## Preface

---

This guide describes the System Management commands. This chapter contains details on the changes made to this document.

- [Changes to This Document, on page iii](#)
- [Communications, Services, and Additional Information, on page iii](#)

## Changes to This Document

---

**Note** *This software release has reached end-of-life status. For more information, see the [End-of-Life and End-of-Sale Notices](#).*

---

This table lists the technical changes made to this document since it was first released.

**Table 1: Changes to This Document**

| Date       | Summary                           |
|------------|-----------------------------------|
| March 2018 | Initial release of this document. |

## Communications, Services, and Additional Information

- To receive timely, relevant information from Cisco, sign up at [Cisco Profile Manager](#).
- To get the business impact you're looking for with the technologies that matter, visit [Cisco Services](#).
- To submit a service request, visit [Cisco Support](#).
- To discover and browse secure, validated enterprise-class apps, products, solutions and services, visit [Cisco Marketplace](#).
- To obtain general networking, training, and certification titles, visit [Cisco Press](#).
- To find warranty information for a specific product or product family, access [Cisco Warranty Finder](#).

### **Cisco Bug Search Tool**

[Cisco Bug Search Tool](#) (BST) is a web-based tool that acts as a gateway to the Cisco bug tracking system that maintains a comprehensive list of defects and vulnerabilities in Cisco products and software. BST provides you with detailed defect information about your products and software.

## Bulk Content Downloader (BCDL) Commands

This module describes the **show** commands that you can use to see the status of the Bulk Content Downloader (BCDL) process. The BCDL provides the Cisco IOS XR software with high-performance downloading capabilities. This capability is used by the following internal applications:

- IPv4 and IPv6 unicast routing protocols—To provide the ability to download forwarding information from the router Global Routing Information Base (GRIB) to the line cards.
- IPv4 and IPv6 multicast routing protocols—To download the Multicast Routing Information Base (MRIB) entries to consumers managing the Multicast Forwarding Information Base (MFIB) on the various line cards and distributed route processors (DRPs).
- MPLS—To download the Label Forwarding Information Base (LFIB) entries to the line card.
- LPTS—To maintain the Internal Forwarding Information Base (IFIB) table on all nodes that do IP forwarding to and from the DRPs.
- Fabric Management—To update memberships for individual fabric group IDs (FGIDs) to selected portions of the fabric hardware.
- CDS—Context Distribution Service.

There is no configuration necessary for the BCDL.

- [show bcdl, on page 2](#)
- [show bcdl consumers, on page 4](#)
- [show bcdl queues, on page 6](#)
- [show bcdl tables, on page 7](#)
- [show bcdl trace, on page 9](#)

# show bcdl

To display Bulk Content Downloader (BCDL) information, use the **show bcdl** command in

EXEC

mode.

**show bcdl** [*group\_name*]

## Syntax Description

*group\_name* (Optional) Displays information for a specific BCDL group.

## Command Default

No default behavior or values

## Command Modes

EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.3.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

## Task ID

**Task Operations ID**

sysmgr read

The following example shows sample output from the **show bcdl** command:

```
RP/0/RP0/CPU0:router# show bcdl ipv4_rib

Sun May 31 06:57:32.153 PST
grp ipv4_rib, gid 2051, sg cnt 1, agent jid 111, node 0/RP0/CPU0, pulse 343, new mbr 0
sg  lwg  fd  csmr  hdlr-act  dnld-act  susp  wait-lck  seq  pulse-tot  pulse-out
0  2053  15   6       no         no     no       0  386       338       0
```

**Table 2: show bcdl Field Descriptions**

| Field    | Description  |
|----------|--|
| group    | Type of download and the Group Services Protocol (GSP) group name.   |
| gid      | Heavyweight group (HWG) in the GSP. This is the group that a consumer initially joins. It is used by the BCDL agent to send control updates. |
| sg count | Number of subgroups for this particular download type.   |

| Field     | Description  |
|-----------|--|
| agent jid | Job identifier of the BCDL agent. The JID is numerical identifier for a particular process and remains the same across process restarts.   |
| node      | Node, expressed in the <i>rack/slot/module</i> notation, in which the agent is running.  |
| pulse     | Pulse code used by the producer to pulse the BCDL agent.   |
| new mbr   | Number of new consumers that have not yet been assigned a subgroup.  |
| sg        | Subgroups number.  |
| lwg       | Lightweight group in GSP. This is a type of child group of the HWG. The BCDL agent tells the consumers to join this group to receive data. |
| fd        | The connection handle between the producer and the BCDL agent.   |
| csmr      | Number of consumers.   |
| hdlr-act  | Specifies if there is a download in progress.  |
| dnld-act  | Indicates whether the convergence flag has been sent or not.   |
| susp      | Indicates whether the download is suspended due to the queue filling up.   |
| wait-lck  | If nonzero, some thread is waiting for other thread to take control of this subgroup.  |
| seq       | Sequence number of the last message sent on this subgroup.   |
| pulse-tot | Total number of pulses sent by the producer to the BCDL agent.   |
| pulse-out | Total number of outstanding pulses that have not yet been processed by the BCDL agent.   |

# show bcdl consumers

To display Bulk Content Downloader (BCDL) consumer information, use the **show bcdl consumers** command in

EXEC

mode.

**show bcdl consumers** [*group\_name*]

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>group_name</i> (Optional) Displays information for a specific BCDL group. |
|---------------------------|--|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |      |
|----------------------|------|
| <b>Command Modes</b> | EXEC |
|----------------------|------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.3.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | sysmgr         | read              |

The following example shows sample output using the **show bcdl consumers** command:

```
RP/0/RP0/CPU0:router# show bcdl consumers ipv4_rib

Sun May 31 06:18:11.556 PST
group ipv4_rib, gsp gid 2051, 6 consumers, agent jid 111, node 0/RP0/CPU0
(expected 6 consumers to reply, received 6 replies)
  pid          node asg csg  lwg sus  messages    bytes  errs name
 467088 0/RP0/CPU0  0  0 2053  N    386    175152    0 fib_mgr
 303249 0/RP1/CPU0  0  0 2053  N    255    73844    0 fib_mgr
  94295 0/1/CPU0  0  0 2053  N    379    174612    0 fib_mgr
  94295 0/6/CPU0  0  0 2053  N    379    174612    0 fib_mgr
127074 0/4/CPU1  0  0 2053  N    387    175180    0 fib_mgr
118884 0/4/CPU0  0  0 2053  N    387    175180    0 fib_mgr
```

This table describes the significant fields shown in the display that are not described in [Table 2: show bcdl Field Descriptions, on page 2](#).

**Table 3: show bcdl consumers Field Descriptions**

| Field    | Description  |
|----------|--|
| PID      | Process identifier.  |
| node     | Consumer node, expressed in the <i>rack/slot/module</i> notation.                                      |
| asg      | Subgroup to which the BCDL agent thinks this consumer belongs.   |
| csg      | Subgroup to which the consumer thinks it belongs.  |
| messages | Number of messages processed by this particular consumer.  |
| bytes    | Bytes processed by this particular consumer.   |
| errors   | Errors encountered by the consumer. This field indicates the number of times the connection was reset. |
| name     | Name of the consumer process.  |

# show bcdl queues

To display the Bulk Content Downloader (BCDL) queue information, use the **show bcdl queues** command in

EXEC

mode.

**show bcdl queues** [*group\_name*]

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>group_name</i> (Optional) Displays information for a specific BCDL group. |
|---------------------------|--|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |      |
|----------------------|------|
| <b>Command Modes</b> | EXEC |
|----------------------|------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.3.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

| <b>Task ID</b> | <b>Task</b> | <b>Operations</b> |
|----------------|-------------|-------------------|
|                | sysmgr      | read              |

The following example shows sample output from the **show bcdl queues** command:

```
RP/0/RP0/CPU0:router# show bcdl queues ipv4_rib

Sun May 31 07:13:19.777 PST
group ipv4_rib, gsp gid 2051, 6 consumers, agent jid 111, node 0/RP0/CPU0
(expected 6 consumers to reply, received 6 replies)
  pid          node asg csg  lwg sus msgs_in_q  bytes_in_q  errs name
  467088 0/RP0/CPU0  0  0 2053  N    0          0          0 fib_mgr
  303249 0/RP1/CPU0  0  0 2053  N    0          0          0 fib_mgr
   94295 0/1/CPU0   0  0 2053  N    0          0          0 fib_mgr
 127074 0/4/CPU1   0  0 2053  N    0          0          0 fib_mgr
   94295 0/6/CPU0   0  0 2053  N    0          0          0 fib_mgr
 118884 0/4/CPU0   0  0 2053  N    0          0          0 fib_mgr
```

[Table 2: show bcdl Field Descriptions, on page 2](#) and [Table 3: show bcdl consumers Field Descriptions, on page 5](#) describe the significant fields shown in the display.

# show bcdl tables

To display Bulk Content Downloader (BCDL) table information, use the **show bcdl tables** command in EXEC mode.

```
show bcdl tables [group_name]
```

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>group_name</i> Displays information for a specific BCDL group. |
|---------------------------|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |      |
|----------------------|------|
| <b>Command Modes</b> | EXEC |
|----------------------|------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 3.3.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | sysmgr         | read              |

The following example shows sample output using the **show bcdl tables** command:

```
RP/0/RP0/CPU0:router# show bcdl tables ipv4_rib

Sun May 31 07:19:41.409 PST
grp ipv4_rib, gid 2051, sg cnt 1, agent jid 111, node 0/RP0/CPU0, pulse 343, new
mbr 0
  sg  lwg fd csmr hdlr-act dnld-act susp wait-lck  seq pulse-tot pulse-out
    0 2053 15 6 no no no 0 386 338 0
sgs: 1, table_cnt: 1, table_mid_cnt: 6, buf size: 124
Showing table info for 1 subgroups
sg 0: has 1 tables (messages: 0, bytes: 0)
  table 0xe0000000: 6 members, dnld act: 0, messages: 386, bytes: 175152
    cnsmr 0: pid 467088 on node 0/RP0/CPU0
    cnsmr 1: pid 127074 on node 0/4/CPU1
    cnsmr 2: pid 118884 on node 0/4/CPU0
    cnsmr 3: pid 94295 on node 0/1/CPU0
    cnsmr 4: pid 94295 on node 0/6/CPU0
    cnsmr 5: pid 303249 on node 0/RP1/CPU0
```

The significant fields shown in the display that are not described in [Table 2: show bcdl Field Descriptions, on page 2](#) or [Table 3: show bcdl consumers Field Descriptions, on page 5](#) are described in this table.

**Table 4: show bcdl tables Field Descriptions**

| Field                                  | Description   |
|--|---|
| sgs                                    | Number of subgroups.  |
| table_cnt                              | Number of tables in this subgroup.  |
| sg                                     | Specific subgroup for which information is provided.                      |
| has 1 tables                           | Number of tables in this subgroup.  |
| messages                               | Messages sent that are not associated with a particular table ID.         |
| bytes                                  | Bytes sent that are not associated with a particular table ID.            |
| table                                  | Specific table ID for which information is provided.                      |
| members                                | Number of consumers associated with this table.                           |
| dnld act                               | Indicates whether or not the convergence flag has been sent.              |
| messages                               | Number of messages sent for a particular table.                           |
| bytes                                  | Number of bytes sent for a particular table.                              |
| cnsmr 0: pid 419725 on node 0/RP0/CPU0 | Process ID and node information for each consumer in the specified table. |

## show bcdl trace

To display Bulk Content Downloader (BCDL) trace information, use the **show bcdl trace** command in EXEC mode.

```
show bcdl trace [group_name] [event] [timing] [grpsnd] [{wrapping|unique}] [hexdump] [last n] [reverse] [stats] [tailf] [verbose] [{file filename original location node-id| location {node-id|all}}]
```

|                           |  |  |
|---------------------------|--|--|
| <b>Syntax Description</b> | <i>group_name</i>                              | (Optional) Displays information for a specific BCDL group.   |
|                           | <b>event</b>                                   | (Optional) Displays event trace entries.   |
|                           | <b>timing</b>                                  | (Optional) Displays timing trace entries.  |
|                           | <b>grpsnd</b>                                  | (Optional) Displays group send trace entries.  |
|                           | <b>wrapping</b>                                | (Optional) Displays wrapping entries.  |
|                           | <b>unique</b>                                  | (Optional) Displays unique entries only, along with the count of the number of times this entry appears.   |
|                           | <b>hexdump</b>                                 | (Optional) Displays traces in hexadecimal format.  |
|                           | <b>last n</b>                                  | (Optional) Displays the last <i>n</i> number of traces only.   |
|                           | <b>reverse</b>                                 | (Optional) Displays the most recent traces first.  |
|                           | <b>stats</b>                                   | (Optional) Displays execution path statistics.   |
|                           | <b>tailf</b>                                   | (Optional) Displays new traces as they are added.  |
|                           | <b>verbose</b>                                 | (Optional) Displays additional internal debugging information.   |
|                           | <b>file filename original location node-id</b> | (Optional) Specifies a filename and original location of the file to display.  |
|                           | <b>location {node-id all}</b>                  | Specifies the RP node for which to display the execution path monitoring information. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies all RP nodes. |
| <b>Command Default</b>    | None   |  |
| <b>Command Modes</b>      | EXEC   |  |
| <b>Command History</b>    | <b>Release</b>                                 | <b>Modification</b>  |
|                           | Release 3.3.0                                  | This command was introduced.   |

**show bcdl trace****Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Task ID****Task Operations  
ID**

| Task ID | Task Operations ID |
|---------|--------------------|
|         | sysmgr read        |

The following example shows sample output using the **show bcdl trace** command:

```
RP/0/RP0/CPU0:router# show bcdl trace ipv4_rib location 0/1/cpu0

Sun May 31 08:28:40.346 PST

## Call Home Commands

---

This module describes the Cisco IOS XR software commands for configuring and sending Call Home messages.

For detailed information about Call Home concepts, configuration tasks, and examples, see the *Configuring Call Home on Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*.

# active

To enable a Call Home profile, use the **active** command in call home profile configuration mode. To disable a profile, use the **no** form of this command.

**active**  
**no active**

**Syntax Description** This command has no keywords or arguments.

**Command Default** A profile is disabled by default.

**Command Modes** Call home configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You must enable a profile using the **active** command so that call home messages can be triggered.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

The following example shows how to activate a profile:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # profile my-profile
RP/0/RP0/CPU0:router(config-call-home-profile) # active
```

[profile \(call home\)](#), on page 32

# alert-group disable

To disable an individual Call Home alert-group, use the **alert group disable** command in call home configuration mode. To enable an individual Call Home alert-group, use the **no** form of this command.

**alert-group** *alert-group-name* **disable**  
**no alert-group** *alert-group-name* **disable**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>alert-group-name</i> A keyword that identifies an alert group. Valid values are: <ul style="list-style-type: none"> <li>• syslog</li> <li>• inventory</li> </ul> |
|---------------------------|---|

|                        |                                      |
|------------------------|--------------------------------------|
| <b>Command Default</b> | Alert groups are enabled by default. |
|------------------------|--------------------------------------|

|                      |                         |
|----------------------|-------------------------|
| <b>Command Modes</b> | Call home configuration |
|----------------------|-------------------------|

| <b>Command History</b> | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 4.1.0</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | Release 4.1.0 | This command was introduced. |
|------------------------|---|---------|--------------|---------------|------------------------------|
| Release                | Modification  |         |              |               |                              |
| Release 4.1.0          | This command was introduced.  |         |              |               |                              |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

By default, alert groups are enabled. Use the **alert-group disable** command to disable alert groups.

| <b>Task ID</b> | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>call-home</td> <td>read,<br/>write</td> </tr> </tbody> </table> | Task ID | Operation | call-home | read,<br>write |
|----------------|---|---------|-----------|-----------|----------------|
| Task ID        | Operation   |         |           |           |                |
| call-home      | read,<br>write  |         |           |           |                |

## Example

The following example shows how to disable the inventory alert group:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # alert-group inventory disable
```

| <b>Related Commands</b>               | <table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><a href="#">call-home, on page 15</a></td> <td>Enters call home configuration mode to configure the call home feature.</td> </tr> </tbody> </table> | Command | Description | <a href="#">call-home, on page 15</a> | Enters call home configuration mode to configure the call home feature. |
|---------------------------------------|---|---------|-------------|---------------------------------------|---|
| Command                               | Description   |         |             |                                       |   |
| <a href="#">call-home, on page 15</a> | Enters call home configuration mode to configure the call home feature.   |         |             |                                       |   |

# call-home

To enter call home configuration mode to configure Call Home, use the **call-home** command in global configuration mode. To remove all Call Home settings and set the technical assistance center (TAC) profile as the default, use the **no** form of this command.

**call-home**  
**no call-home**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

The following example shows how to enter call home configuration mode:

```
RP/0/RP0/CPU0:router(config)# call-home
RP/0/RP0/CPU0:router(config-call-home)#
```

| Related Commands | Command                                    | Description   |
|------------------|--|---|
|                  | <a href="#">show call-home, on page 36</a> | Displays information regarding the Call Home configuration. |

# call-home request

To send a customer request to Cisco, use the **call-home request** command in EXEC mode.

```
call-home request {bugs-list | command-reference | config-sanity | output-analysis "show-command"
| product-advisory} {ccoid ccoid | profile profile-name}
```

| Syntax Description                         |   |         |              |               |                              |
|--|---|---------|--------------|---------------|------------------------------|
| <b>bugs-list</b>                           | Sends output of the following commands: <ul style="list-style-type: none"> <li>• <b>show running-config sanitized</b></li> <li>• <b>show version</b></li> <li>• <b>show diag</b></li> </ul> |         |              |               |                              |
| <b>command-reference</b>                   | Sends output of the following commands: <ul style="list-style-type: none"> <li>• <b>show running-config sanitized</b></li> <li>• <b>show version</b></li> <li>• <b>show diag</b></li> </ul> |         |              |               |                              |
| <b>config-sanity</b>                       | Sends output of the following commands: <ul style="list-style-type: none"> <li>• <b>show running-config sanitized</b></li> <li>• <b>show version</b></li> </ul>                             |         |              |               |                              |
| <b>output-analysis</b> <i>show-command</i> | Sends output from the specified show command. The <i>show-command</i> argument should be enclosed in quotes ("").   |         |              |               |                              |
| <b>product-advisory</b>                    | Sends output of all commands included in the inventory message in addition to the output from the <b>show running-config sanitized</b> command.   |         |              |               |                              |
| <b>ccoid</b> <i>ccoid</i>                  | Specifies the Smart Call Home user registered ID.   |         |              |               |                              |
| <b>profile</b> <i>profile-name</i>         | Specifies the profile to which to send the message.   |         |              |               |                              |
| <b>Command Default</b>                     | None  |         |              |               |                              |
| <b>Command Modes</b>                       | EXEC  |         |              |               |                              |
| <b>Command History</b>                     | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 4.1.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>     | Release | Modification | Release 4.1.0 | This command was introduced. |
| Release                                    | Modification  |         |              |               |                              |
| Release 4.1.0                              | This command was introduced.  |         |              |               |                              |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The message uses the specified profile or the CiscoTAC-1 profile if no profile name is specified to send out the request to the Cisco backend. This ensures that users who use a transport gateway can use a different profile than the CiscoTAC-1 profile to send the request to their email server first before forwarding to the Cisco backend. CiscoTAC-1 or any profile specified needs to be enabled before you can send out the request.

If the CCO ID is not specified, the contact email address of the device is used.

Each message sent includes the CLI command output specified for each subcommand. After the message is sent, a syslog message is displayed indicating whether the request was sent successfully or not.

**Task ID****Task ID    Operation**

call-home read,  
write

The following example shows how to send a message with output from the **show version** command to `engineer@cisco.com`:

```
RP/0/RP0/CPU0:router(config)# call-home request config-sanity ccoid
xyz
RP/0/RP0/CPU0:router(config)# call-home request bugs-list
RP/0/RP0/CPU0:router(config)# call-home request output-analysis "show log"
profile TG
RP/0/RP0/CPU0:router(config)# call-home request output-analysis "show
running-config"
```

**Related Commands**

| Command                                    | Description   |
|--|---|
| <a href="#">call-home, on page 15</a>      | Enters call home configuration mode to configure the call home feature. |
| <a href="#">show call-home, on page 36</a> | Displays information regarding the Call Home configuration.             |

# call-home send

To send the output from a specific command as a Call Home message, use the **call-home send** command in EXEC mode.

```
call-home send "cli-command" {email email-address | tac-service-request service-number}
```

| Syntax Description                               |  |   |
|--|--|---|
| <i>cli-command</i>                               |  | Any CLI command that can be run at the prompt.                          |
| <b>email</b> <i>email-address</i>                |  | Specifies the email address to which to send the call home message.     |
| <b>tac-service-request</b> <i>service-number</i> |  | Specifies the Technical Assistance Center (TAC) service request number. |

**Command Default** If no email address is specified, `attach@cisco.com` is used.

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The specified CLI command is generally a show command with output that is required by the TAC to analyze a specific issue. The CLI command must be enclosed in quotes. The CLI command output is sent to the specified email address in long text format with the service request number in the subject of the email. If no email address is specified, the TAC service request number must be specified. By default, messages are sent to `attach@cisco.com`. If no TAC service request number is specified, TAC email is rejected.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

The following example shows how to send a message with output from the **show version** command to `engineer@cisco.com`:

```
RP/0/RP0/CPU0:router (config) # call-home send "show version" engineer@cisco.com
```

| Related Commands | Command                               | Description   |
|------------------|---------------------------------------|---|
|                  | <a href="#">call-home, on page 15</a> | Enters call home configuration mode to configure the call home feature. |

| Command                                    | Description   |
|--|---|
| <a href="#">show call-home, on page 36</a> | Displays information regarding the Call Home configuration. |

# call-home send alert-group inventory

To send an inventory Call Home message to all subscribed profiles or the specified profile, use the **call-home send alert-group inventory** command in EXEC mode.

**call-home send alert-group inventory** [**profile** *profile-name*]

|                           |                                    |   |
|---------------------------|------------------------------------|---|
| <b>Syntax Description</b> | <b>profile</b> <i>profile-name</i> | Specifies the profile to which to send the inventory Call Home message. |
|---------------------------|------------------------------------|---|

**Command Default** If no profile is specified, the message is sent to all subscribed profiles.

**Command Modes** EXEC

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.1.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The profile specified by the *profile-name* argument does not need to be subscribed to the inventory alert-group.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | call-home      | read,<br>write   |

The following example shows how to send an inventory message to the myprofile profile:

```
RP/0/RP0/CPU0:router(config)# call-home send alert-group inventory profile myprofile
```

|                         |  |   |
|-------------------------|--|---|
| <b>Related Commands</b> | <b>Command</b>                             | <b>Description</b>  |
|                         | <a href="#">call-home, on page 15</a>      | Enters call home configuration mode to configure the call home feature. |
|                         | <a href="#">show call-home, on page 36</a> | Displays information regarding the Call Home configuration.             |

# call-home test

To send a test Call Home message to the specified profile, use the **call-home test** command in EXEC mode.

**call-home test** [*test-message-text*] **profile** *profile-name*

|                           |                                    |   |
|---------------------------|------------------------------------|---|
| <b>Syntax Description</b> | <i>test-message-text</i>           | Text to be sent in the test message. If the message text is not specified, a default message is sent. |
|                           | <b>profile</b> <i>profile-name</i> | Specifies the profile to which to send the test call home message.                                    |

**Command Default** None

**Command Modes** EXEC

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.1.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | call-home      | read,<br>write   |

The following example shows how to send a test Call Home message:

```
RP/0/RP0/CPU0:router(config)# call-home test "this is a test message" profile myprofile
```

|                         |  |   |
|-------------------------|--|---|
| <b>Related Commands</b> | <b>Command</b>                             | <b>Description</b>  |
|                         | <a href="#">call-home, on page 15</a>      | Enters call home configuration mode to configure the call home feature. |
|                         | <a href="#">show call-home, on page 36</a> | Displays information regarding the Call Home configuration.             |

## contact-email-addr

To specify a contact email address for the system, use the **contact-email-addr** command in call home configuration mode. To disable the contact email address, use the **no** form of this command.

**contact-email-addr** *email-addr*  
**no contact-email-addr** *email-addr*

---

**Syntax Description**     *email-addr*   The email address of the system contact.

---

---

**Command Default**     No contact email address is defined.

---

---

**Command Modes**     Call home configuration

---

---

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

---

---

**Usage Guidelines**     To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The contact email address is a mandatory user-configurable field that must be configured before Call Home messages are triggered.

---

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

---

The following example shows how to configure the contact email address:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config) call-home
RP/0/RP0/CPU0:router (config-call-home) # contact-email-addr contact@cisco.com
```

# contract-id

To specify a contract identifier for the system, use the **contract-id** command in call home configuration mode. To disable the contract identifier, use the **no** form of this command.

**contract-id** *contract-id-string*  
**no contract-id** *contract-id-string*

---

## Syntax Description

*contract-id-string* A string that identifies a service contract.

---

## Command Default

No contract ID is defined.

## Command Modes

Call home configuration

---

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.1.0 | This command was introduced. |

---

---

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The contract ID is an optional user-configurable field that can be used for contract information or any other identification information for the support service.

---

## Task ID

| Task ID   | Operation      |
|-----------|----------------|
| call-home | read,<br>write |

---

The following example shows how to configure the contract ID:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # contract-id contract
```

# customer-id

To specify a customer identifier for the system, use the **customer-id** command in call home configuration mode. To disable the customer identifier, use the **no** form of this command.

**customer-id** *contract-id-string*  
**no customer-id** *contract-id-string*

---

**Syntax Description** *customer-id-string* A string that identifies the customer.

---

---

**Command Default** No customer ID is defined.

---

**Command Modes** Call home configuration

---

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

---

---

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The customer ID is an optional user-configurable field that can be used for contract information or any other identification information of a support service.

---

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

---

The following example shows how to configure the customer ID:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config) call-home
RP/0/RP0/CPU0:router (config-call-home) # customer-id cisco
```

## destination address

To specify an email address to which Call Home messages are sent, use the **destination address** command in call home profile configuration mode. To disable the contract identifier, use the **no** form of this command.

**destination address** *email-address*  
**no destination address** *email-address*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>email-address</i> Email address to which short-text and long-text Call Home messages and XML-based Call Home messages are to be sent. |
|---------------------------|--|

|                        |  |
|------------------------|--|
| <b>Command Default</b> | No destination email address is defined. |
|------------------------|--|

|                      |                                 |
|----------------------|---------------------------------|
| <b>Command Modes</b> | Call home profile configuration |
|----------------------|---------------------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.1.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

You must define a destination email address to send out Call Home messages.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | call-home      | read,<br>write   |

The following example shows how to configure the destination email address:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # profile my-profile
RP/0/RP0/CPU0:router(config-call-home-profile) # destination address user@cisco.com
```

|                         |   |   |
|-------------------------|---|---|
| <b>Related Commands</b> | <b>Command</b>                                  | <b>Description</b>  |
|                         | <a href="#">profile (call home), on page 32</a> | Enters call home profile configuration mode to create or configure a Call Home profile. |

## destination message-size-limit

To specify the message size limit for call home messages for a specific profile, use the **destination message-size-limit** command in Call Home profile configuration mode. To disable the message size limit, use the **no** form of this command.

**destination message-size-limit** *maximum-size*  
**no destination message-size-limit** *maximum-size*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>maximum-size</i> Maximum message size in bytes. |
|---------------------------|--|

|                        |   |
|------------------------|---|
| <b>Command Default</b> | The default maximum message size is 3 Mbytes. |
|------------------------|---|

|                      |                                 |
|----------------------|---------------------------------|
| <b>Command Modes</b> | Call home profile configuration |
|----------------------|---------------------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.1.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

The destination maximum message size can be optionally set to limit the size of Call Home messages.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | call-home      | read,<br>write   |

The following example shows how to configure the contract ID:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home)# profile my-profile
RP/0/RP0/CPU0:router(config-call-home-profile)# destination maximum-message-size 2000
```

|                         |   |   |
|-------------------------|---|---|
| <b>Related Commands</b> | <b>Command</b>                                  | <b>Description</b>  |
|                         | <a href="#">profile (call home), on page 32</a> | Enters call home profile configuration mode to create or configure a Call Home profile. |

# destination preferred-msg-format

To specify the message format for a profile, use the **destination preferred-msg-format** command in call home profile configuration mode. To revert to the default message format, use the **no** form of this command.

```
destination preferred-msg-format {long-text | short-text | xml}
no destination preferred-msg-format {long-text | short-text | xml}
```

## Syntax Description

|                   |  |
|-------------------|--|
| <b>long-text</b>  | Specifies to send clear text long Call Home messages, that contain formatting to enable easy readability.  |
| <b>short-text</b> | Specifies to send clear text short Call Home messages, that are designed for use with text pagers.   |
| <b>xml</b>        | Specifies to send the same text as the long text messages, with the addition of XML tagging and Adaptive Messaging Language (AML) specific transport information to allow machine-readable parsing and correct routing of the message. |

## Command Default

The default message format is xml.

## Command Modes

Call home profile configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.1.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

## Task ID

| Task ID   | Operation      |
|-----------|----------------|
| call-home | read,<br>write |

The following example shows how to configure the message format to short text:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # profile my-profile
RP/0/RP0/CPU0:router(config-call-home-profile) # destination preferred-msg-format short-text
```

## Related Commands

| Command   | Description   |
|---|---|
| <a href="#">profile (call home), on page 32</a> | Enters call home profile configuration mode to create or configure a Call Home profile. |

## destination transport-method

To specify the transport method for Call Home messages for a specific profile, use the **destination transport-method** command in call home profile configuration mode. To disable the transport method, use the **no** form of this command.

**destination transport-method email**  
**no destination transport-method email**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <b>email</b> Email is used to send call home messages. |
|---------------------------|--|

|                        |  |
|------------------------|--|
| <b>Command Default</b> | The default transport method is email. |
|------------------------|--|

|                      |                                 |
|----------------------|---------------------------------|
| <b>Command Modes</b> | Call home profile configuration |
|----------------------|---------------------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.1.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

The only transport method supported in this release is email.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | call-home      | read,<br>write   |

The following example shows how to configure the transport method to be email:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home)# profile my-profile
RP/0/RP0/CPU0:router(config-call-home-profile)# destination transport-method email
```

|                         |   |   |
|-------------------------|---|---|
| <b>Related Commands</b> | <b>Command</b>                                  | <b>Description</b>  |
|                         | <a href="#">profile (call home), on page 32</a> | Enters call home profile configuration mode to create or configure a Call Home profile. |

# mail-server

To specify and configure the various mail servers for sending Call Home messages, use the **mail-server** command in call home configuration mode. To remove the mail server configuration, use the **no** form of this command.

**mail-server** *{ip-addressname}* **priority** *priority*  
**no mail-server** *{ip-addressname}* **priority** *priority*

| Syntax                             | Description  |
|------------------------------------|--|
| <i>ip-address</i>                  | An IPv4 address to use as the mail server.   |
| <i>name</i>                        | Name of server to use as the mail server.  |
| <b>priority</b><br><i>priority</i> | Priority to be used to determine which of multiple configured servers to use as the mail server. Values can be from 1 to 100. A server with a lower priority is tried first. |

**Command Default** No mail server is defined.

**Command Modes** Call home configuration

**Command History**

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.1.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You must configure a mail server if the user profile is configured to send email messages only. Only IPv4 addresses are supported.

Up to five mail servers can be configured. Specify a priority for each mail server so the system knows which to try first.

## Task ID

| Task ID   | Operation      |
|-----------|----------------|
| call-home | read,<br>write |

The following example shows how to configure a mail server:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # email-server 209.165.200.225
```

| Related Commands | Command                               | Description   |
|------------------|---------------------------------------|---|
|                  | <a href="#">call-home, on page 15</a> | Enters call home configuration mode to configure the call home feature. |

# phone-number

To specify a phone number to contact regarding the system, use the **phone-number** command in call home configuration mode. To remove the configured phone number, use the **no** form of this command.

**phone-number** *phone-number-string*  
**no phone-number** *phone-number-string*

## Syntax Description

*phone-number-string* Phone number of the contact for the system. The number should always begin with a plus sign (+).

## Command Default

No phone number is defined.

## Command Modes

Call home configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.1.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The phone number is an optional user-configurable field.

## Task ID

| Task ID   | Operation      |
|-----------|----------------|
| call-home | read,<br>write |

The following example shows how to configure the phone number of the system contact:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # phone-number +15435432101
```

## profile (call home)

To enter call home profile configuration mode to create a user-defined profile or configure an existing Call Home profile, use the **profile** command in call home configuration mode. To delete a user-defined profile, use the **no profile** form of this command.

**profile** *profile-name*  
**no profile** *profile-name*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>profile-name</i> A string that identifies the name of profile to create or configure. |
|---------------------------|--|

|                        |                                    |
|------------------------|------------------------------------|
| <b>Command Default</b> | The tac profile exists by default. |
|------------------------|------------------------------------|

|                      |                         |
|----------------------|-------------------------|
| <b>Command Modes</b> | Call home configuration |
|----------------------|-------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 4.1.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the profile command to create a new profile or modify an existing profile. When you use the **no profile** command, the user-defined profile is deleted and the CiscoTAC-1 profile is set to default. A warning message is displayed when the CiscoTAC-1 profile is set to default.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|----------------|----------------|------------------|
|                | call-home      | read,<br>write   |

The following example shows how to create a profile called new-profile:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config) call-home
RP/0/RP0/CPU0:router (config-call-home) # profile new-profile
RP/0/RP0/CPU0:router (config-call-home-profile) #
```

| <b>Related Commands</b> | <b>Command</b>                                  | <b>Description</b>   |
|-------------------------|---|--|
|                         | <a href="#">active, on page 13</a>              | Enables a Call Home profile.                                     |
|                         | <a href="#">destination address, on page 25</a> | Specifies an email address to which Call Home messages are sent. |

# rate-limit

To specify a Call Home event trigger rate limit, use the **rate-limit** command in call home configuration mode. To disable the configured rate limit, use the **no** form of this command.

**rate-limit** *events-count*  
**no rate-limit** *events-count*

| <b>Syntax Description</b> | <i>events-count</i> Number of events that can be triggered per minute. The default is five events. The maximum is five events.  |         |              |               |                              |
|---------------------------|---|---------|--------------|---------------|------------------------------|
| <b>Command Default</b>    | 5 events per minute   |         |              |               |                              |
| <b>Command Modes</b>      | Call home configuration   |         |              |               |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 4.1.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 4.1.0 | This command was introduced. |
| Release                   | Modification  |         |              |               |                              |
| Release 4.1.0             | This command was introduced.  |         |              |               |                              |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |         |              |               |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>call-home</td> <td>read,<br/>write</td> </tr> </tbody> </table>   | Task ID | Operation    | call-home     | read,<br>write               |
| Task ID                   | Operation   |         |              |               |                              |
| call-home                 | read,<br>write  |         |              |               |                              |

## Example

The following example shows how to configure the rate limit to be 3 events per minute:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # rate-limit 3
```

# sender

To specify the from and reply-to email addresses for Call Home email messages, use the **sender** command in call-home configuration mode. To remove these email addresses from the configuration, use the **no** form of this command.

```
sender {from | reply-to}email-address
no sender {from | reply-to}email-address
```

| Syntax Description |                      |   |
|--------------------|----------------------|---|
|                    | <b>from</b>          | Specifies the email address to be used as the from field in Call Home email messages.     |
|                    | <b>reply-to</b>      | Specifies the email address to be used as the reply-to field in Call Home email messages. |
|                    | <i>email-address</i> | A string that identifies a valid email address.   |

**Command Default** No sender email is configured.

**Command Modes** Call-home configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

The following example shows how to configure the from and reply-to email addresses:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # sender from user1@cisco.com
RP/0/RP0/CPU0:router(config-call-home) # sender reply-to user1@cisco.com
```

# service active

To enable the Call Home capability, use the **service active** command in call home configuration mode. To disable the Call Home capability, use the **no** form of this command.

**service active**  
**no service active**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Call Home is disabled by default.

**Command Modes** Call home configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

It is mandatory to enable the Call Home capability using the **service active** command to allow events to get triggered and send out Call Home messages.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

The following example shows how to enable the Call Home capability:

```
RP/0/RP0/CPU0:router(config-call-home)# service active
```

## show call-home

To display information regarding the Call Home configuration, use the **show call-home** command in EXEC mode.

**show call-home** [**detail**]

|                           |   |  |
|---------------------------|---|--|
| <b>Syntax Description</b> | <b>detail</b>   | Displays Call Home general settings, alert group settings, and all available profiles. |
| <b>Command Default</b>    | None  |  |
| <b>Command Modes</b>      | EXEC  |  |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>  |
|                           | Release 4.1.0   | This command was introduced.   |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |  |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operation</b>   |
|                           | call-home   | read   |

The following example shows how to display detailed call home configuration information:

```
RP/0/RP0/CPU0:router# show call-home detail

Wed Apr  6 02:00:27.789 DST

Current call home settings:
  call home feature : disable
  call home message's from address: Not yet set up
  call home message's reply-to address: Not yet set up

  contact person's email address: Not yet set up

  contact person's phone number: Not yet set up
  street address: Not yet set up
  customer ID: Not yet set up
  contract ID: Not yet set up
  site ID: Not yet set up

Mail-server: Not yet set up
Rate-limit: 5 event(s) per minute

Available alert groups:
  Keyword                State  Description
  -----
```

```

inventory          Enable  inventory info
syslog            Enable  syslog info

```

Profiles:

```

Profile Name: CiscoTAC-1
Profile status: INACTIVE
Preferred Message Format: xml
Message Size Limit: 3145728 Bytes
Transport Method: email
Email address(es): callhome@cisco.com

```

Periodic inventory info message is scheduled every 24 day of the month at 16:35

```

Alert-group          Severity
-----
inventory           normal

Syslog-Pattern      Severity
-----
.*                  major

```

#### Related Commands

| Command                               | Description   |
|---------------------------------------|---|
| <a href="#">call-home, on page 15</a> | Enters call home configuration mode to configure the call home feature. |

# show call-home alert-group

To display available Call Home alert groups, use the **show call-home alert-group** command in EXEC mode.

## show call-home alert-group

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

The following example shows how to display Call Home alert group information:

```
RP/0/RP0/CPU0:router# show call-home alert-group
Tue Apr  5 06:51:02.860 DST
Available alert groups:
  Keyword                State  Description
  -----
  inventory              Enable  inventory info
  syslog                 Enable  syslog info
```

## show call-home mail-server status

To displays the status of the configured mail servers, use the **show call-home mail-server status** command in EXEC mode.

### show call-home mail-server status

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID   | Operation |
|---------|-----------|-----------|
|         | call-home | read      |

The following example shows sample output from the **show call-home mail-server status** command:

```
RP/0/RP0/CPU0:router# show call-home mail-server status
Please wait. Checking for mail server status ...
Mail-server[1]: Address: 64.102.124.15 Priority: 50 [Available]
```

| Related Commands | Command                               | Description   |
|------------------|---------------------------------------|---|
|                  | <a href="#">call-home, on page 15</a> | Enters call home configuration mode to configure the call home feature. |

## show call-home profile

To display the Call Home profiles, use the **show call-home profile** command in EXEC mode.

**show call-home profile** {*all**profile-name*}

| Syntax Description | all                 | Displays information for all profiles.                |
|--------------------|---------------------|---|
|                    | <i>profile-name</i> | Name of the profile for which to display information. |

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID   | Operation |
|---------|-----------|-----------|
|         | call-home | read      |

The following example shows sample output from the **show call-home profile** command:

```
RP/0/RP0/CPU0:router# show call-home profile CiscoTAC-1

Profile Name: CiscoTAC-1
  Profile status: INACTIVE
  Preferred Message Format: xml
  Message Size Limit: 3145728 Bytes
  Transport Method: email
  Email address(es): callhome@cisco.com

Periodic inventory info message is scheduled every 4 day of the month at 12:19

Alert-group          Severity
-----
environment          minor

Syslog-Pattern      Severity
-----
.*                   major
```

| Related Commands | Command                               | Description   |
|------------------|---------------------------------------|---|
|                  | <a href="#">call-home, on page 15</a> | Enters call home configuration mode to configure the call home feature. |

# show call-home statistics

To display Call Home statistics, use the **show call-home statistics** command in EXEC mode.

## show call-home statistics

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID   | Operation |
|---------|-----------|-----------|
|         | call-home | read      |

The following example shows sample output from the **show call-home statistics** command:

```
RP/0/RP0/CPU0:router# show call-home statistics
```

| Message Types  | Total | Email |
|----------------|-------|-------|
| Total Success  | 2     | 2     |
| Environment    | 0     | 0     |
| Inventory      | 2     | 2     |
| SysLog         | 0     | 0     |

## show call-home trace

To display Call Home trace information, use the **show call-home trace** command in EXEC mode.

**show call-home trace** {**all** | **error** | **event**} {**file** *filename* **original location** *node-id* | **hexdump** | **last** *n* | **location** {*node-id* | **all**} | **reverse** | **stats** | **tailf** | **unique** | **verbose** | **wrapping**}

| Syntax Description  |  |
|---|--|
| <b>all</b>  | (Optional) Displays both error and event traces.   |
| <b>error</b>  | (Optional) Displays error trace entries.   |
| <b>event</b>  | (Optional) Displays event trace entries.   |
| <b>file</b> <i>filename</i> <b>original location</b> <i>node-id</i> | (Optional) Specifies a filename and original location of the file to display.  |
| <b>hexdump</b>  | (Optional) Displays traces in hexadecimal format.  |
| <b>last</b> <i>n</i>  | (Optional) Displays the last <i>n</i> number of traces only.   |
| <b>location</b> { <i>node-id</i>   <b>all</b> }                     | Specifies the RP node for which to display the execution path monitoring information. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies all RP nodes. |
| <b>reverse</b>  | (Optional) Displays the most recent traces first.  |
| <b>stats</b>  | (Optional) Displays execution path statistics.   |
| <b>tailf</b>  | (Optional) Displays new traces as they are added.  |
| <b>unique</b>   | (Optional) Displays unique entries only, along with the count of the number of times this entry appears.   |
| <b>verbose</b>  | (Optional) Displays additional internal debugging information.   |
| <b>wrapping</b>   | (Optional) Displays wrapping entries.  |

**Command Default** None

| Related Commands | Command                               | Description   |
|------------------|---------------------------------------|---|
|                  | <a href="#">call-home, on page 15</a> | Enters call home configuration mode to configure the call home feature. |

# site-id

To specify a site identifier for the system, use the **site-id** command in call-home configuration mode. To disable the site identifier, use the **no** form of this command.

**site-id** *site-id-string*  
**no site-id** *site-id-string*

---

## Syntax Description

*site-id-string* A string that identifies the site.

---

---

## Command Default

No site ID is defined.

---

## Command Modes

Call-home configuration

---

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.1.0 | This command was introduced. |

---

---

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The site ID is an optional user-configurable field that can be used to specify a Cisco-supplied site ID or other data meaningful to the support service.

---

## Task ID

| Task ID   | Operation      |
|-----------|----------------|
| call-home | read,<br>write |

---

This example shows how to configure the site ID:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config) call-home
RP/0/RP0/CPU0:router (config-call-home) # site-id Cisco-site
```

# street-address

To specify the street address of the system, use the **street-address** command in call home configuration mode. To remove the street address configuration, use the **no** form of this command.

**street-address** *street-address*  
**no street-address** *street-address*

## Syntax Description

*street address* A string that identifies the street address of the system.

## Command Default

No street address is defined.

## Command Modes

Call home configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.1.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The street address is an optional user-configurable field that can be used to provide the address of the system to the support service.

## Task ID

| Task ID   | Operation      |
|-----------|----------------|
| call-home | read,<br>write |

This example shows how to configure the street address:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # street-address 170 West Tasman Dr.
San Jose, CA 95134 USA
```

# subscribe-to-alert-group inventory

To configure a destination profile to receive messages for the inventory alert group, use the **subscribe-to-alert-group inventory** command in call home profile configuration mode. To disable the subscription, use the **no** form of this command.

**subscribe-to-alert-group inventory** [**periodic** {**daily** | **monthly** *day-of-month* | **weekly** *day-of-week*} *time*]

**no subscribe-to-alert-group inventory** [**periodic** {**daily** | **monthly** *day-of-month* | **weekly** *day-of-week*} *time*]

| Syntax Description |                                    |   |
|--------------------|------------------------------------|---|
|                    | <b>periodic</b>                    | Specifies to send an inventory message periodically.                          |
|                    | <b>daily</b>                       | Sends daily inventory messages.   |
|                    | <b>monthly</b> <i>day-of-month</i> | Sends monthly inventory messages on the day of the month specified.           |
|                    | <b>weekly</b> <i>day-of-week</i>   | Sends weekly inventory messages on the day of the week specified.             |
|                    | <i>time</i>                        | Time to send the inventory message, in the format <code>hour:minutes</code> . |

**Command Default** The inventory alert group is disabled by default. The default severity for the inventory alert group is normal.

**Command Modes** Call home profile configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

At least one alert group subscription is mandatory for a profile so that a valid event can be triggered.

There are two types of subscription for an inventory alert group. One is normal subscription, meaning that the severity is set to normal, and any (online insertion and removal) OIR event triggers the event. The second is periodic subscription, using the **periodic** keyword, meaning that an event is triggered only when the specified time arrives.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

This example shows how to configure the sending of inventory messages every Monday:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
```

```
RP/0/RP0/CPU0:router(config-call-home)# profile my-profile  
RP/0/RP0/CPU0:router(config-call-home-profile)# subscribe-to-alert-group inventory periodic  
weekly monday
```

**Related Commands**

| <b>Command</b>  | <b>Description</b>  |
|---|---|
| <a href="#">profile (call home), on page 32</a>             | Enters call home profile configuration mode to create or configure a Call Home profile. |
| <a href="#">subscribe-to-alert-group syslog, on page 50</a> | Configures a destination profile to receive messages for the syslog alert group.        |

# subscribe-to-alert-group syslog

To configure a destination profile to receive messages for the syslog alert group, use the **subscribe-to-alert-group syslog** command in call home profile configuration mode. To disable the subscription, use the **no** form of this command.

**subscribe-to-alert-group syslog severity severity-level pattern match**  
**no subscribe-to-alert-group syslog severity severity-level pattern match**

## Syntax Description

|                       |   |
|-----------------------|---|
| <b>severity</b>       | Specifies the the lowest level of severity events to include in a syslog alert.   |
| <i>severity-level</i> | <ul style="list-style-type: none"> <li>• <b>catastrophic</b>—Includes network-wide catastrophic events in the alert. This is the highest severity.</li> <li>• <b>critical</b>—Includes events requiring immediate attention (system log level 1).</li> <li>• <b>debugging</b>—Includes debug events (system log level 7). This is the lowest severity.</li> <li>• <b>disaster</b>—Includes events with significant network impact.</li> <li>• <b>fatal</b>—Includes events where the system is unusable (system log level 0).</li> <li>• <b>major</b>—Includes events classified as major conditions (system log level 2).</li> <li>• <b>minor</b>—Includes events classified as minor conditions (system log level 3)</li> <li>• <b>normal</b>—Specifies the normal state and includes events classified as informational (system log level 6). This is the default.</li> <li>• <b>notification</b>—Includes events informational message events (system log level 5).</li> <li>• <b>warning</b>—Includes events classified as warning conditions (system log level 4).</li> </ul> |
| <b>pattern</b>        | Specifies a syslog string pattern to match.   |
| <i>match</i>          | A string that when matched in the syslog message, is included in the alert notification. If the pattern contains spaces, you must enclose it in quotes (" ").   |

## Command Default

The syslog alert group is disabled by default. The default severity for the syslog alert group is debugging.

## Command Modes

Call home profile configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.1.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

At least one alert group subscription is mandatory for a profile so that a valid event can be triggered.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | call-home | read,<br>write |

The following example shows how to configure the syslog alert group to include severity notification:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config) call-home
RP/0/RP0/CPU0:router(config-call-home) # profile my-profile
RP/0/RP0/CPU0:router(config-call-home-profile) # subscribe-to-alert-group syslog severity
notification pattern "UPDOWN"
```

| Related Commands | Command   | Description   |
|------------------|---|---|
|                  | <a href="#">profile (call home), on page 32</a> | Enters call home profile configuration mode to create or configure a Call Home profile. |

■ subscribe-to-alert-group syslog

## Boot Commands

---

This module describes the commands used to boot or reset Cisco IOS XR software.

For more information about ROM Monitor (ROMMON) and boot tasks, see *ROM Monitor Configuration Guide for Cisco CRS Routers* or *Cisco IOS XR Getting Started Guide for the Cisco CRS Router*.

# config-register

To define the configuration register boot value, use the **config-register** command in the appropriate mode.

**config-register** *value* [**location** {*node-id* | **all**}]

## Syntax Description

|   |   |
|---|---|
| <i>value</i>                                    | Hexadecimal or decimal value that represents the 16-bit configuration register value to be used the next time the router is reloaded. Range is from 0x0 to 0xFFFF (0 to 65535 in decimal).<br><br>For information about common configuration register settings, see <a href="#">Table 5: Common Configuration Register Settings, on page 55</a> . |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Specifies the RP node for which to define the configuration register boot value. The <b>all</b> keyword specifies all RP nodes.  |

## Command Default

By default, the configuration register value is 0x102 after a Turboboot.

## Command Modes

Administration EXEC  
EXEC mode

## Command History

| Release       | Modification   |
|---------------|--|
| Release 2.0   | This command was introduced.   |
| Release 3.2   | This command was moved from global configuration mode to administration EXEC mode. |
| Release 3.3.0 | Support was added for the <b>location</b> keyword.                                 |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The *configuration register setting* is a 16-bit, user-configurable value that determines how the route processor (RP) functions during initialization. The configuration register can cause the RP to boot normally from the default configuration, or to enter ROMMON mode during a reload. Configuration register settings can also be used to perform tasks such as password recovery.

The **config-register** command is entered in administration EXEC mode, on the designated shelf controller (DSC) of the system. The DSC is the primary RP of the owner secure domain router (owner SDR).

When you have two RPs (Primary RP0 and Standby RP1) and the config-registers of the two are different, you must manually set the config-register in RP1 equal to RP0 in order for RP1 to synchronize with the configurations on RP0.

Use the **show variables boot** command in the EXEC mode to see status of the config-register in both the RPs.

Use the **config-register:location** command in the Admin mode to change the config-register in either of the RPs.

When setting the configuration register value for the **config-register** command, note the following conditions:

- If both the primary and standby DSC are up and running when the configuration register value is set, the configuration register value applies to both the primary and standby DSC.
- By contrast, if only the primary DSC is up and running when the configuration register value is set and the standby DSC is introduced into the router at a later time, the router does *not* attempt to synchronize the configuration register value for the standby RP to that of the active RP; in this situation, the configuration register setting applied to the standby DSC is determined by the configuration register value set in ROMMON mode.
- To set the configuration register value for all RPs in a multishelf system, enter the **config-register value location all** command. Enter the **config-register** command with the *value* argument to set the configuration register setting for the DSC (DSDRSC of the owner SDR).

This table describes the most commonly used configuration register settings.

**Table 5: Common Configuration Register Settings**

| Value | Description  |
|-------|--|
| 0x0   | RP enters ROMMON mode (rommon B1>) on the next system boot.  |
| 0x2   | RP loads the Cisco IOS XR software and default configuration on the next system boot. After logging in, the user can access EXEC mode.   |
| 0x102 | Router loads the Cisco IOS XR software with the console Break key disabled on the next system boot.<br><br>Both 0x102 and 0x2102 specify the same functionality, as bit 13 in 0x2102 is not significant for Cisco IOS XR software. |
| 0x40  | Router enters the password recovery mode on the next system boot.  |

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | root-lr | read,<br>write |

The following example shows how to set the configuration register on the DSC to 0x2. Setting the configuration registration to 0x2 causes the router to boot the Cisco IOS XR software and enter EXEC mode during a router reload.

```
RP/0/RP0/CPU0:router(admin)# config-register 0x2

Successfully set config-register to 0x2 on node 0/RP0/CPU0 Successfully set
config-register to 0x2 on node 0/RP1/CPU0
```

# mirror

To configure disk mirroring on a node, use the **mirror** command in global configuration mode. To disable disk mirroring, use the **no** form of this command.

**mirror location** [**preconfigure**] *node-id primary-device:secondary-device:*  
**no mirror location** *node-id*

| Syntax Description             |  |   |
|--------------------------------|--|---|
| <b>location</b> <i>node-id</i> |  | Specifies the node of the RP. It can be a node that is not yet installed if the <b>preconfigure</b> keyword is used. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.  |
| <b>preconfigure</b>            |  | (Optional) Enables you to specify a node that is not yet installed.   |
| <i>primary-device</i> :        |  | Specifies the primary boot device used to store installation packages and configuration files. Supported devices are: <ul style="list-style-type: none"> <li>• <b>disk0:</b></li> <li>• <b>disk1:</b> (if installed)</li> </ul>                     |
| <i>secondary-device</i> :      |  | Storage device on the same RP as the <i>primary-device</i> , to where critical data is replicated. Supported devices are the same as for <i>primary-device</i> :, but <i>secondary-device</i> : must be different than the <i>primary-device</i> :. |

**Command Default** None

**Command Modes** Global configuration

**Command History**

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **mirror** command replicates all critical data contained in the primary partition of the primary boot device, onto a second storage device on the same RP. Therefore, if the primary boot device fails, applications continue to be serviced transparently by the secondary device, without having to switch control to a standby RP.

Before the **mirror** command can be used, the secondary storage device must be partitioned using the **format** command. If the primary boot device is not partitioned, once mirroring is enabled and all data on the primary boot device is replicated to the secondary device, the primary boot device is partitioned automatically. This guarantees that only critical data on the primary boot device is mirrored to the secondary device. Noncritical data, such as logging data, should not be mirrored and should, therefore, be saved to the secondary partition on the storage device.

To temporarily suspend disk mirroring without changing the configuration, use the **mirror pause** command in EXEC mode.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | root-lr | read,<br>write |

The following example shows how to configure disk mirroring from the primary boot device (disk0:) to the secondary storage device (disk1:):

```
RP/0/RP0/CPU0:router(config)# mirror location 0/rp0/cpu0 disk0: disk1:
```

### Related Topics

[mirror pause](#), on page 59

[mirror resume](#), on page 60

# mirror pause

To temporarily pause disk mirroring on a node, use the **mirror pause** command in EXEC or administration EXEC mode.

**mirror pause** [**location** {*node-id* | **all**}]

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>location</b> { <i>node-id</i>   <b>all</b> } (Optional) Specifies the node of the RP. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies all RP nodes. |
|---------------------------|---|

|                        |   |
|------------------------|---|
| <b>Command Default</b> | If no node is specified, disk mirroring is paused on the active RP. |
|------------------------|---|

|                      |                             |
|----------------------|-----------------------------|
| <b>Command Modes</b> | EXEC<br>Administration EXEC |
|----------------------|-----------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.6.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

The **mirror pause** command temporarily pauses the mirroring of the primary boot device. This command is primarily useful during an installation operation to prevent significant performance degradation on single CPU boards. The **mirror pause** command does not change the configured state of mirroring, but rather causes the mirroring to be suspended until the **mirror resume** command is used.

The **mirror pause** command has no affect if the **mirror** configuration command is not enabled.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | root-lr        | read,<br>write    |

The following example shows how to pause disk mirroring on the active RP:

```
RP/0/RP0/CPU0:router# mirror pause
```

### Related Topics

- [mirror](#), on page 57
- [mirror resume](#), on page 60

# mirror resume

To resume disk mirroring on a node after it has been temporarily stopped, use the **mirror resume** command in EXEC or administration EXEC mode.

**mirror resume** [**location** {*node-id* | **all**}]

---

**Syntax Description**      **location** {*node-id* | **all**} (Optional) Specifies the node of the RP. The *node-id* argument is entered in the *rack/slot/module* notation. The **all** keyword specifies all RP nodes.

---

---

**Command Modes**      EXEC  
Administration EXEC

---

---

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

---

---

**Usage Guidelines**      To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **mirror resume** command resumes the mirroring of the primary boot device after it has been temporarily paused with the **mirror pause** command.

The **mirror resume** command has no affect if the **mirror** configuration command is not enabled and the **mirror pause** command has not been used.

---

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | root-lr | read,<br>write |

---

The following example shows how to resume disk mirroring on the active RP:

```
RP/0/RP0/CPU0:router# mirror resume
```

**Related Topics**

- [mirror](#), on page 57
- [mirror pause](#), on page 59

# mirror verify

To verify disk synchronization for disk mirroring on a node, use the **mirror verify** command in EXEC or administration EXEC mode.

**mirror verify** [**location** *node-id*]

**Syntax Description** **location** *node-id* (Optional) Specifies the node of the RP. The *node-id* argument is entered in the *rack/slot/module* notation.

**Command Default** If no node is specified, the verification is done on the active RP.

**Command Modes** EXEC  
Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **mirror verify** command verifies the synchronization consistency between the primary and secondary media devices being used in mirroring. The command verifies that the full contents are identical between the mirrored devices and reports any inconsistencies found.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | root-lr | read,<br>write |

The following example shows how to verify the disk mirroring on the active RP:

```
RP/0/RP0/CPU0:router# mirror verify

Mirror Verify Information for 0/RP0/CPU0.

=====
Primary device and secondary device are fully synchronized.
```

**Related Topics**

[mirror](#), on page 57

# reload

To reload the designated secure domain router shelf controller (DSDRSC), use the **reload** command in EXEC mode.

## reload

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values

**Command Modes** EXEC

| Command History | Releases      | Modifications  |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.4.1 | The <b>force</b> keyword was not supported.  |
|                 | Release 3.5.0 | Prompt was added to continue with reload in the event that there is no available standby node. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **reload** command to cause the DSDRSC to reload the Cisco IOS XR software according to the configuration register setting (for example, 0x0 to enter ROMMON mode and 0x2 to reload the RP to EXEC mode). If a standby DSDRSC is in the ready redundancy state, the **reload** command also causes the router to fail over to the standby DSDRSC. Use the **show redundancy** command in EXEC mode to display the status of the standby RP.

When the **reload** command is used and a switchover occurs, the running (active) software configuration is automatically maintained during switchover.

**Caution** If a standby RP is not installed or is not in the ready state, then the router experiences a loss of service while the active RP is reloading Cisco IOS XR software. To view the status of the standby RP, issue the **show redundancy** command in EXEC mode.

If you use the **reload** command and there is no available standby node, you are prompted to continue with the reload:

```
RP/0/RP0/CPU0:router# reload
```

```
Standby card not present or not Ready for failover. Proceed?[confirm]y
```

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | root-lr | execute    |

The following example shows how to reload the active RP. If a standby RP is in the ready state, then the router fails over to the standby RP. If the standby RP is not installed or is not in the ready state, then the router enters ROMMON mode and routing operations stop.

```
RP/0/RP0/CPU0:router# reload

Updating Commit Database. Please wait...[OK]

# reload (administration EXEC)

To reload a node or all nodes on a single chassis or multishelf system, use the **reload** command in the appropriate mode.

**reload** [{**location** {*node-id* | **all**} | **rack** *rack-number*}]

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>location</b> { <i>node-id</i>   <b>all</b> } (Optional) Specifies the node to reload. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies all RP nodes. |
| <b>rack</b>               | Reloads all the nodes on a specified chassis.   |
| <i>rack-number</i>        | Rack number of the line card chassis or fabric chassis.   |

**Command Default** None

**Command Modes** Administration EXEC

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>                         |
|------------------------|----------------|---|
|                        | Release 3.3.0  | This command was introduced.                |
|                        | Release 3.4.1  | The <b>force</b> keyword was not supported. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note** Before reloading nodes on the router, we recommend using the **cfs check** command to check the sanity of the configuration file system and attempt to recover from internal inconsistencies.

Enter the **cfs check** command on each secure domain router (SDR) that has nodes impacted by the reload. If you enter the **reload location all** command, run the **cfs check** command on every SDR in the system before reloading the router.

To reload all the nodes in all chassis in a multishelf system, use the **reload** command with the **location all** keywords.

To reload all the nodes in a specific chassis, use the **reload** command with the **rack rack-number** keyword and argument. This command cannot be used to reload the DSC line card chassis (rack 0).

To reload a specific node on the router, specify the **reload** command with the **location node-id** keyword and argument. The *node-id* is expressed in the *rack/slot/module* notation.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | root-system    | execute           |

The following example shows how to reload all nodes on the router:

```
RP/0/RP0/CPU0:router(admin)# reload location all

Graceful reload of all nodes not supported
Assuming 'force'
Operation may result in file corruptions or loss of config. Proceed [Y/N]? y
```

---

**Note** To ensure the sanity of the configuration file system, enter the **cfs check** command on each SDR impacted by the reload operation. If you enter the **reload location all** command, run the **cfs check** command on every SDR in the system before reloading the router.

---

The following example shows how to reload all the nodes in a single chassis:

```
RP/0/RP0/CPU0:router(admin)# reload rack 1

Graceful reload of a rack in admin mode is not supported
Assuming 'force' mode
Operation may result in file corruption or loss of config. Proceed? [confirm]
```

You cannot reload the chassis containing the DSC. The following example shows the message displayed if an attempt is made to reload rack 0 (line card chassis 0) in a multishelf system:

# show epm trace boot

To display execution path monitoring traces, use the **show epm trace boot** command in administration EXEC mode.

**show epm trace boot** [**hexdump**] [**last** *n*] [**reverse**] [**stats**] [**tailf**] [**unique**][**verbose**] [**wrapping**][**file** *filename original*] [**location** {*node-id* | **all**}]

| Syntax Description                              |            |  |
|---|------------|--|
| <b>hexdump</b>                                  | (Optional) | Displays traces in hexadecimal format.   |
| <b>last</b> <i>n</i>                            | (Optional) | Displays the last <i>n</i> number of traces only.  |
| <b>reverse</b>                                  | (Optional) | Displays the most recent traces first.   |
| <b>stats</b>                                    | (Optional) | Displays execution path statistics.  |
| <b>tailf</b>                                    | (Optional) | Displays new traces as they are added.   |
| <b>unique</b>                                   | (Optional) | Displays unique entries only, along with the count of the number of times this entry appears.  |
| <b>verbose</b>                                  | (Optional) | Displays additional internal debugging information.  |
| <b>wrapping</b>                                 | (Optional) | Displays wrapping entries.   |
| <b>file</b> <i>filename original</i>            | (Optional) | Specifies the filename of the file to display. You can specify up to four trace files.   |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) | Specifies the node of the RP. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. You can specify up to four nodes. The <b>all</b> keyword specifies all RP nodes. |

**Command Default** All traces from all trace files from all RP nodes are displayed in time order, starting with the oldest traces.

**Command Modes** Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show epm trace boot** command provides a simple way of tracking and time-stamping critical events to clearly understand their temporal relationship to one another and the amount of time spent performing critical operations. The command displays a merged output from a set of trace files.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | basic    | read       |
|         | services |            |

The following example shows sample output from the **show epm trace boot** command:

```
RP/0/RP0/CPU0: (admin)# show epm trace boot

8 wrapping entries (1024 possible, 0 filtered, 8 total)
Jul 12 21:17:36.229 epm/boot 0/RP0/CPU0 t1 @ 00:00:14 - [init] start
Jul 12 21:17:54.746 epm/boot 0/RP0/CPU0 t1 @ 00:00:32 - [sysmgr] start
Jul 12 21:17:55.315 epm/boot 0/RP0/CPU0 t7 @ 00:00:33 - [sysmgr] start-level: start
Jul 12 21:17:59.899 epm/boot 0/RP0/CPU0 t9 @ 00:00:37 - [sysmgr] start-level: admin
Jul 12 21:20:13.564 epm/boot 0/RP0/CPU0 t15 @ 00:02:51 - [sysmgr] start-level: infra
Jul 12 21:21:47.562 epm/boot 0/RP0/CPU0 t11 @ 00:04:25 - [sysmgr] start-level: active
Jul 12 21:22:09.132 epm/boot 0/RP0/CPU0 t6 @ 00:04:47 - [sysmgr] start-level: final
Jul 12 21:22:17.475 epm/boot 0/RP0/CPU0 t9 @ 00:04:55 - [sysmgr] lr-plane-up
```

In this sample output, the time stamp following the @ sign is the elapsed time in the format hh:mm:ss since the execution phase started (for example, since node start, in the case of a boot).

# show mirror

To display disk mirroring information, use the **show mirror** command in EXEC or administration EXEC mode.

**show mirror** [**location** {*node-id* | **all**}]

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <b>location</b> { <i>node-id</i>   <b>all</b> } (Optional) Specifies the node of the RP for which to display the mirroring information. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies all RP nodes. |
|---------------------------|--|

**Command Default** No default behavior or values

**Command Modes** EXEC  
Administration EXEC

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 3.6.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

|                |                                  |
|----------------|----------------------------------|
| <b>Task ID</b> | <b>Task ID</b> <b>Operations</b> |
|                | filesystem read                  |

The following is sample output from the **show mirror** command:

```
RP/0/RP0/CPU0:router# show mirror

Mirror Information for 0/RP0/CPU0.

=====
Mirroring Enabled
  Configured Primary:      disk0:
  Configured Secondary:   disk1:

Current Mirroring State:  Syncing Files
  Current Physical Primary: disk1:
  Current Physical Secondary: disk0:

BOOT_DEV_SEQ_OPER = disk1:
MIRROR_ENABLE = Y
    
```

**Table 6: show mirror Field Descriptions**

| Field                      | Description   |
|----------------------------|---|
| Mirroring Enabled          | Indicates whether mirroring is enabled or disabled.   |
| Configured Primary         | If mirroring is enabled, the configured primary disk for mirroring.   |
| Configured Secondary       | If mirroring is enabled, the configured secondary disk for mirroring.   |
| Current Mirroring State    | Current status of mirroring. Possible values are as follows:<br><br>Syncing files—Files are being synchronized between the primary and secondary disks.<br><br>Not Configured—Mirroring is not configured.<br><br>Mirroring Paused—In this state, no mirroring is being done to the secondary device and the disk redundancy has been removed. The values of the BOOT_DEV_SEQ_OPER and MIRROR_ENABLE variables reflect this.<br><br>Redundant—The primary and secondary disks are totally in synchronization. Any read or write failure on the primary device results in disk redundancy switchover such that all operations are performed on the secondary device. |
| Current Physical Primary   | Current primary disk.   |
| Current Physical Secondary | Current secondary disk.   |
| Mirroring Logical Device   | Device name used by the mirroring process to intercept all application requests to that named device before passing them through to one of the mirrored physical devices.   |
| Physical Device            | Physical disk in router.  |
| State                      | Status of the disk. Possible values are as follows:<br><br>Available—Disk exists in router and is available.<br><br>Not present—Disk does not exist in router. Partitioning of disks is available only after the disk has been formatted with the <b>partition</b> keyword.   |
| Flags                      | Enabled—Disk mirroring has been enabled on this device and the device is part of the mirroring process.<br><br>Repaired—During the boot, some minor inconsistencies were discovered on the disk and were repaired to make the file system consistent.<br><br>Formatted—Disk was formatted before mirroring was enabled.   |

| Field              | Description  |
|--------------------|--|
| BOOT_DEV_SEQ_CONF= | <p>ROM Monitor environmental variable for the boot disk sequence. This variable is set when mirroring is enabled through the <b>mirror</b> configuration command. The devices in this ROMMON variable declare the primary and the secondary devices of the mirroring process. The first device is the primary device and the second device is the secondary device in the mirroring process.</p> <p><b>Note</b> This variable is also shared by the disk backup feature. This variable can also be set or unset using the system boot-sequence command of the disk backup feature. But the use of system boot-sequence and system backup commands is blocked, if mirroring is enabled.</p> |
| BOOT_DEV_SEQ_OPER= | <p>ROM Monitor environmental variable that reflects the state of the disk redundancy status. When mirroring is enabled and the state is redundant, this variable is set to the primary device followed by the secondary device. When mirroring is not in the redundancy state, then this variable is updated to contain only the primary device.</p>   |
| MIRROR_ENABLE      | <p>ROM Monitor environmental variable whose value reflects the mirroring status. If it is set to Y, then mirroring is enabled. If it is set to P, then mirroring is paused. If empty, mirroring is not enabled.</p>  |

# show reboot

To display reboot information for a node, use the **show reboot** command in EXEC or administration EXEC mode.

**show reboot** {**history** | [**reverse**] | {**first** | **last**} {**crashinfo** | **syslog** | **trace**} | **graceful** | **pcds**} **location** *node-id*

| Syntax Description | Parameter                      | Description   |
|--------------------|--------------------------------|---|
|                    | <b>first</b>                   | (Optional) Displays information about the first ungraceful reboot.  |
|                    | <b>last</b>                    | (Optional) Displays information about the last ungraceful reboot.   |
|                    | <b>crashinfo</b>               | Displays crash information for an ungraceful reboot.  |
|                    | <b>syslog</b>                  | Displays the syslogs related to an ungraceful reboot.   |
|                    | <b>trace</b>                   | Displays trace information for an ungraceful reboot.  |
|                    | <b>graceful</b>                | Displays information about the last graceful reboot.  |
|                    | <b>history</b>                 | Displays the reboot history of a specific node.   |
|                    | <b>reverse</b>                 | (Optional) Displays the reboot history information in reverse chronological order.                                |
|                    | <b>pcds</b>                    | Displays PCDS critical information about the last ungraceful reboot.  |
|                    | <b>location</b> <i>node-id</i> | Specifies which node to reload. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. |

**Command Default** None

**Command Modes** EXEC  
Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **history** keyword for the **show reboot** command displays all reboot causes stored for previous node resets.

Crash information ( **crashinfo** ), syslog, and kernel dumper ltrace ( **trace** ) can be displayed for the first or last reboot if it is an ungraceful reboot.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | system  | read       |

This example shows sample output from the **show reboot** command with the **history** keyword:

```
RP/0/RP0/CPU0:router# show reboot history location 0/rp0/cpu0
```

# show system backup

To display the system backup details and history, use the **show system backup** command in EXEC or administration EXEC mode.

**show system backup** [*target-device*] [{**details** | **diff**}] [**verify**] **location** {*node-id* | **all**}

| Syntax Description                              |   |
|---|---|
| <i>target-device</i>                            | (Optional) Displays the backup details and history for the specified device. The supported devices are: <ul style="list-style-type: none"> <li>• <b>disk0:</b></li> <li>• <b>disk1:</b> (if installed)</li> </ul> |
| <b>details</b>                                  | (Optional) Lists the software packages and configurations stored on the specified backup device.  |
| <b>diff</b>                                     | (Optional) Displays the differences between the software packages and configuration files on the backup device with the packages and configuration files on the current boot device.                              |
| <b>verify</b>                                   | (Optional) Verifies the software packages and configuration files stored on the specified backup device.  |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Specifies the node of the RP for which to display information. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies all RP nodes.          |

**Command Default** Enter the **show system backup** command without keywords or arguments to display the date, time, and status of the last backup for the current designated secure domain router shelf controller (DSDRSC). This command also displays the configured primary and secondary boot devices.

**Command Modes** EXEC  
Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.4.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show system backup** command to display details of the current system backup on a local storage device. The command displays information about the backup performed for the active RP to which you are logged in, including the date, time, and status of the last backup.

- Use the *target-device* argument to display backup information for a specified device on a RP node.

- Use the **details** keyword to list information about the software packages and configuration files stored on the backup device.
- Use the **diff** keyword to display the differences between the software and configurations on the backup device and the software and configurations on the currently active boot disk.
- Use the **location** *node-id* keyword and argument to display information for a backup on a specific node. Use the **location all** keywords to display information for backups on all nodes in the system.

### Various Command Modes

- To display information for the current secure domain router (SDR), enter the **show system backup** command in the EXEC mode of that SDR.
- When the command is entered in administration EXEC mode, the backup information for the owner SDR is displayed.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | root-lr | execute    |

In the following example, the **show system backup** command displays the status of the last system backup:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show system backup

System Backup information for node0_0_CPU0 on disk1:

**Table 7: show system backup Field Descriptions**

| Field              | Description   |
|--------------------|---|
| BOOT_DEV_SEQ_CONF= | ROM Monitor environmental variable for the boot disk sequence. This variable is defined by the <b>system boot-sequence</b> command. The first disk is the primary device; the second disk is the backup (secondary) device. The value listed in the secondary device is also used as the default backup target device for the <b>system backup</b> command. |
| BOOT_DEV_SEQ_OPER= | ROM Monitor environmental variable for the boot disks currently in use by the system.   |

# show variables boot

To display the configuration register setting and boot file setting for the route processors (RPs) in the system, use the **show variables boot** command in administration

EXEC

mode.

**show variables boot** [**location** {**allnode-id**}]

|                           |   |  |
|---------------------------|---|--|
| <b>Syntax Description</b> | <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Specifies the node to reload. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. Use the <b>all</b> keyword to indicate all nodes. |
|---------------------------|---|--|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | Administration EXEC |
|----------------------|---------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>                                |
|------------------------|----------------|--|
|                        | Release 3.3.0  | This command was introduced.                       |
|                        | Release 3.4.0  | Support was added for the <b>location</b> keyword. |

**Usage Guidelines**  
 To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show variables boot** command to display system boot variables for the router. This command displays the configuration register setting and boot file setting for the RPs in the system. Use the **location node-id** keyword and argument to display the configuration register setting for a specific card.

The configuration register setting is set with the **config-register** command. The boot variable is set in ROM Monitor mode. For more information about ROM Monitor mode, see *ROM Monitor Configuration Guide for Cisco CRS Routers*.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | root-lr        | read              |

This example shows sample output from the **show variables boot** command:

```
RP/0/RP0/CPU0:router# show variables boot

Mon Jun 1 05:21:48.580 PST
BOOT variable = disk0:hfr-os-mbi-3.9.0.10I/mbihfr-rp.vm,1;
CONFREG variable = 0x102
```

# system backup

To back up the system software and configurations to a backup disk, use the **system backup** command in EXEC or administration EXEC mode.

**system backup** [*target-device*] [**format**] [{**synchronous** | **asynchronous**}] [**location** {*node-id* | **all**}]

| Syntax Description                              |   |
|---|---|
| <i>target-device</i>                            | <p>(Optional) Specifies the storage device used for the system backup. If a target device is not specified, then the secondary device defined with the <b>system boot-sequence</b> command is used. If a target device is not specified with either command, then the <b>system backup</b> command returns an error.</p> <ul style="list-style-type: none"> <li>• The target device cannot be the current boot device.</li> <li>• The target device must be large enough to store the current software set and configuration.</li> <li>• The supported storage devices are: <ul style="list-style-type: none"> <li>• <b>disk0:</b></li> <li>• <b>disk1:</b> (if installed)</li> </ul> </li> </ul> |
| <b>format</b>                                   | <p>(Optional) Formats a target disk that already contains a system backup.</p> <p>By default, the <b>system backup</b> command formats the target disk if that target disk does not contain a previous system backup. If the target disk already contains a backup, then the disk is not formatted again. The <b>format</b> keyword forces a format of the target device even if it contains a previous system backup.</p>  |
| <b>synchronous</b>                              | <p>(Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned. This is the default mode.</p>  |
| <b>asynchronous</b>                             | <p>(Optional) Performs the command in asynchronous mode. In asynchronous mode, the command runs in the background, and the EXEC prompt is returned as soon as possible.</p>   |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | <p>(Optional) Specifies an alternative node location for the backup target disk, such as the standby DSDRSC.</p> <p>By default, the backup files are copied to the target device in the current DSDRSC. Use the <b>location</b> <i>node-id</i> keyword and argument to specify an alternative node for the backup files, such as the standby DSDRSC.</p> <p>The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation.</p> <p>Use the <b>all</b> keyword to back up the software and configuration files to all RPs in the system or SDR. Each RP must contain a disk in the specified target device location, such as disk1:.</p>   |

**Command Default** The operation is performed in synchronous mode.

The backup files are copied to the secondary device defined with the **system boot-sequence** command.

The backup files are copied to the target device on the current designated secure domain router shelf controller (DSDRSC).

**Command Modes** EXEC

Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.4.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note** The **system backup** command does not make any changes to bootflash content.

### Target Device for the Backup

Use the **system boot-sequence** command with the *target-device* argument to specify the local storage device for backup software and configuration files. The *target-device* argument is optional and applies only to the current backup operation.

- If a target storage device is not specified, then the files are backed up to the secondary storage device defined with the **system boot-sequence** command.
- If a target device is not specified with either the **system backup** command or the **system boot-sequence** command, then the backup operation is not allowed.

The *target-device* can be any local storage device except the current boot device, and must be large enough to store the current software set and configuration. Supported storage devices are:

- **disk0:**
- **disk1:** (if installed)

### Location Node of the Target Device

By default, the backup is created on the specified target device of the active DSDRSC where the command is executed.

- To specify an alternate node for the system backup, such as the standby DSDRSC, use the **system backup** command with the **location node-id** keyword and argument.
- To perform the backup on all installed route processors (RPs), use the **system backup** command with the **location all** keywords in EXEC mode.
- To perform the backup on all RPs in all SDRs installed in the system, use the **system backup** command with the **location all** keywords in administration EXEC mode.

**Note** Each RP or distributed route processor (DRP) impacted by the **system backup** command must contain the specified target device. For example, if the **system backup** command is executed for disk1: on all RPs in the system, then a flash disk must be installed in disk1: of each RP.

**Various Command Modes**

- Use the **system backup** command in administration EXEC mode to back up the administration plane configuration, including software and configurations for all SDRs in the system.
- Use the **system backup** command in the EXEC mode of an SDR to back up the software and configurations for a specific SDR.

**Commit and Installation Operations Not Allowed During Backup**

- Configuration changes are not allowed during the backup process. Any attempts to commit configuration changes are rejected until the backup operation is complete.
- The backup process cannot be performed during an installation operation. If an installation operation is performed while a backup is in process, the backup operation terminates.

**Displaying the Current Backup Information**

Enter the **show system backup** command to display information about the current backup files. If no backup exists, an error message is displayed.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | root-lr | read,<br>write |

The following example shows how to back up the software and configuration files on a router.

- The **system backup** command is run in administration EXEC mode, which backs up both the administration and SDR configurations.
- The target device is defined as disk1:.
- The disk is formatted because this is the first backup on the device.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# system backup disk1:

Info: node0_0_CPU0: formatting target device

Info: node0_0_CPU0: copying SDR configuration
Info: node0_0_CPU0: copying installed software
Info: node0_0_CPU0: backup complete.
Info: node0_0_CPU0: verifying admin configuration
Info: node0_0_CPU0: verifying installed software
Info: node0_0_CPU0: verify complete.
```

```
Info: node0_0_CPU0: command succeeded.
```

**Related Topics**

[show system backup](#), on page 75

[system boot-sequence](#), on page 87

# system boot-sequence

To define the order of local storage devices used to boot a router, use the **system boot-sequence** command in EXEC or administration EXEC mode.

**system boot-sequence** {*primary-device* [*secondary-device*] | **disable**} [**location** {*node-id* | **all**}]

| Syntax Description                              |   |  |
|---|---|--|
| <i>primary-device</i>                           | Default device where software packages are installed and run. This device is also the default location for router configurations. The value of the <i>primary-device</i> argument is normally <b>disk0</b> .  |  |
| <i>secondary-device</i>                         | (Optional) Secondary (backup) boot device, used by the <b>system backup</b> command to back up system software and configurations. Supported storage devices are: <ul style="list-style-type: none"> <li>• <b>disk0</b>:</li> <li>• <b>disk1</b>: (if installed)</li> </ul> | <p><b>Note</b> The value of the <i>secondary-device</i> argument must be different from the value of the <i>primary-device</i> argument.</p> |
| <b>disable</b>                                  | Temporarily disables the automatic recovery mechanism.  |  |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Specifies the node of the RP for which to define the boot sequence. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies all RP nodes.   |  |

**Command Default** The primary device is **disk0**. The (optional) secondary boot device is not defined.

**Command Modes** EXEC  
Administration EXEC

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 3.4.0 | This command was introduced.   |
|                 | Release 3.4.1 | The <b>disable</b> keyword and <i>secondary-device</i> argument were introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **system boot-sequence** command to define the local storage devices used to boot a router. You can define two devices with this command.

- The value of the *primary-device* argument defines the default device where software packages are installed and run. This device is also the default location for router configurations.
- The value of the *secondary-device* argument defines the device used by the **system backup** command to back up system software and configurations. This field is optional.

- The secondary device can also be temporarily defined when the **system backup** command is executed with the *target-device* argument. Use the **system boot-sequence** command with the *secondary-device* argument to permanently define the secondary (backup) device.

**Note** The primary and secondary device definitions remain in effect until the **system boot-sequence** command is entered again.

### General Guidelines

- The value of the *secondary-device* argument must be different from the value of the *primary-device* argument.
- We recommend disk0: as the primary boot device in the boot sequence, and disk1: as the secondary boot device.
- The boot device specified with the **system boot-sequence** command must be installed in the card or the command is rejected.

### Command Mode Options

- Use the **system boot-sequence** command in administration EXEC mode to define the boot sequence for all secure domain routers (SDRs) in the system.
- Use the **system boot-sequence** command in EXEC mode to define the boot sequence for a specific SDR.

### Location Node

- Use the **location node-id** keyword and argument to define the boot sequence for a specific route processor (RP).
- Use the **location all** keywords to define the boot sequence for all RPs in the SDR. Use this command in administration EXEC mode to define the boot sequence for all RPs in all SDRs.

### Disabling Automatic Recovery

Use the **system boot-sequence** command with the **disable** keyword to disable the automatic recovery.

### Displaying the Current Boot Sequence Settings

Enter the **show system backup** command to display the currently configured boot sequence devices.

#### Task ID

| Task ID | Operations     |
|---------|----------------|
| root-lr | read,<br>write |

The following example shows how to define the primary and secondary boot device for the active RP (DSC). In this example, the default location for software and configurations is disk0:. The location for backups of software and configurations is disk1:.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router (admin)# system boot-sequence disk0: disk1:
```

```
Info: node0_0_CPU0: command succeeded.
```

- [cdp timer](#), on page 98
- [clear cdp counters](#), on page 99
- [clear cdp table](#), on page 100
- [show cdp](#), on page 102
- [show cdp entry](#), on page 104
- [show cdp interface](#), on page 106
- [show cdp neighbors](#), on page 108
- [show cdp traffic](#), on page 111

# cdp

To enable the Cisco Discovery Protocol (CDP) globally or on an interface, use the **cdp** command in the appropriate configuration mode. To disable CDP globally or on an interface, use the **no** form of this command.

**cdp**  
**no cdp**

**Syntax Description** This command has no keywords or arguments.

**Command Default** CDP is disabled.

**Command Modes** Interface configuration

| Command History | Release     | Modification  |
|-----------------|-------------|---|
|                 | Release 2.0 | This command was introduced.                                |
|                 | Release 3.2 | The <b>enable</b> and <b>disable</b> keywords were removed. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

By default, CDP is disabled globally. To enable CDP, CDP must be enabled globally and then enabled for each interface.

To enable CDP globally, use the **cdp** command in global configuration mode. To disable CDP globally, use the **no** form of this command in global configuration mode.

To enable CDP on a specific interface, use the **cdp** command in interface configuration mode. To disable CDP on a specific interface, use the **no** form of this command in interface configuration mode.

The following interface types do not support CDP:

- 802.1Q VLAN subinterfaces
- ATM interfaces and ATM subinterfaces
- Bundle Interfaces
- Loopback interfaces
- Service interfaces
- Tunnel Interfaces

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | cdp     | read,<br>write |

The following example shows how to globally enable CDP:

```
RP/0/RP0/CPU0:router(config)# cdp
```

The following example shows how to enable CDP on an interface:

```
RP/0/RP0/CPU0:router(config-if)# cdp
```

### Related Topics

[show cdp](#), on page 102

## cdp advertise v1

To change the version of Cisco Discovery Protocol (CDP) that is used to communicate with neighboring devices to version 1 (CDPv1), use the **cdp advertise v1** command in the appropriate configuration mode. To remove the **cdp advertise v1** command from the configuration file and restore the system to its default condition with respect to this command, use the **no** form of this command.

**cdp advertise v1**  
**no cdp advertise [v1]**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Version 2 is enabled.

**Command Modes** Global Configuration mode

| Command History | Release     | Modification                       |
|-----------------|-------------|------------------------------------|
|                 | Release 2.0 | This command was introduced.       |
|                 | Release 3.0 | The <b>v2</b> keyword was removed. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

CDPv2 packets are sent by default. CDP also sends and receives CDPv1 packets if the device with which CDP is interacting does not process CDPv2 packets.

CDPv2 adds device information over CDPv1. The additional information that is contained in the CDPv2 messages relates to Native VLAN, VLAN Trunking Protocol (VTP) Management Domain, Ethernet Duplex, and other features.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | cdp     | read,<br>write |

The following example shows how to set a networking device to send and receive only CDPv1 advertisements:

```
RP/0/RP0/CPU0:router(config)# cdp advertise v1
```

The following example shows how to restore the default condition (sending and receiving CDPv2 advertisements):

```
RP/0/RP0/CPU0:router(config)# no cdp advertise
```

**Related Topics**

[show cdp](#), on page 102

# cdp holdtime

To specify the time for which the receiving device should hold a Cisco Discovery Protocol (CDP) packet from your networking device before discarding it, use the **cdp holdtime** command in the appropriate configuration mode. To remove the **cdp holdtime** command from the configuration file and restore the system to its default condition with respect to this command, use the **no** form of this command.

**cdp holdtime** *seconds*  
**no cdp holdtime**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>seconds</i> Holdtime to be sent in the CDP update packets, in seconds. Range is 10 to 255. |
|---------------------------|---|

|                        |                      |
|------------------------|----------------------|
| <b>Command Default</b> | <i>seconds</i> : 180 |
|------------------------|----------------------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.2    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

CDP packets are sent with a time-to-live value or holdtime, that is nonzero after an interface is enabled.

The CDP holdtime must be set to a higher number of seconds than the time between CDP transmissions, which is set using the **cdp time** command.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | cdp            | read,<br>write    |

The following example shows how to specify that the CDP packets sent from the networking device are held by the receiving device for 60 seconds before being discarded. You might want to set the holdtime lower than the default setting of 180 seconds if information about your networking device changes often and you want the receiving devices to purge this information more quickly.

```
RP/0/RP0/CPU0:router (config)# cdp holdtime 60
```

# cdp log adjacency changes

To log changes to the Cisco Discovery Protocol (CDP) adjacency table, use the **cdp log adjacency changes** command in the appropriate configuration mode. To disable the logging, use the **no** form of this command.

**cdp log adjacency changes**  
**no cdp log adjacency changes**

**Syntax Description** This command has no keywords or arguments.

**Command Default** CDP adjacency table logging is disabled.

**Command Modes** Global Configuration mode

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When CDP adjacency table logging is enabled, a syslog is generated each time a CDP neighbor is added or removed.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | cdp     | read,<br>write |

The following example shows how to enable CDP adjacency table logging:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# cdp log adjacency changes
```

When CDP adjacency table logging is enabled, a syslog is generated each time a CDP neighbor is added or removed. The following is an example of the log entry:

```
LC/0/5/CPU0:Jun 5 10:51:18.081 : cdp[109]: %L2-CDP-6-DELETED_NEIGHBOR :
CDP Neighbour TBA04110127 on interface GigabitEthernet0/5/0/0
has been deleted, remote interface 3/2

LC/0/5/CPU0:Jun 5 10:51:33.120 : cdp[109]: %L2-CDP-6-NEW_NEIGHBOR :
New CDP neighbor TBA04110127 detected on interface GigabitEthernet0/5/0/0,
remote interface 3/2
```

# cdp timer

To specify how often the software sends Cisco Discovery Protocol (CDP) updates, use the **cdp timer** command in the appropriate configuration mode. To remove the **cdp timer** configuration command from the configuration file and restore the system to its default condition with respect to this command, use the **no** form of this command.

**cdp timer** *seconds*  
**no cdp timer**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>seconds</i> Frequency with which the Cisco IOS XR software sends CDP updates, in seconds. Range is 5 to 254. The default is 60. |
|---------------------------|--|

|                        |                     |
|------------------------|---------------------|
| <b>Command Default</b> | <i>seconds</i> : 60 |
|------------------------|---------------------|

|                      |                           |
|----------------------|---------------------------|
| <b>Command Modes</b> | Global Configuration mode |
|----------------------|---------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

A lower timer setting causes CDP updates to be sent more frequently.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | cdp            | read,<br>write    |

The following example shows how to set the CDP timer to 80 seconds, which is less frequent than the default setting of 60 seconds:

```
RP/0/RP0/CPU0:router (config) # cdp timer 80
```

# clear cdp counters

To reset Cisco Discovery Protocol (CDP) traffic counters to zero (0), use the **clear cdp counters** command in EXEC mode.

```
clear cdp counters location node-id
```

| <b>Syntax Description</b> | <b>location node-id</b> Clears CDP traffic counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.  |         |              |             |                              |
|---------------------------|---|---------|--------------|-------------|------------------------------|
| <b>Command Default</b>    | The counters are set to zero.   |         |              |             |                              |
| <b>Command Modes</b>      | EXEC  |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification  |         |              |             |                              |
| Release 2.0               | This command was introduced.  |         |              |             |                              |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |         |              |             |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>cdp</td> <td>read,<br/>write</td> </tr> </tbody> </table>  | Task ID | Operations   | cdp         | read,<br>write               |
| Task ID                   | Operations  |         |              |             |                              |
| cdp                       | read,<br>write  |         |              |             |                              |

The following example shows how to clear CDP counters. The **show cdp traffic** output shows that all traffic counters have been reset to zero (0).

```
RP/0/RP0/CPU0:router# clear cdp counters
RP/0/RP0/CPU0:router# show cdp traffic

CDP counters:
  Packets output: 0, Input: 0
  Hdr syntax: 0, Chksum error: 0, Encaps failed: 0
  No memory: 0, Invalid packet: 0, Truncated: 0
  CDP version 1 advertisements output: 0, Input: 0
  CDP version 2 advertisements output: 0, Input: 0
  Unrecognize Hdr version: 0, File open failed: 0
```

## clear cdp table

To clear and automatically resize the table that contains Cisco Discovery Protocol (CDP) information about neighbors, use the **clear cdp table** command in EXEC mode.

**clear cdp table location** *node-id*

| <b>Syntax Description</b> | <b>location</b> <i>node-id</i> Clears and resizes the CDP table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.   |         |              |             |                              |
|---------------------------|--|---------|--------------|-------------|------------------------------|
| <b>Command Default</b>    | No default behavior or values  |         |              |             |                              |
| <b>Command Modes</b>      | EXEC   |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>  | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification   |         |              |             |                              |
| Release 2.0               | This command was introduced.   |         |              |             |                              |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>Use the <b>clear cdp table</b> command to clear and resize the CDP table that contains the neighbor entries. The new table size is calculated according to the recommended hash table size, as seen in the <b>show cdp</b> command output.</p> |         |              |             |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>cdp</td> <td>read,<br/>write</td> </tr> </tbody> </table>   | Task ID | Operations   | cdp         | read,<br>write               |
| Task ID                   | Operations   |         |              |             |                              |
| cdp                       | read,<br>write   |         |              |             |                              |

The following example shows how to clear and resize the CDP table. The output of the **show cdp neighbors** command before and after use of the **clear cdp table** command shows that all information has been deleted from the table:

```
RP/0/RP0/CPU0:router# show cdp neighbors

Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge
                  S - Switch, H - Host, I - IGMP, r - Repeater

Device ID         Local Intrfce   Holdtme    Capability  Platform  Port ID
TBA04341195(151a Mg0/RP1/CPU0/0  171        T S          WS-C2924  0/1

RP/0/RP0/CPU0:router# clear cdp table
RP/0/RP0/CPU0:router# show cdp neighbors

Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge
                  S - Switch, H - Host, I - IGMP, r - Repeater

Device ID         Local Intrfce   Holdtme    Capability  Platform  Port ID
```

The **show cdp** command shows that the table has been resized:

```
RP/0/RP0/CPU0:router# show cdp

Global CDP information:
  Sending CDP packets every 60 seconds
  Sending a holdtime value of 180 seconds
  Sending CDPv2 advertisements is enabled
```

# show cdp

To display global Cisco Discovery Protocol (CDP) information, including CDP version, timer, and holdtime information, use the **show cdp** command in

EXEC

mode.

## show cdp

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values

**Command Modes** EXEC

| Release       | Modification                 |
|---------------|------------------------------|
| Release 2.0   | This command was introduced. |
| Release 3.0   | No modification.             |
| Release 3.2   | No modification.             |
| Release 3.3.0 | No modification.             |
| Release 3.4.0 | No modification.             |
| Release 3.5.0 | No modification.             |
| Release 3.6.0 | No modification.             |
| Release 3.7.0 | No modification.             |
| Release 3.8.0 | No modification.             |
| Release 3.9.0 | No modification.             |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show cdp** command to display CDP version, timer, and holdtime information relative to CDP operations.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | cdp     | read       |

The following example shows how to use the **show cdp** command to verify the CDP global settings:

```
RP/0/RP0/CPU0:router# show cdp
```

```
Global CDP information:
```

```
  Sending CDP packets every 20 seconds
  Sending a holdtime value of 30 seconds
  Sending CDPv2 advertisements is not enabled
```

**Table 8: show cdp Field Descriptions**

| Field                                       | Definition   |
|---|--|
| Sending CDP packets every 20 seconds        | Interval between transmissions of CDP advertisements. This field is controlled by the <b>cdp timer</b> command.  |
| Sending a holdtime value of 30 seconds      | Time for which the device directs the neighbor to hold a CDP advertisement before discarding it. This field is controlled by the <b>cdp holdtime</b> command.  |
| Sending CDPv2 advertisements is not enabled | State of being enabled or disabled for the transmission of CDP version 2-type advertisements. This field is controlled by the <b>cdp advertise v1</b> command. |

# show cdp entry

To display information about a specific neighboring device or all neighboring devices discovered using Cisco Discovery Protocol (CDP), use the **show cdp entry** command in

EXEC

mode.

**show cdp entry** *{\*entry-name}* [**{protocol | version}**]

| Syntax Description |  |
|--------------------|--|
| <b>*</b>           | Displays all CDP neighbors.  |
| <i>entry-name</i>  | Name of a neighbor about which you want information.                           |
| <b>protocol</b>    | (Optional) Displays protocol information associated with CDP neighbor entries. |
| <b>version</b>     | (Optional) Displays version information associated with CDP neighbor entries.  |

**Command Default** This command displays information about a particular device that has been discovered by CDP.

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | cdp     | read,<br>write |

The following example shows sample output from the **show cdp entry** command. Information about device ID, address, platform, interface, holdtime, and version is displayed.

```
RP/0/RP0/CPU0:router# show cdp entry TBA04341195
-----
Device ID: TBA04341195(sys-235)
SysName : sys-235
Entry address(es):
  IP address: 172.16.23.9
Platform: WS-C6006, Capabilities: Trans-Bridge Switch
Interface: MgmtEth0/RP1/CPU0/0
Port ID (outgoing port): 4/18
Holdtime : 157 sec
```

```

Version :
WS-C6006 Software, Version McpSW: 7.2(2) NmpSW: 7.2(2)
Copyright (c) 1995-2002 by Cisco Systems

advertisement version: 2
VTP Management Domain: 'sys'
Native VLAN: 125
Duplex: full

```

**Table 9: show cdp entry Field Descriptions**

| Field                   | Description  |
|-------------------------|--|
| Device ID               | ID code assigned during installation of the router.  |
| Entry address(es)       | Addresses of the platform, selected interface, and port ID.  |
| Platform                | Platform name.   |
| Capabilities            | Special functions that the platform can perform (in this case the platform is a trans-bridge switch).  |
| Interface               | Interface location expressed in <i>rack / slot / module / port</i> notation.   |
| Port ID (outgoing port) | Location of the port in use by the interface.  |
| Holdtime                | Time (in seconds) for which the device directs the neighbor to hold a CDP advertisement before discarding it. This field is controlled by the <b>cdp holdtime</b> command. |
| Version                 | Software version.  |
| advertisement version   | Version number of the advertising protocol.  |
| VTP Management Domain   | VLAN Trunking Protocol (VTP) domain name of neighbor device.   |
| Native VLAN             | VLAN ID.   |
| Duplex                  | Duplex setting: half or full.  |

# show cdp interface

To display information about the interfaces on which Cisco Discovery Protocol (CDP) is enabled, use the **show cdp interface** command in the appropriate mode.

**show cdp interface** [{*type interface-path-id* | **location** *node-id*}]

|                           |                                |   |
|---------------------------|--------------------------------|---|
| <b>Syntax Description</b> | <i>type</i>                    | (Optional) Interface type. For more information, use the question mark (?) online help function.  |
|                           | <i>interface-path-id</i>       | (Optional) Physical interface or virtual interface.   |
|                           | <b>Note</b>                    | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.  |
|                           |                                | For more information about the syntax for the router, use the question mark (?) online help function.   |
|                           | <b>location</b> <i>node-id</i> | (Optional) Displays detailed CDP information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |

**Command Default** This command displays information about the interfaces on which CDP has been enabled.

**Command Modes** EXEC

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 2.0    | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show cdp interface** command to display information about any CDP interfaces. When an interface is specified in the command syntax, information is displayed about the specific interface. Not specifying the interface displays information about all interfaces.

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | cdp            | read,<br>write    |

The following example shows sample output from the **show cdp interface** command. Information about the status, CDP timer, and holdtime settings is displayed for all interfaces on which CDP is enabled.

```
RP/0/RP0/CPU0:router# show cdp interface
```

```

POS0/2/0/0 is Up
  Encapsulation HDLC
  Sending CDP packets every 120 seconds
  Holdtime is 240 seconds
POS0/2/0/1 is Up
  Encapsulation HDLC
  Sending CDP packets every 120 seconds
  Holdtime is 240 seconds
POS0/2/0/2 is Up
  Encapsulation HDLC
  Sending CDP packets every 120 seconds
  Holdtime is 240 seconds
POS0/2/0/3 is Up
  Encapsulation HDLC
  Sending CDP packets every 120 seconds
  Holdtime is 240 seconds
MgmtEth0/RP1/CPU0/0 is Up
  Encapsulation ARPA
  Sending CDP packets every 120 seconds
  Holdtime is 240 seconds

```

The following example shows sample output from the **show cdp interface** command with an interface specified. Information about the status, CDP timer, and holdtime settings is displayed for Packet-over-SONET/SDH (POS) interface 0/2/0/1 only.

```

RP/0/RP0/CPU0:router# show cdp interface pos 0/2/0/1

POS0/2/0/1 is Up
  Encapsulation HDLC
  Sending CDP packets every 60 seconds
  Holdtime is 180 seconds

```

**Table 10: show cdp interface Field Descriptions**

| Field                                | Description   |
|--------------------------------------|---|
| POS0/2/0/1 is Up                     | Current condition of POS interface 0/0/2/1.   |
| Encapsulation HDLC                   | Interface is encoding packets using the Cisco HDLC Layer 2 encapsulation.   |
| Sending CDP packets every 60 seconds | Interval between transmissions of CDP advertisements. This field is controlled by the <b>cdp timer</b> command.   |
| Holdtime is 180 seconds              | Time for which the device directs the neighbor to hold a CDP advertisement before discarding it. This field is controlled by the <b>cdp holdtime</b> command. |

# show cdp neighbors

To display detailed information about neighboring devices discovered using Cisco Discovery Protocol (CDP), use the **show cdp neighbors** command in

EXEC

mode.

**show cdp neighbors** [*type interface-path-id* | **location** *node-id*] [**detail**]

## Syntax Description

*type* (Optional) Interface type. For more information, use the question mark ( ? ) online help function.

*interface-path-id* (Optional) Physical interface or virtual interface.

**Note** Use the **show interfaces** command to see a list of all interfaces currently configured on the router.

For more information about the syntax for the router, use the question mark ( ? ) online help function.

**location** *node-id* (Optional) Displays detailed CDP information for the designated node. The *node-id* argument is entered in the *rack/slot/module* notation.

**detail** (Optional) Displays detailed information about a neighbor or neighbors, including network address, enabled protocols, holdtime, and software version. The output includes information about both IPv4 and IPv6 addresses.

## Command Default

No default behavior or values

## Command Modes

EXEC

## Command History

| Release     | Modification   |
|-------------|--|
| Release 2.0 | This command was introduced.   |
| Release 3.2 | When used with the <b>detail</b> keyword, the output was modified to display IPv6 neighbors. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show cdp neighbors** command to display information about any CDP neighbors. When a location is specified in the command syntax, information about the neighbor is displayed for the specified node. Not specifying the location displays information about the neighbor for all interfaces.

Use the command with the **detail** keyword to display additional information, including IPv6 neighbors.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | cdp     | read       |

The following example shows sample output from the **show cdp neighbors** command:

```
RP/0/RP0/CPU0:router# show cdp neighbors

Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge
                  S - Switch, H - Host, I - IGMP, r - Repeater

Device ID          Local Intrlfce  Holdtme  Capability  Platform  Port ID
TBA04110127       Gi0/7/0/0      173      T S         WS-C6506  3/9
cisco_1           Gi0/7/0/2      171      R           CRS-1
                  Gi0/4/0/2
```

**Table 11: show cdp neighbors Field Descriptions**

| Field            | Description   |
|------------------|---|
| Capability Codes | Type of device that can be discovered.  |
| Device ID        | Name of the neighbor device.  |
| Local Intrlfce   | Protocol being used by the connectivity media and the interface number.   |
| Holdtme          | Remaining time, in seconds, for which the current device holds the CDP advertisement from a sending router before discarding it.  |
| Capability       | Type of the device listed in the CDP Neighbors table. Values are as follows:<br>R—Router<br>T—Transparent bridge<br>B—Source-routing bridge<br>S—Switch<br>H—Host<br>I—Internet Group Management Protocol (IGMP) device<br>r—Repeater |
| Platform         | Product number of the device.   |
| Port ID          | Protocol and port number of the device.   |

The following examples illustrates sample output for IPv4 and IPv6 neighbors from the **show cdp neighbors** command with the **detail** keyword:

```
RP/0/RP0/CPU0:router# show cdp neighbor detail
```

```

-----
Device ID: uut-user
SysName : uut-user
Entry address(es):
IPv4 address: 1.1.1.1
IPv6 address: 1::1
IPv6 address: 2::2
Platform: cisco 12008/GRP, Capabilities: Router
Interface: Gi0/4/0/3
Port ID (outgoing port): Gi0/2/0/3
Holdtime : 177 sec

advertisement version: 2

```

**Table 12: show cdp neighbors detail Field Descriptions**

| Field                 | Definition  |
|-----------------------|---|
| Device ID             | Name of the neighbor device.  |
| Entry address(es)     | List of network addresses of neighbor devices. The address can be in IP or in Connectionless Network Service (CLNS) protocol conventions.                           |
| Platform              | Product name and number of the neighbor device.   |
| Capabilities          | Device type of the neighbor. This device can be a router, a bridge, a transparent bridge, a source-routing bridge, a switch, a host, an IGMP device, or a repeater. |
| Interface             | Interface being used by the connectivity medium.  |
| Port ID               | Port number of the port on the current device.  |
| Holdtime              | Remaining time (in seconds) for which the current device holds the CDP advertisement from a sending router before discarding it.                                    |
| Version               | Software version of the neighbor device.  |
| advertisement version | Version number of the advertising protocol.   |

# show cdp traffic

To display information about the traffic gathered between devices using Cisco Discovery Protocol (CDP), use the **show cdp traffic** command in

EXEC

mode.

**show cdp traffic** [**location** *node-id*]

|                           |   |                              |
|---------------------------|---|------------------------------|
| <b>Syntax Description</b> | <b>location</b> <i>node-id</i> (Optional) Displays CDP information for the CDP packets sent and received on the designated node only. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.                 |                              |
| <b>Command Default</b>    | Displays CDP information aggregated across all nodes.   |                              |
| <b>Command Modes</b>      | EXEC  |                              |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>          |
|                           | Release 2.0   | This command was introduced. |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |                              |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operations</b>            |
|                           | cdp   | read                         |

The following example illustrates sample output from the **show cdp traffic** command:

```
RP/0/RP0/CPU0:router# show cdp traffic
CDP counters :
  Packets output: 50662, Input: 40414
  Hdr syntax: 0, Chksum error: 0, Encaps failed: 0
  No memory: 0, Invalid packet: 0, Truncated: 0
  CDP version 1 advertisements output: 0, Input: 0
  CDP version 2 advertisements output: 50662, Input: 40414
  Unrecognize Hdr version: 0, File open failed: 0
```

Table 13: show cdp traffic Field Descriptions

| Field                               | Definition  |
|-------------------------------------|---|
| Packets output                      | Number of CDP advertisements sent by the local device. Note that this value is the sum of the CDP version 1 advertisements output field and the CDP version 2 advertisements output field.  |
| Input                               | Number of CDP advertisements received by the local device. Note that this value is the sum of the CDP version 1 advertisements input field and the CDP version 2 advertisements input field.  |
| Hdr syntax                          | Number of CDP advertisements having bad headers that have been received by the local device.  |
| Chksum error                        | Number of times the checksum (verifying) operation failed on incoming CDP advertisements.   |
| Encaps failed                       | Number of times CDP failed to send advertisements on an interface because of a failure caused by the bridge port of the local device.   |
| No memory                           | Number of times that the local device did not have enough memory to store the CDP advertisements in the advertisement cache table when the device was attempting to assemble advertisement packets for transmission and parse them when receiving them. |
| Invalid packet                      | Number of invalid CDP advertisements received and sent by the local device.   |
| Truncated                           | Number of times truncated CDP advertisements were sent because there was not enough space in the CDP packet to hold all CDP type-length-values (TLVs).  |
| CDP version 1 advertisements output | Number of CDP version 1 advertisements sent by the local device.  |
| Input                               | Number of CDP version 1 advertisements received by the local device.  |
| CDP version 2 advertisements output | Number of CDP version 2 advertisements sent by the local device.  |
| Input                               | Number of CDP version 2 advertisements received by the local device.  |
| Unrecognize Hdr version             | Number of packets received from a CDP version that was outside the current configuration.   |
| File open failed                    | Number of times that CDP failed to connect to one of the underlying services it uses.   |

## Clock Commands

---

This module describes the commands used to set and display the internal clock settings in Cisco IOS XR software.

For more information about manually setting the router clock, see *Cisco IOS XR Getting Started Guide for the Cisco CRS Router*.

For more information about configuring the router to synchronize to Network Time Protocol (NTP), see the *Implementing NTP on Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*.

- [locale language](#), on page 130
- [show clock](#), on page 132

# clock read-calendar

To manually copy the hardware clock (calendar) settings into the software clock, use the **clock read-calendar** command in EXEC modeAdmin EXEC mode.

## clock read-calendar

**Syntax Description** This command has no keywords or arguments.

**Command Default** Read calendar is disabled.

**Command Modes** EXEC mode  
Admin EXEC mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** The *calendar clock* is a hardware system clock that runs continuously, even if the router is powered off or rebooted. The hardware system clock is separate from the software clock settings, which are erased when the router is power cycled or rebooted.

Use the **clock read-calendar** command to manually copy the hardware clock setting into the software clock.

| Task ID | Task ID       | Operations |
|---------|---------------|------------|
|         | host-services | execute    |

In the following example, the hardware clock settings are copied to the software clock with the **clock read-calendar** command. The **show clock** command is then entered to display the new software clock settings.

```
RP/0/RP0/CPU0:router# clock read-calendar
RP/0/RP0/CPU0:router# show clock
```

```
14:31:57.089 PST Tue Feb 10 2008
```

- [show clock](#), on page 132
- [update-calendar](#), on page 442

# clock set

To change the software clock settings, use the **clock set** command in EXEC mode Admin EXEC mode.

```
clock set hh:mm:ss {day month | month day} year
```

| Syntax Description |   |
|--------------------|---|
| <i>hh:mm:ss</i>    | Current time in hours (24-hour format), minutes, and seconds. Colons are required between values. |
| <i>day</i>         | Current day (by date) in the month.   |
| <i>month</i>       | Current month (by name).  |
| <i>year</i>        | Current year (no abbreviation). Enter a valid four-digit year.                                    |

**Command Default** Clock is not set.

**Command Modes** EXEC mode  
Admin EXEC mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Generally, if the system is synchronized by a valid outside timing mechanism, such as a Network Time Protocol (NTP) clock source, or if you have a networking device with calendar capability, you need not set the software clock. Use the **clock set** command if no other time sources are available. The time specified in this command is relative to the configured time zone.

| Task ID | Task ID       | Operations |
|---------|---------------|------------|
|         | host-services | execute    |

## Setting the Software Clock

This example shows how to set the software clock using the **clock set** command with the *day month* arguments first.

```
RP/0/RP0/CPU0:router# clock set 14:12:00 10 feb 2005
14:12:00.114 JST Fri Feb 10 2009
```

This example shows how to set the software clock using the **clock set** command with the *month day* arguments first.

```
RP/0/RP0/CPU0:router# clock set 14:38:00 feb 10 2005
14:38:00.069 PST Tue Feb 10 2009
```

### Displaying the Clock Settings

This example shows how to display the settings of the software clock:

```
RP/0/RP0/CPU0:router# show clock
14:38:11.292 PST Tue Feb 10 2009
```

This example shows how to use the `clock set` command:

```
RP/0/RP0/CPU0:router# clock set 06:10:00 12 ?
    january      Month of the Year
    february
    march
    april
    may
    june
    july
    august
    september
    october
    november
    december
```

### Related Topics

- [clock timezone](#), on page 119
- [show clock](#), on page 132
- [clock summer-time](#), on page 117

## clock summer-time

To configure the system to switch automatically to summer time (daylight saving time), use the **clock summer-time** command in global configuration mode. To remove the daylight saving time setting, use the **no** form of this command.

