or null value of the DIRN parameter. A command with any other value is considered an incorrect use of the command and will return An IDNV (Input, Data Not Valid) error message.
- This command is not used for the common control (TCC2/TCC2P/TCC3 or XCVT/XC10G) cards. A command on a common control card will return an IIAC (Input, Invalid Access Identifier) error message. To switch the common control cards, use the SW-DX-EQPT and ALW-SWDX-EQPT commands.
- This command is not used for SONET (OC-N) cards. A command on a SONET card will return an IIAC (Input, Invalid Access Identifier) error message. To switch a SONET card, use the OPR-PROTNSW and RLS-PROTNSW commands.

**Input Format**

SW-TOWKG-EQPT:[&lt;TID&gt;]:&lt;AID&gt;:&lt;CTAG&gt;::[&lt;MODE&gt;][,&lt;DIRN&gt;];

**Input Example**

SW-TOWKG-EQPT:CISCO:SLOT-2:123::FRCD,BTH;

**Input Parameters**

|        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <AID>  | Access identifier from the <a href="#">“26.24 PRSLOT”</a> section on page 26-54. Specifies the working unit which will have traffic switched to protection.                                                                                                                                                                                                                                                                                                                                                                |
| <MODE> | Mode with which the command is to be implemented. The parameter will only support the NORM value. A null value defaults to NORM. Sending the FRCD value for will generate the same switching behavior as sending the NORM value. The parameter type is CMDMDE, which forces the system to execute a given command regardless of any standing conditions. Normal mode is the default behavior for all commands but you can specify FRCD to force the system to override a state where the command would normally be denied. |

|        |                                                                                                                                                                                                                                                                 |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| • FRCD | Force the system to override a state where the command would normally be denied.                                                                                                                                                                                |
| • NORM | Execute the command normally. Do not override any conditions that could make the command fail.                                                                                                                                                                  |
| <DIRN> | The direction relative to the entity defined in the AID field. The direction of the switching. This command only supports the BTH value of this parameter. DIRN defaults to BTH. The parameter type is DIRECTION, which is the transmit and receive directions. |
| • BTH  | Both transmit and receive directions                                                                                                                                                                                                                            |

# TST Commands

This chapter provides test (TST) commands for the Cisco ONS 15454.

## 25.1 TST-INSERRBITS-<MOD2>

(CISCO ONS 15454) The test inserted error bits for DS1, T1, or T3 (TST-INSERRBITS-<MOD2>) command tests the connectivity and error count on the traffic line, running on the DS1, T1, and T3 ports of the electrical card.

### Usage Guidelines

Before issuing this command, bit error rate testing (BERT) must be enabled on the port and the SYNC STATUS of BERT on the port must be UP.

### Note

This command is limited to DS1/E1-56 and DS3XM-12 electrical cards.

### Category

Ports

### Security

Provisioning

### Input Format

TST-INSERRBITS-<MOD2>:[<TID>]:<AID>:<CTAG>::BITERRS=<BITERRS>;

### Input Example

TST-INSERRBITS-DS1::FAC-2-1:CTAG:::BITERRS=SINGLE;

### Input Parameters

|           |                                                                                    |
|-----------|------------------------------------------------------------------------------------|
| <AID>     | Access identifier from the <a href="#">“26.17 FACILITY”</a> section on page 26-42. |
| <BITERRS> | Specifies the error rate to be injected for BERT. The parameter type is BITERR.    |
| • STOP    | Stops inserting bit errors.                                                        |
| • SINGLE  | Inserts single bit errors.                                                         |

|        |                                      |
|--------|--------------------------------------|
| • 1E-3 | Inserts bit errors at the 1E-3 rate. |
| • 1E-4 | Inserts bit errors at the 1E-4 rate. |
| • 1E-5 | Inserts bit errors at the 1E-5 rate. |
| • 1E-6 | Inserts bit errors at the 1E-6 rate. |

# Access Identifiers

This chapter describes the access identifiers (AIDs) of TL1 commands and autonomous messages for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

The AID code directs an input command to its intended physical or data entity inside the network element (NE). Equipment modules and facilities are typical examples of entities addressed by the access code. The AIDs in this section apply to the SONET ONS 15454, ONS 15454 M2, and ONS 15454 M6 except where noted.

**Note**

Access identifiers supported on the Cisco ONS 15454 platform are also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms.

## 26.1 ALL

AID for CXP port on 100G-LC-C card: AGGR-[SLOT]-[APPM]-[PORT].

AID for fixed trunk on 100G-LC-C card: CHAN-[SLOT]-[PORT].

## 26.3 AidUnionId1

Table 26-3 AidUnionId1

| AID  | Patterns           |
|------|--------------------|
| BLSR | ALL<br>BLSR-RINGID |

## 26.4 BAND

(Cisco ONS 15454 only) The BAND AID is used to access Optical Multiplex Section (OMS) layer of optical networking units.

AID for OCH interface of CXP port on 100G-LC-C card: ACHAN-[SLOT]-[PPM]-[PORT].

AID for fixed trunk on 100G-LC-C card: CHAN-[SLOT]-[PORT].

Table 26-4 BAND

| Pattern                                 | Description                                                                       |
|-----------------------------------------|-----------------------------------------------------------------------------------|
| ALL                                     | All of the OMSs of the NE. The ALL AID is applicable for retrieve-only commands.  |
| BAND[-{1-50}]-{1-6,12-17}-{1-4}-ALL     | All the channels in a Band OADM (1Bn, 4Bn) unit.                                  |
| BAND[-{1-50}]-{1-6,12-17}-{1-4}-{RX,TX} | The Receive/Transmit channels in a Band OADM (1Bn, 4Bn) unit.                     |
| BAND[-{1-50}]-{1-6,12-17}-{1}-ALL       | All the channels in an Optical Multiplexer/Demultiplexer (4Ch) unit.              |
| BAND[-{1-50}]-{1-6,12-17}-{1}-{RX,TX}   | The Receive/Transmit channels in an Optical Multiplexer/Demultiplexer (4Ch) unit. |

## 26.5 BANDWL

(Cisco ONS 15454) Band wavelength. Identifies a wavelength channel included in any of the lower layer OMS facilities.

Table 26-5 BANDWL

| Pattern                                   | Description                                                                                            |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------|
| BANDWL-{1-6,12-17}-{1-32}-{RX,TX}-1530.33 | Identifies an allocated wavelength channel included in any of the lower layer OMS facilities.          |
| BANDWL-{1-6,12-17}-{1-32}-{RX,TX}-ALL     | Identifies all of the allocated wavelength channels included in any of the lower layer OMS facilities. |

Table 26-5 BANDWL (continued)

| Pattern                                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BANDWL-{{1-50}}-{{1-6,12-17}}-{{1-32}}-<br>{RX,TX,PT}-<WLEN> | <p>OCH is the termination point of OCHNC connections and it is also used to report alarms and conditions eventually notified by the node connection anomalies.</p> <p>Because the end points of an OCHNC connection can be both at the OCH filter level and at the node LINE OTS single wavelength level, this logical termination is useful to represent univocally a wavelength termination independently by the physical port it is contained in.</p> <p>The format is<br/>CHAN-[SHELF]-[SLOT]-[PORT]-[PORTDIRECTION]-[WAVELENGTH (in the form of 15xx.yy)]</p> |
| BANDWL-{{1-50}}-{{1-6,12-17}}-{{1-32}}-<br>{RX,TX,PT}-ALL    | <p>OCH is the termination point of OCHNC connections and it is also used to report alarms and conditions eventually notified by the node connection anomalies.</p> <p>Because the end points of an OCHNC connection can be both at the OCH filter level and at the node LINE OTS single wavelength level, this logical termination is useful to represent univocally a wavelength termination independently by the physical port it is contained in.</p> <p>The format is<br/>CHAN-[SHELF]-[SLOT]-[PORT]-[PORTDIRECTION]-[WAVELENGTH (in the form of 15xx.yy)]</p> |

## 26.6 BITS

AID for building integrated timing supply (BITS).

Table 26-6 BITS

| Pattern                   | Description                                                                                                                                                                                                                           |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL                       | The ALL AID is applicable to RTRV commands only (RTRV-BITS and RTRV-ALM/COND-BITS). The All AID is equivalent to BITS-ALL for these commands. For RTRV-ALM/COND-SYCN, the ALL AID translates to BITS-ALL, SYNC-BITS1, and SYNC-BITS2. |
| BITS-ALL                  | BITS AIDs of both BITS-1 and BITS-2 in the RTRV-BITS command.                                                                                                                                                                         |
| BITS[<SHELFID>]-ALL       | BITS shelf ID of both BITS-1 and BITS-2 in the RTRV-BITS command.                                                                                                                                                                     |
| BITS[<SHELFID>]-{1,2}     | Individual BITS AID.                                                                                                                                                                                                                  |
| SYNC[<SHELFID>]-BITS{1,2} | BITS-OUT AIDs of BITS-1 and BITS-2. These AIDs are applicable only in ED/RTRV-BITS commands and are used for setting and retrieving the BITS-OUT parameters.                                                                          |

## 26.7 BLSR

(ONS 15454) BLSR AIDs are used to access the specific BLSR of the NE.

**Table 26-7** BLSR

| Pattern     | Description                                                                                                |
|-------------|------------------------------------------------------------------------------------------------------------|
| ALL         | All the BLSRs in the NE. The ALL AID is applicable for retrieve-only commands like RTRV-<MOD_RING> (BLSR). |
| BLSR-RINGID | RINGID is a string of up to six characters. Valid characters are [A-Z,0-9] (case insensitive).             |

## 26.8 CHANNEL

(Cisco ONS 15454 only) Accesses the optical channels (OCH) layer of optical networking units.

