

# Configuring IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) Operations

---

This module describes how to configure an IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) operation to gather the following performance measurements for Ethernet service:

- Ethernet Delay
- Ethernet Delay Variation
- Ethernet Frame Loss Ratio
  
- [Finding Feature Information, page 1](#)
- [Prerequisites for ITU-T Y.1731 Operations, page 2](#)
- [Restrictions for IP SLAs Metro-Ethernet 3.0 \(ITU-T Y.1731\), page 2](#)
- [How to Configure IP SLAs Metro-Ethernet 3.0 \(ITU-T Y.1731\) Operations, page 2](#)
- [Configuration Examples for IP SLAs Metro-Ethernet 3.0 \(ITU-T Y.1731\) Operations, page 18](#)
- [Additional References for IP SLAs Metro-Ethernet 3.0 \(ITU-T Y.1731\) Operations, page 21](#)
- [Feature Information for IP SLAs Metro-Ethernet 3.0 \(ITU-T Y.1731\) Operations, page 22](#)

## Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

## Prerequisites for ITU-T Y.1731 Operations

IEEE-compliant Connectivity Fault Management (CFM) must be configured and enabled for Y.1731 performance monitoring to function.

**Note**

---

Y1731 is supported on Port Channel interfaces.

---

## Restrictions for IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731)

- Depending on your Cisco software release, SNMP is not supported for reporting threshold events or collecting performance statistics for IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) operations.
- Continuity Check Message (CCM)-based dual-ended Ethernet frame loss operations are not supported.
- In a single-ended Ethernet operation, performance measurement statistics can be retrieved only at the device on which the sender Ethernet Connectivity Fault Management (CFM) Maintenance End Point (MEP) is configured.
- P2 IMs are to be used for CFM and Y1731.
- Do not configure rewrite on the EFPs throughout the I2 circuit to avoid losing the cos value.
- To avoid errors in RX and TX timestamping, ensure to have Y1731 sender as PTP master, and the Y1731 responder as PTP slave.
- Reconfigure IP SLA Y1731 while doing online insertion removal (OIR) of IM or router reload because local MEP is deleted during the course.

## How to Configure IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) Operations

### Configuring a Dual-Ended Ethernet Delay or Delay Variation Operation

Perform the tasks for configuring a dual-ended operation in the order presented.

**Note**

---

To remove the MEP configurations in an already-configured dual-ended operation, always remove the MEPs in the reverse order in which they were configured. That is, remove the scheduler first, then the threshold monitoring configuration, and then the sender MEP configuration on the source device before removing the scheduler, proactive threshold monitoring, and receiver MEP configuration on the destination device.

---

## Configuring a Receiver MEP on the Destination Device

### Before You Begin

Time synchronization is required between the source and destination devices in order to provide accurate one-way delay (latency) or delay-variation measurements. Configure either Precision Time Protocol (PTP) or Network Time Protocol (NTP) on both the source and destination devices.

### SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla operation-number**
4. **ethernet y1731 delay receive 1DM domain domain-name {evc evc-id | vlan vlan-id} cos cos {mpid source-mp-id | mac-address source-address}**
5. **aggregate interval seconds**
6. **distribution {delay | delay-variation} one-way number-of-bins boundary[,...,boundary]**
7. **frame offset offset-value**
8. **history interval intervals-stored**
9. **max-delay milliseconds**
10. **owner owner-id**
11. **end**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Router# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>ip sla operation-number</b>  <b>Example:</b> Router(config-term)# ip sla 501	Begins configuring an IP SLAs operation and enters IP SLA configuration mode.