```
clock summer-time zone {date {date month year hh:mm date month year hh:mm | month date
year hh:mm month date year hh:mm} | recurring week day month hh:mm week day month hh:mm}
[offset]
no clock summer-time
```

### Syntax Description

|                  |   |
|------------------|---|
| <i>zone</i>      | Name of the time zone (for example, PDT) to be displayed when summer time is in effect. <a href="#">Table 14: Common Time Zone Acronyms, on page 119</a> lists common time zone acronyms used for the <i>zone</i> argument. |
| <b>date</b>      | Indicates that summer time should start on the first specific date listed in the command and end on the second specific date in the command.  |
| <i>date</i>      | Date of the month.  |
| <i>month</i>     | Month.  |
| <i>year</i>      | Year (no abbreviation).   |
| <i>hh:mm</i>     | Time (24-hour format) in hours and minutes.   |
| <b>recurring</b> | Indicates that summer time should start and end on the corresponding specified days every year.   |
| <i>week</i>      | Week of the month (values are 1 to 5, first or last).   |
| <i>day</i>       | Day of the week.  |
| <i>offset</i>    | (Optional) Number of minutes to add during summer time.   |

### Command Default

Summer time is not configured.

*offset*: 60

### Command Modes

Global configuration

### Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **clock summer-time** command if you want the system to switch automatically to summer time (for display only):

- Use the **recurring** keyword to apply the rules on the configured day each year. If **clock summer-time zone recurring** is specified without parameters, the summer time rules default to United States standards. The default for the *offset* argument is 60 minutes.
- Use the **date** keyword to specify a start and end date for summer time if you cannot use the first form.

In both forms of the command, the first part of the command specifies when summer time begins and the second part specifies when it ends. All times are relative to the local time zone. The start time is relative to standard time. The end time is relative to summer time. If the starting month is after the ending month, the system assumes that you are in the Southern Hemisphere.

| Task ID | Task ID       | Operations     |
|---------|---------------|----------------|
|         | host-services | read,<br>write |

The following example specifies that summer time starts on the first Sunday in April at 02:00 and ends on the last Sunday in October at 02:00. The **recurring** keyword indicates that the rules apply every year.

```
RP/0/RP0/CPU0:router(config)# clock summer-time PDT recurring 1 Sunday April 2:00
last Sunday October 2:00
```

If you live where summer time does not follow the pattern in the first example, you could set it to start on October 12, 2008 at 02:00 and end on April 26, 2009 at 02:00, with the following example. The **date** keyword indicates that the rules apply for the current year only.

```
RP/0/RP0/CPU0:router(config)# clock summer-time PDT date 12 October 2008 2:00 26
April 2009 2:00
```

### Related Topics

[clock set](#), on page 115

[clock timezone](#), on page 119

# clock timezone

To set the time zone for display, use the **clock timezone** command in Admin Configuration mode or Global Configuration mode. To remove the time zone setting, use the **no** form of this command.

```
clock timezone zone hours-offset [minutes-offset]
no clock timezone
```

| Syntax Description |                       |   |
|--------------------|-----------------------|---|
|                    | <i>zone</i>           | Name of the time zone to be displayed when standard time is in effect.        |
|                    | <i>hours-offset</i>   | Hours offset from Coordinated Universal Time (UTC). Range is from -23 to +23. |
|                    | <i>region</i>         | Sets the offset according to the region specified.                            |
|                    | <i>minutes-offset</i> | (Optional) Minutes offset from UTC.   |

**Command Default** UTC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** Use the **clock timezone** command to display the time zone only when setting the time manually. The system keeps time internally in UTC.

This table lists common time zone acronyms used for the *zone* argument.

**Table 14: Common Time Zone Acronyms**

| Acronym       | Time Zone Name and UTC Offset                   |
|---------------|---|
| <b>Europe</b> |   |
| GMT           | Greenwich Mean Time, as UTC.                    |
| BST           | British Summer Time, as UTC plus 1 hour.        |
| IST           | Irish Summer Time, as UTC plus 1 hour.          |
| WET           | Western Europe Time, as UTC.                    |
| WEST          | Western Europe Summer Time, as UTC plus 1 hour. |
| CET           | Central Europe Time, as UTC plus 1 hour.        |

| Acronym                         | Time Zone Name and UTC Offset   |
|---------------------------------|---|
| CEST                            | Central Europe Summer Time, as UTC plus 2 hours.                          |
| EET                             | Eastern Europe Time, as UTC plus 2 hours.                                 |
| EEST                            | Eastern Europe Summer Time, as UTC plus 3 hours.                          |
| MSK                             | Moscow Time, as UTC plus 3 hours.   |
| MSD                             | Moscow Summer Time, as UTC plus 4 hours.                                  |
| <b>United States and Canada</b> |   |
| AST                             | Atlantic Standard Time, as UTC minus 4 hours.                             |
| ADT                             | Atlantic Daylight Time, as UTC minus 3 hours.                             |
| ET                              | Eastern Time, either as EST or EDT, depending on place and time of year.  |
| EST                             | Eastern Standard Time, as UTC minus 5 hours.                              |
| EDT                             | Eastern Daylight Saving Time, as UTC minus 4 hours.                       |
| CT                              | Central Time, either as CST or CDT, depending on place and time of year.  |
| CST                             | Central Standard Time, as UTC minus 6 hours.                              |
| CDT                             | Central Daylight Saving Time, as UTC minus 5 hours.                       |
| MT                              | Mountain Time, either as MST or MDT, depending on place and time of year. |
| MST                             | Mountain Standard Time, as UTC minus 7 hours.                             |
| MDT                             | Mountain Daylight Saving Time, as UTC minus 6 hours.                      |
| PT                              | Pacific Time, either as PST or PDT, depending on place and time of year.  |
| PST                             | Pacific Standard Time, as UTC minus 8 hours.                              |
| PDT                             | Pacific Daylight Saving Time, as UTC minus 7 hours.                       |
| AKST                            | Alaska Standard Time, as UTC minus 9 hours.                               |
| AKDT                            | Alaska Standard Daylight Saving Time, as UTC minus 8 hours.               |
| HST                             | Hawaiian Standard Time, as UTC minus 10 hours.                            |
| <b>Australia</b>                |   |
| WST                             | Western Standard Time, as UTC plus 8 hours.                               |
| CST                             | Central Standard Time, as UTC plus 9.5 hours.                             |

| Acronym | Time Zone Name and UTC Offset  |
|---------|--|
| EST     | Eastern Standard/Summer Time, as UTC plus 10 hours (plus 11 hours during summer time). |

This table lists an alternative method for referring to time zones, in which single letters are used to refer to the time zone difference from UTC. Using this method, the letter Z is used to indicate the zero meridian, equivalent to UTC, and the letter J (Juliet) is used to refer to the local time zone. Using this method, the International Date Line is between time zones M and Y.

**Table 15: Single-Letter Time Zone Designators**

| Letter Designator | Word Designator | Difference from UTC |
|-------------------|-----------------|---------------------|
| Y                 | Yankee          | UTC minus 12 hours. |
| X                 | Xray            | UTC minus 11 hours. |
| W                 | Whiskey         | UTC minus 10 hours. |
| V                 | Victor          | UTC minus 9 hours.  |
| U                 | Uniform         | UTC minus 8 hours.  |
| T                 | Tango           | UTC minus 7 hours.  |
| S                 | Sierra          | UTC minus 6 hours.  |
| R                 | Romeo           | UTC minus 5 hours.  |
| Q                 | Quebec          | UTC minus 4 hours.  |
| P                 | Papa            | UTC minus 3 hours.  |
| O                 | Oscar           | UTC minus 2 hours.  |
| N                 | November        | UTC minus 1 hour.   |
| Z                 | Zulu            | Same as UTC.        |
| A                 | Alpha           | UTC plus 1 hour.    |
| B                 | Bravo           | UTC plus 2 hours.   |
| C                 | Charlie         | UTC plus 3 hours.   |
| D                 | Delta           | UTC plus 4 hours.   |
| E                 | Echo            | UTC plus 5 hours.   |
| F                 | Foxtrot         | UTC plus 6 hours.   |
| G                 | Golf            | UTC plus 7 hours.   |
| H                 | Hotel           | UTC plus 8 hours.   |

| Letter Designator | Word Designator | Difference from UTC |
|-------------------|-----------------|---------------------|
| I                 | India           | UTC plus 9 hours.   |
| K                 | Kilo            | UTC plus 10 hours.  |
| L                 | Lima            | UTC plus 11 hours.  |
| M                 | Mike            | UTC plus 12 hours.  |

**Task ID****Task ID      Operations**

---

```
host-services read,
                write
```

---

The following example shows how to set the time zone to PST and offset 8 hours behind UTC:

```
RP/0/RP0/CPU0:router(config)# clock timezone PST -8
```

The following example shows how to set the time zone to Newfoundland Standard Time (NST) for Newfoundland, Canada, which is 3.5 hours behind UTC:

```
RP/0/RP0/CPU0:router(config)# clock timezone NST -3 30
```

# clock update-calendar

To copy the software clock settings to the hardware clock (calendar), use the **clock update-calendar** command in EXEC mode Admin EXEC mode.

**clock update-calendar**

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values

**Command Modes** EXEC mode  
Admin EXEC mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The hardware clock (calendar) runs continuously, even if the router is powered off or rebooted. If the software clock and calendar are not synchronized and the software clock is more accurate, use this command to update the hardware calendar clock to the correct date and time.

| Task ID | Task ID       | Operations |
|---------|---------------|------------|
|         | host-services | execute    |

The following example shows how to copy the current time from the software clock to the hardware clock:

```
RP/0/RP0/CPU0:router# clock update-calendar
```

# confdConfig cli timezone local

To specify the timezone that must be used when displaying the time in the CLI, use the **confdConfig cli timezone local** command in System Admin Config mode.

## confdConfig cli timezone local

| <b>Syntax Description</b> | <i>timezone</i> Specifies the timezone that must be used when displaying the time in the CLI. If <b>local</b> is specified then the timezone that is configured on the device is used.   |         |              |               |   |
|---------------------------|--|---------|--------------|---------------|---|
| <b>Command Default</b>    | The default value is <b>local</b> .  |         |              |               |   |
| <b>Command Modes</b>      | System Admin Config  |         |              |               |   |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 6.3.1</td> <td>By default, the sysadmin <b>confdConfig</b> configuration is visible in the sysadmin running configuration.</td> </tr> </tbody> </table>   | Release | Modification | Release 6.3.1 | By default, the sysadmin <b>confdConfig</b> configuration is visible in the sysadmin running configuration. |
| Release                   | Modification   |         |              |               |   |
| Release 6.3.1             | By default, the sysadmin <b>confdConfig</b> configuration is visible in the sysadmin running configuration.  |         |              |               |   |
| <b>Usage Guidelines</b>   | <p>This command is available in Cisco IOS XR 64 bit OS.</p> <p>This example shows you how to configure the timezone:</p> <pre> sysadmin-vm:0_RP0# <b>config</b> Thu May 23 23:19:47.567 UTC+00:00 Entering configuration mode terminal sysadmin-vm:0_RP0(config)# <b>confdconfig cli timezone local</b> Thu May 23 23:19:47.567 UTC+00:00 </pre> |         |              |               |   |

## confdConfig cli utcOffset

To specify the UTC offset measured in minutes, use the **confdConfig cli utcOffset** command in System Admin Config mode.

**confdConfig cli utcOffset** *integer*

---

**Syntax Description**     *integer* Specifies the UTC offset measured in minutes.

---

---

**Command Default**     The default value is **0**.

---

---

**Command Modes**     System Admin Config

---

---

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 6.3.1 | By default, the sysadmin <b>confdConfig</b> configuration is visible in the sysadmin running configuration. |

---

---

**Usage Guidelines**     This command is available in Cisco IOS XR 64 bit OS.

This example shows you how to configure the UTC offset:

```

sysadmin-vm:0_RP0# config
Thu May 23 23:19:47.567 UTC+00:00
Entering configuration mode terminal
sysadmin-vm:0_RP0(config)# confdconfig cli utcOffset 0
Thu May 23 23:19:47.567 UTC+00:00

```

# confdConfig cli idleTimeout

To specify the maximum idle time before terminating a CLI session, use the **confdConfig cli idleTimeout** command in System Admin Config mode.

**confdConfig cli idleTimeout** *time*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>time</i> Specifies the idle timeout value. It must be in this format: (nYnMnDnHnMnS). |
|---------------------------|--|

|                        |  |
|------------------------|--|
| <b>Command Default</b> | The default value is <b>PT10M</b> , which is 10 minutes. <b>PT0M</b> means no timeout. |
|------------------------|--|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | System Admin Config |
|----------------------|---------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>   |
|------------------------|----------------|---|
|                        | Release 6.3.1  | By default, the sysadmin <b>confdConfig</b> configuration is visible in the sysadmin running configuration. |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | This command is available in Cisco IOS XR 64 bit OS. |
|-------------------------|--|

This example shows you how to configure the idle timeout of 25 minutes:

```
sysadmin-vm:0_RP0# config
Thu May 23 23:19:47.567 UTC+00:00
Entering configuration mode terminal
sysadmin-vm:0_RP0(config)# confdconfig cli idleTimeout 25m
Thu May 23 23:19:47.567 UTC+00:00
```

## confdConfig cli timestamp

To enable or disable the display of timestamps, use the **confdConfig cli timestamp** command in System Admin Config mode.

**confdConfig cli timestamp** {*enabled* | *disabled*}

### Syntax Description

*enabled* Enables the display of timestamps.

*disabled* Disables the display of timestamps.

### Command Default

The default value is **enabled**.

### Command Modes

System Admin Config

### Command History

| Release       | Modification  |
|---------------|---|
| Release 6.3.1 | By default, the sysadmin <b>confdConfig</b> configuration is visible in the sysadmin running configuration. |

### Usage Guidelines

This command is available in Cisco IOS XR 64 bit OS.

This example shows you how to enable the display of timestamp:

```
sysadmin-vm:0_RP0# config
Thu May 23 23:19:47.567 UTC+00:00
Entering configuration mode terminal
sysadmin-vm:0_RP0(config)# confdconfig cli timestamp enabled
Thu May 23 23:19:47.567 UTC+00:00
```

# locale country

To set the default country of use, use the **locale country** command in global configuration mode. To remove the country setting, use the **no** form of this command.

**locale country** *country*  
**no locale country**

---

**Syntax Description**     *country* Country, where *country* is a two-character country code. Case is not important.

---

**Command Default**     No default behavior or values

**Command Modes**     Global configuration

---

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

---

**Usage Guidelines**     To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note**     This command is not fully supported at this time.

To display a complete listing of the available country codes, use the online help ( ? ) function:

```
RP/0/RP0/CPU0:router(config)# locale country ?
```

```
AD   Andorra
AE   United Arab Emirates
AF   Afghanistan
AG   Antigua and Barbuda
AI   Anguilla
AL   Albania
AM   Armenia
AN   Netherlands Antilles
AO   Angola
AQ   Antarctica
AR   Argentina
AS   American Samoa
AT   Austria
AU   Australia
AW   Aruba
AZ   Azerbaijan
BA   Bosnia and Herzegovina
BB   Barbados
BD   Bangladesh
BE   Belgium
```

--More--

| Task ID | Task ID       | Operations     |
|---------|---------------|----------------|
|         | host-services | read,<br>write |

The following example shows how to set the country of use to Australia:

```
RP/0/RP0/CPU0:router(config)# locale country au
```

### Related Topics

[locale language](#), on page 130

# locale language

To set the default language of use, use the **locale language** command in global configuration

mode. To remove the language setting, use the **no** form of this command.

**locale language** *language*  
**no locale language**

---

**Syntax Description**     *language* Two-character code that specifies the language. Case is not important.

---

**Command Default**     No default behavior or values

**Command Modes**     Global configuration

---

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

---

**Usage Guidelines**     To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note**     This command is not fully supported at this time.

To display a complete listing of the available language codes, use the online help (?) function:

```
RP/0/RP0/CPU0:router(config)# locale language ?
aa      Afar
ab      Abkhazian
af      Afrikaans
am      Amharic
ar      Arabic
as      Assamese
ay      Aymara
--More--
```

---

| Task ID | Task ID       | Operations     |
|---------|---------------|----------------|
|         | host-services | read,<br>write |

---

The following example shows how to set the language of use to English:

```
RP/0/RP0/CPU0:router(config)# locale language en
```

[locale country](#), on page 128

# show clock

To display the system clock, use the **show clock** command in EXEC mode.

**show clock** [**detail**]

**Syntax Description** **detail** (Optional) Indicates the time zone, time source, and current summer time setting (if any).

**Command Default** No default behavior or values

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The system clock keeps an “authoritative” flag that indicates whether the time is authoritative (believed to be accurate). If the system clock has been set by a timing source, such as system calendar or Network Time Protocol (NTP), the flag is set. If the time is not authoritative, it is used only for display. Until the clock is authoritative and the “authoritative” flag is set, the flag prevents peers from synchronizing to the clock when the peers have invalid times.

The leading symbols that precede the **show clock** command display are shown in this table

**Table 16: show clock Display Leading Symbol Descriptions**

| Symbol  | Description   |
|---------|---|
| *       | Time is not authoritative.                          |
| (blank) | Time is authoritative.                              |
| .       | Time is authoritative, but NTP is not synchronized. |

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

The following sample output shows the current clock settings:

```
RP/0/RP0/CPU0:router# show clock
16:18:28.927 PST Tue Feb 10 2009
```

The following sample output shows the current clock detail, including the time zone and time source:

```
RP/0/RP0/CPU0:router# show clock detail  
16:18:07.164 PST Tue Feb 10 2009  
Timezone: PST8PST Timesource: User configured
```

# abort

To terminate a configuration session and discard all uncommitted changes without system confirmations, use the **abort** command in any configuration mode.

## abort

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Any configuration mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **abort** command to terminate a configuration session and return to EXEC mode from any configuration mode. This command discards all uncommitted configuration changes. You are prompted to commit the changes.

| Task ID | Task ID   | Operations  |
|---------|---|---|
|         | Task ID for the feature or mode impacted by the command | Operation for the feature or mode impacted by the command |

The following example shows how to use the **abort** command to discard all changes made during a configuration session:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface gigabitethernet 0/2/0/0
RP/0/RP0/CPU0:router(config-if)# ipv4 address 1.1.1.1 255.0.0.0
RP/0/RP0/CPU0:router(config-if)# abort
RP/0/RP0/CPU0:router#
```

## Related Topics

[end](#), on page 164

[exit](#), on page 167

# admin

To enter Admin EXEC mode, use the **admin** command in EXEC mode.

## admin

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** Use the **admin** command to enter Admin EXEC mode mode. Administration commands are used to configure secure domain routers (SDRs) and to execute various administration plane commands.

**Note** Administration commands can be run only by entering administration mode and not by prefixing the **admin** command with the keyword in EXEC mode mode.

| Task ID | Task Operations ID         |
|---------|----------------------------|
|         | admin read, write, execute |

The following example shows how to enter Admin EXEC mode mode:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)#
```

To use administration configuration mode, use the **configure** command in Admin EXEC mode mode:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)#
```

## Related Topics

[configure](#), on page 159

# alias

To create a command alias, use the **alias** command in Global Configuration mode. To delete an alias, use the **no alias** form of this command.

```
alias alias-name[(param-list)]content
no alias alias-name
```

## Syntax Description

|                   |   |
|-------------------|---|
| <i>alias-name</i> | Name of the command alias. Alias names can be a single word or multiple words joined by a hyphen (-) or an underscore (_).  |
| <i>param-list</i> | (Optional) Parameters assigned to the alias. These parameters are filled in at execution time.                              |
| <i>content</i>    | Original command syntax. Valid abbreviations of the original command syntax can be entered for the <i>content</i> argument. |

## Command Default

No command aliases are configured.

## Command Modes

Global Configuration mode  
Admin EXEC mode

## Command History

| Release     | Modification                              |
|-------------|---|
| Release 2.0 | This command was introduced.              |
| Release 3.2 | The <i>param-list</i> argument was added. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Cisco IOS XR software supports generic alias definitions for various entities. Any physical or logical entity can have an alias as a reference. For example, an alias can refer to a command, a partial command, a group of commands, a location, or an IP address.

An alias must first be defined. The alias can then be used in command lines in place of the defined entity.

Following is a list of properties for an alias:

- An alias can be used anywhere and in any mode.
- An alias can have zero, one, or many parameters.
- An alias can refer to those parameters with the \$ sign.
- If an alias refers to more than one command, the commands must be separated by a semicolon (;).
- The size of the **alias** command is limited to 1024 characters.

The alias command can be used anywhere. If the content referenced by the alias is invalid or inappropriate in that context or mode, the system issues a warning message containing the substituted content.

An alias name should not be a subset of the keywords that it represents as alias. Substitution is done only when the entered input match fails completely. For instance, the attempt to define an alias with “config? as the alias name fails, as shown in the following example:

```
RP/0/RP0/CPU0:router(config)# alias config set_host hostname router
RP/0/RP0/CPU0:router(config)# show configuration
```

```
alias set_host hostname router
```

Use the **show aliases** command to display all command aliases or the command aliases in a specified mode.

---

**Task ID**

---

**Task ID    Operations**

---

```
logging read,
write
```

---

The following example shows how to create an alias named ipbr for the **show ipv4 interface brief** command, commit the configuration, enter EXEC mode and then enter the configured alias:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# alias ipbr show ipv4 interface brief
RP/0/RP0/CPU0:router(config)# show configuration

Building configuration...
alias ipbr show ipv4 interface brief
end
RP/0/RP0/CPU0:router(config)# commit
RP/0/RP0/CPU0:Feb 21 04:42:57.017 : config[65689]: %MGBL-LIBTARCFG-6-COMMIT :
Configuration committed by user 'lab'. Use 'show configuration commit changes 1000000022'
to view the changes.
RP/0/RP0/CPU0:router(config)# end
RP/0/RP0/CPU0:Mar 27 22:19:05 : config[65739]: %SYS-5-CONFIG_I : Configured from console
by lab
RP/0/RP0/CPU0:router# ipbr
RP/0/RP0/CPU0:router# show ipv4 interface brief

Interface                    IP-Address      Status          Protocol
Loopback0                    1.1.1.1         Up              Up
Loopback999                  unassigned      Up              Up
MgmtEth0/0/CPU0/0            12.29.56.21     Up              Up
RP/0/RP0/CPU0:router#
```

The following example shows how to define an alias, mycompany-10ge, for POS interface 1/0/2/3 and then how to use that alias to shut down the interface:

```
RP/0/RP0/CPU0:router(config)# alias mycompany-10ge gigabitethernet1/0/2/3
RP/0/RP0/CPU0:router(config)# interface mycompany-10ge
RP/0/RP0/CPU0:router(config-if)# shutdown
RP/0/RP0/CPU0:router(config-if)# exit
RP/0/RP0/CPU0:router(config)#
```

The following example shows the use of a parameter name in an alias definition:

```
RP/0/RP0/CPU0:router(config)# alias shint (intname) show interface $intname
```

The following example shows an alias defined with one parameter and two commands:

```
RP/0/RP0/CPU0:router(config)# alias shint_both (intname) show interface $intname;show run
interface $intname
```

The following example shows the use of the alias `shint_both` in EXEC mode:

```
RP/0/RP0/CPU0:router(exec)# shint_both(gigabitethernet1/2/3/4)
```

Two commands are issued, as follows:

```
RP/0/RP0/CPU0:router(exec)# show interface gigabitethernet1/2/3/4; show run interface
gigabitethernet1/2/3/4
```

# apply-template

To apply a template to the target configuration, use the **apply-template** command in Global Configuration mode.

**apply-template** *template-name* [(*param-list*)]

|                           |                      |  |
|---------------------------|----------------------|--|
| <b>Syntax Description</b> | <i>template-name</i> | Name of the template to be applied to the running configuration. Use the <b>template</b> command to define a template. |
|                           | <i>param-list</i>    | (Optional) Up to five template parameters.   |

**Command Default** No templates are applied to the target configuration.

**Command Modes** Global Configuration mode

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **apply-template** command to apply a template to the target configuration. Templates allow you to create a template name that represents a group of configuration commands.

Use the **template** command to define a template. Use the **end-template** command to exit template configuration mode and return to global configuration mode. Use the **show-running** command with the optional **template** *template-name* keyword and argument to display the contents of a template.

| <b>Task ID</b> | <b>Task ID</b>  | <b>Operations</b> |
|----------------|-----------------|-------------------|
|                | config-services | read,<br>write    |

The following example shows how to define a template and then apply the template to the target configuration:

```
RP/0/RP0/CPU0:router(config)# template hostname-template
RP/0/RP0/CPU0:router(config-TPL)# hostname router1
RP/0/RP0/CPU0:router(config-TPL)# end-template
RP/0/RP0/CPU0:router(config)# apply-template hostname-template
```

# clear comment

To discard a comment associated with a configuration, use the **clear comment** command in any configuration or Global Configuration mode.

## clear comment

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Any configuration mode  
Global Configuration mode

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

**Usage Guidelines** The **clear comment** command clears any comments that were added for a specific configuration in the configuration file. After you enter the **clear comment** command, enter the configuration for which you want to delete the comment on a separate line.

To enter configuration comments, enter ! followed by the comment. The comment you enter is associated with the next configuration entered. For example:

```
RP/0/RP0/CPU0:router#!router1 is located in xxx
RP/0/RP0/CPU0:router# hostname router1
RP/0/RP0/CPU0:router# commit
```

The comment is displayed in the output of the **show running-config** command:

```
RP/0/RP0/CPU0:router# show running-config
...
!router1 is located in xxx
hostname router1
...
```

| Task ID | Task ID   | Operations  |
|---------|---|---|
|         | Task ID for the feature or configuration mode impacted by the command | Operation for the feature or configuration mode impacted by the command |

The following example shows how to discard the comment associated with the configuration ipv4 address 1.1.1.1 255.0.0.0.

```
RP/0/RP0/CPU0:router(config-if)# clear comment
RP/0/RP0/CPU0:router(config-if)# ipv4 address 1.1.1.1 255.0.0.0
```

# clear configuration commits

To delete old commit IDs from the commit database to free up disk space, use the **clear configuration commits** command in Admin EXEC mode or EXEC mode.

**clear configuration commits** {**diskspace** *kilobytes* | **oldest** *number-of-commits*}

|                           |  |  |
|---------------------------|--|--|
| <b>Syntax Description</b> | <b>diskspace</b> <i>kilobytes</i>      | Deletes as many commit IDs (beginning with the oldest available commit ID) from the commit database as required to free the number of kilobytes (KB) specified for the <i>kilobytes</i> argument. The range for the number of kilobytes of disk space to free is 1 to 4194304. |
|                           |  | <b>Note</b> The amount of disk space freed may vary depending on the size and number of commits present in the commit database.  |
|                           | <b>oldest</b> <i>number-of-commits</i> | Deletes the number of commit IDs specified for the <i>number-of-commits</i> argument.  |
|                           |  | <b>Note</b> Use the online help ( ? ) function to display the range of commit IDs available for deletion.  |

**Command Default** None

**Command Modes** EXEC mode  
Admin EXEC mode

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>   |
|------------------------|----------------|---|
|                        | Release 2.0    | This command was introduced.  |
|                        | Release 3.2    | This command was earlier named <b>clear configuration rollback points</b> . |
|                        | Release 3.3.0  | Support was added for administration EXEC mode.                             |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **clear configuration commits** command to delete the number of commit IDs available for rollback operations. The most recent 100 commits are retained by the system. As new commit IDs are added, the oldest commit IDs are discarded and are no longer available for rollback operations.

**Note** The **clear configuration commits** command deletes commits from the commit database only. The running configuration, thus, is not changed.

**Note** When a commit ID is deleted from the commit database, it is no longer available for rollback and can no longer be used to display commit changes (with the **show configuration rollback changes** command).

Use the **rollback configuration** command to roll back the current running configuration to a previous configuration. Use the **show configuration rollback changes** command to display a list of the commit IDs available for rollback operations or to display the changes that would be made by the **rollback configuration** command.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | execute    |

The following example shows how to delete the oldest 16 commit IDs to free up disk space. After entering this command, you will be prompted to confirm the deletion.

```
RP/0/RP0/CPU0:router# clear configuration commits oldest 16
Deleting 16 rollback points '1000000021' to '1000000036'
256 KB of disk space will be freed. Continue with deletion?[confirm] y
```

# clear configuration inconsistency

To clear an inconsistency alarm for an SDR configuration or admin plane configuration, use the **clear configuration inconsistency** command in Admin EXEC mode or EXEC mode.

**clear configuration inconsistency**

## Syntax Description

This command has no keywords or arguments.

## Command Default

Administration EXEC mode: Clears the inconsistency alarms for the admin plane configuration.

EXEC mode: Clears the inconsistency alarms for an SDR configuration.

## Command Modes

Admin EXEC mode

EXEC mode

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.4.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

An inconsistency alarm is set when there is a failure to restore the configuration; this can occur during router startup, or when a line card, modular services card (MSC), or route processor (RP) card is inserted or removed.

If an inconsistency alarm is set, a message similar to the following example is displayed:

```
RP/0/0/CPU0:May 26 11:58:40.662 : cfgmgr-rp[130]: %MGBL-CONFIGCLI-3
  BATCH_CONFIG_FAIL : 28 config(s) failed during startup. To view
  failed config(s) use the command - "show configuration failed startup"

RP/0/0/CPU0:May 26 11:58:41.731 : cfgmgr-rp[130]:
  %MGBL-CONFIG-3-ADMIN_INCONSISTENCY_ALARM : Admin plane configuration
  inconsistency alarm has been raised. Configuration commits will be
  blocked until an ADMIN plane 'clear configuration inconsistency' command
  has been run to synchronize persisted admin plane configuration with
  running admin configuration.
```

When the inconsistency alarm is set, all configuration commit operations fail until the alarm is cleared using the **clear configuration inconsistency** command. This command clears the alarm and removes the failed configuration.

For example, the following configuration commit fails to finish due to an existing inconsistency alarm:

```
RP/0/RP0/CPU0:router# configure

ADMIN plane running configuration is inconsistent with persistent
  configuration.
No configuration commits will be allowed until an admin plane
'clear configuration inconsistency' command is performed.
RP/0/RP0/CPU0:router(config)# hostname router2
RP/0/RP0/CPU0:router(config)#commit
```

ADMIN plane running configuration is inconsistent with persistent configuration.  
No configuration commits will be allowed until an admin plane 'clear configuration inconsistency' command is performed.

Enter the **clear configuration inconsistency** command to clear the alarm and allow commit operations to continue.

**Note** To reapply the failed configuration, you must reapply and recommit the configuration. Use the **load configuration failed** command with the **startup** keyword to populate the target configuration with the contents of the previous failed configuration from the startup configuration.

Use the **show configuration history** command with the **alarm** keyword to view the inconsistency alarm set and alarm clear events in the configuration history log.

### Command Modes

To clear the inconsistency alarms for the admin plane configuration, enter the **clear configuration inconsistency** command in administration EXEC mode.

To clear the inconsistency alarms for an SDR configuration, enter the **clear configuration inconsistency** command in EXEC mode for that SDR.

### Task ID

| Task ID         | Operations |
|-----------------|------------|
| config-services | execute    |

The following example shows how to clear the inconsistency alarms for the admin plane configuration by entering the **clear configuration inconsistency** command in administration EXEC mode:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# clear configuration inconsistency

Creating any missing directories in Configuration File system...OK
Initializing Configuration Version Manager...OK
Syncing ADMIN commit database with running configuration...OK
Re-initializing cache files...OK
Updating Commit Database. Please wait...[OK]
```

The following example shows how to clear the inconsistency alarms for an SDR configuration. The command is entered in EXEC mode and impacts only that SDR.

```
RP/0/RP0/CPU0:router# clear configuration inconsistency

Creating any missing directories in Configuration File system...OK
Initializing Configuration Version Manager...OK
Syncing commit database with running configuration...OK
Re-initializing cache files...OK
Updating Commit Database. Please wait...[OK]
```

In the following example, a history of the inconsistency alarms set and cleared for the SDR configuration are displayed using the **show configuration history** command with the **alarm** keyword:

```
RP/0/RP0/CPU0:router# show configuration history alarm
```

| Sno. | Event | Info                        | Time Stamp               |
|------|-------|-----------------------------|--------------------------|
| ~~~~ | ~~~~~ | ~~~~~                       | ~~~~~                    |
| 1    | alarm | inconsistency alarm raised  | Thu Jun 22 15:23:15 2009 |
| 2    | alarm | inconsistency alarm cleared | Thu Jun 22 15:42:30 2009 |
| 3    | alarm | inconsistency alarm raised  | Sun Jul 9 13:39:57 2009  |
| 4    | alarm | inconsistency alarm cleared | Sun Jul 9 14:15:48 2009  |
| 5    | alarm | inconsistency alarm raised  | Sat Jul 15 18:18:26 2009 |
| 6    | alarm | inconsistency alarm cleared | Sat Jul 15 19:21:03 2009 |

# clear configuration inconsistency replica

To resolve configuration inconsistencies on a replica node, use the **clear configuration inconsistency replica** command in administration EXEC or EXEC mode.

**clear configuration inconsistency replica location** *node-id*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>location</b> <i>node-id</i> Resolves the configuration inconsistencies on the designated node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. |
|---------------------------|---|

|                        |   |
|------------------------|---|
| <b>Command Default</b> | Administration EXEC mode: Resolves any configuration inconsistencies for the admin plane configuration.<br>EXEC mode: Resolves any configuration inconsistencies for the SDR configuration. |
|------------------------|---|

|                      |                              |
|----------------------|------------------------------|
| <b>Command Modes</b> | Admin EXEC mode<br>EXEC mode |
|----------------------|------------------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 3.6.0  | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

In administration EXEC mode, the replica node for the **clear configuration inconsistency replica** command is the standby designated system controller (DSC). In EXEC mode, the replica nodes are the route processors (RPs) or distributed route processors (DRPs) that can become the designated secure domain router shelf controller (DSDRSC).

Use the **clear configuration inconsistency replica** command if there is a configuration inconsistency between the standby DSC and the current active DSC; or alternatively, if the configuration on any nodes that could become the DSC is not the same as the configuration on the current DSC. To determine if you have a configuration inconsistency, use the **show configuration inconsistency replica** command.

To clear configuration inconsistencies for the admin plane configuration, enter the **clear configuration inconsistency replica** command in administration EXEC mode.

To clear configuration inconsistencies for an SDR configuration, enter the **clear configuration inconsistency replica** command in EXEC mode for that SDR.

|                |                 |                   |
|----------------|-----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b>  | <b>Operations</b> |
|                | config-services | execute           |

The following example shows how to clear any configuration inconsistencies for the DSC configuration by using the **clear configuration inconsistency replica** command in EXEC mode:

```
RP/0/RP0/CPU0:router# clear configuration inconsistency replica location 0/rp1/cpu0
```

The replica has been repaired.

[show configuration inconsistency replica](#), on page 235

# clear configuration sessions

To clear (end) an active configuration session, use the **clear configuration sessions** command in administration EXEC or EXEC mode.

**clear configuration sessions** *session-id*

**Syntax Description** *session-id* Identifier for the configuration session to be terminated.

**Command Default** None

**Command Modes** Administration EXEC  
EXEC mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **clear configuration sessions** command to clear a configuration session. This command can be used to end the configuration sessions of another user. Any uncommitted changes to a user’s target configuration are discarded.

Use the **show configuration sessions** command to identify active configuration sessions.

When a configuration session is cleared, a message is displayed on the terminal of the terminated user. For example:

```
RP/0/RP0/CPU0:router(config)# This configuration session was terminated by user 'user_a'
from line 'aux0_0_CPU0'
```

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | execute    |

The following example shows how to clear an active configuration session. In this example, the **show configuration sessions** command displays the active configuration session. The **clear configuration sessions** command clears the active configuration session.

```
RP/0/RP0/CPU0:router# show configuration sessions

Current Configuration Session  Line      User      Date              Lock
00000211-002c409b-00000000    con0_RPs1_CPU0  UNKNOWN  Mon Feb  2 01:02:09 2009

RP/0/RP0/CPU0:router# clear configuration sessions 00000211-002c409b-00000000
```

```
session ID '00000211-002cb09b-00000000' terminated
```

# commit

To commit the target configuration to the active (running) configuration, use the **commit** command in any configuration Global Configuration mode Admin Configuration mode.

**commit** [**best-effort**] [**comment** *line*] [**confirmed** [{*seconds* | **minutes** *minutes*}] ] [**force**] [**label** *line*] [**replace**] [**save-running filename** *file\_path*]

| Syntax Description  |  |   |
|---|--|---|
| <b>best-effort</b>  |  | (Optional) Merges the target configuration with the running configuration and commits only valid changes (best effort). Some configuration changes might fail due to semantic errors.                               |
| <b>comment</b> <i>line</i>  |  | (Optional) Assigns a comment to a commit. This text comment is displayed in the commit entry displayed in the output for the <b>show configuration commit list</b> command with the optional <b>detail</b> keyword. |
| <b>confirmed</b> [ <i>seconds</i>   <b>minutes</b> <i>minutes</i> ] |  | (Optional) Commits the configuration on a trial basis for the time specified in seconds or minutes.<br><br><b>Note</b> The <b>confirmed</b> option is not available in administration configuration mode.           |
| <b>force</b>  |  | (Optional) Forces a commit operation in low-memory conditions.  |
| <b>label</b> <i>line</i>  |  | (Optional) Assigns a meaningful label. This label is displayed (instead of the autogenerated commit ID) in the output for the <b>show configuration commit list</b> .   |
| <b>replace</b>  |  | (Optional) Replaces the entire running configuration with the contents of the target configuration.   |
| <b>save-running filename</b> <i>file_path</i>                       |  | (Optional) Saves the running configuration to a specified file.   |

**Command Default** The default behavior is *pseudo-atomic*, meaning that all changes must succeed for the entire commit operation to succeed. If any errors are found, none of the configuration changes take effect.

**Command Modes** Any configuration mode  
Global Configuration mode  
Admin Configuration mode

| Command History | Release     | Modification                          |
|-----------------|-------------|---------------------------------------|
|                 | Release 2.0 | This command was introduced.          |
|                 | Release 3.2 | The <b>replace</b> keyword was added. |

| Release       | Modification  |
|---------------|---|
| Release 3.3.0 | The <b>confirmed</b> <i>minutes</i> keyword and argument were added. The <b>confirmed</b> option is not available in administration configuration mode. |
| Release 3.7.0 | Support was added for the <b>save-running filename</b> <i>file_path</i> keywords and argument in global configuration mode.                             |
| Release 3.8.0 | Support was added for the <b>save-running filename</b> <i>file_path</i> keywords and argument in administration configuration mode.                     |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Changes made during a configuration session are inactive until the **commit** command is entered. By default, the commit operation is *pseudo-atomic*, meaning that all changes must succeed for the entire commit operation to succeed. If any errors are found, none of the configuration changes takes effect.

To replace the default numeric ID for the commit, use the optional **label** keyword. This label is displayed (instead of the autogenerated commit ID) in the output for the **show configuration commit list** command.

Enter an optional comment with the **comment** keyword to provide additional information about the commit action. This comment is displayed in the output for the **show configuration commit list** command with the **detail** keyword.

Use the optional **confirmed** *minutes* keyword and argument to commit a configuration on a trial basis for a minimum of 30 seconds and a maximum of 300 seconds (5 minutes). During the trial configuration period, enter the **commit** command to confirm the configuration. If the **commit** command is not entered, then the system reverts to the previous configuration when the trial time period expires. The confirmed option is not available in administration configuration mode.

You can use the **commit** command in conjunction with the **load** command. Load a new configuration with the **load** command, and use the **commit** command with the **replace** keyword to have the loaded configuration become the active (running) configuration.

Use the optional **save-running filename** *file\_path* keywords and argument to save the running configuration to a specified file. To configure automatic saving of the configuration file on every commit, use the **configuration commit auto-save** command. If automatic saving of the configuration file is already enabled, specifying **save-running filename** *file\_path* with the **commit** command has no additional effect.

In pseudo-atomic commit, if an error occurs on one or more of the configurations in a commit, other configurations which are already part of the running configuration in the same commit are reverted.

#### Caution

Saving the running configuration to a file is CPU intensive.

#### Note

If you use the **commit** command without previously loading a target configuration, a blank configuration is committed.

**Note** If you use the **commit** command with the **replace** keyword, it does not affect the mode of an 8-port E1/T1 SPA. If the mode is E1 before using the **commit replace** command, it remains E1. However, since the default mode is T1, the router does not recognize that the mode is E1. To change the mode to T1, you must first use the **hw-module subslot cardtype e1** command to add the E1 mode into the configuration so that it correlates with the system. Then manually reload the router and it boots in T1 mode.

For more information regarding the **hw-module subslot cardtype** command, refer to *Interface and Hardware Component Command Reference for Cisco CRS Routers*.

| Task ID | Task ID   | Operations  |
|---------|---|---|
|         | Task ID for the feature or configuration mode impacted by the command | Operation for the feature or configuration mode impacted by the command |

### Committing the Target Configuration to the Active Running Configuration

The following example shows how to commit the target configuration to the active running configuration. In this example, the **commit** command saves changes to the router hostname.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# hostname router1
RP/0/RP0/CPU0:router(config)# commit

RP/0/RP0/CPU0:Feb 21 04:42:57.017 : config[65689]: %MGBL-LIBTARCFG-6-COMMIT :
Configuration committed by user 'user_a'.
Use 'show configuration commit changes 1000000033' to view the changes.
```

### Adding a Comment to a Configuration Commit

The following example shows how to use the **commit** command with the optional **comment line** keyword and argument to assign a text description to the commit operation. The comment is then displayed in the output of the **show configuration commit list** command with the **detail** keyword.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# hostname router2
RP/0/RP0/CPU0:router(config)# commit comment new name for router

RP/0/RP0/CPU0:Feb 21 04:42:57.017 : config[65689]: %MGBL-LIBTARCFG-6-COMMIT :
Configuration committed by user 'user_a'. Use 'show configuration commit
changes 1000000226' to view the changes.

RP/0/RP0/CPU0:router2(config)# end
RP/0/RP0/CPU0:router2# show configuration commit list detail

1) CommitId: 1000000226                Label: NONE
   UserId:   user_a                    Line:   con0_RP1_CPU0
   Client:   CLI                       Time:   12:59:26 UTC Wed Feb 04 2004
   Comment:  new name for router

2) CommitId: 1000000225                Label: NONE
   UserId:   user_a                    Line:   con0_RP1_CPU0
```

```
Client: CLI
Comment: NONE
```

```
Time: 12:58:32 UTC Wed Feb 04 2004
```

### Changing the Commit ID to a Text Label

The following example shows how to use the **commit** command with the optional **label line** keyword and argument to change the commit ID to a text label for easier identification. The label is then displayed in the output of the **show configuration commit list** command.

```
RP/0/RP0/CPU0:router2# configure
RP/0/RP0/CPU0:router2(config)# hostname router3
RP/0/RP0/CPU0:router2(config)# commit label new_name

RP/0/RP0/CPU0:Feb 21 04:42:57.017 : config[65689]: %MGBL-LIBTARCFG-6-COMMIT :
Configuration committed by user 'user_a'.
Use 'show configuration commit changes 1000000227' to view the changes.

RP/0/RP0/CPU0:router3(config)# end
RP/0/RP0/CPU0:router3# show configuration commit list
```

| SNo. | Label/ID        | User   | Line        | Client | Time Stamp                   |
|------|-----------------|--------|-------------|--------|------------------------------|
| 1    | <b>new_name</b> | user_a | con0_RPs1_C | CLI    | 13:00:53 UTC Wed Feb 04 2004 |
| 2    | 1000000226      | user_a | con0_RPs1_C | CLI    | 12:59:26 UTC Wed Feb 04 2004 |
| 3    | 1000000225      | user_a | con0_RPs1_C | CLI    | 12:58:32 UTC Wed Feb 04 2004 |

### Commit a Configuration for a Specified Time

The following example shows how to use the **commit** command with the optional **confirmed** keyword and number *argument*. The configuration changes are committed only for the specified number of seconds. You can then either confirm the commit operation or discard the changes.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# hostname router3
RP/0/RP0/CPU0:router(config)# commit confirmed 30
RP/0/RP0/CPU0:router3(config)# end
```

# configuration commit auto-save

To enable automatic saving of the running configuration to a specified file on every commit, use the **configuration commit auto-save** command in Global Configuration mode. To disable automatic saving of the running configuration to a specified file on every commit, use the **no** form of the command.

**Caution** Saving the running configuration to a file is CPU intensive.

```
configuration commit auto-save filename file_path
no configuration commit auto-save
```

**Syntax Description** **filename** *file\_path* Specifies the location to which to save the running configuration.

**Command Default** None

**Command Modes** Global Configuration mode  
Admin Configuration mode

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 3.7.0 | This command was introduced   |
|                 | Release 3.8.0 | This command was first supported in administration configuration mode.  |
|                 | Release 5.1.1 | The 'ftp client username' and 'ftp client password' commands can be used to pass the ftp username and password to the 'configuration commit auto-save' command. |
|                 | Release 6.1.2 | The command was enhanced to save the copy of your config with unique filename   |

**Usage Guidelines** The **configuration commit auto-save** command configures the system to save the running configuration to the specified file and location every time a **commit** command is run. Alternatively, you can save the configuration on a one-time basis by specifying the **save-running** keyword when you run the **commit** command. Use the following syntax when using **tftp**, **ftp**, or **rcp** as options: Configuration commit auto-save filename

[*tftp/ftp/rcp*]

The **configuration commit auto-save** command saves the copy of your config with unique filename. The unique filename is generated by appending timestamp to the filename.

For example:

```
router(config)# hostname T2
T2(config)# configuration commit auto-save filename disk0:/CONF_BK
T2(config)# end
```

```
T2(config)# commit
-----
ios.0/0/CPU0:/disk0:ios.0/0/CPU0disk0: $ ls -lt
total 60
-rwx----- 1 <username> eng 399 Jul 3 17:34 CONF_BK_TS.20160703-173423
```

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | write      |

The following example shows how to configure the system to save the running configuration to the file `disk0:/usr` whenever the **commit** command is used:

```
RP/0/RP0/CPU0:router(config)# configuration commit auto-save filename disk0:/usr
```

# configure

To enter global configuration mode or administration configuration mode, use the **configure** command in EXEC mode or Admin EXEC mode.

**configure** [{**exclusive** | **terminal**}]

| <b>Syntax Description</b> | <p><b>exclusive</b> (Optional) Locks the router configuration. The system configuration can be made only from the login terminal.</p> <p><b>terminal</b> (Optional) Configures the system from the login terminal. This is the default.</p> |         |              |             |                              |
|---------------------------|---|---------|--------------|-------------|------------------------------|
| <b>Command Default</b>    | If the <b>configure</b> command is entered without a keyword, the system is configured from the login terminal.   |         |              |             |                              |
| <b>Command Modes</b>      | EXEC mode<br>Admin EXEC mode  |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification  |         |              |             |                              |
| Release 2.0               | This command was introduced.  |         |              |             |                              |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Configuration modes are used to enter changes to a target configuration session and commit those changes to the running configuration. A router running Cisco IOS XR software contains multiple configurations:

- The configuration for a specific secure domain router (SDR). Each SDR has its own configuration that is modified when a user logs into an SDR and enters global configuration mode. This mode is used to configure SDR- specific features such as routing protocols.
- The administration configuration for system-wide resources and settings. Some features, such as creating SDRs, can be configured only in administration configuration mode.

## Global Configuration mode

Use the **configure** command in EXEC mode to enter Global Configuration mode and create a new target configuration for an SDR. From global configuration mode, you can enter any configuration mode. Configuration changes entered in global configuration mode impact the SDR to which the user is currently logged in.

## Admin Configuration mode

Use the **configure** command in Admin EXEC mode to enter Admin Configuration mode and create a new target configuration. From Admin EXEC mode, you can enter any configuration mode. Configuration changes entered in Admin EXEC mode can impact resources for the entire router. See the command reference documentation for a specific command to determine the impact of commands entered in Admin EXEC mode.

## Router Prompt

After you enter the **configure** command, the system appends “(config)” to the router prompt, indicating that the router is in a configuration mode. For example:

- The following prompt indicates that you are in global configuration mode for an SDR:

```
RP/0/RP0/CPU0:router(config)#
```

- The following prompt indicates that you are in administration configuration mode:

```
RP/0/RP0/CPU0:router(admin-config)#
```

## Locking a Configuration Session

To lock the configuration so that no other user can commit changes to the running configuration during your configuration session, issue the **configure** command with the **exclusive** keyword.

## Committing Changes and Returning to EXEC mode or Admin EXEC mode

Changes to the target configuration remain inactive until the **commit** command is entered. To leave global configuration or administration configuration mode and return to the EXEC mode or Admin EXEC mode prompt, issue the **end** or **exit** command; you are prompted to commit any uncommitted changes.

To leave configuration mode and return directly to EXEC mode or Admin EXEC mode without being prompted to commit changes and without saving changes to the target configuration, enter the **abort** command in any configuration mode.

The following example shows how to enter global configuration mode from EXEC mode and then enter interface configuration mode to configure an IPv4 address, the **configure** command commits the configuration, and the **end** command terminates the configuration session and return the router to EXEC mode.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tengige 0/1/0/0
RP/0/RP0/CPU0:router(config-if)# ipv4 address 1.1.1.1 255.0.0.0
RP/0/RP0/CPU0:router(config-if)# commit
RP/0/RP0/CPU0:router(config-if)# end
RP/0/RP0/CPU0:router#
```

The following example shows how to enter administration configuration mode and then configure an SDR. In this example, the user also enters SDR configuration mode.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# sdr rname
RP/0/RP0/CPU0:router(admin-config-sdr:rname)# location 0/0/*
RP/0/RP0/CPU0:router(admin-config-sdr:rname)# location 0/5/*
RP/0/RP0/CPU0:router(admin-config-sdr:rname)# end
```

# description (interface)

To add a description to an interface configuration, use the **description** command in interface configuration mode. To remove the description, use the **no** form of this command.

**description** *comment*  
**no description**

## Syntax Description

*comment* Comment or a description applied to the interface. The maximum number of characters is 1022.

## Command Default

No description is configured.

## Command Modes

Interface configuration

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **description** command to add a description to an interface configuration. The maximum number of characters is 1022.

## Task ID

| Task ID   | Operations     |
|-----------|----------------|
| interface | read,<br>write |

The following example shows how to add a description to an interface configuration. In this example, the **description** command names a Management Ethernet interface.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface mgmteth 0/
RP
1/CPU0/0
RP/0/RP0/CPU0:router(config-if)# description Management Ethernet Interface
```

[show interfaces](#)

# do

To execute an EXEC mode command from a configuration mode, use the **do** command in any configuration mode.

**do** *exec-command*

---

## Syntax Description

*exec-command* EXEC mode command to be executed.

---

## Command Default

None

## Command Modes

Any configuration mode

---

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

---

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To display the various EXEC mode commands that are available to execute with the **do** command, use the online help (?) function at the configuration mode prompt.

### Note

The **configure** and **describe** commands are not supported with the **do** command.

---

## Task ID

| Task ID   | Operations |
|---|------------|
| Task ID for the EXEC command that you are using | read       |

---

The following example shows how to execute an EXEC command from interface configuration mode. In this example, the **do** command displays output from the **show protocols** command within interface configuration mode:

```
RP/0/RP0/CPU0:router(config)# interface tengige 0/1/0/1
RP/0/RP0/CPU0:router(config-if)# do show protocols

Routing Protocol "BGP 1"

Address Family IPv4 Unicast:
  Distance: external 20 internal 200 local 200
```

# end

To terminate a configuration session and return directly to EXEC mode Admin EXEC mode , use the **end** command in any configuration mode.

**end**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Any configuration mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** Use the **end** command to exit any configuration mode and return directly to EXEC mode Admin EXEC mode. If you enter this command without committing the changes to the target configuration, you are prompted to do so:

```
Uncommitted changes found, commit them before exiting(yes/no/cancel)?[cancel]:
```

- Entering **yes** saves configuration changes to the running configuration file, exits the configuration session, and returns the router to EXEC mode Admin EXEC mode.

If errors are found in the running configuration, the configuration session does not end. To view the errors, enter the **show configuration** (config) command with the **failed** keyword.

- Entering **no** exits the configuration session and returns the router to EXEC mode Admin EXEC mode without committing the configuration changes.
- Entering **cancel** leaves the router in the current configuration session without exiting or committing the configuration changes.

**Note** Entering **Ctrl-Z** is functionally equivalent to entering the **end** command.

Use the **abort** command to exit the configuration session and return to EXEC mode Admin EXEC mode without being prompted to commit changes and without saving changes to the target configuration.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

The following example shows how to use the **end** command to end a configuration session. Changes stored in the target configuration are committed by answering **yes**.

```
RP/0/RP0/CPU0:router# configure
```

```
RP/0/RP0/CPU0:router(config)# interface tengige 0/2/0/0  
RP/0/RP0/CPU0:router(config-if)# ipv4 address 1.1.1.1 255.0.0.0  
RP/0/RP0/CPU0:router(config-if)# end
```

```
Uncommitted changes found, commit them before exiting(yes/no/cancel)? [cancel]: yes  
RP/0/RP0/CPU0:router#
```

# end-template

To exit template configuration mode and return to Global Configuration mode, use the **end-template** command in template configuration mode.

## end-template

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values.

**Command Modes** Template configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** Use the **end-template** command to exit template configuration mode after you have completed the template definition.

To define a template, use the **template** command. To apply a template to the target configuration, use the **apply-template** command. To view the contents of a template, use the **show running-config** command with the optional **template** *template-name* keyword and argument.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

The following example shows how to enter template configuration mode, define a template named “hostname-template” and then exit from template configuration mode:

```
RP/0/RP0/CPU0:router (config) # template hostname-template
RP/0/RP0/CPU0:router (config-TPL) # hostname router-cs1
RP/0/RP0/CPU0:router (config-TPL) # end-template
RP/0/RP0/CPU0:router (config) #
```

## Related Topics

[end](#), on page 164

# exit

To close an active terminal session and log off the router, use the **exit** command in EXEC mode Admin EXEC mode.

To return the router to the next higher configuration mode, use the **exit** command in any configuration mode.

**exit**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC mode  
Any configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To log off from a terminal session, enter the **exit** command in EXEC mode Admin EXEC mode.

When exiting from global or administration configuration mode to EXEC mode Admin EXEC mode, you are prompted to commit any uncommitted configuration changes.

```
Uncommitted changes found, commit them before exiting(yes/no/cancel)?[cancel]:
```

- Entering **yes** saves configuration changes to the running configuration file, exits the configuration session, and returns the router to EXEC mode Admin EXEC mode.  
If errors are found in the running configuration, the configuration session does not end. To view the errors, enter the **show configuration** (config) command with the **failed** keyword.
- Entering **no** exits the configuration session and returns the router to EXEC mode Admin EXEC mode without committing the configuration changes.
- Entering **cancel** leaves the router in the current configuration session without exiting or committing the configuration changes.

**Note** Entering the **exit** command from global configuration is functionally equivalent to entering the **end** command.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

The following example shows how to return the router to the next higher command mode. In this example, the **exit** command exits from interface configuration mode and returns to global configuration mode. The **exit** command is entered a second time to exit from global configuration mode and return to EXEC mode. Because the configuration has not been committed explicitly (with the **commit** command), the system prompts to commit the configuration changes made during the session.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tengige 0/2/0/0
RP/0/RP0/CPU0:router(config-if)# ipv4 address 1.1.1.1 255.0.0.0
RP/0/RP0/CPU0:router(config-if)# exit
RP/0/RP0/CPU0:router(config)# exit
Uncommitted changes found, commit them before exiting(yes/no/cancel)?[cancel]: yes
```

The following example shows how to use the **exit** command from EXEC mode to log off from a terminal session:

```
RP/0/RP0/CPU0:router# exit

router con0_RP1_CPU0 is now available

Press RETURN to get started.
```

# hostname

To specify or modify the hostname for the router, use the **hostname** command in Global Configuration mode.

**hostname** *name*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>name</i> New hostname for the router. |
|---------------------------|--|

|                        |   |
|------------------------|---|
| <b>Command Default</b> | The factory-assigned default hostname is “ios.” |
|------------------------|---|

|                      |                           |
|----------------------|---------------------------|
| <b>Command Modes</b> | Global Configuration mode |
|----------------------|---------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | <p>The hostname is used in prompts and default configuration filenames.</p> <p>No blank or space characters are permitted as part of a name. Do not expect case to be preserved. Uppercase and lowercase characters look the same to many Internet software applications. It may seem appropriate to capitalize a name the same way you might do in English, but conventions dictate that computer names appear all lowercase. For more information, see RFC 1178, <i>Choosing a Name for Your Computer</i>.</p> |
|-------------------------|--|

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | root-lr        | read,<br>write    |

The following example shows how to change the router hostname:

```
RP/0/RP0/CPU0:router(config)# hostname router1
```

# load

To populate the target configuration with the contents of a previously saved configuration file, use the **load** command in global configuration or administration configuration mode.

**load** *device:directory-path*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>device: directory-path</i> Storage device and directory path of the configuration file to be loaded into the target configuration. |
|---------------------------|---|

|                        |   |
|------------------------|---|
| <b>Command Default</b> | If the full path of the file is not specified, the present working directory is used. |
|------------------------|---|

|                      |  |
|----------------------|--|
| <b>Command Modes</b> | Global configuration<br>Administration configuration |
|----------------------|--|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **load** command to populate the target configuration with the contents of a previously saved configuration. When loading a file, you must specify the device, directory path, and filename of the configuration file.

Use the **commit** command in conjunction with the **load** command. Load a new configuration with the **load** command, and use the **commit** command with the **replace** keyword to have the loaded configuration become the active (running) configuration.

Use the **show configuration failed** (config) command with the optional **load** keyword to display syntax errors that occurred during the last load operation.

| <b>Task ID</b> | <b>Task ID</b>  | <b>Operations</b> |
|----------------|-----------------|-------------------|
|                | config-services | read,<br>write    |

The following example shows how to load a target configuration file into the current configuration session. The current configuration session is then populated with the contents of the file.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# load disk1:myconfig.cfg
RP/0/RP0/CPU0:router(config)# show config
```

```
Building configuration...
interface TenGigE 0/3/0/0
  description My 10 GE Interface
  ipv4 address 10.10.11.20 255.0.0.0
```

```
!  
end
```

# load commit changes

To populate the target configuration with changes from previous configuration commits, use the **load commit changes** command in global configuration or administration configuration mode.

**load commit changes** {*commit-id* | **since** *commit-id* | **last** *number-of-commits*}

| Syntax Description |                                      |  |
|--------------------|--------------------------------------|--|
|                    | <i>commit-id</i>                     | Specific configuration commit.   |
|                    | <b>since</b> <i>commit-id</i>        | Loads all configuration changes committed into the target buffer since (and including) a specific configuration commit, <i>commit-id</i> .                                       |
|                    | <b>last</b> <i>number-of-commits</i> | Loads the configuration changes into the target buffer that have been made during the last number of configuration commits specified with the <i>number-of-commits</i> argument. |

**Command Default** None

**Command Modes** Global configuration  
Administration configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 3.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **load commit changes** command to populate the target configuration with changes from previous configuration commits. The changes are not applied until you enter the **commit** command.

Use the **show configuration** (config) command to display the target configuration.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

The following example shows how to populate the target configuration with changes from a previous configuration commit:

```
RP/0/RP0/CPU0:router(config)# load commit changes since 1000000006
Building configuration...
Loading.
223 bytes parsed in 1 sec (222)bytes/sec
```

# load configuration failed

To populate the target configuration with the contents of the previous failed configuration commit, use the **load configuration failed** command in global configuration or administration configuration mode.

```
load configuration failed {commit | startup [previous number-of-reloads] [noerror]}
```

| Syntax Description | commit                            | Loads the failed configuration from the last commit.  |
|--------------------|-----------------------------------|---|
|                    | startup                           | Loads the failed configuration from the startup configuration.  |
|                    | <i>previous number-of-reloads</i> | (Optional) Loads the failed configurations from a previous router reload. Valid <i>number-of-reloads</i> values are 1 to 4. |
|                    | noerror                           | (Optional) Excludes the error reasons when the failed configurations are loaded.  |

**Command Default** None

**Command Modes** Global configuration  
Administration configuration

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 3.2   | This command was introduced.  |
|                 | Release 3.3.0 | Support was added for the <b>commit</b> keyword.<br>Support was added for the <b>startup</b> keyword.<br>Support was added for the <b>previous number-of-reloads</b> keyword and argument.<br>Support was added for the <b>noerror</b> keyword. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **load configuration failed** command to populate the target configuration with the contents of the previous failed configuration commit.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

The following example shows how to populate the target configuration with the contents of the previous failed configuration commit:

```
RP/0/RP0/CPU0:router(config)# load configuration failed startup
Loading.
32 bytes parsed in 1 sec (31)bytes/sec
```

**Related Topics**

[show configuration \(config\)](#), on page 215

# load configuration removed

To populate the target configuration with the contents of the previous removed configuration, use the **load configuration removed** command in global configuration or administration configuration mode.

**load configuration removed** *config-id*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>config-id</i> Identifier of the removed configuration to load. |
|---------------------------|---|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |  |
|----------------------|--|
| <b>Command Modes</b> | Global configuration<br>Administration configuration |
|----------------------|--|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.5.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **load configuration removed** command to populate the target configuration with the contents of the removed configuration during installation operations.

| <b>Task ID</b> | <b>Task ID</b>  | <b>Operations</b> |
|----------------|-----------------|-------------------|
|                | config-services | read,<br>write    |

The following example shows how to populate the target configuration with the contents of the removed configuration during installation:

```
RP/0/RP0/CPU0:router(config)# load configuration removed 20070316021626.cfg
```

## Related Topics

[show configuration persistent](#), on page 237

# load rollback changes

To populate the target configuration with the contents of a previous configuration, use the **load rollback changes** command in global configuration or administration configuration mode.

**load rollback changes** {*commit-id* | **last** *number-of-commits* | **to** *commit-id*}

| Syntax Description |                                      |  |
|--------------------|--------------------------------------|--|
|                    | <i>commit-id</i>                     | Rolls back the configuration changes for a specific configuration commit.  |
|                    | <b>last</b> <i>number-of-commits</i> | Rolls back to the configuration that existed before the last number of commits (specified with the <i>number-of-commits</i> argument) were made. |
|                    | <b>to</b> <i>commit-id</i>           | Rolls back to the running configuration that existed before the configuration specified with the <i>commit-id</i> argument.                      |

**Command Default** None

**Command Modes** Global configuration  
Administration configuration

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 3.2   | This command was introduced.                             |
|                 | Release 3.3.0 | Support was added for administration configuration mode. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **load rollback changes** command to load rollback configuration changes to the target configuration. This command is similar to the **rollback configuration** command. The difference between the commands is that the **load rollback changes** command copies the rollback changes to the target configuration and does not commit the changes until the changes are explicitly committed with the **commit** command.

Use the **show configuration rollback changes** command to display rollback changes.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

The following example shows how to populate the target configuration with the contents of a previous configuration:

```
RP/0/RP0/CPU0:router(config)# load rollback changes 100000004

Building configuration...
Loading.
```

```
302 bytes parsed in 1 sec (301)bytes/sec
```

# man

Cisco IOS XR software provides online help for standard command-line interface (CLI) commands using manual (man) pages. To display manual pages, use the **man** command in EXEC mode.

**man** {**command** *command-name* | **feature** [*feature-name*] | **keyword** *keywords*}

## Syntax Description

|  |  |
|--|--|
| <b>command</b> <i>command-name</i>     | Displays the manual pages for a specific command. The <i>command-name</i> argument must include the complete command name.   |
| <b>feature</b> [ <i>feature-name</i> ] | Displays all commands available in the feature. Use the <b>man</b> command with the <b>feature</b> keyword to list the available feature names.  |
| <b>keyword</b> <i>keywords</i>         | Displays a list of command names that match the keywords. Enter one or more keywords to match in a command. When entering multiple keywords, the keywords must be entered in the same sequential order as they are in the command. |

## Command Default

None

## Command Modes

EXEC

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You must have the documentation PIE installed before you can use the **man** command. If you attempt to run this command without the documentation PIE installed, an error is displayed as shown in the following example:

```
RP/0/RP0/CPU0:router# man command show install

Building index table...
Warning. Unable to get directory info for '/pkg/man' :No such file or directory.
Discarding!
man [5521656]:Building index table failed. No entries found
```

For information about installing optional software PIEs, see the *Upgrading and Managing Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*.

Use the **man** command to display the manual pages for a specific command on the basis of the command name, a feature, or a keyword. Each man page contains the command name, syntax, command mode, usage, examples, and related commands.

The **man** command queries and displays command information about the router. A query can be based on keywords or a feature. The **feature** *feature-name* keyword and argument display all commands that match the feature. For example, entering **man feature hfr-base-1** displays all commands that match the hfr-base-1 feature. The **keyword** *keywords* keyword and argument display all commands that contain the specified keyword. For example, **man keyword ipv4** displays all commands that contain ipv4.

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

The following example shows how to display the manual page for the **arp timeout** command:

```
RP/0/RP0/CPU0:router# man command arp timeout

COMMAND
arp timeout

DESCRIPTION

To specify how long dynamic entries learned on an interface remain in the
Address Resolution Protocol (ARP) cache, use the arp timeout command in
interface configuration mode. To remove the arp timeout command from the
configuration file and restore the system to its default condition with
respect to this command, use the no form of this command.

arp timeout seconds

no arp timeout<seconds>

SYNTAX DESCRIPTION

seconds
Time, in seconds, for which an entry remains in the ARP cache. The
range is from 0 to 4294967. A value of 0 means that entries are never
cleared from the cache. The default is 14400.

DEFAULTS

Entries remain in the ARP cache for 14400 seconds (4 hours).

COMMAND MODES

Interface configuration

COMMAND HISTORY

Release
Modification

Release 2.0
This command was introduced.
```

## USAGE GUIDELINES

To use the arp timeout command, you must be a member of a user group associated with the cef task ID.

For detailed information about user groups and task IDs, refer to the Configuring AAA Services on Cisco IOS-XR Software module of the Cisco IOS-XR System Security Configuration Guide.

This command is ignored when issued on interfaces that do not use ARP. Also, ARP entries that correspond to the local interface or that are statically configured by the user never time out.

The show interfaces command displays the ARP timeout value in hours:minutes:seconds, as follows:

```

* * * * * START OF LISTING * * * * *
ARP type: ARPA, ARP Timeout 04:00:00
* * * * * END OF LISTING * * * * *
```

## EXAMPLES

The following example shows how to set the ARP timeout to 3600 seconds to allow entries to time out more quickly than the default:

```

* * * * * START OF LISTING * * * * *
RP/0/RP0/CPU0:router# configure

RP/0/RP0/CPU0:router(config)# interface MgmtEth 0/RP1/CPU0/0

RP/0/RP0/CPU0:router(config-if)# arp timeout 3600
* * * * * END OF LISTING * * * * *
```

## RELATED COMMANDS

| Command          | Description   |
|------------------|---|
| clear arp-cache  | Deletes all dynamic entries from the ARP cache.                             |
| show arp (cache) | Displays the entries in the ARP table.                                      |
| show interfaces  | Displays statistics for all interfaces configured on the networking device. |

## more

To display the contents of a file, use the **more** command in EXEC or administration EXEC mode.

```
more [{/ascii | /binary | /ebcdic}] filesystem:directory-path location [{node-id | all}]{| begin
regular-expression | | exclude regular-expression | | include regular-expression}
```

| Syntax Description                              |  |
|---|--|
| <b>/ascii</b>                                   | (Optional) Displays a binary file in ASCII format.   |
| <b>/binary</b>                                  | (Optional) Displays a file in hexadecimal or text format.  |
| <b>/ebcdic</b>                                  | (Optional) Displays a binary file in ebcdic format.  |
| <i>filesystem:directory-path</i>                | File system location of the file to be displayed. Include the file system alias for the <i>filesystem</i> argument, followed by a colon, and the directory path of the file to be displayed. |
| <b>location</b> [ <i>node-id</i>   <b>all</b> ] | (Optional) Displays the contents of a file on a designated node or all nodes.  |
| <i>regular-expression</i>                       | (Optional) Regular expression found in the file.   |
|   | Vertical bar (the “pipe” symbol) indicates that an output processing specification follows.  |
| <b>begin</b>                                    | (Optional) Begins unfiltered output of the <b>more</b> command with the first line that contains the regular expression.   |
| <b>exclude</b>                                  | (Optional) Displays output lines that do not contain the regular expression.   |
| <b>include</b>                                  | (Optional) Displays output lines that contain the regular expression.  |

**Command Default** None

**Command Modes** EXEC

Administration EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **more** command to display any text file, especially an ASCII file stored on the router or accessible through the network. The file can be a configuration file or any other text file.

## Filtering Output

This table shows filter options for the output displayed by the **more** command.

**Table 17: Filtering Options**

| Command   | Purpose   |
|---|---|
| <b>more</b> <i>filesystem:</i>   <b>begin</b> <i>regular-expression</i>   | Begins unfiltered output of the <b>more</b> command with the first line that contains the regular expression. |
| <b>more</b> <i>filesystem:</i>   <b>exclude</b> <i>regular-expression</i> | Displays output lines that do not contain the regular expression.   |
| <b>more</b> <i>filesystem:</i>   <b>include</b> <i>regular-expression</i> | Displays output lines that contain the regular expression.  |

### Adding a Filter at the --More-- Prompt

You can also specify a filter at the --More-- prompt of a **more** command output. To filter output from the --More-- prompt, enter a forward slash ( / ) followed by a regular expression. The filter remains active until the command output finishes or is interrupted (using **Ctrl-Z** or **Ctrl-C**).

- A second filter cannot be specified at a --More-- prompt if a filter has already been specified at the original command or at a previous --More-- prompt.
- The minus sign ( - ) preceding a regular expression displays output lines that do not contain the regular expression.
- The plus sign ( + ) preceding a regular expression displays output lines that contain the regular expression.

#### Note

After you specify a filter for a **more** command, you cannot specify another filter at the next --More-- prompt. The first specified filter remains until the **more begin** command output finishes or until you interrupt the output. The use of the keyword does not constitute a filter.

#### Task ID

#### Task ID Operations

filesystem execute

The following example shows partial sample output from the **more** command. The output displays a configuration file saved on the hard disk drive.

```
SDR# more harddisk:/user/alternate.cfg

## Related Topics

[show](#), on page 208

## pwd (config)

To display the current configuration submode from a configuration submode, use the **pwd** command in any supported configuration submode.

### pwd

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Any subconfiguration mode

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The following example shows how to use the **pwd** command from an interface configuration submode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tengige 0/6/4/5
RP/0/RP0/CPU0:router(config-if)# pwd

interface TenGigE0/6/4/5
RP/0/RP0/CPU0:router(config-if)#
```

## rollback configuration

To roll back the running configuration to a previous configuration, use the **rollback configuration** command in EXEC or administration EXEC mode.

**rollback configuration** {**last** *number-of-commits* | **to** *commit-id*} {**best-effort** | **force**} [**label** *label*]  
**comment** *comment*

### Syntax Description

|                                      |   |
|--------------------------------------|---|
| <b>last</b> <i>number-of-commits</i> | Rolls back to the configuration that existed before the last number of commits (specified with the <i>number-of-commits</i> argument) were made.                                    |
| <b>to</b> <i>commit-id</i>           | Rolls back to the running configuration that existed before the configuration specified with the <i>commit-id</i> argument.   |
| <b>best-effort</b>                   | Rolls back to the configuration that existed before the last n commits, and commits only valid changes (best effort). Some configuration changes might fail due to semantic errors. |
| <b>force</b>                         | (Optional) Specifies to override any commit blocks.   |
| <b>label</b> <i>label</i>            | (Optional) Assigns a text label to this rollback. The <i>label</i> argument must begin with a letter.   |
| <b>comment</b> <i>comment</i>        | (Optional) Assigns a text comment to this rollback. The <i>comment</i> argument can be up to 60 characters long.  |

### Command Default

None

### Command Modes

Administration EXEC

### Command History

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.                        |
| Release 3.5.0 | This command was added to administration EXEC mode. |

| Release       | Modification                              |
|---------------|---|
| Release 4.0.0 | The <b>best-effort</b> keyword was added. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Each time the **commit** command is entered, a commit ID is assigned to the new configuration. You can revert the system to the configuration of a previous commit ID with the **rollback configuration** command:

- Use the **to** keyword to revert to the configuration that existed *before* the configuration specified with the *commit-id* argument.
- Use the **last** keyword to revert to the configuration that existed *before* the last number of configuration commits (specified with the *number-of-commits* argument) were made.
- Use **show configuration commit list** to display a list of the commit IDs available for rollback operations.

**Note** The most recent 100 commits are retained by the system. As new commit IDs are added, the oldest commit IDs are discarded and are no longer available for rollback operations.

Use the **force** keyword to override commits that would fail otherwise. This is useful in the event of a low-memory condition on the router, to revert to a commit that would remove a configuration that caused the low-memory condition.

**Note** The rollback operation may fail if you try to rollback two (or more) commits where the individual commits involve the configuration and removing of the configuration of the same item, and there is a dependency of one item over another in any of the individual commit operations.

| Task ID | Task ID                           | Operations     |
|---------|-----------------------------------|----------------|
|         | root-lr (EXEC)                    | read,<br>write |
|         | root-system (administration EXEC) | read,<br>write |

### Rolling Back to a Specific Commit ID

The following example shows how to roll back to a specific commit ID. In this example, the **show configuration commit list** command displays the available rollback points. The configuration is then rolled back to a prior commit with the **rollback configuration** command.

```
RP/0/RP0/CPU0:router# show configuration commit list
```

```

SNo.  Label/ID      User      Line      Client      Time Stamp
~~~~  ~~~~~~      ~~~~      ~~~~      ~~~~~~      ~~~~~~
1     1000000009    lab       con0_RPs0_C  Rollback    02:41:08 UTC Sun Sep 26 2009
2     1000000008    lab       con0_RPs0_C  CLI         02:40:30 UTC Sun Sep 26 2009
3     1000000007    lab       con0_RPs0_C  CLI         02:39:54 UTC Sun Sep 26 2009

```

```
4 1000000006 lab con0_RPs0_C Rollback 02:38:40 UTC Sun Sep 26 2009
5 1000000005 lab con0_RPs0_C CLI 02:37:35 UTC Sun Sep 26 2009
6 1000000004 lab con0_RPs0_C CLI 02:37:04 UTC Sun Sep 26 2009
```

```
RP/0/RP0/CPU0:router# rollback configuration to 1000000008
```

```
Loading Rollback Changes.

0000010' to view the changes.
```

```
Updated Commit database in 1 sec
Configuration successfully rolled back to '1000000008'.
```

### Rolling Back to a Span of Configuration Commits

The following example shows how to roll back to the configuration that existed prior to the last two configuration commits:

```
RP/0/RP0/CPU0:router# rollback configuration last 2
```

```
Loading Rollback Changes.
Loaded Rollback Changes in 1 sec
Committing.
1 items committed in 1 sec (0)items/sec
Updating.
Updated Commit database in 1 sec
Configuration successfully rolled back 2 commits.
```

# root

To return to configuration mode from a configuration submode, use the **root** command in any supported configuration submode.

## root

### Syntax Description

This command has no keywords or arguments.

### Command Default

None

### Command Modes

Any subconfiguration mode except the following:

- The **root** command is not available under the route-policy submodes, because it requires the **end-policy** command to exit out of the configuration.
- The **root** command is not available in template submode, but is available in the submodes configurable under the template submode.

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.4.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

### Task ID

| Task ID         | Operations |
|-----------------|------------|
| config-services | read       |

The following example shows how to use the **root** command to return to configuration mode from the interface configuration submode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tengige 0/1/0/0
RP/0/RP0/CPU0:router(config-if)# root
RP/0/RP0/CPU0:router(config)#
```

The following example shows how to use the **root** command from a submode configurable under the template submode. In this example, the **root** command is used to return to configuration mode from the username submode:

### Note

The recommended range for a user-defined username is 2-253 characters.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# template test
RP/0/RP0/CPU0:router(config-TPL)# username xyz
```

```
RP/0/RP0/CPU0:router(config-un)# root
RP/0/RP0/CPU0:router(config)# show conf
```

```
Building configuration...
template test
  username xyz
  !
end-template
end
```

---

**Tip** The **root** command is not available from the template submode, but is available in the submodes configurable under the template submode.

---

# save configuration

To save the contents of a configuration to a file, use the **save configuration** command in global configuration or administration configuration mode.

**save configuration** [**running**] *device:directory-path*

| <b>Syntax Description</b> | <b>running</b> (Optional) Saves the contents of the running configuration.  |         |              |                 |                              |
|---------------------------|---|---------|--------------|-----------------|------------------------------|
|                           | <i>device: directory-path</i> Storage device and directory path of the configuration file to be loaded into the target configuration.   |         |              |                 |                              |
| <b>Command Default</b>    | None  |         |              |                 |                              |
| <b>Command Modes</b>      | Global configuration<br>Administration configuration  |         |              |                 |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.3.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 3.3.0   | This command was introduced. |
| Release                   | Modification  |         |              |                 |                              |
| Release 3.3.0             | This command was introduced.  |         |              |                 |                              |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>To save a configuration to a file, use the <b>save configuration</b> command.</p> <p>To save a configuration that failed to a file, use the <b>save configuration failed</b> command.</p> |         |              |                 |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>config-services</td> <td>read</td> </tr> </tbody> </table>   | Task ID | Operations   | config-services | read                         |
| Task ID                   | Operations  |         |              |                 |                              |
| config-services           | read  |         |              |                 |                              |

The following example shows the configuration saved to disk0: from global configuration mode:

```
RP/0/RP0/CPU0:router(config)# save configuration disk0:sample3
Destination file name (control-c to abort): [/sample3]?
Building configuration.
1 lines built in 1 second
[OK]
```

The following example shows the configuration saved to disk1 from administration EXEC mode:

```
RP/0/RP0/CPU0:router(admin-config)# save configuration disk1:sample4
Destination file name (control-c to abort): [/sample4]?
Building configuration.
1 lines built in 1 second
```

[OK]

# save configuration commit changes

To save the changes for a commit, or a series of commits, to a file, use the **save configuration commit changes** command in global configuration or administration configuration mode.

**save configuration commit changes** {*commit-id* | **last** *number-of-commits* | **since** *commit-id*}  
*device:directory-path*

| Syntax Description |                                      |   |
|--------------------|--------------------------------------|---|
|                    | <i>commit-id</i>                     | Specific commit ID.   |
|                    | <b>last</b> <i>number-of-commits</i> | Saves changes made in the most recent <i>number-of-commits</i> .  |
|                    | <b>since</b> <i>commit-id</i>        | Saves changes made since (and including) a specific <i>commit-id</i> .                                  |
|                    | <i>device: directory-path</i>        | Storage device and directory path of the configuration file to be loaded into the target configuration. |

**Command Default** None

**Command Modes** Global configuration  
Administration configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |
|                 | Release 3.4.0 | No modification.             |
|                 | Release 3.5.0 | No modification.             |
|                 | Release 3.6.0 | No modification.             |
|                 | Release 3.7.0 | No modification.             |
|                 | Release 3.8.0 | No modification.             |
|                 | Release 3.9.0 | No modification.             |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **save configuration commit changes** command to save the changes made in a commit operation to a file. You can specify a specific commit ID, all the changes since a specified commit ID, or the changes that occurred during the last *n* commits.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

The following example saves the changes from the last two commit operations to disk0:

```
RP/0/RP0/CPU0:router(admin-config)# save configuration commit changes last 2 disk0:sample1

Destination file name (control-c to abort): [/sample1]?
Building configuration.
5 lines built in 1 second
[OK]
```

# save configuration failed

To save the contents of the failed configuration, use the **save configuration failed** command in global configuration or administration configuration mode.

```
save configuration failed [{load | noerrors | startup [previous number] [noerror]}]
device:directory-path
```

| Syntax Description | load                          | (Optional) Saves the failed configuration (syntax errors) in the last reload.  |
|--------------------|-------------------------------|--|
|                    | noerrors                      | (Optional) Excludes the error reasons from the saved configuration.  |
|                    | startup                       | (Optional) Saves the failed configuration during startup.  |
|                    | previous number               | (Optional) Saves a failed startup configuration from the specified previous sessions. The <i>number</i> argument is a value between 1 and 4 that indicates how many failed startup configurations to save. |
|                    | <i>device: directory-path</i> | Storage device and directory path of the configuration file to be saved.   |

**Command Default** None

**Command Modes** Global configuration  
Administration configuration

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 3.3.0 | This command was introduced.   |
|                 | Release 3.5.0 | The <b>startup</b> keyword was added in administration configuration mode. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To save a configuration to a file, use the **save configuration** command.

To save a configuration that failed to a file, use the **save configuration failed** command.

To save a configuration that failed during startup to a file, use the **save configuration failed** command with the **startup** keyword.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

The following example saves the failed configuration to disk0:

```
RP/0/RP0/CPU0:router(admin-config)# save configuration failed disk1:/configs
```

If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |         |              |                 |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>config-services</td> <td>read</td> </tr> </tbody> </table>   | Task ID | Operations   | config-services | read                         |
| Task ID                   | Operations  |         |              |                 |                              |
| config-services           | read  |         |              |                 |                              |

The following example shows the configuration saved to disk0:

```
RP/0/RP0/CPU0:router(admin-config)# save configuration merge disk0:sample3
Destination file name (control-c to abort): [/sample3]?
Building configuration.
1 lines built in 1 second
[OK]
```

# save configuration removed

To save the contents of a removed configuration to a file, use the **save configuration removed** command in global configuration or administration configuration mode.

**save configuration removed** *removed-configuration-file* *device:directory-path*

| Syntax Description                |   |
|-----------------------------------|---|
| <i>removed-configuration-file</i> | Specifies the name of the removed configuration file.   |
| <i>device:directory-path</i>      | Storage device and directory path of the configuration file to be loaded into the target configuration. |

**Command Default** None

**Command Modes** Global configuration  
Administration configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When a package is deactivated, the configuration belonging to that package is removed from the running configuration and saved to a file. To save a copy of the removed configuration file, use the **save configuration removed** command.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

To view a list of the available removed configuration files, use the **save configuration removed** command followed by a question mark:

```
RP/0/RP0/CPU0:router(config)# save configuration removed ?
  20051208042507.cfg  Removed configuration.
  20051208044553.cfg  Removed configuration.
  <cr>
```

In the following example, a removed configuration is saved to disk0: and assigned the filename "sample3.":

```
RP/0/RP0/CPU0:router(config)# save configuration removed 20051208042507.cfg disk0:sample3
  Destination file name (control-c to abort): [/sample3]?
```

```
Building configuration.  
1 lines built in 1 second  
[OK]
```

# save rollback changes

To save the rollback changes, use the **save rollback changes** command in global configuration or administration configuration mode.

**save rollback changes** {*commit-id* | **last** *number-of-commits* | **to** *commit-id*} *device:directory-path*

| Syntax Description |                                      |   |
|--------------------|--------------------------------------|---|
|                    | <i>commit-id</i>                     | Specific commit ID.   |
|                    | <b>last</b> <i>number-of-commits</i> | Saves the rollback changes for the last <i>n</i> commits  |
|                    | <b>to</b> <i>commit-id</i>           | Saves rollback changes up to a specific <i>commit-id</i> .  |
|                    | <i>device: directory-path</i>        | Storage device and directory path of the configuration file to be loaded into the target configuration. |

**Command Default** None

**Command Modes** Global configuration  
Administration configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **save rollback changes** command to save the changes that would be made in a configuration rollback to a specific commit point or for a series of commits.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

The following example shows that the rollback changes for the commit point 5 are saved to the file sample4 on disk0:

```
RP/0/RP0/CPU0:router(admin-config)# save rollback changes last 1 disk0:sample4

Destination file name (control-c to abort): [/sample4]?
Building configuration.
6 lines built in 1 second
[OK]
```

# set default-afi

To set the default address family identifier (AFI) for the current session, use the **set default-afi** command in EXEC mode.

```
set default-afi {all | ipv4 | ipv6}
```

| Syntax Description |  |
|--------------------|--|
| <b>all</b>         | Sets the default AFI to IPv4 and IPv6 for the current session.                     |
| <b>ipv4</b>        | Sets the default AFI to IPv4 for the current session. This is the default setting. |
| <b>ipv6</b>        | Sets the default AFI to IPv6 for the current session.                              |

| Command Default |  |
|-----------------|--|
|                 | The default AFI setting is set to IPv4 for all sessions. |

| Command Modes |      |
|---------------|------|
|               | EXEC |

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

| Usage Guidelines |   |
|------------------|---|
|                  | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |

Use the **set default-afi** command to set the default AFI for the current session. This command acts as a keystroke shortcut for **show** commands. If the default AFI setting is set to IPv4, then you would not have to specify the **ipv4** keyword for **show** commands that support the **ipv4** keyword. For example, if the AFI setting is set to IPv4, you could issue the **show route** command without specifying the **ipv4** keyword to display IPv4 routes in the Routing Information Base (RIB).

Use the **show default-afi-safi-vrf** command to display the default AFI setting.

| Task ID | Task ID        | Operations     |
|---------|----------------|----------------|
|         | basic-services | read,<br>write |

The following example shows how to set the default AFI to IPv6:

```
RP/0/RP0/CPU0:router# set default-afi ipv6

%% Default Address Family Identifier is set to 'ipv6'
```

## Related Topics

# set default-safi

To set the default subaddress family identifier (SAFI) for the current session, use the **set default-safi** command in EXEC mode.

```
set default-safi {all | multicast | unicast}
```

| Syntax Description |  |
|--------------------|--|
| <b>all</b>         | Sets the default SAFI to multicast and unicast for the current session.                |
| <b>multicast</b>   | Sets the default SAFI to multicast for the current session.                            |
| <b>unicast</b>     | Sets the default SAFI to unicast for the current session. This is the default setting. |

**Command Default** The default SAFI setting is set to unicast for all sessions.

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **set default-safi** command to set the default SAFI setting for the current session. This command acts as a keystroke shortcut for **show** commands. If the default SAFI setting is set to unicast, you would not have to specify the **unicast** keyword for **show** commands that support that keyword. For example, if the default SAFI setting is set to unicast, you could issue the **show router** command without specifying the **unicast** keyword to display information about unicast address prefixes in the Routing Information Base (RIB).

Use the **show default-afi-safi-vrf** command to display the default SAFI setting.

| Task ID | Task ID        | Operations     |
|---------|----------------|----------------|
|         | basic-services | read,<br>write |

The following example shows how to set the default SAFI to multicast:

```
RP/0/RP0/CPU0:router# set default-safi multicast
%% Default Sub-Address Family Identifier is set to 'multicast'
```

## set default-vrf

To set the default VPN routing and forwarding (VRF) instance for the current session, use the **set default-vrf** command in EXEC mode.

```
set default-vrf {name | none}
```

### Syntax Description

*name* Default VPN routing and forwarding name.

**none** Sets the default VPN routing and forwarding name to empty.

### Command Default

The default VRF setting is set to empty.

### Command Modes

EXEC

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.3.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **set default-vrf** command to set the default VRF setting for the current session. This command acts as a keystroke shortcut for **show** commands. For example, if the default VRF is configured, you can issue the **show route** command without specifying the VRF name.

When the default VRF for the session is set to **none**, then IPv4 routes for the system default VRF are displayed.

#### Note

To override the default VRF setting, specify the VRF name in the **show** command.

Use the **show default-afi-safi-vrf** command to display the default VRF setting.

### Task ID

| Task ID        | Operations     |
|----------------|----------------|
| basic-services | read,<br>write |

In the following example, the default VRF is set to “dft\_vrf.”

```
RP/0/RP0/CPU0:router# set default-vrf dft_vrf

%% Default Virtual Routing/Forwarding is set to 'dft_vrf'
```

In the following command, the **show route** command is entered without specifying a VRF name. The results for the “dft\_vrf” VRF are displayed because the default VRF was set to “dft\_vrf.”

```
RP/0/RP0/CPU0:router# show route ipv4
```

```
% No matching vrf found
```

When the default VRF for the session is set to **none**, the system default VRF routes are displayed. In the following example, the default VRF is set to (empty) and the **show route** command displays the system default VRF information:

```
RP/0/RP0/CPU0:router# set default-vrf none
```

```
%% Default Virtual Routing/Forwarding is set to ''
```

```
RP/0/RP0/CPU0:router# show route ipv4
```

```
Codes: C - connected, S - static, R - RIP, M - mobile, B - BGP  
D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area  
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2  
E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP  
i - ISIS, L1 - IS-IS level-1, L2 - IS-IS level-2  
ia - IS-IS inter area, su - IS-IS summary null, * - candidate default  
U - per-user static route, o - ODR, L - local
```

```
Gateway of last resort is 12.29.0.1 to network 0.0.0.0
```

```
S* 0.0.0.0/0 [1/0] via 12.29.0.1, 00:31:30

# show

To display information about the system configuration or operational state, use the **show** command in EXEC mode, administration EXEC mode, or any configuration mode.

**show** *command* [{ | **begin** *regular-expression* | | **exclude** *regular-expression* | | **file** *filesystem:* | | **include** *regular-expression* }]

## Syntax Description

|                                |  |
|--------------------------------|--|
| <i>command</i>                 | Supported <b>show</b> command.   |
|                                | Vertical bar (the “pipe” symbol) indicates that an output processing specification follows.  |
| <i>regular-expression</i>      | (Optional) Regular expression found in <b>show</b> command output.   |
| <b>begin</b>                   | (Optional) Begins unfiltered output of the <b>show</b> command with the first line that contains the regular expression.   |
| <b>exclude</b>                 | (Optional) Displays output lines that do not contain the regular expression.   |
| <b>file</b> <i>filesystem:</i> | (Optional) Writes the output lines that contain the regular expression to the specified file on the specified file system. Include the file system alias for the <i>filesystem</i> argument, followed by a colon, and the directory path and filename. |
| <b>include</b>                 | (Optional) Displays output lines that contain the regular expression.  |

## Command Default

None

## Command Modes

EXEC

Administration EXEC

Any configuration

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show** commands display information about the system and its configuration. To display a list of the available **show** commands, use the question mark (?) online help function.

## Filtering Output

Search options for the **show** command are shown in this table.

**Table 18: Show Command Search Options**

| Command  | Purpose   |
|--|---|
| <b>show command</b>   <b>begin</b> <i>regular-expression</i>   | Begins unfiltered output of the <b>show</b> command command with the first line that contains the regular expression. |
| <b>show command</b>   <b>exclude</b> <i>regular-expression</i> | Displays output lines that do not contain the regular expression.   |
| <b>show command</b>   <b>include</b> <i>regular-expression</i> | Displays output lines that contain the regular expression.  |
| <b>show command</b>   <b>file</b> <i>filesystem:</i>           | Writes the output lines that contain the regular expression to the specified file on the specified file system.       |

## Adding a Filter at the --More-- Prompt

You can also specify a filter at the --More-- prompt of a **show** command output. To filter output from the --More-- prompt, enter a forward slash (/) followed by a regular expression. The filter remains active until the command output finishes or is interrupted (using **Ctrl-Z** or **Ctrl-C**).

- If a filter is specified at the original command or a previous --More-- prompt, a second filter cannot be applied.
- The use of the **begin** keyword does not constitute a filter.
- The minus sign (–) preceding a regular expression displays output lines that do not contain the regular expression.
- The plus sign (+) preceding a regular expression displays output lines that contain the regular expression.

## Task ID

| Task ID   | Operations |
|---|------------|
| Task ID for the feature used with the <b>show</b> command | read       |

For example, the **show interfaces** command requires read privileges in the interface task ID.

The following example shows output from the **show interface | include protocol** command. In this example, the **show** command includes only lines in which the regular expression “protocol” appears:

```
RP/0/RP0/CPU0:router# show interface | include protocol

Null0 is up, line protocol is up
0 drops for unrecognized upper-level protocol
TenGigE0/2/0/0 is administratively down, line protocol is administratively down
0 drops for unrecognized upper-level protocol
TenGigE0/2/0/1 is administratively down, line protocol is administratively down
0 drops for unrecognized upper-level protocol
TenGigE0/2/0/2 is administratively down, line protocol is administratively down
0 drops for unrecognized upper-level protocol
TenGigE0/2/0/3 is administratively down, line protocol is administratively down
0 drops for unrecognized upper-level protocol
```

```
FastEthernet0/RP0/CPU0/0 is administratively down, line protocol is administratively
down
FastEthernet0/RP0/CPU0/0 is administratively down, line protocol is administratively
down
0 drops for unrecognized upper-level protocol
```

On most systems, the **Ctrl-Z** key combination can be entered at any time to interrupt the output and return to EXEC mode. For example, use the **show running-config | begin hostname** command to start the display of the running configuration file at the line containing the hostname setting, then use **Ctrl-Z** when you get to the end of the information you are interested in.

The following example shows sample output from the **show configuration running | begin line** command. The output begins with unfiltered output from the first line that contains the regular expression “line.” In this example, at the --More-- prompt, a new search is specified that begins with output lines that contain the regular expression “ipv4.”

---

**Note** The use of the **begin** keyword does not constitute a filter.

---

```
RP/0/RP0/CPU0:router# show configuration running | begin line

Building configuration...
line console
  exec-timeout 120 120
!
logging trap
--More--
/ipv4

filtering...
route ipv4 0.0.0.0 255.255.0.0 pos0/2/0/0
interface TenGigE0/2/0/0
  ipv4 address 172.19.73.215 255.255.0.0
end
```

### Related Topics

[more](#), on page 181

# show aliases

To display all defined aliases or the aliases defined in a specified mode, use the **show aliases** command in EXEC mode.

**show aliases**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Displays all aliases currently configured on the system.

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show aliases** command to display all aliases currently configured on the system.

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

The following example illustrates sample output from the **show aliases** command. The output displays a summary of all the command aliases configured.

```
RP/0/RP0/CPU0:router# show aliases

exec mode aliases:
ipv4_brief          show ipv4 interface brief

interface mode aliases:
sample_int         tengige 0/2/0/0
```

## Related Topics

[alias](#), on page 139

# show commit changes diff

To display the difference between the currently running configuration and the target configuration (the configuration before the commit command), use the **show commit changes diff** command in the appropriate mode.

**show commit changes diff**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Global Configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.0 | This command was introduced. |
|                 | Release 5.2.1 | Class-map was supported.     |
|                 | Release 5.3.1 | Policy-map was supported.    |

**Usage Guidelines** The **show commit changes diff** command displays the output by prepending symbols based on the configuration event:

| Symbol | Event                |
|--------|----------------------|
| +      | Add                  |
| -      | Delete               |
| <-     | Modify for old value |
| +>     | Modify for new value |

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

This example shows the output of **show commit changes diff** command for adding a policy-map:

```
RP/0/RP0/CPU0:router# show commit changes diff
+ policy-map pshow
+ class c1
+ set precedence 1
+ !
+ class c2
+ police rate 100 kbps
+ !
+ !
+ class class-default
+ !
```

```
+ end-policy-map
+ !
```

This example shows the output of **show commit changes diff** command for adding a class-map:

```
RP/0/RP0/CPU0:router# show commit changes diff
!
+ class-map match-any c
+ match precedence 1 2 3
+ match qos-group 2
+ end-class-map
end
```

This example shows the output of **show commit changes diff** command for deleting a policy-map:

```
RP/0/RP0/CPU0:router# show commit changes diff
- policy-map pshow
- class c1
- set precedence 1
- !
- class c2
- police rate 100 kbps
- !
- !
- class class-default
- !
- end-policy-map
- !
```

This example shows the output of **show commit changes diff** command for deleting a class-map:

```
RP/0/RP0/CPU0:router# show commit changes diff
!
- class-map match-any c1
- match precedence 1
- end-class-map
end
```

This example shows the output of **show commit changes diff** command for modifying a policy-map:

```
RP/0/RP0/CPU0:router# show commit changes diff
policy-map pshow
- class c1
- set precedence 1
!
class c2
<- police rate 100 kbps
+> police rate 200 kbps
!
+ set precedence 1
!
+ class c3
+ shape average 100 kbps
!
end-policy-map
!
end
```

This example shows the output of **show commit changes diff** command for modifying a class -map:

**show commit changes diff**

```
RP/0/RP0/CPU0:router# show commit changes diff
policy-map pshow
class-map match-any c
- match precedence 1 2 3
<- match qos-group 2
+> match qos-group 2 4 5
+ match dscp 1 2 3
end-class-map
```

# show configuration (config)

To display information about the current configuration session (target configuration), use the **show configuration** command in any configuration mode.

**show configuration** [**merge**] [**running**]

| <b>Syntax Description</b> | <p><b>merge</b> (Optional) Displays the configuration that occurs if the contents of the uncommitted changed (target configuration) are committed to the running configuration.</p> <p><b>running</b> (Optional) Displays the running (committed) configuration.</p>  |         |              |                |                              |
|---------------------------|---|---------|--------------|----------------|------------------------------|
| <b>Command Default</b>    | When the <b>show configuration</b> command is entered without an argument, the uncommitted changes to the target configuration are displayed.   |         |              |                |                              |
| <b>Command Modes</b>      | Any configuration   |         |              |                |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 2.0    | This command was introduced. |
| Release                   | Modification  |         |              |                |                              |
| Release 2.0               | This command was introduced.  |         |              |                |                              |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>Use the <b>show configuration</b> command to display details on uncommitted configuration changes.</p> <p>Use the <b>show configuration</b> command with the <b>running</b> keyword to display the running (active) configuration.</p> <p>Prior to committing the target configuration, use the <b>show configuration</b> command with the <b>merge</b> keyword from any configuration mode to display the result of merging the target configuration with the running configuration.</p> |         |              |                |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>basic-services</td> <td>read</td> </tr> </tbody> </table>  | Task ID | Operations   | basic-services | read                         |
| Task ID                   | Operations  |         |              |                |                              |
| basic-services            | read  |         |              |                |                              |

In this example, the **show configuration** command displays uncommitted changes made during a configuration session:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tengige0/3/0/3
RP/0/RP0/CPU0:router(config-if)# description faq
RP/0/RP0/CPU0:router(config-if)# ipv4 address 10.10.11.20 255.0.0.0
RP/0/RP0/CPU0:router(config-if)# show configuration

Building configuration...
interface TenGigE0/3/0/3
  description faq
  ipv4 address 10.10.11.20 255.0.0.0
```

```
end
```

The following example shows sample output from the **show configuration** command with the optional **merge** keyword. The command is entered during a configuration session. The output displays the result of merging the target and running configuration, without committing the changes.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tengige0/3/0/3
RP/0/RP0/CPU0:router(config-if)# description faq
RP/0/RP0/CPU0:router(config-if)# ipv4 address 10.10.11.20 255.0.0.0
RP/0/RP0/CPU0:router(config-if)# show configuration merge
```

```
Building configuration...
hostname router
interface TenGigE0/0/0/0
  ipv4 address 1.2.3.4 255.0.0.0
  exit
interface TenGigE0/3/0/3
  description faq
  ipv4 address 1.1.1.1 255.0.0.0
  shutdown
end
```

```

# show configuration commit changes

To display the changes made to the running configuration by previous configuration commits, a configuration commit, or for a range of configuration commits, use the **show configuration commit changes** command in EXEC, administration EXEC, administration configuration, or global configuration mode.

**show configuration commit changes** {*commit-id* | **since** *commit-id* | **last** *number-of-commits* } [**diff**]

| Syntax Description                   |   |   |
|--------------------------------------|---|---|
| <b>since</b>                         |   | Displays all changes committed to the running configuration since (and including) a specific configuration commit.  |
| <i>commit-id</i>                     |   | Displays configuration changes for a specific configuration commit.   |
| <b>last</b> <i>number-of-commits</i> |   | Displays the changes made to the running configuration during the last number of configuration commits specified for the <i>number-of-commits</i> argument. |
| <b>diff</b>                          |   | (Optional) Displays added lines, changed lines, and deleted lines.  |
| <b>Command Default</b>               | None  |   |
| <b>Command Modes</b>                 | EXEC<br>Administration EXEC<br>Administration configuration<br>Global configuration   |   |
| <b>Command History</b>               | <b>Release</b>  | <b>Modification</b>   |
|                                      | Release 2.0   | This command was introduced.  |
|                                      | Release 3.2   | Command name was modified to include the <b>configuration</b> keyword. This command was previously named <b>show commit changes</b> .                       |
|                                      | Release 3.3.0   | Support was added for administration EXEC and administration configuration modes.<br>Support was added for the <b>diff</b> keyword.                         |
| <b>Usage Guidelines</b>              | Each time a configuration is committed with the <b>commit</b> command, the configuration commit operation is assigned a commit ID. The <b>show configuration commit changes</b> command displays the configuration changes made since the specified commit. |   |

## show configuration commit changes

To display a list of the available commit IDs, enter the **show configuration commit list** command. You can also display the commit IDs by entering the **show configuration commit changes** command with the online help function (?).

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

The following example shows sample output from the **show configuration commit changes** command. The output displays commit IDs.

```
RP/0/RP0/CPU0:router# show configuration commit list

SNo. Label/ID      User      Line      Client      Time Stamp
~~~~ ~~~~~~      ~~~~      ~~~~      ~~~~~~      ~~~~~~
1    1000000077    lab      con0_RPs1_C  CLI          15:42:45 UTC Fri Jan 30 2009
2    1000000076    lab      con0_RPs1_C  Rollback     15:30:39 UTC Fri Jan 30 2009
3    1000000075    lab      con0_RPs1_C  Rollback     15:25:26 UTC Fri Jan 30 2009
4    1000000074    lab      con0_RPs1_C  Rollback     15:04:29 UTC Fri Jan 30 2009
5    1000000073    lab      con0_RPs1_C  CLI          14:49:07 UTC Fri Jan 30 2009
6    1000000072    lab      con0_RPs1_C  CLI          14:48:35 UTC Fri Jan 30 2009
```

The following example shows sample output from the **show configuration commit changes** command with the *commit-id* argument. In this example, the output displays the changes made in the configuration commit assigned commit ID 1000000077.

```
RP/0/RP0/CPU0:router# show configuration commit changes 1000000077

Building configuration...
alias exec shrun show configuration running
alias exec shver show version
end
```

The following example shows sample output from the **show configuration commit changes** command with the **since** *commit-id* keyword and argument. In this example, the output displays the configuration changes made since the configuration commit assigned commit ID 1000000077 was committed.

```
RP/0/RP0/CPU0:router# show configuration commit changes since 1000000077

Building configuration...
no hw-module node 0/RP0/CPU0 shutdown
hostname router
logging trap
no logging console
logging history size 1
alias exec shrun show configuration running
alias exec shver show version
interface MgmtEth0/RP1/CPU0/0
  ipv4 address 12.25.34.10 255.255.0.0
  no shutdown
  !
interface preconfigure MgmtEth0/RP0/CPU0/0
  no shutdown
  !
no route ipv4 0.0.0.0/0 12.7.0.1
```

```
route ipv4 0.0.0.0/0 12.25.0.1
route ipv4 223.255.254.254/32 12.25.0.1
telnet ipv4 server enable
end
```

The following example shows sample output from the **show configuration commit changes** command with the **diff** keyword. In the display, the following symbols signify changes:

+ indicates an added line.

– indicates a deleted line.

# indicates a modified line.

```
RP/0/RP0/CPU0:router# show configuration commit changes last 1 diff

Building configuration...
+ interface Loopback1000

# show configuration commit list

To display information about the configuration commits stored in the commit database, use the **show configuration commit list** command in EXEC, administration EXEC, administration configuration, or global configuration mode.

**show configuration commit list** [*number-of-commits*] [**detail**]

## Syntax Description

*number-of-commits* (Optional) Number of commits (beginning with the most recent commit) that are available for rollback.

**detail** (Optional) Displays detailed commit information, including comments.

## Command Default

If this command is entered without any optional arguments or keywords, the output displays information about all the configuration commits stored in the commit database.

## Command Modes

EXEC

Administration EXEC

Administration configuration

Global configuration

## Command History

### Release

### Modification

Release 3.3.0

This command was introduced.

This command replaced the **show rollback points** command, which was available in previous releases.

Release 3.4.0

Support was added for the administration EXEC and administration configuration modes.

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show configuration commit list** command to list the commit IDs (up to 100) that are available for rollback.

### Note

The most recent 100 commits are retained by the system. As new commit IDs are added, the oldest commit IDs are discarded and are no longer available for rollback operations.

## Task ID

### Task ID

### Operations

config-services read

The following example shows sample output from the **show configuration commit list** command. The output displays the commit IDs that are available for rollback.

```
RP/0/RP0/CPU0:router# show configuration commit list

SNo. Label/ID      User      Line      Client      Time Stamp
~~~~ ~~~~~~      ~~~~~      ~~~~~      ~~~~~      ~~~~~~
1     1000000010    UNKNOWN  con0_RP0_C  Rollback    02:25:53 UTC Fri Feb 06 2009
2     1000000009    UNKNOWN  con0_RP0_C  CLI         02:23:09 UTC Fri Feb 06 2009
3     1000000008    UNKNOWN  con0_RP0_C  CLI         02:22:54 UTC Fri Feb 06 2009
4     1000000007    UNKNOWN  con0_RP0_C  CLI         02:22:18 UTC Fri Feb 06 2009
5     1000000006    UNKNOWN  con0_RP0_C  CLI         02:07:21 UTC Fri Feb 06 2009
```

[Table 19: show configuration commit list Field Descriptions, on page 223](#) describes the significant fields shown in the display.

**Table 19: show configuration commit list Field Descriptions**

| Field      | Description  |
|------------|--|
| SNo.       | Serial number of the commit entry.   |
| Label/ID   | If a label was assigned to a commit, the first 10 characters of the label display; otherwise, the autogenerated commit ID displays.  |
| User       | User who executed the commit.  |
| Line       | Line in which the user session was established. In some cases, this field may display "UNKNOWN" or "SYSTEM". These fields indicate that an internal commit was made by the system. |
| Client     | The management interface used to make the commit.  |
| Time Stamp | Time and date when the commit was executed.  |

## show configuration failed (config)

To display information about a configuration that failed during the last commit, use the **show configuration failed** command in any configuration mode.

```
show configuration failed [{load | noerrors}]
```

| <b>Syntax Description</b> | <b>load</b> (Optional) Displays any syntax errors found in a configuration loaded with the <b>load</b> command.   |         |              |                |                              |
|---------------------------|---|---------|--------------|----------------|------------------------------|
|                           | <b>noerrors</b> (Optional) Displays the configuration that failed in last commit without the error reasons.   |         |              |                |                              |
| <b>Command Default</b>    | Displays the details of the failed configuration including error reasons.   |         |              |                |                              |
| <b>Command Modes</b>      | Any configuration   |         |              |                |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 2.0    | This command was introduced. |
| Release                   | Modification  |         |              |                |                              |
| Release 2.0               | This command was introduced.  |         |              |                |                              |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |         |              |                |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>basic-services</td> <td>read</td> </tr> </tbody> </table>  | Task ID | Operations   | basic-services | read                         |
| Task ID                   | Operations  |         |              |                |                              |
| basic-services            | read  |         |              |                |                              |

The following example shows a failed commit operation:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# taskgroup bgp
RP/0/RP0/CPU0:router(config-tg)# description this is an example of an invalid task group
RP/0/RP0/CPU0:router(config-tg)# commit
% Failed to commit one or more configuration items.
Please use 'show configuration failed' to view the errors
```

The following example shows sample output from the **show configuration failed** command. The output displays the configuration items that failed during the last commit operation.

```
RP/0/RP0/CPU0:router(config-tg)# show configuration failed

!! CONFIGURATION FAILED DUE TO SEMANTIC ERRORS
taskgroup bgp
!!% Usergroup/Taskgroup names cannot be taskid names
!
```

The following example shows sample output from the **show configuration failed** command with the optional **no errors** keyword. The output displays the configuration items that failed during the last commit operation without an error description.

```
RP/0/RP0/CPU0:router(config-tg)# show configuration failed noerrors

!! CONFIGURATION FAILED DUE TO SEMANTIC ERRORS
taskgroup bgp
!
```

# show configuration failed incompatible

To display any configurations that were removed from the running configuration because they were not understood by the software being activated, use the **show configuration failed incompatible** command in EXEC or administration EXEC mode.

**show configuration failed incompatible**

---

**Syntax Description** This command has no keywords or arguments.

---

**Command Default** None

---

**Command Modes** EXEC  
Administration EXEC

---

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

---

---

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Any configurations in the running configuration that are not understood by new software being installed are removed from the running configuration. To see which configurations were removed, use the **show configuration failed incompatible** command.

---

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

---

**Related Topics**

[show running-config](#), on page 253

# show configuration failed remove

To display information about a configuration that failed while being removed during installation operations, use the **show configuration failed remove** command in EXEC or administration EXEC mode.

**show configuration failed remove**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC  
Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

The following example shows a failed commit operation:

```
RP/0/RP0/CPU0:router# show configuration failed remove

!! SEMANTIC ERRORS: This configuration was rejected by
!! the system due to semantic errors. The individual
!! errors with each failed configuration command can be
!! found below.

multicast-routing
 no address-family ipv4
  !!% Process did not respond to sysmgr
 address-family ipv4
  no interface all enable
 !!% Process did not respond to sysmgr
!
```

Because the configuration failed to be removed, it is still displayed in the output from the **show running-configuration** command as expected:

```
RP/0/RP0/CPU0:router# show running-configuration
...
router pim vrf default address-family ipv4
 auto-rp candidate-rp GigabitEthernet0/2/0/3 scope 255 group-list 224/4 interval 10
```

```
!  
multicast-routing  
  address-family ipv4  
    interface all enable  
!  
!
```

# show configuration failed startup

To display information about a configuration that failed at startup, use the **show configuration failed** command in EXEC or administration EXEC mode.

**show configuration failed startup** [{noerror | previous *number*}]

## Syntax Description

|                               |   |
|-------------------------------|---|
| <b>noerror</b>                | (Optional) Displays the configuration that failed at startup without an error reason.   |
| <b>previous <i>number</i></b> | (Optional) Displays the previous failed startup configuration or configurations. The <i>number</i> argument is a value from 1 to 4, which displays the failed startup configurations in previous of sessions. |

## Command Default

If no keywords are specified, this command displays the details of the failed startup configuration including error reasons.

## Command Modes

EXEC  
Administration EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.  |
| Release 3.3.0 | Support was added for the <b>previous <i>number</i></b> keyword and argument. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

## Task ID

| Task ID         | Operations |
|-----------------|------------|
| config-services | read       |

# show configuration history

To display a history of configuration events, use the **show configuration history** command in EXEC, administration EXEC, administration configuration, or global configuration mode.