**Table 26-8** CHANNEL

| CHANNEL Values                                    | Description                                                                                                                                       |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL                                               | ALL OCHs of the NE. The ALL AID is applicable for retrieve-only commands.                                                                         |
| ACHAN[-{1-50}]-{2-7}-{1}<br>-}{1}                 | Identifies the OCH Facility of Aggregate port of 100G-LC-C Card.                                                                                  |
| CHAN[-{1-50}]-{2-7}-{2}                           | Identifies the Fixed Trunk or the Coherent Trunk on 100G-LC-C Card.                                                                               |
| CHAN[-{1-50}]-{1-6,12-17}<br>}-ALL                | All the channels of an Optical Transponder/Muxponder. The format is CHAN-[SLOT]-ALL                                                               |
| CHAN[-{1-50}]-{1-6,12-17}<br>}-{1-32}-<br>ALL     | All the channels in an Optical Multiplexer/Demultiplexer 32WSS unit. The format is CHAN-[SHELF]-[SLOT]-[PORT]-ALL.                                |
| CHAN[-{1-50}]-{1-6,12-17}<br>}-{1-32}-<br>{RX,TX} | The Receive/Transmit channels in an Optical Multiplexer/Demultiplexer (32DMX, 32MUX) units. The format is CHAN-[SHELF]-[SLOT]-[PORT]-[DIRECTION]. |
| CHAN[-{1-50}]-{1-6,12-17}<br>}-{1-32}-<br>{RX,PT} | The Receive/Pass-through channels in an Optical 32WSS unit. The format is CHAN-[SHELF]-[SLOT]-[PORT]-[DIRECTION].                                 |
| CHAN[-{1-50}]-{1-5,12-16}<br>}-{1-40}-A<br>LL     | All the channels in Optical Multiplexer/Demultiplexer/WSS (40Ch) units. The format is CHAN-[SHELF]-[SLOT]-[PORT]-ALL.                             |
| CHAN[-{1-50}]-{1-5,12-16}<br>}-{1-40}-{<br>RX,TX} | The receive/transmit channels in an Optical Multiplexer/Demultiplexer (40Ch) unit. The format is CHAN-[SHELF]-[SLOT]-[PORT]-[DIRECTION].          |
| CHAN[-{1-50}]-{1-5,12-16}<br>}-{1-40}-{<br>RX,PT} | The Receive/Pass-through channels in an Optical WSS (40Ch) unit. The format is CHAN-[SHELF]-[SLOT]-[PORT]-[DIRECTION].                            |

Table 26-8 CHANNEL (continued)

| CHANNEL Values                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHAN[-{1-50}]-{1-6,12-17}<br>}{1-4}-ALL               | All the Channels in an OADM (AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x) unit or Optical Multiplexer/Demultiplexer (4MD-xx.x) units. The format is CHAN-[SHELF]-[SLOT]-[PORT]-ALL.                                                                                                                                                                                                                                                                                                                                                                 |
| CHAN[-{1-50}]-{1-6,12-17}<br>}{1-4}-<br>{RX,TX}       | The Receive/Transmit Channels in an OADM (AD-1C-xx.x, AD-2C-xx.x, AD-4C-xx.x) unit or Optical Multiplexer/Demultiplexer (4MD-xx.x) unit. The format is CHAN-[SHELF]-[SLOT]-[PORT]-[DIRECTION].                                                                                                                                                                                                                                                                                                                                             |
| CHAN[-{1-50}]-{1-6,12-17}<br>}{2,3}                   | A single channel of an Optical Transponder/Muxponder. The TXP_MR_10G, TXP_MR_10E, and TXP_MR_2.5G cards use CHAN-[SHELF]-SLOT-2 for the one dense wavelength division multiplexing (DWDM) Facility. The TXPP_MR_2.5G card uses CHAN-[SHELF]-SLOT-{2,3} for the two DWDM Facilities. The format is CHAN-[SHELF]-[SLOT]-[PORT].                                                                                                                                                                                                              |
| CHAN[-{1-50}]-{1-6,12-17}<br>}{5}                     | A single channel of an Optical Muxponder. The TXP_MR_10G and TXP_MR_10E cards use CHAN-[SHELF]-SLOT-5 for the one DWDM facility. The TXP_MR_10G uses the CHAN-[SHELF]-SLOT-5 for the one DWDM facility. The format is CHAN-[SHELF]-[SLOT]-[PORT].                                                                                                                                                                                                                                                                                          |
| CHAN[-{1-50}]-{1-6,12-17}<br>}{9,10}                  | A single channel of an Optical Muxponder. The MXP_MR_10DME_C and MXP_2.5G_10G cards use CHAN-[SHELF]-SLOT-9 for the one DWDM Facility. The MXPP_2.5G_10G card uses CHAN-[SHELF]-SLOT-{9,10} for the two DWDM Facilities. The format is CHAN-[SHELF]-[SLOT]-[PORT].                                                                                                                                                                                                                                                                         |
| CHAN[-{1-50}]-{1-6,12-17}<br>}{3,4}-{1}               | A single channel of an Optical Muxponder. The 10GE-XP uses CHAN-[SHELF]-SLOT-{3,4}-1 for the two DWDM facilities. The format is CHAN-[SHELF]-[SLOT]-[PPM]-[PORT].                                                                                                                                                                                                                                                                                                                                                                          |
| CHAN[-{1-50}]-{1-6,12-17}<br>}{21,22}-{<br>1}         | A single channel of an Optical Muxponder. The GE-XP uses CHAN-[SHELF]-SLOT-{11,12}-1 for the two DWDM facilities. The format is CHAN-[SHELF]-[SLOT]-[PPM]-[PORT].                                                                                                                                                                                                                                                                                                                                                                          |
| CHAN-[[{1-50}]-]{1-6,12-17}<br>}{1-32}-<br>{RX,TX,PT} | OCH is the termination point of OCHNC connections and it is also used to report alarms and conditions eventually notified by the node connection anomalies. Because the end points of an OCHNC connection can be both at the OCH filter level and at the node LINE OTS single wavelength level, this logical termination is useful to represent univocally a wavelength termination independently by the physical port it is contained in. The format is CHAN-[SHELF]-[SLOT]-[PORT]-[PORTDIRECTION].                                       |
| CHAN-[[{1-50}]-]{1-6,12-17}<br>}{1-32}-<br>ALL        | OCH is the termination point of OCHNC connections and it is also used to report alarms and conditions eventually notified by the node connection anomalies. Because the end points of an OCHNC connection can be both at the OCH filter level and at the node LINE OTS single wavelength level, this logical termination is useful to represent univocally a wavelength termination independently by the physical port it is contained in. The format is CHAN-[SHELF]-[SLOT]-[PORT]-[PORTDIRECTION]-[WAVELENGTH] (in the form of 15xx.yy). |

Table 26-8 CHANNEL (continued)

| CHANNEL Values                        | Description                                                                                                                                                                                                                                                                                                                 |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHAN[-{1-50}]-{1-6,12-17}-{19}-{1}    | A single channel of an ADM-10G card. ADM-10G uses CHAN-[SHELF]-SLOT-19 for one DWDM Facility. Format is CHAN-[SHELF]-[SLOT]-[PPM]-[PORT].                                                                                                                                                                                   |
| CHAN[-{1-50}]-{1-6,12-17}-{17,18}-{1} | The DWDM interlinks between two peer ADM-10G cards. ADM-10G uses CHAN-[SHELF]-SLOT-{17,18} for the two DWDM interlinks Facilities. Format is CHAN-[SHELF]-[SLOT]-[PPM]-[PORT].                                                                                                                                              |
| CHAN[-{1-50}]-{1-6,12-17}-{19}-{1}    | A single channel of an ADM-10G card. ADM-10G uses CHAN-[shelf]-slot-19 for the 1 DWDM Facility. Format is CHAN-[shelf]-[slot]-[ppm]-[port].                                                                                                                                                                                 |
| CHAN[-{1-50}]-{2-7}-{1-10}-{1}        | Identifies OCH interface of SFP+ ports on 10x10G-LC and CFP ports on CFP-LC.                                                                                                                                                                                                                                                |
| CHAN[-{1--0}]-{1-6,12-17}-{17,18}-{1} | The DWDM Interlinks between 2 peer ADM-10G cards. ADM-10G uses CHAN-[shelf]-slot-{17,18} for the 2 DWDM Interlinks Facilities. Where format is CHAN-[shelf]-[slot]-[ppm]-[port]. In Release 9.0 or later, Port Number 18 can be used as an optical channel in the single card mode, the AID and the format remain the same. |
| PCHAN-ALL                             | All the Channels in all the Passive patch panel module where format is PCHAN-ALL. This AID is applicable to OCH commands like ENT/DLT/RTRV-LNK, ENT/DLT/ED/RTRV-OCHNC, RTRV-OCH, ENT/ED/RTRV/OPR/RLS/DLT-CPS, SET/RTRV-HOP-CPS.                                                                                             |
| PCHAN-{1-96}-ALL                      | All the Channels in a Passive patch panel module where format is PCHAN-[id]-ALL. This AID is applicable to OCH commands like ENT/DLT/RTRV-LNK, ENT/DLT/ED/RTRV-OCHNC, RTRV-OCH, ENT/ED/RTRV/OPR/RLS/DLT-CPS, SET/RTRV-HOP-CPS.                                                                                              |
| PCHAN-{1-96}-{1-4}-ALL                | All the TX and RX Channels in a port of 15216-FLD-xx-x, passive modules where format is PCHAN-[id]-[port]-ALL. This AID is applicable to OCH commands like ENT/DLT/RTRV-LNK, ENT/DLT/ED/RTRV-OCHNC, RTRV-OCH, ENT/ED/RTRV/OPR/RLS/DLT-CPS, SET/RTRV-HOP-CPS.                                                                |
| PCHAN-{1-96}-{1-4}-{RX-TX}            | All the TX and RX Channels in a port of 15216-FLD-xx-x, passive modules where format is PCHAN-[id]-[port]-[direction]. This AID is applicable to OCH commands like ENT/DLT/RTRV-LNK, ENT/DLT/ED/RTRV-OCHNC, RTRV-OCH, ENT/ED/RTRV/OPR/RLS/DLT-CPS, SET/RTRV-HOP-CPS.                                                        |
| PCHAN-{1-96}-{1-40}-ALL               | All the TX and RX Channels in a port of 15216-MD-ODD, 15216-MD-EVEN passive modules where format is PCHAN-[id]-[port]-ALL. This AID is applicable to OCH commands like ENT/DLT/RTRV-LNK, ENT/DLT/ED/RTRV-OCHNC, RTRV-OCH, ENT/ED/RTRV/OPR/RLS/DLT-CPS, SET/RTRV-HOP-CPS.                                                    |

Table 26-8 CHANNEL (continued)

| CHANNEL Values              | Description                                                                                                                                                                                                                                                                 |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCHAN-{1-96}-{1-40}-{RX,TX} | The Receive/Transmit Channels in a 15216-MD-ODD, 15216-MD-EVEN passive modules where format is PCHAN-[id]-[port]-[direction]. This AID is applicable to OCH commands like ENT/DLT/RTRV-LNK, ENT/DLT/ED/RTRV-OCHNC, RTRV-OCH, ENT/ED/RTRV/OPR/RLS/DLT-CPS, SET/RTRV-HOP-CPS. |
| PCHAN-{1-96}-{1-40}-ALL     | All the TX and RX Channels in a port of 15216-MD-ODD, 15216-MD-EVEN passive modules where format is PCHAN-[id]-[port]-ALL. This AID is applicable to OCH commands like ENT/DLT/RTRV-LNK, ENT/DLT/ED/RTRV-OCHNC, RTRV-OCH, ENT/ED/RTRV/OPR/RLS/DLT-CPS, SET/RTRV-HOP-CPS.    |
| PCHAN-{1-96}-{1-40}-{RX,TX} | The Receive/Transmit Channels in a 15216-MD-ODD, 15216-MD-EVEN passive modules where format is PCHAN-[id]-[port]-[direction]. This AID is applicable to OCH commands like ENT/DLT/RTRV-LNK, ENT/DLT/ED/RTRV-OCHNC, RTRV-OCH, ENT/ED/RTRV/OPR/RLS/DLT-CPS, SET/RTRV-HOP-CPS. |
| VCHAN-{1-50}-{2-7}-{1-2}    | Identifies the OCH Facility of the Backplane Virtual ports on 100G-LC-C card.                                                                                                                                                                                               |

## 26.9 CHGRP

AID for the Channel Group (CHGRP). [Table 26-9](#) lists the CHGRP AIDs and their descriptions.