	Command or Action	Purpose
<b>Step 4</b>	<p><b>ethernet y1731 delay receive 1DM domain</b> <i>domain-name</i> {<i>evc evc-id</i>   <i>vlan vlan-id</i>} <b>cos</b> <i>cos</i> {<i>mpid source-mp-id</i>   <b>mac-address</b> <i>source-address</i>}</p> <p><b>Example:</b></p> <pre>Router(config-ip-sla)# ethernet y1731 delay receive 1DM domain xxx evc yyy cos 3 mpid 101</pre>	<p>Begins configuring the receiver on the responder and enters IP SLA Y.1731 delay configuration mode.</p> <ul style="list-style-type: none"> <li>The <i>source-mp-id</i> or <i>source-address</i> configured by this command corresponds to that of the MEP being configured.</li> </ul> <p><b>Note</b> The session with <i>mac-address</i> will not be inactivated when there is CFM error.</p>
<b>Step 5</b>	<p><b>aggregate interval</b> <i>seconds</i></p> <p><b>Example:</b></p> <pre>Router(config-sla-y1731-delay)# aggregate interval 900</pre>	<p>(Optional) Configures the length of time during which the performance measurements are conducted and the results stored.</p>
<b>Step 6</b>	<p><b>distribution {delay   delay-variation} one-way</b> <i>number-of-bins boundary[,...,boundary]</i></p> <p><b>Example:</b></p> <pre>Router(config-sla-y1731-delay)# distribution delay-variation one-way 5 5000,10000,15000,20000,-1</pre>	<p>(Optional) Specifies measurement type and configures bins for statistics distributions kept.</p>
<b>Step 7</b>	<p><b>frame offset</b> <i>offset-value</i></p> <p><b>Example:</b></p> <pre>Router(config-sla-y1731-delay)# frame offset 1</pre>	<p>(Optional) Sets the value for calculating delay variation rates.</p>
<b>Step 8</b>	<p><b>history interval</b> <i>intervals-stored</i></p> <p><b>Example:</b></p> <pre>Router(config-sla-y1731-delay)# history interval 2</pre>	<p>(Optional) Sets the number of statistics distributions kept during the lifetime of an IP SLAs Ethernet operation.</p>
<b>Step 9</b>	<p><b>max-delay</b> <i>milliseconds</i></p> <p><b>Example:</b></p> <pre>Router(config-sla-y1731-delay)# max-delay 5000</pre>	<p>(Optional) Sets the amount of time an MEP waits for a frame.</p>

	Command or Action	Purpose
<b>Step 10</b>	<b>owner</b> <i>owner-id</i>  <b>Example:</b> <pre>Router(config-sla-y1731-delay)# owner admin</pre>	(Optional) Configures the owner of an IP SLAs operation.
<b>Step 11</b>	<b>end</b>  <b>Example:</b> <pre>Router(config-sla-y1731-delay)# end</pre>	Exits to privileged EXEC mode.

### What to Do Next

To add proactive threshold conditions and reactive triggering for generating traps, see the "Configuring Proactive Threshold Monitoring" module of the *IP SLAs Configuration Guide*.

When you are finished configuring proactive threshold monitoring for this MEP, see the "Scheduling IP SLAs Operations" section to schedule the operation.

## Configuring the Sender MEP on the Source Router

### Before You Begin

- Time synchronization is required between the source and destination devices in order to provide accurate one-way delay (latency) or delay-variation measurements. Configure either Precision Time Protocol (PTP) or Network Time Protocol (NTP) on both the source and destination devices.
- The receiver MEP must be configured, including proactive threshold monitoring, and scheduled before you configure the sender MEP.

**SUMMARY STEPS**

1. **enable**
2. **configure terminal**
3. **ip sla operation-number**
4. **ethernet y1731 delay 1DM domain domain-name {evc evc-id | vlan vlan-id} {mpid target-mp-id | mac-address target-address} cos cos {source {mpid source-mp-id | mac-address source-address}}**
5. **aggregate interval seconds**
6. **frame interval milliseconds**
7. **frame size bytes**
8. **history interval intervals-stored**
9. **owner owner-id**
10. **end**