```
show configuration history [{alarm | backup | cfs-check | commit | rebase | shutdown | startup}]
[first number | last number | reverse] [detail]
```

| Syntax Description         |  |
|----------------------------|--|
| <b>alarm</b>               | (Optional) Displays alarm events.  |
| <b>backup</b>              | (Optional) Displays configuration backup events.   |
| <b>cfs-check</b>           | (Optional) Displays CFS check events.  |
| <b>commit</b>              | (Optional) Displays commit events.   |
| <b>rebase</b>              | (Optional) Displays commit database consolidation events.  |
| <b>shutdown</b>            | (Optional) Displays shutdown events.   |
| <b>startup</b>             | (Optional) Displays startup events, including alternate configurations, failed configurations, and other events. |
| <b>first <i>number</i></b> | (Optional) Displays the first <i>x</i> number of events, where <i>x</i> is the <i>number</i> argument.           |
| <b>last <i>number</i></b>  | (Optional) Displays the last <i>x number</i> events. Replace with the number of events to display.               |
| <b>reverse</b>             | (Optional) Displays the most recent events first.  |
| <b>detail</b>              | (Optional) Displays detailed information, including comments.  |

**Command Default** When entered without any optional arguments or keywords, this command displays all configuration events. The oldest events are displayed at the top of the list for each event type.

**Command Modes**

- EXEC
- Administration EXEC
- Administration configuration
- Global Configuration

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 3.4.0 | This command was introduced.                             |
|                 | Release 3.5.0 | The <b>backup</b> and <b>rebase</b> keywords were added. |
|                 | Release 3.8.0 | Support for the <b>oir</b> keyword was removed.          |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show configuration history** command to display information about the last (up to) 1500 configuration events.

Use one of the available keywords to display the configuration event only for that event type. Use the **first number** and **last number** keywords and arguments to display a specified number of events. Use the **reverse** keyword to display the newest events at the top of the list.

The **show configuration history** command in administration EXEC mode does not display records from releases earlier than Cisco IOS XR Release 3.6.0. To see information about commits prior to an upgrade from before Release 3.6.0, use the **show configuration commit list** command in administration EXEC mode.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

In the following example, the **show configuration history** command is used to display the history of all configuration events for an SDR:

```
RP/0/RP0/CPU0:router# show configuration history

Sno.  Event      Info                               Time Stamp
~~~~~ ~~~~~~   ~~~~                               ~~~~~~
1      alarm      inconsistency alarm raised        Thu Jun 22 15:23:15 2009
2      startup    configuration applied             Thu Jun 22 15:23:32 2009
3      OIR config restore                Thu Jun 22 15:23:25 2009
4      OIR config restore                Thu Jun 22 15:23:33 2009
5      OIR config restore                Thu Jun 22 15:23:33 2009
6      OIR config restore                Thu Jun 22 15:23:34 2009
7      OIR config restore                Thu Jun 22 15:23:34 2009
8      OIR config restore                Thu Jun 22 15:23:35 2009
9      OIR config restore                Thu Jun 22 15:23:36 2009
10     OIR config restore                Thu Jun 22 15:23:37 2009
11     OIR config restore                Thu Jun 22 15:23:37 2009
12     OIR config restore                Thu Jun 22 15:23:38 2009
13     OIR config restore                Thu Jun 22 15:23:38 2009
14     OIR config restore                Thu Jun 22 15:23:39 2009
15     OIR config restore                Thu Jun 22 15:23:39 2009
16     OIR config restore                Thu Jun 22 15:23:40 2009
17     OIR config restore                Thu Jun 22 15:23:40 2009
18     OIR config restore                Thu Jun 22 15:23:42 2009
19     OIR config restore                Thu Jun 22 15:23:42 2009
20     OIR config restore                Thu Jun 22 15:23:42 2009
21     OIR config restore                Thu Jun 22 15:23:43 2009
--More--
```

In the following example, the **show configuration history** command is used to display only the startup configuration events:

```
RP/0/RP0/CPU0:router# show configuration history startup

Sno.  Event      Info                               Time Stamp
~~~~~ ~~~~~~   ~~~~                               ~~~~~~
1      startup    configuration applied             Thu Jun 22 15:23:32 2009
2      startup    configuration applied             Sat Jul 1 15:02:24 2009
```

```

3 startup configuration applied Sat Jul 8 17:36:52 2009
4 startup configuration applied Sun Jul 9 13:40:27 2009
5 startup configuration applied Sat Jul 15 18:18:54 2009
    
```

In the following example, the **show configuration history** command with the **commit detail** keywords is used to display additional details regarding the commit events:

```

RP/0/RP0/CPU0:router# show configuration history commit detail

1) Event: commit           Time: Thu Jun 22 15:44:33 2009
   Commit ID: 1000000001 Label:
   User: lab             Line: vty0
   Client: CLI           Comment:

2) Event: commit           Time: Thu Jun 22 16:58:18 2009
   Commit ID: 1000000002 Label:
   User: lab             Line: vty2
   Client: CLI           Comment:

3) Event: commit           Time: Thu Jun 22 16:58:39 2009
   Commit ID: 1000000003 Label:
   User: lab             Line: vty2
   Client: CLI           Comment:

4) Event: commit           Time: Sat Jul 1 15:29:31 2009
   Commit ID: 1000000001 Label:
   User: lab             Line: vty0

--More--
    
```

**Table 20: show configuration history Field Descriptions**

| Field      | Description  |
|------------|--|
| SNo.       | Serial number of the entry.  |
| Event      | Type of configuration event.   |
| Info       | Summary of the configuration action.   |
| Time Stamp | Time and date when the event was run.  |
| Label/ID   | If a label was assigned to a commit, the first 10 characters display; otherwise, the autogenerated commit ID displays.   |
| User       | User who issued the command.   |
| Line       | Line in which the user session was established. In some cases, this field may display “UNKNOWN” or “SYSTEM”. These fields indicate that an internal action was made by the system. |
| Client     | The management interface used to make the event.   |

# show configuration inconsistency replica

To display any configuration inconsistencies on a replica node, use the **show configuration inconsistency replica** command in EXEC or administration EXEC mode.

**show configuration inconsistency replica location *node-id* [detail]**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>location <i>node-id</i></b> Displays any configuration inconsistencies on the designated node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. |
|                           | <b>detail</b> Displays a detailed list of inconsistencies.  |

**Command Default** Administration EXEC mode: Displays configuration inconsistencies for the admin plane configuration.  
EXEC mode: Displays configuration inconsistencies for an SDR configuration.

**Command Modes** EXEC  
Administration EXEC

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.6.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

In administration EXEC mode, the replica node for the **show configuration inconsistency replica** command is the standby designated system controller (DSC). In EXEC mode, the replica nodes are the route processors (RPs) or distributed route processors (DRPs) that can become the designated secure domain router system controller (DSDRSC).

Use the **show configuration inconsistency replica** command, before performing a manual switchover or DSC migration, to verify that the node in line to take over for the DSC or DSDRSC is in good shape. If any problems are reported, use the **clear configuration inconsistency replica** command to correct them.

| <b>Task ID</b> | <b>Task ID</b>  | <b>Operations</b> |
|----------------|-----------------|-------------------|
|                | config-services | read              |

The following example shows a configuration with inconsistencies:

```
RP/0/RP0/CPU0:router# show configuration inconsistency replica location 0/rp1/cpu0
```

```
The replica at location 0/RP1/CPU0 is inconsistent.  
Please run 'clear configuration inconsistency replica location 0/RP1/CPU0'.
```

The following example shows sample output after the inconsistencies have been resolved:

```
RP/0/RP0/CPU0:Router# show configuration inconsistency replica location 0/rpl/cpu0
```

```
Replica is consistent
```

### Related Topics

[clear configuration inconsistency replica](#), on page 149

# show configuration persistent

To display the persistent configuration, use the **show configuration persistent** command in EXEC mode.

**show configuration persistent [diff]**

## Syntax Description

**diff** (Optional) Displays the difference between the running configuration and persistent configuration. This option is available only on the DSDRSC .

## Command Default

If no argument is specified, the **show configuration persistent** command displays the entire contents of the persistent configuration file.

## Command Modes

EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.7.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The persistent configuration is the configuration stored in nonvolatile memory, from which the running configuration is restored after the router is reloaded. The running configuration should be the same as the persistent configuration. Use the **show configuration persistent** command with the **diff** keyword to check if there is a difference between the running configuration and the persistent configuration.

## Task ID

| Task ID         | Operations |
|-----------------|------------|
| config-services | read       |

The following example shows that there is no difference between the running configuration and the persistent configuration:

```
RP/0/RP0/CPU0:router# show configuration persistent diff
Building configuration...
end
```

The following example shows a difference between the running configuration and the persistent configuration:

```
RP/0/RP0/CPU0:router# show configuration persistent diff
Building configuration...
router vrrp
interface tengige0/1/0/1.1
vrrp 1 preempt delay 300
```

```
!  
interface tengiget0/1/0/1.2  
vrrp 1 preempt delay 300  
!  
interface tengige0/1/0/1.3  
vrrp 1 preempt delay 300
```

# show configuration removed

To display a configuration removed during installation operations, use the **show configuration removed** command in EXEC or administration EXEC mode.

**show configuration removed** *config-id*

|                           |   |   |
|---------------------------|---|---|
| <b>Syntax Description</b> | <i>config-id</i> Name of removed configuration. Type (?) to see a list of the names of all removed configurations.  |   |
| <b>Command Default</b>    | None  |   |
| <b>Command Modes</b>      | EXEC<br>Administration EXEC   |   |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>                                     |
|                           | Release 2.0   | This command was introduced.                            |
|                           | Release 3.5.0   | This command was added to the administration EXEC mode. |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |   |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operations</b>                                       |
|                           | config-services   | read  |

The following example shows a removed configuration:

```
RP/0/RP0/CPU0:router# show configuration removed 20060301112919.cfg

xml agent corba
http server
end
```

# show configuration rollback changes

To display changes that would be made by the **rollback configuration** command or to display the list of commit IDs, use the **show configuration rollback changes** command in EXEC, administration EXEC, administration configuration, or global configuration mode.

**show configuration rollback changes** {*commit-id* | **to** *commit-id* | **last** *number-of-commits*} [**diff**]

| Syntax Description                   |  |  |
|--------------------------------------|--|--|
| <i>commit-id</i>                     |  | Name of configuration. When a specific <i>commit-id</i> is specified, only the changes that would occur if only the specified commit is rolled back are displayed.                 |
| <b>to</b> <i>commit-id</i>           |  | Displays the changes that will occur to the running configuration if the system is rolled back to the configuration specified with the <i>commit-id</i> argument.                  |
| <b>last</b> <i>number-of-commits</i> |  | Displays the changes that will occur to the running configuration if the system is rolled back to the last number of commits specified with the <i>number-of-commits</i> argument. |
| <b>diff</b>                          |  | (Optional) Displays added lines, changed lines, and deleted lines.   |

**Command Default** None

**Command Modes** EXEC  
Administration EXEC  
Administration configuration  
Global configuration

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.  |
|                 | Release 3.2   | The command name was modified to include the <b>configuration</b> keyword.<br><br>The <b>show rollback points</b> command was deprecated and replaced by the <b>show configuration commit list</b> command. |
|                 | Release 3.3.0 | Support was added for the <b>diff</b> keyword.  |
|                 | Release 3.5.0 | This command was added to administration EXEC mode.   |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note** The most recent 100 commits are retained by the system. As new commit IDs are added, the oldest commit IDs are discarded and are no longer available for rollback operations.

Use the *commit-id* argument without the **to** keyword to display the changes for a particular commit. This can be useful for troubleshooting actions of the **rollback configuration** command.

**Task ID**

| Task ID         | Operations |
|-----------------|------------|
| config-services | read       |

The following example shows sample output from the **show configuration rollback changes** command with the **to** *commit-id* keyword and argument. The output displays the configuration changes that would occur if the configuration were to be rolled back to the configuration commit specified for the argument.

```
RP/0/RP0/CPU0:router# show configuration rollback changes to 1000000007

Building configuration...
hostname old-name
end
```

The following example shows sample output from the **show configuration rollback changes** command **last** *number-of-commits* keyword and argument. The output displays the configuration changes that would occur if the configuration were to be rolled back to the number of configuration commits specified for the argument.

```
RP/0/RP0/CPU0:router# show configuration rollback changes last 2

Building configuration...
hostname orig_name
interface POS0/1/0/1
  shutdown
!
end
```

The following example shows sample output from the **show configuration rollback changes** command with the **diff** keyword.

In the display, the following symbols signify changes:

- + indicates an added line.
- - indicates a deleted line.
- # indicates a modified line.

```
RP/0/RP0/CPU0:router
show configuration rollback changes last 1 diff

Building configuration...
  interface Loopback1000
#  ipv4 address 1.1.1.1 255.255.255.255
```

```
!  
end
```

# show configuration running

To display the running configuration, use the **show configuration running** command in the appropriate mode.

```
show configuration running [config-keyword]
```

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>config-keyword</i> (Optional) Specific configuration to display. |
|---------------------------|---|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |   |
|----------------------|---|
| <b>Command Modes</b> | Administration EXEC<br>Administration configuration<br>Global configuration |
|----------------------|---|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **show configuration running** command to display the currently active configuration.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | basic-services | read              |

This example shows the currently running (committed) configuration from administration mode.

```
RP/0/RP0/CPU0:router(admin)# show configuration running

Building configuration...
username lab
  secret 5 $1$XNWt$j8RscNdncKSRoMSnqSbj/
  group root-system
!
end
```

# show configuration sessions

To display the active configuration sessions, use the **show configuration sessions** command in EXEC or administration EXEC mode.

**show configuration sessions** [**detail**]

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>detail</b> (Optional) Displays detailed information. |
|---------------------------|---|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |                             |
|----------------------|-----------------------------|
| <b>Command Modes</b> | EXEC<br>Administration EXEC |
|----------------------|-----------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>   |
|------------------------|----------------|---|
|                        | Release 2.0    | This command was introduced.  |
|                        | Release 3.3.0  | Support was added for the <b>detail</b> keyword.                                      |
|                        | Release 3.5.0  | <i>Session</i> changed to <i>Current Configuration Session</i> in the display output. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show configuration sessions** command to display the active configuration sessions. Use the **clear configuration sessions** command to clear a configuration session. The **show configuration sessions** command can be used with the **clear configuration sessions** command to verify that an active configuration session was cleared.

| <b>Task ID</b> | <b>Task ID</b>  | <b>Operations</b> |
|----------------|-----------------|-------------------|
|                | config-services | read              |

The following example shows sample output from the **show configuration sessions** command:

```
RP/0/RP0/CPU0:router# show configuration sessions

Current Configuration Session Line      User      Date                               Lock
00000050-001200bb-00000000  con0_5_CPU cisco     Fri Feb 16 17:23:47 2007
```

**Table 21: show configuration sessions Field Descriptions**

| <b>Field</b> | <b>Description</b>                                |
|--------------|---|
| Session      | System-generated configuration session ID number. |

| Field | Description  |
|-------|--|
| Line  | Line in which the user session was established. In some cases, this field may display “UNKNOWN” or “SYSTEM.” These fields indicate that an internal commit was made by the system. |
| User  | User who initiated the configuration session.  |
| Date  | Time and date the configuration session was started.   |
| Lock  | Locked running-configuration. An asterisk (*) displayed in this field means the session has been locked. Only one session can lock the running configuration at a time.            |

**Related Topics**

[clear configuration sessions](#), on page 151

# show default-afi-safi-vrf

To display the default address family identifier (AFI), subaddress family identifier (SAFI), and VPN routing and forwarding (VRF) instance for the current session, use the **show default-afi-safi-vrf** command in EXEC mode.

**show default-afi-safi-vrf**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.  |
|                 | Release 3.3.0 | Display of the default VPN routing and forwarding (VRF) instance was supported. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show default-afi-safi-vrf** command to display the default AFI and SAFI settings for the current session. The AFI and SAFI settings are controlled by the following commands:

- [set default-afi](#), on page 204
- [set default-safi](#), on page 205
- [set default-vrf](#), on page 206

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

The following example shows sample output from the **show default-afi-safi-vrf** command:

```
RP/0/RP0/CPU0:router# show default-afi-safi-vrf

%% Default AFI/SAFI/VRF for this session is:
  Address Family Identifier:      'ipv4'
  Sub-Address Family Identifier:  'unicast'
  Virtual Routing/Forwarding:    ''
```

# show history

To display a history of commands executed in EXEC, administration EXEC, administration configuration, or global configuration mode use the **show history** command in one of the supported modes.

**show history** [**detail**]

|                           |   |                              |
|---------------------------|---|------------------------------|
| <b>Syntax Description</b> | <b>detail</b> (Optional) Displays detailed history information.   |                              |
| <b>Command Default</b>    | None  |                              |
| <b>Command Modes</b>      | EXEC<br>Administration EXEC<br>Administration configuration<br>Global configuration   |                              |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>          |
|                           | Release 3.4.0   | This command was introduced. |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>The <b>show history</b> command displays a history of the command entered for the current command mode. For example, enter the <b>show history</b> command to display a history of commands entered in EXEC mode. Enter the <b>show history</b> command in global configuration mode to display a history of the commands entered in global configuration mode.</p> |                              |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operations</b>            |
|                           | config-services   | read                         |
|                           | basic-services  | read                         |

In the following example, the **show history** command is run in EXEC mode to display a history of the command entered in EXEC mode:

```
RP/0/RP0/CPU0:router# show history
configure
admin
show history
```

In the following example, the **show history** command is run in global configuration mode to display a history of the command entered in global configuration mode:

```
RP/0/RP0/CPU0:router(config)# show history
interface pos 0/1/0/0
ipv4 address 10.0.0.0
root
end
describe line default autocommand config
line default autocommand configure
end
show history
```

# show running-config

To display the contents of the currently running configuration or a subset of that configuration, use the **show running-config** command in the appropriate mode.

```
show running-config [[exclude] command] [sanitized]
```

| Syntax Description |            |  |
|--------------------|------------|--|
| <b>exclude</b>     | (Optional) | Excludes a specific configuration from the display.                    |
| <i>command</i>     | (Optional) | Command for which to display the configuration.                        |
| <b>sanitized</b>   | (Optional) | Displays a sanitized configuration for safe distribution and analysis. |

**Command Default** The **show running-config** command without any arguments or keywords displays the entire contents of the running configuration file.

**Command Modes** EXEC  
Administration EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You can display either the entire running configuration, or a subset of the running configuration. The subset may be all the commands within a specified command mode.

**Note** In Cisco IOS XR software, the running configuration is automatically used at system startup, reset, or power cycle. The running configuration is the committed configuration.

## Sanitized Output

Use the **show running-config** command with the **sanitized** keyword to display the contents of the active running configuration without installation-specific parameters. Some configuration details, such as IP addresses, are replaced with different addresses. The sanitized configuration can be used to share a configuration without exposing the configuration details.

**Command Modes** When the **show running-config** command is entered in administration configuration mode, the configuration for the administration plane is displayed, including the configured logical routers for the system. When the **show running-config** command is entered in any global configuration mode, or in EXEC mode, the configuration for the specific secure domain router (SDR) is displayed.

The **inheritance** and **no-annotations** keywords are not supported in administration EXEC or configuration modes.

### Excluding Parts of the Display

Use the **exclude** keyword followed by a *command* argument to exclude a specific configuration from the display.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

This example shows how to enter the **show running-config** command with the question mark (?) online help function to display the available subsets of the running configuration that can be entered to display a subset of the running configuration:

```
RP/0/RP0/CPU0:router# show running-config ?

aaa                Authentication, Authorization and Accounting
alias              Create an alias for entity
aps                Configure SONET Automatic Protection Switching (APS)
arp                Global ARP configuration subcommands
as-path            BGP autonomous system path filter
as-path-set        Define an AS-path set
banner             Define a login banner
cdp                Enable CDP, or configure global CDP subcommands
cef                CEF configuration commands
cinetd             Global Cisco inetd configuration commands
class-map          Configure QoS Class-map command
clock              Configure time-of-day clock
community-list     Add a community list entry
community-set      Define a community set
controller         Controller configuration subcommands
dhcp               Dynamic Host Configuration Protocol
domain             Domain service related commands
exception          CoreDump configuration commands
exclude            Exclude a feature or configuration item from display
explicit-path      Explicit-path config commands
extcommunity-set   Define an extended community set
fault              Fault related commands
forward-protocol   Controls forwarding of physical and directed IP broadcasts
ftp                Global FTP configuration commands
--More--
```

In this example, the **show running-config** command is used to display the running configuration for Packet-over-SONET/SDH (POS) interface 0/2/0/1:

```
RP/0/RP0/CPU0:router# show running-config interface pos 0/2/0/1

interface POS0/2/0/1
ipv4 address 10.0.0.0 255.0.0.0
```

This example shows sample output from the **show running-config** command with the **sanitized** keyword displays a sanitized version of the running configuration. The sanitized configuration can be used to share a configuration without exposing specific configuration details.

```
RP/0/RP0/CPU0:router# show running-config sanitized
```

```
Building configuration...
```

# template

To create a template name and enter template configuration mode, use the **template** command in global configuration mode. To remove a template definition, use the **no** form of this command.

**template** *name*  
**no template** *name*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>name</i> Unique name for the template to be created. |
|---------------------------|---|

|                        |                           |
|------------------------|---------------------------|
| <b>Command Default</b> | No templates are defined. |
|------------------------|---------------------------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **template** command to enter template configuration mode. From template configuration mode, you can group a subset of configuration commands in a named template. Commonly used sets of configuration commands can be grouped into a named template. Defining a template is similar to creating a C macro function. A template provides modularity and ease of use during user configuration.

Use the **end-template** command to exit template configuration mode. After defining a template, use the **apply-template** command to apply the template. Use the **show running-config** command with the optional **template** keyword and *template-name* argument to display the contents of a template.

| <b>Task ID</b> | <b>Task ID</b>  | <b>Operations</b> |
|----------------|-----------------|-------------------|
|                | config-services | read,<br>write    |

The following example shows how to enter template configuration mode to create a template. In this example, a template named “pre-pos” is defined for the preconfigured Packet-over-SONET/SDH (POS) interface 0/1/0/1. The **end-template** command is used to exit from template configuration mode.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# template pre-pos
RP/0/RP0/CPU0:router (config-TPL)# interface preconfigure pos0/1/0/0
RP/0/RP0/CPU0:router (config-if-pre)# ipv4 address 10.3.32.154 255.0.0.0
RP/0/RP0/CPU0:router (config-if-pre)# end-template
RP/0/RP0/CPU0:router (config)#
```

**Note** After configuring a template, you may want to display the contents of the configured template. To display a template configuration, use the **show running-config** command with the **template name** keyword and argument.

The following example shows sample output from the **show running-config** command with the **template name** keyword and argument. In this example, the output displays the contents of a template named “pre-pos.”

```
RP/0/RP0/CPU0:router# show running-config template pre-pos

template pre-pos
  interface preconfigure POS0/1/0/0
    ipv4 address 10.3.32.154 255.0.0.0
  !
end-template
```

# Distributed Route Processor Commands

Distributed route processors (DRPs) can be installed individually or in pairs. This module describes the commands used to create redundant DRP pairs.

## DRP Overview

The DRP card and its associated physical layer interface module (PLIM) function as an additional route processor (RP) in the Cisco CRS-1 router. The DRP does not perform any of the control and management functions performed by the RP; therefore, it can never be the designated system controller (DSC) in a multishelf system. However, the DRP can be configured for the following purposes:

- The DRP can act as the designated secure domain router system controller (DSDRSC) in a secure domain router (SDR). An SDR is a part of the Cisco CRS-1 routing system that functions as a complete router, running its own routing protocols and forwarding IP packets between its interfaces.
- The DRP can provide additional processing capacity for any of the routing processes that run on the RP (for example, BGP, OSPF, IS-IS, MPLS, LDP, IP multicast, and so on).

## Related Documents

For additional information, see the following Cisco Systems documents:

- *Configuring Secure Domain Routers on Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*, for instructions on using DRPs in a secure domain router configuration.
- *Process Placement on Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*, for instructions on configuring process placement and DRPs.
- *Cisco CRS-1 Carrier Routing System 16-Slot Line Card Chassis System Description*, for DRP hardware description and requirements.
- *Installing the Cisco CRS-1 Carrier Routing System 16-Slot Line Card Chassis*, for instructions on installing DRP and DRP PLIM cards.
- [location \(DRP\)](#), on page 260
- [pairing \(DRP\)](#), on page 262

## location (DRP)

To assign nodes to a DRP pair, use the **location** command in DRP pairing configuration mode. To remove the node from a DRP pair, use the **no** form of this command.

**location** *partially-qualified-nodeid* *partially-qualified-nodeid*  
**no location**

### Syntax Description

*partially-qualified-nodeid* Specifies the nodes to be assigned to the specified DRP pair.

The *node-id* argument is entered in the *rack/slot/module* notation. Node IDs are always specified at the slot level, so the wildcard (\*) is used to specify the CPU.

### Command Default

None

### Note

### Command Modes

DRP pairing configuration

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.3.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **location** command in DRP pairing configuration mode to assign nodes to a DRP pair. The following rules apply to DRP pairing assignments:

- To create a DRP pair name, use the **pairing** command.
- Two nodes are assigned to each DRP pair. For example: **location 0/2/\* 0/3/\***.
- DRPs are always specified at a slot level. The wildcard (\*) is used to specify the CPU.
- To be added to a DRP pair, the *node-id* must belong to the owner SDR. If a node is already assigned to a non-owner SDR, the node must be removed from the non-owner SDR before it can be assigned to a DRP pair.
- A *node-id* cannot be used by more than one DRP pair.
- Only two nodes can be assigned to a DRP pair. In the following example, only the last **location 0/0/\* 0/4/\*** takes effect:

```
RP/0/RP0/CPU0:router(admin-config)# pairing pair1
RP/0/RP0/CPU0:router(admin-config-pairing:pair1)# location 0/1/* 0/4/*
RP/0/RP0/CPU0:router(admin-config-pairing:pair1)# location 0/0/* 0/4/*
RP/0/RP0/CPU0:router(admin-config-pairing:pair1)# commit
```

- Use the **no** form of the **location** command to remove both nodes from the DRP pair. Removing a node from a DRP pair implicitly returns it to the owner SDR. When a node has been removed from an SDR, it can be reassigned to another SDR.

| Task ID | Task ID | Operation      |
|---------|---------|----------------|
|         | system  | read,<br>write |

The following example shows how to enter DRP pairing configuration mode, create a DRP pair named “drp1,” and assign node 0/3/\* and node 0/4/\* to the DRP pair:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# pairing drp1
RP/0/RP0/CPU0:router(admin-config-pairing:drp1)# location 0/3/* 0/4/*
```

The following example shows how to remove a DRP pair:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# pairing drp1
RP/0/RP0/CPU0:router(admin-config-pairing:drp1)# no location
```

## pairing (DRP)

To specify a distributed route processor (DRP) pair and enter DRP pairing configuration mode, use the **pairing** command in administration configuration mode. To remove a named DRP pair from the configuration, use the **no** form of this command.

**pairing** *pair-name*  
**no pairing** *pair-name*

| <b>Syntax Description</b> | <i>pair-name</i> Name of the DRP pair. The name can a maximum of 32 alphanumeric characters. The characters “_” or “-” are also allowed. All other characters are invalid.              |         |              |               |                              |
|---------------------------|---|---------|--------------|---------------|------------------------------|
| <b>Command Default</b>    | None  |         |              |               |                              |
| <b>Command Modes</b>      | Administration configuration  |         |              |               |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.3.0</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | Release 3.3.0 | This command was introduced. |
| Release                   | Modification  |         |              |               |                              |
| Release 3.3.0             | This command was introduced.  |         |              |               |                              |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **pairing** command to create a DRP pair or modify an existing DRP pair.

**Note** The *pair-name* argument creates a DRP pair if the *pair-name* specified does not already exist.

After the **pairing** command is issued, the router enters DRP pairing configuration mode. From DRP pairing configuration mode, you can specify the nodes for the DRP pair using the **location** (drp) command. The locations specified are added to the DRP pair, or modify the existing pair.

Use the **no** form of the command to remove a DRP pair configuration. When a DRP pair is removed from the configuration, the nodes are returned to the owner SDR.

| Task ID | Task Operations ID    |
|---------|-----------------------|
|         | system read,<br>write |

The following example shows how to enter DRP pairing configuration mode to configure a DRP pair:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# pairing drp1
```

```
RP/0/RP0/CPU0:router(admin-config-pairing:drp1)# location 0/3/* 0/4/*
```

The following example shows how to remove a DRP pair:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# no pairing drp1
```

## File System Commands

---

This chapter describes the Cisco IOS XR software commands used to manage file systems on your router.

---

**Note**

The commands in this module should not be used to access or modify any Cisco IOS XR software or configuration files. Use only the documented commands for installing and configuring the router. Modifying, deleting, or moving configuration or software package files using the manual commands described in this module is not required and can result in router downtime, loss of service, and a corrupted database.

---

- [cfs check](#), on page 267
- [copy](#), on page 268
- [delete](#), on page 274
- [dir](#), on page 275
- [mkdir](#), on page 277
- [pwd](#), on page 278
- [rmdir](#), on page 279
- [show filesystem](#), on page 280
- [show media](#), on page 282

# cd

To change the current working directory, use **cd** command in EXEC mode.

**cd** *filesystem* :

---

## Syntax Description

*filesystem* : (Optional) Location of the new working directory. Include the file system alias for the *filesystem* argument, followed by a colon and optionally, the name of a directory.

---

## Command Default

The default file directory is **disk0:/usr**.

## Command Modes

EXEC mode.

---

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 6.1.2 | This command was introduced. |

---

## Usage Guidelines

The current working directory is the directory used when EXEC commands that have an optional argument are entered without that argument. Use **cd** command to define the working directory. For example, when the **dir** command is entered without specifying the *filesystem* argument, the files in the current working directory are displayed.

Use **cd** command without an argument to set the working directory back to the default directory, **disk0:/usr**.

The following example shows how to change the current working directory to the root directory on the hard disk. In this example, the **pwd** command confirms that the working directory has changed to the root directory on the hard disk.

```
RP/0/RP0/CPU0:router# cd harddisk:
RP/0/RP0/CPU0:router# pwd

harddisk:
```

The following example shows how to change the current working directory to the default file directory by specifying the **cd** command without a location. In this example, the **pwd** command confirms that the working directory has changed to the default file directory.

```
RP/0/RP0/CPU0:router# cd
RP/0/RP0/CPU0:router# pwd

disk0:/usr
```

# cfs check

To perform a check on the Configuration File System (CFS), use **cfs check** command in EXEC or administration EXEC mode.

## cfs check

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values.

**Command Modes** EXEC mode  
Admin EXEC mode

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 6.1.2 | This command was introduced. |

**Usage Guidelines** Use this command to check the sanity of the configuration file system and attempt to recover from internal inconsistencies; one or more rollback points may be lost depending on the severity of the state of the file system.

**Note** While this command runs, redundancy of the designated secure domain router shelf controller (DSDRSC) is disabled.

The following example shows how to perform a CFS check:

```
RP/0/RP0/CPU0:router# cfs check

Creating any missing directories in Configuration File system...OK
Initializing Configuration Version Manager...OK
Syncing commit database with running configuration...OK
Re-initializing cache files...OK
Updating Commit Database. Please wait...[OK]
```

# copy

To copy a file from a source (such as a network server) to a destination (such as a flash disk), use **copy** command in EXEC or Admin EXEC mode.

**copy** *source* {**location** *node-id* *destination* **location** {*node-id* | **all**} | **running-config**[**atomic**]}

## Syntax Description

|                                |   |
|--------------------------------|---|
| <i>source</i>                  | <p>Filename including the directory path or network location of the file. The possible sources are:</p> <p><i>directory-path</i> —Directory path of the file from which the file is copied.</p> <p><b>access-list</b> { <b>ipv4</b>   <b>ipv6</b> }—Copies an access list (EXEC mode only).</p> <p><b>bootflash:</b> —Copies from the bootflash: file system.</p> <p><b>compactflash:</b> —Copies from the compactflash: file system.</p> <p><b>compactflasha:</b> —Copies from the compactflasha: file system partition.</p> <p><b>disk0:</b> —Copies from disk0: file system.</p> <p><b>disk0a:</b> —Copies from disk0a: file system partition.</p> <p><b>disk1:</b> —Copies from disk1: file system.</p> <p><b>disk1a:</b> —Copies from disk1a: file system partition.</p> <p><b>flash:</b> —Copies from the flash: file system. The <b>flash:</b> keyword is an alias for bootflash:.</p> <p><b>ftp:</b> —Copies from an FTP network server. The syntax is <b>ftp:</b>[[<i>//username</i> [<i>:password</i>]@]<i>location</i>]/<i>directory</i>]/<i>filename</i>.</p> <p><b>harddisk:</b> —Copies from the hard disk drive file system (if present).</p> <p><b>harddiska:</b> —Copies from the hard disk partition a.</p> <p><b>harddiskb:</b> —Copies from the hard disk partition b.</p> <p><b>lcdisk0:</b> —Copies from the eUSB flash device.</p> <p><b>lcdisk0a:</b> —Copies from the eUSB flash device partition a.</p> <p><b>nvr:</b> —Copies from the NVRAM file system.</p> <p><b>prefix-list</b> {<b>ipv4</b>   <b>ipv6</b>}—Copies from a prefix list (EXEC mode only).</p> <p><b>rcp:</b> —Copies from a remote copy protocol (rcp) network server. The syntax is <b>rcp:</b>[[<i>//username</i>@]<i>location</i>]/<i>directory</i>]/<i>filename</i>.</p> <p><b>running-config</b> —Copies from the current system configuration.</p> <p><b>tftp:</b> —Copies from a TFTP network server. The syntax is <b>tftp:</b>[[<i>//location</i>]/<i>directory</i>]/<i>filename</i></p> <p><b>xml-schema</b> —Copies the XML schema files as a tar ball file (.tar.gz) [EXEC mode only].</p> |
| <i>destination</i>             | Filename including the directory path or network location of the file.  |
| <b>location</b> <i>node-id</i> | Specifies a node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation.   |

|                       |   |
|-----------------------|---|
| <b>location all</b>   | Copies to all nodes.  |
| <b>running-config</b> | Applies the source configuration file to the running configuration of the system.       |
| <b>atomic</b>         | (Optional) Applies the changes to the running configuration only if there are no errors |

**Command Default** No default behavior or values

**Command Modes** EXEC mode.  
Admin EXEC mode.

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 6.1.2  | This command was introduced. |

**Usage Guidelines** Source and destination can each be a configuration file, a text file, or a file system. Enter source and destination URL information, usernames, and passwords and issue the **copy** command. The networking device prompts for any missing information.

The exact format of the *source* and *destination* arguments vary according to the file or directory location. Enter the device or network location for the file system type.

Filenames can include the following characters:

```
! # $ % & ' + 0 1 2 3 4 5 6 7 8 9 ; @ A B C D E F G H I J K L M N O P Q R S T U V W X Y Z [ ] ^ _ a b c
d e f g h i j k l m n o p q r s t u v w x y z { } ~
```

The following characters can be used with the stated limitations:

- ` needs backslash before this character
- – cannot be the first character
- . cannot be the last character
- = cannot be the filename without other characters

The following characters cannot be used in filenames:

```
" ( ) * , / : < > ? \ |
```

The maximum length allowed for a filename is 254 characters including the path. If a filename longer than 254 characters is specified, the filename is truncated to 254 characters.

To copy a file from a source on the router to a destination on the router, specify a source **location** *node-id* and a destination **location** *node-id*. To copy the file to all nodes, use the **location all** keywords.

In the alias syntax for the **ftp:**, **rcp:**, and **tftp:** keywords, the location is either an IP address or a hostname. The filename is specified relative to the directory used for file transfers.

When no alias is specified, the networking device looks for a file in the current directory. To view the current directory, enter the **pwd** command.

**Note** During processing of the **copy** command, you might see the “C” character. For all files being copied, “C” indicates that the copy process is taking place. The entire copying process might take several minutes and differs from protocol to protocol and from network to network.

**Table 22: Network Protocols Supported by Cisco IOS XR Software**

| Prefix       | Name                           | Description   |
|--------------|--------------------------------|---|
| <b>tftp:</b> | Trivial File Transfer Protocol | <i>TFTP</i> is a simplified version of FTP that allows files to be transferred from one computer to another over a network, usually without the use of client authentication (for example, username and password).                          |
| <b>ftp:</b>  | File Transfer Protocol         | <i>FTP</i> is an application protocol, part of the TCP/IP protocol stack, and is used for transferring files between network nodes. FTP requires a username and password.   |
| <b>rep:</b>  | Remote Copy Protocol           | The rep protocol allows users to copy files to and from a file system residing on a remote host or server on the network. The rep protocol uses TCP to ensure the reliable delivery of data. The rep protocol downloads require a username. |

Additional usage guidelines are in the following sections.

#### Invalid Combinations of Source and Destination

Some combinations of source and destination are invalid. Specifically, you cannot copy the following:

- From a running configuration to a running configuration
- From a network device to a network device (for example, **copy ftp: rep:** )

#### Using TFTP

*TFTP* is a simplified version of FTP that allows files to be transferred from one computer to another over a network, usually without the use of client authentication (for example, username and password).

The syntax is as follows:

**copy tftp://hostname /ipaddress/directory-path pie name target-device [location {node-id | all}]**

Example:

```
RP/0/RP0/CPU0:router# copy tftp://1.1.1.1/images/software.pie disk1:
```

**Note** Some Cisco IOS XR images may be larger than 32 MB, and the TFTP services provided by some vendors may not support a file this large. If you do not have access to a TFTP server that supports files larger than 32 MB, download the software image using FTP or rep as described in the following sections.

## Using FTP

FTP servers require a username and password for each client request. Cisco IOS XR software sends the first valid username in the following list:

1. The username and password specified in the **copy** command, if a username is specified.

The syntax is as follows:

```
copy ftp://username : password @ hostname or ipaddress/directory-path/pie-name target-device [location
{node-id | all}]
```

Example:

```
RP/0/RP0/CPU0:router# copy ftp://john:secret@10.1.1.1/images/software.pie disk1:
```

2. An “anonymous” username and password. The anonymous password is “root@ip address,” where “ip address” is the IP address of the local networking device.
3. A password “username@iosname.domain” formed by the networking device. The variable “username” is the username associated with the current session, “iosname” is the configured hostname, and “domain” is the domain of the networking device.

The username and password must be associated with an account on the FTP server. If you are writing to the network server, the FTP server must be properly configured to accept the FTP write request from the user on the networking device.

If the network server has a directory structure, the configuration file or image is written to or copied from the directory associated with the username on the network server. For example, if the system image resides in the home directory of a user on the network server, specify the name of that user as the remote username.

Refer to the documentation for your FTP server for more details.

## Using rcp

The rcp protocol requires a username upon each request. When you copy a configuration file or image between the networking device and an rcp server, the Cisco IOS XR software sends the first valid username in the following list:

1. The remote username specified in the **copy** command, if one is specified.
2. The username set by the **rcp client username** command, if the command is configured.
3. The networking device hostname.

For the rcp copy request to process successfully, an account must be defined on the network server for the remote username. If the network administrator of the destination server did not establish an account for the remote username, this command does not run successfully. If the network server has a directory structure, the configuration file or image is written to or copied from the directory associated with the remote username on the network server. For example, if the system image resides in the home directory of a user on the network server, specify the name of that user as the remote username.

If you are writing to the network server, the rcp server must be properly configured to accept the rcp write request from the user on the networking device. For UNIX systems, add an entry to the .rhosts file for the remote user on the rcp server. Suppose the networking device contains the following configuration lines:

```
hostname Rtrl
```

```
ip rcp remote-username User0
```

If the IP address of the networking device translates to company.com, then the .rhosts file for User0 on the rcp server should contain the following line:

```
company.com Rtrl
```

See the documentation for your rcp server for more details.

If you are using a personal computer as a file server, the computer must support remote shell (rsh) protocol.

### Using xml-schema

Use the **xml-schema** keyword to obtain the most up-to-date XML schemas (.xsd files) from the router. Using this keyword is useful to prevent the use of outdated schemas in the event that router software updates include schema updates. The tar ball file includes all active schema files. It does not include schemas that are activated by specific package installation envelopes (PIEs) if those PIEs are not installed and activated on the router.

### Copying to the Running Configuration

When you use the **copy** command to copy a configuration file to the **running-config** destination, the configuration in the file is applied to the running configuration of the system. This is a configuration operation. By default, the copy is carried out in a best-effort manner. This means that if some configuration lines from the file cannot be applied, the remaining configuration is still integrated into the system. In this case, a partial configuration is committed. When the **atomic** keyword is used, partial configurations are not committed. This means that even if one error occurs in the parsing or committing phase, no changes are made to the system. To view any errors when applying the configuration, use the **show configuration failed** command.

---

#### Task ID

---

#### Task ID    Operations

---

```
filesystem    execute
```

---

The following example shows how to copy a file from a FTP server to disk1:

```
RP/0/RP0/CPU0:router# copy ftp://john:secret@10.1.1.1/images/comp-hfr-full.pie disk1:
```

The following example shows how to copy a file from an rcp server to disk1:

```
RP/0/RP0/CPU0:router# copy rcp://john@10.1.1.1/images/comp-hfr-full.pie disk1:
```

The following example shows how to copy a file from a TFTP server to disk1:

```
RP/0/RP0/CPU0:router# copy tftp://10.1.1.1/images/comp-hfr-full.pie disk1:
```

# delete

To delete files, use **delete** command in the appropriate mode.

**delete** [/noprompt] [/ena] *filesystem*: *filename* **location** {*node-id* | **all**}

| Syntax Description                              |            |  |
|---|------------|--|
| <b>/noprompt</b>                                | (Optional) | Causes no prompt for confirmation before deleting the specified files.   |
| <b>/ena</b>                                     | (Optional) | Deletes all files from and below the current working directory.  |
| <i>filesystem</i> :                             | (Optional) | Location of the file to be deleted. Include the file system alias for the <i>filesystem</i> argument, followed by a colon, and, optionally, the name of a directory.                       |
| <i>filename</i>                                 |            | Filename of the file to be deleted.  |
| <b>hddisk</b>                                   |            | Deletes the hddisk   |
| <b>location</b> { <i>node-id</i>   <b>all</b> } |            | Deletes a file from a designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies to delete the file from all nodes. |

**Command Default** A filename must be specified. If a filename is entered without a file system or directory path, the present working directory is used.

**Command Modes** EXEC mode.  
Admin EXEC mode.

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 6.1.2 | This command was introduced. |

**Usage Guidelines** When a file is deleted, it is removed from the system and cannot be restored (undeleted).  
Use the **dir** command to display the list of files on a storage device.

The following example shows how to delete a file:

```
RP/0/RP0/CPU0:router# delete rbtest
```

```
Delete disk1:/rbtest[confirm]y
```

# dir

To display a list of files on a file system or in a specific directory, use the **dir** command in EXEC mode or Admin EXEC mode.

**dir** [{/all | /ena | /recurse}] [*filesystem*:] [*filename*] **location** {*node-id* | **all**}

| Syntax Description                              |  |
|---|--|
| <b>/all</b>                                     | (Optional) Lists deleted files, undeleted files, and files with errors.  |
| <b>/ena</b>                                     | (Optional) Recognizes subdirectories.  |
| <b>/recurse</b>                                 | (Optional) Recursively lists subdirectories.   |
| <i>filesystem</i> :                             | (Optional) Name of the directory containing the files to be displayed. Include the file system alias for the <i>filesystem</i> argument, followed by a colon, and, optionally, the name of a directory.              |
| <i>filename</i>                                 | (Optional) Name of the files to display. The files can be of any type. You can use wildcards in the filename. A wildcard character (*) matches all patterns. Strings following a wildcard are ignored.               |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Specifies the node from which to display a list of files. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies to display files on all nodes. |

**Command Default** When **dir** command is entered without keywords or arguments, the contents of the present working directory are displayed.

**Command Modes** EXEC mode.  
Admin EXEC mode.

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 6.1.2 | This command was introduced. |

**Usage Guidelines** If you enter the **dir** command without specifying a directory, the contents of the present working directory are displayed. The **all** keyword displays all files, including deleted files. The size associated with the directory name is the total size for all files in that directory.

The following example shows how to display the contents of a directory:

```
RP/0/RP0/CPU0:router# dir harddisk:/log
```

```
Directory of harddisk:/log
```

```
5527      drwx  4096      Thu Aug 28 11:21:48 2008  boot_28_Aug_2008_11_21_49
5533      drwx  4096      Thu Aug 28 11:38:54 2008  boot_28_Aug_2008_11_38_54
5538      drwx  4096      Fri Sep  5 13:28:54 2008  boot_05_Sep_2008_13_28_54
5543      drwx  4096      Mon Sep  8 08:55:52 2008  boot_08_Sep_2008_06_59_08
```

--More--

# mkdir

To create a new directory on a file system, use the **mkdir** command in the appropriate mode.

**mkdir** *filesystem*:**[location** {*node-id* | **all**}]

|                           |   |   |
|---------------------------|---|---|
| <b>Syntax Description</b> | <i>filesystem</i> :                             | File system on which to create a new directory.   |
|                           | <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Specifies the node where the file system is located. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. Use the <b>all</b> keyword to indicate all nodes. |
| <b>Command Default</b>    | No default behavior or values                   |   |
| <b>Command Modes</b>      | EXEC<br>Admin EXEC.                             |   |
| <b>Command History</b>    | <b>Release</b>                                  | <b>Modification</b>   |
|                           | Release 6.1.2                                   | This command was introduced.  |

**Usage Guidelines** After you issue the **mkdir** command, Cisco IOS XR software prompts you to specify the name of the directory to be created. When specifying the name of the new directory, include the directory path where you want the new directory to reside. If you do not specify a directory path, the new directory is created in the /usr directory of the file system specified for the *filesystem*: argument.

The following example shows how to create a directory named newdir. The **dir** command is used to verify that the directory has been added.

```
RP/0/RP0/CPU0:router# mkdir harddisk:

Create directory filename []?newdir
Created dir harddisk:/newdir
RP/0/RP0/CPU0:router# dir harddisk:

Directory of harddisk:

11193      drwx 4096      Fri Feb 13 06:45:05 2009  newdir
37146      drwx 4096      Sun Dec 14 15:30:48 2008  malloc_dump
43030      drwx 4096      Wed Dec 24 11:20:52 2008  tracebacks
43035      drwx 4096      Thu Jan  8 18:59:18 2009  sau
51026      drwx 4096      Sat Dec 27 02:52:46 2008  tempA
51027      drwx 4096      Sat Dec 27 02:04:10 2008  dir.not.del
-430307552 -rwx 342       Fri Jan 16 10:47:38 2009  running-config
-430305504 -rwx 39790     Mon Jan 26 23:45:56 2009  cf.dat

39929724928 bytes total (39883231232 bytes free)
```

# pwd

To display the present working directory, use the **pwd** command in EXEC mode

.

## pwd

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values.

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 6.1.2 | This command was introduced. |

**Usage Guidelines** Use the **pwd** command to show what directory or file system is specified as the default by the **cd** command.

The following example shows how to display the present working directory:

```
RP/0/RP0/CPU0:router# pwd
disk0:/usr
```

# rmdir

To remove an existing directory, use the **rmdir** command in the appropriate mode.

**rmdir** *filesystem:* **location** {*node-id* | **all**}

|                           |   |  |
|---------------------------|---|--|
| <b>Syntax Description</b> | <i>filesystem</i>                               | Name of the file system from which to delete a directory, followed by a colon.   |
|                           | <b>location</b> { <i>node-id</i>   <b>all</b> } | Specifies the node where the file system is located. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. Use the <b>all</b> keyword to indicate all nodes. |
| <b>Command Default</b>    | No default behavior or values                   |  |
| <b>Command Modes</b>      | EXEC<br>Administration EXEC                     |  |
| <b>Command History</b>    | <b>Release</b>                                  | <b>Modification</b>  |
|                           | Release 6.1.2                                   | This command was introduced.   |

**Usage Guidelines** Use the **rmdir** command to remove directories (for example, to free up disk space) from a file system. After you issue the **rmdir** command, the Cisco IOS XR software prompts you to specify the name of the directory to be deleted.

When a directory contains files, you must remove the files before deleting the directory. Use the **delete** command to remove files.

The following example shows how to delete a subdirectory from the hard disk. The **dir** command is used to verify that the directory has been deleted.

```
RP/0/RP0/CPU0:router# rmdir harddisk:
Remove directory filename []?newdir
Delete harddisk:/newdir[confirm]y
RP/0/RP0/CPU0:router# dir harddisk:

Directory of harddisk:

 37146      drwx  4096      Sun Dec 14 15:30:48 2008  malloc_dump
 43030      drwx  4096      Wed Dec 24 11:20:52 2008  tracebacks
 43035      drwx  4096      Thu Jan  8 18:59:18 2009  sau
 51026      drwx  4096      Sat Dec 27 02:52:46 2008  tempA
 51027      drwx  4096      Sat Dec 27 02:04:10 2008  dir.not.del
-430307552  -rwx   342      Fri Jan 16 10:47:38 2009  running-config
-430305504  -rwx  39790      Mon Jan 26 23:45:56 2009  cf.dat

39929724928 bytes total (39883235328 bytes free)
```

# show filesystem

To display the layout and contents of file systems, use the **show filesystem** command in EXEC mode

**show filesystem** *filesystem*:[{**firmware** | **stats** | **verbose level**}] [**location** {*node-id* | **all**}]

## Syntax Description

|   |   |
|---|---|
| <i>filesystem</i> :                             | Name of the file system for which to display information, followed by a colon. Possible values are: <b>disk0:</b> , <b>disk1:</b> , <b>harddisk:</b> .  |
| <b>firmware</b>                                 | (Optional) Displays the firmware level.   |
| <b>stats</b>                                    | (Optional) Displays device statistics.  |
| <b>verbose level</b>                            | (Optional) Changes the device driver verbose level.   |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Specifies the node where the file system is located. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. Use the <b>all</b> keyword to indicate all nodes. |

## Command Default

The file system for the active RP is displayed.

## Command Modes

EXEC mode

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 6.1.2 | This command was introduced. |

## Usage Guidelines

Use the **show filesystem** command to learn the alias names (prefixes) of the file systems supported by your networking device.

The following example shows sample output from the **show filesystem** command:

```
RP/0/RP0/CPU0:router# show filesystem

File Systems:

      Size (b)      Free (b)      Type  Flags  Prefixes
      -          -          -     -     -
      -          -          -     -     -
      -          -          -     -     -
39929724928 39852978176  harddisk  rw  harddisk:
 1024606208  863584256  flash-disk  rw  disk0:
    2092032    2059264    nvram     rw  nvram:
    62390272    62381260    flash     rw  bootflash:
```

The following example shows sample output from the **show filesystem** command using the optional **location node-id** keyword and argument:

```
RP/0/RP0/CPU0:router# show filesystem location 0/rp0/cpu0

File Systems:
```

```

      Size(b)      Free(b)      Type  Flags  Prefixes
      -           -           network  rw  qsm/dev/fs/tftp: tftp:
      -           -           network  rw  qsm/dev/fs/rcp: rcp:
      -           -           network  rw  qsm/dev/fs/ftp: ftp:
39929724928 39883235328  harddisk  rw  harddisk:
      2092032      2019328      nvram    rw  nvram:
1024606208  847888384  flash-disk  rw  disk0:
      62390272      62153616      flash    rw  bootflash:

```

**Table 23: show filesystem Field Descriptions**

| Field    | Description   |
|----------|---|
| Size(b)  | Amount of memory in the file system, in bytes.      |
| Free(b)  | Amount of free memory in the file system, in bytes. |
| Type     | Type of file system.                                |
| Flags    | Permissions for file system.                        |
| Prefixes | Alias for the file system.                          |

# show media

To display the current state of the disk storage media, use the **show media** command in EXEC or Administration EXEC mode.

**show media location** {*node-id* | **all**}

## Syntax Description

**location**{*node-id* | **all**} (Optional) Specifies the node where the file system is located. The *node-id* argument is expressed in the *rack/slot/module* notation. Use the **all** keyword to indicate all nodes.

## Command Default

The disk storage media for the active RP is displayed.

## Command Modes

Administration EXEC

EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 6.1.2 | This command was introduced. |

## Usage Guidelines

Use the **show media** command to view the status of the storage media on your system.

The following example displays the output of the **show media** command:

```

sysadmin-vm:0_RP0 #show media
Thu Nov 30 14:57:14.002 WET
Media Information for local node.
-----
Partition          Size      Used   Percent   Avail
rootfs:            2.7G     1.5G     59%      1.1G
apphost:           1.9G      61M      4%      1.7G
/dev/sde           870M     401M    50%     409M
harddisk:          2.4G     966M    43%     1.3G
log:               459M      67M    16%     359M
config:            159M     2.5M     2%     144M
disk0:             1.3G     108M     9%     1.1G
-----
rootfs: = root file system (read-only)
log:    = system log files (read-only)
config: = configuration storage (read-only)

```

**Table 24: show media Field Descriptions**

| Field     | Description            |
|-----------|------------------------|
| Partition | Partition on the disk. |
| Size      | Size of the partition. |
| Used      | Partition size used.   |
| Percent   | Percentage used.       |

| Field | Description                     |
|-------|---------------------------------|
| Avail | Available free partition space. |

# Hardware Redundancy and Node Administration Commands

---

This module describes the commands used to manage the hardware redundancy, power, and administrative status of the nodes on a router running Cisco IOS XR software.

## crs8 set min-power-modules

To configure the minimum number of modular power entry modules (PEMs) on the 8-slot line card chassis, use the **crs8 set min-power-modules** command in administration configuration mode. To remove the configuration and revert to the default, use the **no** form of this command.

**crs8 set min-power-modules** *number*  
**no crs8 set min-power-modules** *number*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>number</i> Minimum number of power modules for the chassis. Values can be from 0 to 4. |
|---------------------------|---|

|                        |   |
|------------------------|---|
| <b>Command Default</b> | Four DC power modules or three AC power modules |
|------------------------|---|

|                      |                              |
|----------------------|------------------------------|
| <b>Command Modes</b> | Administration configuration |
|----------------------|------------------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.0.1  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **crs8 set min-power-modules** command to configure the number of modular PEMs to be used if you are using less than the default number. If you do not use this command and you install less than the default number of PEMs, you receive alarm messages.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | system         | read,<br>write   |

This example shows how to set the minimum number of modular power modules to three:

```
RP/0/RP0/CPU0:router(admin-config)# crs8 set min-power-modules 3
```

## crs16 set min-power-modules

To configure the minimum number of modular power entry modules (PEMs) on the 16-slot line card chassis, use the **crs16 set min-power-modules** command in administration configuration mode. To remove the configuration and revert to the default, use the **no** form of this command.

```
crs16 set min-power-modules number location node-id
no crs16 set min-power-modules number location node-id
```

| Syntax Description | <i>number</i>                     | Minimum number of power modules for the chassis. Values can be from 0 to 8.  |
|--------------------|-----------------------------------|--|
|                    | <b>location</b><br><i>node-id</i> | Location of an alarm module for which to specify the number of power modules. The <i>node-id</i> is expressed in the notation <i>rack/slot/*</i> . |
|                    | <b>Note</b>                       | Enter the <b>show platform</b> command to see the location of alarm nodes installed in the router.   |

**Command Default** Six DC power modules or five AC power modules

**Command Modes** Administration configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.0.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **crs16 set min-power-modules** command to configure the number of modular PEMs to be used if you are using less than the default number. If you do not use this command and you install less than the default number of PEMs, you receive alarm messages.

| Task ID | Task ID               | Operation |
|---------|-----------------------|-----------|
|         | system read,<br>write |           |

This example shows how to set the minimum number of modular power modules to six:

```
RP/0/RP0/CPU0:router (admin-config) # crs16 set min-power-modules 6 location 0/AM0/SP
```

# dsc serial

To define the serial ID for a rack, use the **dsc serial** command in administration configuration mode. To remove a serial ID entry from the designated shelf controller (DSC) table, use the **no** form of this command.

```
dsc serial serial_id rack rack_num
no dsc serial serial_id rack rack_num
```

## Syntax Description

*serial\_id* Serial ID for a rack. The serial ID is included as an entry in the DSC table. Range is from 0 through 16 characters.

**rack** *rack\_num* Identifies the rack whose ID you are configuring to be the serial ID .

**Note** For systems that include two line card chassis and one fabric chassis, the line card chassis IDs are 0 and 1, and the fabric chassis ID is F0.

## Command Default

No default behavior or values

## Command Modes

Administration configuration

## Command History

| Release       | Modification                       |
|---------------|------------------------------------|
| Release 2.0   | This command was introduced.       |
| Release 3.3.0 | The task ID was updated to system. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

For more information about identifying and selecting a DSC on your router, see *Cisco IOS XR Getting Started Guide for the Cisco CRS Router*.

**Note** The serial ID is the hardware serial number that identifies the chassis.

Use the **show running-config** command to display and verify the defined serial ID for a rack.

## Task ID

| Task ID | Operations     |
|---------|----------------|
| system  | read,<br>write |

The following example shows how to define the serial ID for a rack:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
```

```
RP/0/RP0/CPU0:router(admin-config)# dsc serial TBC0610991700000 rack 1
```

# env disable

To disable environment monitoring on the chassis, use the **env disable** command in administration configuration mode. To reenable environment monitoring after it has been disabled, use the **no** form of this command.

**env disable**  
**no env disable**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Environment monitoring is enabled.

**Command Modes** Administration configuration

| Command History | Release     | Modification   |
|-----------------|-------------|--|
|                 | Release 2.0 | This command was introduced.   |
|                 | Release 3.2 | The <b>env disable</b> command was moved from the root-system task ID to the system task ID. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

By default, environment monitoring related to temperature and voltage is enabled on a router running Cisco IOS XR software. If environmental monitoring is disabled, you are not alerted if the router overheats.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | system  | read,<br>write |

The following example shows how to disable environment monitoring with the **env disable** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# env disable
```

## env power-supply disable

To disable power supply monitoring on the chassis, use the **env power-supply disable** command in administration configuration mode. To disable power supply monitoring, use the **no** form of this command.

**env power-supply disable**  
**no env power-supply disable**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Power supply monitoring is enabled.

**Command Modes** Administration configuration

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.3.0 | The <b>env power-supply</b> command was moved from the root-system task ID to the system task ID.<br><br>The <b>threshold {restart voltage   shutdown voltage}</b> keywords and arguments were added to the <b>env power-supply</b> command. |
|                 | Release 3.4.1 | The <b>threshold {restart voltage   shutdown voltage}</b> keywords and arguments were removed, and the command was changed to <b>env power-supply disable</b> .<br><br>Power supply monitoring was enabled by default.                       |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task Operations       |
|---------|-----------------------|
|         | system read,<br>write |

The following example shows how to disable power supply monitoring with the **env power-supply disable** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# env power-supply disable
```

# fpd auto-upgrade

To enable the automatic upgrade of FPD images during a software upgrade, use the **fpd auto-upgrade** command in Admin Configuration mode. To disable automatic FPD upgrades, use the **no** form of this command.

## fpd auto-upgrade

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | This command has no keywords or arguments. |
|---------------------------|--|

|                        |  |
|------------------------|--|
| <b>Command Default</b> | FPD images are not automatically upgraded. |
|------------------------|--|

|                      |                          |
|----------------------|--------------------------|
| <b>Command Modes</b> | Admin Configuration mode |
|----------------------|--------------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.0.1  | This command was introduced. |

**Usage Guidelines**

By default automatic upgrades of the FPD images are not performed during a software upgrade. Once the **fpd auto-upgrade** command is enabled, when you upgrade the software and an FPD upgrade is required, the FPD upgrade is done automatically before the router is rebooted. The automatic FPD upgrade works only if the FPD image is upgraded together with the mini installation PIE. For example, use the **install add** and **install activate** commands as shown here:

```
(admin)# install add comp-hfr-mini.pie hfr-fpd.pie hfr-mpls-p.pie
(admin)# install activate disk0:/comp-hfr-mini.pie disk0:/hfr-fpd.pie disk0:/hfr-mpls-p.pie
```

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | system         | read,<br>write   |

The following example shows how to enable automatic FPD upgrades:

```
RP/0/RP0/CPU0:router(admin-config)# fpd auto-upgrade
```

## hw-module boot override

To place the standby RP into ROM Monitor mode so that you can update the ROMMON software in a single chassis system to a compatible ROM Monitor version, use the **hw-module boot override** command in administration configuration mode. To remove an RP from ROM Monitor mode, use the **no** form of this command.

**hw-module boot override**  
**no hw-module boot override**

**Command Default** No default behavior or values

**Command Modes** Administration configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |
|                 | Release 3.9.0 | This command was deprecated. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note** This command is deprecated as of Cisco IOS XR Release 3.9.0.

Before you can upgrade a single-chassis system from a release of Cisco IOS XR software prior to Release 3.3.0, you need to first upgrade the ROM Monitor software to a compatible version. If you do not perform this upgrade in a single-chassis system, the standby RP fails to boot and an error message appears. To avoid boot failure, you need to use the **hw-module boot override** command to place the standby RP into ROM Monitor mode, and update the ROMMON software as required.

For ROM Monitor requirements, refer to the Software/Firmware Compatibility Matrix at the following URL:  
[http://www.cisco.com/web/Cisco\\_IOS\\_XR\\_Software/index.html](http://www.cisco.com/web/Cisco_IOS_XR_Software/index.html)

Use the **show platform** command to view a summary of the nodes in the router, including status information.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | root-system | read,<br>write |
|         | root-lr     | read,<br>write |

The following example shows how to boot the standby RP to upgrade its ROMMON software to a more recent ROM Monitor version:

```
RP/0/RP0/CPU0:router# admin  
RP/0/RP0/CPU0:router(admin)# configure  
RP/0/RP0/CPU0:router(admin-config)# hw-module boot override
```

## hw-module high-bandwidth

To upgrade the RSP3 Lite card from 80Gig per line card capacity to 220Gig per Line card capacity (for Enhanced ethernet linecards), use the **hw-module high-bandwidth** command in the appropriate mode. To restore the default capacity, use the **no** form of the command.

**hw-module high-bandwidth**

**no hw-module high-bandwidth**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | This command has no keywords or arguments. |
|---------------------------|--|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |              |
|----------------------|--------------|
| <b>Command Modes</b> | Admin config |
|----------------------|--------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 5.3.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | This command can be used only after applying the appropriate license to RSPLite3. Traditional or smart licensing can be used. |
|-------------------------|---|

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | sysmgr         | execute          |

### Example

This example shows how to use the **hw-module high-bandwidth** command:

```
RP/0/RP0/CPU0:router (config) # hw-module high-bandwidth
```

# hw-module location

To configure various hardware attributes for a specific node, or for all nodes installed in the router, use the **hw-module location** command in EXEC or administration EXEC mode.

EXEC Mode

**hw-module location** *node-id* {**maintenance-mode** | **reload** *path*}

Administration EXEC Mode

**hw-module location** *node-id* **reload** *path*

|                           |   |  |
|---------------------------|---|--|
| <b>Syntax Description</b> | <i>node-id</i>  | Slot whose hardware attributes you want to configure. The <i>node-id</i> is expressed in the notation <i>rack/slot/*</i> .                             |
|                           |   | <b>Note</b> Enter the <b>show platform</b> command to see the location of all nodes installed in the router.   |
|                           | <b>maintenance-mode</b>   | Brings the node down and puts the node into maintenance mode.  |
|                           | <b>reload</b>   | Resets power-cycle, reloads hardware, or both on a specific node.  |
|                           | <i>path</i>   | Specific image you want to download onto the specific node or nodes. Replace <i>path</i> with the TFTP or disk path to the image you want to download. |
| <b>Command Default</b>    | None  |  |
| <b>Command Modes</b>      | EXEC<br>Global Configuration  |  |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>  |
|                           | Release 3.3.0   | This command was introduced.   |
|                           | Release 3.4.0   | The <b>maintenance-mode</b> keyword was added in EXEC mode.  |
|                           | Release 4.1.0   | The warm reload option was removed.  |
| <b>Usage Guidelines</b>   | To reset a specific node, or to put a node into maintenance mode, use the <b>hw-module location</b> command in Admin EXEC mode. |  |

To reset a specific node or all nodes, use the **hw-module location** command in administration EXEC mode. Starting with Cisco IOS XR Release 4.0.1, it is recommended to use the partially qualified node ID in the **hw-module location** command. Specify an entire slot using the notation *rack/slot/\**.

**Note** Before reloading nodes, we recommend using the **cfs check** command to check the sanity of the configuration file system and attempt to recover from internal inconsistencies. You need to enter the **cfs check** command on each secure domain router (SDR) that has nodes impacted by the reload.

---

**Task ID**

---

**Task Operations ID**

---

 root-lr execute (in EXEC mode)
 

---

 sysmgr execute (in EXEC mode and administration EXEC mode)
 

---

The following example shows how to reset the hardware on a specific node from EXEC mode:

```
RP/0/RP0/CPU0:router # hw-module location 0/1/CPU0 reload
```

The following example shows how to reset the hardware on a specific node from administration EXEC mode:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# hw-module location 0/3/CPU0 reload
```

# hw-module location bay port port-mode

To configure an MPA with optics in 200G mode use the `hw-module location bay port port-mode` command in the global configuration mode.

**Note** Staircase FEC is supported only in 100gig mode.

**hw-module location** *location* **bay** *bay-number* **port** *port-number* **port-mode** *port-mode*

| Syntax Description | location <i>location</i>          | Indicates the location of the MPA, which is the line card ID.  |
|--------------------|-----------------------------------|--|
|                    | <b>bay</b> <i>bay-number</i>      | Indicates the bay number of the line card.   |
|                    | <b>port</b> <i>port-number</i>    | Indicates the port number of the optical-module or optic. You can configure the port number with only the value, 0.  |
|                    | <b>port-mode</b> <i>port-mode</i> | Configures the 200G port mode. Port mode can be: <ul style="list-style-type: none"> <li>• <i>2xHundredGigE-16QAM</i>: Configures 200G 16QAM port mode for EP</li> <li>• <i>2xHundredGigE-8QAM</i>: Configures 200G 8QAM port mode for EP</li> </ul> <p>A higher QAM value leads to higher data transmission rates, but also increases the risk of errors that necessitates re-sends.</p> |

**Command Default** If this command is not configured, the MPA and optics work in 100G mode.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 7.0.1 | This command was introduced. |

**Usage Guidelines** You can configure this command only at port 0 of a router.

| Task ID | Task ID     | Operation      |
|---------|-------------|----------------|
|         | root-system | read,<br>write |
|         | root-lr     | read,<br>write |

This example shows how to configure 200G for an optical module of a router.

```
Router(config)# hw-module location 0/2/CPU0 bay 0 port 0 port-mode 2xHundredGigE-16QAM
```

# hw-module location slice power-down

To power off a specified slice, use the **hw-module location slice power-down** command in the Global Configuration mode. To power on a slice, use the **no** form of the command.

**hw-module location** *node-id* *slice number* **power-down**

## Syntax Description

**location** *node-id* Specifies the line card node location.

**slice number** Specifies the slice number that should be power off.

## Command Default

All slices are power on.

## Command Modes

Global Configuration mode

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 7.0.1 | This command was introduced. |

## Usage Guidelines

This feature is supported on the Cisco ASR 9000 4th Generation Ethernet line cards.

### Note

It is necessary to reload the line card after executing the **hw-module location slice power-down** command.

## Task ID

| Task ID | Operation      |
|---------|----------------|
| sysmgr  | read,<br>write |

## Example

This example shows how to power down slice 3, and 7 of the line card at node 0:

```
RP/0/RP0/CPU0:router (config) # hw-module location 0/0/CPU0 slice 3 power-down
RP/0/RP0/CPU0:router (config) # hw-module location 0/0/CPU0 slice 7 power-down
RP/0/RP0/CPU0:router (config) # commit
RP/0/RP0/CPU0:router (config) # end
RP/0/RP0/CPU0:router # admin
RP/0/RP0/CPU0:router (sysadmin) # hw-module location 0/0/CPU0 reload
```

# hw-module power disable

To disable the node power-on feature on a specific line card, use the **hw-module power disable** command in administration configuration mode. To reenble the node power-on feature on a line card, use the **no** form of this command.

```
hw-module power disable location node-id
no hw-module power disable location node-id
```

| <b>Syntax Description</b> | <b>location</b> <i>node-id</i> Identifies the node whose power-on feature you want to disable. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation.  |         |              |               |                              |               |  |
|---------------------------|---|---------|--------------|---------------|------------------------------|---------------|--|
| <b>Command Default</b>    | Power is on for all nodes.  |         |              |               |                              |               |  |
| <b>Command Modes</b>      | Administration configuration  |         |              |               |                              |               |  |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.3.0</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 3.9.0</td> <td>The option to use this command without the <b>disable</b> keyword was removed.</td> </tr> </tbody> </table>   | Release | Modification | Release 3.3.0 | This command was introduced. | Release 3.9.0 | The option to use this command without the <b>disable</b> keyword was removed. |
| Release                   | Modification  |         |              |               |                              |               |  |
| Release 3.3.0             | This command was introduced.  |         |              |               |                              |               |  |
| Release 3.9.0             | The option to use this command without the <b>disable</b> keyword was removed.  |         |              |               |                              |               |  |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>Use the <b>show platform</b> command to view a summary of the nodes in the router, including status information. The <b>hw-module power disable</b> command is available for line cards only; it is not available for RP cards.</p> |         |              |               |                              |               |  |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>sysmgr</td> <td>read,<br/>write</td> </tr> <tr> <td>root-lr</td> <td>read,<br/>write</td> </tr> </tbody> </table>  | Task ID | Operations   | sysmgr        | read,<br>write               | root-lr       | read,<br>write   |
| Task ID                   | Operations  |         |              |               |                              |               |  |
| sysmgr                    | read,<br>write  |         |              |               |                              |               |  |
| root-lr                   | read,<br>write  |         |              |               |                              |               |  |

The following example shows how to disable the node power-on feature on a line card:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# hw-module power disable location 0/0/CPU0
```

## hw-module port-control license

To request (and apply) license for (A9K-4T16GE-TR and A9K-4T16GE-SE) combo card , use the **hw-module port-control license** command in the appropriate mode. To remove the applied license, use the **no** form of the command.

**hw-module port-control license location** *node-id*  
**no hw-module port-control license location** *node-id*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>location</b> <i>node-id</i> Interface details. |
|---------------------------|---|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 5.3.0  | This command was introduced. |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | The <b>hw-module port-control license</b> command is used to apply the requested license on the combo card. The granted license is permanent , unless the user wants to remove license on this card and use it on some other card. LC reload is mandatory for the license to take effect. When the LC comes up after the reload, the licenses are installed and can be verified using the <b>show license entitlement</b> command. |
|-------------------------|--|

If the user wants to use the combo license on some other line-card instead of the current one, then the license has to be removed. The **no hw-module port-control license** command removes the applied license.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | sysmgr         | execute          |

### Example

This example shows how to use the **hw-module port-control license** command:

```
RP/0/RP0/CPU0:router (config) # hw-module port-control license location 0/1/CPU0
```

# hw-module port-control non-combo-mode

To use all the four Tengig ports, instead of the Gigabit ethernet ports, use the **hw-module port-control non-combo-mode** command in the appropriate mode. To remove the non-combo configuration, use the **no** form of the command.

**hw-module port-control non-combo-mode location** *linecard-slot*  
**no hw-module port-control non-combo-mode location** *linecard-slot*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <b>location</b> <i>linecard-slot</i> The interface and slot details. |
|---------------------------|--|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 5.3.0  | This command was introduced. |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | On the (A9K-4T16GE-TR and A9K-4T16GE-SE ) combo card, the customer can either use 16Gigabit Ethernet + 2Tengig or 4Tengig ports. This option is when the customer does not have the Wildchild combo license. If the License is installed, all the ports will be enabled. In case, the license is not available and the customer wants to use all the 4 Tengig ports instead of the Gigabit ethernet ports, then , this command needs to be used. This is the non-combo mode. |
|-------------------------|--|

|             |   |
|-------------|---|
| <b>Note</b> | LC reload is mandatory for the mode to take effect. |
|-------------|---|

If the **hw-module port-control non-combo-mode** command is not configured, the line card will operate in the default mode. In the default mode, the two Tengig ports which are enabled are - 0/\*/0/16 and 0/\*/0/17.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|----------------|----------------|------------------|
|                | sysmgr         | execute          |

## Example

This example shows how to use the **hw-module port-control non-combo-mode** command:

```
RP/0/RP0/CPU0:router (config) # hw-module port-control non-combo-mode location 0/1/CPU0
```

## hw-module reset auto

To reset a specific node, use the **hw-module reset auto** command in administration configuration mode. To disable the reset feature on a specific node, use the **no** form of this command.

```
hw-module reset auto [disable] location node-id
no hw-module reset auto [disable] location node-id
```

### Syntax Description

|                         |   |
|-------------------------|---|
| <b>disable</b>          | Disables the node reset feature on the specified node.  |
| <b>location node-id</b> | Identifies the node you want to reload. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |

### Command Default

The node reset feature is enabled for all nodes.

### Command Modes

Administration configuration

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.3.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **hw-module reset auto** command is used to reload Cisco IOS XR software on a specific node. The node reloads with the current running configuration and active software set for that node.

### Task ID

| Task ID     | Operations     |
|-------------|----------------|
| root-system | read,<br>write |
| root-lr     | read,<br>write |

The following example shows how to reload a node:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# hw-module reset auto location 0/2/CPU0

RP/0/RP0/CPU0:router# RP/0/RP0/CPU0:Apr  2 22:04:43.659 : shelfmgr[294]:
%S HELFMGR-3-USER_RESET : Node 0/2/CPU0 is reset due to user reload request
```

# hw-module service maintenance-mode location

To configure the router to take a specific node into maintenance mode in the event of disaster recovery, use the **hw-module service maintenance-mode location** command in global configuration mode. To reset this configuration, use the **no** form of the command.

```
hw-module service maintenance-mode location node-id
no hw-module service maintenance-mode location node-id
```

| <b>Syntax Description</b> | <i>node-id</i> Location of the service card that you want to move into offline mode. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.                    |         |              |               |                              |
|---------------------------|---|---------|--------------|---------------|------------------------------|
| <b>Command Default</b>    | In case of disaster recovery, the router reloads a failed line card if MDR is unsuccessful, and does not put the line card in maintenance mode.   |         |              |               |                              |
| <b>Command Modes</b>      | Global configuration  |         |              |               |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.4.1</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | Release 3.4.1 | This command was introduced. |
| Release                   | Modification  |         |              |               |                              |
| Release 3.4.1             | This command was introduced.  |         |              |               |                              |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

In the event that a line card fails, the router attempts to restart all the processes on the line card without disrupting the traffic flow. This is called a *Minimum Disruptive Restart (MDR)*. If the MDR does not recover the line card, the router reloads the line card. You can configure the router to place the line card into maintenance mode after an unsuccessful MDR, instead of reloading it. Use the **hw-module service maintenance-mode location** command to configure the router to take a specified line card into maintenance mode after an unsuccessful MDR, instead of reloading the line card.

*Maintenance mode* is a mode in which only the processes that are required for collecting useful data for debugging run.

| Task ID | Task    | Operations     |
|---------|---------|----------------|
|         | root-lr | read,<br>write |

The following example shows how to move the card at 0/1/CPU0 into maintenance mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# hw-module service maintenance-mode location 0/1/CPU0
```

## hw-module service offline location

To configure offline mode as the role for a specific node, use the **hw-module service offline location** command in

global configuration

mode. To disable offline mode, use the **no** form of the command.

**hw-module service offline location** *node-id*

**no hw-module service offline location** *node-id*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>node-id</i> Location of the service card that you want to move into offline mode. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |
|---------------------------|--|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.4.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Offline mode disables all configured service instances on a service card. If there is a service active on the service card, the service switches over to a standby location if a standby is configured.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | root-lr        | read,<br>write    |

The following example shows how to move the card at 0/1/CPU0 into offline mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# hw-module service offline location 0/1/CPU0
```

# hw-module shutdown

**Note** Effective with Cisco IOS XR Release 3.9.0, the **hw-module shutdown** command is not supported.

To administratively shut down a specific node, use the **hw-module shutdown** command in Admin Configuration mode. To return a node to the up state, use the **no** form of this command.

**hw-module shutdown location** *node-id*  
**no hw-module shutdown location** *node-id*

**Syntax Description** **location** *node-id* Identifies the node you want to shut down. The *node-id* argument is expressed in the *rack/slot/module* notation.

**Command Default** Nodes are in the up state.

**Command Modes** Admin Configuration

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.  |
|                 | Release 3.2   | This command was modified from the <b>hw-module node shutdown</b> command. The <b>node</b> keyword was replaced by the <b>location</b> keyword, which was moved to the end of the command string. |
|                 | Release 3.9.0 | This command was removed.   |

**Usage Guidelines** Nodes that are shut down still have power, but cannot load or operate Cisco IOS XR software.

**Note** Route processors (RPs) cannot be administratively shut down.

Enter the **show platform** command in Admin EXEC mode to display the results of the **hw-module shutdown** command.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | root-system | read,<br>write |
|         | root-lr     | read,<br>write |

The following example shows how to administratively shut down the node 0/2/CPU0:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# hw-module shutdown location 0/2/CPU0
```

The following example shows how to bring up a node using the **no** form of the **hw-module shutdown** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# no hw-module shutdown location 0/2/CPU0
```

# hw-module subslot reload

To reload Cisco IOS XR software on a specific subslot, use the **hw-module subslot reload** command in EXEC mode.

**hw-module subslot *subslot-id* reload**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>subslot-id</i> Specifies the subslot to be restarted. The <i>subslot-id</i> argument is entered in the <i>rack/slot/subslot</i> notation. |
|---------------------------|--|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |      |
|----------------------|------|
| <b>Command Modes</b> | EXEC |
|----------------------|------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.2    | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This command reloads Cisco IOS XR software on the specified shared port adapter (SPA) and restarts the SPA interfaces. The SPA reloads with the current running configuration and active software set for the SPA.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | root-lr        | read,<br>write    |

The following example shows how to restart the SPA in slot 2, subslot 1:

```
RP/0/RP0/CPU0:router# hw-module subslot 0/2/1 reload
```

## hw-module subslot shutdown

To administratively shut down a specific shared port adapter (SPA), use the **hw-module subslot shutdown** command in Global Configuration mode. To return a SPA to the up state, use the **no** form of this command.

**hw-module subslot *subslot-id* shutdown** [{**powered** | **unpowered**}]  
**no hw-module subslot *subslot-id* shutdown**

### Syntax Description

*subslot-id* Specifies the subslot to be shut down. The *subslot-id* argument is entered in the *rack/slot/subslot* notation.

**powered** (Optional) Retains power to the specified subslot.

**unpowered** (Optional) Powers down completely the specified subslot.

### Command Default

Shutdown is powered if no option is specified.

### Command Modes

Global Configuration mode

### Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 3.2 | This command was introduced. |

### Usage Guidelines

This command administratively shuts down the SPA in the specified subslot. Subslots that are shut down still have power but cannot load or operate Cisco IOS XR software.

### Task ID

| Task ID | Operations     |
|---------|----------------|
| root-lr | read,<br>write |

The following example shows how to shut down the SPA in subslot 1 of the SPA interface processor (SIP) in slot 2:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# hw-module subslot 0/2/1 shutdown powered
```

# isolation enable

To configure the route processor to collect debug information like a process coredump from a failed route processor, when NSR triggers failover, use the **isolation enable** command in global configuration mode. To disable RP isolation during failover, use the **no** form of this command.

**isolation enable**  
**no isolation enable**

**Syntax Description** This command has no keywords or arguments.

**Command Default** If the **isolation enable** is not configured, the **nsr process-failures switchover** command immediately restarts the active RP during NSR failover and hence the active RP cannot collect the required debug information to identify the cause of the failure.

**Command Modes** Global configuration

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 4.1.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

During RP failover, the standby RP takes over as the active RP immediately without a protocol flap and NSR restarts the active RP. This switchover time is less than the timeout for the protocol to flap. Because the active RP is restarted immediately, it is not possible to get debug details to identify the cause of the failure.

The **isolation enable** command enables NSR to trigger RP switchover without protocol flap and collect the required debug information to identify the cause of the failure. The RP isolation feature keeps the active RP in an isolated state wherein it continues to operate even after the switchover. Using the **isolation enable** command you can enable RP isolation, thereby providing sufficient time for the failed RP to collect the necessary debug information like a process coredump before restarting a failed route processor.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|----------------|----------------|------------------|
|                | transport      | read,<br>write   |

This example shows how to configure the route processor to collect debug information when NSR triggers failover:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# isolation enable
RP/0/RP0/CPU0:router(config)#
```

# isolation multiple

To configure the route processor to collect debug information of multiple protocols from a failed route processor when multiple protocols trigger NSR, which in turn triggers failover, use the **isolation multiple** command in the global configuration mode. To disable RP isolation during failover, caused by multiple protocols, use the **no** form of this command.

**isolation multiple**  
**no isolation multiple**

**Syntax Description** This command has no keywords or arguments.

**Command Default** If the **isolation multiple** command is not configured and the failover is triggered by multiple protocols, the **isolation enable** command enables a failed RP to collect the required debug information of only the first failed protocol.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

During RP failover, the standby RP takes over as the active RP immediately and restarts the active RP to support NSR without a protocol flap. This switchover time is less than the timeout for the protocol to flap. Because the active RP is restarted immediately, it is not possible to get debug details to identify the cause of the failure.

The **isolation enable** command enables NSR to trigger RP switchover without protocol flap and collect the required debug information to identify the cause of the failure.

If multiple protocols trigger NSR, the **isolation enable** command does not enable the RP to collect the required debug information. Use the **isolation multiple** command to enable the active RP to collect debug information even if the failure is caused by multiple protocols.

| Task ID | Task ID   | Operation      |
|---------|-----------|----------------|
|         | transport | read,<br>write |

This example shows how to configure the route processor to collect debug information when multiple protocols trigger NSR, which in turn triggers failover:

```
RP/0/RP0/CPU0:router#config
RP/0/RP0/CPU0:router (config) #isolation multiple
RP/0/RP0/CPU0:router (config) #
```

# led mode

To change the message, mode or status of a router card LED display, use the **led mode** command in administration configuration mode. To revert to the default message, mode or status, use the **no** form of this command.

**led mode** {default | scroll} {lock | unlock} message location node-id

## Syntax Description

{default | scroll} Specifies the mode of the card LED display.

{lock | unlock} Specifies the status of the card LED display.

message Specifies the message to display on the card LED.

location node-id Specifies the node for which to configure the LED information. The *node-id* argument is expressed in the *rack/slot/module* notation.

## Command Default

Mode: default; status: unlocked; message: according to the state of the software

## Command Modes

Administration configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.8.0 | This command was introduced. |

## Usage Guidelines

You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show led** command to display the LED settings for a card or all cards.

## Task ID

| Task ID | Operation      |
|---------|----------------|
| system  | read,<br>write |

This example shows how to change the message displayed on the card LED and the subsequent display in the **show led** command output:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# led mode default unlock STBY_RP location 0/rp0/cpu0
RP/0/RP0/CPU0:router(admin-config)# end
```

Uncommitted changes found, commit them? [yes]:

```
RP/0/RP0/CPU0:router(admin)# show led location all | i 0/RP0/CPU0
```

```
LOCATION          MESSAGE          MODE          STATUS
=====
```

|            |         |         |          |
|------------|---------|---------|----------|
| 0/0/SP     | IOX-RUN | DEFAULT | UNLOCKED |
| 0/1/SP     | IOX-RUN | DEFAULT | UNLOCKED |
| 0/RP0/CPU0 | STBY_RP | DEFAULT | UNLOCKED |
| 0/RP1/CPU0 | ACTV_RP | DEFAULT | UNLOCKED |

# redundancy switchover

To cause the primary (active) route processor (RP) to fail over to the redundant standby RP, use the **redundancy switchover** command in

EXEC or administration EXEC

mode. To disable the forced switchover, use the **no** form of this command.

**redundancy switchover** [**location** *node-id*]  
**no redundancy switchover** [**location** *node-id*]

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <b>location</b> <i>node-id</i> (Optional) Specifies the primary RP on which to force a switchover. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. |
|---------------------------|--|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                             |
|----------------------|-----------------------------|
| <b>Command Modes</b> | EXEC<br>Administration EXEC |
|----------------------|-----------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>  |
|------------------------|----------------|--|
|                        | Release 2.0    | This command was introduced.   |
|                        | Release 3.3.0  | The <b>redundancy switchover</b> command was moved from the system task ID to the root-lr task ID. |
|                        | Release 3.5.0  | This command was supported in administration EXEC mode.  |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **redundancy switchover** command to trigger a switchover from the primary RP to the standby RP. When the **redundancy switchover** command is issued, the running (committed) configuration is automatically saved and loaded during switchover, and the standby RP becomes the active primary RP, while the original primary RP becomes the standby RP.

|             |  |
|-------------|--|
| <b>Note</b> | The <b>redundancy switchover</b> command can be used only if the standby RP is in the ready state. Use the <b>show redundancy</b> command to view the status of the RPs. |
|-------------|--|

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | root-lr        | read,<br>write    |

The following example shows partial output for a successful redundancy switchover operation:

```
RP/0/RP0/CPU0:router# show redundancy

Redundancy information for node 0/RP0/CPU0:
=====
Node 0/RP0/CPU0 is in ACTIVE role
Partner node (0/RP1/CPU0) is in STANDBY role
Standby node in 0/RP1/CPU0 is ready

Reload and boot info
-----
RP reloaded Tue Mar 28 09:02:26 2006: 5 hours, 41 minutes ago

Standby node boot Tue Mar 28 09:10:37 2006: 5 hours, 33 minutes ago
Standby node last went not ready Tue Mar 28 09:25:49 2006: 5 hours, 18 minutes
go
Standby node last went ready Tue Mar 28 09:25:51 2006: 5 hours, 18 minutes ago
There has been 1 switch-over since reload
....
RP/0/RP0/CPU0:router# redundancy switchover

Initializing DDR SDRAM...found 2048 MB
Initializing ECC on bank 0
...
Turning off data cache, using DDR for first time

Initializing NVRAM...
Testing a portion of DDR SDRAM ...done
Reading ID EEPROMs ...
Initializing SQUID ...
Initializing PCI ...

PCI0 device[1]: Vendor ID 0x10ee

Configuring MPPs ...
Configuring PCMCIA slots ...
--More--
```

If the standby RP is not in the ready state, the switchover operation is not allowed. The following example shows output for a failed redundancy switchover attempt:

```
RP/0/RP0/CPU0:router# show redundancy

This node (0/RP0/CPU0) is in ACTIVE role
Partner node (0/RP1/CPU0) is in UNKNOWN role

RP/0/RP0/CPU0:router# redundancy switchover

Standby card not running; failover disallowed.
```

# show dsc

To display the current designated shelf controller (DSC) configuration for the shelf or for the system, enter the **show dsc** command in administration EXEC mode.

```
show dsc [{all | mine | location node-id}]
```

| Syntax Description | all              | Displays DSC information from all available nodes in the system.   |
|--------------------|------------------|--|
|                    | mine             | Displays information about the current node.   |
|                    | location node-id | Displays DSC information for a specific node. The <i>node-id</i> is expressed in the <i>rack/slot/module</i> notation. |

**Command Default** This command has no keywords or arguments.

**Command Default** No default behavior or values

**Command Modes** Administration EXEC

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.  |
|                 | Release 3.3.0 | The <b>node</b> keyword was replaced by the <b>location</b> keyword.<br>The <b>show dsc</b> command was moved from the root-system task ID to the system task ID. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

For more information about identifying and selecting a DSC on your router, see *Cisco IOS XR Getting Started Guide for the Cisco CRS Router*.

| Task ID | Task Operations ID |
|---------|--------------------|
|         | system read        |

The following example shows sample output from the **show dsc** command with the **mine** keyword.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show dsc mine
Sun Jan 25 04:26:33.103 PST
```

```
NODE          ROLE          PRIORITY      TBEACON      PRESENT      SERIAL ID
```

```
=====
0/RP0/CPU0      DSC      DEFAULT    300      YES      TBA09160TBA
=====
```

**Table 25: show dsc Field Descriptions**

| Field     | Description   |
|-----------|---|
| NODE      | Location of the node in the <i>rack/slot/module</i> notation.   |
| ROLE      | Role this node is performing.   |
| PRIORITY  | DSC priority assigned to this node.   |
| TBEACON   | Current DSC beacon timeout value.   |
| PRESENT   | Indicates whether the node is present in the slot.  |
| SERIAL ID | Serial ID assigned to this node.  |
| MIGRATION | Displays the current DSC migration functionality to the standby card. Can be one of the following: <ul style="list-style-type: none"> <li>• ENABLE—Migration process is enabled</li> <li>• UNKNOWN—Migration configuration is unknown.</li> </ul> |

The following example shows sample output from the **show dsc** command with the **all** keyword:

```
RP/0/RP0/CPU0:router#admin
RP/0/RP0/CPU0:router(admin)#show dsc all
```

```

NODE          ROLE          PRIORITY    TBEACON    PRESENT    SERIAL ID

```

# show environment

To display environmental monitor parameters for the system, use the **show environment** command in the appropriate mode.

EXEC Mode:

```
show environment [{all | last | leds | location {allnode-id} | table | temperatures | voltages}] [node-id]
```

Administration EXEC Mode:

```
show environment [{all | fans | last | leds | location {allnode-id} | power-supply | table | temperatures | trace | voltages}] [node-id]
```

| Syntax Description                      |  |  |
|---|--|--|
| <b>all</b>                              |  | (Optional) Displays information for all environmental monitor parameters.  |
| <b>fans</b>                             |  | (Optional) Displays information about the fans.  |
| <b>last</b>                             |  | (Optional) Displays the environmental statistics at the time of the last shutdown.   |
| <b>leds</b>                             |  | (Optional) Displays monitor parameters for LEDs on all cards in the node.  |
| <b>location</b> {all   <i>node-id</i> } |  | (Optional) Displays all environmental monitor parameters for the specified location only.  |
| <b>power-supply</b>                     |  | (Optional) Displays power supply voltage and current information.  |
| <b>table</b>                            |  | (Optional) Displays environmental parameter ranges.  |
| <b>temperatures</b>                     |  | (Optional) Displays system temperature information.  |
| <b>trace</b>                            |  | (Optional) Displays trace data for environment monitoring.   |
| <b>voltages</b>                         |  | (Optional) Displays system voltage information.  |
| <i>node-id</i>                          |  | (Optional) Node whose information you want to display. The <i>node-id</i> argument is expressed in the <i>rack / slot / module</i> notation. |

## Command Default

All environmental monitor parameters are displayed.

**Command Modes**

EXEC

Administration EXEC

**Command History**

| Release       | Modification   |
|---------------|--|
| Release 2.0   | This command was introduced.   |
| Release 3.3.0 | The optional <i>node-id</i> argument was supported.<br>The <b>show environment</b> command was moved from the root-system task ID to the system task ID. |

**Usage Guidelines**

The **show environment** command displays information about the hardware that is installed in the system, including fans, LEDs, power supply voltage, and current information and temperatures.

**Task ID**

| Task ID | Operations |
|---------|------------|
| system  | read       |

The following example shows sample output from the **show environment** command with the **temperatures** keyword:

```
RP/0/RP0/CPU0:router# show environment temperatures

R/S/I  Modules          Inlet          Exhaust        Hotspot
      Temperature    Temperature    Temperature
      (deg C)        (deg C)        (deg C)

0/2/*  host                31, 27         43, 45         48
      cpu                31
      fabricq0           46
      fabricq1           44
      ingressq           34
      egressq             41             43
      ingresspse         35
      egresspse          42
      plimasic           30, 31         42
0/RP1/* host                38                44
      cpu                36
      ingressq           42
      fabricq0           43
0/SM0/* host                29, 29         41, 33
```

The following example shows sample output from the **show environment** command with the **temperatures** keyword on the Cisco CRS Series Modular Services Card 140G:

```
RP/0/RP0/CPU0:router(admin)# show environment temperatures location 0/0/cpu0

Thu Oct 28 10:45:05.852 UTC

R/S/I  Modules          Inlet          Exhaust        Hotspot
      Temperature    Temperature    Temperature
      (deg C)        (deg C)        (deg C)

0/0/*
```

|          |        |        |                               |
|----------|--------|--------|-------------------------------|
| host     | 33, 31 | 48, 45 | 47, 48, 52,<br>38, 57, 47, 35 |
| cpu      |        |        | 52, 36                        |
| plimasic | 34     | 46     | 44, 42                        |

Table 26: [show environment temperatures Field Descriptions, on page 321](#) describes the significant fields shown in the display.

**Table 26: show environment temperatures Field Descriptions**

| Field                       | Description  |
|-----------------------------|--|
| R/S/I                       | Rack number, slot number, and interface for which information is displayed, in the format <i>rack/slot/module</i> .  |
| Modules                     | Module for which temperature information is displayed.   |
| Inlet Temperature (deg C)   | Current temperature of the inlet sensor, in degrees Celsius.<br><b>Note</b> The inlet temperature corresponds to the room air temperature entering the router. |
| Exhaust Temperature (deg C) | Current temperature of the exhaust sensor, in degrees Celsius.<br><b>Note</b> The exhaust temperature corresponds to the air being exhausted from the router.  |
| Hotspot Temperature (deg C) | Current temperature of the hotspot, in degrees Celsius.  |

The following example shows sample output from the **show environment** command the with the **leds** keyword:

```
RP/0/RP0/CPU0:router# show environment leds

0/2/*: Module (host) LED status says: OK
0/2/*: Module (plimasic) LED status says: OK
0/SM0/*: Module (host) LED status says: OK
```

Table 27: [show environment leds Field Descriptions, on page 321](#) describes the significant fields shown in the display.

**Table 27: show environment leds Field Descriptions**

| Field                          | Description   |
|--------------------------------|---|
| <i>rack_num/slot_num/*</i> :   | Rack number and slot number where the node resides. |
| Module (host) LED status says: | Current LED status of the specified node.           |

The following example shows sample output from the **show environment** command the with the **power-supply** keyword:

```
RP/0/RP0/CPU0:router(admin)# show env power-supply
```

## show environment

```

Thu Aug 5 00:18:29.492 DST
      Power Supply      Voltage      Current
      AC-REC AC-REC      (V)          (A)
Zone 1:      [A], [B]      54.965, 54.181  3.447,  4.073
Zone 2:      [A], [B]      54.671, 54.083  8.983,  8.670
Zone 3:      [A], [B]      55.063, 54.279  3.865,  4.073

Total Current:  33.111 A
Total Power   : 1804.049 W

```

This table describes the significant fields shown in the display.

**Table 28: show environment power-supply Field Descriptions**

| Field                               | Description  |
|-------------------------------------|--|
| R/S/I                               | Rack number, slot number, and interface for which information is displayed, in the format PEM/Power Module/* (for example 0/PM0/*).        |
| Modules                             | Module for which power information is displayed.   |
| Capacity                            | Power capacity of each power module in Watts.  |
| Status                              | Operational status of power modules.   |
| Power Draw                          | Real (measured) power drawn from each power module.  |
| Voltage                             | Real (measured) power module voltage.  |
| Current                             | Real (measured) power module current draw.   |
| Power Shelves Type                  | AC or DC.  |
| Total Power Capacity                | Sum of the power capacity of each of the modules installed in the chassis.   |
| Usable Power Capacity               | Sum of the power capacity of each of the powered and operational power modules installed in the chassis.                                   |
| Supply Failure Protected Capacity   | Protected power capacity of the chassis with power module redundancy (ASR 9010 AC 3+3, ASR 9010 DC 5+1, ASR 9006 AC 2+1, ASR 9010 DC 2+1). |
| Feed Failure Protected Capacity     | Feed protected power capacity. This value applies to the ASR 9010 AC system only.  |
| Worst Case Power Used               | Sum of the estimated power draw of each of the load modules in the chassis. Load modules can be fan trays, RSPs and line cards.            |
| Worst Case Power Available          | Usable power capacity minus the worst case power used.   |
| Supply Protected Capacity Available | Supply failure protected capacity minus the worst case power used.   |
| Feed Protected Capacity Available   | Feed failure protected capacity minus the worst case power used.   |

| Field                                 | Description  |
|---------------------------------------|--|
| Power Budget Enforcement              | This field displays the Power Budget Enforcement status as Enabled or Disabled.                                    |
| Power Budget Mode                     | This field displays the power redundancy mode used (for example, N+1).   |
| N+1 Supply Failure Protected Capacity | This field represents the Supply Protected Power capacity of the chassis with power module redundancy in N+1 mode. |

# show fpd package

To display which shared port adapters (SPA) and SPA interface processors (SIPs) are supported with your current Cisco IOS XR software release, which field-programmable device (FPD) image you need for each SPA and SIP, and what the minimum hardware requirements are for the SPA and SIP modules, use the **show fpd package** command in administration EXEC mode.

## show fpd package

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values

**Command Modes** Administration EXEC

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 3.4.1 | The <b>show fpd package</b> command output was updated to display the ROMMON images. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If there are multiple FPD images for your card, use the **show fpd package** command to determine which FPD image to use if you only want to upgrade a specific FPD type.

| Task ID | Task Operations ID |
|---------|--------------------|
|         | sysmgr read        |

The following example shows sample output from the **show fpd package** command:

```
show fpd package
Tue Jan 22 13:56:00.212 UTC

This table describes the significant fields shown in the display:

**Table 29: show fpd package Field Descriptions**

| Field           | Description   |
|-----------------|---|
| Card Type       | Module part number.   |
| FPD Description | Description of all FPD images available for the SPA.  |
| Type            | Hardware type. Possible types can be: <ul style="list-style-type: none"> <li>• spa—Shared port adapter</li> <li>• lc—Line card</li> </ul>                                     |
| Subtype         | FPD subtype. These values are used in the <b>upgrade hw-module fpd</b> command to indicate a specific FPD image type to upgrade.  |
| SW Version      | FPD software version recommended for the associated module running the current Cisco IOS XR software.   |
| Min Req SW Vers | Minimum required FPD image software version to operate the card. Version 0.0 indicates that a minimum required image was not programmed into the card.                        |
| Min Req HW Vers | Minimum required hardware version for the associated FPD image. A minimum hardware requirement of version 0.0 indicates that all hardware can support this FPD image version. |

**Note** In the **show fpd package** command output, the “subtype” column shows the FPDs that correspond with each SPA image. To upgrade a specific FPD with the **upgrade hw-module fpd** command, replace the *fpga-type* argument with the appropriate FPD from the “subtype” column, as shown in the following example:

```
RP/0/RP0/CPU0:router (admin) # upgrade hw-module fpd fpga2 location 0/3/1 reload
```

# show hw-module fpd

To display field-programmable device (FPD) compatibility for all modules or a specific module, use the **show hw-module fpd** command in the EXEC or administration EXE mode.

**show hw-module fpd location** {*node-id* | **all**}

| <b>Syntax Description</b> | <b>location</b> { <i>node-id</i>   <b>all</b> } Specifies the location of the module. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. Use the <b>all</b> keyword to indicate all nodes.                         |         |              |               |  |         |      |
|---------------------------|---|---------|--------------|---------------|--|---------|------|
| <b>Command Default</b>    | No default behavior or values   |         |              |               |  |         |      |
| <b>Command Modes</b>      | EXEC<br>Administration EXEC   |         |              |               |  |         |      |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.4.0</td> <td>The <b>show hw-module fpd</b> command output was updated to display the ROMMON images.</td> </tr> </tbody> </table> | Release | Modification | Release 3.4.0 | The <b>show hw-module fpd</b> command output was updated to display the ROMMON images. |         |      |
| Release                   | Modification  |         |              |               |  |         |      |
| Release 3.4.0             | The <b>show hw-module fpd</b> command output was updated to display the ROMMON images.  |         |              |               |  |         |      |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.             |         |              |               |  |         |      |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>sysmgr</td> <td>read</td> </tr> <tr> <td>root-lr</td> <td>read</td> </tr> </tbody> </table>  | Task ID | Operations   | sysmgr        | read   | root-lr | read |
| Task ID                   | Operations  |         |              |               |  |         |      |
| sysmgr                    | read  |         |              |               |  |         |      |
| root-lr                   | read  |         |              |               |  |         |      |

The following example shows how to display FPD compatibility for all modules in the router:

```
RP/0/RSP0/CPU0:router# show hw-module fpd location all

=====
Existing Field Programmable Devices
=====
Location      Card Type          HW Version  Type  Subtype  Inst  Current SW  Upg/
=====  =====  =====  =====  =====  =====  =====  =====

                                     spa     fpga2   0      1.00*       No
-----
```

## NOTES:

1. One or more FPD needs an upgrade or a downgrade. This can be accomplished using the "admin upgrade hw-module fpd" CLI.
2. \* One or more FPD is running minimum software version supported.  
It can be upgraded using the "admin> upgrade hw-module fpd <fpd> force location <loc>" CLI.
3. + One or more FPD is running up-rev FPGA version. Downgrade is "OPTIONAL" in this case.  
  
It can be downgraded using the "admin> upgrade hw-module fpd <fpd> force location <loc>" CLI.
4. ^ One or more FPD will be intentionally skipped from upgrade using CLI with option "all" or during "Auto fpd". It can be upgraded only using the "admin> upgrade hw-module fpd <fpd> location <loc>" CLI with exact location.

**Note** After Release 5.3.x, Upg/Dng? will display Yes only for upgrade.

The following example shows the FPD for which upgrade will be skipped.

```
RP/0/RP0/CPU0:router# show hw-module fpd location all
```

```
===== Existing Field Programmable Devices =====
Location      Card Type      HW      Current SW Upg/

                                lc   rommon   0    2.100   No
-----
```

If the cards in the system do not meet the minimum requirements, the output contains a “NOTES” section that states how to upgrade the FPD image.

**Table 30: show hw-module fpd Field Descriptions**

| Field              | Description   |
|--------------------|---|
| Location           | Location of the module in the <i>rack/slot/module</i> notation.   |
| Card Type          | Module part number.   |
| HW Version         | Hardware model version for the module.  |
| Type               | Hardware type. Can be one of the following types: <ul style="list-style-type: none"> <li>• spa—Shared port adapter</li> <li>• lc—Line card</li> </ul>   |
| Subtype            | FPD type. Can be one of the following types: <ul style="list-style-type: none"> <li>• fabldr—Fabric downloader</li> <li>• fpga1—Field-programmable gate array</li> <li>• fpga2—Field-programmable gate array 2</li> <li>• fpga3—Field-programmable gate array 3</li> <li>• fpga4—Field-programmable gate array 4</li> <li>• fpga5—Field-programmable gate array 5</li> <li>• rommonA—Read-only memory monitor A</li> <li>• rommon—Read-only memory monitor B</li> </ul> |
| Inst               | FPD instance. The FPD instance uniquely identifies an FPD and is used by the FPD process to register an FPD.  |
| Current SW Version | Currently running FPD image version.  |
| Upg/Dng?           | Specifies whether an FPD upgrade or downgrade is required. A downgrade is required in rare cases when the version of the FPD image has a higher major revision than the version of the FPD image in the current Cisco IOS XR software package.  |

## show hw-module subslot brief

To display summary information related to a specified internal hardware device on a shared port adapter (SPA), use the **show hw-module subslot brief** command in

EXEC

mode.

**show hw-module subslot** [*node-id*] **brief** [*device* [*device-index* [*device-subindex*]]]

### Syntax Description

|                        |  |
|------------------------|--|
| <i>node-id</i>         | (Optional) Location for which to display the specified information. The <i>node-id</i> argument is entered in the <i>rack / slot / module</i> notation.  |
| <i>device</i>          | (Optional) Internal hardware device for which to display the specified information. Valid devices include: <ul style="list-style-type: none"> <li>• <b>analog-digital-converter</b>—Displays analog-to-digital converter information.</li> <li>• <b>c2w</b>—Displays Cisco-to-wire bus device information.</li> <li>• <b>fpga</b>—Displays SPA field-programmable gate array information.</li> <li>• <b>framer</b>—Displays SONET framer information. (Not applicable to Ethernet SPAs.)</li> <li>• <b>hdlc</b>—Displays SPA hdlc information, where applicable.</li> <li>• <b>l2-tcam</b>—Displays SPA Layer 2 ternary content addressable memory information. (Not applicable to POS SPAs.)</li> <li>• <b>mac</b>—Displays SPA MAC information. (Not applicable to POS SPAs.)</li> <li>• <b>pluggable-optics</b>—Displays pluggable-optics module information.</li> <li>• <b>power-margining</b>—Displays power-margining device information.</li> <li>• <b>sar</b>—Displays SPA ATM SAR information.</li> <li>• <b>sdcc</b>—Displays section data communications channel device information. (Not applicable to Ethernet SPAs.)</li> <li>• <b>serdes</b>—Displays SPA serializer/deserializer information.</li> <li>• <b>spi4</b>—Displays system packet interface level 4.2 bus device information.</li> <li>• <b>temperature-sensor</b>—Displays temperature sensor information.</li> </ul> |
| <i>device-index</i>    | (Optional) Index of the specific device if there are multiple devices of the same type.  |
| <i>device-subindex</i> | (Optional) Subindex of the specific device if there are multiple devices of the same device index.   |

### Command Default

No default behavior or values

### Command Modes

EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 3.2 | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You can also enter a partially qualified location specifier by using the wildcard (\*) character. For example, 0/1/\* would display information for all modules on slot 1 in rack 0.

Use the **show hw-module subslot brief** command to obtain summary diagnostic information about a device on an interface on the SPA.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | root-lr | read       |

The following example shows sample output for the **show hw-module subslot brief** command:

```
RP/0/RP0/CPU0:router# show hw-module subslot 0/1/0 brief

Subslot 0/1/0 brief info:
-----
SPA inserted: YES
SPA type:      4xOC3 POS SPA
SPA operational state: READY
SPA cfg admin up: YES
```

**Table 31: show hw-module subslot config Field Descriptions**

| Field                 | Description   |
|-----------------------|---|
| SPA inserted          | Indicates if a SPA is currently detected in the subslot.  |
| SPA type              | Description of SPA including the technology type, number of ports, height of SPA (HHSPA—single height, FHSPA—double height), and optics type. |
| SPA operational state | Current state of the SPA module.  |
| SPA cfg admin up      | Configured state of the SPA: YES—the SPA is not shut down; NO—the SPA is shut down.   |

## show hw-module subslot config

To display information related to configuration of the specified internal hardware device on a shared port adapter (SPA), use the **show hw-module subslot config** command in EXEC

mode.