Table 26-9 CHGRP

| Pattern                           | Description                                                                                                                                                                            |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL                               | The ALL aid is applicable for RTRV-only commands, basically the RTRV-rr type of commands. For example, RTRV-CHGRP with ALL aid returns all CHGRP ports on the GE_XP and 10GE_XP cards. |
| CHGRP-{{1-50}}-{1-6,12-17}-{1-11} | Channel group AID on GE_XP and 10GE_XP cards. The format is CHGRP-[SHELF]-[SLOT]-[CHGRP]                                                                                               |

## 26.10 COM

Common

Table 26-10 COM

| Pattern | Description |
|---------|-------------|
| COM     | Common      |

## 26.11 CrossConnectId

AID for CXP port on 100G-LC-C: AGGR-[SLOT]-[APPM]-[PORT].

AID for fixed trunk on 100G-LC-C: CHAN-[SLOT]-[PORT] .

**Table 26-11** CrossConnect Id

| Pattern  | Description                                                |
|----------|------------------------------------------------------------|
| FACILITY | ALL                                                        |

## 26.14 ENV

The environmental AID for the AIC-I cards. “IN” is used for environmental alarms. “OUT” is used for environmental controls.

**Table 26-14** ENV

| Pattern                      | Description                                                                                           |
|------------------------------|-------------------------------------------------------------------------------------------------------|
| ALL                          | The ALL AID applies to retrieve-only commands: RTRV-ALM/COND-ENV, RTRV-ATTR-CONT, and RTRV-ATTR-ENV.  |
| ENV-IN-ALL                   | Environmental AID for ALL environmental alarms on the Cisco ONS 15454.                                |
| ENV-IN[-{1-50}]-ALL          | Environmental AID for ALL multishelf environmental alarms.                                            |
| ENV-IN[-{1-50}]-{1-4}        | (ONS 15454 only) Environmental alarm AID for the AIC-I card on the ONS 15454.                         |
| ENV-IN[-{1-50}]-{1-16}       | (ONS 15454 only) Environmental alarm AID on the ONS 15454.                                            |
| ENV-IN[-{1-50}]-{1-20}       | (ONS 15454 only) Environmental alarm AID for the AIC-I card on the ONS 15454.                         |
| ENV-IN[-{1-50}]-{1-32}       | (ONS 15454) Environmental alarm AID for AIC-I card extensions on the ONS 15454.                       |
| ENV-{IN,OUT}[-{1-50}]-{1-16} | ENV-IN-{1-16} is used for environmental alarm AIDs. ENV-OUT-{1-16} is used for external control AIDs. |
| ENV-OUT-ALL                  | All environmental control output contacts.                                                            |
| ENV-OUT[-{1-50}]-ALL         | Environmental AID for AIC-I cards. “OUT” is used for environmental controls                           |
| ENV-OUT[-{1-50}]-{1-4}       | (ONS 15454 only) Environmental control AID for the AIC-I cards on the ONS 15454.                      |
| ENV-OUT[-{1-50}]-{1-16}      | (ONS 15454 only) Environmental control AID for AIC-I card extensions on the ONS 15454.                |

## 26.15 EQPT

Equipment AIDs are used to access specific cards.

In the ONS 15454, the OC-48/OC-192 cards are only used in Slots 5, 6, 12, and 13.

AID for CXP port on 100G-LC-C and 10x10G-LC: APPM-[SLOT]-[PPM]-[PORT]

Table 26-15 EQPT

| Pattern                                      | Description                                                                                                                                                                                                                   |
|----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AIP[-{1-50}]                                 | (ONS 15454 only) The AID for the alarm interface panel (AIP). It is used for RTRV-INV output only.                                                                                                                            |
| AIP-ALL                                      | (ONS 15454 only) The AID for all of the AIPs in any shelf of the node. It is used for RTRV-INV output only.                                                                                                                   |
| ALL                                          | Only used for RTRV-INV, RTRV-EQPT, and RTRV-ALM/COND-EQPT commands. RTRV-INV returns all the inventory information for the NE. The ONS 15454 includes the multiservice cards, common control cards, and the AIP, BP, and FAN. |
| BIC-ALL                                      | AIDs for the backplane interface connectors (BICs), BIC-A and BIC-B. These AIDs are valid only for the RTRV-ALM-EQPT and RTRV-COND-EQPT commands.                                                                             |
| BIC[-{1-50}]<br>-ALL                         | AIDs for the backplane interface connectors (BICs), BIC-A and BIC-B of a single shelf in a multishelf node. These AIDs are valid only for the RTRV-ALM-EQPT and RTRV-COND-EQPT commands.                                      |
| BIC[-{1-50}]-<br>{A,B}                       | AIDs for the BICs. These AIDs are valid only for the RTRV-ALM-EQPT and RTRV-COND-EQPT commands.                                                                                                                               |
| BP[-{1-50}]                                  | (ONS 15454) The AID for the backplane. It is used for RTRV-INV output only.                                                                                                                                                   |
| BP-ALL                                       | (ONS 15454) The AID for all of the backplanes in any shelf on the multishelf node. It is used for RTRV-INV output only.                                                                                                       |
| FAN[-{1-50}]                                 | The AID for the fan tray. It is used for RTRV-INV, RTRV-ALM, RTRV-COND, RTRV-ALM-EQPT, and RTRV-COND-EQPT output only.                                                                                                        |
| FAN-ALL                                      | The AID for all of the fan tray in all the shelves of a multishelf node. It is used for RTRV-INV, RTRV-ALM, RTRV-COND, RTRV-ALM-EQPT, and RTRV-COND-EQPT output only.                                                         |
| PPM-{1-6,12-<br>17}-{1-4}                    | Pluggable Port Module for MRC-2.5G-4. Format is PPM-[SLOT]-[PPM]. It is not applied on CHG-EQPT, and RMV/RST/ED-EQPT commands.                                                                                                |
| PPM-{1-6,12-<br>17}-{1-12}                   | Pluggable Port Module for MRC-2.5G-12. Format is PPM-[SLOT]-[PPM]. It is not applied on CHG-EQPT, and RMV/RST/ED-EQPT commands.                                                                                               |
| PPM[-{1-50}]<br>-{1-4,11-14}-<br>{1-4}-ALL   | PPM AID. Applicable for the RTRV-EQPT and RTRV-INV commands pertaining to the ASAP card. Format is PPM-[SLOT]-[PIM]-[PPM].                                                                                                    |

|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PPM[-{1-50}]<br>- {1-6,12-17}-<br>{1-22} | PPM AID for XP-GE Cards. Format of AID is PPM-[SHELF]-[SLOT]-[PPM]                                                                                                              |
| PUNIT-ALL                                | The whole NE Passive patch panel equipment AIDs. These AIDs are applicable to EQPT commands like ENT/DLT/RTRV/ED-EQPT commands.                                                 |
| PUNIT-{1-96}<br>}                        | Individual equipment AID of the Passive patch panel units in a 15454 where format is PUNIT-[id]. These AIDs are applicable to EQPT commands like ENT/DLT/RTRV/ED-EQPT commands. |
| PWR-ALL                                  | AIDs for the power supply sources. These AIDs are valid only for the RTRV-ALM-EQPT and RTRV-COND-EQPT commands.                                                                 |
| PWR[-{1-50}]<br>]-{A,B}                  | AIDs for the power supply sources. These AIDs are valid only for the RTRV-ALM-EQPT and RTRV-COND-EQPT commands.                                                                 |
| PWR[-{1-50}]<br>]-ALL                    | AIDs for all of the power supply sources. These AIDs are valid only for the RTRV-ALM-EQPT and RTRV-COND-EQPT commands.                                                          |
| SLOT-ALL                                 | All of the NE equipment AIDs.                                                                                                                                                   |
| SLOT[-{1-50}]<br>]-{1-17}                | (ONS 15454 only) EQPT AID where the format is SLOT-[SLOT].                                                                                                                      |
| SLOT[-{1-50}]<br>]-{1-6,12-17}<br>}      | (ONS 15454 only) Individual equipment AID of the multiservice card units or slots where the format is SLOT-[SLOT].                                                              |
| SPPM[-{36-55}]<br>]-{1-44}               | PPM for the CPT 50 panel GIGE ports card. The format is SPPM-[PTSA]-[PPM].                                                                                                      |
| SFOPPM[-{36-55}]<br>]-{45-48}<br>}       | PPM for the CPT 50 panel 10GIGE ports card. The format is SFOPPM-[PTSA]-[PPM].                                                                                                  |
| PTSYS[-{1}]<br>]-ALL                     | PT System AID for the CPT system. The format is PTSYS-{PTSYSID}.                                                                                                                |
| FOG[-{1}]<br>]-{36-55}-ALL               | Fan-Out-Group AID for connecting the CPT 50 panel to fabric and line cards. The format is FOG-{PTSYSID}-{FOGID}.                                                                |

## 26.16 ETH

Ethernet (ETH) AIDs are used to access the ethernet port. [Table 26-9](#) lists the ETH AIDs and their descriptions.

Table 26-16 ETH

| Pattern             | Description                                         |
|---------------------|-----------------------------------------------------|
| ETH-{1,2,5,6}-{1-6} | Format is ETH-slot-port. Port numbering is 1-based. |

Table 26-16 ETH

| Pattern                                      | Description                                                                                                                                                                                                                                            |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ETH[-{1-50}]-{1-6,12-17}-{1-22}-{1}          | Ethernet AID for ethernet port on GE_XP and 10GE_XP cards. The format is ETH-[SHELF]-[SLOT]-[PPM]-[PORT].                                                                                                                                              |
| ETH[-{1-50}]-{1-6,12-17}-{1-22}-{1}-{1-4096} | Ethernet CEPID AID for ethernet port CEP on GE_XP and 10GE_XP cards. The format is ETH-[SHELF]-[SLOT]-[PPM]-[PORT]-[CEPID], where [CEPID] is the connection end point identifier, that identifies a single 1 Gbit/sec circuit inside an ethernet port. |

## 26.17 FACILITY

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) Facility AIDs are used to access specific ports.