**DETAILED STEPS**

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Router# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>ip sla operation-number</b>  <b>Example:</b> Router(config)# ip sla 500	Begins configuring an IP SLAs operation and enters IP SLA configuration mode.
<b>Step 4</b>	<b>ethernet y1731 delay 1DM domain domain-name {evc evc-id   vlan vlan-id} {mpid target-mp-id   mac-address target-address} cos cos {source {mpid source-mp-id   mac-address source-address}}</b>  <b>Example:</b> Router(config-ip-sla)# ethernet y1731 delay 1DM domain xxx evc yyy mpid 101 cos 3 source mpid 100	Begins configuring a dual-ended Ethernet delay operation and enters IP SLA Y.1731 delay configuration mode.  <b>Note</b> The session with mac-address will not be inactivated when there is CFM error.

	Command or Action	Purpose
<b>Step 5</b>	<b>aggregate interval</b> <i>seconds</i>  <b>Example:</b> <pre>Router(config-sla-y1731-delay)# aggregate interval 900</pre>	(Optional) Configures the length of time during which the performance measurements are conducted and the results stored.
<b>Step 6</b>	<b>frame interval</b> <i>milliseconds</i>  <b>Example:</b> <pre>Router(config-sla-y1731-delay)# frame interval 100</pre>	(Optional) Sets the gap between successive frames.
<b>Step 7</b>	<b>frame size</b> <i>bytes</i>  <b>Example:</b> <pre>Router(config-sla-y1731-delay)# frame size 64</pre>	(Optional) Sets the padding size for frames.
<b>Step 8</b>	<b>history interval</b> <i>intervals-stored</i>  <b>Example:</b> <pre>Router(config-sla-y1731-delay)# history interval 2</pre>	(Optional) Sets the number of statistics distributions kept during the lifetime of an IP SLAs Ethernet operation.
<b>Step 9</b>	<b>owner</b> <i>owner-id</i>  <b>Example:</b> <pre>Router(config-sla-y1731-delay)# owner admin</pre>	(Optional) Configures the owner of an IP SLAs operation.
<b>Step 10</b>	<b>end</b>  <b>Example:</b> <pre>Router(config-sla-y1731-delay)# end</pre>	Exits to privileged EXEC mode.

### What to Do Next

To add proactive threshold conditions and reactive triggering for generating traps, see the "Configuring Proactive Threshold Monitoring" module of the *IP SLAs Configuration Guide*.

When you are finished configuring proactive threshold monitoring for this MEP, see the "Scheduling IP SLAs Operations" section to schedule the operation.

# Configuring a Sender MEP for a Single-Ended Ethernet Delay or Delay Variation Operation

Perform this task to configure a sender MEP on the source device.

## Before You Begin

- Time synchronization is required between the source and destination devices in order to provide accurate one-way delay (latency) or delay-variation measurements. Configure either Precision Time Protocol (PTP) or Network Time Protocol (NTP) on both the source and destination devices.

### Note

To display information about remote (target) MEPs on destination devices, use the **show ethernet cfm maintenance-points remote** command.

## SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla operation-number**
4. **ethernet y1731 delay {DMM | DMMv1} [burst] domain domain-name {evc evc-id | vlan vlan-id} {mpid target-mp-id | mac-address target-address} cos cos {source {mpid source-mp-id | mac-address source-address}}**
5. **clock sync**
6. **aggregate interval seconds**
7. **distribution {delay | delay-variation} one-way number-of-bins boundary[,...,boundary]**
8. **frame interval milliseconds**
9. **frame offset offset-value**
10. **frame size bytes**
11. **history interval intervals-stored**
12. **max-delay milliseconds**
13. **owner owner-id**
14. **end**

## DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode.  • Enter your password if prompted.

	Command or Action	Purpose
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>ip sla operation-number</b>  <b>Example:</b> Device(config-term)# ip sla 10	Begins configuring an IP SLAs operation and enters IP SLA configuration mode.
<b>Step 4</b>	<b>ethernet y1731 delay {DMM   DMMv1} [burst] domain domain-name {evc evc-id   vlan vlan-id} {mpid target-mp-id   mac-address target-address} cos cos {source {mpid source-mp-id   mac-address source-address}}</b>  <b>Example:</b> Device(config-ip-sla)# ethernet y1731 delay dmm domain xxx evc yyy mpid 101 cos 4 source mpid 100	Begins configuring a single-ended Ethernet delay operation and enters IP SLA Y.1731 delay configuration mode. <ul style="list-style-type: none"> <li>To configure concurrent operations, use the <b>DMMv1</b> keyword with this command. Repeat the preceding two steps to each concurrent operation, to be added to a single IP SLA operation number. Concurrent operations are supported for a given EVC, CoS, and remote MEP combination, or for multiple MEPs for a given multipoint EVC.</li> </ul> <p><b>Note</b> The session with mac-address will not be inactivated when there is CFM error.</p>
<b>Step 5</b>	<b>clock sync</b>  <b>Example:</b> Device(config-sla-y1731-delay)# clock sync	(Optional) Indicates that the end points are synchronized and thus allows the operation to calculate one-way delay measurements.
<b>Step 6</b>	<b>aggregate interval seconds</b>  <b>Example:</b> Device(config-sla-y1731-delay)# aggregate interval 900	(Optional) Configures the length of time during which the performance measurements are conducted and the results stored.
<b>Step 7</b>	<b>distribution {delay   delay-variation} one-way number-of-bins boundary[,...boundary]</b>  <b>Example:</b> Device(config-sla-y1731-delay)# distribution delay-variation one-way 5 5000, 10000,15000,20000,-1	(Optional) Specifies measurement type and configures bins for statistics distributions kept.

	Command or Action	Purpose
<b>Step 8</b>	<b>frame interval</b> <i>milliseconds</i>  <b>Example:</b> <pre>Device(config-sla-y1731-delay)# frame interval 100</pre>	(Optional) Sets the gap between successive frames.
<b>Step 9</b>	<b>frame offset</b> <i>offset-value</i>  <b>Example:</b> <pre>Device(config-sla-y1731-delay)# frame offset 1</pre>	(Optional) Sets value for calculating delay variation values.
<b>Step 10</b>	<b>frame size</b> <i>bytes</i>  <b>Example:</b> <pre>Device(config-sla-y1731-delay)# frame size 32</pre>	(Optional) Configures padding size for frames.
<b>Step 11</b>	<b>history interval</b> <i>intervals-stored</i>  <b>Example:</b> <pre>Device(config-sla-y1731-delay)# history interval 2</pre>	(Optional) Sets the number of statistics distributions kept during the lifetime of an IP SLAs Ethernet operation.
<b>Step 12</b>	<b>max-delay</b> <i>milliseconds</i>  <b>Example:</b> <pre>Device(config-sla-y1731-delay)# max-delay 5000</pre>	(Optional) Sets the amount of time an MEP waits for a frame.
<b>Step 13</b>	<b>owner</b> <i>owner-id</i>  <b>Example:</b> <pre>Device(config-sla-y1731-delay)# owner admin</pre>	(Optional) Configures the owner of an IP SLAs operation.
<b>Step 14</b>	<b>end</b>  <b>Example:</b> <pre>Device(config-sla-y1731-delay)# end</pre>	Exits to privileged EXEC mode.

### What to Do Next

To add proactive threshold conditions and reactive triggering for generating traps, see the "Configuring Proactive Threshold Monitoring" module of the *IP SLAs Configuration Guide*.

When you are finished configuring proactive threshold monitoring for this operation, see the "Scheduling IP SLAs Operations" section to schedule the operation.

## Configuring a Sender MEP for a Single-Ended Ethernet Frame Loss Ratio Operation

---

**Note** This task is not supported on Cisco ME 3600X Series and 3800X Series Ethernet Access Switches

---

---

**Note** To display information about remote (target) MEPs on destination devices, use the **show ethernet cfm maintenance-points remote** command.

---

Perform this task to configure a sender MEP on the source device.