```
show hw-module subslot [node-id] config [device [device-index [device-subindex]]]
```

### Syntax Description

|                        |  |
|------------------------|--|
| <i>node-id</i>         | (Optional) Location for which to display the specified information. The <i>node-id</i> argument is entered in the <i>rack / slot / module</i> notation.  |
| <i>device</i>          | (Optional) Internal hardware device for which to display the specified information. Valid devices include: <ul style="list-style-type: none"> <li>• <b>analog-digital-converter</b>—Displays analog-to-digital converter information.</li> <li>• <b>c2w</b>—Displays Cisco-to-wire bus device information.</li> <li>• <b>fpga</b>—Displays SPA field-programmable gate array information.</li> <li>• <b>framer</b>—Displays SONET framer information. (Not applicable to Ethernet SPAs.)</li> <li>• <b>hdlc</b>—Displays SPA hdlc information, where applicable.</li> <li>• <b>l2-tcam</b>—Displays SPA Layer 2 ternary content addressable memory information. (Not applicable to POS SPAs.)</li> <li>• <b>mac</b>—Displays SPA MAC information. (Not applicable to POS SPAs.)</li> <li>• <b>pluggable-optics</b>—Displays pluggable-optics module information.</li> <li>• <b>power-margining</b>—Displays power-margining device information.</li> <li>• <b>sar</b>—Displays SPA ATM SAR information.</li> <li>• <b>sdcc</b>—Displays section data communications channel device information. (Not applicable to Ethernet SPAs.)</li> <li>• <b>serdes</b>—Displays SPA serializer/deserializer information.</li> <li>• <b>spi4</b>—Displays system packet interface level 4.2 bus device information.</li> <li>• <b>temperature-sensor</b>—Displays temperature sensor information.</li> </ul> |
| <i>device-index</i>    | (Optional) Index of the specific device if there are multiple devices of the same type.  |
| <i>device-subindex</i> | (Optional) Subindex of the specific device if there are multiple devices of the same device index.   |

**Table 33: show hw-module subslot counters Field Descriptions**

| Field                 | Description   |
|-----------------------|---|
| SPA inserted          | Indicates if a SPA is currently detected in the subslot.  |
| SPA type              | Description of SPA including the technology type, number of ports, height of SPA (HHSPA—single height, FHSPA—double height), and optics type. |
| SPA operational state | Current state of the SPA module.  |
| SPA insertion time    | Time the SPA module was last physically inserted or power-cycled.   |

| Field               | Description  |
|---------------------|--|
| SPA last time ready | Time the SPA module last changed state to up or ready (the last time the module was loaded or reloaded).                             |
| SPA uptime          | The time in service or amount of time since the module was last out of service due to a reload, power cycle, or configuration event. |

The following example shows sample output for the **show hw-module subslot counters** command with the **framer** keyword:

```
RP/0/RP0/CPU0:router# show hw-module subslot counters framer

SPA device framer index 0 subindex 0 info:

```

## show hw-module subslot errors

To display error information about internal hardware devices for a shared port adapter (SPA), use the **show hw-module subslot errors** command in

EXEC

mode.

**show hw-module subslot** [*node-id*] **errors** [*device* [*device-index* [*device-subindex*]]]

| Syntax Description     |  |
|------------------------|--|
| <i>node-id</i>         | (Optional) Location for which to display the specified information. The <i>node-id</i> argument is entered in the <i>rack / slot / module</i> notation.  |
| <i>device</i>          | (Optional) Internal hardware device for which to display the specified information. Valid devices include: <ul style="list-style-type: none"> <li>• <b>analog-digital-converter</b>—Displays analog-to-digital converter information.</li> <li>• <b>c2w</b>—Displays Cisco-to-wire bus device information.</li> <li>• <b>fpga</b>—Displays SPA field-programmable gate array information.</li> <li>• <b>framer</b>—Displays SONET framer information. (Not applicable to Ethernet SPAs.)</li> <li>• <b>hdlc</b>—Displays SPA hdlc information, where applicable.</li> <li>• <b>l2-tcam</b>—Displays SPA Layer 2 ternary content addressable memory information. (Not applicable to POS SPAs.)</li> <li>• <b>mac</b>—Displays SPA MAC information. (Not applicable to POS SPAs.)</li> <li>• <b>pluggable-optics</b>—Displays pluggable-optics module information.</li> <li>• <b>power-margining</b>—Displays power-margining device information.</li> <li>• <b>sar</b>—Displays SPA ATM SAR information.</li> <li>• <b>sdcc</b>—Displays section data communications channel device information. (Not applicable to Ethernet SPAs.)</li> <li>• <b>serdes</b>—Displays SPA serializer/deserializer information.</li> <li>• <b>spi4</b>—Displays system packet interface level 4.2 bus device information.</li> <li>• <b>temperature-sensor</b>—Displays temperature sensor information.</li> </ul> |
| <i>device-index</i>    | (Optional) Index of the specific device if there are multiple devices of the same type.  |
| <i>device-subindex</i> | (Optional) Subindex of the specific device if there are multiple devices of the same device index.   |
| <b>Command Default</b> | No default behavior or values  |
| <b>Command Modes</b>   | EXEC   |

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 3.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You can also enter a partially qualified location specifier by using the wildcard (\*) character. For example, 0/1/\* would display information for all modules on slot 1 in rack 0.

Use the **show hw-module subslot errors** command to display error information related to the specified internal hardware device on a SPA.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | root-lr | read       |

The following example shows partial sample output for the **show hw-module subslot errors** command:

```
RP/0/RP0/CPU0:router# show hw-module subslot 0/1/0 errors
```

```

| Command                 | Description   |
|-------------------------|---|
| <b>show controllers</b> | Displays the controller type and other information. |

# show hw-module subslot plim-subblock

To display SPA firmware information for a shared port adapter (SPA), use the **show hw-module subslot plim-subblock** command in

EXEC

mode.

**show hw-module subslot** [*node-id*] **plim-subblock**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>node-id</i> (Optional) Location for which to display the specified information. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |
|---------------------------|--|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |      |
|----------------------|------|
| <b>Command Modes</b> | EXEC |
|----------------------|------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.2    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **show hw-module subslot plim-subblock** command to display SPA firmware information, both kernel and application information, as well as heartbeat and keepalive information. The **show hw-module subslot plim-subblock** command is mainly used for debugging purposes.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | root-lr        | read              |

## show hw-module subslot registers

To display register information about internal hardware devices for a shared port adapter (SPA), use the **show hw-module subslot registers** command in

EXEC

mode.

**show hw-module subslot** [*node-id*] **registers** [*device* [*device-index* [*device-subindex*]]]

| Syntax Description     |  |
|------------------------|--|
| <i>node-id</i>         | (Optional) Location for which to display the specified information. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.  |
| <i>device</i>          | (Optional) Internal hardware device for which to display the specified information. Valid devices include: <ul style="list-style-type: none"> <li>• <b>analog-digital-converter</b>—Displays analog-to-digital converter information.</li> <li>• <b>c2w</b>—Displays Cisco-to-wire bus device information.</li> <li>• <b>fpga</b>—Displays SPA field-programmable gate array information.</li> <li>• <b>framer</b>—Displays SONET framer information. (Not applicable to Ethernet SPAs.)</li> <li>• <b>hdlc</b>—Displays SPA hdlc information, where applicable.</li> <li>• <b>l2-tcam</b>—Displays SPA Layer 2 ternary content addressable memory information. (Not applicable to POS SPAs.)</li> <li>• <b>mac</b>—Displays SPA MAC information. (Not applicable to POS SPAs.)</li> <li>• <b>pluggable-optics</b>—Displays pluggable-optics module information.</li> <li>• <b>power-margining</b>—Displays power-margining device information.</li> <li>• <b>sar</b>—Displays SPA ATM SAR information.</li> <li>• <b>sdcc</b>—Displays section data communications channel device information. (Not applicable to Ethernet SPAs.)</li> <li>• <b>serdes</b>—Displays SPA serializer/deserializer information.</li> <li>• <b>spi4</b>—Displays system packet interface level 4.2 bus device information.</li> <li>• <b>temperature-sensor</b>—Displays temperature sensor information.</li> </ul> |
| <i>device-index</i>    | (Optional) Index of the specific device if there are multiple devices of the same type.  |
| <i>device-subindex</i> | (Optional) Subindex of the specific device if there are multiple devices of the same device index.   |
| <b>Command Default</b> | No default behavior or values  |
| <b>Command Modes</b>   | EXEC   |

**show hw-module subslot registers**

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 3.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the command to display the nodes on the router.

You can also enter a partially qualified location specifier by using the wildcard (\*) character. For example, 0/1/\* would display information for all modules on slot 1 in rack 0.

Use the **show hw-module subslot registers** command to display register information for the specified internal hardware device on the SPA.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | root-lr | read       |

The following example shows sample output for the **show hw-module subslot registers** command:

```
RP/0/RP0/CPU0:router# show hw-module subslot 0/1/cpu0 registers

Thu Feb 19 00:38:32.908 PST

Subslot 0/1/0 registers info:
-----

| <b>show controllers</b> | Displays the controller type and other information. |

## show hw-module subslot status

To display status information about internal hardware devices for a shared port adapter (SPA), use the **show hw-module subslot status** command in EXEC

mode.

```
show hw-module subslot [node-id] status [device [device-index [device-subindex]]]
```

### Syntax Description

*node-id* (Optional) Location for which to display the specified information. The *node-id* argument is entered in the *rack/slot/module* notation.

*device* (Optional) Internal hardware device for which to display the specified information. Valid devices include:

- **analog-digital-converter**—Displays analog-to-digital converter information.
- **c2w**—Displays Cisco-to-wire bus device information.
- **fpga**—Displays SPA field-programmable gate array information.
- **framer**—Displays SONET framer information. (Not applicable to Ethernet SPAs.)
- **hdlc**—Displays SPA hdlc information, where applicable.
- **l2-tcam**—Displays SPA Layer 2 ternary content addressable memory information. (Not applicable to POS SPAs.)
- **mac**—Displays SPA MAC information. (Not applicable to POS SPAs.)
- **pluggable-optics**—Displays pluggable-optics module information.
- **power-margining**—Displays power-margining device information.
- **sar**—Displays SPA ATM SAR information.
- **sdcc**—Displays section data communications channel device information. (Not applicable to Ethernet SPAs.)
- **serdes**—Displays SPA serializer/deserializer information.
- **spi4**—Displays system packet interface level 4.2 bus device information.
- **temperature-sensor**—Displays temperature sensor information.

*device-index* (Optional) Index of the specific device if there are multiple devices of the same type.

*device-subindex* (Optional) Subindex of the specific device if there are multiple devices of the same device index.

**Command Default** No default behavior or values

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 3.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You can also enter a partially qualified location specifier by using the wildcard (\*) character. For example, 0/1/\* would display information for all modules on slot 1 in rack 0.

Use the **show hw-module subslot status** command to obtain status information about an interface on the SPA.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | root-lr | read       |

The following example shows sample output for the **show hw-module subslot status** command with the **temperature-sensor** option:

```
RP/0/RP0/CPU0:router# show hw-module subslot 0/2/CPU0 status temperature-sensor

SPA device temperature-sensor index 0 subindex 0 info:

DS1631 (0x0803c2e4) device status:
temperature = 0x1c80 (28.5 degree C)

SPA device temperature-sensor index 0 subindex 0 info:

DS1631 (0x08063bec) device status:
temperature = 0x1e00 (30.0 degree C)
```

**Table 36: show hw-module subslot status Field Descriptions**

| Field                                | Description   |
|--------------------------------------|---|
| DS1631 (0x0803c2e4) device status    | Device for which the temperature status is displayed.                                   |
| temperature = 0x1c80 (28.5 degree C) | Current temperature of the specified device, in hexadecimal format and degrees Celsius. |

| Related Commands | Command                 | Description   |
|------------------|-------------------------|---|
|                  | <b>show controllers</b> | Displays the controller type and other information. |

# show inventory

To retrieve and display information about all the Cisco products that are installed in the router, use the **show inventory** command in EXEC or administration EXEC mode.

EXEC Mode

**show inventory** [{*node-id* | **all** | **location** {*node-id* | **all**} | **raw**}]

Administration EXEC Mode

**show inventory** [{*node-id* | **all** | **chassis** | **fans** | **location** {*node-id* | **all**} | **power-supply** | **raw**}]

## Syntax Description

|   |   |
|---|---|
| <i>node-id</i>                                  | (Optional) Location for which to display the specified information. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |
| <b>all</b>                                      | (Optional) Displays inventory information for all the physical entities in the chassis.   |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Displays inventory information for a specific node, or for all nodes in the chassis.   |
| <b>raw</b>                                      | (Optional) Displays raw information about the chassis for diagnostic purposes.  |
| <b>chassis</b>                                  | (Optional) Displays inventory information for the entire chassis.   |
| <b>fans</b>                                     | (Optional) Displays inventory information for the fans.   |
| <b>power-supply</b>                             | (Optional) Displays inventory information for the power supply.   |

## Command Default

All inventory information for the entire chassis is displayed.

## Command Modes

EXEC

Administration EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.3.0 | This command was introduced. |

## Usage Guidelines

If a Cisco entity is not assigned a product ID (PID), that entity is not retrieved or displayed.

Enter the **show inventory** command with the **raw** keyword to display every RFC 2737 entity installed in the router, including those without a PID, unique device identifier (UDI), or other physical identification.

### Note

The **raw** keyword is primarily intended for troubleshooting problems with the **show inventory** command itself.

If any of the Cisco products do not have an assigned PID, the output displays incorrect PIDs, and version ID (VID) and serial number (SN) elements may be missing.

For UDI compliance products, the PID, VID, and SN are stored in EEPROM and NVRAM. Use the **show inventory** command to display this information.

| Task ID | Task Operations ID |
|---------|--------------------|
|         | sysmgr read        |

The following example shows partial sample output from the **show inventory** command with the **raw** keyword:

```
RP/0/RP0/CPU0:router# show inventory raw

Sun Jan 25 07:40:57.903 PST

[Table 37: show inventory Field Descriptions, on page 350](#) describes the significant fields shown in the display.

**Table 37: show inventory Field Descriptions**

| Field | Description  |
|-------|--|
| NAME  | Hardware for which the inventory information is displayed. If you are displaying the chassis inventory, this field shows “chassis.” If you are displaying raw inventory, or all inventory information for all nodes in the chassis, this field shows the node name in partially qualified format. For a node, the NAME is expressed in <i>rack/slot/module</i> notation. |
| DESCR | Describes the chassis or the node.<br><br>Chassis descriptions provide the name of the chassis and its Gbps. Node descriptions provide the type of node and its software version.<br><br>A description value of “CPU_PORT_0” indicates a control Ethernet port on the CPU module.  |
| PID   | Physical model name of the chassis or node.  |
| VID   | Physical hardware revision of the chassis or node.   |
| SN    | Physical serial number for the chassis or node.  |

# show led

To display LED information for the router, or for a specific LED location, use the **show led** command in EXEC or administration EXEC mode.

```
show led [location {node-id | all}]
```

|                           |   |   |
|---------------------------|---|---|
| <b>Syntax Description</b> | <b>location</b> { <i>node-id</i>   <b>all</b> }                                 | (Optional) Specifies the node for which to display LED information. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. Use the <b>all</b> keyword to indicate all nodes. |
| <b>Command Default</b>    | If no node is specified, information about all LEDs on the router is displayed. |   |
| <b>Command Modes</b>      | EXEC<br>Administration EXEC   |   |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>   |
|                           | Release 2.0   | This command was introduced.  |
|                           | Release 3.3.0   | The <b>show led</b> command was moved from the root-system task ID to the system task ID.<br><br>The <b>show led</b> command was supported in administration EXEC mode.                                 |

**Usage Guidelines** Enter the **show platform** command to see the location of all nodes installed in the router.

| Task ID | Task   | Operations |
|---------|--------|------------|
|         | system | read       |

The following example sample output from the **show led** command with the **all** keyword:

```
RP/0/RP0/CPU0:router# show led location all
```

| LOCATION | MESSAGE | MODE    | STATUS   |
|----------|---------|---------|----------|
| 0/1/*    | IOS XR  | DEFAULT | UNLOCKED |
| 0/4/*    | ACTVDRP | DEFAULT | UNLOCKED |
| 0/6/*    | IOS XR  | DEFAULT | UNLOCKED |
| 0/RP0/*  | ACTV RP | DEFAULT | UNLOCKED |
| 0/RP1/*  | STBYRDY | DEFAULT | UNLOCKED |

**Table 38: show led location Field Descriptions**

| <b>Field</b> | <b>Description</b>   |
|--------------|--|
| LOCATION     | Location of the node. LOCATION is expressed in the <i>rack/slot/module</i> notation. |
| MESSAGE      | Current message displayed by the LED.  |
| MODE         | Current operating mode of the specified node.  |
| STATUS       | Current status of the specified node.  |

# show operational

To display all operational data provided as XML schema, use the **show operational** command in EXEC or administration EXEC mode.

**show operational** *mda-class*[*mda-class*][*mda-class/naming=value*][**descriptive**]

## Syntax Description

*mda-class* Name of the management data API (MDA) class to output. To specify a class name in hierarchy, all classes must be specified from the top of the class to the specific class name that you are interested in. MDA classes are case-sensitive.

To view all available MDA classes, use the question mark (?) online help function.

**descriptive** Displays more descriptive information.

## Command Default

No default behavior or values

## Command Modes

EXEC

Administration EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.6.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Although the **show operational** command uses the schema database, the command displays the information in a string format like the other **show** commands. No XML related setups or knowledge is required to use the command.

## Task ID

| Task ID   | Operations |
|---|------------|
| Depends on the MDA class for which you are displaying the information | read       |

The following example shows sample output from the **show operational** command. Not all the output is shown.

```
RP/0/RP0/CPU0:router# show operational BGP DefaultVRF GlobalProcessInfo descriptive
[BGP DefaultVRF GlobalProcessInfo]
InStandaloneMode: true[Standalone or Distributed mode]
RouterID: 0.0.0.0[Router ID for the local system]
ConfiguredRouterID: 0.0.0.0[Configured router ID]
LocalAS: 10[Local autonomous system #]
RestartCount: 1[No of times BGP has started]
ISRedistributeIBGPToIGPsEnabled: false[Redistribute iBGP into IGPs enabled]
```

## show operational

```

IsFastExternalFalloverEnabled: true[Fast external fallover enabled]
IsBestpathMissingMEDIsWorstEnabled: false[Bestpath: Treat missing MED as worst]
.
.
.
DefaultLocalPreference: 100[Default local preference]
KeepAliveTime: 60[Default keepalive timer (seconds)]
HoldTime: 180[Default hold timer (seconds)]
GenericScanPeriod: 60[Period (in seconds) of generic scanner runs]
.
.
.
VrfIsActive: true[VRF state ]
VrfName: "default"[Name of the VRF ]

```

This example shows sample output from the **show operational** command where only the top-level MDA class is specified. Not all of the output is shown.

```

--More--

# show platform

To display information and status for each node in the system, use the **show platform** command in EXEC or administration EXEC mode.

**show platform** [*node-id*]

## Syntax Description

*node-id* (Optional) Node for which to display information. The *node-id* argument is entered in the *rack/slot/module* notation.

## Command Default

Status and information are displayed for all nodes in the system.

## Command Modes

Administration EXEC  
EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.  |
| Release 3.3.0 | The <b>show platform</b> command was first supported in administration EXEC mode.<br><br>In EXEC mode, the <b>show platform</b> command was moved from the root-system task ID to the system task ID. |
| Release 4.0.1 | Support was added for the MSC-140G.   |

## Usage Guidelines

The **show platform** command provides a summary of the nodes in the system, including node type and status.

Enter the **show platform** command in administration EXEC mode to display output for the entire system.

Enter the **show platform** command in EXEC mode to display output for only those nodes that belong to the SDR on which the command is executed.

For , EP1 will be displayed as, **Not allowed online**, until the required license is bought.

## Task ID

| Task ID     | Operations                         |
|-------------|------------------------------------|
| system      | read (in EXEC mode)                |
| root-system | read (in administration EXEC mode) |

The following example shows sample output from the **show platform** command:

```
RP/0/RP0/CPU0:router# show platform
```

| Node     | Type      | PLIM        | State      | Config State    |
|----------|-----------|-------------|------------|-----------------|
| 0/1/CPU0 | MSC       | Jacket Card | IOS XR RUN | PWR, NSHUT, MON |
| 0/1/0    | MSC (SPA) | 4XOC3-POS   | OK         | PWR, NSHUT, MON |
| 0/1/5    | MSC (SPA) | 8X1GE       | OK         | PWR, NSHUT, MON |

```

0/6/CPU0      MSC          Jacket Card   IOS XR RUN   PWR, NSHUT, MON
0/6/0        MSC (SPA)    4XOC3-POS    OK           PWR, NSHUT, MON
0/6/4        MSC (SPA)    8XOC3/OC12-POS OK           PWR, NSHUT, MON
0/6/5        MSC (SPA)    8X1GE        OK           PWR, NSHUT, MON
0/RP0/CPU0   RP (Active)  N/A          IOS XR RUN   PWR, NSHUT, MON
0/RP1/CPU0   RP (Standby) N/A          IOS XR RUN   PWR, NSHUT, MON

```

This example shows sample output from the **show platform** command on the Cisco CRS Series Modular Services Card 140G:

```
RP/0/RP0/CPU0:router# show platform 0/3/*
```

```
Thu Aug 26 15:37:34.263 UTC
```

```
*****
```

```
***** Router is running in Dual Router configuration *****
```

```
*****
```

```

Node          Type          PLIM          State          Config State
-----
0/3/CPU0      MSC-140G     20-10GbE     IOS XR RUN     PWR, NSHUT, NMON

```

The following is sample output for the **show platform** command with the *node-id* argument:

```
RP/0/RP0/CPU0:router# show platform 0/1/0
```

```

Node          Type          PLIM          State          Config State
-----
0/1/0        MSC (SPA)     4XOC3-POS    OK           PWR, NSHUT, MON

```

This table describes the significant fields shown in the display.

**Table 39: show platform Field Descriptions**

| Field        | Description  |
|--------------|--|
| Node         | Identifier of the node in the <i>rack/slot/module</i> notation.            |
| Type         | Type of node.  |
| PLIM         | Type of physical layer interface module currently supported on the module. |
| State        | Current state of the specified node.                                       |
| Config State | Current status of the specified node.                                      |

# show power allotted

To display the power allotted to the cards in the chassis, use the **show power allotted** command in administration EXEC mode.

**show power allotted** {**location** *node-id* | **rack** *rack-no* | **summary**}

| Syntax Description             |   |
|--------------------------------|---|
| <b>location</b> <i>node-id</i> | Displays the power consumption for the specified location. The node-id argument is entered in the <i>rack/slot/module</i> notation. |
| <b>rack</b> <i>rack-no</i>     | Displays the power consumption for the specified rack.  |
| <b>summary</b>                 | Displays summary information for all racks.   |

**Command Default** None

**Command Modes** Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.3.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The display for modular power supplies is by card. The display for fixed power supplies is by zone and card.

| Task ID | Task ID | Operation |
|---------|---------|-----------|
|         | power   | read      |

This example shows sample output from the **show power allocated** command on a modular power supply:

```
RP/0/RP0/CPU0:router (admin)# show power allotted location 0/0/*
```

```
Sun Nov 18 22:00:51.176 UTC
nodeid = 0x2a00000f
```

| Node    | Card Type | State      | PID            | Power Allotted |
|---------|-----------|------------|----------------|----------------|
| 0/0/*   | FP-140G   | POWERED UP | CRS-MSC-FP140  | 450.0W         |
| 0/0/PL0 | 14-10GbE  | POWERED UP | 14X10GBE-WL-XF | 150.0W         |

This example shows sample output from the **show power allotted** command on a fixed power supply:

```
RP/0/RP0/CPU0:router (admin)# show power allotted rack 0
```

```

# show platform

To display information and status for each node in the system, use the **show platform** command in EXEC or administration EXEC mode.

**show platform** [*node-id*]

|                           |                |   |
|---------------------------|----------------|---|
| <b>Syntax Description</b> | <i>node-id</i> | (Optional) Node for which to display information. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |
|---------------------------|----------------|---|

**Command Default** Status and information are displayed for all nodes in the system.

**Command Modes** Administration EXEC  
EXEC

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>   |
|------------------------|----------------|---|
|                        | Release 2.0    | This command was introduced.  |
|                        | Release 3.3.0  | The <b>show platform</b> command was first supported in administration EXEC mode.<br><br>In EXEC mode, the <b>show platform</b> command was moved from the root-system task ID to the system task ID. |
|                        | Release 4.0.1  | Support was added for the MSC-140G.   |

**Usage Guidelines** The **show platform** command provides a summary of the nodes in the system, including node type and status. Enter the **show platform** command in administration EXEC mode to display output for the entire system. Enter the **show platform** command in EXEC mode to display output for only those nodes that belong to the SDR on which the command is executed.

For , EP1 will be displayed as, **Not allowed online**, until the required license is bought.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b>                  |
|----------------|----------------|------------------------------------|
|                | system         | read (in EXEC mode)                |
|                | root-system    | read (in administration EXEC mode) |

The following example shows sample output from the **show platform** command:

```
RP/0/RP0/CPU0:router# show platform
```

| Node     | Type      | PLIM        | State      | Config State    |
|----------|-----------|-------------|------------|-----------------|
| 0/1/CPU0 | MSC       | Jacket Card | IOS XR RUN | PWR, NSHUT, MON |
| 0/1/0    | MSC (SPA) | 4XOC3-POS   | OK         | PWR, NSHUT, MON |
| 0/1/5    | MSC (SPA) | 8X1GE       | OK         | PWR, NSHUT, MON |

```

0/6/CPU0      MSC          Jacket Card   IOS XR RUN   PWR, NSHUT, MON
0/6/0        MSC (SPA)    4XOC3-POS    OK           PWR, NSHUT, MON
0/6/4        MSC (SPA)    8XOC3/OC12-POS OK          PWR, NSHUT, MON
0/6/5        MSC (SPA)    8X1GE        OK           PWR, NSHUT, MON
0/RP0/CPU0   RP (Active)  N/A          IOS XR RUN   PWR, NSHUT, MON
0/RP1/CPU0   RP (Standby) N/A          IOS XR RUN   PWR, NSHUT, MON

```

This example shows sample output from the **show platform** command on the Cisco CRS Series Modular Services Card 140G:

```
RP/0/RP0/CPU0:router# show platform 0/3/*
```

```
Thu Aug 26 15:37:34.263 UTC
```

```
*****
```

```
***** Router is running in Dual Router configuration *****
```

```
*****
```

```

Node           Type           PLIM           State           Config State
-----
0/3/CPU0      MSC-140G       20-10GbE      IOS XR RUN      PWR, NSHUT, NMON

```

The following is sample output for the **show platform** command with the *node-id* argument:

```
RP/0/RP0/CPU0:router# show platform 0/1/0
```

```

Node           Type           PLIM           State           Config State
-----
0/1/0          MSC (SPA)      4XOC3-POS     OK              PWR, NSHUT, MON

```

This table describes the significant fields shown in the display.

**Table 40: show platform Field Descriptions**

| Field        | Description  |
|--------------|--|
| Node         | Identifier of the node in the <i>rack/slot/module</i> notation.            |
| Type         | Type of node.  |
| PLIM         | Type of physical layer interface module currently supported on the module. |
| State        | Current state of the specified node.                                       |
| Config State | Current status of the specified node.                                      |

# show redundancy

To display the status of route processor redundancy, use the **show redundancy** command in

EXEC

mode.

**show redundancy** [{**location** {*node-id* | **all**} | **statistics** | **summary**}]

## Syntax Description

|   |   |
|---|---|
| <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Specifies the node for which to display LED information. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. Use the <b>all</b> keyword to indicate all nodes. |
| <b>statistics</b>                               | (Optional) Displays redundancy statistics information.  |
| <b>summary</b>                                  | (Optional) Displays a summary of all redundant node pairs in the router.  |

## Command Default

Route processor redundancy information is displayed for all nodes in the system.

## Command Modes

EXEC

## Command History

| Release       | Modification   |
|---------------|--|
| Release 2.0   | This command was introduced.                                       |
| Release 3.5.0 | The <b>statistics</b> and <b>trace</b> keywords were added.        |
| Release 3.6.0 | Nonstop routing (NSR) indication was added to the command display. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show redundancy** command to display the redundancy status of the route processors (RPs). The **show redundancy** command also displays the boot and switchover history for the RPs. To view the nonstop routing (NSR) status of the standby RPs in the system, use the **summary** keyword.

## Task ID

| Task ID        | Operations                           |
|----------------|--------------------------------------|
| system         | read                                 |
| basic-services | read (for <b>statistics</b> keyword) |

The following example shows sample output from the **show redundancy** command:

```
RP/0/RP0/CPU0:router# show redundancy location 0/rp0/cpu0
```

```

Node 0/RP0/CPU0 is in ACTIVE role
Partner node (0/RP1/CPU0) is in STANDBY role
Standby node in 0/RP1/CPU0 is ready
Standby node in 0/RP1/CPU0 is NSR-ready

Reload and boot info
-----
RP reloaded Mon Jul 30 19:27:42 2007: 2 weeks, 1 day, 13 hours,
40 minutes ago
Active node booted Mon Jul 30 19:27:42 2007: 2 weeks, 1 day,
13 hours, 40 minutes ago
Standby node boot Mon Jul 30 19:28:13 2007: 2 weeks, 1 day,
13 hours, 39 minutes ago
Standby node last went not ready Mon Jul 30 20:27:00 2007:
2 weeks, 1 day, 12 hours, 41 minutes ago
Standby node last went ready Mon Jul 30 20:27:00 2007: 2 weeks,
1 day, 12 hours, 41 minutes ago
There have been 0 switch-overs since reload

```

**Table 41: show redundancy Field Descriptions**

| Field                                | Description   |
|--------------------------------------|---|
| Node */*/* is in XXX role            | Current role of the primary route processor, where (*/*/*) is the route processor ID in the format <i>rack/slot/module</i> , and XXX is the role of the route processor (active or standby).<br><br>In the example, this field shows that the node with the ID 0/RP0/CPU0 is in active role.                |
| Partner node (*/*/*) is in XXX role  | Current role of the secondary (or partner) route processor, where (*/*/*) is the route processor ID in the <i>rack/slot/module</i> format, and XXX is the role of the route processor (active or standby).<br><br>In the example, this field shows that the node with the ID 0/RP1/CPU0 is in standby role. |
| Standby node in (*/*/*) is ready     | Current state of the standby node, where (*/*/*) is the standby route processor ID.<br><br>In the example, the standby node is ready.   |
| Standby node in (*/*/*) is NSR-ready | Current state of the standby node regarding nonstop routing (NSR), where (*/*/*) is the standby route processor ID.<br><br>In the example, the standby node is NSR-ready.   |
| Reload and boot info                 | General overview of the active and standby route processors' reload and boot history.   |

The following sample output shows the status of the redundant RPs in the system. The status of the standby node is indicated in parentheses next to the node identifier. The nonstop routing (NSR) status is indicated following NSR. Possible values are Ready and Not ready.

```

RP/0/RP0/CPU0:router# show redundancy summary

Active Node   Standby Node

```

## show redundancy

```
-----  
0/4/CPU0          N/A  
0/4/CPU1          N/A  
0/RP0/CPU0       0/RP1/CPU0 (Ready, NSR: Ready)
```

# show screddrv

To display system controller (SC) redundancy information, use the **show screddrv** command in EXEC mode.

```
show screddrv [{all | standby}]
```

## Syntax Description

**all** (Optional) Displays redundancy details for the entire router.

**standby** (Optional) Displays detailed redundancy information for the standby node.

## Command Default

SC redundancy information is displayed for all nodes in the system.

## Command Modes

EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.  |
| Release 3.0   | No modification.  |
| Release 3.2   | No modification.  |
| Release 3.3.0 | The <b>show screddrv</b> command was moved from the root-system task ID to the system task ID.<br><br>The <b>arbitration</b> keyword was removed from the <b>show screddrv</b> command. |
| Release 3.4.0 | No modification.  |
| Release 3.5.0 | No modification.  |
| Release 3.6.0 | No modification.  |
| Release 3.7.0 | No modification.  |
| Release 3.8.0 | No modification.  |
| Release 3.9.0 | No modification.  |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Enter the **show screddrv** command without any of the optional parameters to display summarized SC redundancy and arbitration information for the router.

## Task ID

| Task ID | Operations |
|---------|------------|
| system  | read       |

The following is sample output from the **show screddrv** command with the **all** keyword:

```
RP/0/RP0/CPU0:router# show screddrv all

Redundancy Driver Info for slot 32:
Slot=32
Role=active role
State=ACTIVE STATE
Prefer_slot=0
Registers: ICreg=[1], MSreg=[33], MPPReg=[c0005cc8]
Tx error count=0
Rx error count=22
Comm Statistics=5632
SHOW REDDRV ARBITRATION is not supported.
```

**Table 42: show screddrv Field Descriptions**

| Field                   | Description   |
|-------------------------|---|
| Role                    | Current role of the card in the specified slot; for example, it may be active, standby, and so forth.                                     |
| State                   | Current state of the card in the specified slot.  |
| Prefer_slot             | Information about the preferred redundancy slot.  |
| Registers               | Information about the following registers: <ul style="list-style-type: none"> <li>• ICreg</li> <li>• MSreg</li> <li>• MPPReg</li> </ul>   |
| Tx error count          | Number of transmit errors that have occurred on the card in the specified slot.   |
| Rx error count          | Number of receive errors that have occurred on the card in the specified slot.  |
| Comm Statistics         | Command statistics.   |
| SHOW REDDRV ARBITRATION | Describes whether arbitration is supported or not on this slot. If arbitration is supported, this field provides arbitration information. |

# show services role

To display the current service role on service cards, use the **show services role** command in

EXEC

mode.

**show services role** [**detail**] [**location** *node-id*]

## Syntax Description

**detail** Displays the reason a role has not been enacted, if applicable.

**location** *node-id* Location for which to display the specified information. The *node-id* argument is entered in the *rack/slot/module* notation.

## Command Default

No default behavior or values

## Command Modes

EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.5.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID   | Operations |
|-----------|------------|
| interface | read       |

This example displays sample output from the **show services role** command:

```
RP/0/RP0/CPU0:router# show services role
Thu Mar  1 14:53:55.530 PST
Node      Configured Role      Enacted Role      Enabled Services
-----
0/3/CPU0  SESH                  SESH              ServiceInfra
```

## show version

To display the configuration of the system hardware, the software version, the names and sources of configuration files, and the boot images, use the **show version** command in EXEC

mode.

**show version**

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values

**Command Modes** EXEC

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.3.0 | The <b>show version</b> command was moved from the sysmgr task ID to the basic-services task ID. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show version** command displays a variety of system information, including hardware and software version, router uptime, boot settings (configuration register), and active software.

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

This example shows partial output from the **show version** command:

```
RP/0/RP0/CPU0:router# show version

# upgrade cpuctrlbits

To upgrade the CPU controller bits on all nodes that are installed in the router or on a specific node, use the **upgrade cpuctrlbits** command in administration EXEC mode.

**upgrade cpuctrlbits** {**all** | **location** *node-id*} [{**bootflash** | **disk0** | **disk1** | **internal**}]

| Syntax Description             |   |
|--------------------------------|---|
| <b>all</b>                     | Upgrades the CPU controller bits on all nodes installed in the router.  |
| <b>location</b> <i>node-id</i> | Upgrades the CPU controller bits on a specific node. The <i>node-id</i> is expressed in the <i>rack/slot/module</i> notation.<br><br><b>Note</b> Enter the <b>show platform</b> command to see the location of all nodes installed in the router. |
| <b>bootflash</b>               | (Optional) Uses the images located on the bootflash to upgrade the CPU controller on all nodes, or on the specified node.   |
| <b>disk0</b>                   | (Optional) Uses the images located on disk0 to upgrade the CPU controller on all nodes, or on the specified node.   |
| <b>disk1</b>                   | (Optional) Uses the images located on disk1 to upgrade the CPU controller on all nodes, or on the specified node.   |
| <b>internal</b>                | (Optional) Uses the images located in the /pkg/bin.<br><br><b>Note</b> This is the default location for the ROMMON image.   |

**Command Default** Default location for the ROMMON image: **internal**

**Command Modes** Administration EXEC

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 3.2   | This command was introduced.  |
|                 | Release 3.3.0 | The <b>upgrade cpuctrlbits</b> command was moved from the sysmgr task ID to the system task ID. |
|                 | Release 3.4.0 | No modification.  |
|                 | Release 3.5.0 | No modification.  |
|                 | Release 3.6.0 | No modification.  |
|                 | Release 3.7.0 | No modification.  |
|                 | Release 3.8.0 | No modification.  |
|                 | Release 3.9.0 | No modification.  |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **upgrade cpuctrlbits** command is only applicable to boards that use the Squid CPU controller, and not the Squirt controller. Use the **internal** keyword to determine which CPU controller is used in a specific card, as indicated in bold in the following example:

```
RP/0/RP0/CPU0:router# show controller cpuctrl internal

Cpuctrl Internal Info for node 0/1/CPU0:
  Error Interrupts = 0      Spurious Error Interrupts = 0
  PCI Error Overflows = 0      PCI PM Error Overflows = 0
  PCIIX Error Overflows = 0    Internal Access PCI Overflows = 0
  Port Error Overflows = 0    Error Log Overflows = 0
  cpuctrl Config Reg = 0x8357ffff  cpuctrl Physical Offset = 0x80000000
  cpuctrl Window Size = 0x40000000  cpuctrl Port Window Size = 0x04000000
  cpuctrl SHMem Size = 0x00800000  cpuctrl SHMem Used = 0x00224fb0
  cpuctrl version info: Squid FPGA v2.07 Fri Jan 23 16:21:01 2004 ykoren

Cpuctrl Internal Info for node 0/4/CPU0:
  Error Interrupts = 0      Spurious Error Interrupts = 0
  PCI Error Overflows = 0      PCI PM Error Overflows = 0
  PCIIX Error Overflows = 0    Internal Access PCI Overflows = 0
  Port Error Overflows = 0    Error Log Overflows = 0
  cpuctrl Config Reg = 0xffffffff  cpuctrl Physical Offset = 0x80000000
  cpuctrl Window Size = 0x40000000  cpuctrl Port Window Size = 0x04000000
  cpuctrl SHMem Size = 0x00800000  cpuctrl SHMem Used = 0x00224fb0
  cpuctrl version info: SQUIRT v3

write

This example shows how to upgrade the CPU controller bits on all nodes in a router:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# upgrade cpuctrlbits all
```

Please do not power cycle, reload the router or reset any nodes until all upgrades are completed.  
Please check the syslog to make sure that all nodes are upgraded successfully.  
If you need to perform multiple upgrades, please wait for current upgrade to be completed before proceeding to another upgrade.  
Failure to do so may render the cards under upgrade to be unusable.

**Related Commands**

| Command                                 | Description  |
|---|--|
| <b>show controller cpuctrl internal</b> | Displays information about the internal CPU controller in the cards in the router. |

| Command                     | Description  |
|-----------------------------|--|
| <a href="#">#unique_216</a> | Displays information and status for each node in the system. |

## upgrade hw-module fpd

To manually upgrade the current field-programmable device (FPD) image package on a module, use the **upgrade hw-module fpd** command in Admin EXEC mode.

```
upgrade hw-module fpd {all | fabldr<fpga-type> | rommon} [ force ] location [{node-id | all}]
```

### Syntax Description

|   |  |
|---|--|
| <b>all</b>                                      | Upgrades all FPD images on the selected module.  |
| <b>fabldr</b>                                   | Upgrades the fabric-downloader FPD image on the module.  |
| <i>fpga-type</i>                                | Upgrades a specific field-programmable gate array (FPGA) image on the module. Use the <b>show fpd package</b> command to view all available FPGA images available for a specific module.                                   |
| <b>rommon</b>                                   | Upgrades the ROMMON image on the module.   |
| <b>force</b>                                    | (Optional) Forces the update of the indicated FPD image package on a shared port adapter (SPA) that meets the minimum version requirements. Without this option, the manual upgrade upgrades only incompatible FPD images. |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | Specifies the node for which to upgrade the FPD image. The <i>node-id</i> argument is expressed in the <i>rack/slot/subslot</i> notation. Use the <b>all</b> keyword to indicate all nodes.                                |

### Command Default

None

### Command Modes

Admin EXEC mode

### Command History

| Release       | Modification                                |
|---------------|---|
| Release 3.2   | This command was introduced.                |
| Release 3.3.0 | Support for multiple FPGA images was added. |

### Usage Guidelines

**Note** The use of the force option when doing a fpd upgrade is not recommended except under explicit direction from Cisco engineering or TAC.

**Note** It is recommended to upgrade all FPGAs on a given node using the **upgrade hw-module fpd all location {all | node-id}** command. Do not upgrade the FPGA on a node using the **upgrade hw-module fpd <individual-fpd> location {all | node-id}** as it may cause errors in booting the card.

During the upgrade procedure, the module must be offline (shut down but powered).

Naming notation for the *node-id* argument is *rack/slot/subslot*; a slash between values is required as part of the notation.

- *rack* —Chassis number of the rack.
- *slot* —Physical slot number of the SPA interface processor (SIP).
- *subslot* —Subslot number of the SPA.

For more information about the syntax for the router, use the question mark (?) online help function.

When you start the FPD upgrade procedure or log into a router that is running the FPD upgrade procedure, the following message is displayed to the screen on TTY, console and AUX ports:

```
FPD upgrade in progress on some hardware, reload/configuration change on those
is not recommended as it might cause HW programming failure and result in RMA
of the hardware.
```

If you enter administration mode while the FPD upgrade procedure is running, the following message is displayed to the screen on TTY, console and AUX ports:

```
FPD upgrade in progress on some hardware, reload/configuration change on those
is not recommended as it might cause HW programming failure and result in RMA
of the hardware. Do you want to continue? [Confirm (y/n)]
```

If you enter global configuration mode while the FPD upgrade procedure is running, the following message is displayed to the screen on TTY, console and AUX ports:

```
FPD upgrade in progress on some hardware, configuration change on those is not
recommended as it might cause HW programming failure and result in RMA of the
hardware. Do you want to continue? [Confirm (y/n)]
```

When the FPD upgrade global timer expires, the following warning message displayed to the screen.

```
FPD upgrade has exceeded the maximum time window, the process will terminate now.
Please check the status of the hardware and reissue the upgrade command if required.
```

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | system  | read,<br>write |
|         | sysmgr  | read,<br>write |

The following example shows how to upgrade the default FPGA on a SPA:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# upgrade hw-module fpd fpga location 0/1/4

% RELOAD REMINDER:
- The upgrade operation of the target module will not interrupt its normal
  operation. However, for the changes to take effect, the target module
  will need to be manually reloaded after the upgrade operation. This can
  be accomplished with the use of "hw-module <target> reload" command.
- If automatic reload operation is desired after the upgrade, please use
  the "reload" option at the end of the upgrade command.
- The output of "show hw-module fpd location" command will not display
  correct version information after the upgrade if the target module is
  not reloaded.
Continue? [confirm] y

Successfully upgraded spa fpga instance 4 on location 0/1/4.
```

## Manageability Commands

---

This chapter describes the Cisco IOS XR software commands used to enable the HTTP server, enable router management through Extensible Markup Language (XML) agent services, and support the Common Object Request Broker Architecture (CORBA) infrastructure.

The XML Parser Infrastructure provides parsing and generation of XML documents with Document Object Model (DOM), Simple API for XML (SAX), and Document Type Definition (DTD) validation capabilities:

- DOM allows customers to programmatically create, manipulate, and generate XML documents.
- SAX supports user-defined functions for XML tags.
- DTD allows for validation of defined document types.

- [xml agent tty](#), on page 402

# http server

To enable the HTTP server on the router and enable access to the Craft Works Interface (CWI), use the **http server** command in global configuration mode. To disable the HTTP server, use the **no** form of this command.

```
http server [ssl] [access-group name]
no http server
```

|                           |                              |  |
|---------------------------|------------------------------|--|
| <b>Syntax Description</b> | <b>ssl</b>                   | (Optional) Enables Secure Socket Layer (SSL).  |
|                           | <b>access-group name</b>     | (Optional) Enables access to the CWI from IP addresses that meet the conditions of the access control list (ACL) specified for the <i>name</i> argument. |
| <b>Command Default</b>    | The HTTP server is disabled. |  |
| <b>Command Modes</b>      | Global configuration         |  |
| <b>Command History</b>    | <b>Release</b>               | <b>Modification</b>  |
|                           | Release 2.0                  | This command was introduced.   |
|                           | Release 3.2                  | Support for access groups was added. The <b>access-group</b> keyword and <i>name</i> argument were added to support access groups.                       |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **http server** command to enable the HTTP server on your router.

To display the home page of the router, use a Web browser pointed to `http://x.x.x.x`, where *x.x.x.x* is the router IP address. If a name has been set, use `http://router-name`.

Use the **ssl** keyword to run HTTP over a secure socket. This command enables the HTTP server to run SSL when accessing web pages or files provided by the HTTP server of the router and disables access through the regular HTTP port.

Enabling the HTTP server enables authentication by default. After the HTTP server has been enabled, you then are prompted to provide a username and password to access web pages on the HTTP server.

**Note** The **http server** command enables the HTTP server process on Management Ethernet interfaces by default. For information about how to enable HTTP server on other inband interfaces, see the *Implementing Management Plane Protection on Cisco IOS XR Software* module in *System Security Configuration Guide for Cisco CRS Routers*.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

The following example shows how to enable the HTTP server on the router:

```
RP/0/RP0/CPU0:router(config)# http server
```

The following example shows how to enable SSL to run HTTP over a secure socket:

```
RP/0/RP0/CPU0:router(config)# http server ssl
```

The following example shows how to enable SSL to run HTTP over a secure socket and to enable access to the CWI from only IP addresses that meet the conditions of the access group named test:

```
RP/0/RP0/CPU0:router(config)# http server ssl access-group test
```

The following sample output from the **show ipv4 access-lists** commands displays the IPv4 access list named test:

```
RP/0/RP0/CPU0:router# show ipv4 access-lists test

ipv4 access-list test
 10 deny ip host 171.71.163.96 any
 20 permit ip host 64.102.48.34 any
```

# ipv4 disable

To disable IPv4 XML transport, use the **ipv4 disable** command in XML agent configuration mode. To enable IPv4 XML transport, use the **no** form of this command.

**ipv4 disable**  
**no ipv4 disable**

**Syntax Description** This command has no keywords or arguments.

**Command Default** IPv4 XML transport is enabled by default.

**Command Modes** XML agent configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID         | Operation      |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

This example illustrates how to disable IPv4 XML transport:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# xml agent
RP/0/RP0/CPU0:router(config-xml-agent) ipv4 disable
```

## Related Topics

[ipv6 enable \(XML\)](#), on page 385

# ipv6 enable (XML)

To enable IPv6 XML transport, use the **ipv6 enable** command in XML agent configuration mode. To disable IPv6 XML transport, use the **no ipv6 enable** form of this command.

**ipv6 enable**  
**no ipv6 enable**

**Syntax Description** This command has no keywords or arguments.

**Command Default** IPv6 XML transport is disabled by default.

**Command Modes** XML agent configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.1.0 | This command was introduced. |
|                 | Release 5.0.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID         | Operation      |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

This example illustrates how to enable IPv6 XML transport:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# xml agent
RP/0/RP0/CPU0:router(config-xml-agent) ipv6 enable
```

[ipv4 disable](#), on page 384

# iteration

To configure the iteration size for large XML agent responses, use the `iteration` command in xml agent configuration mode. To revert to the default iteration settings, use the `no` form of this command.

**iteration** {**off** | **on** **size** *iteration-size*}  
**no iteration**

| Syntax Description | off  | on  | size <i>iteration-size</i>  |
|--------------------|--|---|---|
|                    | Disables iteration, meaning that the entire XML response is returned, regardless of its size. Use of this option is not recommended. | Enables iteration, meaning that large XML responses are broken into chunks according to the iteration chunk size. | Specifies the size of the iteration chunk, in Kbytes. Values can range from 1 to 100,000. |

**Command Default** Iteration is enabled; the *iteration-size* is 48.

**Command Modes** XML agent  
 TTY XML agent  
 SSL XML agent

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.9.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When the XML agent returns a large response, it splits the response into chunks and returns one chunk at a time. External clients then need to send a GetNext request to obtain the next chunk. Use the **iteration** command to control the size of iteration chunks. A larger chunk value allows larger chunks to be received in a shorter period of time, possibly making the router system busier. A smaller chunk value allows smaller chunks to be received over a longer period of time, but does not make the router busy. You can also specify to disable iteration completely using the **iteration off** command.

**Note** It is not recommended to disable iteration, since this could result in large transient memory usage.

To specify the TTY or SSL iteration size specifically, use the **iteration** command from the appropriate command mode.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

## Example

The following example shows how to configure the iteration chunk size to 100 Kbytes.

```
RP/0/RP0/CPU0:router(config)# xml agent  
RP/0/RP0/CPU0:router(config-xml)# iteration on size 100
```

The following example shows how to disable iteration:

```
RP/0/RP0/CPU0:router(config)# xml agent  
RP/0/RP0/CPU0:router(config-xml)# iteration off
```

The following example shows how to turn on iteration with the default iteration size:

```
RP/0/RP0/CPU0:router(config)# xml agent  
RP/0/RP0/CPU0:router(config-xml)# no iteration off
```

The following example shows how to change the iteration size to the default iteration size.

```
RP/0/RP0/CPU0:router(config)# xml agent  
RP/0/RP0/CPU0:router(config-xml)# no iteration on size 100
```

The following example shows how to change the iteration size of the TTY agent to 3 Kbytes:

```
RP/0/RP0/CPU0:router(config)# xml agent tty  
RP/0/RP0/CPU0:router(config-xml-tty)# iteration on size 3
```

The following example shows how to turn off the iteration of the SSL agent:

```
RP/0/RP0/CPU0:router(config)# xml agent ssl  
RP/0/RP0/CPU0:router(config-xml-ssl)# iteration off
```

# streaming

To configure the streaming size of the response while the XML agent is retrieving data from the source, use the **streaming** command in the appropriate mode.

**streaming on** *size size in kbytes*

---

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>size</b> <i>size in kbytes</i> Streaming size of the xml response. Range is 1 to 100000. |
|---------------------------|---|

---

|                        |                   |
|------------------------|-------------------|
| <b>Command Default</b> | Default is 48 KB. |
|------------------------|-------------------|

|                      |                |
|----------------------|----------------|
| <b>Command Modes</b> | XML agent mode |
|----------------------|----------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.1    | This command was introduced. |

---

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | Iteration must be off. The sub-response block size is a configurable value specific to each transport mechanisms on the router (the XML agent for the dedicated TCP connection and Secure Shell (SSH), Telnet, or Secure Sockets Layer (SSL) dedicated TCP connection). |
|-------------------------|---|

|                |                 |                  |
|----------------|-----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b>  | <b>Operation</b> |
|                | config-services | read,<br>write   |

---

## Example

This example shows how to configure the streaming size to 100 KB:

```
RP/0/RP0/CPU0:router (config) # xml agent
RP/0/RP0/CPU0:router (config-xml) # streaming on size 100
```

# session timeout

To configure an idle timeout for the XML agent, use the **session timeout** command in xml agent configuration mode. To remove the session timeout, use the **no** form of this command.

**session timeout** *timeout*

| <b>Syntax Description</b> | <i>timeout</i> Amount of idle time in minutes that must pass before the XML agent closes the session. Values can range from 1 to 1440.  |         |              |                 |                              |
|---------------------------|---|---------|--------------|-----------------|------------------------------|
| <b>Command Default</b>    | There is no session timeout.  |         |              |                 |                              |
| <b>Command Modes</b>      | xml agent<br>xml agent ssl<br>xml agent tty   |         |              |                 |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 4.0.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 4.0.0   | This command was introduced. |
| Release                   | Modification  |         |              |                 |                              |
| Release 4.0.0             | This command was introduced.  |         |              |                 |                              |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |         |              |                 |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>config-services</td> <td>read,<br/>write</td> </tr> </tbody> </table>   | Task ID | Operation    | config-services | read,<br>write               |
| Task ID                   | Operation   |         |              |                 |                              |
| config-services           | read,<br>write  |         |              |                 |                              |

The following example illustrates how to configure the dedicated agent to close the session after 5 minutes of idle time:

```
RP/0/RP0/CPU0:router(config)# xml agent
RP/0/RP0/CPU0:router(config-xml-agent)# session timeout 5
```

The following example illustrates how to configure the XML TTY agent to close the session after 60 minutes of idle time:

```
RP/0/RP0/CPU0:router(config)# xml agent tty
RP/0/RP0/CPU0:router(config-xml-agent-tty)# session timeout 60
```

The following example illustrates how to configure the XML TTY agent to have no timeout (the default):

```
RP/0/RP0/CPU0:router(config)# xml agent tty
```

```
RP/0/RP0/CPU0:router(config-xml-agent)# no session timeout
```

### Related Topics

# show xml schema

To browse the XML schema and data, use the **show xml schema** command in

EXEC

mode.

**show xml schema**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show xml schema** command runs the XML schema browser so that you can browse the XML schema and data.

| Task ID | Task ID         | Operations |
|---------|-----------------|------------|
|         | config-services | read       |

This example shows how to enter the XML schema browser and the available commands:

```
RP/0/RP0/CPU0:router# show xml schema

Username: xxxx
Password:
Enter 'help' or '?' for help
xml-schema[config]:> ?

config          oper          action
adminoper      adminaction  cd
pwd            classinfo   list
ls             datalist    walk
walkdata       get         hierarchy
quit           exit        help
xml-schema[config]:>
```

# show xml sessions

To display the status of an Extensible Markup Language (XML) session, use the **show xml sessions** command in

EXEC

mode.

**show xml sessions** [{**default** | **ssl** | **tty**}] [**detail**]

| Syntax Description | default   |
|--------------------|---|
|                    | Displays the status of the default XML agent.                         |
| ssl                | Displays the status of the XML agents over secure socket layer (SSL). |
| tty                | Displays the status of XML agents over telnet.                        |
| detail             | Displays details regarding the XML sessions.                          |

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.0.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID         | Operation |
|---------|-----------------|-----------|
|         | config-services | read      |

## Example

This example illustrates sample output of the **show xml sessions** command with no optional keywords specified:

```
RP/0/RP0/CPU0:router# show xml sessions

Session Client Agent User Date State
00000001 192.168.10.85 (default) tty cisco Fri Jun 19 22:42:29 2009 idle
10000001 10.12.24.15 (VRF1) default lab Fri Jun 19 22:32:12 2009 busy
```

This example illustrates sample output of the **show xml sessions** command with the **tty** keyword:

```
RP/0/RP0/CPU0:router# show xml sessions tty
```

```
Session Client Agent User Date State
00000001 192.168.10.85 (default) tty cisco Fri Jun 19 22:42:29 2009 idle
00000002 10.12.24.15 (VRF1) tty lab Fri Jun 19 22:32:12 2009 busy
```

This example illustrates sample output of the **show xml sessions** command with the **detail** keyword:

```
RP/0/RP0/CPU0:router#
```

```
show xml sessions detail
```

```
Session: 00000001
  Client: 192.168.10.85 (default)
  Agent type: tty
  User: cisco
  State: idle
  Config session: -
  Alarm notification: Registered
  Start Date: Tue Aug 24 18:21:29 2010
  Elapsed Time: 00:00:27
  Last State Changed: 00:00:27
Session: 10000001
  Client: 10.12.24.15 (VRF1)
  Agent type: default
  User: lab
  State: busy
  Config session: 00000010-0005b105-00000000
  Alarm notification: Not registered
  Start date: Tue Aug 24 18:21:29 2010
  Elapsed Time: 00:01:10
  Last State Changed: 00:01:10
```

|                | config-services | read,<br>write   |

### Example

The following example illustrates how to configure the XML dedicated agent to send and receive messages via VRF1 only:

```
RP/0/RP0/CPU0:router (config) # xml agent
RP/0/RP0/CPU0:router (config-xml-agent) # vrf VRF1
RP/0/RP0/CPU0:router (config-xml-agent) # vrf default
RP/0/RP0/CPU0:router (config-xml-agent-vrf) # shutdown
```

The following example illustrates how to configure the XML SSL agent to send and receive messages via VRF1 only:

```
RP/0/RP0/CPU0:router (config) # xml agent ssl
RP/0/RP0/CPU0:router (config-xml-agent-ssl) # vrf VRF1
RP/0/RP0/CPU0:router (config-xml-agent-ssl) # vrf default
RP/0/RP0/CPU0:router (config-xml-agent-ssl-vrf) # shutdown
```

The following example illustrates how to enable the default VRF after it has been disabled:

```
RP/0/RP0/CPU0:router(config)# xml agent  
RP/0/RP0/CPU0:router(config-xml-agent)# vrf default  
RP/0/RP0/CPU0:router(config-xml-agent-vrf)# no shutdown
```

# streaming

To configure XML response streaming, use the **streaming** command in one of the XML agent configuration modes. To disable XML response streaming, use the **no** form of this command.

**streaming on size** *size*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>on</b> Turns on XML streaming.                                   |
|                           | <b>size</b> <i>size</i> Specifies the size of the stream in Kbytes. |

**Command Default** XML streaming is disabled.

**Command Modes** XML agent  
XML agent ssl  
XML agent tty

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.1.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

|                |                 |                  |
|----------------|-----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b>  | <b>Operation</b> |
|                | config-services | read,<br>write   |

This example illustrates how to set the XML response streaming size to 5000 Kbytes.

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# xml agent
RP/0/RP0/CPU0:router(config-xml-agent)# streaming on size 5000
```

# throttle

To configure the XML agent processing capabilities, use the **throttle** command in XML agent configuration mode.

```
throttle {memory size | process-rate tags}
```

| Syntax Description | memory   | process-rate   |
|--------------------|--|--|
|                    | <i>size</i>  | <i>tags</i>  |
|                    | Specifies the XML agent memory size.   | Specifies the XML agent processing rate.   |
|                    | Maximum memory usage of XML agent per session in MB. Values can range from 100 to 600. The default is 300. | Number of tags that the XML agent can process per second. Values can range from 1000 to 30000. |

**Command Default** The process rate is not throttled; memory size is 300 MB.

**Command Modes** XML agent configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.8.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **throttle** command to control CPU time used by the XML agent when it handles large data.

| Task ID | Task ID         | Operation      |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

## Example

This example illustrates how to configure the number of tags that the XML agent can process to 1000:

```
RP/0/RP0/CPU0:router(config)# xml agent
RP/0/RP0/CPU0:router(config-xml-agent)# throttle process-rate 1000
```

## vrf (XML)

To configure a dedicated agent to receive and send messages via the specified VPN routing and forwarding (VRF) instance, use the `vrf` command in one of the xml agent configuration mode. To disable the receiving and sending of messages via a specific VRF instance, use the `no` form of this command.

**vrf** {**default***vrf-name*}

| Syntax Description | default         | Configures the default VRF instance.   |
|--------------------|-----------------|--|
|                    | <i>vrf-name</i> | Configures the specified VRF instance. |

**Command Default** The default VRF is enabled by default.

**Command Modes** XML agent configuration  
XML agent SSL configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.0.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The default VRF is enabled by default. To disable the default VRF, use the **shutdown** command.

| Task ID | Task ID         | Operation      |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

### Example

This example shows how to configure the dedicated XML agent to receive and send messages via VRF1, VRF2 and the default VRF:

```
RP/0/RP0/CPU0:router(config)# xml agent
RP/0/RP0/CPU0:router(config-xml-agent)# vrf VRF1
RP/0/RP0/CPU0:router(config-xml-agent)# vrf VRF2
```

This example shows how to remove access to VRF2 from the dedicated agent:

```
RP/0/RP0/CPU0:router(config)# xml agent
RP/0/RP0/CPU0:router(config-xml-agent)# no vrf VRF2
```

|----------------|-----------------|-------------------|
|                | config-services | read,<br>write    |

---

This example shows how to enable XML requests over SSL:

```
RP/0/RP0/CPU0:router(config)# xml agent ssl
```

# xml agent tty

To enable Extensible Markup Language (XML) requests over Secure Shell (SSH) and Telnet and enter TTY XML agent configuration mode, use the **xml agent tty** command in

global configuration

mode. To disable XML requests over SSH and Telnet, use the **no** form of this command.

**Note** This command enables a legacy XML agent that has been superseded by an enhanced performance XML agent and is supported only for backward compatibility. To enable the enhanced-performance XML agent, use the **xml agent** command.

**xml agent tty**  
**no xml agent tty**

**Command Default** XML requests over SSH and Telnet are disabled.

**Command Modes** Global configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 3.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

There are two XML agents: a legacy XML agent and an enhanced-performance XML agent. We recommend that you use the enhanced-performance agent. The legacy agent is supported for backward compatibility. The **xml agent tty** command enables the legacy XML agent. Use the **xml agent** command to enable the enhanced-performance XML agent.

Use the **no** form of the **xml agent tty** command to disable the legacy XML agent.

| Task ID | Task ID         | Operations     |
|---------|-----------------|----------------|
|         | config-services | read,<br>write |

This example shows how to enable XML requests over Secure Shell (SSH) and Telnet:

```
RP/0/RP0/CPU0:router(config)# xml agent tty
```

## Network Time Protocol (NTP) Commands

This chapter describes the Cisco IOS XR Network Time Protocol (NTP) commands used to perform basic network time management tasks, including synchronizing time settings and coordinating time distribution over the network.

When an NTP server or client is configured, NTP features are available on all router interfaces. NTP features can be disabled for any specified interface, local or remote, to the route processor (RP).

For detailed information about NTP concepts, configuration tasks, and examples, see the *Implementing NTP on Cisco IOS XR Software* configuration module in *System Management Configuration Guide for Cisco CRS Routers*.

## access-group (NTP)

To control access to Network Time Protocol (NTP) services for an IPv4 or IPv6 access list, use the **access-group** command in one of the NTP configuration modes. To remove the **access-group** command from the configuration file and restore the system to its default condition with respect to this command, use the **no** form of this command.

```
access-group [vrf vrf-name] [{ipv4 | ipv6}] {peer | query-only | serve | serve-only} access-list-name
no access-group [vrf vrf-name] [{ipv4 | ipv6}] {peer | query-only | serve | serve-only}
```

### Syntax Description

|                         |  |
|-------------------------|--|
| <b>vrf</b> vrf-name     | (Optional) Applies the access control configuration to a specified nondefault VRF. If not specified, the configuration is applied to the default VRF.  |
| <b>ipv4</b>             | (Optional) Specifies an IPv4 access list (default).  |
| <b>ipv6</b>             | (Optional) Specifies an IPv6 access list.  |
| <b>peer</b>             | Allows time requests and NTP control queries and allows a networking device to synchronize to the remote system.   |
| <b>query-only</b>       | Allows only NTP control queries. Cisco IOS XR software uses NTP Version 4, but the RFC for Version 3 (RFC 1305: <i>Network Time Protocol (Version 3)—Specification, Implementation and Analysis</i> ) still applies. |
| <b>serve</b>            | Allows time requests and NTP control queries, but does not allow the networking device to synchronize to the remote system.  |
| <b>serve-only</b>       | Allows only time requests.   |
| <b>access-list-name</b> | Name of an IPv4 or IPv6 access list.   |

### Command Default

No NTP access control is configured.

### Command Modes

NTP configuration

VRF-specific NTP configuration

### Command History

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.  |
| Release 3.8.0 | Support was added for: <ul style="list-style-type: none"> <li>• <b>vrf</b> vrf-name keyword and argument</li> <li>• <b>ipv4</b> keyword</li> <li>• <b>ipv6</b> keyword</li> </ul> |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The access group options are scanned in the following order from least restrictive to most restrictive:

1. **peer**—Allows time requests and NTP control queries and allows the router to synchronize itself to a system whose address passes the access list criteria.
2. **serve**—Allows time requests and NTP control queries, but does not allow the router to synchronize itself to a system whose address passes the access list criteria.
3. **serve-only**—Allows only time requests from a system whose address passes the access list criteria.
4. **query-only**—Allows only NTP control queries from a system whose address passes the access list criteria.

Access is granted for the first match that is found. If no access groups are specified, all access is granted to all sources. If any access groups are specified, only the specified access is granted. This facility provides minimal security for the time services of the system. However, it can be circumvented by a determined programmer. If tighter security is desired, use the NTP authentication facility.

If you use the **access-group** command in a VRF-specific NTP configuration mode, the command is applied to the specific VRF. If you are not in a VRF-specific NTP configuration mode, the command is applied to the default VRF unless you use the **vrf** *vrf-name* keyword and argument to specify a VRF.

**Task ID****Task ID    Operations**

ip-services read,  
write

The following example shows how to configure the router to allow itself to be synchronized by a peer from an IPv4 access list named access1 and to restrict access to allow only time requests from an IPv4 access list named access2:

```
RP/0/RP0/CPU0:router(config-ntp)# access-group peer access1
RP/0/RP0/CPU0:router(config-ntp)# access-group serve-only access2
```

The following example shows how to configure the router to allow itself to be synchronized by peers from the IPv6 access list named access20 that route through the vrf10 VRF:

```
RP/0/RP0/CPU0:router(config-ntp)# access-group vrf vrf10 ipv6 peer access20
```

**Related Commands**

| Command                 | Description                                       |
|-------------------------|---|
| <b>ipv4 access-list</b> | Defines an IPv4 access list by name.              |
| <b>ipv6 access-list</b> | Defines an IPv6 access list by name.              |
| <b>vrf</b>              | Configures a VRF instance for a routing protocol. |

# authenticate (NTP)

To enable Network Time Protocol (NTP) authentication, use the **authenticate** command in NTP configuration mode. To restore the system to its default condition, use the **no** form of this command.

**authenticate**  
**no authenticate**

**Syntax Description** This command has no keywords or arguments.

**Command Default** No NTP authentication is configured.  
From Release 6.4.1 onwards, NTP authentication is enabled by default.

**Command Modes** NTP configuration

| Command History | Release       | Modification                              |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.              |
|                 | Release 6.4.1 | NTP authentication is enabled by default. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

From Release 6.4.1 onwards, the behaviour of **authenticate** has changed. This feature is enabled by default to prevent an exploitable condition when **passive**, **broadcast client** or **multicast client** is configured.

If the system has been configured with the **broadcast client** or **multicast client** command in NTP configuration mode, and when the system receives an incoming symmetric active NTP packet, or if the system receives a broadcast or multicast mode NTP packet, it can set up an ephemeral peer association in order to synchronize with the sender. The system will then synchronize to the peer when a symmetric active, broadcast, or multicast NTP packet is received and the packet carries one of the authentication keys specified in the **trusted-key** command.

Even though NTP authentication is enabled by default, it does not force the authentication of peer associations that are created using the **server** and **peer** commands in NTP configuration mode. It only enforces authentication when remote systems attempt to create new ephemeral associations.

Use the **no authenticate** command to allow synchronizing with unauthenticated and unconfigured network peers.

Prior to Release 6.4.1, the behavior of this command is as follows:

Use the **authenticate** command to prevent the system from synchronizing with unauthenticated and unconfigured network peers.

If the **authenticate** command is specified, and when a symmetric active, broadcast, or multicast NTP packet is received, the system will not synchronize to the peer unless the packet carries one of the authentication keys specified in the **trusted-key** command.

You must enable **authenticate** when enabling **broadcast client** or **multicast client** command in NTP configuration mode unless you have other measures (such as using the **access-group** command in NTP configuration mode) to prevent unauthorized hosts from communicating with the NTP service on the device.

The **authenticate** command does not ensure authentication of peer associations that are created using the **server** and **peer** commands in NTP configuration mode. When creating associations using the **server** and **peer** commands in NTP configuration mode, specify the **key** keyword to ensure the authentication of packets that move to and from the remote peer.

Use the **no authenticate** command to allow synchronizing with unauthenticated and unconfigured network peers.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to configure the system to synchronize only to a system that provides an authentication key 42 in its NTP packets:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)# authenticate
RP/0/RP0/CPU0:router(config-ntp)# authentication-key 42 md5 clear key1
RP/0/RP0/CPU0:router(config-ntp)# trusted-key 42
```

### Related Topics

# authentication-key (NTP)

To define an authentication key for a trusted Network Time Protocol (NTP) time source, use the **authentication-key** command in NTP configuration mode. To restore the system to its default condition, use the **no** form of this command.

**authentication-key** *key-number* **md5** [{**clear** | **encrypted**}] *key-name*  
**no authentication-key** *key-number*

## Syntax Description

|                   |   |
|-------------------|---|
| <i>key-number</i> | Authentication key. A number in the range from 1 to 65535.                          |
| <b>md5</b>        | Provides message authentication support using the Message Digest 5 (MD5) algorithm. |
| <b>clear</b>      | (Optional) Specifies that the key value entered after this keyword is unencrypted.  |
| <b>encrypted</b>  | (Optional) Specifies that the key value entered after this keyword is encrypted.    |
| <i>key-name</i>   | Key value. The maximum length is 32 characters.                                     |

## Command Default

No authentication key is defined for NTP.

## Command Modes

NTP configuration

## Command History

| Release       | Modification                              |
|---------------|---|
| Release 2.0   | This command was introduced.              |
| Release 6.4.1 | NTP authentication is enabled by default. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **authentication-key** command to define authentication keys for use with trusted NTP time sources.

### Note

When this command is written to NVRAM, the key is encrypted so that it is not displayed when the configuration is displayed.

## Task ID

| Task ID     | Operations     |
|-------------|----------------|
| ip-services | read,<br>write |

The following example shows how to configure the system to synchronize only to systems providing authentication key 42 in their NTP packets:

```
RP/0/RP0/CPU0:router(config)# ntp
```

```
RP/0/RP0/CPU0:router(config-ntp)# authenticate  
RP/0/RP0/CPU0:router(config-ntp)# authentication-key 42 md5 clear key1  
RP/0/RP0/CPU0:router(config-ntp)# trusted-key 42
```

# broadcast

To create a Network Time Protocol (NTP) broadcast server on a specified NTP interface, use the **broadcast** command in NTP interface configuration mode. To remove the command from the configuration file and restore the system to its default condition, use the **no** form of this command.

**broadcast** [**destination** *ip-address*] [**key** *key-id*] [**version** *number*]  
**no broadcast** [**destination** *ip-address*] [**key** *key-id*] [**version** *number*]

| Syntax Description                   |   |
|--------------------------------------|---|
| <b>destination</b> <i>ip-address</i> | (Optional) Specifies the host IPv4 address.   |
| <b>key</b> <i>key-id</i>             | (Optional) Defines the authentication key, where <i>key-id</i> is the authentication key to use when sending packets to this peer. The key identified by the <i>key-id</i> value is also used for packets received from the peer. |
| <b>version</b> <i>number</i>         | (Optional) Specifies a number from 1 to 4, indicating the NTP version.  |

**Command Default** No NTP broadcast servers are configured.

**Command Modes** NTP interface configuration

| Command History | Release       | Modification                              |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.              |
|                 | Release 6.4.1 | NTP authentication is enabled by default. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **broadcast** command to create an NTP broadcast server on an NTP interface to send NTP broadcast packets.

Use the **broadcast client** command to set a specific interface to receive NTP broadcast packets.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to configure interface 0/0/0/1 to send NTP packets to destination host IP address 10.0.0.0:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)# interface tengige 0/0/0/1
RP/0/RP0/CPU0:router(config-ntp-int)# broadcast destination 10.0.0.0
```

# broadcast client

To allow a networking device to receive Network Time Protocol (NTP) broadcast packets on an interface, use the **broadcast client** command in NTP interface configuration mode. To remove the configuration and restore the system to its default condition, use the **no** form of this command.

**broadcast client**  
**no broadcast client**

**Syntax Description** This command has no keywords or arguments.

**Command Default** No NTP broadcast clients are configured.

**Command Modes** NTP interface configuration

| Command History | Release       | Modification                              |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.              |
|                 | Release 6.4.1 | NTP authentication is enabled by default. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **broadcast client** command to configure and create an NTP broadcast client and to associate the client with an interface to receive and handle NTP broadcast packets. If no NTP client has been created for an interface, the received NTP broadcast packets are dropped. Use this command to allow the system to listen to broadcast packets on an interface-by-interface basis.

To prevent synchronization with unauthorized systems, whenever this command is specified, authentication must be enabled using the **authenticate (NTP)** command or access must be restricted to authorized systems using the **access-group (NTP)** command. See the documentation of the respective commands for more information.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to configure interface 0/0/0/1 to send NTP packets:

```
RP/0/RP0/CPU0:router(config)# ntp interface tengige 0/0/0/1
RP/0/RP0/CPU0:router(config-ntp-int)# broadcast client
```

# broadcastdelay

To set the estimated round-trip delay between a Network Time Protocol (NTP) client and an NTP broadcast server, use the **broadcastdelay** command in NTP configuration mode. To restore the system to its default condition, use the **no** form of this command.

**broadcastdelay** *microseconds*  
**no broadcastdelay** *microseconds*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>microseconds</i> Estimated round-trip time for NTP broadcasts, in microseconds. The range is from 1 to 999999. The default is 3000. |
|---------------------------|--|

|                        |                            |
|------------------------|----------------------------|
| <b>Command Default</b> | <i>microseconds</i> : 3000 |
|------------------------|----------------------------|

|                      |                   |
|----------------------|-------------------|
| <b>Command Modes</b> | NTP configuration |
|----------------------|-------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>                       |
|------------------------|----------------|---|
|                        | Release 2.0    | This command was introduced.              |
|                        | Release 6.4.1  | NTP authentication is enabled by default. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **broadcastdelay** command to change the default round-trip delay time on a networking device that is configured as a broadcast client.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | ip-services    | read,<br>write    |

The following example shows how to set the estimated round-trip delay between a networking device and the broadcast client to 5000 microseconds:

```
RP/0/RP0/CPU0:router(config-ntp)# broadcastdelay 5000
```

# interface (NTP)

To enter a Network Time Protocol (NTP) interface mode and run NTP interface configuration commands, use the **interface** command in one of the NTP configuration modes. To remove an NTP interface configuration, use the **no** form of this command.

```
interface type interface-path-id [vrf vrf-name] [disable]
no interface type interface-path-id [disable]
```

## Syntax Description

|                            |  |
|----------------------------|--|
| <i>type</i>                | Interface type. For more information, use the question mark (?) online help function.                      |
| <i>interface-path-id</i>   | Physical interface or virtual interface.   |
| <b>Note</b>                | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router. |
|                            | For more information about the syntax for the router, use the question mark (?) online help function.      |
| <b>vrf</b> <i>vrf-name</i> | (Optional) Applies the interface configuration to a specific nondefault VRF.                               |
| <b>disable</b>             | (Optional) Disables NTP on the specified interface.  |

## Command Default

No NTP interfaces are configured.

## Command Modes

NTP configuration mode  
VRF-specific NTP configuration mode

## Command History

| Release       | Modification   |
|---------------|--|
| Release 2.0   | This command was introduced.   |
| Release 3.8.0 | Support was added for the <b>vrf</b> keyword and the <i>vrf-name</i> argument. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **interface** command to place the router in NTP interface configuration mode, from which NTP broadcast and multicast servers and clients can be configured. By default, after the NTP process is started, NTP features become available for all interfaces. To exit NTP interface configuration mode, use the **exit** command.

If you use the **interface** command in a VRF-specific NTP configuration mode, the command is applied to the specific VRF. If you are not in a VRF-specific NTP configuration mode, the command is applied to the default VRF unless you use the **vrf** *vrf-name* keyword and argument to specify a VRF.

By default, NTP is enabled on every interface. To disable NTP on a specific interface, use the **interface** command with the **disable** keyword. To reenable NTP on an interface, use the **no** form of the **interface** command with the **disable** keyword.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to enter NTP configuration mode, specify an NTP interface to be configured, and enter NTP interface configuration mode:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)# interface POS 0/1/0/0
RP/0/RP0/CPU0:router(config-ntp-int)#
```

The following example shows how to enter a VRF-specific NTP interface configuration mode:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)# interface TenGigE 0/1/1/0 vrf vrf_10
RP/0/RP0/CPU0:router(config-ntp-int)#
```

The following example shows a different way to enter a VRF-specific NTP interface configuration mode:

```
RP/0/RP0/CPU0:router(config)# ntp vrf vrf_10
RP/0/RP0/CPU0:router(config-ntp-vrf)# interface TenGigE 0/1/1/0
RP/0/RP0/CPU0:router(config-ntp-int)#
```

# master

To configure the router to use its own Network Time Protocol (NTP) master clock to synchronize with peers when an external NTP source becomes unavailable, use the **master** command in NTP configuration mode. To restore the system to its default condition, use the **no** form of this command.

**master** [*stratum*]  
**no master** [*stratum*]

## Syntax Description

*stratum* (Optional) NTP stratum number that the system claims. Range is from 1 to 15. The default is 8.

## Command Default

By default, the master clock function is disabled. When the function is enabled, the default stratum is 8.

## Command Modes

NTP configuration

## Command History

| Release       | Modification                              |
|---------------|---|
| Release 2.0   | This command was introduced.              |
| Release 6.4.1 | NTP authentication is enabled by default. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

NTP uses the concept of a “stratum” to describe how many NTP “hops” away a machine is from an authoritative time source. A stratum 1 time server has a radio or atomic clock attached directly. A stratum 2 time server receives its time through NTP from a stratum 1 time server, a stratum 3 from a stratum 2, and so on.

### Caution

Use the **master** command with extreme caution. It is easy to override other valid time sources using this command, especially if a low-stratum number is configured. Configuring multiple machines in the same network with the **master** command can lead to instability in time-keeping if the machines do not agree on the time.

The networking device is normally synchronized, directly or indirectly, with an external system that has a clock. Cisco IOS XR software does not support directly attached radio or atomic clocks. The **master** command should be used only when there is a temporary disruption in a reliable time service. It should not be employed as an alternative source by itself in the absence of a real-time service.

If the system has the **master** command configured and it cannot reach any clock that has a lower stratum number, the system claims to be synchronized at the configured stratum number. Other systems synchronize with it through NTP.

### Note

The system clock must have been manually set from some source before the **master** command has an effect. This precaution protects against the distribution of erroneous time after the system is restarted.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to configure a networking device as an NTP master clock to which peers may synchronize:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)# master 9
```

# max-associations

To set the maximum number of Network Time Protocol (NTP) associations, use the **max-associations** command in NTP configuration mode. To restore the default setting, use the **no** form of this command.

**max-associations** *number*  
**no max-associations** *number*

---

**Syntax Description**     *number* Maximum number of NTP associations. Range is from 0 to 4294967295. The default is 100.

---

**Command Default**     The default setting for the maximum number of NTP associations is 100.

**Command Modes**     NTP configuration

---

| Command History | Release       | Modification                              |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.              |
|                 | Release 6.4.1 | NTP authentication is enabled by default. |

---

**Usage Guidelines**     To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **max-associations** command to specify the maximum number of associations for an NTP server.

---

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

---

The following example shows how to set the maximum number of associations to 200:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)# max-associations 200
```

## Related Topics

# multicast client

To configure an NTP interface as an NTP multicast client, use the **multicast client** command in NTP interface configuration mode. To remove the NTP multicast client configuration from an interface, use the **no** form of this command.

```
multicast client [ip-address]  
no multicast client [ip-address]
```

| <b>Syntax Description</b> | <i>ip-address</i> IPv4 or IPv6 IP address of the multicast group to join. The default is the IPv4 address 224.0.1.1.  |         |              |               |                              |
|---------------------------|---|---------|--------------|---------------|------------------------------|
| <b>Command Default</b>    | The interface is not configured as an NTP multicast client.   |         |              |               |                              |
| <b>Command Modes</b>      | NTP interface configuration   |         |              |               |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.8.0</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | Release 3.8.0 | This command was introduced. |
| Release                   | Modification  |         |              |               |                              |
| Release 3.8.0             | This command was introduced.  |         |              |               |                              |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **multicast client** command to configure an NTP interface to receive multicast packets that are sent to an IPv4 or IPv6 multicast group IP address. If you do not specify an IP address, the interface is configured to receive multicast packets sent to the IPv4 multicast group address 224.0.1.1. You can configure multiple multicast groups on the same interface.

To prevent synchronization with unauthorized systems, whenever this command is specified, authentication must be enabled using the **authenticate (NTP)** command or access must be restricted to authorized systems using the **access-group (NTP)** command. See the documentation of the respective commands for more information.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to configure the router to receive NTP multicast packets to the multicast group address of 224.0.1.1:

```
RP/0/RP0/CPU0:router(config)# ntp interface TenGigE 0/1/1/0  
RP/0/RP0/CPU0:router(config-ntp-int)# multicast client
```

## Related Topics

[multicast destination](#), on page 420

## multicast destination

To configure an NTP interface as an NTP multicast server, use the **multicast destination** command in NTP interface configuration mode. To remove the NTP multicast server configuration from an interface, use the **no** form of this command.

```
multicast destination ip-address [key key-id] [ttl ttl] [version number]  
no multicast destination ip-address [key key-id] [ttl ttl] [version number]
```

| Syntax Description           |  |   |
|------------------------------|--|---|
| <b>ip-address</b>            |  | The IPv4 or IPv6 multicast group IP address to which to send NTP multicast packets.   |
| <b>key</b> <i>key-id</i>     |  | (Optional) Specifies an authentication key, where the value of the <i>key-id</i> argument is the authentication key to use when sending multicast packets to the specified multicast group. |
| <b>ttl</b> <i>ttl</i>        |  | (Optional) Specifies the time to live (TTL) of a multicast packet.  |
| <b>version</b> <i>number</i> |  | (Optional) Specifies the NTP version number.  |

**Command Default** The interface is not configured as an NTP multicast server.

**Command Modes** NTP interface configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.8.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to configure the router to send NTP multicast packets to the multicast group address of 224.0.1.1:

```
RP/0/RP0/CPU0:router(config)# ntp interface TenGigE 0/1/1/0  
RP/0/RP0/CPU0:router(config-ntp-int)# multicast destination 224.0.1.1
```

# ntp

To enter Network Time Protocol (NTP) configuration mode and run NTP configuration commands, use the **ntp** command in

global  
configuration mode.

**ntp** [**vrf** *vrf-name*]

---

**Syntax Description**      **vrf** *vrf-name* (Optional) Enters a VRF-specific NTP configuration mode.

---

**Command Default**      No defaults behavior or values

**Command Modes**      Global configuration

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.8.0 | Support was added for the <b>vrf</b> <i>vrf-name ip-address</i> keyword and arguments. |

**Usage Guidelines**      To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

NTP configuration commands can also be run from global configuration mode by preceding the command string with the **ntp** keyword. From NTP configuration mode, the following NTP configuration commands are available:

```
RP/0/RP0/CPU0:router(config-ntp)# ?

  access-group      Control NTP access
  authenticate      Authenticate time sources
  authentication-key Authentication key for trusted time sources
  broadcastdelay    Estimated round-trip delay
  commit            Commit the configuration changes to running
  default           Set a command to its defaults
  describe          Describe a command without taking real actions
  do                Run an exec command
  exit              Exit from this submode
  interface         Configure NTP on an interface
  master            Act as NTP master clock
  max-associations  Set maximum number of associations
  no                Negate a command or set its defaults
  peer             Configure NTP peer
  port              Enable NTP port
  server            Configure NTP server
  show              Show contents of configuration
  source            Configure interface for source address
  trusted-key       Key numbers for trusted time sources
```

```
update-calendar      Periodically update calendar with NTP time
```

Use the **ntp** command with the **vrf** *vrf-name* keyword and argument to enter an NTP configuration mode specific to the specified VRF.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to enter NTP configuration mode:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)#
```

The following example shows how to enter an NTP configuration mode for a VRF called VRF1:

```
RP/0/RP0/CPU0:router(config)# ntp vrf vrf1
RP/0/RP0/CPU0:router(config-ntp-vrf)#
```

# ntp clear

To clear all Network Time Protocol (NTP) peers or a specific NTP peer, use the **ntp clear** command in EXEC

mode.

```
ntp clear {peer | all | vrf vrf-name ip-address}
```

## Syntax Description

|                            |   |
|----------------------------|---|
| <i>peer</i>                | IPv4 address or hostname of the NTP peer to be cleared. |
| <b>all</b>                 | Clears all NTP peers.                                   |
| <b>vrf</b> <i>vrf-name</i> | Clears a peer on the specified nondefault VRF.          |
| <i>ip-address</i>          | IPv4 or IPv6 IP address of the peer.                    |

## Command Default

No defaults behavior or values

## Command Modes

EXEC

## Command History

| Release       | Modification   |
|---------------|--|
| Release 2.0   | This command was introduced.   |
| Release 3.8.0 | The * keyword was replaced by the <b>all</b> keyword.<br>Support was added for the <b>vrf vrf-name ip-address</b> keyword and arguments. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

## Task ID

| Task ID     | Operations     |
|-------------|----------------|
| ip-services | read,<br>write |

The following example shows how to clear all NTP peers:

```
RP/0/RP0/CPU0:router# ntp clear all
```

# ntp reset drift

To reset the NTP drift and loopfilter state, use the **ntp reset drift** command in EXEC mode.

## ntp reset drift

**Syntax Description** This command has no keywords or arguments.

**Command Default** No defaults behavior or values

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.8.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **ntp reset drift** command to set the loopfilter state to NSET (never set) and reset the drift. Resetting the loopfilter state and drift enables the router to relearn the frequency of the NTP server clock. This is necessary if there is a synchronization error caused by a large frequency error. This can arise, for example, if the router switches from synchronizing with one NTP server to synchronizing with another NTP server with a different frequency.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to reset the NTP drift and loopfilter state:

```
RP/0/RP0/CPU0:router# ntp reset drift
```

```
Thu Nov 13 11:21:04.381 JST
```

The following example shows NTP status before and after resetting NTP drift and loopfilter state:

```
RP/0/RP0/CPU0:router# show ntp status
```

```
Thu Nov 13 11:20:53.122 JST
```

```
Clock is synchronized, stratum 3, reference is 192.168.128.5
nominal freq is 1000.0000 Hz, actual freq is 1000.2787 Hz, precision is 2**24
reference time is CCC60CBE.9F836478 (11:17:34.623 JST Thu Nov 13 2008)
clock offset is -3.172 msec, root delay is 189.289 msec
```

```
root dispersion is 70.03 msec, peer dispersion is 0.11 msec  
loopfilter state is 'CTRL' (Normal Controlled Loop), drift is -0.0002785891 s/s  
system poll interval is 128, last update was 199 sec ago
```

```
RP/0/RP0/CPU0:router# ntp reset drift  
Thu Nov 13 11:21:04.381 JST
```

```
RP/0/RP0/CPU0:router# show ntp status  
Thu Nov 13 11:21:10.595 JST
```

```
Clock is unsynchronized, stratum 16, no reference clock  
nominal freq is 1000.0000 Hz, actual freq is 1000.0000 Hz, precision is 2**24  
reference time is CCC60CBE.9F836478 (11:17:34.623 JST Thu Nov 13 2008)  
clock offset is -3.172 msec, root delay is 0.000 msec  
root dispersion is 0.09 msec, peer dispersion is 0.00 msec  
loopfilter state is 'NSET' (Never set), drift is 0.0000000000 s/s  
system poll interval is 64, last update was 216 sec ago
```

## peer (NTP)

To configure the system clock to synchronize a peer or to be synchronized by a peer, use the **peer** command in one of the NTP configuration modes. To remove the **peer** command from the configuration file and restore the system to its default condition with respect to the command, use the **no** form of this command.

```
peer [vrf vrf-name] [{ipv4 | ipv6}] ip-address [version number] [key key-id] [minpoll interval]
[maxpoll interval] [source type interface-path-id] [prefer] [burst] [iburst]
no peer [vrf vrf-name] [{ipv4 | ipv6}] ip-address
```

### Syntax Description

|                                |   |
|--------------------------------|---|
| <b>vrf</b> <i>vrf-name</i>     | (Optional) Applies the peer configuration to the specified nondefault VRF.  |
| <b>ipv4</b>                    | (Optional) Specifies an IPv4 IP address.  |
| <b>ipv6</b>                    | (Optional) Specifies an IPv6 IP address.  |
| <i>ip-address</i>              | IPv4 or IPv6 address of the peer providing or being provided with the clock synchronization.  |
| <b>version</b> <i>number</i>   | (Optional) Defines the Network Time Protocol (NTP) version number, where the <i>number</i> argument is a value from 1 to 4. The default is 4.   |
| <b>key</b> <i>key-id</i>       | (Optional) Defines the authentication key, where the <i>key-id</i> argument is the authentication key to use when packets are sent to this peer. The authentication key is also used for packets received from the peer. By default, no authentication key is used. |
| <b>minpoll</b> <i>interval</i> | (Optional) Defines the shortest polling interval, where the <i>interval</i> argument is specified in powers of two seconds. Range is from 4 to 17. The default value is 6.  |
| <b>maxpoll</b> <i>interval</i> | (Optional) Defines the longest polling interval, where the <i>interval</i> argument is specified in powers of two seconds. Range is from 4 to 17. The default value is 10.  |
| <b>source</b>                  | (Optional) IP source address. The default is the outgoing interface.  |
| <i>type</i>                    | (Optional) Interface type. For more information, use the question mark (?) online help function.  |
| <i>interface-path-id</i>       | (Optional) Physical interface or virtual interface.   |
| <b>Note</b>                    | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.  |
|                                | For more information about the syntax for the router, use the question mark (?) online help function.   |
| <b>prefer</b>                  | (Optional) Makes this peer the preferred peer that provides synchronization.  |
| <b>burst</b>                   | (Optional) Sends a series of packets instead of a single packet within each synchronization interval to achieve faster synchronization.   |
| <b>iburst</b>                  | (Optional) Sends a series of packets instead of a single packet within the initial synchronization interval to achieve faster initial synchronization.  |

**Command Default** No peers are configured by default.

**Command Modes** NTP configuration  
VRF-specific NTP configuration

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.  |
|                 | Release 3.8.0 | Support was added for the following keywords and arguments: <ul style="list-style-type: none"> <li>• <b>vrf</b> <i>vrf-name</i></li> <li>• <b>ipv4</b></li> <li>• <b>ipv6</b></li> <li>• <b>burst</b></li> <li>• <b>iburst</b></li> </ul> |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **peer** command to allow this machine to synchronize with the peer, or conversely.

**Caution** Although using the **prefer** keyword can help reduce the switching among peers, you should avoid using the keyword because it interferes with the source selection mechanism of NTP and can result in a degradation in performance.

The value for the **minpoll** keyword must be less than or equal to the value for the **maxpoll** keyword. If this is not the case, the system issues an error message.

To provide peer-level service (as opposed to client/server-level service), it may be necessary to explicitly specify the NTP version for the peer if it is not version 4.

If you use the **peer** command in a VRF-specific NTP configuration mode, the command is applied to the specific VRF. If you are not in a VRF-specific NTP configuration mode, the command is applied to the default VRF unless you use the **vrf vrf-name** keyword and argument to specify a VRF.

**Note** To change the configuration of a specific IP address from peer to server or from server to peer, use the **no** form of the **peer** or **server** command to remove the current configuration before you perform the new configuration. If you do not remove the old configuration before performing the new configuration, the new configuration does not overwrite the old configuration.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

The following example shows how to configure a networking device to allow its system clock to be synchronized with the clock of the peer (or conversely) at IP address 10.0.0.0 using NTP. The source IP address is the address of interface 0/0/0/1.

```
RP/0/RP0/CPU0:router(config)# ntp  
RP/0/RP0/CPU0:router(config-ntp)# peer 10.0.0.0 minpoll 8 maxpoll 12 source tengige 0/0/0/1
```

## server (NTP)

To allow the system clock to be synchronized by a time server, use the **server** command in one of the NTP configuration modes. To remove the **server** command from the configuration file and restore the system to its default condition with respect to this command, use the **no** form of this command.

```
server [vrf vrf-name][{ipv4 | ipv6}] ip-address [version number] [key key-id] [minpoll interval]
[maxpoll interval] [source type interface-path-id][prefer] [burst] [iburst]
no server [vrf vrf-name] [{ipv4 | ipv6}] ip-address
```

### Syntax Description

|                                |   |
|--------------------------------|---|
| <b>vrf</b> <i>vrf-name</i>     | (Optional) Applies the server configuration to the specified nondefault VRF.  |
| <b>ipv4</b>                    | (Optional) Specifies an IPv4 IP address.  |
| <b>ipv6</b>                    | (Optional) Specifies an IPv6 IP address.  |
| <i>ip-address</i>              | IPv4 or IPv6 address of the time server providing the clock synchronization.  |
| <b>version</b> <i>number</i>   | (Optional) Defines the Network Time Protocol (NTP) version number, where the <i>number</i> argument is a value from 1 to 4. The default is 4.   |
| <b>key</b> <i>key-id</i>       | (Optional) Defines the authentication key, where the <i>key-id</i> argument is the authentication key to use when packets are sent to this peer. By default, no authentication key is used. |
| <b>minpoll</b> <i>interval</i> | (Optional) Defines the shortest polling interval, where the <i>interval</i> argument is specified in powers of two seconds. Range is from 4 to 17. The default value is 6.                  |
| <b>maxpoll</b> <i>interval</i> | (Optional) Defines the longest polling interval, where the <i>interval</i> argument is specified in powers of two seconds. Range is from 4 to 17. The default value is 10.                  |
| <b>source</b>                  | (Optional) Specifies the IP source address. The default is the outgoing interface.  |
| <i>type</i>                    | (Optional) Interface type. For more information, use the question mark ( ? ) online help function.  |
| <i>interface-path-id</i>       | (Optional) Physical interface or virtual interface.   |
| <b>Note</b>                    | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.  |
|                                | For more information about the syntax for the router, use the question mark ( ? ) online help function.   |
| <b>prefer</b>                  | (Optional) Makes this peer the preferred server that provides synchronization.  |
| <b>burst</b>                   | (Optional) Sends a series of packets instead of a single packet within each synchronization interval to achieve faster synchronization.   |
| <b>iburst</b>                  | (Optional) Sends a series of packets instead of a single packet within the initial synchronization interval to achieve faster initial synchronization.                                      |

### Command Default

No servers are configured by default.

|                      |   |
|----------------------|---|
| <b>Command Modes</b> | NTP configuration<br>VRF-specific NTP configuration |
|----------------------|---|

|                        |                |   |
|------------------------|----------------|---|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>   |
|                        | Release 2.0    | This command was introduced.  |
|                        | Release 3.8.0  | Support was added for the following keywords and arguments: <ul style="list-style-type: none"> <li>• <b>vrf</b> <i>vrf-name</i></li> <li>• <b>ipv4</b></li> <li>• <b>ipv6</b></li> <li>• <b>burst</b></li> <li>• <b>iburst</b></li> </ul> |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The value for the **minpoll** keyword must be less than or equal to the value for the **maxpoll** keyword. If this is not the case, the system issues an error message.

Using the **prefer** keyword reduces switching back and forth among servers.

If you use the **server** command in a VRF-specific NTP configuration mode, the command is applied to the specific VRF. If you are not in a VRF-specific NTP configuration mode, the command is applied to the default VRF unless you use the **vrf** *vrf-name* keyword and argument to specify a VRF.

**Note** To change the configuration of a specific IP address from peer to server or from server to peer, use the **no** form of the **peer** or **server** command to remove the current configuration before you perform the new configuration. If you do not remove the old configuration before performing the new configuration, the new configuration does not overwrite the old configuration.

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | ip-services    | read,<br>write    |

The following example shows how to configure a router to allow its system clock to be synchronized with the clock of the peer at IP address 209.165.201.1 using NTP:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)# server 209.165.201.1 minpoll 8 maxpoll 12
```

Table 44: show ntp associations Field Descriptions

| Field     | Description   |
|-----------|---|
| *         | Peer has been declared the system peer and lends its variables to the system variables.   |
| #         | Peer is a survivor, but not among the first six peers sorted by synchronization distance. If the association is ephemeral, it may be demobilized to conserve resources. |
| +         | Peer is a survivor and a candidate for the combining algorithm.   |
| -         | Peer is discarded by the clustering algorithm as an outlier.  |
| x         | Peer is discarded by the intersection algorithm as a falseticker.   |
| ~         | Indicates peer is statically configured.  |
| address   | IPv4 or IPv6 address of the peer. If a nondefault VRF is configured for the peer, the VRF follows the address.  |
| ref clock | Reference clock type or address for the peer.   |
| st        | Stratum setting for the peer.   |
| when      | Time since last NTP packet was received from peer, in milliseconds.   |
| poll      | Polling interval, in seconds.   |
| reach     | Peer reachability (bit string, in octal).   |
| delay     | Round-trip delay to peer, in milliseconds.  |
| offset    | Relative time difference between a peer clock and a local clock, in milliseconds.   |
| disp      | Dispersion.   |

This example shows sample output from the **show ntp associations** command with the **detail** keyword:

```
RP/0/RP0/CPU0:router# show ntp associations detail

filtererror = 0.00 0.02 0.03 0.05 0.06 0.08 0.09 0.11

```

Table 45: show ntp associations detail Field Descriptions

| Field           | Descriptions  |
|-----------------|---|
| vrf             | Nondefault VRF, if specified for this peer.                                   |
| configured      | Statically configured peer.   |
| dynamic         | Dynamically discovered peer.  |
| our_master      | Synchronization of the local machine to this peer.                            |
| sane            | Passing of basic sanity checks by this peer.                                  |
| ref ID          | Address of machine to which the peer is synchronized.                         |
| time            | Last time stamp that the peer received from its master.                       |
| our mode        | Mode relative to peer<br>(active/passive/client/server/bdcast/bdcast client). |
| peer mode       | Mode of peer relative.  |
| our poll intvl  | Poll interval to peer.  |
| peer poll intvl | Poll interval of interval.  |
| root delay      | Delay along path to root (ultimate stratum 1 time source).                    |
| root disp       | Dispersion of path to root.   |
| reach           | Peer reachability (bit string in octal).                                      |
| sync dist       | Peer synchronization distance.  |

| Field       | Descriptions                                      |
|-------------|---|
| delay       | Round-trip delay to peer.                         |
| offset      | Offset of peer clock relative to this clock.      |
| dispersion  | Dispersion of peer clock.                         |
| precision   | Precision of peer clock in (Hertz) Hz.            |
| version     | NTP version number that peer is using.            |
| org time    | Originate time stamp.                             |
| rcv time    | Receive time stamp.                               |
| xmt time    | Transmit time stamp.                              |
| filtdelay   | Round-trip delay of each sample, in milliseconds. |
| filtoffset  | Clock offset of each sample, in milliseconds.     |
| filtererror | Approximate error of each sample.                 |

[show ntp status](#), on page 437

# show ntp status

To display the status of Network Time Protocol (NTP), use the **show ntp status** command in

EXEC

mode.

**show ntp status** [**location** *node-id*]

|                           |   |  |
|---------------------------|---|--|
| <b>Syntax Description</b> | <b>location</b> <i>node-id</i> (Optional) Displays the status of NTP from the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.  |  |
| <b>Command Default</b>    | No defaults behavior or values  |  |
| <b>Command Modes</b>      | EXEC  |  |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>  |
|                           | Release 2.0   | This command was introduced.   |
|                           | Release 3.8.0   | The output was modified to display nondefault VRF instances and IPv6 addresses.<br><br>The loopfilter state, drift, system poll interval, and last update display fields were added to the output. |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |  |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operations</b>  |
|                           | ip-services   | read   |

This example shows sample output from the **show ntp status** command:

```
RP/0/RP0/CPU0:router# show ntp status

Clock is synchronized, stratum 3, reference is 192.168.128.5
nominal freq is 1000.0000 Hz, actual freq is 1000.0021 Hz, precision is 2**24
reference time is CC38EC6A.8FCCA1C4 (10:10:02.561 JST Tue Jul 29 2008)
clock offset is -124.051 msec, root delay is 174.060 msec
root dispersion is 172.37 msec, peer dispersion is 0.10 msec
loopfilter state is 'CTRL' (Normal Controlled Loop), drift is -0.0000021106 s/s
system poll interval is 32, last update was 19 sec ago
```

Table 46: show ntp status Field Descriptions

| Field                | Description   |
|----------------------|---|
| synchronized         | Synchronized system to an NTP peer.   |
| stratum              | NTP stratum of this system.   |
| reference            | IPv4 address or first 32 bits of the MD5 hash of the IPv6 address of the peer to which clock is synchronized. |
| vrf                  | VRF through which the peer routes.  |
| nominal freq         | Nominal frequency in Hertz (Hz) of the system hardware clock.   |
| actual freq          | Measured frequency in Hz of the system hardware clock.  |
| precision            | Precision of the clock of this system in Hz.  |
| reference time       | Reference time stamp.   |
| clock offset         | Offset of clock to synchronized peer, in milliseconds.  |
| root delay           | Total delay along path to root clock, in milliseconds.  |
| root dispersion      | Dispersion of root path.  |
| peer dispersion      | Dispersion of synchronized peer.  |
| loopfilter state     | The state of the clock state machine transition function.   |
| drift                | Drift of the hardware clock.  |
| system poll interval | Poll interval of the peer.  |
| last update          | Time the router last updated its NTP information.   |

**Related Topics**

[show ntp associations](#), on page 433

## source (NTP)

To use a particular source address in Network Time Protocol (NTP) packets, use the **source** command in one of the NTP configuration modes. To remove the **source** command from the configuration file and restore the system to its default condition, use the **no source** form of this command.

```
source [vrf vrf-name] type interface-path-id
no source
```

### Syntax Description

**vrf** *vrf-name* (Optional) Applies the source address configuration to the specified nondefault VRF.

*type* (Optional) Interface type. For more information, use the question mark (?) online help function.

*interface-path-id* (Optional) Physical interface or virtual interface.

**Note** Use the **show interfaces** command to see a list of all interfaces currently configured on the router.

For more information about the syntax for the router, use the question mark (?) online help function.

### Command Default

The source address is determined by the outgoing interface.

### Command Modes

NTP configuration

VRF-specific NTP configuration

### Command History

| Release       | Modification   |
|---------------|--|
| Release 2.0   | This command was introduced.   |
| Release 3.8.0 | Support was added for the <b>vrf</b> <i>vrf-name</i> keyword and argument. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **source** command to use a particular source IP address for all NTP packets. The address is taken from the named interface. This command is useful if the address on an interface cannot be used as the destination for reply packets. If the **source** keyword has been configured with the **server** (NTP) or **peer** (NTP) command, that value overrides the global value.

Use the **source** command in a VRF-specific NTP configuration mode or use the **vrf** *vrf-name* keyword and argument to configure the source address for a specific nondefault VRF. Otherwise, the configuration is applied to the default VRF.

### Task ID

| Task ID     | Operations     |
|-------------|----------------|
| ip-services | read,<br>write |

This example shows how to configure the router to use the IP address of interface 0/0/0/1 as the source address of all outgoing NTP packets:

```
RP/0/RP0/CPU0:router(config)# ntp  
RP/0/RP0/CPU0:router(config-ntp)# source tengine 0/0/0/1
```

### Related Topics

[peer \(NTP\)](#), on page 426

[server \(NTP\)](#), on page 429

# trusted-key

To designate a Network Time Protocol (NTP) trusted key, use the **trusted-key** command in NTP configuration mode. To remove the **trusted-key** command from the configuration file and restore the system to its default condition with respect to this command, use the **no** form of this command.

**trusted-key** *key-number*  
**no trusted-key** *key-number*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>key-number</i> Authentication key number to be trusted. Range is from 1 to 65535. |
|---------------------------|--|

|                        |                                   |
|------------------------|-----------------------------------|
| <b>Command Default</b> | No NTP trusted key is designated. |
|------------------------|-----------------------------------|

|                      |                   |
|----------------------|-------------------|
| <b>Command Modes</b> | NTP configuration |
|----------------------|-------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>                       |
|------------------------|----------------|---|
|                        | Release 2.0    | This command was introduced.              |
|                        | Release 6.4.1  | NTP authentication is enabled by default. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

If authentication is enabled, use the **trusted-key** command to define one or more key numbers (corresponding to the keys defined with the **authentication-key** [NTP] command) that a NTP system must provide in its NTP packets for this system to synchronize to it. Because the other system must know the correct authentication key, this precaution provides protection against accidentally synchronizing the system to a system that is not trusted.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | ip-services    | read,<br>write    |

The following example shows how to configure the system to synchronize only to systems providing authentication key 42 in its NTP packets:

```
RP/0/RP0/CPU0:router(config)# ntp
RP/0/RP0/CPU0:router(config-ntp)# authenticate
RP/0/RP0/CPU0:router(config-ntp)# authentication-key 42 md5 clear key1
RP/0/RP0/CPU0:router(config-ntp)# trusted-key 42
```

# update-calendar

To update the calendar periodically from Network Time Protocol (NTP), use the **update-calendar** command in NTP configuration mode. To remove the **update-calendar** command from the configuration file and restore the system to its default condition with respect to the command, use the **no** form of this command.

**update-calendar**  
**no update-calendar**

**Syntax Description** This command has no keywords or arguments.

**Command Default** This command is disabled.

**Command Modes** NTP configuration

| Command History | Release       | Modification                              |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.              |
|                 | Release 6.4.1 | NTP authentication is enabled by default. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Your router has a calendar that is separate from the software clock. This calendar runs continuously, even if the router is powered off or rebooted.

If a router is synchronized to an outside time source through NTP, it is a good idea to update the router's calendar with the time learned from NTP. Otherwise, the calendar may gradually lose or gain time.

After you configure the **update-calendar** command, NTP updates the calendar with the software clock every hour.

| Task ID | Task ID     | Operations     |
|---------|-------------|----------------|
|         | ip-services | read,<br>write |

This example shows how to configure the router to update the calendar periodically from the software clock:

```
RP/0/RP0/CPU0:router (config) # ntp
RP/0/RP0/CPU0:router (config-ntp) # update-calendar
```

## Object Tracking Commands

---

This chapter describes the Cisco IOS XR software commands used to track objects. For information about how to use these commands to configure object tracking, see *System Management Configuration Guide for Cisco CRS Routers*.

- [delay](#), on page 444
- [interface \(track\)](#), on page 446
- [line-protocol track](#), on page 448
- [object](#), on page 449
- [route ipv4](#), on page 450
- [show track](#), on page 451
- [track](#), on page 452
- [type line-protocol state](#), on page 453
- [type list boolean](#), on page 454
- [type route reachability](#), on page 456
- [type rtr](#), on page 458
- [vrf \(track\)](#), on page 459

# delay

To configure the delay, in seconds, before the track or interface state should be polled for a change in status, use the **delay** command in track configuration mode. To delete the configuration of delay tracking, use the **no** form of this command.

```
delay {up | down} seconds
no delay {up | down} [seconds]
```

| Syntax Description | delay up <i>seconds</i>          | Sets delay of from 1 to 180 seconds before communication of up status of the tracked object or list of objects.   |
|--------------------|----------------------------------|---|
|                    | <b>delay down</b> <i>seconds</i> | Sets delay of from 1 to 180 seconds before communication of down status of the tracked object or list of objects. |

**Command Default** No default behavior or values

**Command Modes** Track configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **delay** command can be used in conjunction with all track types:

- [type line-protocol state, on page 453](#)
- [type list boolean, on page 454](#)
- [type route reachability, on page 456](#)

When using the **no** form of the command, the use of the *seconds* argument is optional.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | sysmgr  | read,<br>write |

The following example shows that the tracking process is configured to notify the network administrator that the interface should be polled for its up state in five-second intervals:

```
RP/0/RP0/CPU0:router# configuration
RP/0/RP0/CPU0:router(config)# track name1
RP/0/RP0/CPU0:router(config-track)# delay up 5
```

### Related Topics

# interface (track)

To select an interface object type for tracking purposes, use the **interface** command in interface configuration mode. To delete the configuration of a track based on a particular interface object type, use the **no** form of this command.

```
interface type interface-path-id
no interface type interface-path-id
```

|                           |                          |  |
|---------------------------|--------------------------|--|
| <b>Syntax Description</b> | <i>type</i>              | (Optional) Interface type. For more information, use the question mark (?) online help function.           |
|                           | <i>interface-path-id</i> | (Optional) Physical interface or virtual interface.  |
|                           | <b>Note</b>              | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router. |
|                           |                          | For more information about the syntax for the router, use the question mark (?) online help function.      |

**Command Default** No default behavior or values

**Command Modes** Interface configuration

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 4.2.1  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To access the **interface** command, you must be in line protocol tracking configuration submode.

For information about interface keywords, see *Interface and Hardware Component Command Reference for Cisco CRS Routers*.

| <b>Task ID</b> | <b>Task Operations ID</b> |
|----------------|---------------------------|
|                | sysmgr read,<br>write     |

The following example shows the **interface** command in the context of object tracking:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# track track12
RP/0/RP0/CPU0:router (config-track)# type line-protocol state
RP/0/RP0/CPU0:router (config-track-line-prot)# interface atm 0/2/0/0.1
```

# object

To configure an object for tracking, use the **object** command in list tracking configuration mode. To delete a previously configured track based on an object, use the **no** form of this command.

**object** *object-name* [**not**]  
**no object** *object-name*

## Syntax Description

*object-name* Name of the object to be tracked.

**not** (Optional) Deletes a previously configured track based on whether an interface object is not up or down.

## Command Default

No default behavior or values

## Command Modes

List tracking configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.2.1 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To delete a previously configured track based on whether an interface object is *not* up or down, use the **not** keyword together with the **object** command in a list of tracked objects based on a Boolean expression.

The **object** command can be used only for a track based on a Boolean expression.

## Task ID

### Task Operations ID

sysmgr read,  
write

The following example shows how to configure an object, using the optional **not** keyword, in a tracked list of objects based on a Boolean calculation:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# track connection100
RP/0/RP0/CPU0:router(config-track-list)# type list boolean and
RP/0/RP0/CPU0:router(config-track-list)# object obj3 no
```

# route ipv4

To configure that an IP prefix and subnet mask should be used as the basis to track route reachability, use the **route ipv4** command in route tracking configuration mode. To remove this configuration, use the **no** form of the command.

**route ipv4** *IP prefix and subnet mask*  
**no route ipv4**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>IP prefix and subnet mask</i> Network and subnet mask; for example, 10.56.8.10/16. |
|---------------------------|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                              |
|----------------------|------------------------------|
| <b>Command Modes</b> | Route tracking configuration |
|----------------------|------------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 4.2.1  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

The *IP prefix* and *subnet mask* arguments are optional for the **no** form of this command.

| <b>Task ID</b> | <b>Task Operations ID</b> |
|----------------|---------------------------|
|                | sysmgr read,<br>write     |

The following example displays use of the **route ipv4** command:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# track track22
RP/0/RP0/CPU0:router(config-track)# type route reachability
RP/0/RP0/CPU0:router(config-track-route)# route ipv4 10.56.8.10/16
```

## Related Topics

[type route reachability](#), on page 456  
[vrf \(track\)](#), on page 459

# show track

To display information about objects that were tracked and to specify the format of the report, use the **show track** command in EXEC mode.

```
show track [{track-name | interface | ipv4 route}] [brief]
```

| Syntax Description |  |
|--------------------|--|
| <i>track-name</i>  | (Optional) Name of track used for tracking objects; for example, track1.                       |
| <b>brief</b>       | (Optional) Displays a single line of information related to the preceding argument or keyword. |
| <b>interface</b>   | (Optional) Displays tracked interface objects.   |
| <b>ipv4 route</b>  | (Optional) Displays the tracked IPv4 route objects.  |

| Command Default | No default behavior or values |
|-----------------|-------------------------------|
|-----------------|-------------------------------|

| Command Modes | EXEC |
|---------------|------|
|---------------|------|

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show track** command to display information about objects that are tracked by the tracking process. When no arguments or keywords are specified, information for all objects is displayed.

| Task ID | Task Operations ID |
|---------|--------------------|
|         | sysmgr read        |

The following sample output illustrates use of the **show track** command:

```
RP/0/RP0/CPU0:router# show track Track_name3

Track_name3
  List boolean and is DOWN
  1 change, last change 10:26:20 SJC Sun Aug 05 2007
    object name2 not UP
    object name1 UP
```

# track

To initiate or identify a tracking process used to track the status of an object or list of objects, use the **track** command in global configuration mode. To remove the tracking process, use the **no** form of this command.