ONS 15454 Facility AID format:

- Format for optical and EC1 facilities without PPM: FAC-[SLOT]-[PORT]
- Format for optical facilities with PPM: FAC-[SLOT]-[PPM]-[PORT]
- Format for optical facilities with PPM and PIM: FAC-[SLOT]-[PIM]-[PPM]-[PORT]
- Format for DS1-flavored electrical facilities: FAC-[SLOT]-[PORT]
- Format for DS3-flavored (including DS3i) electrical facilities: FAC-[SLOT]-[PORT]
- Format for packet-over-SONET (POS) ports: VFAC-[SLOT]-[PORT]
- Format for POS ports with PIMs and PPMs: VFAC-[SLOT]-[PIM]-[PPM]-[PORT]
- Format for 100G-LC-C, 10x10G-LC, and CFP-LC cards:  
VLINE-[SLOT]-[PPM]-[PORT]-[SUBLANE-NO] Sublane Aid for all sublanes
- Format for CXP port on 100G-LC-C card: AGGR-[SLOT]-[APPM]-[PORT].
- Format for SFP+ ports on for 10x10G-LC and CFP-LC cards: VFAC-[SLOT]-[PPM]-[PORT]

Table 26-17 FACILITY

| Pattern                           | Description                                                                                                                                                                                                                   |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL                               | The ALL AID is applicable for RTRV-only commands (RTRV-rr type of commands), for example, RTRV-OC48 with the ALL AID returns all OC48 facilities on the node. RTRV-T1 with the ALL AID returns all T1 facilities on the node. |
| AGGR[-{1-50}]-{2-7}-{1}-{1}       | Facility AID for CXP port on 100G-LC-C card.                                                                                                                                                                                  |
| ETH[-{1-50}]-{1-5,12-16}-{1-22}-1 | Facility AID for GE_XP card. Format is FAC-[SHELF]-[SLOT]-[PPM]-[PORT]                                                                                                                                                        |
| ETH[-{1-50}]-{1-6,12-17}-{1-4}-1  | Facility AID for 10GE_XP card. Format is FAC-[SHELF]-[SLOT]-[PPM]-[PORT]                                                                                                                                                      |
| FAC-{1-6,12-17}-{1-10}            | (ONS 15454) Facility AID for CE-MR-10 (454) cards that can plug into Slots 1-6 and 12-17 and there are 10 Facility ports, where format is FAC-[SLOT]-[PORT]                                                                   |

Table 26-17 FACILITY (continued)

| Pattern                                                                            | Description                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FAC[-{1-50}]{1-4,11-14}<br>}{1-4}<br>{1-4}{1}                                      | Facility AID for the ASAP card with PIM and PPM. The format is FAC-[SLOT]-[PIM]-[PPM]-[PORT].                                                                                                                                                                                                                                                            |

## 26.20 LINEWL

Line wavelength. Identifies a wavelength channel included in any of the lower layer OTS facilities.

Table 26-20 LINEWL

| Values                                       | Description                                                                                                                                                                                                                                      |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LINEWL[-{1-50}]{1-6,8,10,12-17}-ALL          | All the Optical Channels representing single wavelength inside OTS facility of a card configured in specified slot. The format is LINE-[SHELF]-[SLOT]-ALL                                                                                        |

| LINEWL[-{1-50}]-{1-6,12-17}-{1}<br>-{RX,TX}-ALL    | All the Optical Channel representing single wavelength inside EXP lines in a 40-SMR1-C cards. The format is LINEWL-[shelf]-[slot]-[port]-[dirn]-ALL                  |
| LINEWL[-{1-50}]-{1-6,12-17}-{1}<br>-{RX,TX}-<wlen> | The Optical Channel representing single wavelength inside EXP line in a 40-SMR1-C cards. The format is LINEWL-[shelf]-[slot]-[port]-[dirn]-<wlen>                    |
| LINEWL[-{1-50}]-{1-5,12-16}-ALL                    | All the Optical Channels representing single wavelength inside OTS facility in a 80-WXC-C card configured in specified slot. The format is LINEWL-[shelf]-[slot]-ALL |

Table 26-20 LINEWL (continued)

| Values                                       | Description                                                                                                                                           |
|----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| LINEWL[-{1-50}]-{1-5,12-16}-{10}-ALL         | All the Optical Channel representing single wavelength inside COM line in a 80-WXC-C cards. The format is LINEWL-[shelf]-[slot]-[port]-ALL            |
| LINEWL[-{1-50}]-{1-5,12-16}-{10}-<wlen>      | The Optical Channel representing single wavelength inside COM line in a 80-WXC-C cards. The format is LINEWL-[shelf]-[slot]-[port]-<wlen>             |
| LINEWL[-{1-50}]-{1-5,12-16}-{9}-ALL          | All the Optical Channel representing single wavelength inside ADD/DROP line in a 80-WXC-C cards. The format is LINEWL-[shelf]-[slot]-[port]-ALL       |
| LINEWL[-{1-50}]-{1-5,12-16}-{9}-<wlen>       | The Optical Channel representing single wavelength inside ADD/DROP line in a 80-WXC-C cards. The format is LINEWL-[shelf]-[slot]-[port]-<wlen>        |
| LINEWL[-{1-50}]-{1-5,12-16}-{1-8}-ALL        | All the Optical Channel representing single wavelength inside EAD line in a 80-WXC-C cards. The format is LINEWL-[shelf]-[slot]-[port]-ALL            |
| LINEWL[-{1-50}]-{1-5,12-16}-{1-8}-<wlen>     | The Optical Channel representing single wavelength inside EAD line in a 80-WXC-C cards. The format is LINEWL-[shelf]-[slot]-[port]-<wlen>             |
| LINEWL[-{1-50}]-{1-5,12-16}-{11}{-TX}-ALL    | All the Optical Channel representing single wavelength inside DROP-TX line in a 80-WXC-C cards. The format is LINEWL-[shelf]-[slot]-[port]-[dirn]-ALL |
| LINEWL[-{1-50}]-{1-5,12-16}-{11}{-TX}-<wlen> | The Optical Channel representing single wavelength inside DROP-TX line in a 80-WXC-C cards. The format is LINEWL-[shelf]-[slot]-[port]-[dirn]-<wlen>  |

## 26.21 LNKTERM

Link termination AIDs are used to access the termination points of a provisionable patchcord.

Table 26-21 LNKTERM

| Pattern           | Description                                                                                                  |
|-------------------|--------------------------------------------------------------------------------------------------------------|
| ALL               | Indicates all the provisionable patchcord terminations on a node. Applicable only for the retrieve commands. |
| LNKTERM-ALL       | Indicates all the provisionable patchcord terminations on a node. Applicable only for the retrieve commands. |
| LNKTERM-{1-65535} | Indicates a single provisionable patchcord termination point on a node, where the format is LNKTERM-.        |

## 26.22 OPM

OPM AIDs represent the single wavelength inside an optical power monitoring object.

Table 26-22 OPM

| Values                          | Description                                                                                                                                                                                                                                           |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL                             | The first ID represents the shelf, the second ID represents the slot, and the last ID is the wavelength, represented in the form of 15xx.yy nanometers. The last index of the wavelength is the value of the wavelength as described in OPTICAL_WLEN. |
| OPM[-{1-50}]-{1-5,12-16}-ALL    |                                                                                                                                                                                                                                                       |
| OPM[-{1-50}]-{1-5,12-16}-<wlen> |                                                                                                                                                                                                                                                       |

## 26.23 OSC

(Cisco ONS 15454 only) OSC AIDs are used to access the OSC of the NE.

Table 26-23 OSC

| Values     | Description                                                                                    |
|------------|------------------------------------------------------------------------------------------------|
| ALL        | All of the OSCs of the NE. The ALL AID applies to the retrieve-only commands.                  |
| OSC-RINGID | RINGID is a string of up to six characters. Valid characters are [A-Z,0-9] (case insensitive). |

## 26.24 PRSLOT

(Cisco ONS 15454 only) Valid protection slots for the electrical cards.

Table 26-24 PRSLOT

| Pattern | Description                                                                            |
|---------|----------------------------------------------------------------------------------------|
| NULL    | Indicates there is no protection group. Used when trying to delete a protection group. |
| SLOT-1  | The No.1 slot of an NE.                                                                |
| SLOT-3  | The No.3 slot of an NE.                                                                |
| SLOT-5  | The No.5 slot of an NE.                                                                |
| SLOT-13 | The No.13 slot of an NE.                                                               |
| SLOT-15 | The No.15 slot of an NE.                                                               |
| SLOT-17 | The No.17 slot of an NE.                                                               |

## 26.25 RFILE

(ONS 15454) File transfer type.

Table 26-25 RFILE

| Pattern   | Description                             |
|-----------|-----------------------------------------|
| RFILE-DB  | Transferring the provisioning database. |
| RFILE-LOG | Transferring a log file.                |

Table 26-25 RFILE

|              |                                                    |
|--------------|----------------------------------------------------|
| RFILE-PKG    | Transferring a software package.                   |
| RFILE-COMPDB | Transferring the provisioning and system database. |

## 26.26 SHELF

(ONS 15454) Identifies a shelf within a node. SHELF is applicable only to nodes that are set to MULTISHELF or MULTISHELFETH mode.

Table 26-26 SHELF

| Pattern      | Description                                        |
|--------------|----------------------------------------------------|
| SHELF-ALL    | All of the shelves in the node.                    |
| SHELF-{1-50} | A specific shelf in the node (shelf 1 through 30). |

## 26.27 STS

SONET frame-level AID set:

- STS AID format for optical and EC1 facilities without PPM: STS-[SLOT]-[PORT]-[STS]
- STS AID format for optical facilities with PPMs: STS-[SLOT]-[PPM]-[PORT]-[STS]
- STS AID format for optical facilities with PIMs and PPMs:  
STS-[SLOT]-[PIM]-[PPM]-[PORT]-[STS]
- STS AID format for DS1 electrical facilities: STS-[SLOT]-[STS]
- STS AID format for DS3 (except DS3i) electrical facilities: STS-[SLOT]-[PORT]-[STS]
- STS AID format for DS3i electrical facilities: STS-[SLOT]-[STS]
- STS AID format for G1K-4 card Gigabit Ethernet (GIGE) facilities: FAC-[SLOT]-[PORT]

Table 26-27 STS

| Pattern                         | Description                                                                                                                                                                                                                                           |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL                             | The ALL AID applies to the RTRV-only commands: RTRV-STIS with the ALL AID retrieves all STS interfaces on the NE. RTRV-STIS1 with ALL AID retrieves all STS1 interfaces on the NE. RTRV-STIS3c with ALL AID retrieves all STS3c interfaces on the NE. |
| FAC-{1-4,11-14}-{1-4}-{1-4}-{1} | Dynamically allocated STSs of all widths for the GIGE port on an ASAP card. Format is FAC-[SLOT]-[PIM]-[PPM]-[PORT].                                                                                                                                  |
| FAC-{1-6,12-17}-{1-4}           | (ONS 15454 only) Dynamically allocated STSs of all widths for the G1K-4 card. Format is FAC-[SLOT]-[PORT]                                                                                                                                             |