### Before You Begin

- Class of Service (CoS)-level monitoring must be enabled on MEPs associated to the Ethernet frame loss operation by using the **monitor loss counter** command on the devices at both ends of the operation. See the *Cisco IOS Carrier Ethernet Command Reference* for command information. See the "Configuration Examples for IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) Operations" section for configuration information.

---

**Note** Cisco IOS Y.1731 implementation allows monitoring of frame loss for frames on an EVC regardless of the CoS value (any CoS or Aggregate CoS cases). See the "Configuration Examples for IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) Operations" section for configuration information.

---

## SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla operation-number**
4. **ethernet y1731 loss** {LMM | SLM} [burst] domain domain-name {evc evc-id | vlan vlan-id} {mpid target-mp-id | mac-address target-address} CoS CoS {source {mpid source-mp-id | mac-address source-address}}
5. **aggregate interval** seconds
6. **availability algorithm** {sliding-window | static-window}
7. **frame consecutive** value
8. **frame interval** milliseconds
9. **history interval** intervals-stored
10. **owner** owner-id
11. **exit**
12. **exit**
13. **ip sla reaction-configuration** operation-number {react {unavailableDS | unavailableSD} [threshold-type {average [number-of-measurements] | consecutive [occurrences] | immediate}] [threshold-value upper-threshold lower-threshold]}
14. **ip sla logging traps**
15. **exit**

## DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode.  • Enter your password if prompted.
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>ip sla operation-number</b>  <b>Example:</b> Device(config-term)# ip sla 11	Begins configuring an IP SLAs operation and enters IP SLA configuration mode.
<b>Step 4</b>	<b>ethernet y1731 loss</b> {LMM   SLM} [burst] domain domain-name {evc evc-id   vlan vlan-id} {mpid target-mp-id   mac-address target-address} CoS CoS	Begins configuring a single-ended Ethernet frame loss ratio operation and enters IP SLA Y.1731 loss configuration mode.

	Command or Action	Purpose
	<p><b>{source {mpid source-mp-id   mac-address source-address}}</b></p> <p><b>Example:</b></p> <pre>Device(config-ip-sla)# ethernet y1731 loss LMM domain xxx vlan 12 mpid 34 CoS 4 source mpid 23</pre>	<ul style="list-style-type: none"> <li>To configure concurrent operations, use the <b>SLM</b> keyword with this command. Repeat the preceding two steps to configure each concurrent operation to be added to a single IP SLA operation number. Concurrent operations are supported for a given EVC, CoS, and remote-MEP combination, or for multiple MEPs for a given multipoint EVC.</li> </ul> <p><b>Note</b> The session with mac-address will not be inactivated when there is CFM error.</p>
<b>Step 5</b>	<p><b>aggregate interval</b> <i>seconds</i></p> <p><b>Example:</b></p> <pre>Device(config-sla-y1731-loss)# aggregate interval 900</pre>	(Optional) Configures the length of time during which performance measurements are conducted and the results stored.
<b>Step 6</b>	<p><b>availability algorithm</b> {<i>sliding-window</i>   <i>static-window</i>}</p> <p><b>Example:</b></p> <pre>Device(config-sla-y1731-loss)# availability algorithm static-window</pre>	(Optional) Specifies availability algorithm used.
<b>Step 7</b>	<p><b>frame consecutive</b> <i>value</i></p> <p><b>Example:</b></p> <pre>Device(config-sla-y1731-loss)# frame consecutive 10</pre>	(Optional) Specifies number of consecutive measurements to be used to determine availability or unavailability status.
<b>Step 8</b>	<p><b>frame interval</b> <i>milliseconds</i></p> <p><b>Example:</b></p> <pre>Device(config-sla-y1731-loss)# frame interval 100</pre>	(Optional) Sets the gap between successive frames.
<b>Step 9</b>	<p><b>history interval</b> <i>intervals-stored</i></p> <p><b>Example:</b></p> <pre>Device(config-sla-y1731-loss)# history interval 2</pre>	(Optional) Sets the number of statistics distributions kept during the lifetime of an IP SLAs Ethernet operation.