**track** *track-name*  
**no track** *track-name*

## Syntax Description

**track** *track-name* Name of track used for tracking objects; for example, track1.

## Command Default

No default behavior or values

## Command Modes

Global configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.2.1 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When you use the **track** command, you enter track configuration mode.

## Task ID

| Task ID | Operations     |
|---------|----------------|
| sysmgr  | read,<br>write |

This example shows that the tracking process is configured to notify the network administrator about the up state of the tracked object list every five seconds:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# track LIST2
RP/0/RP0/CPU0:router# track LIST2 delay up 5
```

## Related Topics

- [type route reachability](#), on page 456

# type line-protocol state

To configure tracking of the line protocol state of an interface object, use the **type line-protocol** command in track configuration mode. To delete the configuration of line-protocol tracking, use the **no** form of this command.

**type line-protocol state**  
**no type line-protocol state**

**Command Default** No default behavior or values

**Command Modes** Track configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **type line-protocol state** command can be used in conjunction with the **delay** command to configure the delay, in seconds, before the track or interface state should be polled for a change in its status.

The **type line-protocol state** command enters line-protocol tracking configuration mode.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | sysmgr  | read,<br>write |

This example shows how to use the **type line-protocol state** command:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# track track12
RP/0/RP0/CPU0:router(config-track)# type line-protocol state
```

## type list boolean

To configure a tracked list of objects based on a Boolean calculation, use the **type list boolean** command in track configuration mode. To remove an object tracking list based on a Boolean calculation, use the **no** form of the command.

```
type list boolean {and | or}
no type list boolean {and | or}
```

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>and</b> Specifies that the list is up if all objects are up, or down if one or more objects are down. For example, when tracking two interfaces, up means that both interfaces are up, and down means that either interface is down. |
|                           | <b>or</b> Specifies that the list is up if at least one object is up. For example, when tracking two interfaces, up means that either interface is up, and down means that both interfaces are down.                                    |

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | Track configuration |
|----------------------|---------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 4.2.1  | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **type list boolean** command enters the list tracking configuration mode, and can be used in conjunction with the **delay** command to configure the delay, in seconds, before the track or interface state should be polled for a change in its status.

To remove a track based on whether an interface object is *not* up or down, use the **not** keyword together with the **object** command as shown in the example that follows.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | sysmgr         | read,<br>write    |

This example shows how to use the **type list boolean** command in creating a list of objects to be tracked:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# track LIST2
RP/0/RP0/CPU0:router(config-track)# type list boolean and
RP/0/RP0/CPU0:router(config-track-list)# object IPsec1 not
RP/0/RP0/CPU0:router(config-track-list)# object IPsec2
```

```
RP/0/RP0/CPU0:router(config-track-list)# object PREFIX1
RP/0/RP0/CPU0:router(config-track-list)# exit
RP/0/RP0/CPU0:router(config)# track IPsec1
RP/0/RP0/CPU0:router(config-track)# type line-protocol state
RP/0/RP0/CPU0:router(config-track-line-prot)# interface tengige 0/0/0/3
RP/0/RP0/CPU0:router(config-track-line-prot)# exit
RP/0/RP0/CPU0:router(config-track)# track IPsec2
RP/0/RP0/CPU0:router(config-track)# type line-protocol state
RP/0/RP0/CPU0:router(config-track-line-prot)# interface ATM0/2/0.1
RP/0/RP0/CPU0:router(config-track-line-prot)# exit
RP/0/RP0/CPU0:router(config)# track PREFIX1
RP/0/RP0/CPU0:router(config-track)# type route reachability
RP/0/RP0/CPU0:router(config-track-route)# route ipv4 7.0.0.0/24
RP/0/RP0/CPU0:router(config-track-route)# exit
RP/0/RP0/CPU0:router(config-track)# interface service-ipsec 1
RP/0/RP0/CPU0:router(config-if)# vrf 1
RP/0/RP0/CPU0:router(config-if)# ipv4 address 70.0.0.2 255.255.255.0
RP/0/RP0/CPU0:router(config-if)# profile vrf_1_ipsec
RP/0/RP0/CPU0:router(config-if)# line-protocol track LIST2
RP/0/RP0/CPU0:router(config-if)# tunnel source 80.0.0.2
RP/0/RP0/CPU0:router(config-if)# tunnel destination 80.0.0.1
RP/0/RP0/CPU0:router(config-if)# service-location preferred-active 0/2/0
RP/0/RP0/CPU0:router(config-if)# commit
```

# type route reachability

To configure the routing process to notify the tracking process when the route state changes due to a routing update, use the **type route reachability** command in track configuration mode. To remove a track based on route reachability, use the **no** form of this command.

**type route reachability**  
**no type route reachability**

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values

**Command Modes** Track configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

A tracked IP-route object is considered up and reachable when a routing-table entry exists for the route and the route is not inaccessible.

The **type route reachability** command can be used in conjunction with the **delay** command to configure the delay, in seconds, before the track or interface state should be polled for a change in its status.

The route reachability tracking process is based on either of the following, depending on your router type:

- **vrf**—A VRF table name.
- **route**—An IPv4 prefix consisting of the network and subnet mask (for example, 10.56.8.10/16).

| Task ID | Task Operations ID    |
|---------|-----------------------|
|         | sysmgr read,<br>write |

This example shows how to track for route reachability:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# track track22
RP/0/RP0/CPU0:router(config-track)# type route reachability
```

## Related Topics

[show track](#), on page 451

[track](#), on page 452

## type rtr

To configure the router to track the return code of IP service level agreement (SLA) operations, use the **type rtr** command in track configuration mode. To remove a track based on IP SLA return code, use the **no** form of this command.

**type rtr** *ipsla-no* **reachability**  
**no type rtr**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>ipsla-no</i> IP SLA operation number. Values can range from 1 to 2048. |
|                           | <b>reachability</b> Tracks whether the route is reachable or not.         |

**Command Default** None

**Command Modes** Track configuration

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.0.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **type rtr** command in conjunction with a configuration that uses:

- The **track** keyword in the **permit** command within an ACL definition. For example:

```
ipv4 access-list abf-track
 10 permit any any nexthop track track1 1.2.3.4
```

- An IP service level agreement configuration.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | sysmgr         | read,<br>write   |

This example shows how to configure IPSLA object tracking:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# track track22
RP/0/RP0/CPU0:router(config-track)# type rtr 1 reachability
```

# vrf (track)

To configure a VRF table to be used as the basis to track route reachability, use the **vrf** command in route tracking configuration mode. To delete the configuration of a VRF table for the purpose of IP route tracking purposes, use the **no vrf** form of the command.

```
vrf vrf-table-name
no vrf [vrf-table-name]
```

|                           |   |                              |
|---------------------------|---|------------------------------|
| <b>Syntax Description</b> | <i>vrf-table-name</i> Network and subnet; for example, 10.56.8.10/16.   |                              |
| <b>Command Default</b>    | No default behavior or values   |                              |
| <b>Command Modes</b>      | Route tracking configuration  |                              |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>          |
|                           | Release 4.2.1   | This command was introduced. |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |                              |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operations</b>            |
|                           | sysmgr  | read,<br>write               |

The following example displays the use of the **vrf** command:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# track track22
RP/0/RP0/CPU0:router(config-track)# type route reachability
RP/0/RP0/CPU0:router(config-track-route)# vrf vrf1
```

# clear context

To clear core dump context information, use the **clear context** command in the appropriate mode.

**clear context location** {*node-id* | **all**}

|                           |   |   |
|---------------------------|---|---|
| <b>Syntax Description</b> | <b>location</b> { <i>node-id</i>   <b>all</b> } | (Optional) Clears core dump context information for a specified node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. Use the <b>all</b> keyword to indicate all nodes. |
|---------------------------|---|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                                  |
|----------------------|----------------------------------|
| <b>Command Modes</b> | Administration EXEC<br>EXEC mode |
|----------------------|----------------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>   |
|------------------------|----------------|---|
|                        | Release 2.0    | This command was introduced.                                |
|                        | Release 3.2    | The command was made available in administration EXEC mode. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **clear context** command to clear core dump context information. If you do not specify a node with the **location** *node-id* keyword and argument, this command clears core dump context information for all nodes.

Use the **show context** command to display core dump context information.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | diag           | execute           |

The following example shows how to clear core dump context information:

```
RP/0/RP0/CPU0:router# clear context
```

## Related Topics

[show context](#), on page 496

# dumpcore

To manually generate a core dump, use the **dumpcore** command in EXEC mode Admin EXEC mode.

**dumpcore** {**running** | **suspended**} *job-id* **location** *node-id*

| Syntax Description             |  |  |
|--------------------------------|--|--|
| <b>running</b>                 |  | Generates a core dump for a running process.   |
| <b>suspended</b>               |  | Suspends a process, generates a core dump for the process, and resumes the process.  |
| <i>job-id</i>                  |  | Process instance identifier.   |
| <b>location</b> <i>node-id</i> |  | Generates a core dump for a process running on the specified node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. |

**Command Default** No default behavior or values

**Command Modes** Admin EXEC mode  
EXEC mode

| Command History | Release     | Modification  |
|-----------------|-------------|---|
|                 | Release 2.0 | This command was introduced.                                |
|                 | Release 3.2 | The command was made available in administration EXEC mode. |

**Usage Guidelines** When a process crashes on the Cisco IOS XR software, a core dump file of the event is written to a designated destination without bringing down the router. Upon receiving notification that a process has terminated abnormally, the Cisco IOS XR software then respawns the crashed process. Core dump files are used by Cisco Technical Support Center engineers and development engineers to debug the Cisco IOS XR software.

Core dumps can be generated manually for a process, even when a process has not crashed. Two modes exist to generate a core dump manually:

- **running** —Generates a core dump for a running process. This mode can be used to generate a core dump on a critical process (a process whose suspension could have a negative impact on the performance of the router) because the core dump file is generated independently, that is, the process continues to run as the core dump file is being generated.
- **suspended** —Suspends a process, generates a core dump for the process, and resumes the process. Whenever the process is suspended, this mode ensures data consistency in the core dump file.

Core dump files contain the following information about a crashed process:

- Register information
- Thread status information
- Process status information
- Selected memory segments

The following scenarios are applicable for creating full or sparse core dumps:

- Without the **exception sparse** configuration or exception sparse OFF, and default core size (4095 MB), a full core is created till the core size. Beyond this, only stack trace is collected.
- With non-default core size and without the **exception sparse** configuration, or exception sparse OFF , a full core is created until the core size limit is reached. Beyond the core size limit, only the stack trace is collected.
- With the exception sparse ON and default core size (4095 MB), a full core is created until the sparse size limit is reached, and a sparse core is created thereafter till the core size. Beyond this, only stack trace is collected.
- With non-default core size and with the exception sparse ON, a full core is created until the sparse size limit is reached. Beyond the sparse size limit, only the stack trace is collected.

**Note** By default, full core dumps are created irrespective of the **exception sparse** configuration. If there is not enough free shared memory available, then the core dump process fails.

#### Task ID

#### Task Operations ID

| Task ID | Operations     |
|---------|----------------|
| diag    | read,<br>write |

The following example shows how to generate a core dump in suspended mode for the process instance 52:

```
RP/0/RP0/CPU0:router# dumpcore suspended 52

RP/0/RP0/CPU0:Sep 22 01:40:26.982 : sysmgr[71]: process in stop/continue state 4104

|-------------------------|--|

The following scenarios are applicable for creating full or sparse core dumps:

- Without the **exception sparse** configuration or exception sparse OFF, and default core size (4095 MB), a full core is created till the core size. Beyond this, only stack trace is collected.
- With non-default core size and without the **exception sparse** configuration, or exception sparse OFF , a full core is created until the core size limit is reached. Beyond the core size limit, only the stack trace is collected.
- With the exception sparse ON and default core size (4095 MB), a full core is created until the sparse size limit is reached, and a sparse core is created thereafter till the core size. Beyond this, only stack trace is collected.
- With non-default core size and with the exception sparse ON, a full core is created until the sparse size limit is reached. Beyond the sparse size limit, only the stack trace is collected.

|             |   |
|-------------|---|
| <b>Note</b> | By default, full core dumps are created irrespective of the <b>exception sparse</b> configuration. If there is not enough free shared memory available, then the core dump process fails. |
|-------------|---|

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | diag    | read,<br>write |

The following example shows how you can disable the creation of core dump files by specifying the limit for core file size.

```
RP/0/RP0/CPU0:router(config)# exception coresize 1024  
RP/0/RP0/CPU0:router(config)# commit
```

## exception filepath

To modify core dump settings, use the **exception filepath** command in the appropriate configuration mode. To remove the configuration, use the **no** form of this command.

**exception** [**choice** *preference*] [**compress** {**on** | **off**}] **filename** *filename lower-limit-higher-limit*  
**filepath** *filepath-name*

**no exception** [**choice** *preference*] [**compress** {**on** | **off**}] **filename** *filename lower-limit-higher-limit*  
**filepath** *filepath-name*

### Syntax Description

|  |  |
|--|--|
| <b>choice</b> <i>preference</i>                          | (Optional) Configures the order of preference for the destination of core dump files. Up to the three destinations can be defined. Valid values are 1 to 3.  |
| <b>compress</b> { <b>on</b>   <b>off</b> }               | (Optional) Specifies whether or not the core dump file should be sent compressed. By default, core dump files are sent compressed. If you specify the <b>compress</b> keyword, you must specify one of the following required keywords: <ul style="list-style-type: none"> <li>• <b>on</b>—Compresses the core dump file before sending it.</li> <li>• <b>off</b>—Does not compress the core dump file before sending it.</li> </ul>   |
| <b>filename</b> <i>filename lower-limit-higher-limit</i> | (Optional) Specifies the filename to be appended to core dump files and the lower and higher limit range of core dump files to be sent to a specified destination before being recycled by the circular buffer. <p><b>filename</b> <i>filename lower-limit-higher-limit</i> See <a href="#">Table 47: Default Core Dump File Naming Convention Description, on page 470</a> for a description of the default core dump file naming convention.</p> <p>Valid <b>filename</b> <i>filename lower-limit-higher-limit</i> d values for the <i>lower-limit</i> argument are 0 to 4. Valid values for the <i>higher-limit</i> argument are 5 to 64. A hyphen ( - ) must immediately follow the <i>lower-limit</i> argument.</p> <p><b>Note</b> To uniquely identify each core dump file, a value is appended to each core dump file, beginning with the lower limit value configured for the <i>lower-limit</i> argument and continuing until the higher limit value configured for the <i>higher-limit</i> argument has been reached. After the higher limit value has been reached, the Cisco IOS XR software begins to recycle the values appended to core dump files, beginning with the lower limit value.</p> |
| <i>filepath-name</i>                                     | Local file system or network protocol, followed by the directory path. All local file systems are supported. The following network protocols are supported: TFTP and FTP.  |

### Command Default

If you do not specify the order of preference for the destination of core dump files using the **choice** *preference* keyword and argument, the default preference is the primary location or 1.

Core dump files are sent compressed.

The default file naming convention used for core dump files is described in [Table 47: Default Core Dump File Naming Convention Description, on page 470](#).

**Command Modes** Administration configuration  
Global configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **exception filepath** command to modify core dump settings, such as the destination file path to store core dump files, file compression, and the filename appended to core dumps.

Up to three user-defined locations may be configured as the preferred destinations for core dump files:

- Primary location—The primary destination for core dump files. Enter the **choice** keyword and a value of **1** (that is, **choice 1**) for the *preference* argument to specify a destination as the primary location for core dump files.
- Secondary location—The secondary fallback choice for the destination for core dump files, if the primary location is unavailable (for example, if the hard disk is set as the primary location and the hard disk fails). Enter the **choice** keyword and a value of **2** (that is, **choice 2**) for the *preference* argument to specify a destination as the secondary location for core dump files.
- Tertiary location—The tertiary fallback choice as the destination for core dump files, if the primary and secondary locations fail. Enter the **choice** keyword and a value of 3 (that is, **choice 3**) for the *preference* argument to specify a destination as the tertiary location for core dump files.

When specifying a destination for a core dump file, you can specify an absolute file path on a local file system or on a network server. The following network protocols are supported: TFTP and FTP.

**Note** We recommend that you specify a location on the hard disk as the primary location.

In addition to the three preferred destinations that can be configured, Cisco IOS XR software provides three default fallback destinations for core dump files in the event that user-defined locations are unavailable.

The default fallback destinations are:

- harddisk:/dumper
- disk1:/dumper
- disk0:/dumper

**Note** If a default destination is a boot device, the core dump file is not sent to that destination.

We recommend that you configure at least one preferred destination for core dump files as a preventive measure if the default fallback paths are unavailable. Configuring at least one preferred destination also ensures

that core dump files are archived because the default fallback destinations store only the first and last core dump files for a crashed process.

**Note** Cisco IOS XR software does not save a core file on a local storage device if the size of the core dump file creates a low-memory condition.

By default, Cisco IOS XR software assigns filenames to core dump files according to the following format:

*process* [.by. *requester* |.abort][.sparse]. *date-time* . *node* . *processor-type* [.Z]

For example:

```
packet.by.dumper_gen.20040921-024800.node0_RP0_CPU0.ppc.Z
```

[Table 47: Default Core Dump File Naming Convention Description, on page 470](#) describes the default core dump file naming convention.

**Table 47: Default Core Dump File Naming Convention Description**

| Field                         | Description   |
|-------------------------------|---|
| <i>process</i>                | Name of the process that generated the core dump.   |
| .by. <i>requester</i>  .abort | If the core dump was generated because of a request by a process (requester), the core filename contains the string “.by. <i>requester</i> ” where the <i>requester</i> variable is the name or process ID (PID) of the process that requested the core dump. If the core dump was due to a self-generated abort call request, the core filename contains the string “.abort” instead of the name of the requester. |
| .sparse                       | If a sparse core dump was generated instead of a full core dump, “sparse” appears in the core dump filename.  |
| . <i>date-time</i>            | Date and time the dumper process was called by the process manager to generate the core dump. The <i>.date-time</i> time-stamp variable is expressed in the <i>yyyy.mm.dd-hh.mm.ss</i> format. Including the time stamp in the filename uniquely identifies the core dump filename.   |
| . <i>node</i>                 | Node ID, expressed in the <i>rack/slot/module</i> notation, where the process that generated the core dump was running.   |
| . <i>processor-type</i>       | Type of processor (mips or ppc).  |
| .Z                            | If the core dump was sent compressed, the filename contains the .Z suffix.  |

You can modify the default naming convention by specifying a filename to be appended to core dump files with the optional **filename** *filename* keyword and argument and by specifying a lower and higher limit ranges of values to be appended to core dump filenames with the *lower-limit* and *higher-limit* arguments, respectively. The filename that you specify for the *filename* argument is appended to the core dump file and the lower and higher limit ranges of core dump files to be sent to a specified destination before the filenames are recycled. Valid values for the *lower-limit* argument are 0 to 4. Valid values for the *higher-limit* argument are 5 to 64. A hyphen (-) must immediately follow the *lower-limit* argument. In addition, to uniquely identify each core dump file, a value is appended to each core dump file, beginning with the lower-limit value specified

with the *lower-limit* argument and continuing until the higher-limit value specified with the *higher-limit* argument has been reached. When the configured higher-limit value has been reached, Cisco IOS XR software begins to recycle the values appended to core dump files, beginning with the lower-limit value.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | diag    | read,<br>write |

The following example shows how to configure the core dump setting for the primary user-defined preferred location. In this example, core files are configured to be sent uncompressed; the filename of core dump files is set to “core” (that is, all core filenames will be named core); the range value is set from 0 to 5 (that is, the values 0 to 5 are appended to the filename for the first five generated core dump files, respectively, before being recycled); and the destination is set to a directory on the hard disk.

```
RP/0/RP0/CPU0:router(config)# exception choice 1 compress off
                             filename core 0-5 filepath /harddisk:/corefile
```

# exception pakmem

To configure the collection of packet memory information in core dump files, use the **exception pakmem** command in administration configuration mode or in global configuration mode. To remove the configuration, use the **no** form of this command.

```
exception pakmem {on | off}
no exception pakmem {on | off}
```

## Syntax Description

**on** Enables the collection of packet memory information in core dump files.

**off** Disables the collection of packet memory information in core dump files.

## Command Default

Packet memory information is not included in core dump files.

## Command Modes

Administration configuration

Global configuration

## Command History

### Release

### Modification

Release 2.0

This command was introduced.

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **exception pakmem** command with the **on** keyword to configure the collection of packet memory information in core dump files. Cisco Technical Support Center engineers and development engineers use packet memory information to debug packet memory issues related to a process.

### Caution

Including packet memory information in core dump files significantly increases the amount of data generated in the core dump file, which may delay the restart time for the process.

## Task ID

### Task Operations ID

diag read,  
write

The following example shows how to configure core dumps to include packet memory information:

```
RP/0/RP0/CPU0:router (config) # exception pakmem on
```

## exception sparse

To enable or disable sparse core dumps, use the **exception sparse** command in administration configuration mode or in global configuration mode. To remove the configuration, use the **no** form of this command.

```
exception sparse {on | off}
no exception sparse
```

### Syntax Description

**on** Enables sparse core dumps.

**off** Disables sparse core dumps

### Command Default

Sparse core dumps are disabled.

### Command Modes

Administration configuration

Global configuration

### Command History

#### Release

Release 2.0

#### Modification

This command was introduced.

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **exception sparse** command to reduce the amount of data generated in the core dump file. Sparse core dumps reduce the amount of time required to generate the core dump file because only referenced data is generated in the core file (at the cost of lost information in the core file). Reducing the time required to generate core dump files corresponds to faster process restart times.

#### Note

Use the **exception sparse off** command in administration configuration mode to get a complete coredump of the transient processes on the RP.

Sparse core dumps contain the following information about crashed processes:

- Register information for all threads, and any memory pages referenced in these register values
- Stack information for all threads, and any memory pages referenced in these threads
- All memory pages referenced by a loaded dynamic loadable library (DLL) data section, if the final program counter falls in a DLL data section
- Any user-specified marker pages from the lib\_dumper\_marker DLL

The **exception sparse** command dumps memory pages based on trigger addresses found in the previously listed dump information, according to the following criteria:

- If the trigger address in the memory page is in the beginning 128 bytes of the memory page, the previous memory page in the continuous address region is dumped also.

- If the trigger address in the memory page is in the final 128 bytes of the memory page, the next memory page in the continuous address region is dumped also.
- In all other instances, only the memory page that includes the trigger address is dumped.

The following scenarios are applicable for creating full or sparse core dumps:

- Without the **exception sparse** configuration or exception sparse OFF, and default core size (4095 MB), a full core is created till the core size. Beyond this, only stack trace is collected.
- With non-default core size and without the **exception sparse** configuration, or exception sparse OFF, a full core is created until the core size limit is reached. Beyond the core size limit, only the stack trace is collected.
- With the exception sparse ON and default core size (4095 MB), a full core is created until the sparse size limit is reached, and a sparse core is created thereafter till the core size. Beyond this, only stack trace is collected.
- With non-default core size and with the exception sparse ON, a full core is created until the sparse size limit is reached. Beyond the sparse size limit, only the stack trace is collected.

**Note** By default, full core dumps are created irrespective of the **exception sparse** configuration. If there is not enough free shared memory available, then the core dump process fails.

#### Task ID

| Task ID | Operations     |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **exception sprsize** command to specify the maximum file size for core dumps. The maximum file size configured for the *megabytes* argument is used with the configuration set for the [exception sparse, on page 474](#) command to determine whether or not to generate a sparse core dump file. If sparse core dumps are disabled and a core dump file is predicted to exceed the default value (192 MB) uncompressed or the value specified for the *megabytes* argument uncompressed, a sparse core dump file is generated. If sparse core dumps are enabled, a sparse core dump file is generated, regardless of the size of the core dump file.

The following scenarios are applicable for creating full or sparse core dumps:

- Without the **exception sparse** configuration or exception sparse OFF, and default core size (4095 MB), a full core is created till the core size. Beyond this, only stack trace is collected.
- With non-default core size and without the **exception sparse** configuration, or exception sparse OFF , a full core is created until the core size limit is reached. Beyond the core size limit, only the stack trace is collected.
- With the exception sparse ON and default core size (4095 MB), a full core is created until the sparse size limit is reached, and a sparse core is created thereafter till the core size. Beyond this, only stack trace is collected.
- With non-default core size and with the exception sparse ON, a full core is created until the sparse size limit is reached. Beyond the sparse size limit, only the stack trace is collected.

**Note** By default, full core dumps are created irrespective of the **exception sparse** configuration. If there is not enough free shared memory available, then the core dump process fails.

# follow

To unobtrusively debug a live process or a live thread in a process, use the **follow** command in EXEC modeAdmin EXEC mode.

**follow** {**job** *job-id* | **process** *pid* | **location** *node-id*} [**all**] [**blocked**] [**debug** *level*] [**delay** *seconds*] [**dump** *address size*] [**iteration** *count*] [**priority** *level*] [**stackonly**] [**thread** *tid*] [**verbose**]

## Syntax Description

|                                 |   |
|---------------------------------|---|
| <b>job</b> <i>job-id</i>        | Follows a process by job ID.  |
| <b>process</b> <i>pid</i>       | Follows the process with the process ID (PID) specified for the <i>pid</i> argument.  |
| <b>location</b> <i>node-id</i>  | Follows the target process on the designated node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation.                |
| <b>all</b>                      | (Optional) Follows all threads.   |
| <b>blocked</b>                  | (Optional) Follows the chain of thread IDs (TIDs) or PIDs that are blocking the target process.   |
| <b>debug</b> <i>level</i>       | (Optional) Sets the debug level for the following operation. Valid values for the <i>level</i> argument are 0 to 10.                                |
| <b>delay</b> <i>seconds</i>     | (Optional) Sets the delay interval between each iteration. Valid values for the <i>seconds</i> argument are 0 to 255 seconds.                       |
| <b>dump</b> <i>address size</i> | (Optional) Dumps the memory segment starting with the specified memory address and size specified for the <i>address</i> and <i>size</i> arguments. |
| <b>iteration</b> <i>count</i>   | (Optional) Specifies the number of times to display information. Valid values for the <i>count</i> argument are 0 to 255 iterations.                |
| <b>priority</b> <i>level</i>    | (Optional) Sets the priority level for the following operation. Valid values for the <i>level</i> argument are 1 to 63.                             |
| <b>stackonly</b>                | (Optional) Displays only stack trace information.   |
| <b>thread</b> <i>tid</i>        | (Optional) Follows the TID of a process or job ID specified for the <i>tid</i> argument.  |
| <b>verbose</b>                  | (Optional) Displays register and status information pertaining to the target process.   |

## Command Default

Entering the **follow** command without any optional keywords or arguments performs the operation for five iterations from the local node with a delay of 5 seconds between each iteration. The output includes information about all live threads. This command uses the default scheduling priority from where the command is being run.

## Command Modes

EXEC mode  
Admin EXEC mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 3.2 | This command was introduced. |

**Usage Guidelines**

Use this command to unintrusively debug a live process or a live thread in a process. This command is particularly useful for debugging deadlock and livelock conditions, for examining the contents of a memory location or a variable in a process to determine the cause of a corruption issue, or in investigating issues where a thread is stuck spinning in a loop. A livelock condition is one that occurs when two or more processes continually change their state in response to changes in the other processes.

The following actions can be specified with this command:

- Follow all live threads of a given process or a given thread of a process and print stack trace in a format similar to core dump output.
- Follow a process in a loop for a given number of iterations.
- Set a delay between two iterations while invoking the command.
- Set the priority at which this process should run while this command is being run.
- Dump memory from a given virtual memory location for a given size.
- Display register values and status information of the target process.

Take a snapshot of the execution path of a thread asynchronously to investigate performance-related issues by specifying a high number of iterations with a zero delay.

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

The following example shows how to use the **follow** command to debug the process associated with job ID 257 for one iteration:

```
RP/0/RP0/CPU0:router# follow job 257 iteration 1
```

```
Attaching to process pid = 28703 (pkg/bin/packet)
No tid specified, following all threads
```

```
DLL Loaded by this process
```

```

# monitor threads

To display auto-updating statistics on threads in a full-screen mode, use the **monitor threads** command in administration EXEC mode or in EXEC mode.

**monitor threads** [**dumbtty**] [**iteration** *number*] [**location** *node-id*]

## Syntax Description

|                                |   |
|--------------------------------|---|
| <b>dumbtty</b>                 | (Optional) Displays the output of the command as if on a dumb terminal (the screen is not refreshed).   |
| <b>iteration</b> <i>number</i> | (Optional) Number of times the statistics display is to be updated, in the range from 0 to 4294967295.  |
| <b>location</b> <i>node-id</i> | (Optional) Displays the output from the command from the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |

## Command Default

When all keywords are omitted, the **monitor threads** command displays the first ten threads for the local node, sorted in descending order by the time used. The display is cleared and updated every 5 seconds until you quit the command.

## Command Modes

EXEC, Admin EXEC

## Command History

| Release     | Modification  |
|-------------|---|
| Release 2.0 | This command was introduced.                                |
| Release 3.2 | The command was made available in administration EXEC mode. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **monitor threads** command to show the top ten threads based on CPU usage. The display refreshes every 10 seconds.

- To change the parameters displayed by the **monitor threads** command, enter one of the key commands described in [Table 48: Interactive Display Commands for the monitor threads Command, on page 486](#).
- To terminate the display and return to the system prompt, enter the **q** key.
- To list the interactive commands, type **?** during the display.

[Table 48: Interactive Display Commands for the monitor threads Command, on page 486](#) describes the available interactive display commands.

Table 48: Interactive Display Commands for the monitor threads Command

| Command | Description  |
|---------|--|
| ?       | Displays the available interactive commands.                       |
| d       | Changes the delay interval between updates.                        |
| k       | Kills a process.   |
| l       | Refreshes the screen.  |
| n       | Changes the number of threads to be displayed.                     |
| q       | Quits the interactive display and returns the prompt to EXEC mode. |

**Task ID****Task ID      Operations**

180     1      0      10 Rcv      0:00:01      0.04% gsp
298     9      0      10 Rcv      0:00:01      0.04% snmpd

```

Table 49: `monitor threads` Field Descriptions, on page 487 describes the significant fields shown in the display.

**Table 49: `monitor threads` Field Descriptions**

| Field    | Description                               |
|----------|---|
| JID      | Job ID.                                   |
| TIDS     | Thread ID.                                |
| LAST_CPU | Number of open channels.                  |
| PRI      | Priority level of the thread.             |
| STATE    | State of the thread.                      |
| HH:MM:SS | Run time of process since last restart.   |
| CPU      | Percentage of CPU used by process thread. |
| COMMAND  | Process name.                             |

### Using Interactive Commands

When the `n` or `d` interactive command is used, the `monitor threads` command prompts for a number appropriate to the specific interactive command. The following example shows sample output from the `monitor threads` command using the interactive `n` command after the first display cycle to change the number of threads:

```

RP/0/RP0/CPU0:router# monitor threads

Computing times... 87 processes; 249 threads;
CPU states: 84.8% idle, 4.2% user, 10.9% kernel
Memory: 256M total, 175M avail, page size 4K

   JID   TID  PRI  STATE  HH:MM:SS      CPU  COMMAND
   ---   ---  ---  ---    ---:---:---   ---  ---
    1     6   10  Run    0:00:10     10.92% kernel
553049   1   10  Rply   0:00:00      4.20% top
    58    3   10  Rcv    0:00:24      0.00% sysdsbvr
    1     3   10  Rcv    0:00:21      0.00% kernel
    69    1   10  Rcv    0:00:20      0.00% wdsysmon
    1     5   10  Rcv    0:00:20      0.00% kernel
   159    2   10  Rcv    0:00:05      0.00% qnet
   160    1   10  Rcv    0:00:05      0.00% netio
   157    1   10  NSlp   0:00:04      0.00% envmon_periodic
   160    9   10  Intr   0:00:04      0.00% netio

n

Enter number of threads to display: 3
Please enter a number between 5 and 40
Enter number of threads to display: 8

```

```
87 processes; 249 threads;
CPU states: 95.3% idle, 2.9% user, 1.7% kernel

[monitor processes](#)

# process

To start, terminate, or restart a process, use the **process** command in admin EXEC mode.

**process** {**crash** | **restart** | **shutdown** | **start**} {*executable-name**job-id*} **location** {*node-id* | **all**}

| Syntax Description                              |  |  |
|---|--|--|
| <b>crash</b>                                    |  | Crashes a process.   |
| <b>restart</b>                                  |  | Restarts a process.  |
| <b>shutdown</b>                                 |  | Stops a process. The process is not restarted (even if considered “mandatory ◆?”).   |
| <b>start</b>                                    |  | Starts a process.  |
| <i>executable-name</i>                          |  | Executable name of the process to be started, terminated, or restarted. Supplying an executable name for the <i>executable-name</i> argument performs the action for all the simultaneously running instances of the process, if applicable. |
| <i>job-id</i>                                   |  | Job ID of the process instance to be started, terminated, or restarted. Supplying a job ID for the <i>job-id</i> argument performs the action for only the process instance associated with the job ID.                                      |
| <b>location</b> { <i>node-id</i>   <b>all</b> } |  | Starts, terminates, or restarts a process on the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies all nodes.  |

**Command Default** None

**Command Modes** Admin EXEC

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.2   | The <b>shutdown</b> keyword was introduced to replace the <b>kill</b> keyword.<br>Support for the <b>crash</b> keyword was added to crash a process. |
|                 | Release 3.5.0 | This command was removed from EXEC mode.   |
|                 | Release 3.8.0 | The <b>blocked</b> keyword was not supported.  |

**Usage Guidelines** Under normal circumstances, processes are started and restarted automatically by the operating system as required. If a process crashes, it is automatically restarted.  
Use this command to manually start, stop, or restart individual processes.

**Caution**

Manually stopping or restarting a process can seriously impact the operation of a router. Use these commands only under the direction of a Cisco Technical Support representative.

**process shutdown**

The **process shutdown** command shuts down (terminates) the specified process and copies associated with the specified process. The process is not restarted, even if considered “mandatory.” Use the **show processes** command to display a list of executable processes running on the system.

**Caution**

Stopping a process can result in an RP switchover, system failure or both. This command is intended for use only under the direct supervision of a Cisco Technical Support representative.

**process restart**

The **process restart** command restarts a process, such as a process that is not functioning optimally.

**process start**

The **process start** command starts a process that is not currently running, such as a process that was terminated using the **process kill** command. If multiple copies are on the system, all instances of the process are started simultaneously.

**Task ID****Task Operations ID**

```
root-lr execute
```

The following example shows how to restart a process. In this example, the IS-IS process is restarted:

```
RP/0/RP0/CPU0:router# process restart isis

RP/0/RP0/CPU0:router#RP/0/RP0/CPU0:Mar 30 15:24:41 : isis[343]: %ISIS-6-INFO_ST
RTUP_START : Cisco NSF controlled start beginning
RP/0/RP0/CPU0:router#RP/0/RP0/CPU0:Mar 30 15:24:52 : isis[352]: %ISIS-6-INFO_ST
RTUP_FINISH : Cold controlled start completed
```

The following example shows how to terminate a process. In this example, the IS-IS process is stopped:

```
RP/0/RP0/CPU0:router# process shutdown isis
RP/0/RP0/CPU0:router#
```

The following example shows how to start a process. In this example, the IS-IS process is started:

```
RP/0/RP0/CPU0:router# process start isis
```

```
RP/0/RP0/CPU0:router#RP/0/RP0/CPU0:Mar 30 15:27:19 : isis[227]:  
  %ISIS-6-INFO_STARTUP_START : Cold controlled start beginning  
RP/0/RP0/CPU0:Mar 30 15:27:31 : isis[352]: %ISIS-6-INFO_STARTUP_FINISH :  
  Cold controlled start completed
```

This example shows how to restart a process:

## process core

To modify the core dump options for a process, use the **process core** command in administration EXEC mode.

**process** {*executable-name**job-id*} **core** {**context** | **copy** | **fallback** | **iomem** | **mainmem** | **off** | **sharedmem** | **sparse** | **sync** | **text**} [**maxcore** *value*] **location** *node-id*

### Syntax Description

|                                |   |
|--------------------------------|---|
| <i>executable-name</i>         | Executable name of the process for which you want to change core dump options. Specifying a value for the <i>executable-name</i> argument changes the core dump option for multiple instances of a running process. |
| <i>job-id</i>                  | Job ID associated with the process instance. Specifying a <i>job-id</i> value changes the core dump option for only a single instance of a running process.   |
| <b>context</b>                 | Dumps only context information for a process.   |
| <b>copy</b>                    | Copies a core dump locally before performing the core dump.   |
| <b>fallback</b>                | Sets the core dump options to use the fallback options (if needed).   |
| <b>iomem</b>                   | Dumps the I/O memory of a process.  |
| <b>mainmem</b>                 | Dumps the main memory of a process.   |
| <b>off</b>                     | Indicates that a core dump is not taken on the termination of the specified process.  |
| <b>sharedmem</b>               | Dumps the shared memory of a process.   |
| <b>sparse</b>                  | Enables sparse core dumps of a process.   |
| <b>sync</b>                    | Enables only synchronous core dumping.  |
| <b>text</b>                    | Dumps the text of a process.  |
| <b>maxcore</b> <i>value</i>    | (Optional) Specifies the maximum number of core dumps allowed for the specified process on its creation.  |
| <b>location</b> <i>node-id</i> | Sets the core dump options for a process on a designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.  |

### Command Default

By default, processes are configured to dump shared memory, text area, stack, data section, and heap information.

### Command Modes

Administration EXEC

### Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

| Release     | Modification   |
|-------------|--|
| Release 3.2 | <p>The command was made available in administration EXEC mode.</p> <p>The <b>mainmem-sharedmem</b> , <b>mainmem-text</b> , and <b>mainmem-text-sharedmem</b> keywords were removed.</p> <p>The <b>context</b> , <b>fallback</b> , <b>iomem</b> , <b>sync</b> , and <b>text</b> keywords were introduced.</p> |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The modular architecture of Cisco IOS XR software allows core dumps for individual processes. By default, processes are configured to dump shared memory, text area, stack, data section, and heap information.

Specifying an executable name for the *executable-name job-id* argument changes the core dump option for all instances of the process. Specifying a job ID for the value changes the core dump option for a single instance of a running process.

### Task ID

| Task ID | Operations |
|---------|------------|
| root-lr | execute    |

The following example shows how to enable the collection of shared memory of a process:

```
RP/0/RP0/CPU0:router# process ospf core sharedmem
```

The following example shows how to turn off core dumping for a process:

```
RP/0/RP0/CPU0:router# process media_ether_config_di core off
```

# process mandatory

To set the mandatory reboot options for a process, use the **process mandatory** command in the appropriate mode.

## process mandatory

**process mandatory** {**on** | **off**} {*executable-name**job-id*} **location** *node-id*

## process mandatory reboot

**process mandatory reboot** {**enable** | **disable**}

## process mandatory toggle

**process mandatory toggle** {*executable-name**job-id*} **location** *node-id*

### Syntax Description

|  |   |
|--|---|
| <b>on</b>  | Turns on mandatory process attribute.   |
| <b>off</b>                                       | Turns off the mandatory process attribute. The process is not considered mandatory.   |
| <b>reboot</b> { <b>enable</b>   <b>disable</b> } | Enables or disables the reboot action when a mandatory process fails.   |
| <b>toggle</b>                                    | Toggles a mandatory process attribute.  |
| <i>executable-name</i>                           | Executable name of the process to be terminated. Specifying an executable name for the <i>executable-name</i> argument terminates the process and all the simultaneously running copies, if applicable. |
| <i>job-id</i>                                    | Job ID associated with the process to be terminated. Terminates only the process associated with the job ID.  |
| <b>location</b> <i>node-id</i>                   | Sets the mandatory settings for a process on a designated node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation.   |

### Command Default

No default behavior or values

### Command Modes

Administration EXEC

EXEC

### Command History

| Release     | Modification  |
|-------------|---|
| Release 2.0 | This command was introduced.                                |
| Release 3.2 | The command was made available in administration EXEC mode. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If a process unexpectedly goes down, the following action occurs based on whether the process is considered mandatory.

- If the process is mandatory and the process cannot be restarted, the node automatically reboots.
- If the process is not mandatory and cannot be restarted, it stays down and the node does not reboot.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | root-lr | execute    |

The following example shows how to turn on a mandatory attribute. In this example, the mandatory attribute is turned on for the `media_ether_config_di` process.

```
RP/0/RP0/CPU0:router# process mandatory on media_ether_config_di
```

The following example shows how to turn the reboot option on. In this example, the router is set to reboot the node if a mandatory process goes down and cannot be restarted.

```
RP/0/RP0/CPU0:router# process mandatory reboot enable
```

```
RP/0/RP00/CPU0:Mar 19 19:28:10 : sysmgr[71]: %SYSMGR-4-MANDATORY_REBOOT_ENABLE :
mandatory reboot option enabled by request
```

The following example shows how to turn off the reboot option. In this example, the router is set *not* to reboot the node if a mandatory process goes down and cannot be restarted. In this case, the mandatory process is restarted, but the node is not rebooted.

```
RP/0/RP0/CPU0:router# process mandatory reboot disable
```

```
RP/0/RP00/CPU0:Mar 19 19:31:20 : sysmgr[71]: %SYSMGR-4-MANDATORY_REBOOT_OVERRIDE
: mandatory reboot option overridden by request
```

# show context

To display core dump context information, use the **show context** command in administration EXEC mode or in EXEC mode.

**show context** [*coredump-occurrence* | **clear**] [**location** {*node-id* | **all**}]

## Syntax Description

|   |   |
|---|---|
| <i>coredump-occurrence</i>                      | (Optional) Core dump context information to be displayed based on the occurrence of the core dump. Valid values are 1 to 10.  |
| <b>clear</b>                                    | (Optional) Clears the current context information.  |
| <b>location</b> { <i>node-id</i>   <b>all</b> } | Displays core dump information that occurred on the designated node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. The <b>all</b> keyword specifies to display information for all nodes. |

## Command Default

If no *coredump-occurrence* value is specified, core dump context information for all core dumps is displayed.

## Command Modes

EXEC, Administration EXEC

## Command History

| Release     | Modification  |
|-------------|---|
| Release 2.0 | This command was introduced.                                |
| Release 3.2 | The command was made available in administration EXEC mode. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show context** command to display core dump context information. This command displays context information for the last ten core dumps. Cisco Technical Support Center engineers and development engineers use this command for post-analysis in the debugging of processes.

Use the [clear context, on page 462](#) command to clear core dump context information.

## Task ID

| Task ID | Operations |
|---------|------------|
| diag    | read       |

The following example shows sample output from the **show context** command:

```
RP/0/RP0/CPU0:router# show context

Crashed pid = 20502 (pkg/bin/mbi-hello)
Crash time: Thu Mar 25, 2004: 19:34:14
```

```
Core for process at disk0:/mbi-hello.20040325-193414.node0_RP0_CPU0
```

```

[Table 50: show context Field Descriptions, on page 497](#) describes the significant fields shown in the display.

**Table 50: show context Field Descriptions**

| Field               | Description  |
|---------------------|--|
| Crashed pid         | Process ID (PID) of the crashed process followed by the executable path. |
| Crash time          | Time and date the crash occurred.  |
| Core for process at | File path to the core dump file.   |

| Field          | Description  |
|----------------|--|
| Stack Trace    | Stack trace information.   |
| Registers Info | Register information related to crashed threads.                               |
| DLL Info       | Dynamically loadable library (DLL) information used to decode the stack trace. |

# show dll

To display dynamically loadable library (DLL) information, use the **show dll** command in administration EXEC mode or in EXEC mode.

```
show dll [{jobid job-id [virtual] | [symbol]address virtual-address | dllname dll-virtual-path | memory | virtual}] [location node-id]
```

| Syntax Description                     |  |  |
|--|--|--|
| <b>jobid</b> <i>job-id</i>             | (Optional) Displays DLL information for the specified job identifier.  |  |
| <b>virtual</b>                         | (Optional) Displays the virtual path of DLLs. The virtual path is expressed in the /pkg/lib/library-name.dll format where the library name is the name of the DLL followed by the .dll suffix. |  |
| <b>symbol</b>                          | (Optional) Displays the symbol at the virtual address specified for the <i>virtual-address</i> argument.   |  |
| <b>address</b> <i>virtual-address</i>  | (Optional) Displays the DLL that is mapped at the virtual address specified for the <i>virtual-address</i> argument.   |  |
| <b>dllname</b> <i>dll-virtual-path</i> | (Optional) Displays the process IDs (PIDs) of the process that have downloaded the DLL specified for the <i>dll-virtual-path</i> argument.   |  |
| <b>memory</b>                          | (Optional) Displays a summary of DLL memory usage.   |  |
| <b>location</b> <i>node-id</i>         | (Optional) Displays DLLs for the specified node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation.   |  |

[Table 51: show dll Field Descriptions, on page 501](#) describes the significant fields shown in the display.

**Table 51: show dll Field Descriptions**

| Field    | Description                                     |
|----------|---|
| DLL path | Physical path of the DLL on the router.         |
| Text VA  | Virtual address of the text segment of the DLL. |
| Text Sz  | Size of the text segment of the DLL.            |
| Data VA  | Virtual address of the data segment of the DLL. |
| Data Sz  | Size of the data segment of the DLL.            |
| Refcount | Number of clients using the DLL.                |

The following example shows sample output from the **show dll** command with the optional **dllname** *dll-virtual-path* keyword and optional argument:

```
RP/0/RP0/CPU0:router# show dll dllname /pkg/lib/libinst_mem.dll

PID:      4102  Refcount: 1
PID:      4105  Refcount: 1
PID:     24600  Refcount: 1
PID:     86111  Refcount: 1
```

[Table 52: show dll dllname Field Descriptions, on page 501](#) describes the significant fields shown in the display.

**Table 52: show dll dllname Field Descriptions**

| Field    | Description                                     |
|----------|---|
| PID:     | Process ID of the process.                      |
| Refcount | Number of references to the DLL by the process. |

The following example shows sample **show dll** output from the command with the optional **memory** keyword:

```
RP/0/RP0/CPU0:router# show dll memory
-----
Total DLL Text - 14778896 bytes  Total DLL Data - 12688500 bytes
Total DLL Memory - 27467396 bytes
```

# show exception

To display the configured core dump settings, use the **show exception** command in administration EXEC mode or in EXEC mode.

**show exception** [**core-options** [**process** *process-name*] **location** *node-id*]

## Syntax Description

|                                    |   |
|------------------------------------|---|
| <b>core-options</b>                | (Optional) Displays process core option values.   |
| <b>process</b> <i>process-name</i> | (Optional) Specifies the process for which to display the information.  |
| <b>location</b> <i>node-id</i>     | (Optional) Displays configured settings for a specified node. The <i>node-id</i> argument is expressed in the <i>rack/slot/module</i> notation. |

## Command Default

None

## Command Modes

EXEC, Administration EXEC

## Command History

| Release       | Modification   |
|---------------|--|
| Release 2.0   | This command was introduced.                           |
| Release 3.9.0 | Support for the <b>core-options</b> keyword was added. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show exception** command to display the configured core dump settings. The output from this command displays the core dump settings configured with the following commands:

- [exception filepath](#), on page 468
- [exception pakmem](#), on page 472
- [exception sparse](#), on page 474
- [exception sprsize](#), on page 476

## Task ID

| Task ID | Operations |
|---------|------------|
| diag    | read       |

The following example shows sample output from the **show exception** command with the **location** keyword. All processes for the specified node are displayed.

```
RP/0/RP0/CPU0:router# show excep core-options location 0/rp0/cpu0
Mon Nov 30 01:31:31.391 PST
```

```

# show memory

To display the available physical memory and memory usage information of processes on the router, use the **show memory** command in EXEC or administration EXEC mode.

**show memory** [{*jobid* | **summary** [{**bytes** | **detail**}]}] **location** *node-id*

| Syntax Description             |   |
|--------------------------------|---|
| <i>job id</i>                  | (Optional) Job ID associated with a process instance. Specifying a job ID for the <i>job-id</i> argument displays the memory available and memory usage information for only the process associated with the specified job ID. If the <i>job-id</i> argument is not specified, this command displays information for all running processes. |
| <b>summary</b>                 | (Optional) Displays a summary of the physical memory and memory usage information.  |
| <b>bytes</b>                   | (Optional) Displays numbers in bytes for an exact count.  |
| <b>detail</b>                  | (Optional) Displays numbers in the format “nnn.dddM” for more detail.   |
| <b>location</b> <i>node-id</i> | Displays the available physical memory from the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.  |

**Command Default** None

**Command Modes** Administration EXEC  
EXEC

| Command History | Release     | Modification  |
|-----------------|-------------|---|
|                 | Release 2.0 | This command was introduced.                                |
|                 | Release 3.2 | The command was made available in administration EXEC mode. |

**Usage Guidelines** To display detailed memory information for the entire router, enter the **show memory** command without any parameters.

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

This example shows partial sample output from the **show memory** command entered without keywords or arguments. This command displays details for the entire router.

```
RP/0/RP0/CPU0:router# show memory

Physical Memory:2048M total
Application Memory :1802M (1636M available)
Image:116M (bootram:116M)
Reserved:128M, IOMem:0, flashfsys:0
Total shared window:0
```

```

kernel:jid 1

7e000000    8192      DLL Data libc.dll

```

This example shows how to display a detailed summary of memory information for the router:

```

RP/0/RP0/CPU0:router# show memory summary detail

Physical Memory: 256.000M total
Application Memory : 140.178M (15.003M available)
Image: 95.739M (bootram: 95.739M)
Reserved: 20.000M, IOMem: 0, flashfsys: 0
Shared window fibv6: 257.980K
Shared window PFI_IFH: 207.925K
Shared window aib: 8.972M
Shared window infra_statsd: 3.980K
Shared window ipv4_fib: 1.300M

```

```

Shared window atc_cache: 35.937K
Shared window qad: 39.621K
Total shared window: 10.805M
Allocated Memory: 49.933M
Program Text: 6.578M
Program Data: 636.000K
Program Stack: 4.781M

```

**Table 53: show memory summary Field Descriptions**

| Field                      | Description  |
|----------------------------|--|
| Physical Memory            | Available physical memory on the router.                         |
| Application Memory         | Current memory usage of all the processes on the router.         |
| Image                      | Memory that is currently used by the image and available memory. |
| Reserved                   | Total reserved memory.   |
| IOMem                      | Available I/O memory.  |
| flashfsys                  | Total flash memory.  |
| Shared window fibv6        | Internal shared window information.                              |
| Shared window PFI_IFH      | Internal shared window information.                              |
| Shared window aib          | Internal shared window information.                              |

# show memory compare

To display details about heap memory usage for all processes on the router at different moments in time and compare the results, use the **show memory compare** command in EXEC or administration EXEC mode.

**show memory compare** {start | end | report}

| Syntax Description |   |
|--------------------|---|
| <b>start</b>       | Takes the initial snapshot of heap memory usage for all processes on the router and sends the report to a temporary file named /tmp/memcmp_start.out.   |
| <b>end</b>         | Takes the second snapshot of heap memory usage for all processes on the router and sends the report to a temporary file named /tmp/memcmp_end.out. This snapshot is compared with the initial snapshot when displaying the heap memory usage comparison report. |
| <b>report</b>      | Displays the heap memory comparison report, comparing heap memory usage between the two snapshots of heap memory usage.   |

**Command Default** None

**Command Modes** Administration EXEC  
EXEC

| Command History | Release     | Modification  |
|-----------------|-------------|---|
|                 | Release 2.0 | This command was introduced.                                |
|                 | Release 3.2 | The command was made available in administration EXEC mode. |

**Usage Guidelines** Use the **show memory compare** command to display details about the heap memory usage of all processes on the router at different moments in time and compare the results. This command is useful for detecting patterns of memory usage during events such as restarting processes or configuring interfaces.

Use the following steps to create and compare memory snapshots:

1. Enter the **show memory compare** command with the **start** keyword to take the initial snapshot of heap memory usage for all processes on the router.

**Note** The snapshot is similar to that resulting from entry of the [show memory heap, on page 510](#) command with the optional **summary** keyword.

2. Perform the test you want to analyze.
3. Enter the **show memory compare** command with the **end** keyword to take the snapshot of heap memory usage to be compared with the initial snapshot.
4. Enter the **show memory compare** command with the **report** keyword to display the heap memory usage comparison report.

## show memory compare

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

This example shows sample output from the **show memory compare** command with the **report** keyword:

```
RP/0/RP0/CPU0:router# show memory compare report
```

# show memory heap

To display information about the heap space for a process, use the **show memory heap** command in EXEC or administration EXEC mode.

**show memory heap** [**allocated**] [**dllname**] [**failure**] [**free**] {*jobid* | **all**}

| Syntax Description |            |  |
|--------------------|------------|--|
| <b>allocated</b>   | (Optional) | Displays a list of all allocated heap blocks.  |
| <b>dllname</b>     | (Optional) | Displays heaps with dynamic link library (DLL) names.  |
| <b>failure</b>     | (Optional) | Displays a summary of heap failures.   |
| <b>free</b>        | (Optional) | Displays a list of all free heap blocks.   |
| <b>summary</b>     | (Optional) | Displays a summary of the information about the heap space.  |
| <i>job-id</i>      |            | Job ID associated with the process instance.   |
| <b>all</b>         | (Optional) | Displays information about the heap space for all processes. The <b>all</b> keyword is only available when the <b>failure</b> or <b>summary</b> keywords are used. |

**Command Default** None

**Command Modes** Administration EXEC  
EXEC

| Command History | Release     | Modification  |
|-----------------|-------------|---|
|                 | Release 2.0 | This command was introduced.                                |
|                 | Release 3.2 | The command was made available in administration EXEC mode. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

This example shows sample output from the **show memory heap** command, specifying a job ID for the *job-id* argument:

```
RP/0/RP0/CPU0:router# show memory heap 111
```

```

Malloc summary for pid 16433:

Table 55: show memory heap Field Descriptions

| Field                         | Description   |
|-------------------------------|---|
| Malloc summary for pid        | System-defined process ID (PID).  |
| Heapsize                      | Size of the heap as allocated from the system by the malloc library.  |
| allocd                        | Bytes allocated to the process.   |
| free                          | Bytes available in the heap.  |
| overhead                      | Malloc library overhead in bytes.   |
| mallocs                       | Number of malloc calls.   |
| reallocs                      | Number of realloc calls.  |
| frees                         | Number of invocations to the caller interface provided in the malloc library for deallocating the memory.                       |
| [core-allocs 1; core-frees 0] | Number of core memory units, the memory units in the malloc library allocated by the system for the heap, allocated, and freed. |

The following example shows sample output from the **show memory heap** command, specifying the **summary job-id** keyword and argument:

```

RP/0/RP0/CPU0:router# show memory heap summary 65

Malloc summary for pid 20495 process pcmciad:
  Heapsize 65536: allocd 40332, free 16568, overhead 8636

Table 56: show memory heap summary Field Descriptions

| Field                  | Description  |
|------------------------|--|
| Malloc summary for pid | System-defined process ID (pid).                                     |
| Heapsize               | Size of the heap as allocated from the system by the malloc library. |
| allocd                 | Bytes allocated to the process.                                      |
| free                   | Bytes available in the heap.   |
| overhead               | Malloc library overhead in bytes.                                    |
| mallocs                | Number of malloc calls.  |

| Field                         | Description  |
|-------------------------------|--|
| reallocs                      | Number of realloc calls.   |
| frees                         | Number of invocations to the caller interface provided in the malloc library for deallocating the memory.                              |
| [core-allocs 1; core-frees 0] | Number of core memory units, the memory units in the malloc library allocated by the system for the heap, allocated and freed.         |
| Band size                     | Small memory elements are arranged in bands. The band size specifies the size of elements within the band.                             |
| element per block             | Number of elements per block in the band.  |
| nbunit                        | Number of memory unit one block consists of. Any block in any band should be of a size that is an integer multiple of this basic unit. |
| Completely free blocks        | Number of blocks in the band completely free (available for allocation).   |
| Block alloced                 | Number of blocks currently allocated for the band.   |
| allocs                        | Number of allocations currently performed from the band.   |
| frees                         | Number of free calls that resulted in memory being returned to the band.   |
| allocmem                      | Amount of memory currently allocated from the band.  |
| overhead                      | Amount of memory in bytes as overhead for managing the band.   |
| blocks                        | Number of blocks currently in the band.  |
| blknodes                      | Number of nodes (elements) in all the blocks in the band.  |

## show processes

To display information about active processes, use the **show processes** command in EXEC or administration EXEC mode.

**show processes** {*job-id**process-name* | **aborts** | **all** | **blocked** | **boot** | **cpu** | **distribution** *process-name* | **dynamic** | **failover** | **family** | **files** | **location** *node-id* | **log** | **mandatory** | **memory** | **pidin** | **searchpath** | **signal** | **startup** | **threadname**} [**location** *node-id*] [**detail**] [**run**]

| Syntax                         | Description   |
|--------------------------------|---|
| <i>job-id</i>                  | Job identifier for which information for only the process instance associated with the <i>job-id</i> argument is displayed.                             |
| <i>process-name</i>            | Process name for which all simultaneously running instances are displayed, if applicable.   |
| <b>aborts</b>                  | Displays process abort information.   |
| <b>all</b>                     | Displays summary process information for all processes.   |
| <b>blocked</b>                 | Displays details about reply, send, and mutex blocked processes.  |
| <b>boot</b>                    | Displays process boot information.  |
| <b>cpu</b>                     | Displays CPU usage for each process.  |
| <b>distribution</b>            | Displays the distribution of processes.   |
| <b>dynamic</b>                 | Displays process data for dynamically created processes.  |
| <b>failover</b>                | Displays process switchover information.  |
| <b>family</b>                  | Displays the process session and family information.  |
| <b>files</b>                   | Displays information about open files and open communication channels.  |
| <b>location</b> <i>node-id</i> | Displays information about the active processes from a designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |
| <b>log</b>                     | Displays process log.   |
| <b>mandatory</b>               | Displays process data for mandatory processes.  |
| <b>memory</b>                  | Displays information about the text, data, and stack usage for processes.   |
| <b>pidin</b>                   | Displays all processes using the QNX command.   |
| <b>searchpath</b>              | Displays the search path.   |
| <b>signal</b>                  | Displays the signal options for blocked, pending, ignored, and queued signals.  |
| <b>startup</b>                 | Displays process data for processes created at startup.   |
| <b>threadname</b>              | Displays thread names.  |

|               |  |
|---------------|--|
| <b>detail</b> | (Optional) Displays more detail. This option is available only with the <i>process-name</i> argument.                            |
| <b>run</b>    | (Optional) Displays information for only running processes. This option is available only with the <i>process-name</i> argument. |

**Command Default** None

**Command Modes** Administration EXEC  
EXEC

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.2   | The command was made available in administration EXEC mode.              |
|                 | Release 3.5.0 | The use of this command with no keywords or arguments was not supported. |

**Usage Guidelines** Use the **show processes** command to display general information about the active processes. To display more detailed information for a process, specify a job ID or process for the *job-id* argument or *process-name* argument, respectively.

You can also use the **monitor processes** command to determine the top processes and threads based on CPU usage.

| Task ID | Task ID        | Operations |
|---------|----------------|------------|
|         | basic-services | read       |

The **show processes** command with the *process-name* argument displays detailed information about a process:

```
RP/0/RP0/CPU0:router# show processes ospf

      Job Id: 261
        PID: 139453
Executable path: /crs-rout-0.44.0/bin/ospf
      Instance #: 1
      Version ID: 00.00.0000
        Respawn: ON
      Respawn count: 1
Max. spawns per minute: 12
      Last started: Wed Mar 17 07:46:26 2004
      Process state: Run
      Package state: Normal
Started on config: cfg/gl/ipv4-ospf/proc/100/ord_a/routerid
      core: TEXT SHAREDMEM MAINMEM
      Max. core: 0
      Mandatory: ON
      Placement: ON
      startup_path: /pkg/startup/ospf.startup
```

## show processes

```

Process cpu time: 0.410 user, 0.183 kernel, 0.593 total
JID   TID  LastCPU  Stack pri state      HR:MM:SS:MSEC NAME

```

Table 57: show processes Field Descriptions

| Field                  | Description   |
|------------------------|---|
| Job id                 | Job ID. This field remains constant over process restarts.  |
| PID                    | Process ID. This field changes when process is restarted.   |
| Executable path        | Path for the process executable.  |
| Instance               | There may be more than one instance of a process running at a given time (each instance may have more than one thread). |
| Version ID             | API version.  |
| Respawn                | ON or OFF. The field indicates if this process restarts automatically in case of failure.                               |
| Respawn count          | Number of times this process has been started or restarted (that is, the first start makes this count 1).               |
| Max. spawns per minute | Number of respawns not to be exceeded in 1 minute. If this number is exceeded, the process stops restarting.            |
| Last started           | Date and time the process was last started.   |
| Process state          | Current state of the process.   |
| Started on config      | Configuration command that started (or would start) this process.   |
| core                   | Memory segments to include in core file.  |
| Max. core              | Number of times to dump a core file. 0 = infinity.  |

The **show processes** command with the **memory** keyword displays details of memory usage for a given process or for all processes, as shown in the following example:

```

RP/0/RP0/CPU0:router# show processes memory

JID   Text      Data      Stack     Dynamic  Process

Table 58: show processes memory Field Descriptions

| Field   | Description  |
|---------|--|
| Text    | Size of text region (process executable).                      |
| Data    | Size of data region (initialized and uninitialized variables). |
| Stack   | Size of process stack.   |
| Dynamic | Size of dynamically allocated memory.                          |
| Process | Process name.  |

The **show processes** command with the **all** keyword displays summary information for all processes, as shown in the following example:

```
RP/0/RP0/CPU0:router# show processes all
```

```

      JID      LAST STARTED          STATE  RE-  PLACE-  MANDA-  MAINT-  NAME (IID)  ARGS

Table 59: show processes all Field Description

| Field        | Description                             |
|--------------|---|
| JID          | Job ID.                                 |
| Last Started | Date when the process was last started. |
| State        | State of the process.                   |

| Field      | Description   |
|------------|---|
| Restart    | Number of times the process has restarted since the node was booted. If a node is reloaded, the restart count for all processes is reset. Normally, this value is 1, because usually processes do not restart. However, if you restart a process using the <b>process restart</b> command, the restart count for the process increases by one.        |
| Placement  | Indicates whether the process is a placeable process or not. Most processes are not placeable, so the value is blank. ISIS, OSPF, and BGP are examples of placeable processes.  |
| Mandatory  | M indicates that the process is mandatory. A mandatory process must be running. If a mandatory process cannot be started (for example, sysmgr starts it but it keeps crashing), after five attempts the sysmgr causes the node to reload in an attempt to correct the problem. A node cannot function properly if a mandatory process is not running. |
| Maint Mode | Indicates processes that should be running when a node is in maintenance mode. Maintenance mode is intended to run as few processes as possible to perform diagnostics on a card when a problem is suspected. However, even the diagnostics require some services running.  |
| Name (IID) | Name of the process followed by the instance ID. A process can have multiple instances running, so the IID is the instance ID.  |
| Args       | Command-line arguments to the process.  |

## Secure Domain Router Commands

---

Secure domain routers (SDRs) provide a means of partitioning a router into multiple, independent routers. SDRs perform routing functions in the same manner as a physical router but share resources with the rest of the system. For example, the applications, configurations, protocols, and routing tables assigned to an SDR belong to that SDR only, but other functions such as chassis control, switch fabric, and partitioning are shared with the rest of the system.

For detailed information about secure domain router concepts, configuration tasks, and examples, see the *Configuring Secure Domain Routers on Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*.

- [location \(SDR\), on page 520](#)
- [pair \(SDR\), on page 522](#)
- [sdr, on page 524](#)
- [show sdr, on page 526](#)

## location (SDR)

To assign a node to a secure domain router (SDR), use the **location** command in SDR configuration mode. To remove a node from an SDR and return the node to the owner SDR, use the **no** form of this command.

**location** *node-location*

**location** *partially-qualified-nodeid* [**primary**]

**no location**

### Syntax Description

*partially-qualified-nodeid* Node to be assigned to the specified secure domain router. Refer to the Usage Guidelines for the syntax required in each router platform.

**primary** (Optional) Configures the node as the DSDRSC for a secure domain router.

### Command Default

All nodes are assigned to the owner SDR.

### Command Modes

SDR configuration

### Command History

| Release       | Modification   |
|---------------|--|
| Release 3.2   | This command was introduced.   |
| Release 3.3.0 | The term logical router (LR) was changed to secure domain router (SDR).<br>Added support for the <b>primary</b> keyword. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **location** command to assign a node to an SDR. By default, all nodes belong to the owner SDR. When a node is assigned to a non-owner SDR, it is automatically removed from the owner SDR inventory.

Use the **no** form of the **location** command to remove a node from an SDR. Removing a node from an SDR implicitly returns it to the owner SDR. When a node has been removed from an SDR, it can be reassigned to another SDR. To remove the designated secure domain router system controller (DSDRSC), you must first remove all other nodes in the SDR. You cannot remove the designated system controller (DSC) from the owner SDR.

**Note** Removing all nodes from an SDR deletes the secure domain router from the configuration.

### Usage Notes

- Use the **location** command with the **primary** keyword to assign a route processor (RP) pair or a single distributed route processor (DRP) as the DSDRSC. If the **primary** keyword is not used, the node is assigned to the SDR, but it is not the DSDRSC.

- You cannot assign a single RP to an SDR. RPs must be added in redundant pairs. The value of the *partially-qualified-nodeid* argument for RPs is entered in the *rack/slot/\** notation. This command assigns the redundant RP pair as the DSDRSC. One RP is automatically elected as the DSDRSC, and the second RP acts as the standby DSDRSC.
- To assign a single DRP to an SDR, use the **location** command with the *partially-qualified-nodeid* argument. To assign a single DRP node as the DSDRSC, enter the **location** command with the *partially-qualified-nodeid* argument and the **primary** keyword.
- To assign a redundant DRP pair to an SDR, use the **pair (SDR)** command. We recommend the use of DRP pairs as the DSDRSC for all non-owner SDRs.
- If an RP is already assigned to the SDR as the DSDRSC, it must be removed before a DRP can be assigned as the DSDRSC.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | system  | read,<br>write |

In the following example, a new SDR “rname2” is created. The **location** command is used to add an RP pair as the primary node (DSDRSC). An additional node in rack 1, slot 0 is then added to the configuration.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# sdr rname2
RP/0/RP0/CPU0:router(admin-config-sdr:rname2)# location 1/RP/* primary
RP/0/RP0/CPU0:router(admin-config-sdr:rname2)# location 1/0/*
RP/0/RP0/CPU0:router(admin-config-sdr:rname2)# end
```

The following example shows how to remove a node from SDR “rname2”:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# sdr rname2
RP/0/RP0/CPU0:router(admin-config-sdr:rname2)# no location 1/0/*
RP/0/RP0/CPU0:router(admin-config-sdr:rname2)# end
```

### Related Topics

[pair \(SDR\)](#), on page 522

[sdr](#), on page 524

## pair (SDR)

To assign a distributed route processor (DRP) pair to a secure domain router (SDR), use the **pair** command in SDR configuration mode. To remove a DRP pair from the configuration, use the **no** form of this command.

```
pair pair-name [primary]  
no pair pair-name
```

### Syntax Description

*pair-name* Specifies a DRP pair to be assigned to the specified secure domain router. The *pair-name* argument is the name assigned to the DRP pair. For instructions to create a DRP pair name, see the **pairing** (drp) command in the *Distributed Route Processor Commands on Cisco IOS XR Software*.

**primary** (Optional) Specifies the named DRP pair as the primary and standby designated secure domain router system controllers (DSDRSC).

### Command Default

None

### Command Modes

SDR configuration

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.3.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **pair** command with the *pair-name* argument to assign a DRP pair to an SDR. Enter the **pair** command with the **primary** keyword to assign the DRP pair as the DSDRSCs (primary and standby DSDRSCs).

To assign a DRP pair to an SDR, you must first create a DRP pair name as described in *Distributed Route Processor Commands on Cisco IOS XR Software* and *Configuring Secure Domain Routers on Cisco IOS XR Software*. When the DRP pair is created, you can add the *pair-name* to the SDR.

When a DRP pair is assigned to a non-owner SDR, it is automatically removed from the owner SDR inventory. When a DRP pair is removed from a non-owner SDR configuration, it is automatically returned to the owner SDR inventory.

RP's have precedence over DRPs for DSDRSC configuration. If an SDR already includes an RP, the RP must become the DSDRSC.

Use the **no** form of the **pair** command to remove the DRP pair from an SDR. Removing a DRP pair from an SDR implicitly returns it to the owner SDR. When a DRP pair has been removed from an SDR, it can be reassigned to another SDR.

### Task ID

| Task ID | Operation      |
|---------|----------------|
| system  | read,<br>write |

The following example shows how to enter SDR configuration mode and add a DRP pair as the DSDRSC. The command **show configuration** is used in SDR configuration mode to display the SDR configuration.

```
RP/0/RP0/CPU0:router(admin-config)# sdr rname2
RP/0/RP0/CPU0:router(admin-config-sdr:rname2)# pair drp1 primary
RP/0/RP0/CPU0:router(admin-config-sdr:rname2)# show configuration

Building configuration... sdr rname2 pair drp1 primary
! end
```

The following example shows how to enter SDR configuration mode and remove a DRP pair from the SDR configuration:

```
RP/0/RP0/CPU0:router(admin-config)# sdr rname2
RP/0/RP0/CPU0:router(admin-config-sdr:rname2)# no pair drp1
```

### Related Topics

[sdr](#), on page 524

# sdr

To create a secure domain router (SDR) and enter SDR configuration mode, use the **sdr** command in administration configuration

mode. To remove a secure domain router from the configuration, use the **no** form of this command.

```
sdr sdr-name
no sdr sdr-name
```

---

**Syntax Description**      *sdr-name*    Name of the SDR to be created or modified.

---

---

**Command Default**      The system comes configured as a single secure domain router known as the *owner SDR*.

---

---

**Command Modes**      Administration configuration

---

---

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |

---

---

**Usage Guidelines**      To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **sdr** command to create an SDR or modify an existing SDR.

---

**Note**      The *sdr-name* argument creates an SDR if the SDR specified for the *sdr-name* argument does not exist.

---

By default, a router running Cisco IOS XR software contains one SDR, the owner SDR. You cannot create the owner SDR because it always exists—nor can you completely remove it because it is necessary for managing the router.

After the **sdr** command is used, the router enters SDR configuration mode. From SDR configuration mode, you can add nodes to the SDR or remove nodes from the SDR using the **location** (SDR) command. You can also add or remove DRP pairs using the **pair** (SDR) command.

Use the **no** form of the command to remove a non-owner SDR configuration. When an SDR is removed from the router configuration, all nodes included in the SDR configuration are returned to the owner SDR inventory. The owner SDR cannot be removed.

## Maximum Number of SDR Configurations

A maximum of eight SDRs are supported, including one owner SDR and up to seven non-owner SDRs.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | system  | read,<br>write |

The following example shows how to remove an SDR from the configuration. All nodes belonging to the configuration are returned to the owner SDR inventory, and the SDR name is deleted.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# configure
RP/0/RP0/CPU0:router(admin-config)# no sdr rname
RP/0/RP0/CPU0:router (admin-config)# end
```

- [pair \(SDR\)](#), on page 522

# show sdr

To display information about the currently defined secure domain routers (SDRs), use the **show sdr** command in the appropriate configuration mode.

## Administration EXEC Mode

```
show sdr [{name sdr-name [detail] | summary}]
```

## EXEC Mode

```
show sdr [detail]
```

### Syntax Description

|                             |  |
|-----------------------------|--|
| <b>name</b> <i>sdr-name</i> | Specifies a specific SDR.                                  |
| <b>detail</b>               | Displays more detailed information for a specific SDR.     |
| <b>summary</b>              | Displays summary information about all SDRs in the system. |

### Command Default

Administration EXEC Mode Mode:

- Displays information for the Owner SDR.
- If you are logged into a specific SDR as the admin user, then information about the local SDR is displayed.

EXEC Mode Mode:

- Displays information about the local SDR.

### Command Modes

EXEC

Administration EXEC

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.5.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show sdr** command in administration EXEC mode to display the inventory of nodes in the Owner SDR or in a specific named SDR. The **show sdr** command in EXEC mode displays the inventory of nodes in the current SDR.

### Task ID

| Task ID | Operations |
|---------|------------|
| system  | read       |

This example shows sample output from the **show sdr** command in EXEC

mode:

**Table 60: show sdr Field Descriptions**

| Field       | Description  |
|-------------|--|
| Type        | Type of card, which can be Linecard, RP, or DRP.                                   |
| NodeName    | Name of the node, expressed in the <i>rack/slot/module</i> notation.               |
| NodeState   | Run state of the card, which can be failure, present, booting, running, and so on. |
| RedState    | Redundancy state of the card, which can be active, standby, or none.               |
| PartnerName | Partner of the card, expressed in the <i>rack/slot/module</i> notation.            |

This example shows sample output from the **show sdr** command in administration EXEC

mode with the **summary** keyword:

```
RP/0/RP0/CPU0:router(admin)# show sdr summary
```

```
SDRs Configured:
SDR-Names      SDRid  dSDRSC      StbydSDRSC   Primary1     Primary2     MacAddr
-----
Owner          0      0/RP0/CPU0  0/RP1/CPU0   0/RP0/CPU0  0/RP1/CPU0  0011.92da.b400

# Simple Network Management Protocol (SNMP) Server Commands

---

This chapter describes the Cisco IOS XR software commands used to configure and monitor the Simple Network Management Protocol (SNMP) for network monitoring and management.

For detailed information about SNMP concepts, configuration tasks, and examples, see the *Implementing SNMP on Cisco IOS XR Software* configuration module in *System Management Configuration Guide for Cisco CRS Routers*.

---

**Note** The **snmp-server** commands enable SNMP on Management Ethernet interfaces by default. For information about how to enable SNMP server support on other inband interfaces, see the *Implementing Management Plane Protection on Cisco IOS XR Software* module in *System Security Configuration Guide for Cisco CRS Routers*.

# clear snmp counters

To clear the Simple Network Management Protocol (SNMP) packet statistics shown by the **show snmp** command, use the **clear snmp counters** command in EXEC mode.

**clear snmp counters**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC mode

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **clear snmp counters** command provides the ability to clear all SNMP counters used in the **show snmp** command without restarting any processes.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

The following example shows how to clear the SNMP counters:

```
RP/0/RP0/CPU0:router# clear snmp counters
```

# index persistence

To enable index persistence on an Simple Network Management Protocol (SNMP) interface, use the **index persistence** command in SNMP interface configuration mode. To restore the default conditions with respect to this command, use the **no** form of this command.

**index persistence**  
**no index persistence**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Index persistence is disabled.

**Command Modes** SNMP interface configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **index persistence** command to enable ifIndex persistence for individual entries (corresponding to individual interfaces) in the ifIndex table of the IF-MIB. IfIndex persistence retains the mapping between the ifName object values and the ifIndex object values (generated from the IF-MIB) across reboots, allowing for consistent identification of specific interfaces using SNMP.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

The following example shows how to assign ifIndex persistence on interface 0/0/1/0:

```
RP/0/RP0/CPU0:router(config)# snmp-server interface tengige 0/0/1/0
RP/0/RP0/CPU0:router(config-snmp-if)# index persistence
```

# notification linkupdown

To enable or disable linkUp and linkDown trap notifications on a Simple Network Management Protocol (SNMP) interface, use the **notification linkupdown** command in SNMP interface configuration mode. To revert to the default setting, use the **no** form of this command.

**notification linkupdown disable**  
**no notification linkupdown disable**

|                           |  |   |
|---------------------------|--|---|
| <b>Syntax Description</b> | <b>disable</b>   | Disables linkUp and linkDown trap notifications on an SNMP interface.       |
| <b>Syntax Description</b> | This command has no keywords or arguments.   |   |
| <b>Command Default</b>    | By default, for all main interfaces the linkUp and linkDown trap notifications are enabled; for all subinterfaces they are disabled.   |   |
| <b>Command Modes</b>      | SNMP interface configuration<br>SNMP interface subset configuration  |   |
| <b>Command History</b>    | <b>Release</b>   | <b>Modification</b>   |
|                           | Release 2.0  | This command was introduced.  |
|                           | Release 3.2  | The <b>enable</b> keyword was removed.                                      |
|                           | Release 3.9.0  | This command was supported in the SNMP interface subset configuration mode. |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>Enabling of linkUp and linkDown notifications is performed globally using the <b>snmp-server traps snmp</b> command. Issue the <b>notification linkupdown</b> command to disable linkUp and linkDown notifications on an interface.</p> <p>Use the <b>no</b> form of this command to enable linkUp and linkDown notifications on an interface, if linkUp and linkDown notifications have been disabled.</p> <p>You can also use the <b>snmp-server interface subset</b> command to enable or disable groups of interfaces.</p> |   |
| <b>Task ID</b>            | <b>Task ID</b>   | <b>Operations</b>   |
|                           | snmp   | read,<br>write  |

The following example shows how to disable linkUp and linkDown trap notifications on interface 0/0/1/0:

```
RP/0/RP0/CPU0:router(config)# snmp-server interface tengige 0/0/1/0  
RP/0/RP0/CPU0:router(config-snmp-if)# notification linkupdown disable
```

# show snmp

To display the status of Simple Network Management Protocol (SNMP) communications, use the **show snmp** command in

EXEC

mode.

## show snmp

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the `show snmp` command to show counter information for SNMP operations. It also displays the chassis ID string defined with the `snmp-server chassis-id` command.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | snmp    | read       |

This example shows sample output from the `show snmp` command:

```
RP/0/RP0/CPU0:router# show snmp

Chassis: 01506199
37 SNMP packets input
0 Bad SNMP version errors
4 Unknown community name
0 Illegal operation for community name supplied
0 Encoding errors
24 Number of requested variables
0 Number of altered variables
0 Get-request PDUs
28 Get-next PDUs
0 Set-request PDUs
78 SNMP packets output
0 Too big errors (Maximum packet size 1500)
0 No such name errors
0 Bad values errors
0 General errors
```

```

24 Response PDUs
13 Trap PDUs
SNMP logging: enabled
Logging to 172.25.58.33.162, 0/10, 13 sent, 0 dropped.

```

Table 62: [show snmp Field Descriptions](#), on page 537 describes the significant fields shown in the display.

**Table 62: show snmp Field Descriptions**

| Field   | Description   |
|---|---|
| Chassis                                       | Chassis ID string.  |
| SNMP packets input                            | Total number of SNMP packets input.   |
| Bad SNMP version errors                       | Number of packets with an invalid SNMP version.   |
| Unknown community name                        | Number of SNMP packets with an unknown community name.  |
| Illegal operation for community name supplied | Number of packets requesting an operation not allowed for that community.   |
| Encoding errors                               | Number of SNMP packets that were improperly encoded.  |
| Number of requested variables                 | Number of variables requested by SNMP managers.   |
| Number of altered variables                   | Number of variables altered by SNMP managers.   |
| Get-request PDUs                              | Number of get requests received   |
| Get-next PDUs                                 | Number of get-next requests received.   |
| Set-request PDUs                              | Number of set requests received.  |
| SNMP packets output                           | Total number of SNMP packets sent by the device.  |
| Too big errors                                | Number of SNMP packets that were larger than the maximum packet size.   |
| Maximum packet size                           | Maximum size of SNMP packets.   |
| No such name errors                           | Number of SNMP requests that specified a MIB object that does not exist.  |
| Bad values errors                             | Number of SNMP set requests that specified an invalid value for a MIB object.   |
| General errors                                | Number of SNMP set requests that failed due to some other error. (It is not a noSuchName error, badValue error, or any of the other specific errors.) |
| Response PDUs                                 | Number of responses sent in reply to requests.  |
| Trap PDUs                                     | Number of SNMP traps sent.  |

| Field        | Description  |
|--------------|--|
| SNMP logging | Enabled or disabled logging.   |
| sent         | Number of traps sent.  |
| dropped      | Number of traps dropped. Traps are dropped when the trap queue for a destination exceeds the maximum length of the queue, as set by the <b>snmp-server queue-length</b> command. |

# show snmp context

To display the enhanced SNMP context mappings, use the **show snmp context** command in EXEC mode.

**show snmp context**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show snmp context** command to display the protocol instance, topology and VRF mappings associated with an SNMP context.

| Task ID | Task | Operation |
|---------|------|-----------|
|         |      | snmp      |

This example illustrates sample output from the **show snmp context** command:

```
RP/0/RP0/CPU0:router# show snmp context
```

```
Tue Dec 21 03:41:08.065 PST
Context-name      Vrf-name      Topology-Name  Instance-Name  Feature
con5              vf5           tp5            in5            OSPF
con6              vf6           tp6            in6            OSPF
con7              vf7           tp7            in7            OSPF
con8              vf8           tp8            in8            OSPF
```

[snmp-server context mapping](#), on page 599

# show snmp context-mapping

To display the SNMP context mapping table, use the **show snmp context-mapping** command in EXEC mode.

## show snmp context-mapping

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.8.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The SNMP agent handles queries based on SNMP contexts created by client features. Use the **show snmp context-mapping** command to display the SNMP context mapping table. Each entry in the table includes the name of an SNMP context created by a client instance and the name of the client that created the context.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | snmp    | read       |

The following example shows sample output from the **show snmp context-mapping** command:

```
RP/0/RP0/CPU0:router# show snmp context-mapping

Wed Aug 6 01:42:35.227 UTC
Context-name          Feature-name          Feature
ControlEthernet0_RP0_CPU0_S0  ControlEthernet0_RP0_CPU0_S0  BRIDGEINST
ControlEthernet0_RP1_CPU0_S0    ControlEthernet0_RP1_CPU0_S0    BRIDGEINST
```

**Table 63: show snmp context-mapping Field Descriptions**

| Field        | Definition                                     |
|--------------|--|
| Context-name | Name of an SNMP context.                       |
| Feature-name | Name of the instance that created the context. |

| Field   | Definition   |
|---------|--|
| Feature | Name of the client whose instance created the context. |

# show snmp engineid

To display the identification of the local Simple Network Management Protocol (SNMP) engine that has been configured on the router, use the **show snmp engineid** command in EXEC mode.

**show snmp engineid**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

An *SNMP engine* is a copy of SNMP that can reside on a local device.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | snmp    | read       |

The following example shows sample output from the **show snmp engineid** command:

```
RP/0/RP0/CPU0:router# show snmp engineid
Local SNMP engineID: 0000000902000000C025808
```

# show snmp group

To display the names of groups on the router, security model, status of the different views, and storage type of each group, use the **show snmp group** command in

EXEC

mode.

## show snmp group

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | snmp    | read       |

This example shows sample output from the **show snmp group** command:

```
RP/0/RP0/CPU0:router# show snmp group

groupname: public security model:snmpv1
readview : vldefault writeview: -
notifyview: vldefault
row status: nonVolatile

groupname: public security model:snmpv2c
readview : vldefault writeview: -
notifyview: vldefault
row status: nonVolatile
```

**Table 64: show snmp group Field Descriptions**

| Field     | Definition   |
|-----------|--|
| groupname | Name of the Simple Network Management Protocol (SNMP) group or collection of users that have a common access policy. |

| Field          | Definition   |
|----------------|--|
| readview       | String identifying the read view of the group.   |
| security model | Security model used by the group, either v1, v2c, or v3.   |
| writeview      | String identifying the write view of the group.  |
| notifyview     | String identifying the notify view of the group.   |
| row status     | Settings that are set in volatile or temporary memory on the device, or in nonvolatile or persistent memory where settings remain after the device is turned off and on again. |

# show snmp host

To display the configured Simple Network Management Protocol (SNMP) notification recipient host, User Datagram Protocol (UDP) port number, user, and security model, use the **show snmp host** command in

EXEC

mode.

## show snmp host

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | snmp    | read       |

The following example shows sample output from the **show snmp host** command:

```
RP/0/RP0/CPU0:router# show snmp host

Notification host: 10.50.32.170 udp-port: 2345 type: trap
user: userV3auth security model: v3 auth

Notification host: 10.50.32.170 udp-port: 2345 type: trap
user: userV3noauth security model: v3 noauth

Notification host: 10.50.32.170 udp-port: 2345 type: trap
user: userV3priv security model: v3 priv

Notification host: 10.50.32.170 udp-port: 2345 type: trap
user: userv2c security model: v2c
```

*Table 65: show snmp host Field Descriptions*

| <b>Field</b>      | <b>Definition</b>   |
|-------------------|---|
| Notification host | Name or IP address of target host.                            |
| udp-port          | UDP port number to which notifications are sent.              |
| type              | Type of notification configured.                              |
| user              | Security level of the user.                                   |
| security model    | Version of SNMP used to send the trap, either v1, v2c, or v3. |

# show snmp interface

To display the interface index identification numbers (ifIndex values) for all the interfaces or a specified interface, use the **show snmp interface** command in the appropriate mode.

**show snmp interface** [*type interface-path-id ifindex*]

|                           |                          |  |
|---------------------------|--------------------------|--|
| <b>Syntax Description</b> | <i>type</i>              | (Optional) Interface type. For more information, use the question mark (?) online help function.           |
|                           | <i>interface-path-id</i> | (Optional) Physical interface or virtual interface.  |
|                           | <b>Note</b>              | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router. |
|                           |                          | For more information about the syntax for the router, use the question mark (?) online help function.      |
|                           | <b>ifindex</b>           | (Optional) Displays the ifIndex value for the specified interface.   |

**Command Default** Enter the **show snmp interface** command without keywords or arguments to display the ifIndex value for all interfaces.

**Command Modes** EXEC

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.4.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | snmp           | read              |

This example displays the ifIndex value for a specific interface:

```
RP/0/RP0/CPU0:router# show snmp interface pos 0/1/0/1 ifindex
ifName : POS0/1/0/1          ifIndex : 12
```

The following example displays the ifIndex value for all interfaces:

```
RP/0/RP0/CPU0:router# show snmp interface
ifName : Loopback0          ifIndex : 1
```

```

ifName : POS0/1/0/1           ifIndex : 12
ifName : POS0/1/4/2           ifIndex : 14
ifName : POS0/1/4/3           ifIndex : 15
ifName : POS0/6/0/1           ifIndex : 2
ifName : POS0/6/4/4           ifIndex : 18
ifName : POS0/6/4/5           ifIndex : 19
ifName : POS0/6/4/6           ifIndex : 20
ifName : Bundle-POS24         ifIndex : 4
ifName : Bundle-Ether28       ifIndex : 5
ifName : Bundle-Ether28.1     ifIndex : 7
ifName : Bundle-Ether28.2     ifIndex : 8
ifName : Bundle-Ether28.3     ifIndex : 9
ifName : MgmtEth0/RP0/CPU0/0  ifIndex : 6
ifName : MgmtEth0/RP1/CPU0/0  ifIndex : 10
ifName : GigabitEthernet0/1/5/0 ifIndex : 11
ifName : GigabitEthernet0/1/5/1 ifIndex : 13
ifName : GigabitEthernet0/1/5/2 ifIndex : 3
ifName : GigabitEthernet0/6/5/1 ifIndex : 16
ifName : GigabitEthernet0/6/5/2 ifIndex : 17
ifName : GigabitEthernet0/6/5/7 ifIndex : 21

```

**Table 66: show snmp interface Field Descriptions**

| Field   | Definition      |
|---------|-----------------|
| ifName  | Interface name. |
| ifIndex | ifIndex value.  |

## show snmp interface notification

To display the linkUp and linkDown notification status for a subset of interfaces, use the **show snmp interface notification** command in EXEC mode.

**show snmp interface notification** {**subset** *subset-number* | **regular-expression** *expression* | [*type interface-path-id*]}

### Syntax Description

|   |  |
|---|--|
| <b>subset</b> <i>subset-number</i>          | Specifies the identifier of the interface subset. The subset-number argument is configured using the <b>snmp-server interface subset</b> command.  |
| <b>regular-expression</b> <i>expression</i> | Specifies a subset of interfaces matching a regular expression, for which to display information.  |
| <i>type</i>                                 | (Optional) Interface type. For more information, use the question mark (?) online help function.   |
| <i>interface-path-id</i>                    | (Optional) Physical interface or virtual interface.<br><br><b>Note</b> Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.<br><br>For more information about the syntax for the router, use the question mark ( ? ) online help function. |

### Command Default

None

### Command Modes

EXEC

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.9.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Regular expressions have two constraints:

- Regular expressions must always be entered within double quotes to ensure that the CLI interprets each character correctly.
- All characters that are part of a regular expression are considered regular characters with no special meaning. In order to enter special characters, such as "\" or "?," they must be preceded by the backslash character "\." For example, to enter the regular expression ([A-Z][A-Z0-9]\*)\b[^\>]\*>(.\*)<\1, you would enter ([A-Z][A-Z0-9]\*)\b[^\>]\*>(.\*)<\1.

Refer to the *Understanding Regular Expressions, Special Characters, and Patterns* module in *Cisco IOS XR Getting Started Guide for the Cisco CRS Router* for more information regarding regular expressions.

When using the **subset** or **regular-expression** keywords, the actual display might not match the configuration if there are higher priority *subset-number* values that actually apply to the interface. This can happen for a set of interfaces that are included in two or more configured regular expressions or where an individual interface configuration is enabled.

| Task ID | Task ID | Operation |
|---------|---------|-----------|
|         | snmp    | read      |

The following example illustrates how to display linkUp and linkDown notification status for a subset of interfaces identified by a specific *subset-number* :

```
RP/0/RP0/CPU0:router# show snmp interface notification subset 3
```

This example illustrates how to display linkUp and linkDown notification status for a subset of interfaces identified by a regular expression:

```
RP/0/RP0/CPU0:router# show snmp interface notification regular-expression
"^Gig[a-zA-Z]+[0-9/]+\."
```

# show snmp interface regular-expression

To display interface names and indices assigned to interfaces that match a regular expression, use the **show snmp interface regular-expression** command in EXEC mode.

**show snmp interface regular-expression** *expression*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>expression</i> Specifies a subset of interfaces matching a regular expression, for which to display information. |
|---------------------------|---|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |      |
|----------------------|------|
| <b>Command Modes</b> | EXEC |
|----------------------|------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.9.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

All characters that are part of a regular expression are considered regular characters with no special meaning. In order to enter special characters, such as "\" or "?," they must be preceded by the backslash character "\". For example, to enter the regular expression ([A-Z][A-Z0-9]\*)\b[^\>]\*>(.\*)<\1, you would enter ([A-Z][A-Z0-9]\*)\b[^\>]\*>(.\*)<\1.

Refer to the *Understanding Regular Expressions, Special Characters, and Patterns* module in *Cisco IOS XR Getting Started Guide for the Cisco CRS Router* for more information regarding regular expressions.

| <b>Task ID</b> | <b>Task</b> | <b>Operation</b> |
|----------------|-------------|------------------|
|                |             | snmp             |

This example illustrates how to display information for interfaces that match the given regular expression:

```
RP/0/RP0/CPU0:router# show snmp interface regular-expression "^Gig[a-zA-Z]+[0-9/]+\."
```

# show snmp mib

To display a list of MIB module object identifiers (OIDs) registered on the system, use the **show snmp mib** command in

EXEC

mode.

**show snmp mib** [*object-name* | **dll**]

## Syntax Description

*object-name* (Optional) Specific MIB object identifier or object name.

**dll** (Optional) Displays a list of all MIB DLL filenames and the OID supported by each DLL filename on the system.

## Command Default

None

## Command Modes

EXEC

## Command History

| Release       | Modification                                   |
|---------------|--|
| Release 2.0   | This command was introduced.                   |
| Release 3.8.0 | The <b>detailed</b> keyword was not supported. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show snmp mib** command to display a list of the MIB module instance identifiers registered on the system.

Although the **show snmp mib** command can be used to display a list of MIB OIDs registered on the system, the use of a Network Management System (NMS) application is the recommended alternative for gathering this information.

The **show snmp mib** command is intended only for network managers who are familiar with Abstract Syntax Notation One (ASN.1) syntax and the Structure of Management Information (SMI) of Open Systems Interconnection (OSI) Reference Model.

SNMP management information is viewed as a collection of managed objects residing in a virtual information store termed the *MIB*. Collections of related objects are defined in MIB modules. These modules are written using a subset of ASN.1 termed the *SMI*.

The definitions for the OIDs displayed by this command can be found in the relevant RFCs and MIB modules. For example, RFC 1907 defines the system.x, sysOREntry.x, snmp.x, and snmpTrap.x OIDs, and this information is supplemented by the extensions defined in the CISCO-SYSTEM-MIB.

Use the **detailed** keyword to display a list of the MIB module instance identifiers registered on the system. The output displays additional details, such as DLL and configuration information.

Use the **dll** keyword to display a list of the MIB modules loaded into the agent. This command can be used to find the supported MIBs.

**Note** This command produces a high volume of output if SNMP is enabled on the system. To exit from a --More-- prompt, press **Crtl-Z**.

# show snmp request type summary

To show the types of requests sent from each network management system (NMS), use the **show snmp request type summary** command in EXEC mode.

## show snmp request type summary

This command has no keywords or arguments.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show snmp request type summary** command shows these details:

| Field       | Description  |
|-------------|--|
| NMS address | IP address of the NMS that sent the request.                 |
| Get         | Number of requests of Get type.                              |
| Getnext     | Number of requests of Getnext type.                          |
| Getbulk     | Number of requests of Getbulk type.                          |
| Set         | Number of requests of Set type.                              |
| Test        | Number of requests of Test type that is part of Set request. |

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

```
RP/0/RP0/CPU0:router# show snmp request type summary
Wed Mar 12 05:17:14.643 PDT

## show snmp request overload stats

To show the number of packets dropped due to overload feature, use the **snmp request overload stats** command in EXEC mode.

### show snmp request overload stats

This command has no keywords or arguments.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This command displays the latest 100 entries.

The show snmp request overload stats command shows these details:

| Field      | Description  |
|------------|--|
| StartTime  | Time when overload control notification is received.       |
| InQInDrop  | Number of packet drops before inserting in incoming queue. |
| InQOutDrop | Number of packets dropped from incoming queue.             |
| EndTime    | Time when overload control notification ends.              |

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

```
RP/0/RP0/CPU0:router# show snmp request overload stats
```

```
Thu Mar 13 07:00:45.575 UTC
```

| StartTime           | InQInDrop | InQOutDrop | EndTime |

# show snmp statistics oid group

To show the statistics of object ID (OID), use the **show snmp statistics oid group** command in EXEC mode.

```
show snmp statistics oid group {interface | infra | route | entity}
```

| Syntax Description |                                  |
|--------------------|----------------------------------|
| <b>interface</b>   | mibd_interface sub-agent process |
| <b>infra</b>       | mibd_infra sub-agent process     |
| <b>route</b>       | mibd_route sub-agent process     |
| <b>entity</b>      | mibd_entity sub-agent process    |

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The latest 500 entries for each group is displayed and a maximum of 2000 entries is displayed for four groups.

The **show snmp statistics oid group** command shows these details:

| Field     | Description  |
|-----------|--|
| SerNum    | Unique serial number for each request processing in sub-agents.  |
| Type      | Request type.  |
| NumObj    | Number of OIDs processing in this request.   |
| MIBMGR-IN | Time stamp of request received from AIPC.  |
| PDU-IN    | Time stamp of request sent to MIB for processing. This will be offset in milli seconds from MIBMGR_IN time stamp.      |
| FROM-MIB  | Time stamp of response sent from MIB after processing. This will be offset in milli seconds from MIBMGR_IN time stamp. |
| PDU-OUT   | Time stamp of response sent to SNMP through AIPC. This will be offset in milli seconds from MIBMGR_IN.                 |
| OID       | OID info processing this request.  |

## show snmp statistics oid group

| Field   | Description  |
|---------|--|
| MIB-IN  | Time stamp of the request sent to MIB for each OID.  |
| MIB-OUT | Time stamp of response sent from MIB after processing. This will be offset in milli seconds from MIB-IN. |
| ExpNext | Request Exp-Next.  |

## Task ID

| Task ID | Operations |
|---------|------------|
|---------|------------|

|      |                |
|------|----------------|
| snmp | read,<br>write |
|------|----------------|

```
RP/0/RP0/CPU0:router# show snmp statistics oid group interface

# show snmp statistics pdu

To show if processing time of any protocol data unit (PDU) is more than threshold limit, use the **show snmp statistics pdu nms** command in EXEC mode.

**show snmp statistics pdu nms[address]**

|                           |                                |  |
|---------------------------|--------------------------------|--|
| <b>Syntax Description</b> | <b>nms</b><br><b>[address]</b> | Address of Network Management Station from which request has arrived. The PDU statistics is filtered for each NMS. |
|---------------------------|--------------------------------|--|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 5.2.2  | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The PDU processing time can exceed the threshold limit in these scenarios:

- SNMPD not able to dispatch the request to MIB because of any failures in snmpd.
- MIB response after threshold limit.
- MIB does not respond to SNMPD.

Default threshold limit is 2 seconds. To change the default threshold value, use the command:

```
Snmp-server timeouts pdu stats <1-10>
```

The maximum number of entries per network management system (NMS) is 500 and the maximum number of NMS is 30.

This command shows these details:

| Field  | Description   |
|--------|---|
| NMS    | Address of Network Management Station from which request has arrived. |
| Port   | Port number of application that requested the SNMP query.             |
| REQID  | Request ID for each PDU.  |
| Type   | Type of PDU.  |
| SerNum | The unique number generated for every request and sent to all MIBDs.  |

**show snmp statistics pdu**

| Field      | Description   |
|------------|---|
| Timeout    | If the request was timeout out set to TRUE, else set to FALSE.  |
| InputQ-In  | Time stamp of the PDU when queued into input Q.   |
| InputQ-Out | Time stamp of the PDU when queued into input Q, This will be in milliseconds, Offset from INPUT-IN time stamp.      |
| ProcQ-In   | Time stamp of the PDU when queued into Processing Q. This will be in milliseconds, Offset from INPUT-IN time stamp. |
| Response   | Time stamp in milli seconds of the PDU when response is received from sub agents. Offset from INPUT-IN time stamp.  |

**Task ID****Task ID    Operations**

---

snmp read,  
write

---

```
RP/0/RP0/CPU0:router# show snmp statistics pdu nms
Thu Mar 13 08:03:17.322 UTC
NMS: 64.103.222.6   PORT: 35028

Mar 13 08:03:15.269      0                0                 1056
```

## show snmp statistics slow oid

To show the object ID (OID) that has exceeded beyond the threshold time for processing and the number of times that the threshold limit is exceeded with the latest timestamp, use the **show snmp statistics slow oid** command in EXEC mode.

### show snmp statistics slow oid

This command has no keywords or arguments.

#### Command Modes

Global configuration

#### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 5.2.2 | This command was introduced. |

#### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Default threshold limit for this data as 500 milli seconds. To change the default value, use the command:

```
Snmp-server logging threshold oid-processing < <0-20000>
```

The latest 500 entries for each sub agent is displayed and a total of upto 2000 entries is maintained.

The **show snmp statistics slow oid** command shows these details:

| Field      | Description  |
|------------|--|
| Type       | Request type for slow OID.                             |
| Exact OID  | Requested OID from NMS.                                |
| Resp OID   | Response OID for the Request type and EXACT OID.       |
| Slow Count | Number of times OID is slow.                           |
| Slow Time  | Time taken for processing the OID in milli seconds.    |
| Time Stamp | Time stamp of the slow OID when MIB responded to MIBD. |

#### Task ID

| Task ID | Operations     |
|---------|----------------|
| snmp    | read,<br>write |

This example shows a slow OIDs that exceeds the specified threshold time.

```
RP/0/RP0/CPU0:router# show snmp statistics slow oid
```

# show snmp statistics poll oid all

To show all object IDs (OIDs) polled from all network management system (NMS) and how many times it has polled, use the **show snmp statistics poll oid all** command in EXEC mode.

For this command to work, the following configuration has to be committed:

```
(config)#snmp-server oid-poll-stats
```

## show snmp statistics poll oid all

This command has no keywords or arguments.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The maximum number of entries equals the number of OIDs that were polled. The maximum number of NMS details for each OID is 15.

The **show snmp statistics poll oid all** command shows these details:

| Field     | Description                                    |
|-----------|--|
| Object ID | OID requested from NMS.                        |
| NMS       | List of NMS IP address requested for each OID. |
| Count     | Number of times OID is polled for each NMS.    |

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

```
RP/0/RP0/CPU0:router# show snmp statistics poll oid all

```

# Show snmp statistics poll oid nms

To show which object ID (OID) is polled from which network management system (NMS) and how many times it has polled, use the **show snmp statistics poll oid nms** command in EXEC mode.

**show snmp statistics poll oid nms**<V4 / V6 address>

This command has no keywords or arguments.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show snmp statistics poll oid nms** command shows these details:

| Field     | Description                                    |
|-----------|--|
| Object ID | OID requested from NMS.                        |
| NMS       | List of NMS IP address requested for each OID. |
| Count     | Number of times OID is polled for each NMS.    |

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

```
RP/0/RP0/CPU0:router# show snmp statistics poll nms 1.2.3.4
  NMS Address   : 1.2.3.4
Object ID      Count
1.3.6.1.2.1.2.2.1.2  14
```

```
show snmp statistics slow oid [after/before] hh:mm:ss day mday year
```

## show snmp statistics slow oid [after/before] hh:mm:ss day mday year

To show the object ID (OID) that has exceeded beyond the threshold time for processing and the number of times that the threshold limit is exceeded with the latest timestamp, use the **show snmp statistics slow oid [after/before] hh:mm:ss day mday year** command in EXEC mode.

**show snmp statistics slow oid[after/before] hh:mm:ss day mday year**

This command has no keywords or arguments.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Default threshold limit for this data as 500 milli seconds. To change the default value, use the command:

```
snmp-server logging threshold oid-processing < <0-20000>
```

The latest 500 entries for each sub agent is displayed and a total of upto 2000 entries is maintained.

The **show snmp statistics slow oid [after/before] hh:mm:ss day mday year** command shows these details:

| Field      | Description  |
|------------|--|
| Type       | Request type for slow OID.                             |
| Exact OID  | Requested OID from NMS.                                |
| Resp OID   | Response OID for the Request type and EXACT OID.       |
| Slow Count | Number of times OID is slow.                           |
| Slow Time  | Time taken for processing the OID in milli seconds.    |
| Time Stamp | Time stamp of the slow OID when MIB responded to MIBD. |

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows a slow OIDs that exceeds the specified threshold time.

# show snmp mib ifmib general

To show how many requests get data from internal cache and how many requests are sent to statsd to get data, use the **show snmp mib ifmib general** command in EXEC mode.

## show snmp mib ifmib general

This command has no keywords or arguments.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Default IFMIB internal cache is 15 seconds. To change the duration, use the command:

```
snmp-server ifmib internal cache max-duration <0-60>
```

The default duration is 15 seconds, 0 seconds to disable the IFMIB internal cache.

To service the requests from Stats cache instead of Drivers, use the command:

```
snmp-server ifmib stats cache
```

The **show snmp mib ifmib general** command shows these details:

| Field            | Description  |
|------------------|--|
| Cache Hit        | Number of times the request retrieves data from IFMIB internal cache.                |
| Cache Miss       | Number of times the request processed from statsd, and not from IFMIB internal cache |
| Last Access Time | Latest time stamp of corresponding hit or miss.                                      |
| Count            | Number of times the data is retrieved.   |

The Cache Hit and Cache Miss are 32 bit counters. The maximum value is  $2^{31}$  and reset to 0 if the maximum value is exceeded.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

```
RP/0/RP0/CPU0:router# Show snmp mib ifmib general
```

Fri Mar 14 05:05:50.408 PDT

| Type       | Count | Last Access Time    |
|------------|-------|---------------------|
| Cache Hit  | 328   | Mar 14 05:05:47.480 |
| Cache Miss | 2     | Mar 14 05:05:47.386 |

## show snmp mib ifmib cache

To show the Ifindex that has exceeded the threshold time for processing, the request type and the time stamp, use the **show snmp mib ifmib cache** command in EXEC mode. The threshold time for the data to create an entry is 500 milli seconds.

### show snmp mib ifmib cache

This command has no keywords or arguments.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This command displays the latest 500 entries. An entry will be added when the difference between Cache in and Cache out time is more than 500 milli seconds. The timeout value cannot be changed.

The **show snmp mib ifmib cache** command shows these details:

| Field     | Description   |
|-----------|---|
| Index     | Interface index.  |
| MIB IN    | Time stamp of the request when IFMIB starts processing.   |
| Cache In  | Time stamp in milli seconds when data retrieval from the cache starts for the request. It is offset from MIB IN time stamp. |
| Cache Out | Time stamp in milli seconds when data is retrieved from cache. It is offset from MIB IN time stamp.                         |
| MIB Out   | Time stamp in milli seconds of the response from IF MIB. It is offset from MIB IN time stamp.                               |

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

```
RP/0/RP0/CPU0:router# show snmp mib ifmib cache
IFIndex      Type          MIB IN          CACHE IN[ms]    CACHE OUT[ms]
```

```
                MIB OUT[ms]
2             NEXT      Mar 18 07:14:41.815      4      701
              701
2             NEXT      Mar 18 07:15:36.815      0      679
              679
2             NEXT      Mar 18 07:16:00.735      0      684
              684
```

## show snmp mib ifmib statsd

To show the Ifindex that has exceeded the threshold time for processing, the request type and the time stamp, use the **show snmp mib ifmib statsd** command in EXEC mode. The threshold time for the data to create an entry is 500 milli seconds.

### show snmp mib ifmib statsd

This command has no keywords or arguments.

#### Command Modes

Global configuration

#### Command History

| Release       | Modification                 |

```

## show snmp traps details

To show the details about the traps generated for each host, the sent and drop count and the timestamp, use the **show snmp traps details** command in EXEC mode.

### show snmp traps details

This command has no keywords or arguments.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 5.2.2 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show snmp traps details** command shows these details:

| Field     | Description   |
|-----------|---|
| TrapOID   | Generated trap.   |
| Sent      | Number of times the trap sent from the host and port configured.    |
| Drop      | Number of times the trap dropped from the host and port configured. |
| Last-sent | Time stamp when the last trap was sent from the host and port.      |
| Last-drop | Time stamp when the last trap dropped from the host and port.       |
| Host      | Configured address of the host to receive traps                     |
| udp-port  | Configured port to receive traps                                    |

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

## show snmp users

To display information about the configured characteristics of Simple Network Management Protocol (SNMP) users, use the **show snmp users** command in

EXEC

mode.

**show snmp users**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

An SNMP user must be part of an SNMP group, as configured using the **snmp-server user** command.

Use the **show snmp users** command to display information about all configured users.

When configuring SNMP, you may see the logging message “Configuring snmpv3 USM user.” USM stands for the User-Based Security Model (USM) for SNMP Version 3 (SNMPv3). For further information about USM, see RFC 3414, *User-based Security Model (USM) for version 3 of the Simple Network Management Protocol (SNMPv3)*.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | snmp    | read       |

This example shows sample output from the **show snmp users** command:

```
RP/0/RP0/CPU0:router# show snmp users

User name:user1
Engine ID:localSnmpID
storage-type:nonvolatile active
```

**Table 67: show snmp users Field Descriptions**

| Field        | Definition   |
|--------------|--|
| User name    | String identifying the name of the SNMP user.  |
| Engine ID    | String identifying the name of the copy of SNMP on the device.   |
| storage-type | Settings that are set in volatile or temporary memory on the device, or in nonvolatile or persistent memory where settings remain after the device is turned off and on again. |

**Related Topics**

[snmp-server user](#), on page 684

# show snmp view

To display the configured views and the associated MIB view family name, storage type, and status, use the **show snmp view** command in

EXEC

mode.

## show snmp view

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID | Operations |
|---------|---------|------------|
|         | snmp    | read       |

This example shows sample output from the **show snmp view** command:

```
RP/0/RP0/CPU0:router# show snmp view

view1 1.3 - included nonVolatile active
v1default 1.3.6.1 - included nonVolatile active
```

# snmp-server chassis-id

To provide a message line identifying the Simple Network Management Protocol (SNMP) server serial number, use the **snmp-server chassis-id** command in

global configuration

mode. To restore the default value, if any, use the **no** form of this command.

**snmp-server chassis-id** *serial-number*  
**no snmp-server chassis-id**

## Syntax Description

*serial-number* Unique identification string to identify the chassis serial number.

## Command Default

On hardware platforms, where the serial number can be read by the device, the default is the serial number. For example, some Cisco devices have default chassis ID values of their serial numbers.

## Command Modes

Global configuration

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server chassis-id** command to provide a message line identifying the SNMP server serial number.

The chassis ID message can be displayed with the **show snmp** command.

## Task ID

| Task ID | Operations     |
|---------|----------------|
| snmp    | read,<br>write |

The following example shows how to specify the chassis serial number 1234456:

```
RP/0/RP0/CPU0:router# snmp-server chassis-id 1234456
```

## Related Topics

[show snmp](#), on page 536

## snmp-server community

To configure the community access string to permit access to the Simple Network Management Protocol (SNMP), use the **snmp-server community** command in

global configuration

mode. To remove the specified community string, use the **no** form of this command.