Table 26-27 STS (continued)

| Pattern                                                                        | Description                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STS-{1-4,11-14}-{1-4}-{1,4}-{1}                                                | StS3c AID for the ASAP card with an OC3 port provisioned. STS12C AID for the ASAP card with an OC12 port provisioned. STS48C AID for the ASAP card with OC48 port provisioned. Format of AID is STS-[SLOT]-[PIM]-[PPM]-[PORT]-[STS]. |
| STS-{1-4,11-14}-{1-4}-{1,4}-{1}-{1,13,25,37}                                   | STS12C AID for the ASAP card with an OC48 port provisioned. Format is STS-[SLOT]-[PIM]-[PPM]-[PORT]-[STS].                                                                                                                           |
| STS-{1-4,11-14}-{1-4}-{1,4}-{1}-{1,25}                                         | STS24C AID for the ASAP card with an OC48 port provisioned. Format is STS-[SLOT]-[PIM]-[PPM]-[PORT]-[STS].                                                                                                                           |
| STS-{1-4,11-14}-{1-4}-{1,4}-{1}-{1,4,13,16,25,28,37,40}                        | STS9C AID for the ASAP card with an OC48 port provisioned. Format is STS-[SLOT]-[PIM]-[PPM]-[PORT]-[STS].                                                                                                                            |

| STS-{1-6,12-17}-{1-4}-ALL                         | (ONS 15454 only) All the STSs for a 4-port OC3 card. Format is STS-[SLOT]-[PORT]-[STS].                           |
| STS-{1-6,12-17}-{1-4}-{1,4,7,10-46}               | Format is STS-[SLOT]-[PORT]-[STS].                                                                                |
| STS-{1-6,12-17}-{1-4}-{1,4,7}                     | (ONS 15454 only) STS6c AID for a 4-port OC12 card. Format is STS-[SLOT]-[PORT]-[STS].                             |
| STS-{1-6,12-17}-{1-4}-{1,4}                       | (ONS 15454 only) STS9C AID for a 4-port OC12 card. Format is STS-[SLOT]-[PORT]-[STS].                             |
| STS-{1-6,12-17}-{1-4}-{1-12}                      | (ONS 15454 only) STS1 AID for a 4-port OC12 card. Format is STS-[SLOT]-[PORT]-[STS].                              |
| STS-{1-6,12-17}-{1-6}                             | (ONS 15454 only) STS1 AID for a DS3XM card. Format is STS-[SLOT]-[STS].                                           |
| STS-{2}-{1-2}-{1}-{1-3}                           | STS1 AID for the OC3 port. Format is STS-[SLOT]-[PPM]-[PORT]-[STS].                                               |
| STS-{5,6,12,13}-1-1                               | (ONS 15454 only) STS48c AID for an OC48 card, or STS192 AID for an OC192 card. Format is STS-[SLOT]-[PORT]-[STS]. |
| STS-{5,6,12,13}-1-{1,13,25,37-180}                | (ONS 15454 only) STS12c AID for an OC192 card. Format is STS-[SLOT]-[PORT]-[STS].                                 |
| STS-{5,6,12,13}-1-{1,13,25,37}                    | (ONS 15454 only) STS12c AIDs for an OC48 card. Format is STS-[SLOT]-[PORT]-[STS].                                 |
| STS-{5,6,12,13}-1-{1,4,7,10,13,16,19,22,25}       | (ONS 15454 only) STS24c AID for an OC48 card. Format is STS-[SLOT]-[PORT]-[STS].                                  |
| STS-{5,6,12,13}-1-{1,4,7,10-190}                  | (ONS 15454 only) STS3c for an OC192 card. Format is STS-[SLOT]-[PORT]-[STS].                                      |
| STS-{5,6,12,13}-1-{1,4,7,10-46}                   | (ONS 15454 only) STS3c AID for an OC48 card. Format is STS-[SLOT]-[PORT]-[STS].                                   |
| STS-{5,6,12,13}-1-{1,4,7,13,16,19,25,28,37,40,43} | (ONS 15454 only) STS6c AID for an OC48 card. Format is STS-[SLOT]-[PORT]-[STS].                                   |
| STS-{5,6,12,13}-1-{1,49,97,145}                   | (ONS 15454 only) STS48c AID for an OC192 card. Format is STS-[SLOT]-[PORT]-[STS].                                 |
| STS-{5,6,12,13}-1-{1-192}                         | (ONS 15454 only) STS1 AID for an OC192 card. Format is STS-[SLOT]-[PORT]-[STS].                                   |

Table 26-27 STS (continued)

| Pattern                  | Description                                                                                                                                                                                    |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STS-{5,6,12,13}-1-{1-48} | (ONS 15454 only) STS1 AID for an OC48 card. Format is STS-[SLOT]-[PORT]-[STS].                                                                                                                 |
| VFAC-{1-6,12-17}-{0-1}   | (ONS 15454 only) Virtual facility AID for the ML-Series card back-end POS ports. Both the ML1000-2 and ML100T-12 have two POS ports. Port numbering starts at 0. Format is VFAC-[SLOT]-[PORT]. |

## 26.28 SYN

Synchronization AIDs

Table 26-28 SYN

| Pattern                     | Description                                               |
|-----------------------------|-----------------------------------------------------------|
| SYNC[-{1-50}]-ALL           | ALL synchronization AID (values 1 to 8 is the shelf ID).  |
| SYNC[-{1-50}]-NE            | NE synchronization AID (values 1 to 8 is the shelf ID).   |
| SYNC[-{1-50}]-{BITS1,BITS2} | BITS synchronization AID (values 1 to 8 is the shelf ID). |

## 26.29 SYN\_SRC

Synchronization source

Table 26-29 SYN\_SRC

| Pattern               | Description                                                                                                                                    |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| BITS-1                | (ONS 15454) Synchronization source is BITS-1. Format is BITS-[PORT].                                                                           |
| BITS-2                | (ONS 15454) Synchronization source is BITS-2. Format is BITS-[PORT].                                                                           |
| FAC-{1-4,11-14}-{1-4} | Synchronization source is 4-port OC192. Format is FAC-[SLOT]-[PORT].                                                                           |
| FAC-{1-6,12-17}-{1-4} | (ONS 15454 only) Synchronization source is the optical card (four-port OC3 and four-port OC12) facility. Format is FAC-[SLOT]-[PORT].          |
| FAC-{1-6,12-17}-{1}   | (ONS 15454 only) Synchronization source is the optical card (one-port OC12 and OC48AS) facility. Format is FAC-[SLOT]-[PORT].                  |
| FAC-{5,6,12,13}-{1}   | Synchronization source is the optical card (OC48, OC192) facility. Format is FAC-[SLOT]-[PORT].                                                |
| INTERNAL              | Set the SYN_SRC to be the system default value. The INTERNAL value of the SYN_SRC is only applied for the SYNC-NE AID on the ED-SYNCN command. |

Table 26-29 SYN\_SRC (continued)

| Pattern | Description                                                                                                                                             |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| NONE    | Set the SYNC_SRC value to the default value for BITS-OUT. The NONE value of SYNC_SRC only applies to the BITS-1 and BITS-2 AID of the ED-SYNCN command. |
| SYNC-NE | SYNC-NE source. It is only used in the alarm report or alarm retrieve commands.                                                                         |

## 26.30 SYNC\_REF

(Cisco ONS 15454, ONS 15454 M2, and ONS 15454 M6) Synchronization AIDs.

Table 26-30 SYNC\_REF

| Pattern                    | Description                                                                                                                                          |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL                        | Equivalent to a combination of SYNC-ALL, BITS-1 and BITS-2. This AID is valid only for the commands RTRV-SYNCN, RTRV-ALM-SYNCN, and RTRV-COND-SYNCN. |
| SYNC-ALL                   | All synchronization references.                                                                                                                      |
| SYNC-{1-50}-NE             | NE synchronization AID.                                                                                                                              |
| SYNC-{1-50}-{BITS1, BITS2} | BITS1 and BITS2 synchronization AIDs.                                                                                                                |

## 26.31 SYNC\_SW

New synchronization reference that will be used.

Table 26-31 SYNC\_SW

| Pattern | Description                                                                                   |
|---------|-----------------------------------------------------------------------------------------------|
| INT     | Internal clock. The INT value is only applied for the SYNC-NE AID on the OPR-SYNC_SW command. |
| PRI     | Primary timing reference.                                                                     |
| SEC     | Secondary timing reference.                                                                   |

## 26.32 UDC

(ONS 15454) UDC AIDs for F-UDC and DCC-UDC channels on the AIC-I card.

Table 26-32 UDC

| Pattern           | Description                                                                                                                                      |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| ALL               | Applicable to RTRV-only commands, for example, RTRV-ALM/COND-UDCF and RTRV-ALM/COND-UDCDCC. Corresponds to a superset of F-UDC and DCC-UDC AIDs. |
| UDC-{F,DCC}-{A,B} | F-UDC and DCC-UDC AIDs for A and B channels. DCC-UDC is supported on the ONS 15454 only. F-UDC is supported on the ONS 15454.                    |

## 26.33 VT

(ONS 15454) Virtual tributary.

- VT1 AID format for optical and EC1 facilities without PPM:  
VT1-[SLOT]-[PORT]-[STS]-[VTG]-[VTN]
- VT1 AID format for optical facilities with PPM:  
VT1-[SLOT]-[PPM]-[PORT]-[STS]-[VTG]-[VTN]
- VT1 AID format for DS1 electrical facilities: VT1-[SLOT]-[STS]-[VTG]-[VTN]
- VT1 AID format for DS3 electrical facilities: VT1-[SLOT]-[PORT]-[STS]-[VTG]-[VTN]

Table 26-33 VT

| Pattern                                  | Description                                                                                                               |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| ALL                                      | Applies to RTRV-only commands. For example, the RTRV-VT and RTRV-VT1 with ALL AIDs return all VT1 interfaces on the node. |
| VT1-{1-4,14-17}-{1-8}-{1-3}-{1-7}-{1-4}  | (ONS 15454 only) 8-port OC3 card                                                                                          |
| VT1-{1-6,12-17}-1-{1-12}-{1-7}-{1-4}     | (ONS 15454 only) Single-port OC12 card                                                                                    |
| VT1-{1-6,12-17}-1-{1-48}-{1-7}-{1-4}     | (ONS 15454 only) OC48AS card                                                                                              |
| VT1-{1-6,12-17}-1-{1-7}-{1-2}            | (ONS 15454 only) DS1 card                                                                                                 |
| VT1-{1-6,12-17}-{1-12}-1-{1-7}-{1-4}     | (ONS 15454 only) EC1 card                                                                                                 |
| VT1-{1-6,12-17}-{1-24}-1-{1-7}-{1-4}     | VT1.5 AIDs for DS3XM-12 STS12 backplane rate cards                                                                        |
| VT1-{1-6,12-17}-{1-36}-1-{1-7}-{1-4}     | VT1.5 AIDs for DS3XM-12 STS48 backplane rate cards                                                                        |
| VT1-{1-6,12-17}-{1-4}-{1-12}-{1-7}-{1-4} | (ONS 15454 only) 4-port OC12 card                                                                                         |
| VT1-{1-6,12-17}-{1-4}-{1-3}-{1-7}-{1-4}  | (ONS 15454 only) 4-port OC3 card                                                                                          |
| VT1-{1-6,12-17}-{1-6}-{1-7}-{1-4}        | (ONS 15454 only) DS3XM-6 card                                                                                             |
| VT1-{5,6,12,13}-1-{1-192}-{1-7}-{1-4}    | (ONS 15454 only) OC192 card                                                                                               |
| VT1-{5,6,12,13}-1-{1-48}-{1-7}-{1-4}     | (ONS 15454 only) OC48 card                                                                                                |
| VT2-{1-4,14-17}-{1-8}-{1-3}-{1-7}-{1-3}  | (ONS 15454 only) Eight-port OC3 card                                                                                      |
| VT2-{1-6,12-17}-1-{1-12}-{1-7}-{1-3}     | (ONS 15454 only) Single-port OC12 card                                                                                    |
| VT2-{1-6,12-17}-1-{1-48}-{1-7}-{1-3}     | (ONS 15454 only) OC48AS card                                                                                              |

Table 26-33 VT (continued)

| Pattern                                  | Description                          |
|------------------------------------------|--------------------------------------|
| VT2-{1-6,12-17}-{1-4}-{1-12}-{1-7}-{1-3} | (ONS 15454 only) Four-port OC12 card |
| VT2-{1-6,12-17}-{1-4}-{1-3}-{1-7}-{1-3}  | (ONS 15454 only) Four-port OC3 card  |
| VT2-{5,6,12,13}-1-{1-192}-{1-7}-{1-3}    | (ONS 15454 only) OC192 card          |
| VT2-{5,6,12,13}-1-{1-48}-{1-7}-{1-3}     | (ONS 15454 only) OC48 card           |

## 26.34 WDMANS

(Cisco ONS 15454 only) This AID is used to access the Wavelength Division Multiplexing (WDM) automatic optical node setup (AONS) application of the NE.