	Command or Action	Purpose
<b>Step 10</b>	<p><b>owner</b> <i>owner-id</i></p> <p><b>Example:</b></p> <pre>Device(config-sla-y1731-delay)# owner admin</pre>	(Optional) Configures the owner of an IP SLAs operation.
<b>Step 11</b>	<p><b>exit</b></p> <p><b>Example:</b></p> <pre>Device(config-sla-y1731-delay)# exit</pre>	Exits to IP SLA configuration mode.
<b>Step 12</b>	<p><b>exit</b></p> <p><b>Example:</b></p> <pre>Device(config-ip-sla)# exit</pre>	Exits to global configuration mode.
<b>Step 13</b>	<p><b>ip sla reaction-configuration</b> <i>operation-number</i> {<b>react</b> {<b>unavailableDS</b>   <b>unavailableSD</b>} [<b>threshold-type</b> {<b>average</b> [<i>number-of-measurements</i>]   <b>consecutive</b> [<i>occurrences</i>]   <b>immediate</b>}] [<b>threshold-value</b> <i>upper-threshold</i> <i>lower-threshold</i>]}</p> <p><b>Example:</b></p> <pre>Device(config)# ip sla reaction-configuration 11 react unavailableDS</pre>	(Optional) Configures proactive threshold monitoring for frame loss measurements.
<b>Step 14</b>	<p><b>ip sla logging traps</b></p> <p><b>Example:</b></p> <pre>Device(config)# ip sla logging traps</pre>	(Optional) Enables IP SLAs syslog messages from CISCO-RTTMON-MIB.
<b>Step 15</b>	<p><b>exit</b></p> <p><b>Example:</b></p> <pre>Device(config)# exit</pre>	Exits to privileged EXEC mode.

### What to Do Next

When you are finished configuring this MEP, see the "Scheduling IP SLAs Operations" section to schedule the operation.

# Scheduling IP SLAs Operations

## Before You Begin

- All IP Service Level Agreements (SLAs) operations to be scheduled must be already configured.
- The frequency of all operations scheduled in a multioperation group must be the same.
- The list of one or more operation ID numbers to be added to a multioperation group must be limited to a maximum of 125 characters in length, including commas (,).

## SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. Enter one of the following commands:
  - **ip sla schedule** *operation-number* [**life** {**forever** | *seconds*}] [**start-time** {[*hh:mm:ss*] [*month day* | *day month*]} | **pending** | **now** | **after** *hh:mm:ss*] [**ageout** *seconds*] [**recurring**]
  - **ip sla group schedule** *group-operation-number* *operation-id-numbers* {**schedule-period** *schedule-period-range* | **schedule-together**} [**ageout** *seconds*] **frequency** *group-operation-frequency* [**life** {**forever** | *seconds*}] [**start-time** {[*hh:mm* [*:ss*] [*month day* | *day month*]} | **pending** | **now** | **after** *hh:mm* [*:ss*]}]
4. **end**
5. **show ip sla group schedule**
6. **show ip sla configuration**

## DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
Step 2	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
Step 3	Enter one of the following commands: <ul style="list-style-type: none"> <li>• <b>ip sla schedule</b> <i>operation-number</i> [<b>life</b> {<b>forever</b>   <i>seconds</i>}] [<b>start-time</b> {[<i>hh:mm:ss</i>] [<i>month day</i>   <i>day month</i>]}   <b>pending</b>   <b>now</b>   <b>after</b> <i>hh:mm:ss</i>] [<b>ageout</b> <i>seconds</i>] [<b>recurring</b>]</li> </ul>	<ul style="list-style-type: none"> <li>• Configures the scheduling parameters for an individual IP SLAs operation.</li> <li>• Specifies an IP SLAs operation group number and the range of operation numbers for a multioperation scheduler.</li> </ul>