```
snmp-server community [{clear | encrypted}] community-string [view view-name] [{RO | RW}]
[{{SDROwner | SystemOwner}}] [access-list-name]
no snmp-server community community-string
```

### Syntax Description

|                         |   |
|-------------------------|---|
| <b>clear</b>            | (Optional) Specifies that the entered <i>community-string</i> is clear text and should be encrypted when displayed by the <b>show running</b> command.  |
| <b>encrypted</b>        | (Optional) Specifies that the entered <i>community-string</i> is encrypted text and should be displayed as such by the <b>show running</b> command.   |
| <i>community-string</i> | Community string that acts like a password and permits access to the SNMP protocol. The maximum length of the <i>community-string</i> argument is 32 alphabetic characters.<br><br>If the <b>clear</b> keyword was used, <i>community-string</i> is assumed to be clear text. If the <b>encrypted</b> keyword was used, <i>community-string</i> is assumed to be encrypted. If neither was used, <i>community-string</i> is assumed to be clear text. |
| <b>view view-name</b>   | (Optional) Specifies the name of a previously defined view. The view defines the objects available to the community.  |
| <b>RO</b>               | (Optional) Specifies read-only access. Authorized management stations are able only to retrieve MIB objects.  |
| <b>RW</b>               | (Optional) Specifies read-write access. Authorized management stations are able both to retrieve and to modify MIB objects.   |
| <b>SDROwner</b>         | (Optional) Limits access to the owner service domain router (SDR).  |
| <b>SystemOwner</b>      | (Optional) Provides system-wide access including access to all non-owner SDRs.  |
| <i>access-list-name</i> | (Optional) Name of an access list of IP addresses allowed to use the community string to gain access to the SNMP agent.   |

### Command Default

By default, an SNMP community string permits read-only access to all MIB objects.

By default, a community string is assigned to the SDR owner.

### Command Modes

Global configuration

### Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

| Release       | Modification  |
|---------------|---|
| Release 3.3.0 | The optional keywords <b>LROwner</b> and <b>SystemOwner</b> were added.   |
| Release 3.6.0 | The <b>LROwner</b> keyword was changed to <b>SDROwner</b> .<br>The <b>clear</b> and <b>encrypted</b> keywords were added. |
| Release 4.2.0 | IPv6 was supported.   |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server community** command to configure the community access string to permit access to SNMP.

To remove the specified community string, use the **no** form of this command.

Use the **clear** keyword to specify that the clear text community string you enter is displayed encrypted in the **show running** command output. To enter an encrypted string, use the **encrypted** keyword. To enter a clear text community string that is not encrypted by the system, use neither of these keywords.

When the **snmp-server community** command is entered with the **SDROwner** keyword, SNMP access is granted only to the MIB object instances in the owner SDR.

When the **snmp-server community** command is entered with the **SystemOwner** keyword, SNMP access is granted to all SDRs in the system.

**Note**

In a non-owner SDR, a community name provides access only to the object instances that belong to that SDR, regardless of the access privilege assigned to the community name. Access to the owner SDR and system-wide access privileges are available only from the owner SDR.

**Task ID**

| Task ID | Operations     |
|---------|----------------|
| snmp    | read,<br>write |

This example shows how to assign the string comaccess to SNMP, allowing read-only access, and to specify that IP access list 4 can use the community string:

```
RP/0/RP0/CPU0:router(config)# snmp-server community comaccess ro 4
```

The following example shows how to assign the string mgr to SNMP, allowing read-write access to the objects in the restricted view:

```
RP/0/RP0/CPU0:router(config)# snmp-server community mgr view restricted rw
```

This example shows how to remove the community comaccess:

```
RP/0/RP0/CPU0:router(config)#no snmp-server community comaccess
```

## snmp-server community-map

To associate a Simple Network Management Protocol (SNMP) community with an SNMP context, security name, or a target-list use the **snmp-server community-map** command in

global configuration

mode. To change an SNMP community mapping to its default mapping, use the **no** form of this command.

```
snmp-server community-map [{clear | encrypted}] community-string [context context-name]
[security-name security-name] [target-list target]
no snmp-server community-map [{clear | encrypted}] community-string
```

| Syntax Description                        |            |   |
|---|------------|---|
| <b>clear</b>                              | (Optional) | Specifies that the <i>community-string</i> argument is clear text.                    |
| <b>encrypted</b>                          | (Optional) | Specifies that the <i>community-string</i> argument is encrypted text.                |
| <i>community-string</i>                   |            | Name of the community.  |
| <b>context</b> <i>context-name</i>        | (Optional) | Name of the SNMP context to which this community name is to be mapped.                |
| <b>security-name</b> <i>security-name</i> | (Optional) | Security name for this community. By default, the <i>string</i> is the security name. |
| <b>target-list</b> <i>target</i>          | (Optional) | Name of the target list for this community.   |

**Command Default** The value of the *community-string* argument is also the security name.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server community-map** command to map an SNMPv1 or SNMPv2c community name to one or more of the following:

- **context name**—Maps a community name to a specific SNMP context name. This allows MIB instances in an SNMP context to be accessed through SNMPv1 or SNMPv2c using this community name.
- **security name**—By default, the community name is used to authenticate SNMPv1 and SNMPv2c. Configure a security name for a community name to override the default and authenticate SNMP with the security name.
- **target**—Target list identifies a list of valid hosts from which SNMP access can be made using a specific security name. When such mapping is done for a particular community name, SNMP access is allowed only from hosts included in the target list.

Use the **clear** keyword to specify that the clear text community string you enter is displayed encrypted in the **show running** command output. To enter an encrypted string, use the **encrypted** keyword. To enter a clear text community string that is not encrypted by the system, use neither of these keywords.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example maps the community name “sample 2” to the SNMP context name “sample1”:

```
RP/0/RP0/CPU0:router(config)# snmp-server community-map sample2 context sample1
```

## snmp-server contact

To set the Simple Network Management Protocol (SNMP) system contact, use the **snmp-server contact** command in

global configuration

mode. To remove the system contact information, use the **no** form of this command.

**snmp-server contact** *system-contact-string*

**no snmp-server contact**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>system-contact-string</i> String that describes the system contact information. The maximum string length is 255 alphanumeric characters. |
|---------------------------|--|

|                        |                           |
|------------------------|---------------------------|
| <b>Command Default</b> | No system contact is set. |
|------------------------|---------------------------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **snmp-server contact** command to set the system contact string. Use the **no** form of this command to remove the system contact information.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | snmp           | read,<br>write    |

This example shows how to specify a system contact string:

```
RP/0/RP0/CPU0:router(config)# snmp-server contact Dial System Operator at beeper # 27345
```

## snmp-server context

To create a Simple Network Management Protocol (SNMP) context, use the **snmp-server context** command in

global configuration

mode. To remove an SNMP context, use the **no** form of this command.

**snmp-server context** *context-name*  
**no snmp-server context** *context-name*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>context-name</i> Name of the SNMP context. |
|---------------------------|---|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.3.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

This command creates an SNMP context. By default, all the SNMP MIB instances are in a default context. Create an SNMP context and map it to a particular feature to enable similar instances of the same object to co-exist in different SNMP contexts.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | snmp           | read,<br>write    |

This example creates a new SNMP context named “sample1.”

```
RP/0/RP0/CPU0:router(config)# snmp-server context sample1
```

### Related Topics

## snmp-server context mapping

To map an SNMP context with a protocol instance, topology or VRF entity, use the **snmp-server context mapping** command in global configuration mode.

**snmp-server context mapping** *context-name* [**feature** *feature-name*] [**instance** *instance-name*] [**topology** *topology-name*] [**vrf** *vrf-name*]

### Syntax Description

|                                      |   |
|--------------------------------------|---|
| <b>context-name</b>                  | Name of the SNMP context.   |
| <b>feature</b> <i>feature-name</i>   | Specifies the protocol for which to map the context. Available options are: <ul style="list-style-type: none"> <li>• <b>bridge</b>—Layer 2 VPN bridge</li> <li>• <b>vrf</b>—Virtual Routing and Forwarding</li> </ul> |
| <b>instance</b> <i>instance-name</i> | Maps the context to the specified protocol instance.  |
| <b>topology</b> <i>topology-name</i> | Maps the context to the specified protocol topology.  |
| <b>vrf</b> <i>vrf-name</i>           | Maps the context to the specified VRF logical entity.   |

### Command Default

No context mappings exist by default.

### Command Modes

Global configuration

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.2.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

A device can support multiple instances of a logical network entity, such as protocol instances or VRFs. Most existing MIBs cannot distinguish between these multiple logical network entities. For example, the original OSPF-MIB assumes a single protocol instance on a device, but you can now configure multiple OSPF instances on a device.

The **snmp-server context mapping** command maps a context to a protocol instance, topology or VRF logical entity.

### Note

The **snmp-server context mapping** command does not work for OSPF and OSPFv3. Refer to the **snmp context** commands.

| Task ID | Task ID | Operation      |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example illustrates how to map an snmp context to an OSPF instance:

```
RP/0/RP0/CPU0:router(config)# snmp-server context mapping con5 feature ospf instance in1
```

### Related Topics

[snmp context \(OSPFv3\)](#)

# snmp-server drop report acl

To apply an ACL policy for restricting an SNMPv3 unknown engine-id report to be sent out to NMS, use the **snmp-server drop report acl** command in the configuration mode.

**snmp-server drop report acl IPv4** *IPv4-acl-name* **IPv6** *IPv6-acl-name*

| Syntax Description | Parameter                           | Description                                    |
|--------------------|-------------------------------------|--|
|                    | <b>acl</b>                          | Specifies IP Access Control Lists (ACL) policy |
|                    | <b>IPv4</b><br><i>IPv4-acl-name</i> | Defines an IPv4 ACL name.                      |
|                    | <b>IPv6</b><br><i>IPv6-acl-name</i> | Defines an IPv6 ACL name.                      |

**Command Default** Unknown engine-id reports will be sent to all polling stations (even if other ACLs are configured).

**Command Modes** Configuration mode

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 6.2.3 | This command was introduced. |

**Usage Guidelines** To drop an unknown engine-id report, you can either configure IPv4/IPv6 ACL name or both. When router is polled with wrong engine-id or no engine-id during a snmpv3 packet exchange, the unknown engine-id report will be sent based on the ACL policy that is configured.

Unknown engine-id reports will be sent only to polling station addresses that are permitted by ACL.

| Task ID | Task | Operation      |
|---------|------|----------------|
|         | snmp | read,<br>write |

## Example

This example shows how to configure the SNMP server to drop the unknown engine-id report:

```
RP/0/RP0/CPU0:router (config) # snmp-server drop report acl IPv4 nms-block IPv6 nms-block-ipv6
```

## snmp-server drop unknown-user

To avoid error PDUs being sent out of router when polled with incorrect SNMPv3 user name, use the **snmp-server drop unknown-user** command in the appropriate mode. If the configuration is not set, by default it will respond with error PDUs.

### snmp-server drop unknown-user

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <b>drop unknown-user</b> Drop the error PDUs to be sent when router is polled with incorrect SNMPv3 user name. |
|---------------------------|--|

|                        |  |
|------------------------|--|
| <b>Command Default</b> | Unknown error PDUs will be sent when router is polled with incorrect SNMPv3 user name. |
|------------------------|--|

|                      |           |
|----------------------|-----------|
| <b>Command Modes</b> | XR config |
|----------------------|-----------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 6.2.3  | This command was introduced. |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | No specific guidelines impact the use of this command. |
|-------------------------|--|

| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|----------------|----------------|------------------|
|                | snmp           | read,<br>write   |

### Example

This example shows how to configure the SNMP server to drop the error PDUs:

```
RP/0/RP0/CPU0:router (config) # snmp-sever drop unknown-user
```

# snmp-server engineid local

To specify Simple Network Management Protocol (SNMP) engine ID on the local device, use the **snmp-server engineid local** command in

global configuration

mode. To return the engine ID to the default, use the **no** form of this command.

**snmp-server engineid local** *engine-id*  
**no snmp-server engineid local** *engine-id*

| <b>Syntax Description</b> | <i>engine-id</i> Character string that identifies the engine ID. Consists of up to 24 characters in hexadecimal format. Each hexadecimal number is separated by a colon (:).  |         |              |             |                              |
|---------------------------|---|---------|--------------|-------------|------------------------------|
| <b>Command Default</b>    | An SNMP engine ID is generated automatically.   |         |              |             |                              |
| <b>Command Modes</b>      | Global configuration  |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification  |         |              |             |                              |
| Release 2.0               | This command was introduced.  |         |              |             |                              |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |         |              |             |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>snmp</td> <td>read,<br/>write</td> </tr> </tbody> </table>   | Task ID | Operations   | snmp        | read,<br>write               |
| Task ID                   | Operations  |         |              |             |                              |
| snmp                      | read,<br>write  |         |              |             |                              |

This example shows how to configure the SNMP engine ID on the local device:

```
RP/0/RP0/CPU0:router(config)# snmp-server engineID local 00:00:00:09:00:00:00:a1:61:6c:20:61
```

## Related Topics

## snmp-server engineid remote

To specify a Simple Network Management Protocol (SNMP) engine ID on a remote device, use the **snmp-server engineid remote** command in

global configuration

mode. To return the engine ID to the default, use the **no** form of this command.

**snmp-server engineid remote** *ip-address engine-id udp-port port*  
**no snmp-server engineid remote** *ip-address engine-id udp-port port*

| Syntax Description |                      |   |
|--------------------|----------------------|---|
|                    | <i>ip-address</i>    | IP address of remote SNMP notification host   |
|                    | <i>engine-id</i>     | Character string that identifies the engine ID. Consists of up to 24 characters in hexadecimal format. Each hexadecimal number is separated by a colon (:). |
|                    | <b>udp-port port</b> | (Optional) Specifies the User Datagram Protocol (UDP) port of the host to use. Range is from 1 to 65535. The default UDP port is 161.                       |

**Command Default** An SNMP engine ID is generated automatically.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |
|                 | Release 4.2.0 | Support for IPv6 was added.  |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The IP address of the remote host can be in either IPv4 or IPv6 format.

| Task ID | Task ID | Operation      |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to configure the SNMP engine ID on the local device:

```
RP/0/RP0/CPU0:Router(config)# snmp-server engineID remote 172.16.4.1
00:00:00:09:00:00:00:a1:61:6c:20:61
```

# snmp-server entityindex persist

To enable the persistent storage of ENTITY-MIB data across process restarts, switchovers, and device reloads, use the **snmp-server entityindex persist** command in

global configuration

mode. To disable the persistent storage of ENTITY-MIB data, use the **no** form of this command.

**snmp-server entityindex persist**  
**no snmp-server entityindex persist**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.9.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID | Operation      |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

## Example

This example illustrates how to enable persistent storage of ENTITY-MIB indices:

```
RP/0/RP0/CPU0:router(config)# snmp-server entityindex persist
```

## Related Topics

[snmp-server mibs cbqosmib persist](#), on page 628

## snmp-server group

To configure a new Simple Network Management Protocol (SNMP) group, or a table that maps SNMP users to SNMP views, use the **snmp-server group** command in

global configuration

mode. To remove a specified SNMP group, use the **no** form of this command.

```
snmp-server group name {v1 | v2c | v3 {auth | noauth | priv}} [read view] [write view] [notify view] [context context-name] [access-list-name]
```

```
no snmp-server group name
```

| Syntax Description                 |   |
|------------------------------------|---|
| <i>name</i>                        | Name of the group.  |
| <b>v1</b>                          | Specifies a group that uses the SNMPv1 security model. The SNMP v1 security model is the least secure of the possible security models.                          |
| <b>v2c</b>                         | Specifies a group that uses the SNMPv2c security model. The SNMPv2c security model is the second least secure of the possible security models.                  |
| <b>v3</b>                          | Specifies a group that uses the SNMPv3 security model. The SNMP v3 security is the most secure of the possible security models.                                 |
| <b>auth</b>                        | Specifies authentication of a packet without encrypting it.   |
| <b>noauth</b>                      | Specifies no authentication of a packet.  |
| <b>priv</b>                        | Specifies authentication of a packet with encryption.   |
| <b>read</b> <i>view</i>            | (Optional) Specifies a read view string (not to exceed 64 characters) that is the name of the view that allows only the contents of the agent to be viewed.     |
| <b>write</b> <i>view</i>           | (Optional) Specifies a write view string (not to exceed 64 characters) that is the name of the view used to enter data and configure the contents of the agent. |
| <b>notify</b> <i>view</i>          | (Optional) Specifies a notify view string (not to exceed 64 characters) that is the name of the view used to specify a notify or trap.                          |
| <b>context</b> <i>context-name</i> | (Optional) Specifies the SNMP context to associate with this SNMP group and associated views.   |
| <i>access-list-name</i>            | (Optional) Access list string (not to exceed 64 characters) that is the name of the access list.  |

**Command Default** See [Table 68: snmp-server group Default Descriptions, on page 607](#).

**Command Modes** Global configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

| Release       | Modification   |
|---------------|--|
| Release 3.2   | The <b>access</b> keyword was removed.   |
| Release 3.3.0 | Support was added for the <b>context</b> <i>context-name</i> keyword and argument. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This table describes the default values for the different views:

**Table 68: snmp-server group Default Descriptions**

| Default            | Definition  |
|--------------------|---|
| <b>read view</b>   | Assumed to be every object belonging to the Internet (1.3.6.1) object identifier (OID) space, unless the user uses the <b>read</b> option to override this state.   |
| <b>write view</b>  | Nothing is defined for the write view (that is, the null OID). You must configure write access.   |
| <b>notify view</b> | Nothing is defined for the notify view (that is, the null OID). If a view is specified, any notifications in that view that are generated are sent to all users associated with the group (provided an SNMP server host configuration exists for the user). |

## Configuring Notify Views

Do not specify a notify view when configuring an SNMP group for the following reasons:

- The **snmp-server host** command autogenerates a notify view for the user, and then adds it to the group associated with that user.
- Modifying the notify view of the group affects all users associated with that group.

The notify view option is available for two reasons:

- If a group has a notify view that is set using SNMP, you may need to change the notify view.
- The **snmp-server host** command may have been configured before the **snmp-server group** command. In this case, reconfigure the **snmp-server host** command or specify the appropriate notify view.

Instead of specifying the notify view for a group as part of the **snmp-server group** command, use the following commands in global configuration mode:

- **snmp-server user**—Configures an SNMP user.
- **snmp-server group**—Configures an SNMP group, without adding a notify view.
- **snmp-server host**—Autogenerates the notify view by specifying the recipient of a trap operation.

## Working with Passwords and Digests

No default values exist for authentication or privacy algorithms when this command is configured. In addition, no default passwords exist. The minimum length for a password is one character, although we recommend using eight characters for security. A plain-text password or localized Message Digest 5 (MD5) password can be specified. Forgotten passwords cannot be recovered, and the user must be reconfigured.

### SNMP Contexts

SNMP contexts provide Virtual Private Network (VPN) users with a secure way of accessing MIB data. When a VPN is associated with a context, that VPN's specific MIB data exists in that context. Associating a VPN with a context enables service providers to manage networks with multiple VPNs. Creating and associating a context with a VPN enables a provider to prevent the users of one VPN from accessing information about users of other VPNs on the same networking device.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

The following example shows how to configure an SNMP version 3 group named group1 that requires the authentication of packets with encryption:

```
RP/0/RP0/CPU0:router(config)# snmp-server group group1 v3 priv
```

# snmp-server host

To specify the recipient of a Simple Network Management Protocol (SNMP) notification operation, use the **snmp-server host** command in

global configuration

mode. To remove the specified host, use the **no** form of this command.

```
snmp-server host address [{clear | encrypted}] [informs] [traps] [version {1 | 2c | 3 {auth | noauth | priv}}] community-string [udp-port port] [notification-type]
```

```
nosnmp-server host address [{clear | encrypted}] [informs] [traps] [version {1 | 2c | 3 {auth | noauth | priv}}] community-string [udp-port port] [notification-type]
```

## Syntax Description

|                             |   |
|-----------------------------|---|
| <i>address</i>              | Name or IP address of the host (the targeted recipient).  |
| <b>clear</b>                | (Optional) Specifies that the <i>community-string</i> argument is clear text.   |
| <b>encrypted</b>            | (Optional) Specifies that the <i>community-string</i> argument is encrypted text.   |
| <b>informs</b>              | (Optional) Specifies to send inform messages to this host.  |
| <b>traps</b>                | (Optional) Specifies that notifications should be sent as traps. This is the default.   |
| <b>version</b>              | (Optional) Specifies the version of the SNMP used to send the traps.  |
| <b>1</b>                    | Specifies SNMPv1, the default.  |
| <b>2c</b>                   | Specifies SNMPv2C.  |
| <b>3</b>                    | Specifies SNMPv3. Version 3 is the most secure model because it allows packet encryption. If you specify the SNMPv3 keyword, you must specify the security level.   |
| <b>auth</b>                 | Enables Message Digest 5 (MD5) algorithm and Secure Hash Algorithm (SHA) packet authentication.   |
| <b>noauth</b>               | Specifies that the noAuthNoPriv security level applies to this host. This is the default security level for SNMPv3.   |
| <b>priv</b>                 | Enables Data Encryption Standard (DES) packet encryption (also called “privacy”).   |
| <i>community-string</i>     | Password-like community string sent with the notification operation. We recommend defining this string using the <b>snmp-server community</b> command prior to using the <b>snmp-server host</b> command. |
| <b>udp-port</b> <i>port</i> | (Optional) Specifies the User Datagram Protocol (UDP) port of the host to use. Range is from 1 to 65535. The default UDP port is 161.   |

*notification-type*

(Optional) Type of notification to be sent to the host. If no type is specified, all available notifications are sent. The notification type can be one or more of these keywords:

- **bgp** —Enables SNMP Border Gateway Protocol Version 4 (BGPv4) traps.
- **config** —Controls configuration notifications, as defined in the CISCO-CONFIG-MAN-MIB (enterprise 1.3.6.1.4.1.9.9.43.2). The notification type is (1) ciscoConfigManEvent.
- **copy-complete** —Enables CISCO-CONFIG-COPY-MIB ccCopyCompletion traps.
- **entity** —Controls Entity MIB modification notifications. This notification type is defined in the ENTITY-MIB (enterprise 1.3.6.1.2.1.47.2) as: (1) entConfigChange.
- **fabric** —Enables SNMP fabric traps.
- **fru-ctrl** —Enables SNMP entity field-replaceable unit (FRU) control traps.
- **mpls** —Enables SNMP Multiprotocol Label Switching (MPLS) traps.
- **sensor** —Enables SNMP entity sensor traps.
- **snmp** —Enables SNMP traps.
- **syslog** —Controls error message notifications (Cisco-syslog-MIB). Specify the level of messages to be sent with the **logging history** command.

**Command Default**

This command is disabled by default. No notifications are sent.

The default UDP port is 161.

When this command is entered without keywords, the default is to send all trap types to the host.

If no version keyword is entered, the default is version 1.

If version 3 is specified, but the security level is not specified, the default security level is noauth.

**Command Modes**

Global configuration

**Command History**

| Release       | Modification                          |
|---------------|---------------------------------------|
| Release 2.0   | This command was introduced.          |
| Release 4.1.0 | The <b>informs</b> keyword was added. |
| Release 4.2.0 | Support for IPv6 was added.           |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

SNMP notifications can be sent as traps. Traps are unreliable because the receiver does not send acknowledgments when it receives traps. The sender cannot determine if the traps were received. Traps are discarded as soon as they are sent. Traps are also sent only once.

When the **snmp-server host** command is not entered, no notifications are sent. To configure the device to send SNMP notifications, configure at least one **snmp-server host** command. When the command is entered without keywords, all trap types are enabled for the host.

To enable multiple hosts, issue a separate **snmp-server host** command for each host. You can specify multiple notification types in the command for each host.

When multiple **snmp-server host** commands are given for the same host and kind of notification (trap), each succeeding **snmp-server host** command overwrites the previous command. Only the last **snmp-server host** command is in effect. For example, if an **snmp-server host** command with the **traps** keyword is entered for a host and then another command with the **traps** keyword is entered for the same host, the second command replaces the first.

Either a host name or IP address can be used to specify the host. Both IPv4 and IPv6 IP address formats are supported.

The **snmp-server host** command is used with the **snmp-server engineid** command. Use the **snmp-server traps** command to specify which SNMP notifications are sent globally. For a host to receive most notifications, at least one **snmp-server traps** command and the **snmp-server host** command for that host must be enabled.

However, some notification types cannot be controlled with the **snmp-server traps** command. For example, some notification types are always enabled. Other notification types are enabled by a different command.

The availability of a notification-type depends on the device type and Cisco software features supported on the device.

To display which notification types are available on the system, use the question mark (?) online help function at the end of the **snmp-server host** command.

The **no snmp-server host** command used with no keywords disables traps.

Use the **clear** keyword to specify that the clear text community string you enter is displayed encrypted in the **show running** command output. To enter an encrypted string, use the **encrypted** keyword. To enter a clear text community string that is not encrypted by the system, use neither of these keywords.

If the **informs** keyword is used, the SNMP version can be only SNMPv2C or SNMPv3.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to send RFC 1157 SNMP traps to the host specified by the name myhost.cisco.com. Other traps are enabled, but only SNMP traps are sent because only the **snmp** keyword is specified in the **snmp-server host** command. The community string is defined as comaccess.

```
RP/0/RP0/CPU0:router(config)# snmp-server traps
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com comaccess snmp
```

This example shows how to send the SNMP traps to address 172.30.2.160:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps snmp
RP/0/RP0/CPU0:router(config)# snmp-server host 172.30.2.160 public snmp
```

This example shows how to enable the router to send all traps to the host, myhost.cisco.com, using the community string public:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com public
```

This example shows how to prevent traps from being sent to any host. The BGP traps are enabled for all hosts, but only the configuration traps are enabled to be sent to a host.

```
RP/0/RP0/CPU0:router(config)# snmp-server traps bgp
RP/0/RP0/CPU0:router(config)# snmp-server host hostabc public config
```

This example shows how to send SNMPv3 informs to a host:

```
RP/0/RP0/CPU0:router(config)# snmp-server host 172.30.2.160 informs version 3
```

# snmp-server ifindex persist

To enable ifIndex persistence globally on all Simple Network Management Protocol (SNMP) interfaces, use the **snmp-server ifindex persist** command in global configuration mode. To disable global interface persistence, use the **no** form of this command.

**snmp-server ifindex persist**  
**no snmp-server ifindex persist**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Global interface persistence is disabled.

**Command Modes** Global configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server ifindex persist** command to enable ifIndex persistence on all interfaces that have entries in the ifIndex table of the IF-MIB. When enabled, this command retains the mapping between the ifName object values and the ifIndex object values (generated from the IF-MIB) persistent during reloads, allowing for consistent identification of specific interfaces using SNMP. Applications such as device inventory, billing, and fault detection depend on this feature.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to enable ifIndex persistence globally:

```
RP/0/RP0/CPU0:router(config)# snmp-server ifindex persist
```

## snmp-server ifmib ifalias long

To enable the ifAlias IF-MIB object to accept an interface alias name that exceeds the 64-byte default, use the **snmp-server ifmib ifalias long** command. Use the **no** form of this command to revert to the default length.

**snmp-server ifmib ifalias long**  
**no snmp-server ifmib ifalias long**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Global interface persistence is disabled.  
 The alias name is 64 bytes in length.

**Command Modes** Global configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server ifmib ifalias long** command to enable the IF-MIB object ifAlias to accept an interface alias name that is greater than 64 bytes in length. The default length for the alias name is 64 bytes.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to enable the IF-MIB object ifAlias:

```
RP/0/RP0/CPU0:router(config)# snmp-server ifmib ifalias long
RP/0/RP0/CPU0:router(config)# exit
```

```
Uncommitted changes found, commit them before exiting(yes/no/cancel)? [cancel]:yes
RP/0/RP0/CPU0:router#
```

# snmp-server ifmib internal cache max-duration

To configure the refresh interval for the IF-MIB statistics cache, use the **snmp-server ifmib internal cache max-duration** command in global configuration mode. To revert to the default cache interval, use the **no** form of this command.

**snmp-server ifmib internal cache max-duration** *timeout*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>timeout</i> Length of time before the cache is refreshed. Values can range from 0 to 60 seconds. The default is 15. |
|---------------------------|--|

|                        |                             |
|------------------------|-----------------------------|
| <b>Command Default</b> | <i>timeout</i> : 15 seconds |
|------------------------|-----------------------------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.2.3  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

The **snmp-server ifmib internal cache max-duration** command controls the refresh interval of the cache. If the *timeout* value in the **snmp-server ifmib internal cache max-duration** command is set to zero, the cache is disabled. By default, the counters are cached for 15 secs in the ifmib internal cache, after which it will be discarded.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | snmp           | read,<br>write   |

This example shows how to change the refresh interval for the IF-MIB statistics cache.

```
RP/0/RP0/CPU0:routerrouter(config)# snmp-server ifmib internal cache max-duration 60
```

## Related Topics

[snmp-server ifmib stats cache](#), on page 616

# snmp-server ifmib stats cache

To enable retrieval of cached statistics instead of real-time statistics, use the **snmp-server ifmib stats cache** command. To revert to the default, use the **no** form of this command.

**snmp-server ifmib stats cache**  
**no snmp-server ifmib stats cache**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Cached statistics are not enabled.

**Command Modes** Global configuration

| Command History | Release       | Modification                    |
|-----------------|---------------|---------------------------------|
|                 | Release 3.3.2 | This command was introduced.    |
|                 | Release 3.4.0 | This command was not supported. |
|                 | Release 3.5.0 | This command was supported      |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Cisco IOS XR statistics infrastructure maintains a cache of statistics for all interfaces. This cache is updated every 30 seconds. Use the **snmp-server ifmib stats cache** command to enable the IF-MIB to retrieve these cached statistics rather than real-time statistics. Accessing cached statistics is less CPU-intensive than accessing real-time statistics.

| Task ID | Task Operations ID  |
|---------|---------------------|
|         | snmp read,<br>write |

This example shows how to enable the IF-MIB caches statistics:

```
RP/0/RP0/CPU0:router(config)# snmp-server ifmib stats cache
RP/0/RP0/CPU0:router(config)# exit
```

```
Uncommitted changes found, commit them before exiting(yes/no/cancel)? [cancel]:yes
RP/0/RP0/CPU0:router#
```

# snmp-server inform

To configure Simple Network Management Protocol (SNMP) inform message options, use the **snmp-server inform** command in global configuration mode. To revert to the default informs options, use the **no** form of this command.

```
snmp-server inform {pending max-no | retries no-retries | timeout seconds}
no snmp-server inform {pending max-no | retries no-retries | timeout seconds}
```

| Syntax Description | pending max-no   | retries no-retries  | timeout seconds   |
|--------------------|--|---|---|
|                    | Specifies the maximum number of inform messages to hold in the queue. The default is 25. | Specifies the retry count for inform messages. Values can be from 1 to 100. The default is three. | Specifies the inform message timeout value in seconds. The default is 15. |

**Command Default** None

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To enable the sending of SNMP inform messages, use the **snmp-server host** command with the **informs** keyword. When SNMP server informs are enabled, the SNMP version can be only SNMPv2C or SNMPv3.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to configure SNMP inform messages:

```
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com informs comaccess
RP/0/RP0/CPU0:router(config)# snmp-server inform pending 40
RP/0/RP0/CPU0:router(config)# snmp-server inform retries 10
```

## snmp-server interface subset

To enter snmp-server interface subset configuration mode for a set of interfaces, use the **snmp-server interface subset** command in global configuration mode. To revert to the default interface settings, use the **no** form of this command.

**snmp-server interface subset** *subset-number* **regular-expression** *expression*  
**no snmp-server interface subset** *subset-number*

|                           |   |  |
|---------------------------|---|--|
| <b>Syntax Description</b> | <i>subset-number</i>                        | Identifying number of the interface subset, which also indicates its relative priority.  |
|                           | <b>regular-expression</b> <i>expression</i> | Specifies for which subset of interfaces to enter snmp-server interface subset configuration mode. The <i>expression</i> argument must be entered surrounded by double quotes. |
| <b>Command Default</b>    | None  |  |
| <b>Command Modes</b>      | Global configuration                        |  |
| <b>Command History</b>    | <b>Release</b>                              | <b>Modification</b>  |
|                           | Release 3.9.0                               | This command was introduced.   |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The *subset-number* argument is used to set the priority for an interface that matches more than one configured regular expressions. Lower values of the *subset-number* have a higher priority. If a single interface becomes part of a multiple-interface configured regular expression, the configuration with the lower *subset-number* value is applied.

Regular expressions have two constraints:

- Regular expressions must always be entered within double quotes to ensure that the CLI interprets each character correctly.
- All characters that are part of a regular expression are considered regular characters with no special meaning. In order to enter special characters, such as "\" or "?," they must be preceded by the backslash character "\". For example, to enter the regular expression ([A-Z][A-Z0-9]\*)b[^>]\*>(.\*)<^1, you would enter ([A-Z][A-Z0-9]\*)\b[^>]\*>(.\*)<^1.

Refer to the *Understanding Regular Expressions, Special Characters, and Patterns* module in *Cisco IOS XR Getting Started Guide for the Cisco CRS Router* for more information regarding regular expressions.

From the snmp-server interface mode of a subset of interfaces, SNMP linkUp and linkDown notifications can be enabled or disabled using the **notification linkupdown disable** command.

| Task ID | Task ID | Operation      |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example illustrates how to configure all Gigabit Ethernet interfaces:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# snmp-server int subset 2
regular-expression "^Gig[a-zA-Z]+[0-9/]+\."
```

## snmp-server ipv4 dscp

To mark packets with a specific differentiated services code point (DSCP) value, use the **snmp-server ipv4 dscp** command in global configuration mode. To remove matching criteria, use the **no** form of this command.

```
snmp-server ipv4 dscp value
no snmp-server ipv4 dscp [value]
```

### Syntax Description

*value* Value of the DSCP. The DSCP value can be a number from 0 to 63, or it can be one of the following keywords: **default**, **ef**, **af11**, **af12**, **af13**, **af21**, **af22**, **af23**, **af31**, **af32**, **af33**, **af41**, **af42**, **af43**, **cs1**, **cs2**, **cs3**, **cs4**, **cs5**, **cs6**, **cs7**.

### Command Default

The IP DSCP default value for SNMP traffic is 0.

### Command Modes

Global configuration

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.6.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server ipv4 dscp** command to specify an IP DSCP value to give SNMP traffic higher or lower priority in your network.

### Task ID

| Task ID | Operations     |
|---------|----------------|
| snmp    | read,<br>write |

This example shows how to configure the DSCP value to af32:

```
RP/0/RP0/CPU0:router(config)# snmp-server ipv4 dscp af32
```

# snmp-server ipv4 precedence

To mark packets with a specific precedence level to use for packet matching, use the **snmp-server ipv4 precedence** command in global configuration mode. To restore the system to its default interval values, use the **no** form of this command.

```
snmp-server ipv4 precedence value
no snmp-server ipv4 precedence [value]
```

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <p><i>value</i> Value of the precedence. The precedence value can be a number from 0 to 7, or it can be one of the following keywords:</p> <p><b>critical</b><br/>Set packets with critical precedence (5)</p> <p><b>flash</b><br/>Set packets with flash precedence (3)</p> <p><b>flash-override</b><br/>Set packets with flash override precedence (4)</p> <p><b>immediate</b><br/>Set packets with immediate precedence (2)</p> <p><b>internet</b><br/>Set packets with internetwork control precedence (6)</p> <p><b>network</b><br/>Set packets with network control precedence (7)</p> <p><b>priority</b><br/>Set packets with priority precedence (1)</p> <p><b>routine</b><br/>Set packets with routine precedence (0)</p> |
|---------------------------|--|

|                        |  |
|------------------------|--|
| <b>Command Default</b> | The IP Precedence default value for SNMP traffic is 0. |
|------------------------|--|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.6.0</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | Release 3.6.0 | This command was introduced. |
|------------------------|---|---------|--------------|---------------|------------------------------|
| Release                | Modification  |         |              |               |                              |
| Release 3.6.0          | This command was introduced.  |         |              |               |                              |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **snmp-server ipv4 precedence** command to specify an IP Precedence value to give SNMP traffic higher or lower priority in your network.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to set the precedence to 2:

```
RP/0/RP0/CPU0:router(config)# snmp-server ipv4 precedence 2
```

# snmp-server location

To specify the system location for Simple Network Management Protocol (SNMP), use the **snmp-server location** command in

global configuration

mode. To remove the location string, use the **no** form of this command.

**snmp-server location** *system-location*

**no snmp-server location**

| <b>Syntax Description</b> | <i>system-location</i> String indicating the physical location of this device. The maximum string length is 255 alphanumeric characters.  |         |              |             |                              |
|---------------------------|---|---------|--------------|-------------|------------------------------|
| <b>Command Default</b>    | No system location string is set.   |         |              |             |                              |
| <b>Command Modes</b>      | Global configuration  |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification  |         |              |             |                              |
| Release 2.0               | This command was introduced.  |         |              |             |                              |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |         |              |             |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>snmp</td> <td>read,<br/>write</td> </tr> </tbody> </table>   | Task ID | Operations   | snmp        | read,<br>write               |
| Task ID                   | Operations  |         |              |             |                              |
| snmp                      | read,<br>write  |         |              |             |                              |

This example shows how to specify a system location string:

```
RP/0/RP0/CPU0:router(config)# snmp-server location Building 3/Room 214
```

## snmp-server mibs cbqosmib cache

To enable and configure caching of the QoS MIB statistics, use the **snmp-server mibs cbqosmib cache** command in global configuration mode. To disable caching, use the **no** form of this command.

```
snmp-server mibs cbqosmib cache {refresh time time | service-policy count count}
no snmp-server mibs cbqosmib cache [{refresh time time | service-policy count count}]
```

| Syntax Description | Parameter                 | Description  |
|--------------------|---------------------------|--|
|                    | <b>refresh</b>            | Enables QoS MIB caching with a specified cache refresh time.   |
|                    | <b>time</b> <i>time</i>   | Specifies the cache refresh time, in seconds. The <i>time</i> argument can be between 5 and 60. The default is 30. |
|                    | <b>service-policy</b>     | Enables QoS MIB caching with a limited number of service policies to cache.  |
|                    | <b>count</b> <i>count</i> | Specifies the maximum number of service policies to cache. The count argument can be between 1 and 5000.           |

**Command Default** None

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.9.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task | Operation      |
|---------|------|----------------|
|         | snmp | read,<br>write |

### Example

This example illustrates how to enable QoS MIB caching with a refresh time:

```
RP/0/RP0/CPU0:router(config)# snmp-server mibs cbqosmib cache refresh time 45
```

This example illustrates how to enable QoS MIB caching with a service policy count limitation:

```
RP/0/RP0/CPU0:router(config)# snmp-server mibs cbqosmib cache service-policy count 10
```

# snmp-server mibs eventmib congestion-control

To configure the generation of SNMP traps when congestion exceeds configured thresholds, use the **snmp-server mibs eventmib congestion-control** command in global configuration mode. To restore the default values, use the **no** form of this command.

```
snmp-server mibs eventmib congestion-control type interface-path-id falling lower-threshold
interval sampling-interval rising upper-threshold
no snmp-server mibs eventmib congestion-control type interface-path-id
```

## Syntax Description

|  |  |
|--|--|
| <i>type</i>                              | Interface type. For more information, use the question mark (?) online help function.  |
| <i>interface-path-id</i>                 | Physical interface or virtual interface.<br><b>Note</b> Use the show interfaces command to see a list of all interfaces currently configured on the router.<br><br>For more information about the syntax for the router, use the question mark (?) online help function. |
| <b>falling</b> <i>lower-threshold</i>    | Specifies the lower threshold for which to determine whether an mteTriggerFalling SNMP Trap is generated.  |
| <b>interval</b> <i>sampling-interval</i> | Specifies how often the congestion statistics are polled. The <i>interval</i> argument, in minutes, can be between 5 and 1440; it must be a multiple of 5.   |
| <b>rising</b> <i>upper-threshold</i>     | Specifies the upper threshold for which to determine whether an mteTriggerRising SNMP Trap is generated.   |

## Command Default

None

## Command Modes

Global configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

### Note

A maximum of 100 interfaces can be monitored for congestion.

Congestion configurations using the **snmp-server mibs eventmib congestion-control** command cannot be modified using SNMP SET and vice versa.

When the congestion between two intervals increases above the *upper-threshold* argument, an `mteTriggerRising` SNMP trap is generated. This trap is not generated until the congestion drops below the lower threshold and then rises above the upper threshold.

When the congestion between two intervals falls below the *lower-threshold* argument, and an SNMP `mteTriggerRising` trap was generated previously, an SNMP `mteTriggerFalling` trap is generated. The `mteTriggerRising` trap is not generated until the congestion goes above the upper threshold and then falls back below the lower threshold.

The *lower-threshold* value (falling) should be set to a value less than or equal to the *upper-threshold* value (rising).

The **snmp-server mibs eventmib congestion-control** command is configured on a specific interface and is supported on the following cards:

- 8-port 10 Gigabit Ethernet PLIM
- 16-port OC-48c/STM-16 POS/DPT PLIM
- 1-port OC-768c/STM-256 POS PLIM
- 4-port OC-192c/STM-64 POS/DPT PLIM
- All Ethernet SPAs
- 2-port and 4-port OC-3c/STM-1 POS SPAs
- 2-port, 4-port, and 8-port OC-12c/STM-4 POS SPAs
- 2-port and 4-port OC-48c/STM-16 POS/RPR SPAs
- 1-port OC-192c/STM-64 POS/RPR SPA

| Task ID | Task ID | Operations  |
|---------|---------|-------------|
|         | snmp    | read, write |

This example shows how to configure the generation of SNMP traps in response to congestion:

```
RP/0/RP0/CPU0:router(config)# snmp-server mibs eventmib congestion-control pos 0/1/0/0
    falling 1 interval 5 rising 2
```

## snmp-server mibs eventmib packet-loss

To configure the generation of SNMP traps when packet loss exceeds configured thresholds, use the **snmp-server mibs eventmib packet-loss** command in global configuration mode. To restore the default values, use the **no** form of this command.

```
snmp-server mibs eventmib packet-loss type interface-path-id falling lower-threshold interval
sampling-interval rising upper-threshold
no snmp-server mibs eventmib packet-loss type interface-path-id
```

### Syntax Description

|  |  |
|--|--|
| <i>type</i>                              | Interface type. For more information, use the question mark (?) online help function.  |
| <i>interface-path-id</i>                 | Physical interface or virtual interface.<br><b>Note</b> Use the show interfaces command to see a list of all interfaces currently configured on the router.<br><br>For more information about the syntax for the router, use the question mark (?) online help function. |
| <b>falling</b> <i>lower-threshold</i>    | Specifies the lower threshold for which to determine whether an mteTriggerFalling SNMP Trap is generated.  |
| <b>interval</b> <i>sampling-interval</i> | Specifies how often the packet loss statistics are polled. The <i>interval</i> argument, in minutes, can be between 5 and 1440; it must be a multiple of 5.  |
| <b>rising</b> <i>upper-threshold</i>     | Specifies the upper threshold for which to determine whether an mteTriggerRising SNMP Trap is generated.   |

### Command Default

None

### Command Modes

Global configuration

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.9.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

#### Note

A maximum of 100 interfaces can be monitored for packet loss.

Packet loss configurations using the **snmp-server mibs eventmib packet-loss** command cannot be modified using SNMP SET and vice versa.

When the packet loss between two intervals increases above the *upper-threshold* argument, an `mteTriggerRising` SNMP trap is generated. This trap is not generated until the packet loss drops below the lower threshold and then rises above the upper threshold.

When the packet loss between two intervals falls below the *lower-threshold* argument, and an SNMP `mteTriggerRising` trap was generated previously, an SNMP `mteTriggerFalling` trap is generated. The `mteTriggerRising` trap is not generated until the packet loss goes above the upper threshold and then falls back below the lower threshold.

The *lower-threshold* value (falling) should be set to a value less than or equal to the *upper-threshold* value (rising).

The **snmp-server mibs eventmib packet-loss** command is configured on a specific interface and is supported on the following cards:

- 8-port 10 Gigabit Ethernet PLIM
- 16-port OC-48c/STM-16 POS/DPT PLIM
- 1-port OC-768c/STM-256 POS PLIM
- 4-port OC-192c/STM-64 POS/DPT PLIM
- All Ethernet SPAs
- 2-port and 4-port OC-3c/STM-1 POS SPAs
- 2-port, 4-port, and 8-port OC-12c/STM-4 POS SPAs
- 2-port and 4-port OC-48c/STM-16 POS/RPR SPAs
- 1-port OC-192c/STM-64 POS/RPR SPA

### **Example**

```
RP/0/RP0/CPU0:router(config)# snmp-server mibs sensormib cache
```

# snmp-server notification-log-mib

To configure the NOTIFICATION-LOG-MIB, use the **snmp-server notification-log-mib** command in global configuration

mode. To remove the specified configuration, use the **no** form of this command.

**snmp-server notification-log-mib** {**globalAgeOut** *time* | **globalSize** *size* | **default** | **disable** | **size** *size*}  
**no snmp-server notification-log-mib** {**globalAgeOut** | **globalSize** | **default** | **disable** | **size**}

| Syntax Description              |  |
|---------------------------------|--|
| <b>globalAgeOut</b> <i>time</i> | Specifies how much time, in minutes, a notification remains in the log. Values for the <i>time</i> argument can range from 0 to 4294967295; the default is 15. |
| <b>globalSize</b> <i>size</i>   | Specifies the maximum number of notifications that can be logged in all logs. The default is 500.  |
| <b>default</b>                  | Specifies to create a default log.   |
| <b>disable</b>                  | Specifies to disable logging to the default log.   |
| <b>size</b> <i>size</i>         | Specifies the maximum number of notifications that the default log can hold. The default is 500.   |

**Command Default** NOTIFICATION-LOG-MIB notifications are not logged.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.4.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Logging of NOTIFICATION-LOG-MIB notifications begins when the default log is created. Named logs are not supported, therefore only the default log can be created.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

The following example creates a default log for notifications:

```
RP/0/RP0/CPU0:router(config)# snmp-server notification-log-mib default
```

This example removes the default log:

```
RP/0/RP0/CPU0:router(config)# no snmp-server notification-log-mib default
```

This example configures the size of all logs to be 1500:

```
RP/0/RP0/CPU0:router(config)# snmp-server notification-log-mib globalSize 1500
```

## snmp-server packetsize

To establish control over the largest Simple Network Management Protocol (SNMP) packet size permitted when the SNMP server is receiving a request or generating a reply, use the **snmp-server packetsize** command in

global configuration

mode. To restore the default value, use the **no** form of this command.

**snmp-server packetsize** *size*  
**no snmp-server packetsize**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>size</i> Packet size, in bytes. Range is from 484 to 65500. The default is 1500. |
|---------------------------|---|

|                        |                    |
|------------------------|--------------------|
| <b>Command Default</b> | <i>size</i> : 1500 |
|------------------------|--------------------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **snmp-server packetsize** command to establish control over the largest SNMP packet size permitted when the SNMP server is receiving a request or generating a reply.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | snmp           | read,<br>write    |

This example shows how to set the maximum size of SNMP packets to 1024 bytes:

```
RP/0/RP0/CPU0:router(config)# snmp-server packetsize 1024
```

## snmp-server queue-length

To establish the message queue length for each trap host for Simple Network Management Protocol (SNMP), use the **snmp-server queue-length** command in

global configuration

mode. To restore the default value, use the **no** form of this command.

**snmp-server queue-length** *length*  
**no snmp-server queue-length**

|                           |   |                              |
|---------------------------|---|------------------------------|
| <b>Syntax Description</b> | <i>length</i> Integer that specifies the number of trap events that can be held before the queue must be emptied. Range is from 1 to 5000.  |                              |
| <b>Command Default</b>    | <i>length</i> : 100   |                              |
| <b>Command Modes</b>      | Global configuration  |                              |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>          |
|                           | Release 2.0   | This command was introduced. |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>Use the <b>snmp-server queue-length</b> command to define the length of the message queue for each trap host. After a trap message is successfully sent, Cisco IOS XR software continues to empty the queue at a throttled rate to prevent trap flooding.</p> |                              |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operations</b>            |
|                           | snmp  | read,<br>write               |
|                           | <p>This example shows how to set the SNMP notification queue to 20 events:</p> <pre>RP/0/RP0/CPU0:router(config)# snmp-server queue-length 20</pre>   |                              |

## snmp-server target list

To create a Simple Network Management Protocol (SNMP) target list, use the **snmp-server target list** command in

global configuration

mode. To remove an SNMP target list, use the **no** form of this command.

```
snmp-server target list target-list {vrf vrf-name | host hostname}
no snmp-server target list target-list
```

|                           |                             |  |
|---------------------------|-----------------------------|--|
| <b>Syntax Description</b> | <i>target-list</i>          | Name of the target list.   |
|                           | <b>vrf</b> <i>vrf-name</i>  | Specifies the name of the VRF hosts included in the target list.                             |
|                           | <b>host</b> <i>hostname</i> | Assigns a hostname to the target list. The <i>hostname</i> variable is a name or IP address. |

**Command Default** None

**Command Modes** Global configuration

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.3.0  | This command was introduced. |
|                        | Release 4.2.0  | Support for IPv6 was added.  |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use this command to create an SNMP target list and assign hosts to the list. When a target list is mapped to a community name using the **snmp-server community-map** command, SNMP access is restricted to the hosts in the target list (for that community name).

The host IP address can be in either IPv4 or IPv6 format.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | snmp           | read,<br>write    |

In this example, a new target list “sample3” is created and assigned to the vrf server “server2:”

```
RP/0/RP0/CPU0:router(config)# snmp-server target list sample3 vrf server2
```

# snmp-server throttle-time

To specify the throttle time for handling incoming Simple Network Management Protocol (SNMP) messages, use the **snmp-server throttle-time** command in

global configuration

mode. To restore the throttle time to its default value, use the **no** form of this command.

**snmp-server throttle-time** *time*

**no snmp-server throttle-time**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>time</i> Throttle time for the incoming queue, in milliseconds. Values can be from 50 to 1000. |
|---------------------------|---|

|                        |                 |
|------------------------|-----------------|
| <b>Command Default</b> | <i>time</i> : 0 |
|------------------------|-----------------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.5.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | snmp           | read,<br>write    |

In the following example, the throttle time is set to 500 milliseconds:

```
RP/0/RP0/CPU0:router(config)# snmp-server throttle-time 500
```

## snmp-server timeouts subagent

To change the timeout used by the SNMP agent while it waits for a response from a subagent, use the **snmp-server timeouts subagent** command in

global configuration

mode. SNMP subagents are feature-specific entities that register with the SNMP agent and implement sets of MIB objects.

**snmp-server timeouts subagent** *timeout*

**no snmp-server timeouts subagent** *timeout*

| <b>Syntax Description</b> | <i>timeout</i> The timeout used by the SNMP agent when waiting for a response from a MIB module, in seconds. The default is 10.   |         |              |               |                              |
|---------------------------|---|---------|--------------|---------------|------------------------------|
| <b>Command Default</b>    | <i>timeout</i> : 10   |         |              |               |                              |
| <b>Command Modes</b>      | Global configuration  |         |              |               |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.8.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 3.8.0 | This command was introduced. |
| Release                   | Modification  |         |              |               |                              |
| Release 3.8.0             | This command was introduced.  |         |              |               |                              |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |         |              |               |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>snmp</td> <td>read,<br/>write</td> </tr> </tbody> </table>   | Task ID | Operations   | snmp          | read,<br>write               |
| Task ID                   | Operations  |         |              |               |                              |
| snmp                      | read,<br>write  |         |              |               |                              |

In the following example, the timeout is set to 8 seconds:

```
RP/0/RP0/CPU0:router(config)# snmp-server timeouts subagent 8
```

# snmp-server timeouts duplicate

To set the timeout value for the snmp-server duplicate request feature, use the **snmp-server timeouts duplicate** command in the appropriate mode. To delete the set value, use the **no** form of the command.

**snmp-server timeouts duplicate** *timeout-value*  
**no snmp-server timeouts duplicate** *timeout-value*

## Syntax Description

*timeout-value* Timeout value in seconds. Range is 0 to 20 seconds.

- 0- To Remove this feature support. i.e SNMP will process all the packets irrespective of duplicate (retry) Packets.
- 1- This is the default value, i.e if no configuration is present , then, the timeout value is set to 1. If any packet takes more than 1 second for getting processed, then the Duplicate drop feature is enabled.
- 2 to 20 - if the packet processing is done between 2 and 20 seconds, then the Duplicate drop feature is enabled.

## Command Default

1 second

## Command Modes

Global configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 5.1.1 | This feature was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

## Task ID

| Task ID | Operation      |
|---------|----------------|
| snmp    | read,<br>write |

## Example

This example shows how to use the **snmp-server timeouts duplicate** command:

```
RP/0/RP0/CPU0:router (config) # snmp-server timeouts duplicate 10
```

# snmp-server trap authentication vrf disable

To disable authentication traps on VPNs, use the **snmp-server trap authentication vrf disable** command in global configuration mode.

## **snmp-server trap authentication vrf disable**

### Syntax Description

This command has no keywords or arguments.

### Command Default

Authentication traps are enabled on VPNs by default.

### Command Modes

Global configuration

### Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.3.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

### Task ID

| Task ID | Operation      |
|---------|----------------|
| snmp    | read,<br>write |

This example illustrates how to disable authentication traps on VPNs:

```
RP/0/RP0/CPU0:router(config)# snmp-server trap authentication vrf disable
```

### Related Topics

# snmp-server trap link ietf

To enable the varbind used for linkUp and linkDown SNMP traps to utilize the RFC 2863 standard varbind, use the **snmp-server trap link ietf** command in

global configuration

mode. To restore the default value, use the **no** form of this command..

**snmp-server trap link ietf**  
**nosnmp-server trap link ietf**

**Syntax Description** This command has no keywords or arguments.

**Command Default** The default varbind used is cisco.

**Command Modes** Global configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

For more information about linkUP and linkDown notifications, see RFC 2863, *The Interface Group MIB*, and RFC 3418, *Management Information Base (MIB) for the Simple Network Management Protocol (SNMP)*.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to enable the RFC 2863 standard varbind:

```
RP/0/RP0/CPU0:router# snmp-server trap link ietf
```

## snmp-server trap throttle-time

To specify the throttle time for handling more Simple Network Management Protocol (SNMP) traps, use the **snmp-server trap throttle-time** command in

global configuration

mode. To restore the throttle time to its default value, use the **no** form of this command.

**snmp-server trap throttle-time** *time*  
**no snmp-server trap throttle-time**

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>time</i> Throttle time in milliseconds. Values can be from 10 to 500. |
|---------------------------|--|

|                        |     |
|------------------------|-----|
| <b>Command Default</b> | 250 |
|------------------------|-----|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.5.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | snmp           | read,<br>write    |

In the following example, the trap throttle time is set to 500 milliseconds:

```
RP/0/RP0/CPU0:router(config)# snmp-server trap throttle-time 500
```

## snmp-server traps

To enable Simple Network Management Protocol (SNMP) trap notifications, use the **snmp-server traps** command in

global configuration

mode. To disable SNMP notifications, use the **no** form of this command.

**snmp-server traps** *notification-type*

**no snmp-server traps** [*notification-type*]

---

**Syntax Description**     *notification-type*

(Optional) Type of notification (trap) to enable or disable. If no type is specified, all notifications available on the device are enabled or disabled.

The notification type can be one or more of the following keywords:

**bfd**

Enables Bidirectional Forwarding Detection (BFD) traps.

**bgp**

Enables BGP4-MIB and CISCO-BGP4-MIB traps.

**bridgemib**

Enables SNMP traps for the Bridge MIB.

**config**

Controls configuration notifications, as defined in the CISCO-CONFIG-MAN-MIB (enterprise 1.3.6.1.4.1.9.9.43.2). The notification type is: (1) ciscoConfigManEvent.

**copy-complete**

Enables CISCO-CONFIG-COPY-MIB ccCopyCompletion traps.

**ds1**

Enables SNMP Cisco DS1 traps.

**ds2**

Enables SNMP Cisco DS2 traps.

**entity**

Controls Entity MIB modification notifications. This notification type is defined in the ENTITY-MIB (enterprise 1.3.6.1.2.1.47.2) as: (1) entConfigChange.

**ethernet**

Enables Ethernet link OAM and 802.1ag connectivity fault management traps.

**fabric bundle**

Enables SNMP fabric bundle traps.

**fabric plane**

Enables SNMP fabric plane state-change traps.

**flash insertion**

Enables ciscoFlashDeviceInsertedNotif.

**flash removal**

Enables ciscoFlashDeviceRemovedNotif.

**fru-ctrl**

Enables SNMP entity field-replaceable unit (FRU) control traps.

**hsrp**

Enables SNMP HSRP traps.

**ipsec tunnel start**

Enables SNMP IPsec tunnel start traps.

**ipsec tunnel stop**

Enables SNMP IPsec tunnel stop traps.

**isakmp**

Enables ISAKMP traps.

**l2vpn all**

Enables all Layer 2 VPN traps.

**l2vpn vc-down**

Enables Layer 2 VPN VC down traps.

**l2vpn vc-up**

Enables Layer 2 VPN VC up traps.

**mpls frr all**

Enables all MPLS fast reroute MIB traps.

**mpls frr protected**

Enables MPLS fast reroute tunnel protected traps.

**mpls ldp**

Enables SNMP Multiprotocol Label Switching (MPLS) Label Distribution Protocol (LDP) traps.

**mpls traffic-eng**

Enables SNMP MPLS traffic engineering traps.

**msdp peer-state-change**

Enables SNMP MSDP Peer state change traps.

**ntp**

Enables SNMP Cisco NTP traps.

**otn**

Enables SNMP Cisco optical transport network (OTN) traps.

**pim**

Enables SNMP PIM traps.

**rf**

Enables RF-MIB traps.

**sensor**

Enables SNMP entity sensor traps.

**snmp**

Enables SNMP traps.

**sonet**

Enables SONET traps.

**syslog**

Controls error message notifications (Cisco-syslog-MIB). Specify the level of messages to be sent with the **logging history** command.

**system**

Enables SNMP SYSTEMMIB-MIB traps.

**vpls**

Enables virtual private LAN service (VPLS) traps.

**vrrp events**

Enables Virtual Router Redundancy Protocol (VRRP) traps.

**Note** To display the trap notifications supported on a platform, use the online help ( ? ) function.

**Command Default**

SNMP notifications are disabled by default.

**Command Modes**

Global configuration

**Command History**

| Release       | Modification   |
|---------------|--|
| Release 2.0   | This command was introduced.   |
| Release 3.2   | The <b>enable</b> keyword was removed from the command name.   |
| Release 3.5.0 | The following traps were introduced: <ul style="list-style-type: none"> <li>• <b>flash</b></li> <li>• <b>ipsec</b></li> <li>• <b>l2vpn</b></li> <li>• <b>mpls</b></li> </ul> |
| Release 3.6.0 | The RF-MIB trap was introduced.  |
| Release 3.8.0 | The <b>bfd</b> , <b>bridgemib</b> , and <b>system</b> keywords were introduced.  |
| Release 3.9.0 | The <b>ds1</b> , <b>ds3</b> , <b>otn</b> , and <b>vrrp events</b> keywords were introduced.  |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server traps** command to enable trap requests for the specified notification types. To configure the router to send SNMP notifications, specify at least one **snmp-server traps** command. When the command is entered with no keyword, all notification types are enabled. When a notification type keyword is specified,

only the notification type related to that keyword is enabled. To enable multiple types of notifications, issue a separate **snmp-server traps** command for each notification type.

More information about individual MIBs can be found in the SNMP Object Navigator, available through cisco.com at <http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2>.

The **snmp-server traps** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

Some SNMP trap notifications require additional Task IDs as indicated in the following table:

| Notification Type | Task ID         | Operations  |
|-------------------|-----------------|-------------|
| bfd               | bgp             | read, write |

## snmp-server traps bgp

To enable Border Gateway Protocol (BGP) state-change Simple Network Management Protocol (SNMP) notifications, use the **snmp-server traps bgp** command in global configuration mode. To disable BGP state-change SNMP notifications, use the **no** form of this command.

**snmp-server traps bgp**  
**no snmp-server traps bgp**

**Syntax Description** This command has no keywords or arguments.

**Command Default** SNMP notifications are disabled by default.

**Command Modes** Global configuration

| Command History | Release     | Modification   |
|-----------------|-------------|--|
|                 | Release 2.0 | This command was introduced.                                 |
|                 | Release 3.2 | The <b>enable</b> keyword was removed from the command name. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

SNMP notifications can be sent as traps.

Use the **snmp-server traps bgp** command to enable or disable BGP server state-change notifications, as defined in the BGP4-MIB (enterprise 1.3.6.1.2.1.15.7). The notifications types are:

- bgpEstablished
- bgpBackwardTransition

The BGP notifications are defined in the BGP-4 MIB as follows:

```

bgpTraps                OBJECT IDENTIFIER ::= { bgp 7 }

bgpEstablished NOTIFICATION-TYPE
OBJECTS { bgpPeerLastError,
          bgpPeerState      }
STATUS current
DESCRIPTION
"The BGP Established event is generated when the BGP FSM enters the ESTABLISHED
state."
 ::= { bgpTraps 1 }

bgpBackwardTransition NOTIFICATION-TYPE
OBJECTS { bgpPeerLastError,
          bgpPeerState      }
STATUS current
DESCRIPTION
"The BGPBackwardTransition Event is generated when the BGP FSM moves from a higher
numbered state to a lower numbered state."
 ::= {bgpTraps 2}

```

For a complete description of these notifications and additional MIB functions, see the BGP4-MIB in the SNMP Object Navigator, available through [cisco.com at http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2](http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2).

The **snmp-server traps bgp** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |
|         | bgp     | read,<br>write |

The following example shows how to enable the router to send BGP state-change notifications to the host at the address `myhost.cisco.com` using the community string defined as `public`:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps bgp
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com version 2c public
```

## snmp-server traps mpls l3vpn

To enable the sending of MPLS Layer 3 VPN Simple Network Management Protocol (SNMP) notifications, use the **snmp-server traps mpls l3vpn** command in global configuration mode. To disable MPLS Layer 3 VPN SNMP notifications, use the **no** form of this command.

```
snmp-server traps mpls l3vpn {all | max-threshold-cleared | max-threshold-exceeded |
max-threshold-reissue-notif-time seconds | mid-threshold-exceeded | vrf-down | vrf-up}
no snmp-server traps mpls l3vpn
```

| Syntax Description                                     |  |   |
|--|--|---|
| <b>all</b>   |  | Enables all MPLS Layer 3 VPN traps.   |
| <b>max-threshold-cleared</b>                           |  | Enables maximum threshold cleared traps.  |
| <b>max-threshold-exceeded</b>                          |  | Enables maximum threshold exceeded traps.   |
| <b>max-threshold-reissue-notif-time</b> <i>seconds</i> |  | Specifies the time interval for reissuing a maximum threshold notification, in seconds. |
| <b>mid-threshold-exceeded</b>                          |  | Enables mid-threshold exceeded traps.   |
| <b>vrf-down</b>  |  | Enables VRF down traps.   |
| <b>vrf-up</b>  |  | Enables VRF up traps.   |

**Command Default** SNMP notifications are disabled by default.

**Command Modes** Global configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

The following example shows how to enable the device to send MPLS Layer 3 VPN traps:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps mpls l3vpn all
```

## snmp-server traps ospf errors

To enable Open Shortest Path First (OSPF) error Simple Network Management Protocol (SNMP) notifications, use the **snmp-server traps ospf errors** command in global configuration mode. To disable OSPF error SNMP notifications, use the **no** form of this command.

```
snmp-server traps ospf errors {authentication-failure | bad-packet | config-error |
virt-authentication-failure | virt-bad-packet | virt-config-error}
no snmp-server traps ospf errors {authentication-failure | bad-packet | config-error |
virt-authentication-failure | virt-bad-packet | virt-config-error}
```

| Syntax Description                 |  |  |
|------------------------------------|--|--|
| <b>authentication-failure</b>      | Enables SNMP traps for authentication failure errors on physical interfaces. |  |
| <b>bad-packet</b>                  | Enables SNMP traps for bad packet errors on physical interfaces.             |  |
| <b>config-error</b>                | Enables SNMP traps for configuration errors on physical interfaces.          |  |
| <b>virt-authentication-failure</b> | Enables SNMP traps for authentication failure errors on virtual interfaces.  |  |
| <b>virt-bad-packet</b>             | Enables SNMP traps for bad packet errors on virtual interfaces.              |  |
| <b>virt-config-error</b>           | Enables SNMP traps for configuration errors on virtual interfaces.           |  |

**Command Default** SNMP notifications are disabled by default.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

SNMP notifications can be sent as traps.

For a complete description of OSPF error notifications and additional MIB functions, see the OSPF-TRAP-MIB in the SNMP Object Navigator, available through cisco.com at <http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2>.

The **snmp-server traps ospf errors** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to enable the router to send OSPF error notifications to the host at the address myhost.cisco.com using the community string defined as public:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps ospf errors
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com version 2c public
```

## snmp-server traps ospf lsa

To enable Open Shortest Path First (OSPF) link-state advertisement Simple Network Management Protocol (SNMP) notifications, use the **snmp-server traps ospf lsa** command in global configuration mode. To disable OSPF link state SNMP notifications, use the **no** form of this command.

```
snmp-server traps ospf lsa {lsa-maxage | lsa-originate}
no snmp-server traps ospf lsa {lsa-maxage | lsa-originate}
```

| <b>Syntax Description</b> | <b>lsa-maxage</b> Enables SNMP traps for link-state advertisement maxage.   |         |              |               |                              |
|---------------------------|---|---------|--------------|---------------|------------------------------|
|                           | <b>lsa-originate</b> Enables SNMP traps for new link-state advertisement origination.   |         |              |               |                              |
| <b>Command Default</b>    | SNMP notifications are disabled by default.   |         |              |               |                              |
| <b>Command Modes</b>      | Global configuration  |         |              |               |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.3.1</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | Release 3.3.1 | This command was introduced. |
| Release                   | Modification  |         |              |               |                              |
| Release 3.3.1             | This command was introduced.  |         |              |               |                              |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

SNMP notifications can be sent as traps.

For a complete description of OSPF link-state advertisement notifications and additional MIB functions, see the OSPF-TRAP-MIB in the SNMP Object Navigator, available through cisco.com at <http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2>.

The **snmp-server traps ospf lsa** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

| Task ID | Task Operations ID  |
|---------|---------------------|
|         | snmp read,<br>write |

This example shows how to enable the router to send OSPF link-state advertisement notifications to the host at the address myhost.cisco.com using the community string defined as public:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps ospf lsa lsa-maxage

## snmp-server traps ospf state-change

To enable Simple Network Management Protocol (SNMP) notifications for Open Shortest Path First (OSPF) neighbor state change, use the **snmp-server traps ospf state-change** command in global configuration mode. To disable OSPF state-change SNMP notifications, use the **no** form of this command.

```
snmp-server traps ospf state-change {if-state-change | neighbor-state-change | virtif-state-change |
virtneighbor-state-change}
no snmp-server traps ospf state-change {if-state-change | neighbor-state-change | virtif-state-change
| virtneighbor-state-change}
```

| Syntax Description | if-state-change           | Enables SNMP traps for OSPF non-virtual interface state changes. |
|--------------------|---------------------------|--|
|                    | neighbor-state-change     | Enables SNMP traps for OSPF neighbor state changes.              |
|                    | virtif-state-change       | Enables SNMP traps for OSPF virtual interface state changes.     |
|                    | virtneighbor-state-change | Enables SNMP traps for OSPF virtual neighbor state changes.      |

**Command Default** SNMP notifications are disabled by default.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

SNMP notifications can be sent as traps.

Use the **snmp-server traps ospf state-change** command to enable or disable OSPF server state-change notifications, as defined in the MIB. One notification type is ospfNbrStateChange.

For example, the OSPF ospfNbrStateChange notification is defined in the OSPF MIB as follows:

```
!      ospfNbrStateChange NOTIFICATION-TYPE
!      OBJECTS {
!          ospfRouterId, -- The originator of the trap
!          ospfNbrIpAddress,
!          ospfNbrAddressLessIndex,
!          ospfNbrRtrId,
!          ospfNbrState -- The new state
!      }
!      STATUS current
```

For a complete description of these notifications and additional MIB functions, see the OSPF-TRAP-MIB in the SNMP Object Navigator, available through cisco.com at <http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2>.

The **snmp-server traps ospf state-change** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

The following example shows how to enable the router to send OSPF state-change notifications to the host at the address myhost.cisco.com using the community string defined as public:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps ospf state-change neighbor-state-change
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com version 2c public
```

## snmp-server traps ospfv3 errors

To enable Open Shortest Path First (OSPF) Version 3 error Simple Network Management Protocol (SNMP) notifications, use the **snmp-server traps ospfv3 errors** command in global configuration mode. To disable OSPFv3 error SNMP notifications, use the **no** form of this command.

```
snmp-server traps ospfv3 errors [{bad-packet | config-error | virt-bad-packet | virt-config-error}]
no snmp-server traps ospfv3 errors [{bad-packet | config-error | virt-bad-packet | virt-config-error}]
```

|                           |   |   |
|---------------------------|---|---|
| <b>Syntax Description</b> | <b>bad-packet</b>                           | Enables SNMP traps for bad packet errors on physical interfaces.    |
|                           | <b>config-error</b>                         | Enables SNMP traps for configuration errors on physical interfaces. |
|                           | <b>virt-bad-packet</b>                      | Enables SNMP traps for bad packet errors on virtual interfaces.     |
|                           | <b>virt-config-error</b>                    | Enables SNMP traps for configuration errors on virtual interfaces.  |
| <b>Command Default</b>    | SNMP notifications are disabled by default. |   |
| <b>Command Modes</b>      | Global configuration                        |   |
| <b>Command History</b>    | <b>Release</b>                              | <b>Modification</b>   |
|                           | Release 4.2.1                               | This command was introduced.  |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

SNMP notifications can be sent as traps.

For a complete description of OSPFv3 error notifications and additional MIB functions, see the OSPFV3-MIB in the SNMP Object Navigator, available through cisco.com at <http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2>.

The **snmp-server traps ospfv3 errors** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

|                |             |                   |
|----------------|-------------|-------------------|
| <b>Task ID</b> | <b>Task</b> | <b>Operations</b> |
|                | snmp        | read,<br>write    |

This example shows how to enable the router to send OSPF error notifications to the host at the address myhost.cisco.com using the community string defined as public:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps ospfv3 errors
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com version 2c public
```

## snmp-server traps ospfv3 state-change

To enable Simple Network Management Protocol (SNMP) notifications for Open Shortest Path First (OSPF) Version 3 state changes, use the **snmp-server traps ospfv3 state-change** command in global configuration mode. To disable OSPFv3 state-change SNMP notifications, use the **no** form of this command.

```
snmp-server traps ospfv3 state-change [ {if-state-change | neighbor-state-change | nssa-state-change
| restart-helper-status-change | restart-status-change | restart-virtual-helper-status-change |
virtif-state-change | virtneighbor-state-change} ]
no snmp-server traps ospfv3 state-change [ {if-state-change | neighbor-state-change | nssa-state-change
| restart-helper-status-change | restart-status-change | restart-virtual-helper-status-change |
virtif-state-change | virtneighbor-state-change} ]
```

| Syntax Description                          |  |   |
|---|--|---|
| <b>if-state-change</b>                      |  | Enables SNMP traps for OSPFv3 non-virtual interface state changes.      |
| <b>neighbor-state-change</b>                |  | Enables SNMP traps for OSPFv3 neighbor state changes                    |
| <b>nssa-state-change</b>                    |  | Enables SNMP traps for OSPFv3 not so stubby area (NSSA) status changes. |
| <b>restart-helper-status-change</b>         |  | Enables SNMP traps for OSPFv3 restart helper status changes.            |
| <b>restart-status-change</b>                |  | Enables SNMP traps for OSPFv3 restart status changes.                   |
| <b>restart-virtual-helper-status-change</b> |  | Enables SNMP traps for OSPFv3 virtual helper restart status changes.    |
| <b>virtif-state-change</b>                  |  | Enables SNMP traps for OSPFv3 virtual interface state changes.          |
| <b>virtneighbor-state-change</b>            |  | Enables SNMP traps for OSPFv3 virtual neighbor state changes.           |

**Command Default** SNMP notifications are disabled by default.

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

SNMP notifications can be sent as traps.

Use the **snmp-server traps ospfv3 state-change** command to enable or disable the various OSPFv3 server state-change notifications, as defined in the MIB.

The **snmp-server traps ospfv3 state-change** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

The following example shows how to enable the router to send OSPFv3 NSSA state-change notifications to the host at the address myhost.cisco.com using the community string defined as public:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps ospfv3 state-change nssa-state-change
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com version 2c public
```

# snmp-server traps pim interface-state-change

To enable Protocol Independent Multicast (PIM) interface status notification, use the **snmp-server traps pim interface-state-change** command in global configuration mode. To disable this command so no notification is sent, use the **no** form of this command.

```
snmp-server traps pim interface-state-change
no snmp-server traps pim interface-state-change
```

|                           |  |                              |
|---------------------------|--|------------------------------|
| <b>Syntax Description</b> | This command has no keywords or arguments.                                       |                              |
| <b>Command Default</b>    | Simple Network Management Protocol (SNMP) notifications are disabled by default. |                              |
| <b>Command Modes</b>      | Global configuration   |                              |
| <b>Command History</b>    | <b>Release</b>   | <b>Modification</b>          |
|                           | Release 3.3.2  | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

Use the **snmp-server traps pim interface-state-change** command to send notifications when a PIM interface changes status from up to down. When the status is up, the notification signifies the restoration of a PIM interface. When the status is down, the notification signifies the loss of a PIM interface.

PIM notifications are defined in the CISCO-PIM-MIB.my and PIM-MIB.my files that can be accessed from the SNMP Object Navigator, available through cisco.com at <http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2>.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to use the **snmp-server traps pim interface-state-change** command:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps pim interface-state-change
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com version 2c public
```

# snmp-server traps pim invalid-message-received

To enable notifications for monitoring invalid Protocol Independent Multicast (PIM) protocol operations, such as invalid register received and invalid join or prune received, use the **snmp-server traps pim invalid-message-received** command in global configuration mode. To disable this command so that no notification is sent, use the **no** form of this command.

```
snmp-server traps pim invalid-message-received
no snmp-server traps pim invalid-message-received
```

## Syntax Description

This command has no keywords or arguments.

## Command Default

Simple Network Management Protocol (SNMP) notifications are disabled by default.

## Command Modes

Global configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.3.2 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

A router can receive a join or prune message in which the RP specified in the packet is not the RP for the multicast group. Or a router can receive a register message from a multicast group in which it is not the RP.

PIM notifications are defined in the CISCO-PIM-MIB.my and PIM-MIB.my files that can be accessed from the SNMP Object Navigator, available through cisco.com at <http://tools.cisco.com/Support/SNMP/do/BrowseMIB.do?local=en&step=2>.

## Task ID

| Task ID | Operations     |
|---------|----------------|
| snmp    | read,<br>write |

The following example shows how to use the **snmp-server traps pim invalid-message-received** command:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps pim invalid-message-received
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com version 2c public
```

## snmp-server traps rsvp

To enable the sending of Resource Reservation Protocol (RSVP) notifications, use the **snmp-server traps rsvp** command in global configuration mode. To disable RSVP notifications, use the **no** form of this command.

```
snmp-server traps rsvp {all | lost-flow | new-flow}
```

| Syntax Description | all              | Enables the sending of both new flow lost flow traps. |
|--------------------|------------------|---|
|                    | <b>lost-flow</b> | Enables the sending of traps when a flow is deleted.  |
|                    | <b>new-flow</b>  | Enables the sending of traps when a flow is created.  |

**Command Default** None

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.9.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID | Operation      |
|---------|---------|----------------|
|         | mpls-te | read,<br>write |
|         | ouni    | read,<br>write |
|         | snmp    | read,<br>write |

This example illustrates how to enable all SNMP RSVP MIB traps.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# snmp-server traps rsvp all
```

## snmp-server traps snmp

To enable the sending of RFC 1157 Simple Network Management Protocol (SNMP) notifications, use the **snmp-server traps snmp** command in the appropriate configuration mode. To disable RFC 1157 SNMP notifications, use the **no** form of this command.

```
snmp-server traps snmp [{authentication | coldstart | linkdown | linkup | warmstart}]
no snmp-server traps snmp [{authentication | coldstart | linkdown | linkup | warmstart}]
```

| Syntax Description |                       |   |
|--------------------|-----------------------|---|
|                    | <b>authentication</b> | (Optional) Controls the sending of SNMP authentication failure notifications. |
|                    | <b>linkup</b>         | (Optional) Controls the sending of SNMP linkUp notifications                  |
|                    | <b>linkdown</b>       | (Optional) Controls the sending of SNMP linkDown notifications                |
|                    | <b>coldstart</b>      | (Optional) Controls the sending of SNMP coldStart notifications.              |
|                    | <b>warmstart</b>      | (Optional) Controls the sending of SNMP warmStart notifications.              |

**Command Default** SNMP notifications are disabled by default.

**Command Modes** Global configuration

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.2   | The <b>enable</b> keyword was removed from the command name.   |
|                 | Release 3.9.0 | The <b>authentication</b> , <b>linkup</b> , <b>linkdown</b> , <b>coldstart</b> , and <b>warmstart</b> keywords were added. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **snmp-server traps snmp** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications.

The optional **authentication** keyword controls the sending of SNMP authentication failure notifications. In order to send notifications, you must configure at least one **snmp-server host** command. An authentication Failure (4) trap signifies that the sending device is the addressee of a protocol message that is not properly authenticated. The authentication method depends on the version of SNMP being used. For SNMPv1 or SNMPv2, authentication failure occurs for packets with an incorrect community string. For SNMPv3, authentication failure occurs for packets with an incorrect Secure Hash Algorithm (SHA) or Message Digest

5 (MD5) authentication key or for a packet that is outside the authoritative SNMP engine's window, for example, the packets that are configured outside access lists or time ranges. In such an instance, only a report Protocol Data Unit (PDU) is generated, and authentication failure traps are not generated.

The optional **linkup** keyword controls the sending of SNMP linkUp notifications. The linkUp(3) trap signifies that the sending device recognizes one of the communication links represented in the agent's configuration coming up.

The optional **linkdown** keyword controls the sending of SNMP linkDown notifications. The linkDown(2) trap signifies that the sending device recognizes a failure in one of the communication links represented in the agent's configuration.

The **snmp-server traps snmp** command with the **linkup** or **linkdown** keywords globally enables or disables SNMP linkUp and linkDown traps. After enabling either of these traps globally, you can enable or disable these traps on specific interfaces using the **no notification linkupdown disable** command in interface configuration mode. According to RFC 2863, linkUp and linkDown traps are enabled for interfaces that do not operate on top of any other interface (as defined in the ifStackTable), and are disabled otherwise. This means that you do not have to enable linkUp and linkdown notifications on such interfaces. However, linkUp and linkDown notifications will not be sent unless you enable them globally using the **snmp-server traps snmp** command.

The optional **coldstart** keyword controls the sending of SNMP coldStart notifications. The coldStart(0) trap signifies that the sending device is reinitializing itself such that the agent's configuration or the protocol entity implementation may be altered.

The optional **warmstart** keyword controls the sending of SNMP coldStart notifications. The warmStart(1) trap signifies that the sending device is reinitializing itself such that neither the agent configuration nor the protocol entity implementation is altered.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to enable the device to send all traps to the host myhost.cisco.com using the community string defined as public:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps snmp
RP/0/RP0/CPU0:router(config)# snmp-server host myhost.cisco.com public snmp
```

The following example shows how to enable only linkUp and linkDown traps:

```
RP/0/RP0/CPU0:router(config)# snmp-server traps snmp linkup
RP/0/RP0/CPU0:router(config)# snmp-server traps snmp linkdown
```

## snmp-server trap-source

To specify the interface (and hence the corresponding IP address) from which a Simple Network Management Protocol (SNMP) trap should originate, use the **snmp-server trap-source** command in

global configuration

mode. To remove the source designation, use the **no** form of this command.

**snmp-server trap-source** *type interface-path-id*  
**no snmp-server trap-source**

|                           |                          |  |
|---------------------------|--------------------------|--|
| <b>Syntax Description</b> | <i>type</i>              | Interface type. For more information, use the question mark (?) online help function.                      |
|                           | <i>interface-path-id</i> | Physical interface or virtual interface.   |
|                           | <b>Note</b>              | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router. |
|                           |                          | For more information about the syntax for the router, use the question mark (?) online help function.      |

**Command Default** No interface is specified.

**Command Modes** Global configuration

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When an SNMP trap is sent from a Cisco SNMP device, it has a notification address of the interface it happened to exit at that time. Use the **snmp-server trap-source** command to monitor notifications from a particular interface.

**Note** In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0 or RP1) and the module is CPU0. Example: interface MgmtEth0/RP1/CPU0/0.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | snmp           | read,<br>write    |

The following example shows how to specify that the IP address for interface 0/0/1/0 is the source for all SNMP notifications:

```
RP/0/RP0/CPU0:router(config)# snmp-server trap-source tengige 0/0/1/0
```

# snmp-server trap-timeout

To define how often to try resending trap messages on the retransmission queue, use the **snmp-server trap-timeout** command in

global configuration

mode. To restore the default value, use the **no** form of this command.

**snmp-server trap-timeout** *seconds*  
**no snmp-server trap-timeout** *seconds*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>seconds</i> Integer that sets the interval for resending the messages, in seconds). Value can be from 1 to 1000. |
|---------------------------|---|

|                        |                     |
|------------------------|---------------------|
| <b>Command Default</b> | <i>seconds</i> : 30 |
|------------------------|---------------------|

|                      |                      |
|----------------------|----------------------|
| <b>Command Modes</b> | Global configuration |
|----------------------|----------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 2.0    | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Before Cisco IOS XR software tries to send a trap, it looks for a route to the destination address. If there is no known route, the trap is saved in a retransmission queue. Use the **snmp-server trap-timeout** command to determine the number of seconds between retransmission attempts.

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | snmp           | read,<br>write    |

The following example shows how to set an interval of 20 seconds to try resending trap messages on the retransmission queue:

```
RP/0/RP0/CPU0:router(config)# snmp-server trap-timeout 20
```

## snmp-server user

To configure a new user to a Simple Network Management Protocol (SNMP) group, use the **snmp-server user** command in

global configuration

mode. To remove a user from an SNMP group, use the **no** form of this command.

```
snmp-server user username groupname {v1 | v2c | v3 [auth {md5 | sha} {clear | encrypted}
auth-password [priv {3des | aes aes-bit-encryption | des56} {clear | encrypted} priv-password]]}
[{SDROwner | SystemOwner}] [access-list-name]
no snmp-server user username groupname
```

### Syntax Description

|                                      |  |
|--------------------------------------|--|
| <i>username</i>                      | Name of the user on the host that connects to the agent.<br><b>Note</b> The recommended range for a user-defined username is 2-253 characters.                   |
| <i>groupname</i>                     | Name of the group to which the user belongs.   |
| <b>v1</b>                            | Specifies that the SNMPv1 security model should be used.   |
| <b>v2c</b>                           | Specifies that the SNMPv2c security model should be used.  |
| <b>v3</b>                            | Specifies that the SNMPv3 security model should be used.   |
| <b>auth</b>                          | (Optional) Specifies which authentication level should be used. If this keyword is used, you must specify an authentication level and an authorization password. |
| <b>md5</b>                           | Specifies the HMAC-MD5-96 authentication level.  |
| <b>sha</b>                           | Specifies the HMAC-SHA-96 authentication level.  |
| <b>clear</b>                         | Specifies that an unencrypted password follows.  |
| <b>encrypted</b>                     | Specifies that an encrypted password follows.  |
| <i>auth-password</i>                 | Authentication password, which is a string (not to exceed 64 characters) that enables the agent to receive packets from the host.                                |
| <b>priv</b>                          | (Optional) Specifies that encryption parameters follow.  |
| <b>3des</b>                          | Specifies the 168-bit Triple Data Encryption Standard (3DES) level of encryption for the user.   |
| <b>aes</b> <i>aes-bit-encryption</i> | Specifies the Advanced Encryption Standard (AES) level of encryption for the user. Supported options are 128, 192 and 256 bit encryption.                        |
| <b>des56</b>                         | Specifies the 56-bit Data Encryption Standard (DES) level of encryption for the user.  |

|                         |  |
|-------------------------|--|
| <i>priv-password</i>    | Privacy password, which can be clear or encrypted text, according to what is specified.  |
| <b>SDROwner</b>         | (Optional) Limits access to the agents for the owner secure domain router (SDR) only.  |
| <b>SystemOwner</b>      | (Optional) Provides system-wide access to the agents for all SDRs.   |
| <i>access-list-name</i> | (Optional) Access list to be associated with this SNMP user. The <i>access-list-name</i> argument represents a value from 1 to 99, that is, the identifier of the standard IP access list. |

**Command Default**

By default, access is limited to agents on the owner SDR only.

See also [Table 69: snmp-server user Default Descriptions, on page 686](#).

**Command Modes**

Global configuration

**Command History**

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.  |
| Release 3.2   | The <b>access</b> keyword was removed.<br><br>The <b>0</b> and <b>7</b> keywords were replaced by the <b>clear</b> and <b>encrypted</b> keywords, respectively. |
| Release 3.3.0 | Optional keywords <b>LROwner</b> and <b>SystemOwner</b> were added.   |
| Release 3.6.0 | The <b>LROwner</b> keyword was changed to the <b>SDROwner</b> keyword.  |
| Release 3.9.0 | AES and 3DES encryption formats were supported.   |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To use 3DES and AES encryption standards, you must have installed the security package (k9sec). For information on installing software packages, see *Upgrading and Managing Cisco IOS XR Software* in *System Management Configuration Guide for Cisco CRS Routers*.

**Note**

Only one remote host can be assigned to the same username for SNMP version 3. If you configure the same username with different remote hosts, only the last username and remote host combination will be accepted and will be seen in the **show running** configuration. In the case of multiple SNMP managers, multiple unique usernames are required.

Table 69: snmp-server user Default Descriptions

| Characteristic | Default                                       |
|----------------|---|
| passwords      | Text strings are assumed.                     |
| access lists   | Access from all IP access lists is permitted. |

### SDR and System-wide Access

When the **snmp-server user** command is entered with the **SDROwner** keyword, SNMP access is granted only to the MIB object instances in the owner SDR.

When the **snmp-server user** command is entered with the **SystemOwner** keyword, SNMP access is granted to all SDRs in the system .

**Note** In a non-owner SDR, user access is provided only to the object instances in that SDR, regardless of the access privilege assigned. Access to the owner SDR and system-wide access privileges are available only from the owner SDR.

### Task ID

#### Task ID Operations

snmp read,  
write

The following example shows how to enter a plain-text password for the string *abcd* for user2 in group2:

```
RP/0/RP0/CPU0:router(config)# snmp-server user user2 group2 v3 auth md5 clear abcd
```

To learn if this user has been added to the configuration, use the **show snmp user** command.

If the localized Message Digest 5 (MD5) or Secure Hash Algorithm (SHA) digest is known, specify that string instead of the plain-text password. The digest should be formatted as AA:BB:CC:DD where AA, BB, CC, and DD are hexadecimal values. The digest should also be exactly 16 octets long.

This example shows how to specify the command with a digest name of 00:11:22:33:44:55:66:77:88:99:AA:BB:CC:DD:EE:FF:

```
RP/0/RP0/CPU0:router(config)# snmp-server user user2 group2 v3 auth md5 encrypted
00:11:22:33:44:55:66:77:88:99:AA:BB:CC:DD:EE:FF
```

## snmp-server view

To create or update a Simple Network Management Protocol (SNMP) view entry, use the **snmp-server view** command in

global configuration

mode. To remove the specified server view entry, use the **no** form of this command.

**snmp-server view** *view-name oid-tree* {**excluded** | **included**}

**no snmp-server view** *view-name oid-tree* {**excluded** | **included**}

### Syntax Description

*view-name* Label for the view record being updated or created. The name is used to reference the record.

*oid-tree* Object identifier (OID) of the ASN.1 subtree to be included or excluded from the view. To identify the subtree, specify a text string consisting of numbers, such as 1.3.6.2.4, or a word, such as *system*. Replace a single subidentifier with the asterisk (\*) wildcard to specify a subtree family; for example 1.3.\*.4.

**excluded** Excludes the MIB family from the view.

**included** Includes the MIB family in the view.

### Command Default

No view entry exists.

### Command Modes

Global configuration

### Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Other SNMP commands require a view as a keyword. Use the **snmp-server view** command to create a view to be used as keywords for other commands that create records including a view.

Instead of defining a view explicitly, you can rely on the following predefined views, which are supported by the SNMP agent:

#### **all**

Predefined view indicating that a user can see all objects.

#### **CfgProt**

Predefined view indicating that a user can see all objects except the SNMPv3 configuration tables.

#### **vacmViewTreeFamilyEntry**

Predefined view indicating that a user can see the default configuration of vacmViewTreeFamilyEntry.

The predefined views supported on Cisco IOS XR software, however, do not match the predefined views specified in RFC 3415.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example creates a view that includes all objects in the MIB-II subtree:

```
RP/0/RP0/CPU0:router(config)# snmp-server view mib2 1.3.6.1.2.1 included
```

This example shows how to create a view that includes all objects in the MIB-II system group and all objects in the Cisco enterprise MIB:

```
RP/0/RP0/CPU0:router(config)# snmp-server view view1 1.3.6.1.2.1.1 included
RP/0/RP0/CPU0:router(config)# snmp-server view view1 1.3.6.1.4.1.9 included
```

This example shows how to create a view that includes all objects in the MIB-II system group except for sysServices (System 7) and all objects for interface 1 in the MIB-II interfaces group:

```
RP/0/RP0/CPU0:router(config)# snmp-server view view1 1.3.6.1.2.1.1 included
RP/0/RP0/CPU0:router(config)# snmp-server view view1 1.3.6.1.2.1.1.7 excluded
RP/0/RP0/CPU0:router(config)# snmp-server view view1 1.3.6.1.2.1.2.2.1.*.1 included
```

## snmp-server vrf

To configure the VPN routing and forwarding (VRF) properties of Simple Network Management Protocol (SNMP), use the **snmp-server vrf** command in

global configuration

mode. To remove the configuration, use the **no** form of this command.

```
snmp-server vrf vrf-name[host address [{clear | encrypted}][traps][version {1 | 2c | 3 security-level}]
community-string[udp-port port][context context-name]
```

```
no snmp-server vrf vrf-name
```

| Syntax Description                                 |   |
|--|---|
| <i>vrf-name</i>                                    | Name of the VRF.  |
| <b>host</b> <i>address</i>                         | (Optional) Specifies the name or IP address of the host (the targeted recipient).   |
| <b>clear</b>                                       | (Optional) Specifies that the <i>community-string</i> argument is clear text.   |
| <b>encrypted</b>                                   | (Optional) Specifies that the <i>community-string</i> argument is encrypted text.   |
| <b>traps</b>                                       | (Optional) Specifies that notifications should be sent as traps. This is the default.   |
| <b>version</b> { <b>1</b>   <b>2c</b>   <b>3</b> } | (Optional) Specifies the version of the SNMP used to send the traps. The default is SNMPv1. When the <b>version</b> keyword is used, one of these keywords must be specified: <ul style="list-style-type: none"> <li>• <b>1</b>—SNMPv1</li> <li>• <b>2c</b>—SNMPv2C</li> <li>• <b>3</b>—SNMPv3</li> </ul> |
| <i>security-level</i>                              | (Optional) Security level for SNMPv3. Options are: <ul style="list-style-type: none"> <li>• <b>auth</b>—authNoPriv</li> <li>• <b>noauth</b>—noAuthNoPriv</li> <li>• <b>priv</b>—authPriv</li> </ul>   |
| <i>community-string</i>                            | Specifies the community string for SNMPv1 and SNMPv2, or the SNMPv3 user.   |
| <b>udp-port</b> <i>port</i>                        | (Optional) Specifies the UDP port to which notifications should be sent.  |
| <b>context</b> <i>context-name</i>                 | (Optional) Name of the context that must be mapped to VRF identified by value of the <i>vrf-name</i> argument.  |

**Command Default** None

**Command Modes** Global configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |
|                 | Release 4.2.0 | Support for IPv6 was added.  |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use this command to enter SNMP VRF configuration mode and configure an SNMP notification recipient on a VRF. You can also map a VRF to an SNMP context.

SNMP notification recipient that is reachable by way of a VRF can be configured. Notification is forwarded to the recipient represented by its address using the routing table instance identified by the VRF name.

The *address* argument can be either a host name or an IP address. Both IPv4 and IPv6 formats are supported.

Use the **clear** keyword to specify that the clear text community string you enter is displayed encrypted in the **show running** command output. To enter an encrypted string, use the **encrypted** keyword. To enter a clear text community string that is not encrypted by the system, use neither of these keywords.

An SNMP context identified by the value of the *context-name* argument can be mapped to a VRF in this mode. This context must be created using **snmp-server context** command.

| Task ID | Task ID | Operations     |
|---------|---------|----------------|
|         | snmp    | read,<br>write |

This example shows how to configure a host IP address for a VRF name:

```
RP/0/RP0/CPU0:router(config)# snmp-server vrf vrfA
RP/0/RP0/CPU0:router(config-snmp-vrf)# host 12.21.0.1 traps version
2c public udp-port 2525
```

# snmp test trap all

To send a Simple Network Management Protocol (SNMP) trap message to the trap receivers for all supported traps, use the **snmp test trap all** command in

EXEC

mode.

## snmp test trap all

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | This command has no keywords or arguments. |
|---------------------------|--|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |      |
|----------------------|------|
| <b>Command Modes</b> | EXEC |
|----------------------|------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.9.1  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

To use the **snmp test trap** command, SNMP must be configured on the router. This command is not intended for testing scalability, performance, or high availability scenarios.

Use the **snmp test trap all** command to generate test traps for all supported traps. The following traps are supported:

- coldStart—SNMP agent Initializing and its configuration may have changed.
- warmStart—SNMP agent Initializing and its configuration is unaltered.
- linkUp—Interface ifOperStatus is Up.
- linkDown—Interface ifOperStatus is Down.
- clogMessage Generated—Syslog message generated.
- ciscoFlashDeviceInsertedNotif—Flash device inserted.
- ciscoFlashDeviceRemovedNotif—Flash device removed.
- ciscoRFProgressionNotif—RF state change.
- ciscoRFSwactNotif—Switchover.
- ciscoConfigManEvent—Command-line interface (CLI) configuration management event.
- newRoot—SNMP agent is a new root of the spanning tree.
- topologyChange—Bridge port has transitioned to the Forwarding state.
- cefcFanTrayOperStatus—Fan tray cefcFanTrayOperStatus is Up.

**snmp test trap all**

- `cefcModuleStatusChange`—Module `cefcModuleOperStatus` is OK (module up) or module `cefcModuleOperStatus` is Failed (module down).
- `entSensorThresholdNotification`—`entSensorValue` crossed the `entSensorthresholdValue`.
- `cefcPowerStatusChange`—Redundant PowerSupply fails.

| Task ID | Task ID | Operation |
|---------|---------|-----------|
|         | snmp    | read      |

This example illustrates how to use the **snmp test trap all** command:

```
RP/0/RP0/CPU0:router# snmp test trap all
```

### Related Topics

## snmp test trap entity

To send a test SNMP Entity trap message to the trap receivers, use the **snmp test trap entity** command in EXEC mode.

**snmp test trap entity** {fru {power status-change failed | module status-change {up | down} | fan-tray oper-status up} | sensor threshold-notification}[entity-index *index*]

| Syntax Description                      |  |  |
|---|--|--|
| <b>fru</b>                              |  | Sends a field replacement unit trap.   |
| <b>power status-change failed</b>       |  | Sends a cefcPowerStatusChange trap for the CISCO-ENTITY-FRU-CONTROL-MIB.     |
| <b>module status-change {up   down}</b> |  | Sends a cefcModuleStatusChange trap for the CISCO-ENTITY-FRU-CONTROL-MIB.    |
| <b>fan-tray oper-status up</b>          |  | Sends a cefcFanTrayOperStatus trap for the CISCO-ENTITY-FRU-CONTROL-MIB.     |
| <b>sensor</b>                           |  | Sends a sensor trap.   |
| <b>threshold-notification</b>           |  | Sends a entSensorThresholdNotification trap for the CISCO-ENTITY-SENSOR-MIB. |
| <b>entity-index</b> <i>index</i>        |  | Specifies the physical index for which to generate the trap.                 |

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.9.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **snmp test trap entity** command tests the sending of Entity MIB traps. It is not intended for testing scalability, performance, or high availability scenarios. To use the **snmp test trap** command, SNMP must be configured on the router.

| Task ID | Task ID | Operation |
|---------|---------|-----------|
|         | snmp    | read      |

This example illustrates how to use the **snmp test trap entity** command:

```
RP/0/RP0/CPU0:router# snmp test trap entity sensor threshold index
```

|                        | <b>redundancy</b>               | Sends an RF trap.   |
|                        | <b>progression</b>              | Sends a ciscoRFProgressionNotif trap for the CISCO-RF-MIB.          |
|                        | <b>switch</b>                   | Sends a ciscoRFSwactNotif trap for the CISCO-RF-MIB.                |
|                        | <b>syslog message-generated</b> | Sends a clogMessageGenerated for the CISCO-SYSLOG-MIB.              |
| <b>Command Default</b> | None                            |   |
| <b>Command Modes</b>   | EXEC                            |   |
| <b>Command History</b> | <b>Release</b>                  | <b>Modification</b>   |
|                        | Release 3.9.1                   | This command was introduced.  |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **snmp test trap infra** command tests the sending of Infra MIB traps. It is not intended for testing scalability, performance, or high availability scenarios. To use this command, SNMP must be configured on the router.

**Task ID**

| Task ID | Operation |
|---------|-----------|
| snmp    | read      |

This example illustrates how to use the **snmp test trap infra** command:

```
RP/0/RP0/CPU0:router# snmp test trap infra syslog message-generated
```

## snmp test trap interface

To send a test Simple Network Management Protocol (SNMP) interface trap message to the trap receivers, use the **snmp test trap interface** command in

EXEC

mode.

**snmp test trap interface** {**link-down** | **link-up**} **ifindex** *index*

| Syntax Description | link-down     | Sends a linkDown trap for the IF-MIB.                            |
|--------------------|---------------|--|
|                    | link-up       | Sends a linkUp trap for the IF-MIB.                              |
|                    | ifindex index | Specifies the interface index for which to send the IF-MIB trap. |

**Command Default** None

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.9.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **snmp test trap interface** command tests the sending of IF-MIB traps. It is not intended for testing scalability, performance, or high availability scenarios. To use this command, SNMP must be configured on the router.

| Task ID | Task ID | Operation |
|---------|---------|-----------|
|         | snmp    | read      |

This example illustrates how to use the **snmp test trap interface** command:

```
RP/0/RP0/CPU0:router# snmp test trap interface link-down
```

## snmp test trap snmp

To send a test Simple Network Management Protocol (SNMP) trap message to the trap receivers, use the **snmp test trap snmp** command in

EXEC

mode.

**snmp test trap snmp** {**cold-start** | **warm-start**}

| Syntax Description |  |
|--------------------|--|
| <b>cold-start</b>  | Sends a coldStart trap for the SNMPv2-MIB. |
| <b>warm-start</b>  | Sends a warmStart trap for the SNMPv2-MIB. |

| Command Default |      |
|-----------------|------|
|                 | None |

| Command Modes |      |
|---------------|------|
|               | EXEC |

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.9.1 | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **snmp test trap snmp** command tests the sending of MIB traps. It is not intended for testing scalability, performance, or high availability scenarios. To use this command, SNMP must be configured on the router.

| Task ID | Task ID | Operation |
|---------|---------|-----------|
|         | snmp    | read      |

The following example illustrates how to use the **snmp test trap snmp** command:

```
RP/0/RP0/CPU0:router# snmp test trap snmp cold-start
```

## Software Entitlement Commands

---

For detailed information about software entitlement concepts, configuration tasks, and examples, see the *Software Entitlement on Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*.

# clear license

To delete all licenses from the router persistent storage, use the **clear license** command in administration EXEC mode.

**clear license**

---

## Command Default

No default behavior or values

---

## Command Modes

Administration EXEC

---

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.5.0 | This command was introduced. |

---

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **clear license** command removes all licenses from the router persistent storage.

---

## Task ID

| Task ID  | Operations |
|----------|------------|
| pkg-mgmt | execute    |

In the following example, all licenses are removed from the router:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# clear license
```

# clear license log

To clear the operational or administrative logs for the license system, use the **clear license log** command in administration EXEC mode.

```
clear license log {operational | administration}
```

## Syntax Description

**operational** Clears the operational logs for the license system.

**administration** Clears the administration logs for the license system.

## Command Default

No default behavior or values

## Command Modes

Administration EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.5.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **clear license log** command to clear either the operational or administrative logs for the license system. To view the logs, use the **show license log** command. The license log does not persist between reloads.

## Task ID

| Task ID  | Operations |
|----------|------------|
| pkg-mgmt | read       |

The following example illustrates how to use the **clear license log** command to clear the operational logs:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# clear license log operational
```

## Related Topics

[show license log](#), on page 739

# hw-module linecard throughput

To configure the throughput for a modular services card (MSC), use the **hw-module linecard throughput** command in global configuration mode. To revert to the default throughput, use the **no** form of this command.

```
hw-module linecard throughput {20g | 40g} location node-id
no hw-module linecard throughput {20g | 40g} location node-id
```

## Syntax Description

|                         |  |
|-------------------------|--|
| <b>20g   40g</b>        | Specifies whether the node should operate at 40 Gbps or 20 Gbps.   |
| <b>location node-id</b> | Specifies the node to configure. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation. |

## Command Default

The default throughput is 20 Gbps.

## Command Modes

Global configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.5.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The default throughput is 20 Gbps. If you upgrade your release from one that does not support software entitlement to one that does, and you have MSCs in your router operating at 40 Gbps, an implicit license is added to your router so that you can continue to operate at 40 Gbps for a limited period of time. You must, however, use the **hw-module linecard throughput** command to enable the MSC throughput to 40 Gbps. Otherwise, your cards continue to operate at 20 Gbps.

Implicit licenses expire after a set period of time. You should install permanent licenses for all MSCs that you want to operate at 40 Gbps. Refer to the *Software Entitlement on Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*.

## Task ID

| Task ID   | Operations     |
|-----------|----------------|
| interface | read,<br>write |

The following example shows how to configure a node to operate at 40 Gbps:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# hw-module linecard throughput 40 location 0/6/0
```

**Related Topics**

[show hw-module linecard throughput](#), on page 719

# license

To configure a license to be used for specific slots or for any slots, use the **license** command in administration configuration mode. To remove the configuration of the license, use the **no** form of this command.

```
license feature-id [{type [evaluation | permanent]} | location node-id]
no license feature-id [{type [evaluation | permanent]} | location node-id]
```

## Syntax Description

|                                      |  |
|--------------------------------------|--|
| <i>feature-id</i>                    | Identifier for the feature.  |
| <b>type</b> [evaluation   permanent] | (Optional) Specifies whether the license is evaluation or permanent.   |
| <b>location</b> <i>node-id</i>       | (Optional) Specifies the location of the card. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |

## Command Default

Licenses are not configured.

## Command Modes

Administration configuration

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 4.0.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If the **license** command is not configured during a license acquisition, the acquisition fails. This command is required to be configured for every licensed feature starting in Cisco IOS XR Release 4.0.0.

Licenses can be optionally configured as either permanent or evaluation. If no location is specified, the license is considered a flexible license available for any location. When a specific location is configured, the feature allowed by the license is considered slot-specific and bound to specific slots only.

## Task ID

| Task ID  | Operation      |
|----------|----------------|
| pkg-mgmt | read,<br>write |

The following example shows how to configure a license to a specific slot:

```
RP/0/RSP0/CPU0:router(admin-config)# license A9K-ADV-VIDEO-LIC type permanent
location 0/1/cpu0
```

## Related Topics

[show license](#), on page 721

# license add

To add a license to a secure domain router (SDR) license pool, use the **license add** command in administration EXEC mode.

```
license add [tar] license-name [sdr sdr-name]
```

| Syntax Description         |  |  |
|----------------------------|--|--|
| <b>tar</b>                 |  | (Optional) Indicates that the license file is contained in a tar file.   |
| <i>license-name</i>        |  | Name and location of the license file to be added. The license file can be local to the system or a remote file on a TFTP server.                  |
| <b>sdr</b> <i>sdr-name</i> |  | (Optional) Adds the license to the specified SDR license pool. The default is owner. The <i>sdr-name</i> argument is the name assigned to the SDR. |

**Command Default** License is added to the owner SDR.

**Command Modes** Administration EXEC

| Command History | Release       | Modification                      |
|-----------------|---------------|-----------------------------------|
|                 | Release 3.5.0 | This command was introduced.      |
|                 | Release 4.0.0 | The <b>tar</b> keyword was added. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **license add** command to add a license to an SDR license pool. The license file can be local to the system or a remote file on a TFTP server. The license file is stored in persistent storage on the router.

To acquire a license file, you must provide a manufacturing supplied product authorization key (PAK) and the license unique device identifier (UDI) of the chassis to the license registration tool at: <https://tools.cisco.com/SWIFT/Licensing/RegistrationServlet>. To obtain the UDI of your chassis, use the **show license udi** command.

By default, there is one license pool available. You can create specific license pools using the **license pool create** command. If a license is available for a specific SDR license pool, it cannot be used in another SDR, unless it is moved from one SDR license pool to another. Use the **license move** command.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | execute    |

The following example shows how to add a software license to the owner SDR:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license add disk1:/P1-LIC-8_TBA09370035_20070207195224661.lic
```

```
License command "license add disk1:/P1-LIC-8_TBA09370035_20070207195224661.lic
sdr Owner" completed successfully.
```

# license backup

To back up all licenses contained on the persistent storage of the router, use the **license backup** command in administration EXEC mode.

**license backup** *backup-file*

| <b>Syntax Description</b> | <i>backup-file</i> Name and location of the backup file to be created or modified. This can be a local file, or a remote file on a TFTP or rcp server.                                  |         |              |               |                              |
|---------------------------|---|---------|--------------|---------------|------------------------------|
| <b>Command Default</b>    | No default behavior or values   |         |              |               |                              |
| <b>Command Modes</b>      | Administration EXEC   |         |              |               |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.5.0</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | Release 3.5.0 | This command was introduced. |
| Release                   | Modification  |         |              |               |                              |
| Release 3.5.0             | This command was introduced.  |         |              |               |                              |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **license backup** command to back up the licenses stored in the persistent storage on the router. We recommend this so that you can restore the licenses at one time while recovering from a failed disk situation. The destination location can be local to the system; in other words, a flash disk or hard disk. Alternatively, it can be a remote file on a TFTP or rcp server. The license information includes the licenses as well as the operational information, such as the slot the licenses are allocated to and the current license operation identifier.

If the backup file already exists, you are prompted to confirm before the file is overwritten.

When licenses are backed up, they can be restored as required using the **license restore** command.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | execute    |

The following example shows how to back up the licenses on a router:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license backup disk1:/license_back
```

License command "license backup disk1:/license\_back" completed successfully.

# license move

To move a license from one secure domain router (SDR) license pool to another, use the **license move** command in administration EXEC mode.

**license move** *feature-id* {**all***count*} **sdr** *source-sdr-name* **sdr** *dest-sdr-name* [{**evaluation** | **permanent**}]

## Syntax Description

|                                   |  |
|-----------------------------------|--|
| <i>feature-id</i>                 | Identifier for the feature entitled in the licenses to be moved. You can display available licenses using the <b>show license</b> command.     |
| <b>all</b>                        | Specifies to move all available licenses with the specific feature identifier.   |
| <i>count</i>                      | Number of licenses to move.  |
| <b>sdr</b> <i>source-sdr-name</i> | Specifies the SDR license pool from which to move the specified licenses. The <i>source-sdr-name</i> argument is the name assigned to the SDR. |
| <b>sdr</b> <i>dest-sdr-name</i>   | Specifies the SDR license pool to which the license should be moved. The <i>source-sdr-name</i> argument is the name assigned to the SDR.      |
| <b>evaluation</b>                 | Specifies to move an evaluation license.   |
| <b>permanent</b>                  | Specifies to move a permanent license.   |

## Command Default

No default behavior or values

## Command Modes

Administration EXEC

## Command History

| Release       | Modification                                      |
|---------------|---|
| Release 3.5.0 | This command was introduced.                      |
| Release 3.9.0 | The evaluation and permanent keywords were added. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

By default, there is only one license pool available. If you have created multiple license pools, you can use the **license move** command to move the license to a different SDR license pool.

The **license move** command is used only to move licenses between SDR license pools on the same router. To move licenses between routers, you must first remove the license from the original router using the **license remove** command, and then add it to the new router using the **license add** command. To move licenses between routers, you also need to generate a new license key on Cisco.com. The license registration tool is located at <https://tools.cisco.com/SWIFT/Licensing/RegistrationServlet>.

Licenses can be moved only if they are in the available state. In other words, you have to clear the feature configuration before a license can be released back to the appropriate license pool.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | execute    |

The following example shows how to move a license from one license pool to another:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license move crs-msc-40g sdr owner sdr mysdr
```

### Related Topics

[license add](#), on page 705

[show license](#), on page 721

# license move slot

To move a license from one slot to another, use the **license move slot** command in EXEC or administration EXEC mode.