Table 26-34 WDMANS

| Pattern                           | Description                          |
|-----------------------------------|--------------------------------------|
| WDMSIDE-{UNKNOWN,A,B,C,D,E,F,G,H} | Automatic MSTP node setup identifier |
| WDMNODE                           | Automatic MSTP node setup identifier |

## 26.35 WLEN

(Cisco ONS 15454 only) This AID represents the single wavelength inside an external facility. If the facility is of type OTS (line), the wavelengths contained are all the available in the node (currently 32). If the facility is of type OCH (CHAN), the wavelength is just one and it is the same of the correspondent wavelength customized for that channel.

Table 26-35 WLEN

| Pattern                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Description           |

# Conditions

**Note**

The terms "Unidirectional Path Switched Ring" and "UPSR" may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as "Path Protected Mesh Network" and "PPMN," refer generally to Cisco's path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

This chapter describes the conditions for TL1 commands and autonomous messages for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6.

Conditions include any problem detected on an Cisco ONS 15454, Cisco ONS 15454 M2, or Cisco ONS 15454 M6 shelf. They can include standing or transient notifications. A snapshot of all currently raised standing conditions on the network, node, or card can be retrieved in the Cisco Transport Controller (CTC) Conditions window or using the RTRV-COND commands. (In addition, some but not all cleared conditions are found in the CTC History tab.)

**Note**

The Condition that apply to Cisco ONS 15454 also applies to Cisco ONS 15454 M2 and Cisco ONS 15454 M6.

**Table 27-1**      **Conditions**

| Condition    | Description                                     |
|--------------|-------------------------------------------------|
| AIS          | Alarm Indication Signal                         |
| AIS-L        | Alarm Indication Signal-Line                    |
| AIS-P        | Alarm Indication Signal-Path                    |
| AIS-V        | Alarm Indication Signal-VT                      |
| ALS          | Automatic Laser Shutdown                        |
| APC-DISABLED | Automatic Power Control Disabled                |
| APC-FAIL     | Automatic Power Control Failure                 |
| APSB         | Byte Failure                                    |
| APSC-IMP     | Improper Automatic Protection Switch (APS) Code |
| APSCDFLTK    | Default K Byte                                  |
| APSCINCON    | Inconsistent APS Code                           |

Table 27-1 Conditions (continued)

| Condition        | Description                                                          |
|------------------|----------------------------------------------------------------------|
| APSCM            | Protection Switching Channel Match Failure                           |
| APSCNMIS         | Node ID Mismatch                                                     |
| APSIMP           | APS Invalid Mode                                                     |
| APSMM            | Automatic Protection Switch Mode Mismatch                            |
| AS-CMD           | Alarms Suppressed By User Command                                    |
| AS-MT            | Alarms Suppressed For Maintenance                                    |
| AU-LOF           | Loss of Frame (LOF)–Administration Unit–Loss of Multiframe           |
| AUD-LOG-LOSS     | Audit Log 100 Percent Full–Oldest records will be lost               |
| AUD-LOG-LOW      | Audit Log 80 Percent Full                                            |
| AUTOLSROFF       | Automatic Laser Shutoff Due To High Temperature                      |
| AUTORESET        | Automatic System Reset                                               |
| AUTOSW-AIS       | Automatic Path Protection Switch Caused By AIS                       |
| AUTOSW-LOP       | Automatic Path Protection Switch Caused By LOP                       |
| AUTOSW-PDI       | Automatic Path Protection Switch Caused By PDI                       |
| AUTOSW-SDBER     | Automatic Path Protection Switch Caused By SDBER                     |
| AUTOSW-SFBER     | Automatic Path Protection Switch Caused By SFBER                     |
| AUTOSW-UNEQ      | Automatic Path Protection Switch Caused By UNEQ                      |
| BAT-FAIL         | Battery Failure                                                      |
| BAT-HGH-VLT      | High Volt                                                            |
| BAT-LOW-VLT      | Low Volt                                                             |
| BKUPMEMP         | Primary Nonvolatile Backup Memory Failure                            |
| BLSROSYNC        | BLSR Out Of Sync                                                     |
| CARLOSS          | Carrier Loss On The LAN                                              |
| CKTDOWN          | Signaling Unable to Set Up Circuit                                   |
| CLDRESTART       | Cold Restart                                                         |
| COMIOXC          | Input/Output (IO) Slot To Cross-connect (XCON) Communication Failure |
| COMM-FAIL        | Plug-in Module Communication Failure                                 |
| CONTBUS-A-18     | TCC A To DCC A Processor Communication Failure                       |
| CONTBUS-B-18     | TCC B To DCC B Processor Communication Failure                       |
| CONTBUS_A        | Controller A To Shelf Slot Communication Failure                     |
| CONTBUS_B        | Controller B To Shelf Slot Communication Failure                     |
| CTNEQPT-MISMATCH | Connection Equipment Mismatch                                        |
| CTNEQPT-PBPROT   | Interconnection Equipment Failure–Protect XC Payload Bus             |
| CTNEQPT-PBWORK   | Interconnection Equipment Failure–Working XC Payload Bus             |
| DATAFLT          | Software Fault–Data Integrity Fault                                  |

**Table 27-1** Conditions (continued)

| Condition          | Description                                                                      |
|--------------------|----------------------------------------------------------------------------------|
| DBOSYNC            | Standby Database Out of Synchronization                                          |
| DS3-MISM           | DS3 Frame Format Mismatch                                                        |
| DSP-COMM-FAIL      | DSP Communication Failure                                                        |
| DSP-FAIL           | DSP Failure                                                                      |
| DUP-IPADDR         | IP address already in use within the same data communications channel (DCC) area |
| DUP-NODENAME       | Node name already in use within the same DCC area                                |
| E-W-MISMATCH       | Both Ends Of Fiber Provisioned As East Or Both As West                           |
| EHIBATVG           | Extreme High Voltage                                                             |
| ELWBATVG           | Extreme Low Voltage                                                              |
| EOC                | Section DCC (SDCC) Termination Failure                                           |
| EOC-L              | Line DCC (LDCC) Termination Failure                                              |
| EQPT               | Equipment Failure                                                                |
| EQPT-MISS          | Replaceable Equipment/Unit is Missing                                            |
| ERFI-P-CONN        | Enhanced Remote Failure Indication–Path–Connectivity                             |

| EXERCISE-SPAN-FAIL | Exercise Request on Span Failed                                                  |
| EXERCISE-SPAN-REQ  | Exercise Request on Span                                                         |
| EXT                | Failure Detected External To The NE                                              |
| EXTRA-TRAF-PREEMPT | Extra Traffic Preempted                                                          |
| FAILTOSW           | Failure To Switch To Protection                                                  |
| FAILTOSW-PATH      | Failure To Switch To Protection–Path                                             |
| FAILTOSWR          | Failure To Switch To Protection–Ring                                             |
| FAILTOSWS          | Failure To Switch To Protection–Span                                             |
| FAN                | Fan Failure                                                                      |
| FANDEGRADE         | Partial Fan Failure                                                              |
| FE-AIS             | Far End AIS                                                                      |
| FE-DS1-MULTLOS     | Far End Multiple DS1 LOS Detected On DS3                                         |
| FE-DS1-NSA         | Far End DS1 Equipment Failure–Non-Service-Affecting                              |
| FE-DS1-SA          | Far End DS1 Equipment Failure–Service-Affecting                                  |

Table 27-1 Conditions (continued)

| Condition           | Description                                                  |
|---------------------|--------------------------------------------------------------|
| FE-DS1-SNGLLOS      | Far End Single DS1 Loss of Signal (LOS)                      |
| FE-DS3-NSA          | Far End DS3 Equipment Failure–Non-Service-Affecting          |
| FE-DS3-SA           | Far End DS3 Equipment Failure–Service-Affecting              |
| FE-EQPT-NSA         | Far End Common Equipment Failure–Non-Service-Affecting       |
| FE-EXERCISING-RING  | Far End Exercising Ring                                      |
| FE-EXERCISING-SPAN  | Far End Exercising Span                                      |
| FE-FRCDWKSWPR-RING  | Far End Working Facility Forced To Switch To Protection–Ring |
| FE-FRCDWKSWPR-SPAN  | Far End Working Facility Forced To Switch To Protection–Span |
| FE-IDLE             | Far End Idle                                                 |
| FE-LOCKOUTOFPR-SPAN | Far End Lockout Of Protection–Span                           |
| FE-LOF              | Far End LOF                                                  |
| FE-LOS              | Far End LOS                                                  |
| FE-MANWKSWPR-RING   | Far End Manual Switch Of Working Facility To Protection–Ring |
| FE-MANWKSWPR-SPAN   | Far End Manual Switch Of Working Facility To Protection–Span |
| FEC-MISM            | FEC Mismatch                                                 |
| FEPRLF              | Far End Protection Line Failure                              |
| FORCED-REQ          | Forced Switch Request                                        |
| FORCED-REQ-RING     | Forced Switch Request On Ring                                |
| FORCED-REQ-SPAN     | Forced Switch Request On Span                                |
| FRCDSWTOINT         | Forced Switch To Internal Clock                              |
| FRCDSWTOPRI         | Forced Switch To Primary Reference                           |
| FRCDSWTOSEC         | Forced Switch To Second Reference                            |
| FRCDSWTOTHIRD       | Forced Switch To Third Reference                             |
| FRNGSYNC            | Free Running Synchronization Mode                            |
| FSTSYNC             | Fast Start Synchronization Mode                              |
| FULLPASSTHR-BI      | Bidirectional Full Pass Through Is Active                    |
| GCC-EOC             | GCC Termination Failure                                      |
| GE-OOSYNC           | Gigabit Ethernet Out of Synchronization                      |
| HI-LASERBIAS        | Equipment High Laser Bias                                    |
| HI-RXPOWER          | Equipment High Receive (Rx) Power                            |
| HI-TXPOWER          | Equipment High Transmit (Tx) Power                           |
| HITEMP              | High Temperature                                             |
| HLDOVRSYNC          | Holdover Synchronization Mode                                |