	Command or Action	Purpose
	<ul style="list-style-type: none"> <li>• <b>ip sla group schedule</b> <i>group-operation-number</i> <i>operation-id-numbers</i> {<b>schedule-period</b> <i>schedule-period-range</i>   <b>schedule-together</b>} [<b>ageout</b> <i>seconds</i>] <b>frequency</b> <i>group-operation-frequency</i> [<b>life</b> {<b>forever</b>   <i>seconds</i>}] [<b>start-time</b> {<i>hh:mm</i> [:<i>ss</i>] [<i>month day</i>   <i>day month</i>]   <b>pending</b>   <b>now</b>   <b>after</b> <i>hh:mm</i> [:<i>ss</i>]}]</li> </ul> <p><b>Example:</b></p> <pre>Device(config)# ip sla schedule 10 life forever start-time now Device(config)# ip sla group schedule 10 schedule-period frequency Device(config)# ip sla group schedule 1 3,4,6-9 life forever start-time now Device(config)# ip sla schedule 1 3,4,6-9 schedule-period 50 frequency range 80-100</pre>	
<b>Step 4</b>	<p><b>end</b></p> <p><b>Example:</b></p> <pre>Device(config)# end</pre>	Exits global configuration mode and returns to privileged EXEC mode.
<b>Step 5</b>	<p><b>show ip sla group schedule</b></p> <p><b>Example:</b></p> <pre>Device# show ip sla group schedule</pre>	(Optional) Displays IP SLAs group schedule details.
<b>Step 6</b>	<p><b>show ip sla configuration</b></p> <p><b>Example:</b></p> <pre>Device# show ip sla configuration</pre>	(Optional) Displays IP SLAs configuration details.

## Enabling NTP Time of Day Synchronization

Perform additional NTP Time Of Day synchronization configuration when NTP is chosen for time synchronization for one-way delay or delay-variation measurements on source and destination devices.

**Note**

PTP should *not* be configured when NTP Time Of Day synchronization is used as they are mutually-exclusive configuration options for time synchronization.

For information on configuring NTP, see Configuring NTP section in [Cisco IOS Network Management Configuration Guide](#).

**SUMMARY STEPS**

1. **enable**
2. **configure terminal**
3. **platform time-source ntp**
4. **exit**

**DETAILED STEPS**

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Router# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>platform time-source ntp</b>  <b>Example:</b> Router(config)# <b>platform time-source ntp</b>	Initiates Time of Day (ToD) synchronization on the ethernet ports.
<b>Step 4</b>	<b>exit</b>  <b>Example:</b> Router(config)# <b>exit</b>	Exits the configuration.

# Configuration Examples for IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) Operations

## Example: Dual-Ended Ethernet Delay Operation

The following sample output shows the configuration, including default values, of a receiver MEP on the responder device for a dual-ended Ethernet delay or delay variation operation:

```
Device# show ip sla configuration 501

IP SLAs Infrastructure Engine-III
Entry number: 501

  Aggregation Period: 900
  Frame consecutive: 10
  Availability algorithm: static-window
History
  Number of intervals: 2

```

## Example: Verifying NTP Time Of Day Synchronization

Use the **show platform time-source** command to display information on the time source.

```
Router# show platform time-source
Time Source mode : NTP not Configured
```

```
Router# show platform time-source
Time Source mode : NTP
NTP State          : Not Synchronized
```

```
Router# show platform time-source
Time Source mode : NTP
NTP State          : Synchronized
```

## Feature Information for IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) Operations

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

**Table 1: Feature Information for IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) Operations**

Feature Name	Releases	Feature Information
IP SLAs Metro-Ethernet 3.0 (ITU-T Y.1731) Operations	Cisco IOS XE Release 3.13.0S	This feature was introduced on the Cisco ASR 920 Series Aggregation Services Router (ASR-920-12CZ-A, ASR-920-12CZ-D, ASR-920-4SZ-A, ASR-920-4SZ-D).