**license move** *feature-id* **slot** [*count*] **from** {*node-id* | **allocated**} **to** {*node-id* | **available**}[{**evaluation** | **permanent**}]

## Syntax Description

|                   |  |
|-------------------|--|
| <i>feature-id</i> | Identifier for the feature entitled in the licenses to be moved. You can display available licenses using the <a href="#">show license, on page 721</a> command. |
| <i>count</i>      | Number of licenses to move. This argument cannot be used in conjunction with the <b>allocated</b> and <b>available</b> keywords.                                 |
| <b>from</b>       | Specifies from where to move the specified licenses.   |
| <i>node-id</i>    | Specific node from which to move the license.  |
| <b>allocated</b>  | Specifies to move all allocated licenses with the specific feature identifier. This keyword must be used in conjunction with the <b>available</b> keyword.       |
| <b>to</b>         | Specifies to where to move the specified licenses.   |
| <i>node-id</i>    | Specific node to which to move the license.  |
| <b>available</b>  | Specifies to move the specified allocated licenses into the available state. This keyword must be used in conjunction with the <b>allocated</b> keyword.         |
| <b>evaluation</b> | Specifies to move an evaluation license.   |
| <b>permanent</b>  | Specifies to move a permanent license.   |

## Command Default

One license is moved.

## Command Modes

Administration EXEC

EXEC

## Command History

| Release       | Modification                                      |
|---------------|---|
| Release 3.5.0 | This command was introduced.                      |
| Release 3.9.0 | The evaluation and permanent keywords were added. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **license move slot** command moves slot-based licenses from one slot to another slot on the same router.

Use the **allocated** keyword to move all allocated licenses into the available state. The **allocated** keyword must be used in conjunction with the **available** keyword. If no allocated licenses are available that match the feature identifier, the **license move slot** command revokes used licenses on the given slot.

If licenses are going to be revoked on the source card, a warning prompt is displayed.

Licenses can be moved only if they are in the available state. In other words, you have to clear the feature configuration before a license can be released back to the appropriate license pool.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | execute    |

The following example shows how to move a license from one slot to another:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license move crs-msc-40g slot 1 from 0/1/cpu0 to 0/4/cpu0
```

The following example shows how to move all licenses to the available state:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license move crs-msc-40g slot from allocated to available
```

|----------------------|---------------------|
| <b>Command Modes</b> | Administration EXEC |
|----------------------|---------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 3.5.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Before the **license pool create** command can be used, the SDR must exist.

By default, there is only one license pool available. You can create a license pool for each SDR on the router. If there were any licenses in use on nodes in the SDR prior to creating the pool, the licenses are automatically moved to the newly created license pool.

When a license is associated with a specific SDR license pool, you cannot use it for entitlement on another SDR. To move a license from one license pool to another, use the **license move** command. Use the **license add** command to add licenses to the newly created license pool.

To remove an SDR license pool, use the **license pool remove** command.

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | pkg-mgmt       | execute           |

The following example shows how to create a new license pool for an SDR:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license pool create sdr mysdr

License command "license pool create mysdr" completed successfully.
```

# license pool remove

To remove a secure domain router (SDR) license pool, use the **license pool remove** command in administration EXEC mode.

```
license pool remove sdr sdr-name
```

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>sdr</b> <i>sdr-name</i> Creates a license pool on the SDR specified by <i>sdr-name</i> . The <i>sdr-name</i> argument is the name assigned to the SDR. |
|---------------------------|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | Administration EXEC |
|----------------------|---------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 3.5.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

By default, there is only one license pool available. If you have created multiple license pools, you can use the **license pool remove** command to remove them as desired. You cannot remove the default license pool in the owner SDR.

If you remove a license pool that contains licenses, the licenses are automatically returned to the owner SDR license pool.

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | pkg-mgmt       | execute           |

The following example shows how to remove an SDR license pool:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license pool remove sdr mysdr

License command "license pool remove sdr mysdr" completed successfully.
```

## Related Topics

# license remove

To remove a license permanently from a router, use the **license remove** command in administration EXEC mode.

```
license remove feature-id {id | ticket permission-ticket rehost-ticket} [sdr sdr-name] {evaluation | permanent}
```

## Syntax Description

|                            |   |
|----------------------------|---|
| <i>feature-id</i>          | Identifier for the feature entitled in the licenses to be removed. You can display available features using the show license command. |
| <b>id</b>                  | Specifies to remove licenses using a unique identifier of the license.  |
| <b>sdr</b> <i>sdr-name</i> | Removes the license from the specified SDR license pool.  |
| <b>evaluation</b>          | Specifies to move an evaluation license.  |
| <b>permanent</b>           | Specifies to move a permanent license.  |

## Command Default

None

## Command Modes

Administration EXEC

## Command History

| Release       | Modification                                      |
|---------------|---|
| Release 3.7.0 | This command was introduced.                      |
| Release 3.9.0 | The evaluation and permanent keywords were added. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **license remove** command permanently removes a license from the router and outputs a key or rehost ticket that can be used to prove that the license has been removed. This command accepts a permission ticket, obtained from CCO, that includes the UDI, feature ID and count of licenses to remove. Refer to the license registration tool on CCO for more information: <https://tools.cisco.com/SWIFT/Licensing/RegistrationServlet>.

If you use a permission ticket that was previously used, the same rehost ticket is created, but no licenses are removed.

Licenses can be removed only if they are in the available state. In other words, you have to clear the feature configuration before that the license can be released back to the appropriate license pool.

## Task ID

| Task ID  | Operation |
|----------|-----------|
| pkg-mgmt | execute   |

### Example

The following example shows how to remove a license from a license pool:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license remove crs-msc-40g ticket
disk1:/my_permission disk1:/40g_rehost
```

# license restore

To restore the licenses on a router using an earlier backup copy, use the **license restore** command in administration EXEC mode.

**license restore** *backup-file*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>backup-file</i> Name and location of the backup file to be used for the license restore. This can be a local file, or a remote file on a TFTP or rcp server. |
|---------------------------|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | Administration EXEC |
|----------------------|---------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.5.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

The **license restore** command restores the licenses on the router using an earlier backup copy that was created using the **license backup** command. The source location can be local to the system, in other words, a flash disk or hard disk. Alternatively, it can be a remote file on a TFTP or rcp server.

Before the licenses are restored, the license manager verifies the following:

- The backup format is valid.
- The licenses are issued for the chassis where the CLI is being run.
- The license operation identifier in the backup file matches the one on the router EEPROM.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | pkg-mgmt       | execute           |

The following example shows how to move a license from one license pool to another:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# license restore disk1:/license_back
```

```
Info: This command will erase all existing licenses.
Info: It is strongly recommended to backup existing licenses first. Do you wish to
proceed? [yes/no]: y
```

```
License command "license restore disk1:/license_back" completed successfully.
```

# license save credential

To retrieve the router credentials and save them to a specified location, use the **license save credential** command in administration EXEC mode.

**license save credential** *file-name*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>file-name</i> Name and location of file where the credentials are saved. |
|---------------------------|---|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | Administration EXEC |
|----------------------|---------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 4.0.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The following device credentials are saved:

- OPID
- SN—Serial number attached to the chassis.
- UDI—Universal device identifier; the Cisco wide identifier that contains the product ID, serial number, and version.

|                |                |                  |
|----------------|----------------|------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|                | pkg-mgmt       | execute          |

## Example

The following example shows how to save the credentials to a file:

```
RP/0/RP0/CPU0:router:router(admin)# license save credential disk1:/cred_file
```

The following example shows the typical information saved to the credential file:

```
Wed Aug 4 12:20:19.544 DST
Device credentials:
  OPID :5
  SN   :FOX1232H67M
  PID  :ASR-9010-AC
```

# show hw-module linecard throughput

**Note** Effective with Cisco IOS XR Release 4.0.0, the **show hw-module linecard throughput** command was removed.

To display the throughput of modular services cards (MSCs) in the Cisco CRS-1 router, use the **show hw-module linecard throughput** command in EXEC mode.

**show hw-module linecard throughput** [**location** *node-id*]

**Syntax Description** **location** *node-id* Specifies the node for which to display the throughput. The *node-id* argument is expressed in *rack/slot/module* notation.

**Command Default** No default behavior or values

**Command Modes** EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |
|                 | Release 4.0.0 | This command was removed.    |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show hw-module linecard throughput** command to determine if MSCs are running at 40 Gbps or 20 Gbps throughput.

| Task ID | Task ID   | Operations |
|---------|-----------|------------|
|         | interface | read       |
|         | drivers   | read       |

The following example displays sample output from the **show linecard throughput** command:

```
RP/0/RP0/CPU0:router# show hw-module linecard throughput
```

```
Mon Aug 17 04:48:48.760 DST
```

```
----- Throughput -----
Location      Lic Acquired  Configured    Operating
-----
0/1/CPU0      Yes           --            40G
```

0/6/CPU0      Yes      --      40G

**Table 70: show hw-module linecard throughput Field Descriptions**

| Field        | Description  |
|--------------|--|
| Location     | Indicates the specific card location.                            |
| Configured   | Indicates whether or not the feature is configured on this card. |
| Lic Acquired | Indicates whether or not a license is acquired for the card.     |
| Operating    | Indicates if the MSC is operating at 40 Gbps or 20 Gbps.         |

# show license

To display all license information, use the **show license** command in EXEC or administration EXEC mode.

```
show license [{feature-id | location node-id | sdr sdr-name}]
```

| Syntax Description             |   |
|--------------------------------|---|
| <i>feature-id</i>              | (Optional) Identifier for the feature entitled in the licenses to be displayed.   |
| <b>location</b> <i>node-id</i> | (Optional) Specifies the location of the card. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.    |
| <b>sdr</b> <i>sdr-name</i>     | (Optional) Displays the licenses in the specified SDR license pool. The <i>sdr-name</i> argument is the name assigned to the SDR. |

**Command Default** No default behavior or values

**Command Modes** Administration EXEC

EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license** command displays all license information. Alternatively, you can display license information for a specific feature identifier, slot location, or SDR by using the available options.

If the feature process has supplied an opaque string while checking out the license, that string is displayed next to the feature identifier in the command output.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example shows sample output from the **show license** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license

FeatureID: CRS-MS-40G
  (Slot based, Implicit[Remaining time: 81 days])
  Total licenses 2

Available for use          0
Allocated to location     2
Active                    0
```

```

Pool: Owner
Total licenses in pool: 2
Status: Available      0 Operational:      2

Locations with licenses: (Active/Allocated) [SDR]
      0/0/CPU0          (0/1) [Owner]
      0/1/CPU0          (0/1) [Owner]

```

**Table 71: show license Field Descriptions**

| Field                   | Description  |
|-------------------------|--|
| FeatureID               | Feature to which the licenses apply. The type of license is designated as one of the following: <ul style="list-style-type: none"> <li>• Permanent licenses—Enable a designated feature permanently as long as the license resides on the router.</li> <li>• Evaluation or metered licenses—Enable a feature for a limited period of time.</li> <li>• Implicit licenses—Metered licenses that are included with the software image (upgrade or initial installation).</li> </ul>   |
| Total licenses          | Number of licenses on the router.  |
| Available for use       | Number of licenses that are not currently active.  |
| Allocated to location   | Number of licenses allocated to a slot but not used.   |
| Active                  | Number of licenses currently checked out or being used by applications.  |
| Pool                    | License pool to which the licenses belong.   |
| Total licenses in pool  | Number of licenses in the specific pool.   |
| Status                  | Indicates the number of licenses in each state. Licenses can have the following states: <p>Available—License is available in the pool and can be assigned to a slot/feature process. For example, a recently added 40-Gbps license to the router is available before it gets checked out by a card.</p> <p>Allocated—License is assigned to a slot but is unused. In other words, the feature process is not using the license. For example, a 40-Gbps license is allocated to slot 5 if the license was previously used but the card is currently in the shutdown state.</p> <p>Active—Feature process has checked out a license. Generally this happens when the feature is actively using the license. For example, if a card is in IOS XR RUN state and is passing traffic at 40 Gbps, a 40-Gbps license is in the used state in that slot.</p> <p>Operational—All licenses that are either active or allocated.</p> <p>Expired—License has expired. This is applicable only for evaluation licenses or licenses granted by Cisco.</p> |
| Locations with licenses | Slot where the licenses are being used, followed by an indication of whether the license is active or allocated, and to which license pool it belongs.   |

## show license active

To display license information for all licenses that are currently checked out or being used by an application, use the **show license active** command in EXEC or administration EXEC mode.

```
show license active [{feature-id | location node-id | sdr sdr-name}]
```

| Syntax Description             |            |   |
|--------------------------------|------------|---|
| <i>feature-id</i>              | (Optional) | Identifier for the feature entitled in the licenses to be displayed.  |
| <b>location</b> <i>node-id</i> | (Optional) | Specifies the location of the card. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.                           |
| <b>sdr</b> <i>sdr-name</i>     | (Optional) | Displays the licenses in the specified secure domain router (SDR) license pool. The <i>sdr-name</i> argument is the name assigned to the SDR. |

**Command Default** No default behavior or values

**Command Modes** Administration EXEC  
EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license active** command displays all license information regarding licenses that are currently checked out or being used by an application. You can display the information for a specific feature identifier, slot location, or SDR by using the available options.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example displays sample output from the **show license active** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license active

FeatureID: CRS-MS-40G

(Slot based, Implicit[Remaining time: 90 days])
  Status: Active                2
    SDR: Owner
      Operational:              2

Location: 0/1/CPU0              1
```

```
0/6/CPU0          1
```

See [Table 71: show license Field Descriptions, on page 722](#) for a description of the significant fields shown in the display.

# show license allocated

To display license information for all licenses allocated to a slot but not used, use the **show license allocated** command in EXEC or administration EXEC mode.

**show license allocated** [{*feature-id* | **location** *node-id* | **sdr** *sdr-name*}]

| Syntax Description             |  |
|--------------------------------|--|
| <i>feature-id</i>              | (Optional) Identifier for the feature entitled in the licenses to be displayed.  |
| <b>location</b> <i>node-id</i> | (Optional) Specifies the location of the card. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.                           |
| <b>sdr</b> <i>sdr-name</i>     | (Optional) Displays the licenses in the specified secure domain router (SDR) license pool. The <i>sdr-name</i> argument is the name assigned to the SDR. |

**Command Default** No default behavior or values

**Command Modes** Administration EXEC  
EXEC

**Command History**

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license allocated** command displays all license information regarding licenses that are allocated to a slot but are not currently being used. You can display the information for a specific feature identifier, slot location, or SDR by using the available options.

**Task ID**

| Task ID  | Operations |
|----------|------------|
| pkg-mgmt | read       |

The following example displays sample output from the **show license allocated** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license allocated

FeatureID: CRS-MS-40G

(Slot based, Permanent)
Status: Allocated 1
  SDR: Owner
    Status: Operational: 1
    Locations with licenses: (Active/Allocated)
                          0/1/CPU0 (0/1)
```

```
FeatureID: XC-L3VPN (Slot based, Permanent)
No allocated licenses.
```

See [Table 71: show license Field Descriptions, on page 722](#) for a description of the significant fields shown in the display.

# show license available

To display all licenses that are not currently in use or allocated to specific slots, use the **show license available** command in EXEC or administration EXEC mode.

```
show license available {feature-id | location node-id | sdr sdr-name}
```

| Syntax Description             |   |  |
|--------------------------------|---|--|
| <i>feature-id</i>              | Identifier for the feature entitled in the licenses to be displayed.  |  |
| <b>location</b> <i>node-id</i> | Specifies the location of the card. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.                           |  |
| <b>sdr</b> <i>sdr-name</i>     | Displays the licenses in the specified secure domain router (SDR) license pool. The <i>sdr-name</i> argument is the name assigned to the SDR. |  |

**Command Default** No default behavior or values

**Command Modes** Administration EXEC  
EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license available** command displays all licenses that currently are not being used or allocated to a specific slot. You can display only licenses with a specific feature identifier, slot location, or SDR by using the available options.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example displays sample output from the **show license available** command with only implicit licenses available:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license available
```

```
FeatureID: CRS-MS-40G
```

```
(Slot based, Implicit[Remaining time: 90
days]) Status: Available 0 SDR: Owner Status: Available 0 Location: 0/1/CPU0 1 0/6/CPU0 1
```

The following example displays sample output from the **show license available** command with permanent licenses installed:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license available

FeatureID: CRS-MS-40G

  (Slot based, Permanent)
  Status: Available      7
    SDR: Owner Status:
      Available          7

FeatureID: XC-L3VPN (Slot based, Permanent)
  Status: Available      8
    SDR: Owner
      Status: Available  8
```

See [Table 71: show license Field Descriptions, on page 722](#) for a description of the significant fields shown in the display.

# show license backup

To display the backup license file, use the **show license backup** command in administration EXEC mode.

```
show license backup file-name
```

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>file-name</i> Name of the backup license file. |
|---------------------------|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | Administration EXEC |
|----------------------|---------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 3.5.0  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license backup** command displays the UDI information and license summary of a backup database, so that you can confirm the contents of a particular backup file before restoring it. Create the backup license file using the **license backup** command. Restore licenses from a backup using the **license restore** command.

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | pkg-mgmt       | read              |

The following example shows sample output from the **show license backup** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license backup disk1:/license_back

Local Chassis UDI Information:
  S/N           : TBA09370035
  Operation ID  : 5
  Licenses      :

FeatureID      Type                               #installed
CRS-MS-40G    Slot based, Permanent                    2
XC-L3VPN      Slot based, Permanent                    1
```

**Table 72: show license backup Field Descriptions**

| Field | Description            |
|-------|------------------------|
| S/N   | Chassis serial number. |

| Field        | Description   |
|--------------|---|
| Operation ID | License operation ID number. The license operation ID is incremented by the license manager every time there is a successful license add or remove operation. |
| FeatureID    | Feature to which the licenses apply.  |
| Type         | Type of license: slot-based or chassis-based; permanent, evaluation, or implicit.   |
| #installed   | Number of such licenses installed.  |

**Related Topics**

[license backup](#), on page 707

[license restore](#), on page 716

# show license chassis

To display all licenses with their serial number information, use the **show license chassis** command in administration EXEC mode.

**show license chassis**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID  | Operation |
|---------|----------|-----------|
|         | pkg-mgmt | read      |

## Example

The following example illustrates sample output from the **show license chassis** command:

```
RP/0/RP0/CPU0:router(admin)# show license chassis
Fri Sep 25 03:50:28.152 DST

FeatureID: CRS-MS-40G-IMP (Slot based, Implicit[Remaining time: unlimited])
Total licenses 2
Available for use          0
Allocated to location     0
Active                    2
Pool: Owner
  Total licenses in pool: 2
  Status: Available      0   Operational:    2
  Locations with licenses: (Active/Allocated) [SDR]
                        0/6/CPU0      (1/0) [Owner]
                        0/1/CPU0      (1/0) [Owner]

S/N Information:
S/N TBA09370035:    0 licenses
```

# show license evaluation

To display information about any evaluation licenses currently allocated, available, or in use, use the **show license evaluation** command in EXEC or administration EXEC mode.

**show license evaluation** [*feature-id* | **location** *node-id* | **sdr** *sdr-name*]

| Syntax Description             |  |
|--------------------------------|--|
| <i>feature-id</i>              | (Optional) Identifier for the feature entitled in the licenses to be displayed.  |
| <b>location</b> <i>node-id</i> | (Optional) Specifies the location of the card. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.                           |
| <b>sdr</b> <i>sdr-name</i>     | (Optional) Displays the licenses in the specified secure domain router (SDR) license pool. The <i>sdr-name</i> argument is the name assigned to the SDR. |

**Command Default** No default behavior or values

**Command Modes** Administration EXEC  
EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license evaluation** command displays information regarding any evaluation licenses that are currently allocated, available, or in use, including the number of days left until they expire. You can display the information for a specific feature identifier, slot location, or SDR by using the available options.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example displays sample output from the **show license evaluation** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license evaluation

FeatureID: XC-L3VPN (Non slot based, Evaluation[Valid])
Valid for 2day(s) from 15:13:16 Nov 17 2006
Remaining time: 1 day(s) 21:07:46
Status: Available      6      Allocated      0      Active      0
      SDR: Owner
      Status: Available      6      Operational:      0
```

See [Table 71: show license Field Descriptions, on page 722](#) for a description of the significant fields shown in the display.

# show license expired

To display information regarding evaluation licenses that have expired, use the **show license expired** command in EXEC or administration EXEC mode.

```
show license expired [{feature-id | location node-id | sdr sdr-name}]
```

| Syntax Description             |  |
|--------------------------------|--|
| <i>feature-id</i>              | (Optional) Identifier for the feature entitled in the licenses to be displayed.  |
| <b>location</b> <i>node-id</i> | (Optional) Specifies the location of the card. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.                           |
| <b>sdr</b> <i>sdr-name</i>     | (Optional) Displays the licenses in the specified secure domain router (SDR) license pool. The <i>sdr-name</i> argument is the name assigned to the SDR. |

**Command Default** No default behavior or values

**Command Modes** Administration EXEC  
EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license expired** command displays information regarding evaluation licenses that have expired. You can display the information for a specific feature identifier, slot location, or SDR by using the available options.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example displays sample output from the **show license expired** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license expired

FeatureID: XC-L3VPN (Non slot based, Evaluation[Expired])

Status: Available 6 Allocated 0 Active 0

SDR: Owner

Status: Available 6 Operational: 0
```

See [Table 71: show license Field Descriptions, on page 722](#) for a description of the significant fields shown in the display.

## show license features

To display all features that can be licensed on the router, use the **show license features** command in administration EXEC mode.

**show license features**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.9.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID  | Operation |
|---------|----------|-----------|
|         | pkg-mgmt | read      |

# show license file

To display all the XML license files that have been added to a router, use the **show license file** command in administration EXEC mode.

## show license file

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.0.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID  | Operation |
|---------|----------|-----------|
|         | pkg-mgmt | read      |

## Example

The following example shows sample output from the **show license file** command:

```
RP/0/RSP0/CPU0:router(admin)# show license file

Wed Aug  4 03:01:53.506 DST

# show license log

To display the operational or administrative logs for the license system, use the **show license log** command in EXEC or administration EXEC mode.

```
show license log {operational | administration} {request-id|feature-id | sdr sdr-name}
```

| Syntax Description         |   |  |
|----------------------------|---|--|
| <b>operational</b>         | Displays the operational logs for the license system.   |  |
| <b>administration</b>      | Displays the administration logs for the license system.  |  |
| <i>request-id</i>          | Identifier of a particular log entry.   |  |
| <i>feature-id</i>          | Identifier for the feature entitled in the licenses to be displayed.  |  |
| <b>sdr</b> <i>sdr-name</i> | Displays the licenses in the specified secure domain router (SDR) license pool. The <i>sdr-name</i> argument is the name assigned to the SDR. |  |

**Command Default** No default behavior or values

**Command Modes** Administration EXEC  
EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license log** command displays the operational or administrative logs for the license system. The administrative log displays all licenses that are added, removed, or moved along with a timestamp and username of the person who initiated the request. This log persists across reloads. The operation log displays when a license was checked out or released by a feature. The license release can be done by the license manager if it detects that the feature is not responding. This log does not persist between reloads.

You can display license information for a specific feature identifier or SDR by using the available options.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example displays sample output from the **show license log** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license log operational
#ID :SDR      :FeatureID   :NodeID      :Time:      Log
```

```
1      :Owner   :CRS-MS-40G

      :0/6/CPU0 :Tue Feb  6 21:33:16 2007:
          license_acquire: opaque_string , result(No error)
2      :Owner   :CRS-MS-40G

      :0/1/CPU0 :Tue Feb  6 21:33:16 2007:
          license_acquire: opaque_string , result(No error)
```

See [Table 71: show license Field Descriptions, on page 722](#) for a description of the significant fields shown in the display.

# show license pools

To display the currently configured set of license pools, use the **show license pools** command in administration EXEC mode.

**show license pools [detail]**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>detail</b> (Optional) Displays the locations of the licenses in each pool. |
|---------------------------|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | Administration EXEC |
|----------------------|---------------------|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 3.5.0  | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license pools** command displays all license pools, and the features that are enabled with the licenses in each pool. By default, all licenses are contained in the owner SDR pool. If you have created SDR license pools with the **license pool create** command, you can place licenses in separate pools.

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | pkg-mgmt       | read              |

The following example displays sample output from the **show license pools** command. In this example, the owner SDR has both 40-Gbps and Layer\_3 VPN licenses, while the SDR sdr2 has only 40-Gbps licenses.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license pools

Pool Name          Feature
=====
Owner              CRS-MSC-40G XC-L3VPN

sdr2               CRS-MSC-40G
```

**Table 73: show license pools Field Descriptions**

| Field | Description       |
|-------|-------------------|
| Owner | SDR license pool. |

| Field   | Description  |
|---------|--|
| Feature | Feature that is enabled in the specified license pool. |

**Related Topics**

[license pool create](#), on page 712

# show license udi

To display unique device identifier (UDI) information for the router, use the **show license udi** command in administration EXEC mode.

**show license udi**

**Syntax Description** This command has no keywords or arguments.

**Command Default** No default behavior or values

**Command Modes** Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show license udi** command displays the complete UDI of the router to which any license is associated. The UDI comprises the chassis serial number, along with a license operation ID number. The UDI is used to acquire a license file using the license registration tool on CCO. The license tool is located at <https://tools.cisco.com/SWIFT/Licensing/RegistrationServlet?>

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example displays sample output from the **show license udi** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show license udi

Local Chassis UDI Information:
PID           : CRS-8-LCC
S/N          : TBA09370035
Operation ID  : 1
```

**Table 74: show license udi Field Descriptions**

| Field | Description            |
|-------|------------------------|
| PID   | Product ID number.     |
| S/N   | Chassis serial number. |

| Field        | Description   |
|--------------|---|
| Operation ID | License operation ID number. The license operation ID is incremented by the license manager every time there is a successful license add or remove operation. |

# show license status

To display the status of all relevant licenses, use the **show license status** command. On Cisco IOS XR, this command runs in Administration mode, and on Cisco IOS XR 64-bit, it runs in EXEC mode.

## show license status

### Usage Guidelines

This command has no keywords or arguments.

### Command Default

None

### Command Modes

Administration for Cisco IOS XR

EXEC for Cisco IOS XR 64-bit

### Command History

| Release       | Modification                                       |
|---------------|--|
| Release 4.0.0 | This command was introduced on Cisco IOS XR.       |
| Release 6.2.1 | This command was supported on Cisco IOS XR 64-bit. |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

### Task ID

| Task ID  | Operation |
|----------|-----------|
| pkg-mgmt | read      |

## Example

The following example shows output for the **show license status** command on Cisco IOS XR:

```
RP/0/RSP0/CPU0:router(admin)# show license status

Sun Jul 18 05:25:09.855 DST
License Type Supported
    permanent   Non-expiring node-locked licenses
    evaluation   Expiring node-locked licenses

License Operation Supported
    add          Add license file to the system
    backup       Backup License
    move         Move licenses
    pool         License pool creation
    remove       Remove license file
    restore      Restore backedup licenses

Device Status
    Device Credential type: IMAGE
    Device Credential Verification: PASS
    Rehost Type: Hardware
```

The following example shows output for the **show license status** command on Cisco IOS XR 64-bit:

```
RP/0/RSP0/CPU0:router # show license status

## Software Package Management Commands

This chapter describes the Cisco IOS XR commands used to add packages to a router storage device, activate or deactivate packages, upgrade or downgrade existing packages, and display information about packages.

For detailed information about the concepts and tasks necessary to manage Cisco IOS XR software see *Cisco IOS XR Getting Started Guide for the Cisco CRS Router*.

# clear install boot-options

To clear the boot options for a specified location or for all locations, use the **clear install boot-options** command in administration EXEC mode.

```
clear install boot-options [location {node-id | all}]
```

## Syntax Description

**location** {*node-id* | **all**} (Optional) Specifies a node. The *node-id* argument is expressed in the *rack/slot/module* notation. The **all** keyword specifies all nodes.

## Command Default

If no location is specified, the **clear install boot-options** command prompts you for confirmation and clears boot options for all locations.

## Command Modes

Administration EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.7.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **clear install boot-options** command to clear boot options that were set using the **install boot-options** command.

## Task ID

| Task ID  | Operations     |
|----------|----------------|
| pkg-mgmt | read,<br>write |

The following example shows how to clear the boot options for all locations:

```
RP/0/RP0/CPU0:router(admin)#clear install boot-options
Install operation 4 '(admin) clear install boot-options location all' started
by user 'salevy' via CLI at 14:03:34 DST Sat Mar 15 2008.
Proceed with clearing boot options for all nodes? [confirm]
Install operation 4 completed successfully at 14:03:49 DST Sat Mar 15 2008.
```

# clear install label

To clear a label from an installation rollback point, use the **clear install label** command in EXEC or administration EXEC mode.

**clear install label** *label*

---

**Syntax Description**     *label* Label defined for an installation rollback point.

---

---

**Command Default**     No default behavior or values

---

---

**Command Modes**     EXEC  
Administration EXEC

---

---

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.6.0 | This command was introduced. |

---

---

**Usage Guidelines**     To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **clear install label** command to remove a label associated with an installation rollback point. Labels are assigned using the **install label** command.

---

| Task ID | Task ID  | Operations     |
|---------|----------|----------------|
|         | pkg-mgmt | read,<br>write |

---

In the following example, the label `brians_smu` is removed from the associated installation rollback point.

```
RP/0/RP0/CPU0:router# clear install label brians_smu
```

```
Install operation 6 'clear install label brians_smu' started by user 'usr'
on SDR Owner via CLI at 09:28:04 DST Thu Aug 09 2007.
Install operation 6 completed successfully at 09:28:04 DST Thu Aug 09 2007.
```

# clear install log-history oldest

To clear the oldest log items from the installation history log, use the **clear install log-history oldest** command in EXEC or administration EXEC mode.

**clear install log-history oldest** *number*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>number</i> Specifies the number of log entries to clear. The oldest log entries are cleared. |
|---------------------------|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |                             |
|----------------------|-----------------------------|
| <b>Command Modes</b> | EXEC<br>Administration EXEC |
|----------------------|-----------------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.4.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Enter the **clear install log-history oldest** command in EXEC mode to clear the oldest installation history log entries only for the current secure domain router (SDR) user. (The log entries for the admin user are not cleared.)

Enter the **clear install log-history oldest** command in administration EXEC mode to clear the oldest installation history log entries for all users. (This command impacts all users when entered in administration EXEC mode.)

Use the *number* argument to specify the number of the old log entries to be deleted.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | pkg-mgmt       | read,<br>write    |

In the following example, the two oldest installation log history entries are cleared. Because this command is entered in EXEC mode, only the log entries for the current SDR user are deleted:

```
RP/0/RP0/CPU0:router# clear install log-history oldest 2
```

```
Install operation 5 'clear install log-history oldest 2' started by user
'user_b' at 13:28:27 UTC Sat Aug 26 2006.
Info:      Successfully deleted the following historylog points:
Info:      1, 2
Install operation 5 completed successfully at 13:28:29 UTC Sat Aug 26 2006.
```

In the following example, the five oldest installation log history entries are cleared for all users in the system. Because this command is entered in administration EXEC mode, the log entries for all SDR users are deleted:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# clear install log-history oldest 5

Install operation 6 '(admin) clear install log-history oldest 5' started by
user 'user_b' at 13:35:50 UTC Sat Aug 26 2006.
Info:      Successfully deleted the following historylog points:
Info:      1, 2, 3, 4, 5
Install operation 6 completed successfully at 13:35:50 UTC Sat Aug 26 2006.
```

# clear install rollback oldest

To delete saved installation points from the installation buffer, use the **clear install rollback oldest** command in EXEC or administration EXEC mode.

**clear install rollback oldest** *points*

| <b>Syntax Description</b> | <i>points</i> Number of saved installation points to delete, beginning with the oldest saved installation point.  |         |              |             |                              |             |   |               |                                  |
|---------------------------|---|---------|--------------|-------------|------------------------------|-------------|---|---------------|----------------------------------|
| <b>Command Default</b>    | No default behavior or values   |         |              |             |                              |             |   |               |                                  |
| <b>Command Modes</b>      | EXEC<br>Administration EXEC   |         |              |             |                              |             |   |               |                                  |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.0</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 3.2</td> <td>The command was made available in administration EXEC mode.</td> </tr> <tr> <td>Release 3.4.0</td> <td>Support was added for EXEC mode.</td> </tr> </tbody> </table>          | Release | Modification | Release 3.0 | This command was introduced. | Release 3.2 | The command was made available in administration EXEC mode. | Release 3.4.0 | Support was added for EXEC mode. |
| Release                   | Modification  |         |              |             |                              |             |   |               |                                  |
| Release 3.0               | This command was introduced.  |         |              |             |                              |             |   |               |                                  |
| Release 3.2               | The command was made available in administration EXEC mode.   |         |              |             |                              |             |   |               |                                  |
| Release 3.4.0             | Support was added for EXEC mode.  |         |              |             |                              |             |   |               |                                  |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.   |         |              |             |                              |             |   |               |                                  |
| <b>Command Modes</b>      | <ul style="list-style-type: none"> <li>Enter the <b>clear install rollback oldest</b> command in administration EXEC mode to delete the saved installation points for all secure domain routers (SDRs).</li> <li>Enter the <b>clear install rollback oldest</b> command in EXEC mode to delete the saved installation points for the SDR to which you are logged in.</li> </ul> |         |              |             |                              |             |   |               |                                  |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>pkg-mgmt</td> <td>read,<br/>write</td> </tr> </tbody> </table>   | Task ID | Operations   | pkg-mgmt    | read,<br>write               |             |   |               |                                  |
| Task ID                   | Operations  |         |              |             |                              |             |   |               |                                  |
| pkg-mgmt                  | read,<br>write  |         |              |             |                              |             |   |               |                                  |

In the following example, the **show install rollback ?** command is used to display the available rollback points. The **clear install rollback oldest 2** command is then used to delete the two oldest rollback points. The **show install rollback ?** command is used again to display the remaining rollback points.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show install rollback ?

 0  ID of the rollback point to show package information for
 2  ID of the rollback point to show package information for
 4  ID of the rollback point to show package information for
 9  ID of the rollback point to show package information for
```

```
10 ID of the rollback point to show package information for

RP/0/RP0/CPU0:router(admin)# clear install rollback oldest 2

Install operation 11 'clear install rollback oldest 2' started by user 'user_b'
at 18:11:19 UTC Sat Apr 08 2006.
Info:      Successfully deleted the following rollback points:
Info:      0, 2
Install operation 11 completed successfully at 18:11:21 UTC Sat Apr 08 2006.

RP/0/RP0/CPU0:router(admin)# show install rollback ?

 4 ID of the rollback point to show package information for
 9 ID of the rollback point to show package information for
10 ID of the rollback point to show package information for
```

# install abort

To abort an installation transaction, use the **install abort** command in administration EXEC mode.

```
install abort [request-id]
```

## Syntax Description

*request-id* (Optional) Request ID assigned to an installation operation.

## Command Default

Abort the current installation operation.

## Command Modes

Administration EXEC

## Command History

| Release       | Modification                             |
|---------------|--|
| Release 3.3.0 | This command was introduced.             |
| Release 4.0.0 | This command was removed from EXEC mode. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **install abort** command to halt a software installation operation that is in process or that has been suspended.

Only activation, deactivation, and rollback operations can be aborted. Specifically, the **install abort** command cannot be aborted, but the **install add** command with the **activate** keyword can be aborted.

Use the **install abort** command with the *request-id* argument to halt a specific installation operation if the *request-id* is currently in process.

## Task ID

| Task ID  | Operations     |
|----------|----------------|
| pkg-mgmt | read,<br>write |

The following example shows how to halt an installation operation:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install abort
```

```
Info: Please confirm your 'install abort' request by pressing Enter or y, or pressing n to
cancel it.
```

```
Do you really want to abort install operation 15? [confirm] <enter>
```

```
Abort confirmed.
```

```
Please check console to verify the operation is aborted.
```

## Related Topics

[install activate](#), on page 757

[install add](#), on page 767

[install deactivate](#), on page 781

# install activate

To add software functionality to the active software set, use the **install activate** command in Admin EXEC mode or EXEC mode.

```
install activate {device:package | id add-id} [auto-abort-timer time] [location node-id] [issu]
[if-active] [admin-profile] [{asynchronous | synchronous}] [parallel-reload] [prompt-level {default
| none}] [test] [pause sw-change]
```

| Syntax Description                  |  |
|-------------------------------------|--|
| <i>device:package</i>               | <p>Device and package, expressed in concatenated form (for example, disk0:hfr-mgbl-4.0.0).</p> <p>For the <i>device</i> argument, the value is a specified storage device, typically disk0:. This is the local storage device where the package was added with the <b>install add</b> command.</p> <p>Press <b>?</b> after a partial package name to display all possible matches available for activation. If there is only one match, press the <b>Tab</b> key to fill in the rest of the package name. Up to 16 device–package pairs can be specified.</p> <p><b>Note</b> Multiple packages can be activated at one time. Up to 16 packages can be specified in a single <b>install activate</b> command. Multiple packages can be specified using the wildcard syntax, for example, <b>harddisk:*4.0*</b>. If multiple Software Maintenance Upgrades (SMUs) are activated, some SMUs may require a reload. If the operation requires a node reload, the user is prompted before the installation operation occurs.</p> |
| <b>id</b> <i>add-id</i>             | <p>Specifies the ID number of an <b>install add</b> operation. The command activates all packages that were added in the specified <b>install add</b> operation. The ID number of an <b>install add</b> operation is indicated in the syslog displayed during the operation and in the output of the <b>show install log</b> command. Up to 16 <b>install add</b> operations can be specified.</p>   |
| <b>auto-abort-timer</b> <i>time</i> | <p>(Optional) Specifies an abort timer value, in minutes, which when expired loads the last committed loadpath.</p>  |

|  |  |
|--|--|
| <b>location</b> <i>node-id</i>                       | (Optional) Activates a package on the designated node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation.<br><br><b>Note</b> A package cannot be activated on a single node unless some version of the package being activated is already active on all nodes. For example, a Multiprotocol Label Switching (MPLS) package cannot be active on only one node. If a version of the MPLS package is already active on all nodes, an MPLS package then could be upgraded or downgraded on a single node.<br><br><b>Note</b> To activate a package on all supported nodes, do not specify a location. |
| <b>issu</b>  | Performs an in-service software upgrade.   |
| <b>admin-profile</b>                                 | (Optional. Administration EXEC mode only) Activates the package only for the admin-plane nodes. Admin plane nodes provide system-wide functionality and do not belong to a specific SDR. Examples of admin-plane nodes are fabric cards and service processor modules (SPs). The <b>admin-profile</b> keyword is used to update admin-plane resources without impacting the routing nodes in any SDRs.   |
| <b>if-active</b>                                     | (Optional. Administration EXEC mode only) Activates an optional package or SMU for an optional package only if an earlier version of the package is already active. Use the <b>if-active</b> keyword when SDRs have different sets of active software packages.  |
| <b>asynchronous</b>                                  | (Optional) Performs the command in asynchronous mode. In asynchronous mode, the command runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode.   |
| <b>synchronous</b>                                   | (Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned.  |
| <b>parallel-reload</b>                               | (Optional) Forces all cards on the router to reload at the same time and then come up with the new software, rather than proceeding according to the option encoded in the install package.  |
| <b>prompt-level</b> { <b>default</b>   <b>none</b> } | (Optional) Specifies when you are prompted for input during the procedure.<br><br><ul style="list-style-type: none"> <li>• <b>default</b>—You are prompted only when input is required by the operation.</li> <li>• <b>none</b>—You are never prompted.</li> </ul>   |
| <b>test</b>  | (Optional) Verifies the effects of proposed operations without making changes to the Cisco IOS XR software.  |

---

**pause sw-change** (Optional) Pauses the operation after the preparatory stage and before locking the configuration for the actual software change. While the operation is paused, you can perform configuration changes. You control the resumption of the operation from the command-line interface (CLI) prompt.

---

**Command Default**

If the **install prepare** command was not executed prior to **install activate**, executing the **install activate** command without any keywords aborts the process.

- Package is activated for all supported nodes on all SDRs in the system.
- Operation is performed in asynchronous mode: The **install activate** command runs in the background, and the EXEC prompt is returned as soon as possible.

**Command Modes**

Admin EXEC mode  
EXEC mode

**Command History**

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.  |
| Release 3.2   | This command was moved from EXEC mode to administration EXEC mode.  |
| Release 3.3.0 | Support was added for the <b>SDR <i>sdr-name</i></b> keyword and argument.<br>Support was added for the <b>noprompt</b> keyword.  |
| Release 3.4.0 | Support was added for EXEC mode.<br>Support was added for the <b>if-active</b> keyword in administration EXEC mode.   |
| Release 3.5.0 | Support was added for the <b>auto-abort-timer</b> keyword.  |
| Release 3.6.0 | Support was added for the <b>prompt-level</b> and <b>parallel-reload</b> keywords.<br>Support was added for wildcard syntax when specifying packages to be activated.<br>Support was removed for the <b>noprompt</b> keyword. |
| Release 3.7.0 | Support was added for the <b>id <i>add-id</i></b> keyword and argument.<br>Disruption during multiple SMU activation was reduced, requiring reloads in fewer cases.   |
| Release 3.8.0 | Support was added for the <b>pause sw-change</b> keywords.  |
| Release 4.0.0 | This command was removed from EXEC mode.<br>Support for the <b>sdr</b> keyword was removed.   |

| Release       | Modification  |
|---------------|---|
| Release 4.1.0 | The auto-abort timer was changed to enabled by default. The <b>off</b> keyword was added to disable the auto-abort timer.<br><br>The <b>issu</b> keyword was added. |

### Usage Guidelines

Use the **install activate** command to activate software packages or SMUs for all valid cards. Information within the package is used to verify compatibility with the target cards and with the other active software. Actual activation is performed only after the package compatibility and application program interface (API) compatibility checks have passed.

### Specifying Packages to Activate

You can either use the **id add-id** keyword and argument to activate all packages that were added in one or more specific **install add** operations, or specify packages by name. The operation ID of an **install add** operation is indicated in the syslog displayed during the operation and in the output of the **show install log** command. If you specify packages according to operation ID, all the packages that were added by the specified operation must still be on the router.

### Upgrading and Downgrading Packages

- To upgrade a package, activate the later version of the package; the earlier version is automatically deactivated.
- To downgrade a package, activate the earlier version of the package; the later version is automatically deactivated.

#### Caution

Downgrading to Cisco IOS XR Software Release 3.7.0 or earlier is not supported if you are using a FAT32 flash disk. If you are using a FAT32 flash disk, and you must downgrade, convert the flash disk to FAT16 before downgrading. If you do not convert the flash disk to FAT16 before the downgrade, the disk becomes unreadable and the router does not boot. Converting from FAT32 to FAT16 is a complex procedure.

#### Note

Activating a Software Maintenance Update (SMU) does not cause any earlier SMUs, or the package to which the SMU applies, to be automatically deactivated.

### Activating New Versions of the Currently Active Packages

Use the **install activate** command with the **if-active** keyword to activate the package only on SDRs where an earlier version of the package is already active. This command is available only in administration EXEC mode.

The **if-active** keyword is used only for optional packages or SMUs for optional packages.

### Router Reloads Following Package Activation

If the activation requires a reload of the SDR or all SDRs, a confirmation prompt appears. Use the **install activate** command with the **prompt-level none** keywords to automatically ignore any reload confirmation prompts and proceed with the package activation. The router reloads if required.

### Node Reloads Following Package Activation

If the software activation requires a router reload, a confirmation prompt appears.

### Node Reloads Following Package Activation

If a software operation requires a node reload, the config-register for that node should be set to autoboot. If the config-register for the node is not set to autoboot, the system automatically changes the setting and the node reloads. A message describing the change is displayed.

### Synchronous Mode

Use the **install activate** command with the **synchronous** keyword to complete the operation before the prompt is returned. A progress bar indicates the status of the operation. For example:

```
- 1% complete: The operation can still be aborted (ctrl-c for options)
\ 10% complete: The operation can still be aborted (ctrl-c for options)
```

When the **install activate** command is run in asynchronous mode, the system may stay in synchronous mode for a short period of time while the system checks for questions to ask the user.

Press **Ctrl-C** during a synchronous operation to abort the operation or make the operation asynchronous.

### Test Option

Use the **test** keyword to verify the effects of the proposed operations and determine whether the installation can be completed. After previewing the effects of the proposed operations, use the **show install log** command for more details about the effects of the proposed operations.

### Auto-abort Option

Use the **auto-abort-timer** keyword to provide a safety mechanism for the instance that a package is activated and access to the router is lost. This option automatically rolls back to the current committed loadpath, thereby undoing any changes that are activated with the **install activate** command. After the installation, if the activated software is working correctly, use the **install commit** command to cancel the timer and commit the new loadpath. The auto-abort timer is enabled to 60 minutes by default.

---

**Note** The changes made to the active software set are not persistent during route processor (RP) reloads. Use the **install commit** command to make changes persistent.

---

### Parallel Reload

Install operations are activated according to the method encoded in the package being activated. Generally, this method has the least impact for routing and forwarding purposes, but it may not be the fastest method from start to finish and can require user interaction by default. To perform the installation procedure as quickly as possible, you can specify the **parallel-reload** keyword. This action forces the installation to perform a parallel reload, so that all cards on the router reload simultaneously and then come up with the new software. This impacts routing and forwarding, but it ensures that the installation is performed without other issues.

## Pausing Before Configuration Lock

Use the **pause sw-change** keywords to pause the operation before locking the configuration. An **install activate** operation begins with preparatory steps, such as software checks, and then proceeds with the actual activation of the new software. The configuration is locked for the activation. If you specify the **pause sw-change** keywords, the operation pauses before locking the configuration and provides you with the option to hold the operation while you perform configuration changes, and you can proceed with the activation whenever you choose. This action is useful, for example, if your workflow involves configuring a router out of the network during software installation and you want to minimize the time that the router is out of the network. You can specify these keywords for both asynchronous and synchronous operations. In both cases, follow the onscreen instructions to control the pausing and completion of the operation.

## ISSU

Note the following prerequisites before activating software packages using ISSU:

- You must have at least four fabric planes installed, two odd and two even. Use the command **show controller fabric plane all** in administration EXEC mode to verify the number of fabric planes in your router.

```
RP/0/RP0/CPU0:router(admin)# show controller fabric plane all
```

```
Thu Jun 23 04:45:40.186 DST
Flags: P - plane admin down,      p - plane oper down
       C - card admin down,       c - card oper down
       A - asic admin down,       a - asic oper down
       L - link port admin down,  l - linkport oper down
       B - bundle port admin Down, b - bundle port oper down
       I - bundle admin down,     i - bundle oper down
       N - node admin down,       n - node down
       X - ctrl admin down,       x - ctrl down
       o - other end of link down d - data down
       f - failed component downstream
       m - plane multicast down,  s - link port permanently shutdown
       t - no barrier input       O - Out-Of-Service oper down
       T - topology mismatch down e - link port control only
       D - plane admin data down  U - issu down
```

| Plane Id | Admin State | Oper State | up->dn counter | up->mcast counter |
|----------|-------------|------------|----------------|-------------------|
| 0        | UP          | UP         | 0              | 0                 |
| 1        | UP          | UP         | 0              | 0                 |
| 2        | UP          | UP         | 0              | 0                 |
| 3        | UP          | UP         | 0              | 0                 |
| 4        | UP          | UP         | 0              | 0                 |
| 5        | UP          | UP         | 0              | 0                 |
| 6        | UP          | UP         | 0              | 0                 |
| 7        | UP          | UP         | 0              | 0                 |

- You must have only UNIGEN flash disks installed in your system. Use the command **show file disk0:** in EXEC mode to verify the flash disk vendor.

```
RP/0/RP0/CPU0:router# show file disk0:
```

```
Thu Jun 23 04:48:59.183 DST
Model:          UNIGEN FLASH
```

```
Capacity:      8215201 Sectors, Total 4206182912 Bytes, (512 Bytes/sector)
```

- You must have at least 400 MB of memory available on all line cards to be upgraded.
- You must have enough disk space for V1 and V2 images, PIEs and SMUs. This prerequisite is no different than that of a non-ISSU upgrade.
- Cisco recommends that you do a backup of the ASCII configuration before each upgrade.

Note the following restrictions regarding ISSU:

- ISSU does not work if any of the following hardware is running in the chassis. If you have any of these running in your system, manually shut them down before running ISSU, and then bring them back up after ISSU is complete.
  - DRP cards
  - Non-owner SDRs

If any non-supported hardware is running on your system, you receive an error message similar to this one when ISSU tries to run:

```
RP/0/RP0/CPU0:router(admin)# install activate id 4 6 prompt-level all auto-abort timer
off issu

Thu Jun  9 13:42:47.217 DST
Install operation 10 '(admin) install activate id 4 6 prompt-level all
auto-abort-timer off issu' started by user 'user1' via CLI at 13:42:48 DST
Thu Jun 09 2011.
/ 1% complete: The operation can still be aborted (ctrl-c for options)
Info:      This operation will activate the following packages:
Info:      disk0:hfr-mini-p-4.3.99
Info:      disk0:hfr-mpls-p-4.3.99
Info:      disk0:hfr-mgbl-p-4.3.99
Info:      disk0:hfr-mcast-p-4.3.99
Info:      disk0:hfr-k9sec-p-4.3.99
Info:      disk0:hfr-fpd-p-4.3.99
Info:      disk0:hfr-doc-p-4.3.99
Info:      disk0:hfr-diags-p-4.3.99
/ 1% complete: The operation can still be aborted (ctrl-c for options)
Error:     ISSU upgrade not supported: 'ISSU is not supported for DRP cards'
```

- Refer to your release notes for a complete list of hardware that cannot be upgraded during the ISSU process. If you have any non-supported hardware running in your system, the upgrade process automatically shuts them down and reloads them after the upgrade is complete.
- Ethernet OAM flaps after an ISSU upgrade.
- ISSU downgrade is not supported.
- ISSU is not supported on the NV cluster set-up.

The following example shows how to display the packages available for activation using the online help system. In this example, ? is entered after a partial package name to display all possible matches:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install activate disk0:?

disk0:hfr-mini-p-4.0.0      disk0:hfr-diags-p-4.0.0    disk0:hfr-mcast-p-4.0.0
disk0:hfr-mppls-p.4.0.0    disk0:hfr-k9sec-p-4.0.0   disk0:hfr-mgbl-p-4.0.0
disk0:hfr-fpd-p-4.0.0
```

The following example shows how to activate a package that was installed in an **install add** operation that was assigned install operation id 2:

```
RP/0/RP0/CPU0:router(admin)# install activate id 2

Install operation 3 '(admin) install activate id 2' started by user 'lab' via
CLI at 01:10:21 UTC Thu Jan 03 2010.
Info:      This operation will activate the following package:
Info:      disk0:hfr-mcast-p-4.0.0
Info:      Install Method: Parallel Process Restart
The install operation will continue asynchronously.
Info:      The changes made to software configurations will not be persistent
Info:      across system reloads. Use the command '(admin) install commit' to
Info:      make changes persistent.
Info:      Please verify that the system is consistent following the software
Info:      change using the following commands:
Info:      show system verify
Info:      install verify packages
Install operation 3 completed successfully at 01:11:30 UTC Thu Jan 03 2008.
```

The following example shows how to activate a package on all nodes for all SDRs. Use the **install commit** command to make the changes persistent across DSDRSC reloads.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install activate disk0:hfr-mppls-4.0.0 synchronous

Install operation 15 'install activate disk0:hfr-mppls-p-4.0.0 synchronous'
started by user 'user_b' at 19:15:33 UTC Sat Apr 08 2010.
Info:      The changes made to software configurations will not be persistent
Info:      across system reloads. Use the command 'admin install commit' to make
Info:      changes persistent.

Install operation 15 completed successfully at 19:16:18 UTC Sat Apr 08 2010.

RP/0/RP0/CPU0:router(admin)# install commit

Install operation 16 'install commit' started by user 'user_b' at 19:18:58 UTC
Sat Apr 08 2006.
Install operation 16 completed successfully at 19:19:01 UTC Sat Apr 08 2010.
```

The following example shows how to activate a package for a specific SDR:

```
RP/0/RP0/CPU0:router(admin)# install activate disk0:hfr-mppls-p-4.0.0 SDR CE1b
```

```

Install operation 2 'install activate disk0:hfr-mpls-4.0.0
  on SDR: CE1b' started by user 'user_b'
Install operation 2 'install activate disk0:hfr-mpls-4.0.0
  on SDR: CE1b' started by user 'user_b' at 15:31:23 GMT Mon Nov 14 2009.
Info:      SDR CE1b: Checking running configuration version compatibility with
  newly activated software ...
Info:      SDR CE1b: No incompatibilities found between the activated software
  and router running configuration.
Info:      The changes made to software configurations will not be persistent
  across system reloads. Use the command 'admin install commit' to make
  changes persistent.
Info:      Please verify that the system is consistent following the software
  change using the following commands:
Info:      show system verify
Info:      install verify
Install operation 2 completed successfully at 15:32:28 GMT Mon Nov 14 2009.

```

The following example shows how to activate a package for multiple SDRs. To perform this operation, enter the **install activate** command with the **sdr** keyword, and list the SDR names. In this example, the SDR names are “Owner” and “user\_a.” Use the **install commit** command to make the changes persistent across DSDRSC reloads.

```

RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install activate disk0:
hfr-mcast-p-4.0.0
synchronous sdr Owner user_a

Install operation 7 '(admin) install activate disk0:hfr-mcast-p-4.0.0
  synchronous sdr Owner user_a' started by user 'abc' via CLI at 11:32:29
  UTC Mon Sep 25 2009.
Info:      This operation will reload the following node:
Info:      0/RP0/CPU0 (RP) (SDR: Owner)
Info:      This operation will reload all RPs in the Owner SDR, and
  thereby indirectly cause every node in the router to reload.
Proceed with this install operation (y/n)? [y]

- 85% complete: The operation can no longer be aborted (ctrl-c for
  options)[OK]ting Commit Database. Please wait...
Info:      The changes made to software configurations will not be
  persistent across system reloads. Use the command 'admin install
  commit' to make changes persistent.
Info:      Please verify that the system is consistent following the
  software change using the following commands:
Info:      show system verify
Info:      install verify
Install operation 7 completed successfully at 11:33:08 UTC Mon Sep 25 2009.

```

The following example shows how to activate multiple software packages using the wildcard syntax:

```

RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install activate
disk0:*4.0*
Install operation 2 '(admin) install activate disk0:*4.0*' started
  by user 'user_a' via CLI at 04:30:01 PST Fri Dec 28 2009.
Info:      This operation will activate the following packages:
Info:      disk0:hfr-fwgd-4.0.0
Info:      disk0:hfr-admin-4.0.0
Info:      disk0:hfr-fpd-4.0.0
Info:      disk0:hfr-diags-p-4.0.0

# install add

To copy the contents of a package installation envelope (PIE) file to a storage device, use the **install add** command in Admin EXEC mode EXEC mode.

```
install add [{source source-path | tar}] file [activate [pause sw-change] [admin-profile]
[auto-abort-timer time] [location node-id] [issu]] [{asynchronous | synchronous}] [parallel-reload]
[prompt-level {default | none}] [if-active]
```

## Syntax Description

|                                  |   |
|----------------------------------|---|
| <b>source</b> <i>source-path</i> | (Optional) Specifies the source location of the PIE files to be appended to the PIE filenames. Location options are as follows: <ul style="list-style-type: none"> <li>• <b>disk0:</b></li> <li>• <b>disk1:</b></li> <li>• <b>compactflash:</b></li> <li>• <b>harddisk:</b></li> <li>• <b>ftp://username :password@hostname</b> or <i>ip-address / directory-path</i></li> <li>• <b>rcp://username@hostname</b> or <i>ip-address / directory-path</i></li> <li>• <b>tftp://hostname</b> or <i>ip-address / directory-path</i></li> </ul>  |
| <b>tar</b>                       | (Optional) Indicates that the PIE file is contained in a tar file.  |
| <i>file</i>                      | Name and location of the PIE file (composite package) to install. If a source path location is specified using the <b>source</b> keyword, the <i>file</i> argument can be either a fully specified PIE file path, or a path to the PIE file relative to the source path. <p><b>Note</b> Up to 32 PIE files can be added to a device in a single <b>install add</b> operation.</p> <p>If the <b>tar</b> keyword is used, the <i>file</i> argument is a tar file that contains one or more PIE files, or directories containing PIE files. Up to 16 tar files can be added, out of the possible 32 install files.</p> |
| <b>activate</b>                  | (Optional) Activates the package or packages. This option is run only if the <b>install add</b> operation is successful.  |
| <b>pause sw-change</b>           | (Optional) Pauses the operation before locking the configuration for the software activation. While the operation is paused, you can perform configuration changes. You control the resumption of the operation at the CLI prompt.  |

|  |  |
|--|--|
| <b>admin-profile</b>                                 | (Optional. Administration EXEC mode only.) Activates the package only for the admin-plane nodes. Admin-plane nodes provide system-wide functionality and do not belong to a specific SDR. Examples of admin-plane nodes are fabric cards and service processor modules (SPs). The <b>admin-profile</b> keyword is used to update admin-plane resources without impacting the routing nodes in any SDRs   |
| <b>auto-abort-timer</b> <i>time</i>                  | (Optional) Specifies an abort timer value, <i>time</i> , in minutes, which when expired loads the last committed loadpath.   |
| <b>location</b> <i>node-id</i>                       | (Optional) Activates a package on the designated node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation.<br><br><b>Note</b> A package cannot be activated on a single node unless some version of the package being activated is already active on all nodes. For example, a Multiprotocol Label Switching (MPLS) package cannot be active on only one node. If a version of the MPLS package is already active on all nodes, an MPLS package then could be upgraded or downgraded on a single node. |
| <b>issu</b>  | Performs an in-service software upgrade. Refer to the <b>install activate</b> command for more detailed information.   |
| <b>asynchronous</b>                                  | (Optional) Performs the command in asynchronous mode. In asynchronous mode, this command runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode.  |
| <b>synchronous</b>                                   | (Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned.  |
| <b>parallel-reload</b>                               | (Optional) Forces all cards on the router to reload at the same time and then come up with the new software, rather than proceeding according to the option encoded in the install package.  |
| <b>prompt-level</b> { <b>default</b>   <b>none</b> } | (Optional) Specifies when you are prompted for input during the procedure.<br><br><ul style="list-style-type: none"> <li>• <b>default</b>—You are prompted only when input is required by the operation.</li> <li>• <b>none</b>—You are never prompted.</li> </ul>   |
| <b>if-active</b>                                     | (Optional. Administration EXEC mode only.) Activates the optional packages only if a version is already active.  |

**Command Default**

Packages are added to the storage device, but are not activated.

The operation is performed in asynchronous mode. The **install add** command runs in the background, and the EXEC prompt is returned as soon as possible.

### Command Modes

EXEC mode  
Admin EXEC mode

### Command History

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.  |
| Release 3.2   | The command was moved from EXEC mode to administration EXEC mode.   |
| Release 3.3.0 | Support was added for the <b>activate</b> , <b>sdr</b> , <b>noprompt</b> , and <b>location</b> keywords and their associated arguments.<br>Support was removed for the <b>to device</b> keyword and argument. |
| Release 3.4.0 | Support was added for EXEC mode.  |
| Release 3.5.0 | Support was added for the <b>source</b> , <b>auto-abort-timer</b> , and <b>admin-profile</b> keywords.<br>Support was added for the addition of up to 32 PIE files in a single <b>install add</b> operation.  |
| Release 3.6.0 | Support was added for the <b>tar</b> , <b>prompt-level</b> , and <b>parallel-reload</b> keywords.<br>Support was removed for the <b>noprompt</b> keyword.   |
| Release 3.8.0 | Support was added for the <b>pause sw-change</b> keywords.  |
| Release 4.0.0 | This command was removed from EXEC mode.<br>The <b>sdr</b> keyword was removed.   |
| Release 4.1.0 | The <b>issu</b> keyword was added.  |
| Release 6.0.1 | The syntax of the command was modified to append a forward slash (/) to the source location (disk0:, disk1:, compactflash:, harddisk: and so on) of the PIE file.   |

### Usage Guidelines

Use the **install add** command to unpack the package software files from a PIE file and copy them to the boot device (usually disk0:).

From Cisco IOS XR Software Release 6.0.1 onwards, you must use a forward slash (/) to the source location of the PIE file while using **install add** command. For example, instead of **install add harddisk:file**, use **install add harddisk:/file**.

The package software files are added to the boot device of the designated secure domain router system controller (DSDRSC) for all SDRs on the router, as well as all active and standby Route Processors (RPs), DRPs and fabric shelf controllers (SCs) installed on the router.

---

**Note** The package files are also added to any additional installed distributed router processors (DRPs) for the effected SDRs.

---

### Adding and Activating a Package

Software packages remain inactive until activated with the [install activate, on page 757](#) command.

To add and activate a package at the same time, use the **install add** command with the **activate** keyword. When this command is used, the keywords and rules for package activation apply. See [install activate, on page 757](#) for more information.

---

**Note** SDR-specific activation is supported for specific packages and upgrades, such as optional packages and Software Maintenance Upgrades (SMUs). Packages that do not support SDR-specific activation can be activated for all SDRs simultaneously only from administration EXEC mode. For detailed instructions, see the *Managing Cisco IOS XR Software Packages* module of *System Management Configuration Guide for Cisco CRS Routers*.

---

---

**Note** If a software activation requires a node reload, the config-register for that node should be set to autoboot. If the config-register for the node is not set to autoboot, then the system automatically changes the setting and the node reloads. A message describing the change is displayed.

---

### Synchronous Mode

Use the **install add** command with the **synchronous** keyword to complete the operation before the prompt is returned. A progress bar indicates the status of the operation. For example:

```
- 1% complete: The operation can still be aborted (ctrl-c for options)
\ 10% complete: The operation can still be aborted (ctrl-c for options)
```

### TFTP Services and Image Size

Some Cisco IOS XR images may be larger than 32 MB, and the TFTP services provided by some vendors may not support a file this large. If you do not have access to a TFTP server that supports files larger than 32 MB:

- Download the software image using FTP or rcp.
- Use a third-party or freeware TFTP server that supports file sizes larger than 32 MB.

### Adding tar Files

Use the **tar** keyword to add one or more PIE files in the tar file format. If the **tar** keyword is used, only a single tar file can be added.

**Note** Multiple tar files or a combination of PIE and tar files is not supported.

Note the following regarding tar files:

- The *file* argument must include the complete location of the tar file.
- The tar file can contain only PIE files and directories containing PIE files. For example:
  - The tar file pies.tar containing the files x.tar and y.pie fails because x.tar is not a PIE file.
  - The tar file pies.tar containing the file x.pie and the directory dir\_a, where dir\_a contains a PIE file y.pie succeeds.
  - The tar file pies.tar containing the file x.pie and the directory dir\_a, where dir\_a contains a tar file y.tar fails because y.tar is not a PIE file.
  - The tar file pies.tar containing the PIE files x.pie, y.pie, ...\*.pie succeeds.
- The **source** keyword is not supported with the **tar** keyword.

Following is a valid example of using the **tar** keyword:

```
RP/0/RP0/CPU0:router(admin)# install add tar
tftp://223.255.254.254/install/files/pies.tar
```

You can add and activate tar files at the same time. In other words, the **install add** command is supported using the **tar** and the **activate** keywords simultaneously.

### Adding Multiple Packages

To add multiple PIE files, use the **source** keyword to specify the directory path location of the PIE files. Then list all the PIE filenames, as necessary. This alleviates the need to repeat the directory location for each PIE file. Up to 32 files can be added, of which 16 can be tar files.

Following is an example of the **install add** command using the **source** keyword:

```
RP/0/0/CPU0:router(admin)# install add source
tftp://192.168.201.1/images/myimages/comp-hfr-mini.pie
hfr-mgbl-p.pie hfr-mpls-p.pie
hfr-mcast-p.pie
```

The following example also illustrates a valid use of the **install add** command with the **source** keyword:

```
RP/0/RP0/CPU0:router(admin)# install add source
tftp://192.168.254.254/images/user/hfr-mcast-p.pie
pies/hfr-mpls-p.pie
ftp://1.2.3.4/other_location/hfr-mgbl-p.pie
```

In the previous example, three PIE files are added from the following locations:

- tftp://192.168.254.254/images/user/hfr-mcast-p.pie
- tftp://192.168.254.254/images/user/pies/hfr-mpls-p.pie
- ftp://1.2.3.4/other\_location/hfr-mgbl-p.pie

### Parallel Reload

Installation operations are activated according to the method encoded in the package being activated. Generally, this method has the least impact for routing and forwarding purposes, but it may not be the fastest method from start to finish and can require user interaction by default. To perform the installation procedure as quickly as possible, you can specify the **parallel-reload** keyword. This forces the installation to perform a parallel reload, so that all cards on the router reload simultaneously, and then come up with the new software. This impacts routing and forwarding, but it ensures that the installation is performed without other issues.

### Pausing Activation Before Configuration Lock

If you specify the **activate** keyword, use the **pause sw-change** keywords to pause the software activation operation before locking the configuration. A software activation operation begins with preparatory steps, such as software checks, and then proceeds with the actual activation of the new software. The configuration is locked for the activation. If you specify the **pause sw-change** keywords, the operation pauses before locking the configuration and provides you with the option to hold the operation while you perform configuration changes, and proceed with the activation whenever you choose. This is useful, for example, if your workflow involves configuring a router out of the network during software installation and you want to minimize the time that the router is out of the network. You can specify these keywords for both asynchronous and synchronous operations. In both cases, follow the onscreen instructions to control the pausing and completion of the operation.

### Task ID

| Task ID  | Operations |
|----------|------------|
| pkg-mgmt | execute    |

The following example shows how to add a PIE file for all SDRs in the system. In the following example, a Multiprotocol Label Switching (MPLS) package is added in synchronous mode. This operation copies the files required for the package to the storage device. This package remains inactive until it is activated with the **install activate** command.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install add
tftp://209.165.201.1/hfr-mpls.pie synchronous

Install operation 4 'install add /tftp://209.165.201.1/hfr-mpls.pie synchronous'
  started by user
'user_b' at 03:17:05 UTC Mon Nov 14 2005.
Info:      The following package is now available to be activated:
Info:
Info:      disk0:hfr-mpls-3.3.80
Info:
Install operation 4 completed successfully at 03:18:30 UTC Mon Nov 14 2005.
```

In the following example, a package is added and activated on all SDRs with a single command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install add disk1:/hfr-mpls-px.pie-6.0.1 activate

Install operation 4 'install add /disk1:/hfr-mpls-px.pie-6.0.1 activate' started
by user 'user_b' at 07:58:56 UTC Wed Mar 01 2006.
The install operation will continue asynchronously.
:router(admin)#Part 1 of 2 (add software): Started
Info:      The following package is now available to be activated:
Info:
```

```
Info:          disk0:hfr-mpls-px.pie-6.0.1
Info:
Part 1 of 2 (add software): Completed successfully
Part 2 of 2 (activate software): Started
Info:          The changes made to software configurations will not be persistent across
system reloads. Use the command 'admin install
Info:          commit' to make changes persistent.
Info:          Please verify that the system is consistent following the software change
using the following commands:
Info:          show system verify
Info:          install verify
Part 2 of 2 (activate software): Completed successfully
Part 1 of 2 (add software): Completed successfully
Part 2 of 2 (activate software): Completed successfully
Install operation 4 completed successfully at 08:00:24 UTC Wed Mar 01 2006.
```

# install attach

To attach a terminal to an installation operation, use the **install attach** command in administration EXEC configuration mode.

**install attach** [*request-id*] [{**asynchronous** | **synchronous**}]

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>request-id</i> (Optional) Request ID assigned to an installation operation.  |
|                           | <b>asynchronous</b> (Optional) Performs the command in asynchronous mode. In asynchronous mode, this command runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode. |
|                           | <b>synchronous</b> (Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned.  |

**Command Default** The command operates in synchronous mode.

**Command Modes** Administration EXEC

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>                      |
|------------------------|----------------|--|
|                        | Release 3.3.0  | This command was introduced.             |
|                        | Release 3.4.0  | Support was added for EXEC mode.         |
|                        | Release 4.0.0  | This command was removed from EXEC mode. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **install attach** command to attach a terminal to an installation operation. This is similar to making the installation operation synchronous, and is used for the following reasons:

- To change an asynchronous installation operation to a synchronous installation operation.
- The installation operation is asynchronous but the terminal that ran the command has been lost (due to a switchover or terminal timeout).

**Note** An asynchronous operation runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode. A synchronous operation allows the installation process to finish before the prompt is returned.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | pkg-mgmt       | read,<br>write    |

The following example, a software package is activated in asynchronous mode. In asynchronous mode, the command runs in the background, and the CLI prompt is returned as soon as possible.

Use the **install attach** command to attach the terminal to an installation operation. This switches the operation to synchronous mode, which allows the installation process to finish before the prompt is returned.

In the following example, the **install activate** command is entered in asynchronous mode. The CLI prompt returns before the operation is complete.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install activate
disk0:hfr-mcast-3.7.6
```

```
Install operation 14 'install activate
disk0:RP/0/RP0/CPU0:router-mcast-3.7.6'
started by user 'user_b' at 08:04:31 UTC Mon Nov 14 2005.
The install operation will continue asynchronously.
```

```
RP/0/RP0/CPU0:router(admin)#
Info: SDR Owner: Checking running configuration version compatibility with
Info: newly activated software ...
Info: SDR Owner: No incompatibilities found between the activated software
Info: and router running configuration.
```

In the following example, the **install attach** command is used to attach the terminal to the installation operation and complete the operation in synchronous mode. The CLI prompt is returned only after the installation operation is complete.

```
RP/0/RP0/CPU0:router(admin)# install attach
```

```
Install operation 14 'install activate
disk0:hfr-mcast-3.7.6'
started by user 'user_b' at 08:04:31 UTC Mon Nov 14 2005.
Info: SDR Owner: Checking running configuration version compatibility with
Info: newly activated software ...
Info: SDR Owner: No incompatibilities found between the activated software
Info: and router running configuration.
Info: The changes made to software configurations will not be persistent
Info: across system reloads. Use the command 'admin install commit' to make
Info: changes persistent.
Info: Please verify that the system is consistent following the software
Info: change using the following commands:
Info: show system verify
Info: install verify
```

```
The currently active software is not committed. If the system reboots
then the committed software will be used. Use 'install commit' to commit
the active software.
```

```
Install operation 14 completed successfully at 08:06:12 UTC Mon Nov 14 2005.
```

# install auto-abort-timer stop

To deactivate the auto-abort-timer that is set in the **install activate** or **install deactivate** commands, use the **install auto-abort-timer stop** command in administration EXEC mode.

**install auto-abort-timer stop**

## Syntax Description

This command has no keywords or arguments.

## Command Default

When activated, the auto-abort-timer runs to expiration and then loads the last committed loadpath.

## Command Modes

Administration EXEC

## Command History

| Release       | Modification                             |
|---------------|--|
| Release 3.5.0 | This command was introduced.             |
| Release 4.0.0 | This command was removed from EXEC mode. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **install auto-abort-timer stop** command to halt the auto-abort-timer that was activated with the **install activate** or **install deactivate** command. Alternatively, you can use the **install commit** command to halt the timer.

If you do not halt the auto-abort-timer, the software loads to the last committed loadpath when the timer expires. If the software has installed successfully, and you intend to continue using the new software, you should disable the auto-abort-timer.

## Task ID

| Task ID  | Operations     |
|----------|----------------|
| pkg-mgmt | read,<br>write |

The following example shows how to halt the auto-abort-timer:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install auto-abort-timer stop
```

# install boot-options

To set boot options for a specified node, use the **install boot-options** command. Boot options include formatting and cleaning the disk in the specified node during the boot process.

```
install boot-options {clean | format} location node-id
```

|                           |  |   |
|---------------------------|--|---|
| <b>Syntax Description</b> | <b>clean</b>   | Cleans the card installed in the specified node during the next reboot.                         |
|                           | <b>format</b>  | Formats the card installed in the specified node during the next reboot.                        |
|                           | <b>location</b> <i>node-id</i>   | Specifies a node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation. |
| <b>Command Default</b>    | None   |   |
| <b>Command Modes</b>      | Administration EXEC  |   |
| <b>Command History</b>    | <b>Release</b>   | <b>Modification</b>   |
|                           | Release 3.7.0  | This command was introduced.  |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>Use the <b>install boot-options</b> command to clean or format a card during the next reboot. This command affects only the next reboot that a user initiates. To initiate a reboot during which the boot option you set are applied, reboot the card from a disk in another node. You can use the <b>hw-module location reload</b> command with the <i>path</i> argument to download a boot image using TFTP from a remote node. When the reboot is complete, the boot options are reset.</p> |   |
| <b>Task ID</b>            | <b>Task ID</b>   | <b>Operations</b>   |
|                           | pkg-mgmt   | read,<br>write  |

The following example shows how to set the card located in node 0/0/CPU0 to be cleaned during the next reboot:

```
RP/0/RP0/CPU0:router(admin)# install boot-options clean location 0/0/CPU0

Install operation 7 '(admin) install boot-options clean location 0/RP
0/CPU0'
started by user '' via CLI at 09:15:46 GMT Mon Mar 10 2008.
Info:      The boot option will be in effect when the node is reloaded and will
Info:      be cleared when the node preparation is complete.
Install operation 7 completed successfully at 09:15:46 GMT Mon Mar 10 2008.
RP/0/RP0/CPU0:router(admin)#
```

The following example shows how to set the card located in node 0/0/CPU0 to be formatted during the next reboot:

```
RP/0/RP0/CPU0:router(admin)# install boot-options format location 0/0/CPU0

Install operation 8 '(admin) install boot-options format location 0/RP
0/CPU0'
started by user '' via CLI at 09:15:52 GMT Mon Mar 10 2008.
Info:      The boot option will be in effect when the node is reloaded and will
Info:      be cleared when the node preparation is complete.
Install operation 8 completed successfully at 09:15:52 GMT Mon Mar 10 2008.
RP/0/RP0/CPU0:router(admin)#
```

# install commit

To save the active software set to be persistent across designated system controller (DSC) reloads, use the **install commit** command in Admin EXEC mode EXEC mode.

```
install commit [{admin-profile | location node-id}]
```

| Syntax Description             |  |
|--------------------------------|--|
| <b>admin-profile</b>           | (Optional. Administration EXEC mode only.) Commits the active software set on the admin profile only.                                  |
| <b>location</b> <i>node-id</i> | (Optional. Admin EXEC mode mode only.) Specifies a node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation. |

**Command Default** Admin EXEC mode: Commits the active software set for all SDRs.

**Command Modes** Admin EXEC mode  
EXEC mode

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.                                      |
|                 | Release 3.2   | The command was moved from EXEC mode to administration EXEC mode. |
|                 | Release 3.4.0 | Support was added for EXEC mode.                                  |

**Usage Guidelines** When a package is activated, it becomes part of the current running configuration. To make the package activation persistent across designated secure domain router shelf controller (DSDRSC) reloads, enter the **install commit** command. On startup, the DSDRSC of the SDR loads this committed software set.

If the system is restarted before the active software set is saved with the **install commit** command, the previously committed software set is used.

| Task ID | Task ID  | Operations     |
|---------|----------|----------------|
|         | pkg-mgmt | read,<br>write |

The following example shows how to make the current active software set persistent across DSDRSC reloads for all SDRs in the system:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install commit
```

```
Install operation 16 'install commit' started by user 'user_b' at 19:18:58 UTC
Sat Apr 08 2006.
Install operation 16 completed successfully at 19:19:01 UTC Sat Apr 08 2006.
```

# install deactivate

To remove a package from the active software set, use the **install deactivate** command in Admin EXEC mode EXEC mode .

```
install deactivate {id add-id | device:package } [auto-abort-timer time] [location node-id]
[{asynchronous | synchronous}] [parallel-reload] [prompt-level {default | none}] [test] [pause
sw-change]
```

| Syntax Description                                   |   |
|--|---|
| <b>id</b> <i>add-id</i>                              | <p>Specifies the ID number of an <b>install add</b> operation. The command deactivates all packages that were added in the specified <b>install add</b> operation. The ID number of an <b>install add</b> operation is indicated in the syslog displayed during the operation and in the output of the <b>show install log</b> command.</p> <p>Up to 16 <b>install add</b> operations can be specified.</p>   |
| <i>device</i> : <i>package</i>                       | <p>Device and package, expressed in concatenated form (for example, disk0:hfr-mgbl-3.8.0). For the <i>device</i> argument, the value is a specified storage device, typically <b>disk0</b>.</p> <p>Press ? after a partial package name to display all possible matches available for activation. If there is only one match, press [TAB] to fill in the rest of the package name.</p> <p>Up to 32 <i>device</i> : <i>package</i> pairs can be specified.</p> |
| <b>auto-abort-timer</b> <i>time</i>                  | (Optional) Specifies an abort timer value, <i>time</i> , in minutes, which when expired loads the last committed loadpath.  |
| <b>location</b> <i>node-id</i>                       | <p>(Optional) Deactivates a package from the designated node. The <i>node-id</i> argument is entered in <i>rack / slot / module</i> notation.</p> <p><b>Note</b> In most cases, a package cannot be deactivated from a node, because some version of that package must be running on all supported nodes after the deactivation operation finishes.</p>   |
| <b>asynchronous</b>                                  | (Optional) Performs the command in asynchronous mode. In asynchronous mode, this command runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode.   |
| <b>synchronous</b>                                   | (Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned.   |
| <b>parallel-reload</b>                               | (Optional) Forces all cards on the router to reload at the same time and then come up with the new software, rather than proceeding according to the option encoded in the install package.   |
| <b>prompt-level</b> { <b>default</b>   <b>none</b> } | <p>(Optional) Specifies when you are prompted for input during the procedure.</p> <ul style="list-style-type: none"> <li><b>default</b>—You are prompted only when input is required by the operation.</li> <li><b>none</b>—You are never prompted.</li> </ul>  |

|                        |  |
|------------------------|--|
| <b>test</b>            | (Optional) Verifies the effects of proposed operations without making changes to the Cisco IOS XR software.  |
| <b>pause sw-change</b> | (Optional) Pauses the operation after the preparatory stage and before locking the configuration for the actual deactivation. While the operation is paused, you can perform configuration changes. You control the resumption of the operation at the CLI prompt. |

**Command Default**

The **install deactivate** operation is performed in asynchronous mode: The command runs in the background, and the router prompt is returned as soon as possible.

**Command Modes**

Admin EXEC mode  
EXEC mode

**Command History**

| Release 4.0.0 | This command was removed from EXEC mode.<br>Support was removed for the <b>sdr</b> keyword.                               |

**Usage Guidelines**

Deactivating a package removes the activated package from the active software set from all nodes or from a single node. When a deactivation is attempted, the system runs an automatic check to ensure that the package is not required by other active packages. The deactivation is permitted only after all compatibility checks have passed.

The following conditions apply to software deactivation:

- A feature package cannot be deactivated if active packages need it to operate.
- To downgrade a package, activate the earlier version. The later package version is deactivated automatically.

**Specifying Packages to Deactivate**

You can either use the **id add-id** keyword and argument to deactivate all packages that were added in one or more specific **install add** operations, or specify packages by name. The operation ID of an **install add** operation is indicated in the syslog displayed during the operation and in the output of the **show install log** command.

If you specify packages according to operation ID, all the packages that were added by the specified operation must still be on the router.

### Router Reloads

If the deactivation requires a router reload, a confirmation prompt appears. Use the **install deactivate** command with the **prompt-level none** keywords to automatically ignore any reload confirmation prompts and proceed with the package deactivation. The router reloads if required.

### Node Reloads

If a software operation requires a node reload, the config-register for that node should be set to autoboot. If the config-register for the node is not set to autoboot, then the system automatically changes the setting and the node reloads. A message describing the change is displayed.

### Synchronous Operation

Use the **install deactivate** command with the **synchronous** keyword to complete the operation before the prompt is returned. A progress bar indicates the status of the operation. For example:

```
- 1% complete: The operation can still be aborted (ctrl-c for options)
\ 10% complete: The operation can still be aborted (ctrl-c for options)
```

### Test Option

Use the **test** keyword to verify the effects of the deactivation without making changes to the system. Use this option to determine if the deactivation can be completed. After previewing the effects of the proposed operations, use the [show install log, on page 829](#) command for more details about the effects of the proposed operations.

### Auto Abort Option

Use the **auto-abort-timer** keyword to provide a safety mechanism for the instance that a package is deactivated and for some reason access to the router is lost. This option automatically rolls back to the current committed loadpath, thereby undoing any changes that are deactivated with the **install deactivate** command. After the installation, if the activated software is working correctly, use the **install commit** command to cancel the timer and commit the new loadpath.

Use the **install commit** command to make changes persistent across route processor (RP) reloads.

### Pausing Before Configuration Lock

Use the **pause sw-change** keywords to pause the operation before locking the configuration. The deactivation operation begins with preparatory steps, such as software checks, and then proceeds with the actual deactivation. The configuration is locked for the actual deactivation. If you specify the **pause sw-change** keywords, the operation pauses before locking the configuration and provides you with the option to hold the operation while you perform configuration changes, and proceed with the deactivation whenever you choose. This is useful, for example, if your workflow involves configuring a router out of the network during software changes and you want to minimize the time that the router is out of the network. You can specify these keywords for both asynchronous and synchronous operations. In both cases, follow the onscreen instructions to control the pausing and completion of the operation.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | execute    |

The following example shows how to display the packages available for deactivation using the online help system. In this example, ? is entered after a partial package name to display all possible matches.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install deactivate disk0:?

disk0:comp-hfr-mini-3.4.0  disk0:hfr-admin-3.4.0  disk0:hfr-base-3.4.0
      disk0:hfr-diags-3.4.0
disk0:hfr-fwdg-3.4.0      disk0:hfr-k9sec-3.4.0  disk0:hfr-lc-3.4.0
      disk0:hfr-mcast-3.4.0
disk0:hfr-mgbl-3.4.0     disk0:hfr-mpls-3.4.0  disk0:hfr-os-mpi-3.4.0.1
I  disk0:hfr-rout-3.4.0
```

The following example shows how to deactivate a package on all supported nodes in all SDRs. The operation is performed in synchronous mode.

```
RP/0/RP0/CPU0:router(admin)# install deactivate
disk0:hfr-mpls-3.8.0 synchronous

Install operation 14 'install deactivate disk0:hfr-mpls-3.8.0 synchronous'
started by user 'user_b' at 18:38:37 UTC Sat Apr 08 2006.
Info:      The changes made to software configurations will not be persistent
Info:      across system reloads. Use the command 'admin install commit' to make
Info:      changes persistent.
Info:      Please verify that the system is consistent following the software
Info:      change using the following commands:
Info:      show system verify
Info:      install verify
Install operation 14 completed successfully at 18:39:20 UTC Sat Apr 08 2006.
```

In the following example, the security package is deactivated for the SDR named “LR1:”

```
RP/0/RP0/CPU0:router(admin)# install deactivate
disk0:hfr-k9sec-3.4.0 sdr LR1

Install operation 11 'install deactivate disk0:hfr-k9sec-3.4.0 on SDR: LR1'
started by user 'user_b' at 03:25:26 est Thu Mar 02 2006.

- 1% complete: The operation can still be aborted (ctrl-c for options)

The install operation will continue asynchronously.
The changes made to software configurations will not be persistent
Info:      across system reloads. Use the command 'admin install commit' to make
Info:      changes persistent.
Info:      Please verify that the system is consistent following the software
Info:      change using the following commands:
Info:      show system verify
Info:      install verify
The currently active software is not committed. If the system reboots then
the committed software will be used. Use 'install commit' to commit the
active software.
```

Install operation 11 completed successfully at 03:25:56 est Thu Mar 02 2006.

You cannot deactivate a package if other packages or nodes require that package. In the following example, an attempt to deactivate a package is rejected:

```
RP/0/RP0/CPU0:router(admin)# install deactivate disk0:hfr-diags-3.3.90 location 0/6/cpu0

Install operation 25 'install deactivate disk0:hfr-diags-3.3.90 on node
0/6/CPU0' started by user 'user_b' at 23:01:38 UTC Sat Apr 15 2006.
Error: Cannot proceed with the deactivation because of the following package
incompatibilities:
Error: hfr-diags-3.3.90 on nodes of type RP needs hfr-diags-3.3.90, or
Error: equivalent, to be active on node 0/6/CPU0 on secure domain router

Error: - activate or deactivate the specified packages on the specified
Error: nodes.
Install operation 25 failed at 23:01:44 UTC Sat Apr 15 2006.
```

The following example shows how to deactivate a package, pausing the operation before locking the configuration for the actual software deactivation. While the operation is paused, you can enter a configuration mode and perform configurations. When you want to complete the operation, you enter the **install operation id complete** command or the **install operation id attach synchronous** command.

```
RP/0/RP0/CPU0:router(admin)# install deactivate
disk0:comp-hfr-3.8.0.07I.CSCsr09575-1.0.0
pause sw-change

Install operation 12 '(admin) install deactivate disk0:comp-hfr-3.8.0.07I.CSCsr09575-1.0.0
pause sw-change' started by user 'admin' via CLI at 09:06:26 BST Mon Jul 07 2008.
Info: This operation will reload the following nodes in parallel:
Info: 0/0/CPU0 (RP) (SDR: Owner)
Info: 0/1/CPU0 (LC (E3-GE-4)) (SDR: Owner)
Info: 0/5/CPU0 (LC (E3-OC3-POS-4)) (SDR: Owner)
Proceed with this install operation (y/n)? [y]
The install operation will continue asynchronously.
RP/0/RP0/CPU0:ensoft-gsr13(admin)#
Info: Install Method: Parallel Reload
Info: Install operation 12 is pausing before the config lock is applied
for the software change as requested by the user.
Info: No further install operations will be allowed until the operation
is resumed.
Info: Please continue the operation using one of the following steps:
Info: - run the command '(admin) install operation 12 complete'.
Info: - run the command '(admin) install operation 12 attach synchronous'
and then answer the query.
```

In the following example, the operation is synchronous and the **pause sw-change** keywords are used to pause the operation before configuration lock. In this case, you are prompted to enter one of three options at the pause stage: **abort/complete/cli**. If you enter **abort**, the operation is aborted. If you enter **complete**, the operation is immediately resumed. If you enter **cli**, the CLI prompt returns, enabling you to perform configurations before resuming the operation. Alternatively, you can leave the prompt open while you open a separate CLI session to perform configurations. Then, you can return to the prompt and enter **complete** when you are ready to resume the operation.

```
RP/0/RP0/CPU0:router# install deactivate
disk0:hfr-mpls-3.8.0.10I
sync pause sw-change
Wed Jul 23 14:42:11.273 UTC
Install operation 8 'install deactivate disk0:hfr-mpls-3.8.0.10I
synchronous pause sw-change' started by user 'salevy' on SDR
Owner via CLI at 14:42:12 UTC Wed Jul 23 2008.
Info:      Install Method: Parallel Process Restart
The install operation has paused before the configuration is locked as
requested by user 'salevy'.
Please perform any changes to the configuration that are required before
the operation is to continue.
How should the operation continue?
Abort the operation (abort)
Lock the config and complete the operation (complete)
Suspend the operation and return to the Command Line Interface (cli)
Please confirm an option (abort/complete/cli): [complete] cli
Use the command 'install operation 8 ?' to find how to continue the operation.

RP/0/RP0/CPU0:router# install operation 8 ?

      abort      Abort the operation
      attach     Attach to the operation
      complete   Phase to run to end of

RP/0/RP0/CPU0:router# install operation 8 complete

Wed Jul 23 14:43:04.562 UTC
RP/0/RP0/CPU0:router# Info:      Install operation 8 has been resumed.
Info:      The changes made to software configurations will not be persistent
across system reloads. Use the command '(admin)
Info:      install commit' to make changes persistent.
Info:      Please verify that the system is consistent following the
software change using the following commands:
Info:      show system verify
Info:      install verify packages
Install operation 8 completed successfully at 14:43:53 UTC Wed Jul 23 2008.
```

# install label

To add a label or description to a state associated with a rollback point, use the **install label** command in administration EXEC mode.

```
install label point-id {description description | label-name label}
```

| Syntax Description |                                       |   |
|--------------------|---------------------------------------|---|
|                    | <i>point-id</i>                       | Installation point ID number.                             |
|                    | <b>description</b> <i>description</i> | Specifies a description for the specified rollback point. |
|                    | <b>label-name</b> <i>label</i>        | Specifies a label for the specified rollback point.       |

**Command Default** No default behavior or values

**Command Modes** Administration EXEC

| Command History | Release       | Modification                             |
|-----------------|---------------|--|
|                 | Release 3.6.0 | This command was introduced.             |
|                 | Release 4.0.0 | This command was removed from EXEC mode. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **install label** command to put a label and description on an installation rollback point that can be used to identify the rollback point in other commands. Commands that support the rollback label include:

- **clear install rollback**
- **install rollback**
- **show install rollback**

The label can be a maximum of 15 characters which must adhere to the following rules:

- No white-space
- Cannot include any of the following CLI keywords:
  - **active**
  - **all**
  - **asynchronous**
  - **brief**
  - **committed**
  - **description**
  - **detail**
  - **differences**

- **from**
  - **force**
  - **inactive**
  - **install**
  - **label**
  - **label-name**
  - **location**
  - **noprompt**
  - **rollback**
  - **sdr**
  - **summary**
  - **synchronous**
  - **test**
  - **to**
  - **verbose**
- Cannot contain any of the following characters:
    - Comma (,)
    - Semi-colon (;)
    - Colon (:)
    - Single-quote (')
    - Double-quote ("")
  - Cannot contain uppercase alphabetic characters
  - Cannot contain numeric characters only

# install remove

To delete inactive packages from a storage device, use the **install remove** command in administration EXEC mode.

```
install remove {id add-id | device:package | inactive} [prompt-level {default | none}] [{asynchronous | synchronous}] [test]
```

## Syntax Description

|  |   |
|--|---|
| <b>id</b> <i>add-id</i>                              | Specifies the ID number of an <b>install add</b> operation. The command deletes all packages that were added in the specified <b>install add</b> operation. The ID number of an <b>install add</b> operation is indicated in the syslog displayed during the operation and in the output of the <b>show install log</b> command.<br><br>Up to 16 <b>install add</b> operations can be specified |
| <i>device : package</i>                              | Device and package, expressed in concatenated form (for example, disk0:hfr-mgbl-3.8.0). For the <i>device</i> argument, the value is a specified storage device, typically <b>disk0</b> .<br><br><b>Note</b> Multiple packages can be removed at the same time. Up to 32 <i>device : package</i> pairs can be specified.  |
| <b>inactive</b>                                      | Removes all inactive, noncommitted packages from the boot device (usually disk0:).  |
| <b>prompt-level</b> { <b>default</b>   <b>none</b> } | (Optional) Specifies when you are prompted for input during the procedure. <ul style="list-style-type: none"> <li><b>default</b> —You are prompted only when input is required by the operation.</li> <li><b>none</b> —You are never prompted.</li> </ul>   |
| <b>asynchronous</b>                                  | (Optional) Performs the command in asynchronous mode. In asynchronous mode, this command runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode.   |
| <b>synchronous</b>                                   | (Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned.   |
| <b>test</b>  | (Optional) Verifies the effects of proposed operations without making changes to the Cisco IOS XR software.   |

## Command Default

The operation is performed in asynchronous mode: The **install remove** command runs in the background, and the EXEC prompt is returned as soon as possible.

## Command Modes

Administration EXEC

## Command History

| Release     | Modification  |
|-------------|---|
| Release 2.0 | This command was introduced.  |
| Release 3.0 | Support was added to enable removal of multiple packages at the same time and to enable removal of inactive packages from a storage device. |

| Release       | Modification   |
|---------------|--|
| Release 3.2   | The command was moved from EXEC mode to administration EXEC mode.  |
| Release 3.3.0 | Support was added for the <b>noprompt</b> keyword.   |
| Release 3.4.0 | Support was added for EXEC mode.<br><br>The <b>install remove inactive</b> command removes inactive packages only from the boot device (usually disk0:). |
| Release 3.6.0 | The <b>prompt-level</b> keyword replaced the <b>noprompt</b> keyword.  |
| Release 3.8.0 | Support was added for the <b>id add-id</b> keyword and argument.   |
| Release 4.0.0 | This command was removed from EXEC mode.<br><br>Support was removed for the <b>sdr</b> keyword.  |

### Usage Guidelines

**Note** Only inactive packages can be removed. (Packages cannot be in the active or committed software set.)

- To remove all inactive packages from the boot device (usually **disk0:**), use the **install remove** command with the **inactive** keyword.
- To remove a specific inactive package from a storage device, use the **install remove** command with the *device: package* arguments.

**Note** When removing all inactive packages from the boot device, use the **show version**, **show install active**, or **show install committed** command to determine the device used as the boot device.

- To remove all packages that were added in one or more specific **install add** operations, use the **id add-id** keyword and argument. The operation ID of an **install add** operation is indicated in the syslog displayed during the operation and in the output of the **show install log** command. If you specify packages according to operation ID, all the packages that were added by the specified operation must still be on the router.

### User Prompts

Use the **install remove** command with the **prompt-level none** keywords to automatically ignore any confirmation prompts and proceed with the package removal.

### Test Operation

Use the **test** keyword to verify the effects of the package removal operation and determine whether the operation can be completed. After previewing the effects of the proposed operations, use the [show install log, on page 829](#) command for more details about the effects of the proposed operations.

**Note** When removing a package, note that the **install remove** command ignores secure domain router (SDR) boundaries and performs the operation in global scope.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | execute    |

The following example shows how to remove a specific inactive package. In this example, the operation is run in test mode. The operation is then confirmed and the package is removed.

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install remove
disk0:hfr-diags-3.7.90 test

Install operation 30 'install remove disk0:hfr-diags-3.7.90 test' started by user 'user_b'
  at 23:40:22 UTC Sat Apr 15 2006.
Warning: No changes will occur due to 'test' option being specified. The
Warning: following is the predicted output for this install command.
Info: This operation will remove the following package:
Info: disk0:hfr-diags-3.7.90
Info: After this install remove the following install rollback points will
Info: no longer be reachable, as the required packages will not be present:
Info: 4, 9, 10, 14, 15, 17, 18
Proceed with removing these packages? [confirm] y

The install operation will continue asynchronously.
Install operation 30 completed successfully at 23.
```

The following example shows how to remove all inactive packages from the boot device:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install remove inactive synchronous

RP/0/RP0/CPU0:Aug 15 09:25:41.020 :
  instdir[198]: %INSTALL-INSTMGR-6-INSTALL_OPERATION_STARTED :

# install rollback to

To roll back the software set to a saved installation point or to the last committed installation point, use the **install rollback to** command in administration EXEC mode.

Administration EXEC Mode:

```
install rollback to {point-idlabel | committed} [auto-abort-timer time] location node-id
[admin-profile] [{asynchronous | synchronous}] [parallel-reload] [prompt-level {default | none}]
[test] [pause sw-change]
```

## Syntax Description

|  |   |
|--|---|
| <i>point-id</i>                                      | Installation point ID number.   |
| <i>label</i>   | Label associated with an installation point.  |
| <b>committed</b>                                     | Rolls the Cisco IOS XR software back to the last committed installation point.  |
| <b>auto-abort-timer</b> <i>time</i>                  | (Optional) Specifies an abort timer value, <i>time</i> , in minutes, which when expired loads the last committed loadpath.  |
| <b>location</b> <i>node-id</i>                       | Specifies a node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation.   |
| <b>admin-profile</b>                                 | (Optional) Rolls back the active software set on the admin profile only. This option is in administration EXEC mode only.   |
| <b>asynchronous</b>                                  | (Optional) Performs the command in asynchronous mode. In asynchronous mode, this command runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode.   |
| <b>synchronous</b>                                   | (Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned.   |
| <b>parallel-reload</b>                               | (Optional) Forces all cards on the router to reload at the same time and then come up with the new software, rather than proceeding according to the option encoded in the install package.   |
| <b>prompt-level</b> { <b>default</b>   <b>none</b> } | (Optional) Specifies when you are prompted for input during the procedure. <ul style="list-style-type: none"> <li>• <b>default</b> —You are prompted only when input is required by the operation.</li> <li>• <b>none</b> —You are never prompted.</li> </ul>         |
| <b>test</b>  | (Optional) Verifies the effects of proposed operations without making changes to the Cisco IOS XR software.   |
| <b>pause sw-change</b>                               | (Optional) Pauses the operation after the preparatory stage and before locking the configuration for the actual software change. While the operation is paused, you can perform configuration changes. You control the resumption of the operation at the CLI prompt. |

## Command Default

The operation is performed in asynchronous mode. The **install rollback to** command runs in the background, and the EXEC prompt is returned as soon as possible.

**Command Modes**

Administration EXEC

| Release 3.4.0 | Support was added for EXEC mode.   |
| Release 3.6.0 | Support was added for the <b>prompt-level</b> and <b>parallel-reload</b> keywords.<br>Support was removed for the <b>noprompt</b> keyword. |
| Release 3.8.0 | Support was added for the <b>pause sw-change</b> keywords.   |
| Release 4.0.0 | This command was removed from EXEC mode.<br>Support was removed for the <b>sdr</b> keyword.  |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **install rollback to** command to roll back the configuration to a saved installation point or to the last committed installation point. Rollback points are created when the router is booted and when packages are activated, deactivated, or committed. When an installation point is created, Cisco IOS XR software assigns an ID number to that rollback point. To roll back to a saved installation point, enter the installation point ID number assigned to it for the *point-id* argument. When a software configuration is committed with the **install commit** command, that configuration is also saved as the last committed installation point. Use the **committed** keyword to roll back to the last committed installation point.

Labels can be assigned to installation points using the **install label** command. Then these labels can be used to identify a specific installation point that you want to roll back to.

To display the saved rollback points available, use the online help function:

```
RP/0/RP0/CPU0:router(admin)# install rollback to ?
0          Specify the id for the install point to rollback to
1          Specify the id for the install point to rollback to
12         Specify the id for the install point to rollback to
15         Specify the id for the install point to rollback to
2          Specify the id for the install point to rollback to
4          Specify the id for the install point to rollback to
6          Specify the id for the install point to rollback to
7          Specify the id for the install point to rollback to
8          Specify the id for the install point to rollback to
9          Specify the id for the install point to rollback to
```

```
committed Rollback to the last committed installation point
```

If a rollback operation is beyond two saved installation points, a router reload is required to avoid system instability. If a reload is required, a confirmation prompt appears before the reload occurs. Use the **install rollback to** command with the **prompt-level none** keywords to automatically ignore any reload confirmation prompts and proceed with the rollback operation.

If a software operation requires a node reload, the config-register for that node should be set to autoboot. If the config-register for the node is not set to autoboot, then the system automatically changes the setting and the node reloads. A message describing the change is displayed.

If a rollback operation requires that a package be activated that is no longer on the system (because the package had been removed), a message appears in the output of the **install rollback to** command indicating that the specified installation point is unavailable and that the required package must be added to roll back the software set to the specified installation point.

Use the **test** keyword to verify the effects of the proposed operations and determine whether the rollback operation can be completed. After previewing the effects of the proposed operations, use the **show install log** command for more details about the effects of the proposed operations.

Use the **clear install rollback oldest** command to delete saved installation points from the installation buffer.

Use the **show install rollback** command to display the software set associated with a saved installation point.

### Pausing Before Configuration Lock

Use the **pause sw-change** keywords to pause the operation before locking the configuration. A rollback operation begins with preparatory steps, such as software checks, and then proceeds with the actual software change. The configuration is locked for the actual software change. If you specify the **pause sw-change** keywords, the operation pauses before locking the configuration and provides you with the option to hold the operation while you perform configuration changes, and proceed with the software change whenever you choose. This is useful, for example, if your workflow involves configuring a router out of the network during software change and you want to minimize the time that the router is out of the network. You can specify these keywords for both asynchronous and synchronous operations. In both cases, follow the onscreen instructions to control the pausing and completion of the operation.

#### Task ID

#### Task ID Operations

```
pkg-mgmt read,
write
```

The following example shows how to roll back to a saved installation point:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# install rollback to 8

Install operation 10 'install rollback to 8' started by user
  'user_b' at 07:49:26
UTC Mon Nov 14 2005.
The install operation will continue asynchronously.
RP/0/RP0/CPU0:router(admin)#Info:
The changes made to software configurations will not be persistent
Info:      across system reloads. Use the command
          'admin install commit' to make
Info:      changes persistent.
```

```

Info:      Please verify that the system is consistent following
           the software
Info:      change using the following commands:
Info:      show system verify
Info:      install verify

```

The currently active software is the same as the committed software.

```

Install operation 10 completed successfully at 07:51:24 UTC Mon
Nov 14 2005.

```

In the following example, the software is rolled back to the last committed installation point and the rollback is paused before configuration lock and then completed when the user enters the **install operation complete** command:

```

RP/0/RP0/CPU0:router# install rollback to committed pause sw-change

Wed Jul 23 15:37:53.377 UTC
Install operation 16 'install rollback to committed pause sw-change'
  started by user 'userb' on SDR Owner via CLI at 15:37:54 UTC
Wed Jul 23 2008.
The install operation will continue asynchronously.
RP/0/RP0/CPU0:router#Info: Install Method: Parallel Process Restart
Info: Install operation 16 is pausing before the config lock is
      applied for the software change as requested by the user.
Info: No further install operations will be allowed until the
      operation is resumed.
Info: Please continue the operation using one of the following
      steps:
Info: - run the command 'install operation 16 complete'.
Info: - run the command 'install operation 16 attach synchronous'
      and then answer the query.
RP/0/RP0/CPU0:router# install operation 16 complete

Wed Jul 23 15:38:35.197 UTC
RP/0/RP0/CPU0:router#Info: Install operation 16 has been resumed.
Info: The changes made to software configurations will not be persistent
      across system reloads. Use the command '(admin)
Info: install commit' to make changes persistent.
Info: Please verify that the system is consistent following the
      software change using the following commands:
Info: show system verify
Info: install verify packages
Install operation 16 completed successfully at 15:39:18 UTC Wed
Jul 23 2008.

# install verify healthcheck

To verify that processes and dynamic link libraries (DLLs) running on a node are correct, use the **install verify healthcheck** command in administration EXEC mode.

```
install verify healthcheck [{asynchronous | synchronous}] [admin-profile] [location node-id]
[repair]
```

## Syntax Description

|                         |   |
|-------------------------|---|
| <b>asynchronous</b>     | (Optional) Performs the command in asynchronous mode. In asynchronous mode, this command runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode.                             |
| <b>synchronous</b>      | (Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned.   |
| <b>admin-profile</b>    | (Optional. Administration EXEC mode only) Verifies the processes and DLLs in the administration profile only.   |
| <b>location node-id</b> | (Optional) Verifies the consistency of previously installed software from the designated node with the package file from which it originated. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation. |
| <b>repair</b>           | (Optional) Repairs anomalies found by the <b>install verify healthcheck</b> process.  |

## Command Default

The operation is performed in asynchronous mode: The **install verify healthcheck** command runs in the background, and the EXEC prompt is returned as soon as possible.

## Command Modes

Administration EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 3.5.0 | This command was introduced.  |
| Release 4.0.0 | This command was removed from EXEC mode.<br>Support was removed for the <b>sdr</b> keyword. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **install verify healthcheck** command is responsible for verifying that processes and DLLs in use by the system are correct and are executing from the correct location.

## Note

The **install verify healthcheck** command can take up to two minutes per package to process.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | execute    |

The following example shows how to use the **install verify healthcheck** command. This command is run in asynchronous mode:

```
RP/0/RP0/CPU0:router# install verify healthcheck

Install operation 10 'install verify healthcheck' started by user
'userb' on SDR Owner via CLI at 04:56:49 UTC Thu Feb 22 2007.
The install operation will continue asynchronously.

Info:      This operation can take 1 minute to completion. Please be patient.

# install verify packages

To verify the consistency of a previously installed software set with the package file from which it originated, use the **install verify packages** command in administration EXEC mode.

Administration EXEC Mode:

**install verify packages** [**repair**] [**location** *node-id*] [**admin-plane**] [{**asynchronous** | **synchronous**}]

## Syntax Description

|                                |   |
|--------------------------------|---|
| <b>repair</b>                  | (Optional) Repairs anomalies found by the <b>install verify packages</b> process.   |
| <b>location</b> <i>node-id</i> | (Optional) Verifies the consistency of previously installed software from the designated node with the package file from which it originated. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation. |
| <b>admin-plane</b>             | (Optional) Verify the admin profile only.   |
| <b>asynchronous</b>            | (Optional) Performs the command in asynchronous mode. In asynchronous mode, this command runs in the background, and the EXEC prompt is returned as soon as possible. This is the default mode.                             |
| <b>synchronous</b>             | (Optional) Performs the command in synchronous mode. This mode allows the installation process to finish before the prompt is returned.   |

## Command Default

The operation is performed in asynchronous mode: The **install verify packages** command runs in the background, and the EXEC prompt is returned as soon as possible.

## Command Modes

Administration EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 3.2   | This command was introduced.  |
| Release 3.3.0 | Support was added for the <b>sdr</b> <i>sdr-name</i> keyword and argument.                          |
| Release 3.4.0 | Support was added for EXEC mode.  |
| Release 3.5.0 | This command was changed from <b>install verify</b> .   |
| Release 3.7.0 | This command was extended to check for corruptions in installation state files and MBI image files. |
| Release 4.0.0 | This command was removed from EXEC mode.<br>Support was removed for the <b>sdr</b> keyword.         |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **install verify packages** command to verify the consistency of a previously installed software set with the package file from which it originated. This command can be used as a debugging tool to verify the validity

of the files that constitute the packages to determine if there are any corrupted files. This command also checks for corruptions of install state files and MBI image files. This command is particularly useful when issued after the activation of a package or when upgrading the Cisco IOS XR software to a major release.

**Note** The `install verify packages` command can take up to two minutes per package to process.

# show install

To display active packages, use the **show install** command in EXEC or administration EXEC mode.

## Administration EXEC Mode

```
show install [{detail | summary | verbose}] [{sdr sdr-name | location node-id}]
```

## EXEC Mode

```
show install [{detail | summary | verbose}] [location node-id]
```

| Syntax Description | Parameter               | Description   |
|--------------------|-------------------------|---|
|                    | <b>detail</b>           | (Optional) Displays a detailed summary of the active packages for a system, secure domain router (SDR), or node.  |
|                    | <b>summary</b>          | (Optional) Displays a summary of the active packages in a system or SDR. Use this command to display the default software profile for SDRs                |
|                    | <b>verbose</b>          | (Optional) Displays a detailed summary of the active packages for a system, SDR, or node, including component and file information for each package.      |
|                    | <b>sdr sdr-name</b>     | (Optional. Administration EXEC mode only.) Displays the active packages for a specific SDR. The <i>sdr-name</i> argument is the name assigned to the SDR. |
|                    | <b>location node-id</b> | (Optional) Displays the active packages for a designated node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation.              |

**Command Default** No default behavior or values

**Command Modes** EXEC

Administration EXEC

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.2   | The command was supported in administration EXEC mode.   |
|                 | Release 3.3.0 | Support was added for the optional keywords and arguments: <b>sdr sdr-name</b> , <b>detail</b> , <b>summary</b> , and <b>verbose</b> . |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note** This command displays output that is similar to the **show install active** command.

Use the **show install** command to display the active software set for all nodes, or for specific nodes. Enter the command in administration EXEC mode to display information for all nodes in all SDRs.

### Displaying Information for a Specific SDR or all SDRs

- To display information for a specific SDR from administration EXEC mode, use the **sdr** *sdr-name* keyword and argument.
- To display information for an SDR when logged into that SDR, enter the command in EXEC mode.
- To display information for all SDRs in the system, enter the command in administration EXEC mode, without the **sdr** keyword.

### Displaying Information for a Specific Node

Use the **location** *node-id* keyword and argument to display information for a specific node. If you do not specify a location with the **location** *node-id* keyword and argument, this command displays information from all nodes.

### Summary, Detailed, and Verbose Information

Use the **summary** keyword to display a summary of the active packages in a system or SDR. Use the **detail** keyword to display the active packages for each node in an SDR, or in all SDRs. Use the **verbose** keyword to display additional information, including component and file information for each package.

**Note** This command displays output that is similar to the **show install active** command.

### Displaying the Default SDR Software Profile

When an SDR is created, the nodes assigned to that SDR are configured with the default software profile. To view a summary of the default SDR software configuration, enter the **show install summary** command in administration EXEC mode. Any new nodes that are configured to become a part of an SDR boot with the default software profile listed in the output of this command.

#### Task ID

#### Task ID Operations

pkg-mgmt read

Use the **location** *node-id* keyword and argument to display the active packages for a designated node:

```
RP/0/RP0/CPU0:router# show install location 0/rp0/cpu0

Mon May 31 06:49:47.768 DST
Node 0/RP0/CPU0 [HRP] [SDR: Owner]

### Command History

| Release     | Modification  |
|-------------|---|
| Release 2.0 | This command was introduced.  |
| Release 3.2 | The command was made available in administration EXEC mode.<br>The <b>detail</b> keyword was added. |

### Usage Guidelines

#### Note

This command displays output that is similar to the **show install** command.

Use the **show install active** command to display the active software set for all nodes, or for specific nodes.

### Displaying Information for a Specific SDR

- To display information for a specific SDR from administration EXEC mode, use the **sdr sdr-name** keyword and argument.
- To display information for an SDR when logged into that SDR, enter the **show install active** command in EXEC mode.