**Table 27-1** Conditions (continued)

| Condition                 | Description                                                       |
|---------------------------|-------------------------------------------------------------------|
| I-HITEMP                  | Industrial High Temperature                                       |
| IMPROPRMVL                | Improper Removal                                                  |
| INC-GFP-OUTOFFRAME        | Out Of Frame Detected by Generic Framing Procedure (GFP) Receiver |
| INC-GFP-SIGLOSS           | Client Signal Loss Frames Detected by GFP Receiver                |
| INC-ISD                   | DS3 Idle Condition                                                |
| INC-SIGLOSS               | Incoming Signal Loss on Fibre Channel Interface                   |
| INC-SYNCCLOSS             | Incoming Synchronization Loss on Fibre Channel Interface          |
| INC_GFP_SYNCCLOSS         | Client Synchronization Loss Frames Detected by GFP Receiver       |
| INHSWPR                   | Inhibit Switch To Protect Request On Equipment                    |
| INHSWWKG                  | Inhibit Switch To Working Request On Equipment                    |
| INTRUSION-PSWD            | Security Intrusion Attempt Detected—See Audit Log                 |
| INVMACADR                 | Invalid MAC Address                                               |
| IOSCFGCOPY                | IOS Configuration Copy In Progress                                |
| KB-PASSTHR                | K Byte Pass Through Is Active                                     |
| KBYTE-APS-CHANNEL-FAILURE | K Byte Channel Failure                                            |
| LAN-POL-REV               | LAN Connection Polarity Reversed                                  |
| LASEREOL                  | Laser Approaching End of Life                                     |
| LKOUTPR-S                 | Lockout Of Protection—Span                                        |
| LMP-HELLODOWN             | LMP Hello FSM to Control Channel Down                             |
| LMP-NDFAIL                | LMP Neighbor Discovery has failed                                 |
| LO-RXPOWER                | Equipment Low Rx Power                                            |
| LO-TXPOWER                | Equipment Low Tx Power                                            |
| LOA                       | Loss of Alignment                                                 |
| LOC                       | Loss of Channel                                                   |
| LOCKOUT-REQ               | Lockout Switch Request On Facility or Equipment                   |
| LOCKOUT-REQ-RING          | Lockout Switch Request On Ring                                    |
| LOF                       | Loss Of Frame                                                     |
| LOM                       | Loss of Multiframe                                                |
| LOP-P                     | Loss Of Pointer—Path                                              |
| LOP-V                     | Loss Of Pointer—VT                                                |
| LOS                       | Loss Of Signal                                                    |
| LPBKCRS                   | Cross-connect Loopback                                            |
| LPBKDS1FEAC               | DS1 Loopback Due To Far End Alarm and Control (FEAC) Command      |
| LPBKDS1FEAC-CMD           | DS1 Loopback Command Sent To Far End                              |

Table 27-1 Conditions (continued)

| Condition          | Description                                |
|--------------------|--------------------------------------------|
| LPBKDS3FEAC        | DS3 Loopback Due To FEAC Command           |
| LPBKDS3FEAC-CMD    | DS3 Loopback Command Sent To Far End       |
| LPBKFACILITY       | Facility Loopback                          |
| LPBKTERMINAL       | Terminal Loopback                          |
| LWBATVG            | Low Volt                                   |
| MAN-REQ            | Manual Switch Request                      |
| MANRESET           | Manual System Reset                        |
| MANSWTOINT         | Manual Switch To Internal Clock            |
| MANSWTOPRI         | Manual Switch To Primary Reference         |
| MANSWTOSEC         | Manual Switch To Second Reference          |
| MANSWTO THIRD      | Manual Switch To Third Reference           |
| MANUAL-REQ-RING    | Manual Switch Request On Ring              |
| MANUAL-REQ-SPAN    | Manual Switch Request On Span              |
| MEA                | Mismatch Of Equipment And Attributes       |
| MEM-GONE           | Free Memory On Card Near Zero              |
| MEM-LOW            | Free Memory On Card Very Low               |
| MFGMEM             | Manufacturing Data Memory (EEPROM Failure) |
| NO-CONFIG          | No Startup Config                          |
| NTWTPINC           | Network Topology Incomplete                |
| OCHNC-ACTIV-FAIL   | Optical Channel Activation Failure         |
| OCHNC-DEACTIV-FAIL | Optical Channel Deactivation Failure       |
| OCHNC-FAIL         | Optical Channel Connection Failure         |
| OCHNC-INC          | Optical Channel Incomplete                 |
| ODUK-AIS-PM        | ODUk: Alarm Indication Signal              |
| ODUK-BDI-PM        | ODUk: PM Backward Defect Indication        |
| ODUK-LCK-PM        | ODUk: Locked Defect-PM                     |
| ODUK-OCI-PM        | ODUk: Open Connection Indication           |
| ODUK-SD-PM         | ODUk: Signal Degrade                       |
| ODUK-SF-PM         | ODUk: Signal Failure                       |
| ODUK-TIM-PM        | ODUk: Trail Trace Identifier Mismatch      |
| OOU-TPT            | Out of Use-Transport Failure               |
| OPTNTWMIS          | Optical Network Type Mismatch              |
| OTUK-AIS           | OTUk: Alarm Indication Signal              |
| OTUK-BDI           | OTUk: Backward Defect Indication           |
| OTUK-LOF           | OTUk: Loss Of Frame                        |
| OTUK-SD            | OTUk: Signal Degrade                       |

**Table 27-1** Conditions (continued)

| Condition       | Description                                                     |
|-----------------|-----------------------------------------------------------------|
| OTUK-SF         | OTUk: Signal Failure                                            |
| OTUK-TIM        | OTUk: Trail Trace Identifier Mismatch                           |
| OUT-OF-SYNC     | 8B10B Out of Sync                                               |
| PDI-P           | Payload Defect Indication–Path                                  |
| PEER-NORESPONSE | Peer Card Not Responding                                        |
| PLM-P           | Payload Label Mismatch–Path                                     |
| PLM-V           | Signal Label Mismatch Failure–Payload Label Mismatch–VT         |
| PORT-CODE-MISM  | Pluggable Port security code mismatch                           |
| PORT-COMM-FAIL  | Module Communication Failure                                    |
| PORT-MISMATCH   | Pluggable Port rate mismatch                                    |
| PORT-MISSING    | Pluggable Port missing                                          |
| PRC-DUPID       | Duplicate Node ID                                               |
| PROTNA          | Protection Unit Not Available                                   |
| PTIM            | Payload Type Identifier Mismatch                                |
| PWR-REDUN       | Redundant Power Capability Lost                                 |
| RAI             | Remote Alarm Indication                                         |
| RCVR-MISS       | Facility Termination Equipment–Receiver Missing                 |
| RFI             | Remote Failure Indication                                       |
| RFI-L           | Remote Failure Indication–Line                                  |
| RFI-P           | One-Bit Remote Failure Indication–Path                          |
| RFI-V           | Remote Failure Indication–VT                                    |
| RING-ID-MIS     | Ring ID Mismatch                                                |
| RING-MISMATCH   | Far End of Fiber Is Provisioned With Different Ring ID          |
| RING-SW-EAST    | Ring Switch Is Active on the East Side                          |
| RING-SW-WEST    | Ring Switch Is Active on the West Side                          |
| RSVP-HELLODOWN  | RSVP Hello FSM to Neighbor Down                                 |
| RUNCFG-SAVENEED | Need to Save Running Configuration                              |
| SD              | Signal Degrade                                                  |
| SD-L            | Bit Error Rate (BER) Threshold Exceeded For Signal Degrade–Line |
| SD-P            | BER Threshold Exceeded For Signal Degrade–Path                  |
| SF              | Signal Failure                                                  |
| SF-L            | BER Threshold Exceeded For Signal Failure–Line                  |
| SF-P            | BER Threshold Exceeded For Signal Failure–Path                  |
| SFTWDOWN        | Software Download In Progress                                   |
| SNTP-HOST       | Simple Network Time Protocol (SNTP) Host Failure                |

Table 27-1 Conditions (continued)

| Condition    | Description                                                    |
|--------------|----------------------------------------------------------------|
| SPAN-SW-EAST | Span Switch Is Active On The East Side                         |
| SPAN-SW-WEST | Span Switch Is Active On The West Side                         |
| SQM          | Sequence Mismatch                                              |
| SQUELCH      | Ring Is Squelching Traffic                                     |
| SQUELCHED    | Equipment Squelched                                            |
| SSM-DUS      | Do Not Use For Synchronization                                 |
| SSM-FAIL     | Failed To Receive Synchronization Status Message               |
| SSM-LNC      | G812–Local Node Clock Traceable                                |
| SSM-OFF      | Synchronization Status Messages Are Disabled On This Interface |
| SSM-PRC      | G811–Primary Reference Clock Traceable                         |
| SSM-PRS      | Stratum 1 Primary Reference Source Traceable                   |
| SSM-RES      | Reserved For Network Synchronization Use                       |
| SSM-SDH-TN   | G812–Transit Node Clock Traceable                              |
| SSM-SETS     | G813–Synchronous Equipment Timing Source Traceable             |
| SSM-SMC      | SONET Minimum Clock Traceable                                  |
| SSM-ST2      | Stratum 2 Traceable                                            |
| SSM-ST3      | Stratum 3 Traceable                                            |
| SSM-ST3E     | Stratum 3E Traceable                                           |
| SSM-ST4      | Stratum 4 Traceable                                            |
| SSM-STU      | Synchronized–Traceability Unknown                              |
| SSM-TNC      | Transit Node Clock Traceable                                   |
| SWMTXMOD     | Switching Matrix Module Failure                                |
| SWTOPRI      | Switch To Primary Reference                                    |
| SWTOSEC      | Switch To Second Reference                                     |
| SWTOTHIRD    | Switch To Third Reference                                      |
| SYNC-FREQ    | Synchronization Reference Frequency Out Of Bounds              |
| SYNCPRI      | Primary Synchronization Reference Failure                      |
| SYNCSEC      | Secondary Synchronization Reference Failure                    |
| SYNCTHIRD    | Third Synchronization Reference Failure                        |
| SYSBOOT      | System Reboot                                                  |
| TIM          | TIM Section–Trace Identifier Mismatch Failure                  |
| TIM-MON      | TIM Section Monitor–Trace Identifier Mismatch Failure          |
| TIM-P        | STS Path Trace Identifier Mismatch                             |
| TPTFAIL      | Transport layer failure                                        |
| TRMT         | Transmit Failure                                               |

**Table 27-1** *Conditions (continued)*

| <b>Condition</b> | <b>Description</b>                                 |
|------------------|----------------------------------------------------|
| TRMT-MISS        | Facility Termination Equipment–Transmitter Missing |
| TUNDERRUN        | Ethernet Transmit First In First Out Underrun      |
| TX-AIS           | Alarm Indication Signal in Tx                      |
| TX-RAI           | Remote Alarm Indication in Tx                      |
| UNC-WORD         | Forward Error Correction (FEC) Uncorrected Word    |
| UNEQ-P           | Unequipped–Path                                    |
| UNEQ-V           | Signal Label Mismatch Failure–Unequipped VT        |
| VCG-DEG          | Virtual Concatenation (VCAT) Group Degraded        |
| VCG-DOWN         | VCAT Group Down                                    |
| WKSWPR           | Switched To Protection                             |
| WTR              | Wait To Restore                                    |
| WVL-MISMATCH     | Equipment Wavelength Mismatch                      |

# Modifiers

This chapter describes the modifiers for TL1 commands and autonomous messages for the Cisco ONS 15454, Cisco ONS 15454 M2, and Cisco ONS 15454 M6. [Table 28-1](#) details the TL1 modifiers for commands that have carets (< >) in part of their input format; for example, RTRV-<OCN\_TYPE>. A “Yes” in the platform column indicates that a particular modifier is supported in that platform. A “No” in the platform column indicates that a particular modifier is not supported in that platform.

**Note**

The Modifier supported on the Cisco ONS 15454 is also supported on Cisco ONS 15454 M2 and Cisco ONS 15454 M6 Platforms.

**Table 28-1**      **Modifier Support**

| Modifier | ONS 15454 | ONS 15454 M2 | ONS 15454 M6 |
|----------|-----------|--------------|--------------|
| 10GFC    | Yes       | Yes          | Yes          |
| 10GIGE   | Yes       | Yes          | Yes          |
| 40GIGE   | Yes       | Yes          | Yes          |
| 100GIGE  | Yes       | Yes          | Yes          |
| 1GFC     | Yes       | Yes          | Yes          |
| 1GFICON  | Yes       | Yes          | Yes          |
| 2GFC     | Yes       | Yes          | Yes          |
| 4GFC     | Yes       | Yes          | Yes          |
| 2GFICON  | Yes       | Yes          | Yes          |
| 5GIB     | Yes       | Yes          | Yes          |
| 8GFC     | Yes       | Yes          | Yes          |
| 3GVIDEO  | Yes       | Yes          | Yes          |
| AUTO     | Yes       | Yes          | Yes          |
| CHGRP    | Yes       | Yes          | Yes          |
| D1VIDEO  | Yes       | Yes          | Yes          |
| DS1      | Yes       | Yes          | Yes          |
| DV6000   | Yes       | Yes          | Yes          |
| DVBASI   | Yes       | Yes          | Yes          |

## S

SCHED-PMREPT command  
description [22-1](#)

retrieving all schedules [21-367](#)  
retrieving schedule [21-363](#)  
Schedule Performance Monitoring Report command [22-1](#)  
scheduling performance monitoring reports [22-1](#)  
SDBER, editing [11-40, 11-123](#)  
security  
alarm reports [17-20](#)  
clearing conditions [6-2](#)  
clearing INTRUSION-PSWD condition [6-1](#)  
creating users [12-66](#)  
deleting users [10-38](#)  
disabling user accounts [14-8](#)  
editing for commands [11-61](#)  
editing for users [11-177](#)  
enabling disabled user ID [2-7](#)  
forcing a user off the NE [4-3](#)  
report of nonalarmed events [17-46](#)  
retrieving defaults [21-162](#)  
retrieving level for a command [21-124](#)  
retrieving user information [21-471](#)  
setting default values [23-8](#)  
service states  
changing [19-1, 19-2, 20-1, 20-2](#)  
retrieving [21-125](#)  
retrieving for DWDM cards [21-287](#)  
retrieving for OMS facilities [21-306](#)  
retrieving for optical cards [21-34](#)  
retrieving for OTS facilities [21-313](#)  
retrieving for OTU2 facilities [21-318](#)  
Set Alarm Threshold command [23-1](#)  
Set Alarm Threshold Equipment command [23-3](#)  
SET-ALMTH-<MOD2> command [23-1](#)  
SET-ALMTH-EQPT command [23-3](#)  
SET-ATTR-CONT command [23-5](#)  
SET-ATTR-ENV command [23-6](#)  
Set Attribute Control command [23-5](#)  
Set Attribute Environment command [23-6](#)  
Set Attribute Security Default command [23-8](#)  
SET-ATTR-SECUDFLT command [23-8](#)

- Set HOP Control Plane Service command [23-11](#)
- SET-HOP-CPS command [23-11](#)
- Set Performance Mode of PM Data Collection (STS) command [23-13](#)
- Set Performance Mode of PM Data Collection (VT) command [23-14](#)
- SET-PMMODE-<STS\_PATH> command [23-13](#)
- SET-PMMODE-<VT\_PATH> command [23-14](#)
- Set Service Type command [23-15](#)
- SET-SRVTYPE command [23-15](#)
- SET-TH-<MOD2> command [23-16](#)
- Set Threshold command [23-16](#)
- Set Time of Day command [23-22](#)
- setting
  - alarm thresholds [23-1](#)
  - alarm thresholds for power level monitoring [23-3](#)
  - external control attributes [23-5, 23-6](#)
  - MXP\_2.5G\_10G card alarm thresholds [23-16](#)
  - PM data collection mode [23-13, 23-14](#)
  - system date [23-22](#)
  - system security default values [23-8](#)
  - system time [23-22](#)
  - TXP\_MR\_10G card alarm thresholds [23-16](#)
- SET-TOD command [23-22](#)
- SFBER, editing [11-40](#)
- SHELF AID [26-55](#)
- SHELL protocol
  - disabling [11-154](#)
  - enabling [11-154](#)
  - retrieving status [21-379](#)
- slots
  - deleting provisioning [10-11](#)
  - editing attributes [11-77](#)
- SNMP
  - deleting traps [10-35](#)
  - disabling [11-154](#)
  - editing trap table destination entry [11-173](#)
  - enabling [11-154](#)
  - provisioning [12-63](#)
  - retrieving status [21-379](#)
  - retrieving trap destination [21-457](#)
- software
  - activating or reverting loads [3-1](#)
  - downloading [8-2](#)
  - download message [17-44](#)
- span loss
  - calculating expected verification [16-16](#)
  - retrieving expected value [21-406](#)
- SSM, editing [11-40, 11-115](#)
- starting
  - ANS [16-19](#)
  - a session, nonalarmed event report [17-48](#)
  - Cisco IOS [8-1](#)
- static routes
  - creating [12-60](#)
  - deleting [10-34](#)
  - retrieving [21-402](#)
- STSs
  - creating cross-connects [12-12](#)
  - editing paths [11-32](#)
  - protection switching [16-12](#)
  - releasing protection switch [18-7](#)
  - retrieving attributes [21-46](#)
  - retrieving path attributes [21-408](#)
  - retrieving path protection switching state [21-375](#)
  - retrieving specified cross-connects [21-155](#)
  - rolling [12-59](#)
  - setting PM data collection mode [23-13](#)
  - STS AID [26-55](#)
- Superuser, description [12-66](#)
- SW-DX-EQPT command [24-1](#)
- Switch Duplex Equipment command [24-1](#)
- switching
  - 1+1 optical protection [16-9](#)
  - autonomous reports [17-60](#)
  - cross-connect cards [24-1](#)
  - electrical equipment [24-2, 24-4](#)
  - enabling for electrical protection cards [2-5, 2-6](#)

- enabling on a cross-connect cards [2-4](#)
- inhibiting for cross-connect cards [14-4](#)
- inhibiting for electrical cards [14-6](#)
- inhibiting protection switches [14-5](#)
- Path Protection [16-12](#)
- protection on TXPP\_MR\_2.5G card [16-14](#)
- releasing Y-cable protection switch [18-5](#)
- retrieving SONET line state [21-373](#)
- retrieving status [21-372](#)
- timing references [16-17](#)
- Y-cable protection [16-8](#)

Switch to Protection Equipment command [24-2](#)

Switch to Working Equipment command [24-4](#)

SW-TOPROTN-EQPT command [24-2](#)

SW-TOWKG-EQPT command [24-4](#)

synchronization

## T

### TACCs

- See also* TAPs
- changing mode [5-1](#)
- editing attributes for DS3XM card DS1 access [11-68](#)
- retrieving [21-425](#)

### TADRMAP table

- deleting an entry from [10-35](#)
- retrieving contents [21-428](#)

### TAPs

- See also* TACCs
- connecting STSs or VTs to the specified STS [7-1](#)
- deleting [9-1](#)
- retrieving TACCs [21-425](#)

### testing circuits [5-1](#)

### The Retrieve Channel Group command [21-121](#)

### thresholds

- creating RMON [12-53](#)
- deleting RMON [10-27](#)
- retrieving [21-443](#)
- retrieving for alarms [21-89](#)
- retrieving for power alarms [21-94](#)
- retrieving RMON [21-390](#)
- setting for alarms [23-1](#)
- setting for MXP\_2.5G\_10G and TXP\_MR\_10G cards [23-16](#)
- setting for power monitoring [23-3](#)

### time

- editing [11-67](#)
- retrieving [21-455](#)
- setting for system [23-22](#)

### timing

- See also* BITS
- See also* synchronization
- alarms [17-22](#)
- editing for nodes [11-115](#)
- mixed mode [11-116](#)
- releasing switch [18-9](#)
- retrieving synchronization reference list [21-414](#)
- switching references [16-17](#)

### TL1

- commands [1-1 to 24-6](#)
- disabling [11-154](#)
- enabling [11-154](#)
- retrieving header [21-225](#)

retrieving status [21-379](#)

traps. *See* SNMP

troubleshooting the TL1 link to the NE [21-225](#)

TST-INSERRBITS-<MOD2> command [25-1](#)

tunnels

- firewall. *See* firewall tunnels
- GRE. *See* GRE tunnels
- proxy. *See* proxy tunnels

turning off

- See also* disabling
- See also* inhibiting
- audible alarms [16-1](#)
- ML-Series card console port [14-1](#)
- performance monitoring reports for a session [14-3](#)

TXP\_MR\_10G cards, setting thresholds [23-1](#)

TXP\_MR\_2.5G/TXPP\_MR\_2.5G cards

- editing OCH protection [11-87](#)
- protection switching [16-14](#)
- releasing protection switch [18-8](#)
- retrieving protection information [21-197, 21-198](#)
- retrieving switching status [21-376, 21-378](#)

TXPP\_MR\_2.5G cards

- releasing protection switches [18-8](#)

---

## U

UDC AID [26-60](#)

UDP port, provisioning [12-63](#)

UID [1-2](#)

upgrading

- activating or reverting software load during [3-1](#)
- low-density electrical cards to high density [5-3](#)

uploading the Cisco IOS startup configuration file [8-1](#)

users

- activating [1-1](#)
- changing passwords [11-152](#)
- creating [12-66](#)
- deleting [10-38](#)
- disabling accounts [14-8](#)

- enabling after ID has been disabled [2-7](#)
- forcing off an NE [4-3](#)
- logging out [4-2](#)
- retrieving security information [21-471](#)

---

## V

VCAT groups. *See* VCGs

VCGs

- creating [12-68](#)
- deleting [10-38](#)
- editing [11-178](#)
- retrieving attributes [21-473](#)

viewing a list of GRE tunnels [21-404](#)

virtual concatenation groups. *See* VCGs

Virtual LAN

- deleting [10-39](#)

VLAN

- entering [12-70](#)

VOAs, computing values [16-19](#)

VTs

- creating cross-connects [12-12](#)
- editing paths [11-32](#)
- protection switching [16-12](#)
- releasing protection switch [18-7](#)
- retrieving attributes [21-46](#)
- retrieving path attributes [21-478](#)
- retrieving path protection switching state [21-375](#)
- retrieving specified cross-connects [21-155](#)
- rolling [12-59](#)
- setting PM data collection mode [23-14](#)
- VT AID [26-61](#)

---

## W

wavelengths

- provisioning [11-43](#)
- WLEN AID [26-62](#)

## WDMANS

editing [11-182](#)

WDMANS AID [26-62](#)

## WDMSIDE

creating [12-77](#)

---

**X**

XC10G cards. *See* cross-connect cards

XCVT cards. *See* cross-connect cards

XC-VXC-10G cards. *See* cross-connect cards

## XTC cards

*See also* cross-connect cards [11-162](#)

editing DS1/T1 ports [11-162](#)

---

**Y**

## Y-cable protection

creating groups [12-26](#)

deleting [10-12](#)

editing groups [11-84](#)

initiating a switch [16-8](#)

releasing a switch [18-5](#)

retrieving for client facilities [21-193](#)