- To display information for all SDRs, enter the **show install active** command in administration EXEC mode.

### Displaying Information for a Specific Node

Use the **location** *node-id* keyword and argument to display information for a specific node. If you do not specify a location with the **location** *node-id* keyword and argument, this command displays information from all nodes.

### Summary, Detailed, and Verbose Information

Use the **summary** keyword to display a summary of the active packages in a system or SDR. Use the **detail** keyword to display the active packages for each node in an SDR, or in all SDRs. Use the **verbose** keyword to display additional information, including component and file information for each package.

### For Superseded SMUs

The **show install active** command does not display superseded SMUs. To get details of the superseded SMUs, use the **show install superseded** command.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

# show install audit

To compare the current active packages and software maintenance upgrades (SMUs) on the router with a list of packages and SMUs that should be active, use the **show install audit** command in EXEC or administration EXEC mode.

## Administration EXEC Mode

```
show install audit file file-name [{sdr sdr-name | location node-id}] [verbose]
```

## EXEC Mode

```
show install audit file file-name [location node-id] [verbose]
```

| Syntax Description | file <i>file-name</i>          | Specifies the location and name of the installation audit file.   |
|--------------------|--------------------------------|---|
|                    | <b>sdr</b> <i>sdr-name</i>     | (Optional. Administration EXEC mode only.) Audits the active packages on a specific secure domain router (SDR). The <i>sdr-name</i> argument is the name assigned to the SDR. |
|                    | <b>location</b> <i>node-id</i> | (Optional) Audits the active packages on a designated node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation.                                     |
|                    | <b>verbose</b>                 | (Optional) Displays a detailed summary of the audit and can be used for troubleshooting.  |

**Command Default** No default behavior or values

**Command Modes** EXEC  
Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.4.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show install audit** command to compare the currently active packages and SMUs on the router with a list of packages and SMUs that should be active. The file should be a simple text file with a flat list of packages that should be active on the router. It should be placed in a location accessible from the router.

Note the following about the audit file:

- Each package or SMU name must be on a separate line.

**Note** For accurate results, make sure that every line in the audit file, including the last line, is terminated with a line break.

- Comments are allowed and must begin with the pound character: #

- SMUs can be specified with a package name only; regular packages should be specified as “package-version”. For SMUs, if a version is not specified, the default version of “1.0.0” is used.
- Composite package names are allowed.
- PIE extensions are allowed at the end of the package name, and they are stripped off.
- Maximum number of lines in a file is limited to 100; the maximum length of each line is limited to 256 characters.

Following are the contents of a valid audit file:

```
# R4.0.0
# some comments
#
comp-
hfr-mini-4.0.0
hfr-mgbl-p-4.0.0
hfr-mcast-p-4.0.0
hfr-mpls-p-4.0.0
hfr-mpls-4.0.0.CSCse00294
comp-
hfr-4.0.0.CSCsd07147
```

### Displaying Information for a Specific SDR

- To display information for a specific SDR from administration EXEC mode, use the **sdr** *sdr-name* keyword and argument.
- To display information for an SDR when logged into that SDR, enter the **show install audit** command in EXEC mode.

### Displaying Information for a Specific Node

Use the **location** *node-id* keyword and argument to display information for a specific node. If you do not specify a location with the **location** *node-id* keyword and argument, this command displays information for all nodes.

### Verbose Information

Use the **verbose** keyword to display additional information, including component and file information for each package.

### Command Output

Output from the **show install audit** command provides the following information about the audit:

- Command completes successfully, and the result of the audit is success. This means that all packages listed in the audit file are active, and there are no extra packages active on all nodes where the audit was requested. This can refer to the entire router, a particular SDR, or a particular node.
- Command completes successfully, and the result of the audit is failure. Audit failure means that there are discrepancies between the set of packages listed in the audit file and the packages active on the nodes where audit is done.

The following additional messages indicate the type of discrepancy found in the audit:

- Package specified in the audit file is not present at all. In other words, there was no **install add** performed for this package.

- Package specified in the audit file is present, but is not active on all nodes where it should be active. For example, a package that goes only to route processors (RPs) is not active on all RPs audited (either the entire router or a specific SDR, depending on the scope of command).
- Package specified in the audit file is present, but is not active on some nodes where it should be active. In this case, a list is provided of the nodes where the package is not active.
- Extra package that is not present in the audit file is active on all nodes being audited.
- Extra package that is not present in the audit file is active on some nodes being audited. In this case, a list is provided of the nodes where the package is active.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following sample output indicates that the audit is successful:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show install audit file tftp://10.2.2.2/install_list.txt

Install audit operation completed.
Install audit result: SUCCESS
```

The following sample output indicates that there are discrepancies between the packages installed on the router and the supplied audit file:

```
RP/0/RP0/CPU0:router(admin)# show install audit file tftp://10.2.2.2/install_list.txt

Info: Package (hfr-base-3.2.4.CSCxx12345) is not active only on node(s)
Info: 0/5/CPU0, 0/3/CPU0.
Install audit operation completed.
Install audit result: FAILED (discrepancies found)
```

# show install auto-abort-timer

To display the current auto-abort-timer, use the **show install auto-abort-timer** command in EXEC or administration EXEC mode.

**show install auto-abort-timer**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC  
Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.5.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show install auto-abort-timer** command displays the timer value configured with the **install activate** and **install deactivate** commands.

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following sample output displays the current auto-abort-timer value:

```
RP/0/RP0/CPU0:router# show install auto-abort-timer
No Auto Abort Timer(s) present
```

# show install inactive

To display the inactive packages on the designated secure domain router shelf controller (DSDRSC) for one or more secure domain routers (SDRs), use the **show install inactive** command in EXEC or administration EXEC mode.

## Administration EXEC Mode

```
show install inactive [{detail | summary | verbose}] [{sdr sdr-name | location node-id}]
```

## EXEC Mode

```
show install inactive [{detail | summary | verbose}] [location node-id]
```

|                           |                             |  |
|---------------------------|-----------------------------|--|
| <b>Syntax Description</b> | <b>detail</b>               | (Optional) Displays summary and component information for inactive packages.   |
|                           | <b>summary</b>              | (Optional) Displays a summary of inactive packages.  |
|                           | <b>verbose</b>              | (Optional) Displays summary, component, and file information for inactive packages.  |
|                           | <b>sdr sdr-name</b>         | (Optional. Administration EXEC mode only.) Displays the inactive packages for a the boot device in a specific secure domain router (SDR). The <i>sdr-name</i> argument is the name assigned to the SDR.  |
|                           | <b>location node-id</b>     | (Optional) Displays the inactive software set from a designated node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation.  |
| <b>Command Default</b>    | None                        |  |
| <b>Command Modes</b>      | Administration EXEC<br>EXEC |  |
| <b>Command History</b>    | <b>Release</b>              | <b>Modification</b>  |
|                           | Release 2.0                 | This command was introduced.   |
|                           | Release 3.2                 | The command was made available in administration EXEC mode.<br>The <b>components</b> , <b>files</b> , and <b>none</b> keywords were removed and replaced by the <b>detail</b> , <b>verbose</b> , and <b>brief</b> keywords, respectively.<br>The <b>summary</b> keyword was removed.<br>The default output display was changed to match the output that displayed when the optional <b>summary</b> keyword was entered in previous releases. |

| Release       | Modification   |
|---------------|--|
| Release 3.4.0 | This command was modified to display inactive packages only for the boot device. |

### Usage Guidelines

**Note** Use the **show install inactive** command to display the inactive packages for the DSDRSC .

Enter the command in administration EXEC mode to display information for the DSDRSC in all SDRs.

### Displaying Information for a Specific SDR

- To display information for a specific SDR from administration EXEC mode, use the **sdr** *sdr-name* keyword and argument.
- To display information for an SDR when logged into that SDR, enter the command in EXEC mode.
- To display information for all SDRs in the system, enter the command in administration EXEC mode, without the **sdr** keyword.

### Displaying Information for a Specific Node

Use the **location** *node-id* keyword and argument to display information for a specific node. If you do not specify a location with the **location** *node-id* keyword and argument, this command displays information from all nodes.

### Summary, Detailed, and Verbose Information

Use the **summary** keyword to display summary of inactive packages in a system or SDR. Use the **detail** keyword to display the packages for each node in an SDR, or in all SDRs. Use the **verbose** keyword to display additional information, including component and file information for each package.

### Task ID

#### Task ID Operations

# show install issu inventory

To display the status of each node and the current status of ISSU, use the **show install issu inventory** command in administration EXEC mode.

```
show install issu inventory [{detail | type ism-card-type}]
```

| Syntax Description | detail                              | Description   |
|--------------------|-------------------------------------|---|
|                    | <b>detail</b>                       | Displays detailed information about the status of each card.  |
|                    | <b>type</b><br><i>ism-card-type</i> | <p>displays information regarding a specific card type. <i>ism-card-type</i> values can be of the following:</p> <ol style="list-style-type: none"> <li>1—Show inventory of all Active RPs in ndsc Racks</li> <li>2—Show inventory of all Standby RPs in ndsc Racks</li> <li>3—Show inventory of all Active DRPs (any rack)</li> <li>4—Show inventory of all Standby DRPs (any rack)</li> <li>5—Show inventory of the dSC node</li> <li>6—Show inventory of the Standby dSC node</li> <li>7—Show inventory of all Active Non-root SCs</li> <li>8—Show inventory of all Standby Non-root SCs</li> <li>9—Show inventory of the Root SC</li> <li>10—Show inventory of the Root SC backup</li> <li>11—Show inventory of all LCs (any rack)</li> <li>12—Show inventory of all Non-Fabric SPs. Eg:LC, Alarm, Fan Controller SPs</li> <li>13—Show inventory of all Fabric SPs</li> </ol> |

**Command Default** Summary information is displayed

**Command Modes** Administration EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 4.2.1 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show install issu inventory** command displays output only when the ISSU process is running.

| Task ID | Task ID  | Operation |
|---------|----------|-----------|
|         | pkg-mgmt | read      |

# show install issu stage

To display the current stage of the running ISSU process, use the **show install issu stage** command in administration EXEC mode.

**show install issu stage** [detail]

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <b>detail</b> Displays more information regarding the stage of the process. |
|---------------------------|---|

|                        |  |
|------------------------|--|
| <b>Command Default</b> | Displays summary information about the ISSU stage on the router. |
|------------------------|--|

|                      |                     |
|----------------------|---------------------|
| <b>Command Modes</b> | Administration EXEC |
|----------------------|---------------------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 4.2.1  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

The **show install issu stage** command displays output only when the ISSU process is running.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|----------------|----------------|------------------|
|                | pkg-mgmt       | read             |

This example displays output from the **show install issu stage** command during the load phase:

```
RP/0/RP0/CPU0:router(admin)# show install issu stage

Thu Dec 8 16:09:48.397 UTC
Current State : LOAD phase done (Load phase done)
Status : 31% Completed
Participating nodes : 0
Nodes in progress : 0
```

# show install log

To display the details of installation requests, use the **show install log** command in EXEC or administration EXEC mode.

```
show install log [{install-id | from install-id}] [{detail | verbose}] [reverse]
```

| Syntax Description            |   |
|-------------------------------|---|
| <i>install-id</i>             | (Optional) Identifier assigned to an installation operation.  |
| <b>from</b> <i>install-id</i> | (Optional) Displays information for logs from the specified installation identifier and forward.  |
| <b>detail</b>                 | (Optional) Displays details including impact to processes and nodes.  |
| <b>verbose</b>                | (Optional) Displays the information from the keyword, plus additional information about impacts to files, processes, and dynamic link libraries (DLLs). |
| <b>reverse</b>                | (Optional) Displays the logs in reverse order.  |

**Command Default** None

**Command Modes** Administration EXEC  
EXEC

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 2.0   | This command was introduced.   |
|                 | Release 3.2   | The command was moved from EXEC mode to administration EXEC mode.    |
|                 | Release 3.3.0 | Support was added for the <b>detail</b> and <b>verbose</b> keywords. |
|                 | Release 3.4.0 | Support was added for EXEC mode.                                     |
|                 | Release 3.6.0 | Support was added for the <b>from</b> and <b>reverse</b> keywords.   |

**Usage Guidelines** Enter the **show install log** command with no arguments to display a summary of all installation operations, including the changes to files and the processes impacted by each request. Specify the *install-id* argument to display details for a specific operation.

The *install-id* argument is listed beside each operation in the **show install log** summary and is attached to messages from that operation. For example, the third installation operation has “Install 3:” attached to all its status messages.

The **reverse** keyword displays the information from the latest install log to the oldest install log. Use the **from** keyword to limit the output to be from the specified installation identifier and later.

### Displaying Information for a Specific SDR or All SDRs

- To display information for a specific SDR from administration EXEC mode, use the **sdr** *sdr-name* keyword and argument.
- To display information for an SDR when logged into that SDR, enter the command in EXEC mode.
- To display information for all SDRs in the system, enter the command in administration EXEC mode, without the **sdr** keyword.

### Detailed and Verbose Information

Use the **detail** keyword to display detailed information for all previous installations, including impact to processes and nodes impacted. The detailed information is a subset of the information displayed with the **verbose** keyword.

Use the **verbose** keyword to display detailed information for all previous installations, information including files changes, impact to processes, and impact to dynamic link libraries (DLLs).

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example shows a summary of all installation requests:

```
RP/0/RP0/CPU0:router# show install log

Thu May 27 11:19:18.177 DST

## Summary:

```

Sub-operation 1:
Install method: Parallel Process Restart
Summary of changes on nodes 0/4/CPU0, 0/4/CPU1:
  Activated:  hfr-mgbl-3.9.0.14I
              9 hfr-mgbl processes affected (0 updated, 9 added, 0 removed, 0 impacted)

Summary of changes on nodes 0/RP0/CPU0, 0/RP1/CPU0:
  Activated:  hfr-mgbl-3.9.0.14I
              9 hfr-mgbl processes affected (0 updated, 9 added, 0 removed, 0 impacted)

Sub-operation 2:
Install method: Parallel Process Restart
Summary of changes on nodes 0/4/CPU0, 0/4/CPU1:
  Activated:  hfr-k9sec-3.9.0.14I
              9 hfr-k9sec processes affected (0 updated, 9 added, 0 removed, 0 impacted)

Summary of changes on nodes 0/RP0/CPU0, 0/RP1/CPU0:
  Activated:  hfr-k9sec-3.9.0.14I
              9 hfr-k9sec processes affected (0 updated, 9 added, 0 removed, 0 impacted)

Sub-operation 3:
Install method: Parallel Process Restart
Summary of changes on nodes 0/1/SP, 0/4/SP, 0/6/SP, 0/SM0/SP, 0/SM1/SP,
0/SM2/SP, 0/SM3/SP:
  Activated:  hfr-diags-3.9.0.14I
              No processes affected

Summary of changes on nodes 0/1/CPU0, 0/6/CPU0:
  Activated:  hfr-diags-3.9.0.14I
              No processes affected

Summary of changes on nodes 0/4/CPU0, 0/4/CPU1:
  Activated:  hfr-diags-3.9.0.14I
              No processes affected

Summary of changes on nodes 0/RP0/CPU0, 0/RP1/CPU0:
  Activated:  hfr-diags-3.9.0.14I
              No processes affected

Sub-operation 4:
Install method: Parallel Process Restart
Summary of changes on nodes 0/1/SP, 0/4/SP, 0/6/SP, 0/SM0/SP, 0/SM1/SP,
0/SM2/SP, 0/SM3/SP:
  Activated:  hfr-fpd-3.9.0.14I
              No processes affected

```

```

Summary of changes on nodes 0/1/CPU0, 0/6/CPU0:
  Activated:   hfr-fpd-3.9.0.14I
  No processes affected

Summary of changes on nodes 0/4/CPU0, 0/4/CPU1:
  Activated:   hfr-fpd-3.9.0.14I
  No processes affected

Summary of changes on nodes 0/RP0/CPU0, 0/RP1/CPU0:
  Activated:   hfr-fpd-3.9.0.14I
  No processes affected

Sub-operation 5:
Install method: Parallel Process Restart
Summary of changes on nodes 0/4/CPU0, 0/4/CPU1:
  Activated:   hfr-doc-3.9.0.14I
  No processes affected

Summary of changes on nodes 0/RP0/CPU0, 0/RP1/CPU0:
  Activated:   hfr-doc-3.9.0.14I
  No processes affected

Sub-operation 6:
Install method: Parallel Process Restart
Summary of changes on nodes 0/1/CPU0, 0/6/CPU0:
  Activated:   hfr-mpls-3.9.0.14I
    1 hfr-mpls processes affected (0 updated, 1 added, 0 removed, 0 impacted)

Summary of changes on nodes 0/4/CPU0, 0/4/CPU1:
  Activated:   hfr-mpls-3.9.0.14I
    7 hfr-mpls processes affected (0 updated, 7 added, 0 removed, 0 impacted)

Summary of changes on nodes 0/RP0/CPU0, 0/RP1/CPU0:
  Activated:   hfr-mpls-3.9.0.14I
    7 hfr-mpls processes affected (0 updated, 7 added, 0 removed, 0 impacted)

Sub-operation 7:
Install method: Parallel Process Restart
Summary of changes on nodes 0/1/CPU0, 0/6/CPU0:
  Activated:   hfr-mcast-3.9.0.14I
    2 hfr-mcast processes affected (0 updated, 2 added, 0 removed, 0 impacted)

Summary of changes on nodes 0/4/CPU0, 0/4/CPU1:
  Activated:   hfr-mcast-3.9.0.14I
    16 hfr-mcast processes affected (0 updated, 16 added, 0 removed, 0 impacted)

Summary of changes on nodes 0/RP0/CPU0, 0/RP1/CPU0:
  Activated:   hfr-mcast-3.9.0.14I
    16 hfr-mcast processes affected (0 updated, 16 added, 0 removed, 0 impacted)

# show install package

To display information about a package, use the **show install package** command in EXEC or administration EXEC mode.

**show install package** {*device:package* | **all**} [{**brief** | **detail** | **verbose**}]

## Syntax Description

|                         |  |
|-------------------------|--|
| <i>device : package</i> | Device and package, expressed in concatenated form (for example, disk0:hfr-mgbl-3.8.0). For the <i>device:</i> argument, the value is a specified storage device, typically <b>disk0</b> . |
| <b>all</b>              | Displays all installed packages on the system or SDR.  |
| <b>brief</b>            | (Optional) Displays only the name and version of packages.   |
| <b>detail</b>           | (Optional) Displays detailed information including impact to processes and nodes, vendor information, card support, and component information.   |
| <b>verbose</b>          | (Optional) Displays the information included in the keyword, plus information about dynamic link libraries (DLLs).   |

## Command Default

None

## Command Modes

Administration EXEC

EXEC

## Command History

| Release     | Modification   |
|-------------|--|
| Release 2.0 | This command was introduced.   |
| Release 3.2 | The command was made available in administration EXEC mode.<br>The <b>components</b> , <b>files</b> , and <b>none</b> keywords were removed and replaced by the <b>detail</b> , <b>verbose</b> , and <b>brief</b> keywords, respectively.<br>The <b>summary</b> keyword was removed.<br>The default output display was changed to match the output that displayed when the optional <b>summary</b> keyword was entered in previous releases. |

## Usage Guidelines

Use the **show install package** command with the **all** keyword to display a list of the packages on the router or SDR.

Use the **show install package** command with the **detail** keyword to display the version of the package, name of the manufacturer, name of the package, date and time when the package was built, and source directory where the package was built.

Use the **show install package** command with the **verbose** keyword to display the same information as the **detail** keyword, plus additional information about DLLs.

**Note** This command returns the same data in EXEC mode and administration EXEC mode. In EXEC mode, only the information for the current SDR is displayed.

For additional information about the status of installed software packages, use the **show install active** and **show install inactive** commands.

**Task ID****Task ID    Operations**

pkg-mgmt read

The following sample output from the **show install package** command lists all packages that are available on the router:

```
RP/0/RP0/CPU0:router# show install package all
```

```

# show install pie-info

To display information about a package installation envelope (PIE) installation file, use the **show install pie-info** command in EXEC or administration EXEC mode.

```
show install pie-info device:package [{brief | detail | verbose}]
```

|                           |  |  |
|---------------------------|--|--|
| <b>Syntax Description</b> | <i>device : package</i> Device, directory path, and package, expressed in concatenated form.   |  |
|                           | <b>brief</b>   | (Optional) Displays summary information.   |
|                           | <b>detail</b>  | (Optional) Displays detailed information.  |
|                           | <b>verbose</b>   | (Optional) Displays comprehensive information.   |
| <b>Command Default</b>    | Displays summary information.  |  |
| <b>Command Modes</b>      | EXEC<br>Administration EXEC  |  |
| <b>Command History</b>    | <b>Release</b>   | <b>Modification</b>  |
|                           | Release 2.0  | This command was introduced.   |
|                           | Release 3.2  | The command was moved from EXEC mode to administration EXEC mode.  |
|                           | Release 3.3.0  | Support was added for the <b>detail</b> , and <b>verbose</b> keywords.                                   |
|                           | Release 3.4.0  | Support was added for EXEC mode.<br>The <b>summary</b> keyword was replaced by the <b>brief</b> keyword. |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.<br>Use the <b>install pie-info</b> command to display information about a specified PIE installation file. |  |
| <b>Task ID</b>            | <b>Task ID</b>   | <b>Operations</b>  |
|                           | pkg-mgmt   | read   |

The following example illustrates sample output from the **install pie-info** command. The default display shows the package name, expiration date, and file size:

```
RP/0/RP0/CPU0:router(admin)# show install pie-info
tftp://223.255.254.254/auto/tftpboot/users/usera/hfr-mcast-p.pie
Thu May 27 17:05:19.888 UTC
```

## show install pie-info

```

Contents of pie file '/tftp://223.255.254.254/auto/tftpboot/users/usera/hfr-mcast-p.pie':

| <b>Syntax Description</b> | <b>detail</b> (Optional) Displays detailed information. |
|---------------------------|---|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |                             |
|----------------------|-----------------------------|
| <b>Command Modes</b> | Administration EXEC<br>EXEC |
|----------------------|-----------------------------|

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.  |
|                 | Release 3.2   | The command was moved from EXEC mode to administration EXEC mode.                             |
|                 | Release 3.3.0 | Command syntax was changed from <b>show install requests</b> to <b>show install request</b> . |
|                 | Release 3.4.0 | Support was added for EXEC mode.  |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | Cisco IOS XR software processes only one installation request per secure domain router (SDR) at a time. The <b>show install request</b> command displays any incomplete request that is currently running. |
|-------------------------|--|

Use the **show install request** command in administration EXEC mode to display installation operations for all SDRs in the system. In EXEC mode, this command displays only the installation requests for that SDR.

|             |   |
|-------------|---|
| <b>Note</b> | The default of installation commands is asynchronous mode, meaning that the command runs in the background and the EXEC prompt is returned as soon as possible. Performing a command in synchronous mode allows the installation process to finish before the prompt is returned. |
|-------------|---|

|            |   |
|------------|---|
| <b>Tip</b> | These requests cannot be stopped by pressing <b>Ctrl-C</b> . To stop a request, use the <b>install attach</b> command to attach to the operation, then press <b>Ctrl-C</b> and select the “abort” option. |
|------------|---|

| Task ID | Task ID  | Operations |
|---------|----------|------------|
|         | pkg-mgmt | read       |

The following example shows sample output from the **show install request** command:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show install request
```

```
Install operation 17 'install add /tftp://172.31.255.255/dir/19mcast' started by user
'user_b' at 14:38:45 UTC Thu Mar 30 2006. The operation is 1% complete 2,017KB
downloaded The operation can still be aborted.
```

The following example shows sample output from the **show install request** command when no installation operations are running:

```
RP/0/RP0/CPU0:router(admin)# show install request
```

```
There are no install requests in operation.
```

# show install rollback

To display the software set associated with a saved installation point, use the **show install rollback** command in EXEC or administration EXEC mode.

## Administration EXEC Mode

```
show install rollback {point-idlabel} [{detail | summary}] [{sdr sdr-name | location node-id}]
```

## EXEC Mode

```
show install rollback {point-idlabel} [{detail | summary}] [location node-id]
```

| Syntax Description             |  |   |
|--------------------------------|--|---|
| <i>point-id</i>                |  | Installation point ID number.   |
| <i>label</i>                   |  | Label associated with an installation point ID.   |
| <b>detail</b>                  |  | (Optional) Displays a detailed summary of information for a system, SDR, or node, including the packages contained in a composite package.  |
| <b>summary</b>                 |  | (Optional) Displays a summary of information in a system or SDR.  |
| <b>sdr</b> <i>sdr-name</i>     |  | (Optional) Displays information for a specific secure domain router (SDR). The <i>sdr-name</i> argument is the name assigned to the SDR. This option is in administration EXEC mode only. |
| <b>location</b> <i>node-id</i> |  | (Optional) Displays information for a designated node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation.  |

**Command Default** None

**Command Modes** EXEC

Administration EXEC

| Command History | Release       | Modification   |
|-----------------|---------------|--|
|                 | Release 3.0   | This command was introduced.   |
|                 | Release 3.2   | The command was made available in administration EXEC mode.  |
|                 | Release 3.3.0 | The command was moved to administration EXEC mode only.<br>Support was added for the keywords and arguments: <b>sdr</b> <i>sdr-name</i> , <b>detail</b> , and <b>summary</b> . |
|                 | Release 3.4.0 | Support was added for EXEC mode.   |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show install rollback** command to display the software set associated with a saved installation point. To display the available rollback points, use the online help system. For example: **show install rollback ?**.

**Tip** This command can be used with the **install rollback to** command to verify the software set associated with a saved installation point before rolling back to the saved installation point.

### Displaying Information for a Specific SDR or All Nodes

- To display information for a specific SDR from administration EXEC mode, use the **sdr sdr-name** keyword and argument.
- To display information for an SDR when logged into that SDR, enter the command in EXEC mode.
- To display information for all SDRs in the system, enter the command in administration EXEC mode, without the **sdr** keyword.

### Displaying Information for a Specific Node

Use the **location node-id** keyword and argument to display information for a specific node. If you do not specify a location with the **location node-id** keyword and argument, this command displays information from all nodes.

### Summary, Detailed, and Verbose Information

Use the **summary** keyword to display a summary of the packages that are used by the **install rollback to** command. Use the **detail** keyword to display additional information, including the individual packages included in the composite packages.

**Tip** Use the **clear install rollback oldest** command to delete saved installation points from the installation buffer.

## Task ID

### Task ID Operations

pkg-mgmt read

In the following example, the **show install rollback** command with the **?** option displays the available rollback points:

```
RP/0/RP0/CPU0:router# admin
RP/0/RP0/CPU0:router(admin)# show install rollback ?

 0  ID of the rollback point to show package information for
 2  ID of the rollback point to show package information for
```

In the following example, the **show install rollback** command displays the packages for a specific rollback point. This display summarizes the packages that are used by the **install rollback to** command:

```
RP/0/RP0/CPU0:router# show install rollback 0

Thu May 27 05:41:36.484 DST
```

## show install rollback

```

ID: 0, Label:

# show install which

To display the origin of a named process, component, or package, use the **show install which** command in EXEC or administration EXEC mode.

**show install which** {**component** *name* [**verbose**] | **file** *filename*} [{**sdr** *sdr-name* | **location** *node-id*}]

## Syntax Description

|                                |  |
|--------------------------------|--|
| <b>component</b> <i>name</i>   | Displays the package information for the component specified in the <i>name</i> argument.  |
| <b>verbose</b>                 | (Optional) Displays summary, component, and file information for each component.   |
| <b>file</b> <i>filename</i>    | Displays the package information for the file specified in the <i>filename</i> argument.   |
| <b>sdr</b> <i>sdr-name</i>     | (Optional. Administration EXEC mode only.) Displays information for a specific secure domain router (SDR). The <i>sdr-name</i> argument is the name assigned to the SDR. |
| <b>location</b> <i>node-id</i> | (Optional) Displays information for the designated node. The <i>node-id</i> argument is expressed in <i>rack/slot/module</i> notation.                                   |

## Command Default

The default search is performed for the active software set.

## Command Modes

Administration EXEC

EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.  |
| Release 3.2   | The command was moved from EXEC mode to administration EXEC mode.   |
| Release 3.3.0 | This command was supported in both EXEC mode and administration EXEC mode.<br>Support was removed for the <b>files</b> keyword.<br>Support was added for the <b>verbose</b> keyword.<br>Support was added for the <b>sdr sdr-name</b> keyword and argument. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show install which** command to display information about a named process, component, or package. Information is shown for each node where the process, component, or package is located.

This command returns the same data in EXEC mode and administration EXEC mode.

### Displaying Information for a Specific SDR or All SDRs

- To display information for a specific SDR from administration EXEC mode, use the **sdr** *sdr-name* keyword and argument.
- To display information for an SDR when logged into that SDR, enter the command in EXEC mode.
- To display information for all SDRs in the system, enter the command in administration EXEC mode, without the **sdr** keyword.

### Displaying Information for a Specific Node

Use the **location** *node-id* keyword and argument to display information for a specific node. If you do not specify a location with the **location** *node-id* keyword and argument, this command displays information from all nodes.

**Note** If the process, component, or package is not located on that node, an error message is displayed.

### Verbose Information

Use the **verbose** keyword to display additional information, including component and file information for each package.

### Task ID

#### Task ID Operations

pkg-mgmt read

The following example shows cisco discovery protocol (CDP) information for a single node. The **show install which** command is entered with the **file** and **location** keywords specified:

```
RP/0/RP0/CPU0:router# show install which file cdp location 0/6/cpu0

Wed Jul 14 05:56:04.873 DST
Node 0/6/CPU0 has file cdp for boot package /disk0/hfr-os-mpi-4.0.0.24I/lc/mbihfr-lc.vm
from iosxr-fwding

## show issu-warm-reload control-protocol trace

To display control protocol trace data about the ongoing process of an in-service software upgrade (ISSU), use the **show issu-warm-reload control-protocol trace** command in EXEC mode.

```
show issu-warm-reload control-protocol trace data-type type {all | error | information | packet}
[hexdump] [last n] [reverse] [stats] [tailf] [unique][verbose] [wrapping][file filename original]
```

### Syntax Description

|                      |   |
|----------------------|---|
| <i>data-type</i>     | The type of data to display. Valid options are: <ul style="list-style-type: none"> <li>• <b>all</b>—Displays all trace data.</li> <li>• <b>chdlc</b>—Displays Cisco High-Level Data Link Control (cHDLC) Serial Line Address Resolution Protocol (SLARP) data.</li> <li>• <b>control-io</b>—Displays control input-output (I/O) data.</li> <li>• <b>ipv6nd</b>—Displays IPv6 ND data.</li> <li>• <b>lACP</b>—Displays Link Aggregation Control Protocol (LACP) data.</li> <li>• <b>platform</b>—Displays platform data.</li> <li>• <b>ppp</b>—Displays PPP data.</li> </ul> all, chdlc, control-io, ipv6nd, lACP, |
| <b>type</b>          | Specifies the format of trace data to display.  |
| <b>all</b>           | Displays error, information and packet traces.  |
| <b>error</b>         | Displays error traces.  |
| <b>information</b>   | Displays information traces.  |
| <b>packet</b>        | Displays packet traces.   |
| <b>hexdump</b>       | (Optional) Displays traces in hexadecimal format.   |
| <b>last</b> <i>n</i> | (Optional) Displays the last <i>n</i> number of traces only.  |
| <b>reverse</b>       | (Optional) Displays the most recent traces first.   |
| <b>stats</b>         | (Optional) Displays execution path statistics.  |
| <b>tailf</b>         | (Optional) Displays new traces as they are added.   |
| <b>unique</b>        | (Optional) Displays unique entries only, along with the count of the number of times this entry appears.  |
| <b>verbose</b>       | (Optional) Displays additional internal debugging information.  |

|                                      |   |
|--------------------------------------|---|
| <b>wrapping</b>                      | (Optional) Displays wrapping entries.   |
| <b>file <i>filename</i> original</b> | (Optional) Specifies the filename of the file to display. You can specify up to four trace files. |

**Command Default** None.

**Command Modes** EXEC

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 4.2.1  | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show issu-warm-reload control-protocol trace** command only provides information while the ISSU process is running. After the installation is complete, no information is provided.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operation</b> |
|----------------|----------------|------------------|
|                | system         | read             |

# show zapdisk locations

To display location information where zapdisk operation is supported, use the **show zapdisk locations** command in EXEC mode.

## show zapdisk locations

This command has no keywords or arguments.

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |
|------------------------|------|

|                      |           |
|----------------------|-----------|
| <b>Command Modes</b> | EXEC mode |
|----------------------|-----------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 7.0.1  | This command was introduced. |

|                         |  |
|-------------------------|--|
| <b>Usage Guidelines</b> | No specific guidelines impact the use of this command. |
|-------------------------|--|

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | diag           | read              |

The following example shows sample output from the **show zapdisk locations** command:

```
RP/0/RP0/CPU0:router# show context

0/RSP1    Fully qualified location specification
0/7       Fully qualified location specification
0/4       Fully qualified location specification
all       all locations
```

# zapdisk start location

To erase data from the disk memory of RSPs and line cards, use the **zapdisk start location** command in EXEC mode.

**zapdisk start location** *node-id*

|                           |   |   |
|---------------------------|---|---|
| <b>Syntax Description</b> | <b>location</b> { <i>node-id</i>   <b>all</b> }   | Specify the location string obtained from the <b>show zapdisk location</b> command. Zapdisk can be executed for specific node location or all node locations. |
| <b>Command Default</b>    | Disabled.   |   |
| <b>Command Modes</b>      | EXEC mode   |   |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>   |
|                           | Release 7.0.1   | This command was introduced.  |
| <b>Usage Guidelines</b>   | After the command is executed, the card is shut down. Do not reload the card.   |   |
|                           |    |   |
| <b>Caution</b>            | This command should not be used during normal operation of the router. The command should be used only when you have planned to delete the data from the card during return material authorization (RMA). |   |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operations</b>   |
|                           | diag  | read,<br>write  |

The following example shows how to erase data from the line card location 0/4:

```
Router# zapdisk start location 0/4
Action on designated location is in progress, more detail logs will be located in sysadmin
at
/misc/disk1/tftpboot/zapdisk.log once action is completed
```

■ zapdisk start location

## Terminal Services Commands

---

This chapter describes the Cisco IOS XR commands used for setting up physical and virtual terminal connections, managing terminals, and configuring virtual terminal line (vty) pools. It also includes commands for the managing the Craft Panel Interface.

For detailed information about configuring physical and virtual terminals, see the *Implementing Physical and Virtual Terminals on Cisco IOS XR Software* module in *System Management Configuration Guide for Cisco CRS Routers*.

# absolute-timeout

To set the absolute timeout for line disconnection, use the **absolute-timeout** command in line template configuration mode. To remove the **absolute-timeout** command from the configuration file and restore the system to its default condition, use the **no** form of this command.

**absolute-timeout** *minutes*  
**no absolute-timeout** *minutes*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>minutes</i> Absolute timeout interval, in minutes. Range is from 10 to 10000. |
|---------------------------|--|

|                        |                       |
|------------------------|-----------------------|
| <b>Command Default</b> | <i>minutes</i> : 1440 |
|------------------------|-----------------------|

|                      |                             |
|----------------------|-----------------------------|
| <b>Command Modes</b> | Line template configuration |
|----------------------|-----------------------------|

| <b>Command History</b> | <b>Release</b>               | <b>Modification</b>          |
|------------------------|------------------------------|------------------------------|
|                        | Release 2.0                  | This command was introduced. |
| Release 5.0.0          | This command was introduced. |                              |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **absolute-timeout** command to terminate the connection after the specified time has elapsed, regardless of whether the connection is being used at the time of termination. You can specify an absolute-timeout value for each port. The user is notified 20 seconds before the session is terminated.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | tty-access     | read,<br>write    |

The following example shows how to set the session timeout value to 2880 minutes (2 days) for the default line template:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# absolute-timeout 2880
```

| <b>Related Commands</b> | <b>Command</b>                               | <b>Description</b>  |
|-------------------------|--|---|
|                         | <a href="#">banner incoming, on page 871</a> | Sets the idle wait timeout interval for user input over a physical terminal connection. |
|                         | <a href="#">session-timeout, on page 903</a> | Sets the idle wait timeout interval for user input over a virtual terminal connection.  |

# access-class

To restrict incoming and outgoing connections using an IPv4 or IPv6 access list, use the **access-class** command in line template configuration mode. To remove the restriction, use the **no** form of this command.

```
access-class list-name {in | out}
no accessclass list-name {in | out}
```

| Syntax Description |   |
|--------------------|---|
|                    | <i>list-name</i> IPv4 or IPv6 access list name. |
| <b>in</b>          | Filters incoming connections.                   |
| <b>out</b>         | Filters outgoing connections.                   |

**Command Default** No access class is set.

**Command Modes** Line template configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **access-class** command to restrict incoming or outgoing connections to addresses defined in an access list. Use the **ipv4 access-list** or **ipv6 access-list** command to define an access list by name.

**Note** To restrict access of incoming or outgoing connections over IPv4 and IPv6, the IPv4 access list and IPv6 access list must share the same name.

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to specify an access class assigned to outgoing connections for the default line template:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# access-class vtyacl out
```

The following sample output from the **show ipv4 access-lists** command displays the IPv4 access list named vtyacl:

```
RP/0/RP0/CPU0:router# show ipv4 access-lists vtyacl

ipv4 access-list vtyacl
 10 permit ip host 10.32.162.48 any
 20 permit ip host 10.20.49.170 any
 30 permit ip host 10.60.3.5 any
```

The following sample output from the **show ipv6 access-lists** command displays the IPv6 access list name vtyacl:

```
RP/0/RP0/CPU0:router# show ipv6 access-lists vtyacl

ipv6 access-list vtyacl
 10 permit ipv6 host 2001:db8:2222:: any
 20 permit ipv6 host 2001:db8:0:4::2 any
```

#### Related Commands

| Command                 | Description                          |
|-------------------------|--------------------------------------|
| <b>ipv4 access-list</b> | Defines an IPv4 access list by name. |
| <b>ipv6 access-list</b> | Defines an IPv6 access list by name. |

# autocommand

To automatically run one or more commands after a user logs in to a vty terminal session, use the **autocommand** command in line default or line template configuration mode. To remove the **autocommand** command from the configuration file and restore the system to its default condition, use the **no** form of this command.

**autocommand** *command*  
**no autocommand** *command*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>command</i> Command or command alias to be executed on user login to a vty session. |
|---------------------------|--|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |   |
|----------------------|---|
| <b>Command Modes</b> | Line template configuration<br>Line default configuration |
|----------------------|---|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 3.4.0  | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **autocommand** command to automatically run a command or command alias when a user logs in to a vty session. To run multiple commands, use a command alias for the *command* argument. When the user logs in, the commands included in the alias are run sequentially.

|             |  |
|-------------|--|
| <b>Note</b> | The <b>autocommand</b> command is supported on vty connections only; it is not supported on console or aux line connections. Use this command to automatically run a command after user login. |
|-------------|--|

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | tty-access     | read,<br>write    |

The following example shows how to use the **autocommand** command to automatically run the **show ip interface brief** command when a user logs in to a default vty session:

```
RP/0/RP0/CPU0:router# configure terminal
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# autocommand show ip interface brief
RP/0/RP0/CPU0:router(config-line)# end
```

```
Uncommitted changes found, commit them before exiting(yes/no/cancel)? [cancel]:yes
```

```
RP/0/RP0/CPU0:router# exit

<Your 'TELNET' connection has terminated>
```

The following example shows how the **show ip interface brief** command is automatically run when the user logs on to a vty session:

```
User Access Verification

Username: lab
Password:

Executing Autocommand 'show ip interface brief'
RP/0/RP0/CPU0:router# show ip interface brief

Interface                IP-Address      Status          Protocol
MgmtEth0/RP0/CPU0/0     172.16.0.0     Up              Up
POS0/0/0/0               unassigned     Up              Up
POS0/0/0/1               unassigned     Up              Up
POS0/0/0/2               unassigned     Up              Up
POS0/0/0/3               unassigned     Up              Up
POS0/3/0/0               unassigned     Up              Up
POS0/3/0/1               unassigned     Up              Up
POS0/3/0/2               unassigned     Up              Up
POS0/3/0/3               unassigned     Up              Up
```

The following example shows how to disable the feature using the **no** form of the **autocommand** command. In this example, the autocommand for the **show ip interface brief** command is disabled. When the user logs out, and logs back in, the **autocommand** command does not run.

```
RP/0/RP0/CPU0:router# configure terminal
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# no autocommand ?

LINE  Appropriate EXEC command

RP/0/RP0/CPU0:router(config-line)# no autocommand show ip interface brief
RP/0/RP0/CPU0:router(config-line)# end

Uncommitted changes found, commit them before exiting(yes/no/cancel)? [cancel]:yes

RP/0/RP0/CPU0:router# exit

<Your 'TELNET' connection has terminated>

User Access Verification

Username: lab
Password:
RP/0/RP0/CPU0:router#
```

The following example shows how to use a command alias with the **autocommand** command to run more than one command when a user logs in to a default vty session. In this example, the alias “test” is created to include the **show ip interface brief** command and the **show users** command. The autocommand feature is then used to run the “test” alias when a user logs in to the vty terminal:

```
RP/0/RP0/CPU0:router# configure terminal
RP/0/RP0/CPU0:router(config)# alias test show ip interface brief; show users
```

```

RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# autocommand test
RP/0/RP0/CPU0:router(config-line)# end

Uncommitted changes found, commit them before exiting(yes/no/cancel)? [cancel]:yes

RP/0/RP0/CPU0:router# exit

<Your 'TELNET' connection has terminated>

User Access Verification

Username: lab
Password:

Executing Autocommand 'test'
RP/0/RP0/CPU0:router# test

RP/0/RP0/CPU0:router# show ip interface brief

Interface                IP-Address      Status          Protocol
MgmtEth0/RP0/CPU0/0     172.16.0.0      Up              Up
POS0/0/0/0               unassigned      Up              Up
POS0/0/0/1               unassigned      Up              Up
POS0/0/0/2               unassigned      Up              Up
POS0/0/0/3               unassigned      Up              Up
POS0/3/0/0               unassigned      Up              Up
POS0/3/0/1               unassigned      Up              Up
POS0/3/0/2               unassigned      Up              Up
POS0/3/0/3               unassigned      Up              Up

RP/0/RP0/CPU0:router# show users

   Line      User      Service  Conns  Idle      Location
*  vty0      lab      telnet   0      00:00:00  172.16.0.0

```

# banner exec

To create a message that is displayed when an EXEC process is created (an EXEC banner), use the **banner exec** command in Global Configuration mode. To delete the EXEC banner, use the **no** form of this command.

```
banner exec delimiter message delimiter
no banner exec
```

## Syntax Description

*delimiter* Delimiting character is (c).

*message* Message text. Text may include tokens in the form \$( *token* ) in the message text. Tokens are replaced with the corresponding configuration variable. Tokens are described in [Table 82: banner exec Tokens, on page 869](#).

## Command Default

No EXEC banner is displayed.

## Command Modes

Global Configuration mode

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **banner exec** command to specify a message that is displayed when an EXEC process is created (a line is activated or an incoming connection is made to a vty). Follow this command with one or more blank spaces and the delimiting character (c). After entering one or more lines of text, terminate the message with the delimiting character (c).

When a user connects to a router, the message-of-the-day (MOTD) banner appears first, followed by the login banner and prompts. After the user logs in to the router, the EXEC banner or incoming banner is displayed, depending on the type of connection. For a reverse Telnet login, the incoming banner is displayed. For all other connections, the router displays the EXEC banner.

Use tokens in the form \$( *token* ) in the message text to customize the banner. Tokens display current configuration variables, such as the router hostname and IP address.

The tokens are described in this table.

**Table 82: banner exec Tokens**

| Token        | Information Displayed in the Banner                 |
|--------------|---|
| \$(hostname) | Displays the hostname for the router.               |
| \$(domain)   | Displays the domain name for the router.            |
| \$(line)     | Displays the vty or tty (asynchronous) line number. |

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to set an EXEC banner that uses tokens:

```
RP/0/RP0/CPU0:router(config)# banner exec c
Enter TEXT message. End with the character 'c'.
THIS IS AN EXEC BANNER
c
```

### Related Commands

| Command  | Description  |
|--|--|
| <a href="#">banner incoming, on page 871</a>       | Defines and enables a customized message that is displayed when there is an incoming connection to a terminal line from a host on the network. |
| <a href="#">banner login, on page 873</a>          | Defines and enables a customized banner that is displayed before the username and password login prompts.                                      |
| <a href="#">banner motd, on page 875</a>           | Defines a customized MOTD banner.  |
| <a href="#">banner prompt-timeout, on page 877</a> | Defines a customized banner that is displayed when there is a login timeout.   |

# banner incoming

To create a banner that is displayed when there is an incoming connection to a terminal line from a host on the network, use the **banner incoming** command in Global Configuration mode. To delete the incoming connection banner, use the **no** form of this command.

**banner incoming** *delimiter message delimiter*  
**no banner incoming**

| <b>Syntax Description</b> | <p><i>delimiter</i> Delimiting character is (c).</p> <p><i>message</i> Message text. You can include tokens in the form \$( <i>token</i> ) in the message text. Tokens are replaced with the corresponding configuration variable. Tokens are described in <a href="#">Table 83: banner incoming Tokens, on page 872</a>.</p> |         |              |             |                              |
|---------------------------|---|---------|--------------|-------------|------------------------------|
| <b>Command Default</b>    | No incoming banner is displayed.  |         |              |             |                              |
| <b>Command Modes</b>      | Global Configuration mode   |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification  |         |              |             |                              |
| Release 2.0               | This command was introduced.  |         |              |             |                              |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Follow the **banner incoming** command with one or more blank spaces and the delimiting character (c). After entering one or more lines of text, terminate the message with the second occurrence of the delimiting character (c).

An *incoming connection* is one initiated from the network side of the router. Incoming connections are also called reverse Telnet sessions. These sessions can display message-of-the-day (MOTD) banners and incoming banners, but they do not display EXEC banners.

When a user connects to a router, the MOTD banner (if configured) appears first, followed by the login banner and prompts. After the user logs in to the router, the EXEC banner or incoming banner is displayed, depending on the type of connection. For a reverse Telnet login, the incoming banner is displayed. For all other connections, the router displays the EXEC banner.

Incoming banners cannot be suppressed. If you do not want the incoming banner to appear, you must delete it with the **no banner incoming** command.

To customize the banner, use tokens in the form \$(*token*) in the message text. Tokens display current variables, such as the router hostname and IP address.

This table describes the tokens.

**Table 83: banner incoming Tokens**

| Token               | Information Displayed in the Banner                 |
|---------------------|---|
| <b>\$(hostname)</b> | Displays the hostname for the router.               |
| <b>\$(domain)</b>   | Displays the domain name for the router.            |
| <b>\$(line)</b>     | Displays the vty or tty (asynchronous) line number. |

## Task ID

### Task ID Operations

tty-access read,  
write

The following example shows how to create an incoming connection banner:

```
RP/0/RP0/CPU0:router(config)# banner incoming c
Enter TEXT message. End with the character `c'
THIS IS AN INCOMING BANNER.
c
```

## Related Commands

| Command  | Description   |
|--|---|

# banner login

To create a customized banner that is displayed before the username and password login prompts, use the **banner login** command in Global Configuration mode. To disable the login banner, use **no** form of this command.

```
banner login delimiter message delimiter
no banner login
```

| <b>Syntax Description</b> | <i>delimiter</i> Delimiting character is (c).   |         |              |             |                              |
|---------------------------|---|---------|--------------|-------------|------------------------------|
|                           | <i>message</i> Message text. You can include tokens in the form \$( <i>token</i> ) in the message text. Tokens are replaced with the corresponding configuration variable. Tokens are described in <a href="#">Table 84: banner login Tokens, on page 873</a> . |         |              |             |                              |
| <b>Command Default</b>    | No login banner is displayed.   |         |              |             |                              |
| <b>Command Modes</b>      | Global Configuration mode   |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>   | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification  |         |              |             |                              |
| Release 2.0               | This command was introduced.  |         |              |             |                              |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Follow the **banner login** command with one or more blank spaces and the delimiting character (c). Then enter one or more lines of text, terminating the message with the second occurrence of the delimiting character (c).

When a user connects to the router, the message-of-the-day (MOTD) banner (if configured) appears first, followed by the login banner and prompts. After the user successfully logs in to the router, the EXEC banner or incoming banner is displayed, depending on the type of connection. For a reverse Telnet login, the incoming banner is displayed. For all other connections, the router displays the EXEC banner.

To customize the banner, use tokens in the form \$( *token* ) in the message text. Tokens display current configuration variables, such as the router hostname and IP address.

Tokens are described in the this table.

**Table 84: banner login Tokens**

| Token        | Information Displayed in the Banner                 |
|--------------|---|
| \$(hostname) | Displays the hostname for the router.               |
| \$(domain)   | Displays the domain name for the router.            |
| \$(line)     | Displays the vty or tty (asynchronous) line number. |

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to set a login banner:

```
RP/0/RP0/CPU0:router(config)# banner login c

Enter TEXT message. End with the character 'c'.
THIS IS A LOGIN BANNER
c
```

#### Related Commands

| Command  | Description  |
|--|--|

# banner motd

To create a message-of-the-day (MOTD) banner, use the **banner motd** command in Global Configuration mode. To delete the MOTD banner, use the **no** form of this command.

**banner motd** *delimiter message delimiter*  
**no banner motd**

## Syntax Description

*delimiter* Delimiting character is (c).

*message* Message text. You can include tokens in the form \$( *token* ) in the message text. Tokens are replaced with the corresponding configuration variable.

## Command Default

No MOTD banner is displayed.

## Command Modes

Global Configuration mode

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Follow this command with one or more blank spaces and the delimiting character (c). Then enter one or more lines of text, terminating the message with the second occurrence of the delimiting character (c).

This MOTD banner is displayed to all terminals connected and is useful for sending messages that affect all users (such as impending system shutdowns). Use the **no banner motd** command to disable the MOTD banner on a line.

When a user connects to the router, the MOTD banner (if configured) appears first, followed by the login banner and prompts. After the user successfully logs in to the router, the EXEC banner or incoming banner is displayed, depending on the type of connection. For a reverse Telnet login, the incoming banner is displayed. For all other connections, the router displays the EXEC banner.

To customize the banner, use tokens in the form \$(token) in the message text. Tokens display current configuration variables, such as the router hostname and IP address.

Tokens are described in this table.

**Table 85: banner motd Tokens**

| Token        | Information Displayed in the Banner                 |
|--------------|---|
| \$(hostname) | Displays the hostname for the router.               |
| \$(domain)   | Displays the domain name for the router.            |
| \$(line)     | Displays the vty or tty (asynchronous) line number. |

| Task ID | Task ID | Operations |
|---------|---------|------------|
|---------|---------|------------|

|  |            |                |
|--|------------|----------------|
|  | tty-access | read,<br>write |
|--|------------|----------------|

The following example shows how to configure an MOTD banner with a token:

```
RP/0/RP0/CPU0:router(config)# banner motd c
```

```
Enter TEXT message. End with the character 'c'.
```

```
Notice: all routers in $(domain) will be upgraded beginning April 20
c
```

|  | <a href="#">banner login, on page 873</a>          | Defines and enables a customized banner that is displayed before the username and password login prompts.                                      |
|  | <a href="#">banner prompt-timeout, on page 877</a> | Defines a customized banner that is displayed when there is a login timeout.   |

# banner prompt-timeout

To create a banner that is displayed when there is a login authentication timeout, use the **banner prompt-timeout** command in Global Configuration mode. To delete the prompt timeout banner, use the **no banner prompt-timeout** form of this command.

**banner prompt-timeout** *delimiter message delimiter*  
**no banner prompt-timeout**

## Syntax Description

*delimiter* Delimiting character is (c).

*message* Message text. You can include tokens in the form  $\$(token)$  in the message text. Tokens are replaced with the corresponding configuration variable.

## Command Default

No banner is displayed when there is a login authentication timeout.

## Command Modes

Global Configuration mode

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Follow this command with one or more blank spaces and the delimiting character (c). Then enter one or more lines of text, terminating the message with the second occurrence of the delimiting character (c).

This prompt-timeout banner is displayed when there is a login authentication timeout at the username and password prompt.

## Task ID

| Task ID    | Operations     |
|------------|----------------|
| tty-access | read,<br>write |

The following example shows how to configure a prompt-timeout banner:

```
RP/0/RP0/CPU0:router(config)# banner prompt-timeout c
Enter TEXT message. End with the character 'c'.
THIS IS A PROMPT TIMEOUT BANNER
c
```

# clear line

To clear an auxiliary or console line to an idle state, use the **clear line** command in EXEC mode.

```
clear line {aux | console} location node-id
```

| Syntax Description | Parameter                      | Description   |
|--------------------|--------------------------------|---|
|                    | <b>aux</b>                     | Clears the auxiliary line.  |
|                    | <b>console</b>                 | Clears the console line.  |
|                    | <b>location</b> <i>node-id</i> | Specifies the location of a route processor (RP) where the auxiliary or console line to be cleared resides. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |

**Command Default** None

**Command Modes** EXEC mode

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID    | Operations |
|---------|------------|------------|
|         | tty-access | execute    |

The following example shows how to clear the console line, putting it in an idle state:

```
RP/0/RP0/CPU0:router# clear line console location 0/RP1/CPU0
```

| Related Commands | Command                                 | Description   |
|------------------|---|---|
|                  | <a href="#">show users, on page 912</a> | Displays information about the active lines on the networking device. |

# clear line vty

To clear a virtual terminal line (vty) to an idle state, use the **clear line vty** command in EXEC mode.

**clear line vty** *line-number*

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>line-number</i> Line number in the range from 0 to 99. |
|---------------------------|---|

|                        |                               |
|------------------------|-------------------------------|
| <b>Command Default</b> | No default behavior or values |
|------------------------|-------------------------------|

|                      |           |
|----------------------|-----------|
| <b>Command Modes</b> | EXEC mode |
|----------------------|-----------|

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|------------------------|----------------|------------------------------|
|                        | Release 2.0    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **show users** command to determine the origin of the connection and which lines to clear. When a line is cleared to an idle state, the user on the other end of the connection receives notice that the connection was closed by a foreign host.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | tty-access     | execute           |

The following example shows how to reset vty 3 to the idle state:

```
RP/0/RP0/CPU0:router# clear line vty 3
```

| <b>Related Commands</b> | <b>Command</b>                          | <b>Description</b>  |

|                         | <a href="#">show users, on page 912</a> | Displays information about the active lines on the networking device. |

# cli interactive syntax check

To enable interactive syntax checking, use the **cli interactive syntax check** command in the appropriate line configuration mode. To disable interactive syntax checking, use the **no** form of this command.

**cli interactive syntax check**  
**no cli interactive syntax check**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Interactive syntax checking is disabled.

**Command Modes** Line console configuration  
 Line default configuration  
 Line template configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **cli interactive syntax check** command to check command syntax as you type. You are not allowed to enter incorrect syntax.

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to enable interactive syntax checking:

```
RP/0/RP0/CPU0:router(config)# line console
RP/0/RP0/CPU0:router(config-line)# cli interactive syntax check
```

| Related Commands | Command  | Description  |
|------------------|--|--|
|                  | <a href="#">cli whitespace completion, on page 882</a> | Enables completion of a command when you type the space key. |

# cli whitespace completion

To enable completion of a command when you type the space key, use the **cli whitespace completion** command in the appropriate line configuration mode. To disable whitespace completion, use the **no** form of this command.

**cli whitespace completion**

**no cli whitespace completion**

**Syntax Description** This command has no keywords or arguments.

**Command Default** Whitespace completion is disabled.

**Command Modes**

- Line console configuration
- Line default configuration
- Line template configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **cli whitespace completion** command to complete the next word of the command syntax if you type the space key before completing the word. If more than one option is valid, all options are displayed for you to choose one.

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to enable whitespace completion:

```
RP/0/RP0/CPU0:router(config)# line console
RP/0/RP0/CPU0:router(config-line)# cli whitespace completion
```

|------------------|---|--------------------------------------|
|                  | <a href="#">cli interactive syntax check, on page 881</a> | Enables interactive syntax checking. |

# databits

To set the data bits per character for physical terminal connections, use the **databits** command in line console configuration mode. To restore the default value, use the **no** form of this command.

**databits** {**5** | **6** | **7** | **8**}  
**no databits**

## Syntax Description

|          |  |
|----------|--|
| <b>5</b> | Sets the data bits per character to 5. |
| <b>6</b> | Sets the data bits per character to 6. |
| <b>7</b> | Sets the data bits per character to 7. |
| <b>8</b> | Sets the data bits per character to 8. |

## Command Default

Eight databits per character.

## Command Modes

Line console configuration

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **databits** command to set the data bits attributes for physical terminal connections. Physical terminal connections use either the console or auxiliary line template.

The **databits** command masks the high bit on input from devices that generate 7 data bits with parity. If parity is being generated, specify 7 data bits per character. If no parity generation is in effect, specify 8 data bits per character. The keywords **5** and **6** are supplied for compatibility with older devices and generally are not used.

## Task ID

| Task ID    | Operations     |
|------------|----------------|
| tty-access | read,<br>write |

The following example shows how to set the data bits per character for the console terminal template to 7:

```
RP/0/RP0/CPU0:router(config)# line console
RP/0/RP0/CPU0:router(config-line)# databits 7
```

**Related Commands**

| <b>Command</b>                          | <b>Description</b>  |
|---|---|
| <a href="#">show users, on page 912</a> | Displays information about the active lines on the networking device. |
| <a href="#">stopbits, on page 914</a>   | Sets the number of stop bits.   |

# disconnect

To disconnect a network connection, use the **disconnect** command in EXEC mode.

**disconnect** [{*connection-number*network-name}]

## Syntax Description

*connection-number* (Optional) Number of the line of the active network connection to be disconnected. Range is from 1 to 20.

*network-name* (Optional) Name of the active network connection to be disconnected.

## Command Modes

EXEC mode

## Command Default

Disconnects the existing network connection if no arguments are provided.

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

Do not disconnect a line to end a session. Instead, log off the host before ending the session to clear the connection. If you cannot log out of an active session, disconnect the line.

## Task ID

| Task ID    | Operations     |
|------------|----------------|
| tty-access | read,<br>write |

The following example shows how to disconnect from a device (in this example “User1”) to return to the router:

```
User1% disconnect
Connection closed by remote host

RP/0/RP0/CPU0:router#
```

# disconnect-character

To define a character to disconnect a session, use the **disconnect-character** command in line template configuration mode. To remove the **disconnect-character** command from the configuration file and restore the system to its default condition, use the **no** form of this command.

**disconnect-character** [*{numbercharacter}*]  
**no disconnect-character**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | <i>number</i> (Optional) ASCII decimal equivalent of the disconnect character. Range is from 0 through 255. |
|                           | <i>character</i> (Optional) Disconnect character.   |

**Command Default** No disconnect character is defined.

**Command Modes** Line template configuration

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 2.0    | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The break character is represented by 0; null cannot be represented.

|                |                |                   |
|----------------|----------------|-------------------|
| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|                | tty-access     | read,<br>write    |

The following example shows how to set the disconnect character for the default line template to the Esc character, which is the ASCII decimal equivalent 27:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# disconnect-character 27
```

## Related Commands

| Command  | Description                  |
|--|------------------------------|
| <a href="#">escape-character</a> , on page 887 | Defines an escape character. |

# escape-character

To define a character to escape a session, use the **escape-character** command in line template configuration mode. To remove the **escape-character** command from the configuration file and restore the system to its default condition, use the **no** form of this command.

```
escape-character {breaknumbercharacter | default | none}
no escape-character
```

| Syntax Description |  |
|--------------------|--|
| <b>break</b>       | Sets the escape character to the Break key.                                    |
| <i>number</i>      | ASCII decimal equivalent of the escape character. Range is from 0 through 255. |
| <i>character</i>   | Escape character.  |
| <b>default</b>     | Specifies the default escape character (^X).                                   |
| <b>none</b>        | Disables the escape function.  |

**Command Default** The default escape character is ^X.

**Command Modes** Line template configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **escape-character** command to define an escape character sequence that is different from the default. Use the escape character to exit from an existing connection and return to the EXEC prompt.

The default escape key sequence is Ctrl-Shift-6, X (^X). The **escape-character** command with the **default** keyword sets the escape character to the Break key (the default setting for the Break key is Ctrl-C).

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to set the escape character for the default line template to Ctrl-P, which is the ASCII decimal character 16:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# escape-character 16
```

---

| <b>Command Default</b>    | <i>minutes</i> : 10<br><i>seconds</i> : 0  |         |              |             |                              |
| <b>Command Modes</b>      | Line console configuration<br>Line default configuration<br>Line template configuration  |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>  | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification   |         |              |             |                              |
| Release 2.0               | This command was introduced.   |         |              |             |                              |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>If no input is detected during the interval, the EXEC facility resumes the current connection. If no connections exist, the EXEC facility returns the terminal to the idle state and disconnects the incoming session. To disable the EXEC timeout function so that the EXEC session never timeouts, enter the following command:</p> <pre>exec-timeout 00</pre> |         |              |             |                              |
| <b>Task ID</b>            | <table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>tty-access</td> <td>read,<br/>write</td> </tr> </tbody> </table>  | Task ID | Operations   | tty-access  | read,<br>write               |
| Task ID                   | Operations   |         |              |             |                              |
| tty-access                | read,<br>write   |         |              |             |                              |

The following example shows how to set the timeout interval for the console line template to 60 minutes, 0 seconds:

```
RP/0/RP0/CPU0:router(config)# line console
RP/0/RP0/CPU0:router(config-line)# exec-timeout 60 0
```

|---|--|
| <a href="#">absolute-timeout, on page 863</a> | Sets the absolute timeout for line disconnection.                                      |
| <a href="#">session-timeout, on page 903</a>  | Sets the idle wait timeout interval for user input over a virtual terminal connection. |

# flowcontrol hardware

To configure the hardware flow control setting for physical terminal connections, use the **flowcontrol hardware** command in line console configuration mode. To remove the attribute from the configuration file and restore the system to its default condition, use the **no** form of this command.

```
flowcontrol hardware {in | out | none}
no flowcontrol hardware {in | out | none}
```

## Syntax Description

|             |                                  |
|-------------|----------------------------------|
| <b>in</b>   | Specifies inbound flow control.  |
| <b>out</b>  | Specifies outbound flow control. |
| <b>none</b> | Specifies no flow control.       |

## Command Default

None

## Command Modes

Line console configuration

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **flowcontrol hardware** command to set the flow control attribute for physical line connections. Physical line connections use either the console or auxiliary line template.

## Task ID

| Task ID    | Operations     |
|------------|----------------|
| tty-access | read,<br>write |

The following example shows how to restrict the hardware flow control to inbound for the console line template:

```
RP/0/RP0/CPU0:router(config)# line console
RP/0/RP0/CPU0:router(config-line)# flowcontrol hardware in
```

| Usage Guidelines | None |
|------------------|------|
|------------------|------|

## Example

This example show how to use the **lcd name** command:

```
RP/0/RP0/CPU0:router (config) # lcd name lc1
```

# length

To set the number of lines that display at one time on the screen, use the **length** command in line template configuration mode. To remove the **length** command from the configuration file and restore the system to its default condition, use the **no** form of this command.

**length** *lines*  
**no length** *lines*

| <b>Syntax Description</b> | <i>lines</i> Number of lines that displays on a screen. Range is from 0 through 512. 0 specifies no pausing. The default is 24.   |         |              |             |                              |
|---------------------------|---|---------|--------------|-------------|------------------------------|
| <b>Command Default</b>    | <i>lines</i> : 24   |         |              |             |                              |
| <b>Command Modes</b>      | Line template configuration   |         |              |             |                              |
| <b>Command History</b>    | <table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table> | Release | Modification | Release 2.0 | This command was introduced. |
| Release                   | Modification  |         |              |             |                              |
| Release 2.0               | This command was introduced.  |         |              |             |                              |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **length** command to modify the default length setting for the specified line template. The length setting determines when the screen pauses during the display of multiple-screen output. Specifying a value of 0 for the lines argument prevents the router from pausing between screens of output.

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to set the length of the default line template to 33 lines:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# length 33
```

| Related Commands | Command                                      | Description   |
|------------------|--|---|
|                  | <a href="#">terminal length, on page 919</a> | Sets the length of the display terminal for the current terminal session. |

# line

To specify the console, the default, or a user-defined line template and enter line template configuration mode, use the **line** command in

global configuration

mode.

**line** {**console** | **default** | **template** *template-name*}

| Syntax Description |                                      |   |
|--------------------|--------------------------------------|---|
|                    | <b>console</b>                       | Specifies the line template for the console line.                   |
|                    | <b>default</b>                       | Specifies the default line template.                                |
|                    | <b>template</b> <i>template-name</i> | Specifies a user-defined line template to be applied to a vty pool. |

**Command Default** None

**Command Modes** Global configuration

| Command History | Release       | Modification                              |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.              |
|                 | Release 3.3.0 | The <b>aux</b> keyword was not supported. |

**Usage Guidelines** Use the **line** command to specify a line template type and enter into line template configuration mode. Line templates are a collection of attributes used to configure and manage physical terminal line connections (the console and auxiliary ports) and vty connections. The following templates are available in Cisco IOS XR software:

- Default line template—The default line template that applies to a physical and virtual terminal lines.
- Console line template—The line template that applies to the console line.
- User-defined line templates—User-defined line templates that can be applied to a range of virtual terminal lines.

The following example shows how to enter line template configuration mode to allow configuration changes to be made to the default line template:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)#
```

# parity

To set the parity bit for physical terminal connections, use the **parity** command in line console configuration mode. To specify no parity, use the **no** form of this command.

```
parity {even | none | odd}
no parity {even | none | odd}
```

## Syntax Description

**even** Specifies even parity.

**none** Specifies no parity.

**odd** Specifies odd parity.

## Command Default

No parity is set.

## Command Modes

Line console configuration

## Command History

| Release       | Modification  |
|---------------|---|
| Release 2.0   | This command was introduced.                            |
| Release 3.4.0 | The <b>mark</b> and <b>space</b> keywords were removed. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Communication protocols provided by devices such as terminals and modems often require a specific parity bit setting.

Use the **parity** command for setting the parity attribute for physical terminal connections. Physical terminal connections use either the console or auxiliary line template.

## Task ID

| Task ID    | Operations     |
|------------|----------------|
| tty-access | read,<br>write |

The following example shows how to set the line parity configuration to even for the console line template:

```
RP/0/RP0/CPU0:router(config)# line console
RP/0/RP0/CPU0:router(config-line)# parity even
```

## Related Commands

| Command                                 | Description   |
|---|---|
| <a href="#">show users, on page 912</a> | Displays information about the active lines on the networking device. |

# resume

To switch to another active Secure Shell (SSH) or Telnet session, use the **resume** command in

EXEC

mode.

**resume** [*connection*]

## Syntax Description

*connection* (Optional) Name or number of the active network connection; the default is the most recent connection. Number range is from 1 to 20.

## Command Default

The most recent connection.

## Command Modes

EXEC

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

SSH and Telnet sessions can be established to another router or server.

When the network session is being established and without disconnecting the network session, you can resume the router console session by typing a special sequence of characters as shown. After switching back to the router console, the network connection can be resumed by specifying the number of the connection or the name of the connection.

You can have several concurrent sessions open and switch back and forth between them. The number of sessions that can be open is defined using the **session-limit** command.

You can switch between sessions by escaping one session and resuming a previously opened session, as follows:

1. Escape from the current session by pressing the escape sequence (Ctrl Shift-6, x [^^X]) to return to the EXEC prompt.
2. Enter the **show sessions** command to list the open sessions. All open sessions associated with the current terminal line are displayed.
3. Enter the **resume** command and the session number to make the connection.

You can also resume the previous session by pressing the **Return** key.

The ^^X and commands are available for all supported connection protocols.

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to escape from one connection and resume another. You can omit the connection name and simply enter the connection number to resume that connection.

```
host1% ^^X
RP/0/RP0/CPU0:router# resume 1

blg_router#
```

### Related Commands

| Command                                    | Description  |
|--|--|
| <a href="#">session-limit, on page 902</a> | Sets the maximum number of outgoing terminal sessions from the current terminal. |

| <b>telnet</b>                              | Logs in to a host that supports Telnet.  |

# send

To send messages to one or all terminal lines, use the **send** command in

EXEC

mode.

```
send {*line-number | aux 0 | console 0 | vty number}
```

## Syntax Description

|                    |   |
|--------------------|---|
| <b>*</b>           | Sends a message to all tty lines.                                   |
| <i>line-number</i> | Line number to which the message is sent. A number from 0 to 101.   |
| <b>aux 0</b>       | Sends a message to the auxiliary line.                              |
| <b>console 0</b>   | Sends a message to the console line.                                |
| <b>vty number</b>  | Sends a message to a virtual terminal line (vty). Range is 0 to 99. |

## Command Default

None

## Command Modes

EXEC

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The system prompts for the message, which can be up to 500 characters long. Enter **Ctrl-Z** to end the message. Enter **Ctrl-C** to abort this command.

## Task ID

| Task ID    | Operations     |
|------------|----------------|
| tty-access | read,<br>write |

The following example shows how to send a message to all lines:

```
RP/0/RP0/CPU0:router# send *

Enter message, end with CTRL/Z; abort with CTRL/C:
The system will be shut down in 10 minutes for repairs.^Z
Send message? [confirm]
RP/0/RP0/CPU0:router#

***
***
```

```
*** Message from tty to all terminals:  
***  
The system will be shut down in 10 minutes for repairs.
```

# session-limit

To set the maximum number of outgoing terminal sessions from the current terminal, use the **session-limit** command in the appropriate line configuration mode. To remove any specified session limit, use the **no** form of this command.

**session-limit** *connections*  
**no session-limit**

|                           |   |                              |
|---------------------------|---|------------------------------|
| <b>Syntax Description</b> | <i>connections</i> Maximum number of outgoing connections. Range is from 0 through 20.  |                              |
| <b>Command Default</b>    | <i>connections</i> : 6  |                              |
| <b>Command Modes</b>      | Line console configuration<br>Line default configuration<br>Line template configuration   |                              |
| <b>Command History</b>    | <b>Release</b>  | <b>Modification</b>          |
|                           | Release 2.0   | This command was introduced. |
| <b>Usage Guidelines</b>   | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |                              |
| <b>Task ID</b>            | <b>Task ID</b>  | <b>Operations</b>            |
|                           | tty-access  | read,<br>write               |

The following example shows how to limit the number of active outgoing connections for the default line template to eight:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# session-limit 8
```

## session-timeout

To set the timeout interval for all outgoing connections from the current terminal, use the **session-timeout** command in the appropriate line configuration mode. To remove the **session-timeout** command from the configuration file and restore the system to its default condition, use the **no** form of this command.

**session-timeout** *minutes* [**output**]  
**no session-timeout** *minutes*

|                           |  |                              |
|---------------------------|--|------------------------------|
| <b>Syntax Description</b> | <i>minutes</i> Timeout interval, in minutes. Range is 0 to 35791. The default is 10.   |                              |
|                           | <b>output</b> (Optional) Specifies that when traffic is sent to an asynchronous line from the router (within the specified interval), the connection is retained.  |                              |
| <b>Command Default</b>    | <i>minutes</i> : 10  |                              |
| <b>Command Modes</b>      | Line console configuration<br>Line default configuration<br>Line template configuration  |                              |
| <b>Command History</b>    | <b>Release</b>   | <b>Modification</b>          |
|                           | Release 2.0  | This command was introduced. |
| <b>Usage Guidelines</b>   | <p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>Use the <b>session-timeout</b> command to set the interval that Cisco IOS XR software waits for traffic before closing the connection to a remote device and returning the terminal to an idle state. If the <b>output</b> keyword is not specified, the session timeout interval is based solely on detected input from the user. If the keyword is specified, the interval is based on input and output traffic.</p> |                              |
| <b>Task ID</b>            | <b>Task ID</b>   | <b>Operations</b>            |
|                           | tty-access   | read,<br>write               |

The following example shows how to set the session timeout value for the default line template to 120 minutes (2 hours):

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# session-timeout 120
```

# show diag lcd-interface

To display details about the LCD interface (of the craft panel) , use the **show diag lcd-interface** command in the appropriate mode.

## show diag lcd-interface

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | This command has no keywords or arguments. |
|---------------------------|--|

|                        |      |
|------------------------|------|
| <b>Command Default</b> | None |

|                | lcd            | read             |

## Example

This example shows how to use the **show diag lcd-interface**

```
RP/0/RP0/CPU0:router # show diag location 0/CI0
```

```
Diag Information For : 0/CI0
```

```
0/CI0-IDPROM Info
  Controller Family      : 0084
  Controller Type       : 0932
  PID                   : NCS4K-CRAFT
  Version Identifier     : V00
  UDI Description       : NCS 4000 Craft Panel
  CLEI Code             : NOCLEICODE
  ECI Number            : 11223344
  Top Assy. Part Number : 800-41609-01
  Top Assy. Revision    : 12
  PCB Serial Number     : SAL1818RL2G
  PCA Number            : 73-14799-03
```

# show line

To display the parameters of terminal lines, use the **show line** command in

EXEC

mode.

**show line** [{**aux location** *node-id* | **console location** *node-id* | **vty number**}]

| Syntax Description | aux                            | (Optional) Displays the terminal line parameters for the auxiliary line.   |
|--------------------|--------------------------------|--|
|                    | <b>location</b> <i>node-id</i> | (Optional) Specifies the location for the route processor (RP) on which the auxiliary or console port resides. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. |
|                    | <b>console</b>                 | (Optional) Displays the terminal line parameters for the console line.   |
|                    | <b>vty number</b>              | (Optional) Specifies a virtual terminal line (vty) number. Range is from 0 through 99.   |

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

| Task ID | Task ID    | Operations |
|---------|------------|------------|
|         | tty-access | read       |

The following example shows sample output from the **show line** command. The asterisk (\*) indicates the current terminal session.

```
RP/0/RP0/CPU0:router# show line
```

```

Tty          Speed    Modem  Uses   Noise  Overruns  Acc I/O
aux0_0_0    9600    -      -      -      0/0      -/-
* con0_0_0  9600    -      -      -      0/0      -/-
vty0        0/0     -      -      -      0/0      -/-
vty1        0/0     -      -      -      0/0      -/-
vty2        0/0     -      -      -      0/0      -/-

```

```

vty3          0/0      -   -   -   0/0      -/-
vty4          0/0      -   -   -   0/0      -/-
vty100        0/0      -   -   -   0/0      -/-

vty103        0/0      -   -   -   0/0      -/-
vty104        0/0      -   -   -   0/0      -/-
vty105        0/0      -   -   -   0/0      -/-

```

Table 86: show line Field Descriptions

| Field    | Description   |
|----------|---|
| Tty      | Available ttys and vtys.  |
| Speed    | Baud rate that the inbound serial connection is using, in bps.  |
| Modem    | Not implemented.  |
| Uses     | Not implemented.  |
| Noise    | Not implemented.  |
| Overruns | Hardware Universal Asynchronous Receiver/Transmitter (UART) overruns or software buffer overflows, both defined as the number of overruns or overflows that have occurred on the specified line since the system was restarted. Hardware overruns are buffer overruns; the UART chip has received bits from the software faster than it can process them. A software overflow occurs when the software has received bits from the hardware faster than it can process them. |
| Acc I/O  | Not implemented.  |

The following example shows sample output from the **show line** command with the console line specified:

```

RP/0/RP0/CPU0:router# show line console location 0/rp0/cpu0

      Tty          Speed      Overruns          Acc I/O
con0/RP0/CPU0    9600          0/0                -/-

Line con0 RP0_CPU0, Location "0/RP0/CPU0", Type "Console"
Length: 24 lines, Width: 80 columns
Baud rate (TX/RX) is 9600, 1 parity, 2 stopbits, 8 databits
Template: console
Capabilities: Timestamp Disabled
Allowed transports are none.

```

Table 87: show line location Field Descriptions

| Field | Description  |
|-------|--|
| Tty   | Unique identifier of the tty; it contains the type of tty and, for physical ttys, it indicates the physical location of the tty. |
| Speed | Baud rate that the inbound serial connection is using in bps.  |

| Field                  | Description   |
|------------------------|---|
| Overruns               | Hardware UART overruns or software buffer overflows, both defined as the number of overruns or overflows that have occurred on the specified line since the system was restarted. Hardware overruns are buffer overruns; the UART chip has received bits from the software faster than it can process them. A software overflow occurs when the software has received bits from the hardware faster than it can process them. |
| Acc I/O                | Not implemented.  |
| Line                   | Unique identifier of the TTY. This field displays the type of TTY and the physical location of physical TTYs.   |
| Location               | Location of the line.   |
| Type                   | Line type.  |
| Length                 | Length of the terminal or screen display, in rows.  |
| Width                  | Width of the terminal or screen display, in columns.  |
| Baud rate (TX/RX)      | Transmit rate/receive rate of the line, in bps.   |
| parity                 | Parity bits value used for physical terminal connections.   |
| stopbits               | Stop bits value used for physical terminal connections.   |
| databits               | Data bits value used for physical terminal connections.   |
| Template               | Line template being sourced by the particular connection.   |
| Config                 | Configuration applied to the tty. This field indicates the allowed incoming transports that can be used to access the router from this tty.   |
| Allowed transports are | Incoming transport protocols that can be used by this tty to access the router.   |

# show sessions

To display information about suspended Secure Shell (SSH) and Telnet connections launched from the terminal session, use the **show sessions** command in

EXEC

mode.

## show sessions

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show sessions** command to display the hostname, remote connection service used by the router to access the host, idle time, and connection name.

| Task ID | Task ID    | Operations |
|---------|------------|------------|
|         | tty-access | read       |

The following example shows sample output from the **show sessions** command:

```
RP/0/RP0/CPU0:router# show sessions

Conn Host          Address           Service Idle Conn Name
*  1 10.26.25.40    10.26.25.40     telnet   15 10.26.25.40
```

The asterisk (\*) indicates the current terminal session.

**Table 88: show sessions Field Descriptions**

| Field | Description   |
|-------|---|
| Conn  | Identifier for the connection used for resuming and disconnecting suspended sessions. An asterisk (*) indicates the current terminal session. |

| Field     | Description  |
|-----------|--|
| Host      | Remote host to which the router is connected. This field displays either the IP address or hostname of the remote host. If the IP address of the remote host is mapped to the hostname (that is, if Domain Name System [DNS] services are enabled) and the session is initiated with the hostname, the output for this field displays the hostname of the host rather than the IP address of the host. |
| Address   | IP address of the remote host.   |
| Service   | Remote connection service used.  |
| Idle      | Interval (in seconds) since data was last sent on the line.  |
| Conn Name | Equivalent to the “Host” field in Cisco IOS XR software.   |

**Related Commands**

| Command                                 | Description                                |
|---|--|
| <a href="#">disconnect, on page 885</a> | Disconnects a network connection.          |
| <a href="#">resume, on page 898</a>     | Switches to another active Telnet session. |

# show terminal

To obtain information about the terminal configuration attribute settings for the current terminal line, use the **show terminal** command in

EXEC

mode.

## show terminal

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** None.

This example shows sample output from the **show terminal** command:

```
RP/0/RP0/CPU0:router# show terminal

Line vty0, Location "10.56.249.67", Type "VTY"
Length: 24 lines, Width: 80 columns
Baud rate (TX/RX) is 0, 0 parity, 0 stopbits, 0 databits
Template: default
Capabilities: Timestamp Disabled
Allowed transports are telnet ssh.
```

**Table 89: show terminal Field Descriptions**

| Field             | Description   |
|-------------------|---|
| Line              | Line that is currently being used.                        |
| Location          | Location of the terminal accessing the router.            |
| Type              | Type of line.   |
| Length            | Length of the terminal or screen display, in rows.        |
| Width             | Width of the terminal or screen display, in columns.      |
| Baud rate (TX/RX) | Transmit or receive rate of the line, in bps.             |
| parity            | Parity bits value used for physical terminal connections. |

| <b>Field</b>           | <b>Description</b>  |
|------------------------|---|
| stopbits               | Stop bits value used for physical terminal connections.   |
| databits               | Data bits value used for physical terminal connections.   |
| Template               | Line template being sourced by the particular connection.   |
| Config                 | Configuration applied to the tty. This field indicates the allowed incoming transports that can be used to access the router from this tty. |
| Allowed transports are | Incoming transport protocols that can be used by this tty to access the router.   |

# show users

To display information about the active lines on the router, use the **show users** command in EXEC mode.

**show users**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show users** command to display the line number, connection name, idle time, hosts, and terminal location. An asterisk (\*) indicates the current terminal session.

**Note** To display all user groups and task IDs associated with the currently logged-in user, use the **show user** command in EXEC mode. See the *Authentication, Authorization, and Accounting Commands on Cisco IOS XR Software* module in *System Security Command Reference for Cisco CRS Routers*.

| Task ID | Task ID    | Operations |
|---------|------------|------------|
|         | tty-access | read       |

The following example shows sample output identifying an active vty terminal session:

```
RP/0/RP0/CPU0:router# show users

      Line      User      Service  Conns   Idle      Location
con0_RP0_CPU0  cisco    hardware  0      18:33:48
 vty0          cisco    telnet    0      00:30:36  10.33.54.132
* vty1        cisco    telnet    0      00:00:00  10.33.54.132
```

**Table 90: show users Command Output Field Descriptions**

| Field | Description   |
|-------|---|
| Line  | All current connections. An asterisk (*) indicates the active connection. |
| User  | Username of the user logged into the line.                                |

| Field    | Description  |
|----------|--|
| Service  | Physical or remote login service used.   |
| Conns    | Number of outgoing connections.  |
| Idle     | Interval (in hours:minutes:seconds) since last keystroke.  |
| Location | IP address of remote login host. For local (physical) terminal connections, this field is blank. |

**Related Commands**

| Command                                | Description   |
|--|---|
| <a href="#">show line, on page 905</a> | Displays the parameters of a terminal line.   |
| <b>show user</b>                       | Displays all user groups and task IDs associated with the currently logged-in user. |

# stopbits

To set the stop bits used for physical terminal connections, use the **stopbits** command in line console configuration mode. To restore the default, use the **no** form of this command.

**stopbits** {1 | 2}  
**no stopbits**

## Syntax Description

- 1 Specifies one stop bit.
- 2 Specifies two stop bits. This is the default.

## Command Default

Two stop bits.

## Command Modes

Line console configuration

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **stopbits** command to set the data bits attributes for physical terminal connections. Physical terminal connections use either the console or auxiliary terminal templates.

Communication protocols provided by devices such as terminals and modems often require a specific stop-bit setting.

### Note

The number of stop bits configured on the router and a terminal server should be same. The default number of stop bits on the router is two stop-bits.

## Task ID

| Task ID    | Operations     |
|------------|----------------|
| tty-access | read,<br>write |

This example shows how to change the default from two stop bits to one for the console line template:

```
RP/0/RP0/CPU0:router(config)# line console
RP/0/RP0/CPU0:router(config-line)# stopbits 1
```

**Related Commands**

| Command                               | Description                   |
|---------------------------------------|-------------------------------|
| <a href="#">databits, on page 883</a> | Sets the number of data bits. |

# terminal exec prompt

To specify prompt attributes for the current terminal session, use the **terminal exec prompt** command in the appropriate mode.

**terminal exec prompt** {no-timestamp | timestamp}

| Syntax Description  |   |
|---------------------|---|
| <b>no-timestamp</b> | Disables the time-stamp printing before each command. |
| <b>timestamp</b>    | Enables the time-stamp printing before each command.  |

**Command Default** None

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** Use the **terminal exec prompt** command with the **timestamp** keyword to show the time-stamp display after each command is entered. Use the **terminal exec** command with the **no-timestamp** keyword to disable the time-stamp display.

**Note** The **terminal** commands are active for the current terminal session only. To apply a setting to all sessions, use the **line** commands.

This example shows how to enable the time-stamp prompt. When enabled, the date and time are displayed after each command. In this example, the **show version** command is entered, and the date and time is displayed.

```
RP/0/RP0/CPU0:router# terminal exec prompt timestamp
RP/0/RP0/CPU0:router# show version

Thu Jun  1 14:31:31.200 UTC

```

The following example shows how to disable the time-stamp prompt:

```
RP/0/RP0/CPU0:router# terminal exec prompt no-timestamp
```

# terminal exec utility pager

To configure the terminal page display options, use the **terminal exec utility pager** command in the appropriate mode.

**terminal exec utility pager** {less | more | none}

| Syntax Description |   |
|--------------------|---|
| <b>less</b>        | Specifies to use unix-like "less" bidirectional paging for the terminal display.  |
| <b>more</b>        | Specifies to use unix-like "more" unidirectional paging for the terminal display. |
| <b>none</b>        | Specifies that the display is not paginated.                                      |

**Command Default** No pagination is configured by default.

**Command Modes** EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **terminal exec utility pager** command with the **more** keyword to scroll forward through command display one screen at a time. "--More--" is displayed at the end of each screen. Press the Space key to advance one screen. Press the Enter key to advance one line. Press the Esc key to exit the command display.

| Task ID | Task ID    | Operation |
|---------|------------|-----------|
|         | tty-access | Read      |

This example shows how to limit command display to one screen at a time such that you can move forward through the display:

```
RP/0/RP0/CPU0:router#terminal exec utility pager more
```

# terminal length

To set the number of lines that display at one time on the screen for the current terminal session, use the **terminal length** command in

EXEC

mode.

**terminal length** *lines*

---

**Syntax Description**     *lines* Number of lines that display on a screen. Range is from 0 through 512.

---

**Command Default**     None

**Command Modes**     EXEC

---

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

---

**Usage Guidelines**     To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **terminal length** command to set the terminal length value for only the current terminal session and not save it to the running configuration. Exiting from the terminal session returns the terminal length value to the value configured with the **length** command.

Specifying a value of 0 for the *lines* argument prevents the router from pausing between screens of output.

---

**Note**     The **terminal** commands are active for the current terminal session only. To apply a setting to all sessions, use the **line** commands.

---

---

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

---

This example shows how to set the length for the current terminal session to 120 lines:

```
RP/0/RP0/CPU0:router# terminal length 120
```

**Related Commands**

| Command                             | Description                              |
|-------------------------------------|--|
| <a href="#">length, on page 895</a> | Sets the length of the display terminal. |

# terminal width

To set the width of the display terminal for the current terminal session, use the **terminal width** command in

EXEC

mode.

**terminal width** *characters*

---

**Syntax Description**     *characters* Number of characters to display on a screen. Range is from 0 to 512.

---

**Command Default**     None

**Command Modes**     EXEC

---

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

---

**Usage Guidelines**     To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **terminal width** command to set the terminal width value for only the current terminal session and not save it to the running configuration. Exiting from the terminal session returns the terminal width value to the value configured with the **width** (display) command.

---

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

---

The following example shows how to set the terminal width for the current terminal session to 120 characters:

```
RP/0/RP0/CPU0:router# terminal width 120
```

---

|------------------|--|---|
|                  | <a href="#">width (display), on page 931</a> | Sets the width of the display terminal. |

# timestamp disable

To disable time-stamp recording at the top of each command output, use the **timestamp disable** command in the appropriate line configuration mode. To reenale time-stamp recording if disabled, use the **no** form of this command.

**timestamp disable**  
**no timestamp disable**

|                           |   |
|---------------------------|---|
| <b>Syntax Description</b> | This command has no keywords or arguments.  |
| <b>Command Default</b>    | Time-stamp recording at the top of each command output is enabled.                      |
| <b>Command Modes</b>      | Line console configuration<br>Line default configuration<br>Line template configuration |

| <b>Command History</b> | <b>Release</b> | <b>Modification</b>  |
|------------------------|----------------|--|
|                        | Release 3.3.0  | This command was introduced.   |
|                        | Release 3.4.0  | No modification.   |
|                        | Release 3.8.0  | The command was changed from <b>timestamp</b> to <b>timestamp disable</b> . The default was changed. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

By default, the time stamp is displayed at the top of any command output. The time stamp records the time at which the command was issued. You can use the **snmp-server view** command to disable this setting so that the time stamp does not appear at the top of the command output. This setting applies to all command outputs on any terminal line to which the current line template applies.

| <b>Task ID</b> | <b>Task ID</b> | <b>Operations</b> |
|----------------|----------------|-------------------|
|                | tty-access     | read,<br>write    |

This example shows how to disable time-stamp recording for the console line template:

```
RP/0/RP0/CPU0:router(config)# line console
RP/0/RP0/CPU0:router(config-line)# timestamp disable
```

# transport input

To define the transport protocols that can be used to access the router, use the **transport input** command in the appropriate line configuration mode. To change or remove the protocol, use the **no** form of this command.

```
transport input {all | none | ssh | telnet}
no transport input {all | none | ssh | telnet}
```

## Syntax Description

|               |   |
|---------------|---|
| <b>all</b>    | Specifies the Secure Shell (SSH) and Telnet protocols.                                    |
| <b>none</b>   | Specifies that the router rejects incoming SSH and Telnet transport protocol connections. |
| <b>ssh</b>    | Specifies the SSH transport protocol.   |
| <b>telnet</b> | Specifies the Telnet transport protocol.  |

## Command Default

All protocols are allowed on the line.

## Command Modes

Line console configuration  
Line default configuration  
Line template configuration

## Command History

| Release     | Modification                 |
|-------------|------------------------------|
| Release 2.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To be accepted, incoming network connections to an asynchronous port (terminal line) must use a transport protocol specified with the **transport input** command. This command can be useful in limiting the acceptable transport protocols to include or exclude those used by different types of users, or to restrict a line to secure connections (SSH connections).

## Task ID

| Task ID    | Operations     |
|------------|----------------|
| tty-access | read,<br>write |

This example shows how to set the transport input setting for the default line template to SSH connections:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# transport input ssh
```

**Related Commands**

| <b>Command</b>                                   | <b>Description</b>  |
|--|---|
| <a href="#">transport output, on page 925</a>    | Determines the protocols that can be used for outgoing connections from a line.   |
| <a href="#">transport preferred, on page 927</a> | Specifies the transport protocol that Cisco IOS XR software uses if the user does not specify one when initiating a connection. |

## transport output

To specify the transport protocols that can be used for outgoing connections from a line, use the **transport output** command in the appropriate line configuration mode. To change or remove the protocol, use the **no** form of this command.

```
transport output {all | none | ssh | telnet}
no transport output {all | none | ssh | telnet}
```

| Syntax Description |   |
|--------------------|---|
| <b>all</b>         | Specifies the Secure Shell (SSH) and Telnet transport protocols.                          |
| <b>none</b>        | Specifies that the router rejects outgoing SSH and Telnet transport protocol connections. |
| <b>ssh</b>         | Specifies the SSH transport protocol.   |
| <b>telnet</b>      | Specifies the Telnet transport protocol.  |

**Command Default** All protocols are allowed on the line.

**Command Modes** Line console configuration  
Line default configuration  
Line template configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Any settings made with the **transport output** command override settings made with the **transport preferred** command.

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

This example shows how to set the default line template to prevent any outgoing transport protocol connections:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# transport output none
```

**Related Commands**

| Command  | Description   |
|--|---|
| <a href="#">transport input, on page 923</a>     | Defines which protocols to use to connect to a specific line of the router.   |
| <a href="#">transport preferred, on page 927</a> | Specifies the transport protocol that Cisco IOS XR software uses if the user does not specify one when initiating a connection. |

# transport preferred

To specify the default outgoing transport protocol to be used for initiating network connections, use the **transport preferred** command in the appropriate line configuration mode. To change or remove the protocol, use the **no** form of this command.

```
transport preferred {none | ssh | telnet}
no transport preferred {none | ssh | telnet}
```

| Syntax Description |  |
|--------------------|--|
| <b>none</b>        | Disables the feature.                                |
| <b>ssh</b>         | Specifies the Secure Shell (SSH) transport protocol. |
| <b>telnet</b>      | Specifies the Telnet transport protocol.             |

**Command Default** No transport protocol is set as the default outgoing protocol.

**Command Modes**

- Line console configuration
- Line default configuration
- Line template configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | Release 2.0 | This command was introduced. |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **transport preferred** command to provide a default transport protocol to use when initiating outgoing connections. The preferred outgoing transport protocol specified with the **transport preferred** command enables you to initiate an outgoing connection without explicitly specifying the transport protocol.

Cisco IOS XR software assumes that any unrecognized command is a hostname and the software attempts a connection. When the protocol is set to **none**, the system ignores unrecognized commands entered at the EXEC prompt, and does not attempt a connection.

The default setting, the same as using the **transport preferred** command with the **none** keyword, prevents errant connection attempts.

| Task ID | Task ID    | Operations     |
|---------|------------|----------------|
|         | tty-access | read,<br>write |

The following example shows how to set the preferred transport setting for the default line template to SSH:

**transport preferred**

```
RP/0/RP0/CPU0:router(config)# line default  
RP/0/RP0/CPU0:router(config-line)# transport preferred ssh
```

**Related Commands**

| Command                                       | Description   |
|---|---|
| <a href="#">transport input, on page 923</a>  | Defines which protocols to use to connect to a specific line of the router.     |
| <a href="#">transport output, on page 925</a> | Determines the protocols that can be used for outgoing connections from a line. |

# vty-pool

To create or modify a virtual terminal line (vty) pool, use the **vty-pool** command in global configuration mode. To delete a vty pool, use the **no** form of this command.

```
vty-pool {default | eempool-name} first-vty last-vty [line-template {defaulttemplate-name}]  
no vty-pool {default | eempool-name} first-vty last-vty [line-template {defaulttemplate-name}]
```

| Syntax Description   |  |
|----------------------|--|
| <b>default</b>       | Specifies the default vty pool.  |
| <b>eem</b>           | Specifies the embedded event manager vty pool.   |
| <i>pool-name</i>     | User-defined vty pool.   |
| <i>first-vty</i>     | First vty line in the pool. <ul style="list-style-type: none"> <li>• For the default vty pool, you must specify 0 for the first vty line.</li> <li>• For a user-defined vty pool, the range is 5 to 99.</li> <li>• For the embedded event manager vty pool, you must specify 100 for the first vty line.</li> </ul>      |
| <i>last-vty</i>      | Last vty line in the pool. <ul style="list-style-type: none"> <li>• The default vty pool must contain at least five vtys. Range is 4 to 99.</li> <li>• For a user-defined vty pool, the range is 5 to 99.</li> <li>• The embedded event manager vty pool must contain at least six vtys. Range is 105 to 199.</li> </ul> |
| <b>line-template</b> | (Optional) Specifies the terminal template to be used in the configuration of virtual terminals in the vty pool.   |
| <b>default</b>       | Specifies that the vty pool should reference the default template.   |
| <i>template-name</i> | User-defined template to be applied to the vtys in the vty pool.   |

**Command Default**

**default** *vty-pool* : 5 vtys (vty 0 through 4) referencing the default line template.  
**eem** *vty pool* : 6 vtys (vty 100 through 105) referencing the default line template.

**Command Modes** Global configuration

| Command History | Release       | Modification                                      |
|-----------------|---------------|---|
|                 | Release 2.0   | This command was introduced.                      |
|                 | Release 3.8.0 | The keyword <b>fm</b> was changed to <b>eem</b> . |

**Usage Guidelines** When creating or modifying vty pools, follow these usage guidelines:

- Before creating or modifying the vty pools, enable the Telnet server using the **telnet server** command in global configuration mode. See *IP Addresses and Services Configuration Guide for Cisco CRS Routers* and *IP Addresses and Services Command Reference for Cisco CRS Routers* for more information.
- The vty range for the default vty pool must start at vty 0 and must contain a minimum of five vtys.
- The vty range from 0 through 99 can reference the default vty pool.
- The vty range from 5 through 99 can reference a user-defined vty pool.
- The vty range from 100 is reserved for the embedded event manager vty pool.
- The vty range for embedded event manager vty pools must start at vty 100 and must contain a minimum of six vtys.
- A vty can be a member of only one vty pool. A vty pool configuration fails if the vty pool includes a vty that is already in another pool.

If you attempt to remove an active vty from the active vty pool when configuring a vty pool, the configuration for that vty pool fails.

This example shows how to configure a user-defined vty pool (test1) that contains vtys 10 through 14 and references the user-defined line template test2:

```
RP/0/RP0/CPU0:router(config)# vty-pool test1 10 14 line-template test2
```

## width (display)

To set the width of the display terminal, use the **width** command in the appropriate line configuration mode. To remove the **width** command from the configuration file and restore the system to its default condition, use the **no** form of this command.

**width** *characters*  
**no width** *characters*

|                           |  |
|---------------------------|--|
| <b>Syntax Description</b> | <i>characters</i> Number of characters to display on a screen. Range is from 0 to 512. |
|---------------------------|--|

|                        |                        |
|------------------------|------------------------|
| <b>Command Default</b> | <i>characters</i> : 80 |
|------------------------|------------------------|

|                      |   |
|----------------------|---|
| <b>Command Modes</b> | Line console configuration<br>Line default configuration<br>Line template configuration |
|----------------------|---|

|                        |                |                              |
|------------------------|----------------|------------------------------|
| <b>Command History</b> | <b>Release</b> | <b>Modification</b>          |
|                        | Release 2.0    | This command was introduced. |

|                         |   |
|-------------------------|---|
| <b>Usage Guidelines</b> | To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. |
|-------------------------|---|

Use the **width** command to modify the default width setting for the specified line template.

|                |                                  |
|----------------|----------------------------------|
| <b>Task ID</b> | <b>Task ID</b> <b>Operations</b> |
|                | tty-access   read,<br>write      |

This example shows how to set the terminal width for the default line template to 99 characters:

```
RP/0/RP0/CPU0:router(config)# line default
RP/0/RP0/CPU0:router(config-line)# width 99
```

|                         |   |  |
|-------------------------|---|--|
| <b>Related Commands</b> | <b>Command</b>                              | <b>Description</b>   |
|                         | <a href="#">terminal width, on page 921</a> | Sets the width of the display terminal for the current terminal session. |

width (display)

## Utility Commands

---

This module describes the utility commands for Cisco IOS XR software. Utility commands provide CLI equivalents to common UNIX commands.

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. For example, the **universal** keyword can also be entered using the UNIX-equivalent (**-u**). To display the UNIX-equivalent syntax online, enter the **usage** keyword.

---

- [utility bc, on page 934](#)

## utility bc

To implement an arbitrary precision calculator, use the **utility bc** command in EXEC mode or administration EXEC mode.

**utility bc** [**file** *input-file*]

**Syntax Description**

**file** (Optional) Specifies the text file containing commands and function definitions to be interpreted by the bc utility.

*input-file* After all files have been read, the bc utility reads input from the standard input (keyboard). If no files are specified, then only the standard input (keyboard) is used.

The syntax of the *input-file* argument is as follows: *device* :[/ *directory-path*]/ *filename*

Possible values of the *device*: argument are:

**disk0:**

Uses a file from disk0: file system.

**disk0a:**

Uses a file from disk0a: file system partition.

**disk1:**

Uses a file from disk1: file system.

**disk1a:**

Uses a file from disk1a: file system partition.

**ftp:**

Uses a file from an FTP network server. The syntax is

**ftp:**[[[/*username*[:*password*]@]*location*]/*directory*]/*filename*

**harddisk:**

Uses a file from the hard disk drive file system (if present).

**harddiska:**

Uses a file from the hard disk partition (if present).

**nvrn:**

Uses a file from the nvrn: file system.

**ipv4**

Uses a file from an IPv4 access list or prefix list.

**ipv6**

Uses a file from an IPv6 access list or prefix list.

**rcp:**

Uses a file from a remote copy protocol (rcp) network server. The syntax is

**rcp:**[[[/*username*@]*location*]/*directory*]/*filename*

**tftp:**

Uses a file from a TFTP network server. The syntax is **tftp:**[[/*location*]/*directory*]/*filename*

Use the online help (?) function to display the available devices and network protocols.

**Command Default**

If an input file is not specified, the standard input (keyboard) is used.

**Command Modes**

EXEC

Administration EXEC

**Command History**

| Release       | Modification   |
|---------------|--|
| Release 3.4.0 | This command was introduced.   |
| Release 3.6.0 | The following file systems were added: <b>disk0a:</b> , <b>disk1a:</b> and <b>compactflasha:</b> . |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **utility bc** command to use the interactive, programmable calculator that supports a complete set of control structures, including functions. The utility first processes any specified files, and then reads input from the keyboard (standard input).

Input files (and standard input) are ASCII text files containing sequences of bc statements to be executed.

**Note**

The bc utility uses the bc programming language, an arbitrary precision calculator language with syntax similar to the C programming language. The bc utility does not support character or string manipulation.

The bc utility supports:

- 26 functions
- 26 simple variables
- 26 array variables (up to 2048 elements per array).

The bc utility supports the following common programming language constructs:

- “if”, “while”, and “for” statements
- User-defined functions with parameters
- Local variables

**Information About Supported Network Protocols**

In the syntax for the **ftp:**, **rcp:**, and **tftp:** network protocols, the location is either an IP address or a hostname. The filename is specified relative to the directory used for file transfers.

When no device is specified, the current directory is used. To view the current directory, enter the **pwd** command.

*Table 91: Network Protocols Supported by Cisco IOS XR Software*

| Prefix       | Name                           | Description  |
|--------------|--------------------------------|--|
| <b>tftp:</b> | Trivial File Transfer Protocol | <i>TFTP</i> is a simplified version of FTP that allows files to be transferred from one computer to another over a network, usually without the use of client authentication (for example, username and password). |

| Prefix      | Name                   | Description  |
|-------------|------------------------|--|
| <b>ftp:</b> | File Transfer Protocol | <i>FTP</i> is an application protocol, part of the TCP/IP protocol stack, and is used for transferring files between network nodes. FTP requires a username and password.  |
| <b>rcp:</b> | remote copy protocol   | <i>Rcp</i> is a protocol that allows users to copy files to and from a file system residing on a remote host or server on the network. Rcp uses TCP to ensure the reliable delivery of data. Rcp downloads require a username. |

**Task ID****Task ID Operations**

---

 universal execute
 

---

In the following example, the **utility bc** command is used to execute the bc statements contained in the ASCII text file exp.txt:

```
RP/0/RP0/CPU0:router# utility bc file disk0:/usr/exp.txt

50
15
25
3
17
```

# utility cut

To extract selected characters or fields from standard input or from a file, use the **utility cut** command in EXEC mode or administration EXEC mode.

**utility cut** {{**list** *character-list* | **fields** *field-list* [**nodelim**] [**delimiter** *delimiter-character*]*WORD*} [**file** *input-file*] | **usage**}

## Syntax Description

|   |   |
|---|---|
| <b>list</b> <i>character-list</i>           | (-c) Cuts out the characters that are located on each line as specified with the <i>character-list</i> argument.<br><br>The <i>character-list</i> argument specifies the character positions or range of the characters to be cut.<br><br><ul style="list-style-type: none"> <li>Use a comma (,) to indicate more than one character. For example, <b>utility list 1,2,5</b> outputs the first, second, and fifth characters.</li> <li>Use a dash (-) to indicate a range. For example, <b>utility list 1-64</b> outputs the first 64 characters of each line, <b>utility list 5-</b> outputs the fifth character to the end of the line.</li> </ul> <p><b>Note</b> Lines are separated by a delimiter. The default delimiter is tab.</p> |
| <b>fields</b> <i>field-list</i>             | (-f) Cuts out the fields (lines) as indicated with the <i>field-list</i> argument.<br><br>The <i>field-list</i> argument specifies the field numbers or ranges. For example, <b>utility field 2,9</b> outputs the second and ninth fields, <b>utility field 1-3</b> outputs the first three fields, <b>utility field -6</b> outputs the first six fields.<br><br><p><b>Note</b> The fields indicated by the <i>field-list</i> argument are assumed to be separated in the file by a delimiter character. The default delimiter is tab. Use the <b>delimiter</b> <i>delimiter</i> option to specify a delimiter character. Lines without field delimiters are processed unless the <b>nodelim</b> keyword is specified.</p>                |
| <b>nodelim</b>                              | (Optional) (-s) Ignores lines with no delimiter. Use this optional keyword when the <b>fields</b> <i>field-list</i> keyword and argument is specified.  |
| <b>delimiter</b> <i>delimiter-character</i> | (Optional) (-d) Specifies an alternative delimiter to indicate the end of each field. Replace the <i>delimiter-character</i> argument with the character used as the delimiter.   |
| <i>WORD</i>                                 | (Optional) UNIX command-line option string. The maximum number of characters is 80.   |
| <b>file</b> <i>input-file</i>               | (Optional) Storage device and directory path of the text file used instead of the standard input (keyboard input).<br><br>The syntax of the <i>input-file</i> argument is: <i>device</i> :[/ <i>directory-path</i> ]/ <i>filename</i><br><br>The <i>device</i> argument, followed by a colon, indicates the name of the device where the file is located. Use the online help (?) function to display the available storage devices and network protocols.  |

---

**usage** (Optional) Displays the UNIX options supported by this command.

---

**Command Default** If no file is specified, the keyboard input (standard input) is used.  
The delimiter is tab.

**Command Modes** EXEC  
Administration EXEC

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 3.4.0 | This command was introduced.  |
|                 | Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> and <b>compactflasha:</b> . |

**Usage Guidelines** The **utility cut** command cuts out columns, fields, or characters displayed from standard input or from a file. Use the **fields** *field-list* keyword and argument if the fields vary in length from line to line. (The lines must be separated by a delimiter character.) By default, the field delimiter character is the Tab key. Use the **delimiter** *delimiter-character* keyword and argument to specify a different delimiter.

Use the **list** *character-list* keyword and argument only if the fields are of a fixed length. Replace the *character-list* argument with the character positions to be extracted.

For the *character-list* argument, use a comma (,) to indicate more than one character, or use a dash (-) to indicate a range. For example, **utility list 1,2,5** outputs the first, second, and fifth characters, **utility list 1-64** outputs the first 64 characters of each line, **utility list 5-** outputs the fifth character to the end of the line.

You can also use the cut utility as a filter. If no files are specified, the keyboard input (standard input) is used.

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. For example, the **fields** keyword can also be entered using the UNIX-equivalent (-f). To display the UNIX-equivalent syntax online, enter the **usage** keyword.

In the following example, the **utility cut** command is entered with the **list** *character-list* keyword and argument to display the first 10 characters in each line. The output is from the results of the **show version** command, which is entered with the pipe (|) character:

```
RP/0/RP0/CPU0:router# show version | utility cut list 1-10

Cisco IOS
Copyright

ROM: Syste

router upt
System ima

cisco CRS-
```

```

7457 proce

16 Gigabit

20 SONET/S
2043k byte
38079M byt
1000592k b
1000640k b

Configurat
Package ac
--More--

```

In the following example, the **utility cut** command is used to extract fields from a file:

```

RP/0/RP0/CPU0:router# utility cut fields 1,5 delimiter : file disk0:/usr/passwd

root:Super-User
daemon:
bin:
sys:
adm:Admin
lp:Line Printer Admin
uucp:uucp Admin
nuucp:uucp Admin
listen:Network Admin
nobody:Nobody

```

In the following example, the **utility cut** command is used with the **delimiter** keyword to specify an alternative field delimiter:

```

RP/0/RP0/CPU0:router# utility cut fields 1,4,5 delimiter : file disk0:/usr/passwd

root:1:Super-User
daemon:1:
bin:2:
sys:3:
adm:4:Admin
lp:8:Line Printer Admin
uucp:5:uucp Admin
nuucp:9:uucp Admin
listen:4:Network Admin

```

In the following example, a range of fields is specified:

```

RP/0/RP0/CPU0:router# utility cut fields 1-4 delimiter : file disk0:/usr/passwd

root:x:0:1
daemon:x:1:1
bin:x:2:2
sys:x:3:3
adm:x:4:4
lp:x:71:8
uucp:x:5:5
nuucp:x:9:9
listen:x:37:4

```

In the following example, the **list** *character-list* keyword and argument are used to specify the character positions to be extracted:

```
RP/0/RP0/CPU0:router# utility cut list 1-30 file disk0:/usr/passwd
```

```
root:x:0:1:Super-User:/:/sbin/
daemon:x:1:1:/:
bin:x:2:2:/:usr/bin:
sys:x:3:3:/:
adm:x:4:4:Admin:/var/adm:
lp:x:71:8:Line Printer Admin:/
uucp:x:5:5:uucp Admin:/usr/lib
nuucp:x:9:9:uucp Admin:/var/sp
listen:x:37:4:Network Admin:/u
nobody:x:60001:60001:Nobody:/:
noaccess:x:60002:60002:No Acce
nobody4:x:65534:65534:SunOS 4.
```

=====

In the following example, the UNIX equivalent options are used directly. First, the **utility cut** command is entered with the **usage** keyword to display the possible options. Next, the **utility cut** command is entered with the options to extract the desired data.

```
RP/0/RP0/CPU0:router# utility cut usage
```

```
cut -c list [file], cut -f list [-d delim] [-s] [file]
```

```
RP/0/RP0/CPU0:router# utility cut -f 1,4 -d : disk0:/usr/passwd
```

```
root:1
daemon:1
bin:2
sys:3
adm:4
lp:8
```

# utility date

To display the date and time, use the **utility date** command in EXEC mode or administration EXEC mode.

**utility date** {**format** *word* | **universal** | **usage***WORD*}

## Syntax Description

**format** *word* (Optional) (+) Specifies the format for the date display. Use the online help system to display the available format syntax for the *word* argument.

**universal** (Optional) (-u) Displays the date in Coordinated Universal Time (UTC) instead of local time. UTC is the standard term for Greenwich Mean Time (GMT).

**usage** (Optional) Displays the UNIX options supported by this command.

*WORD* (Optional) UNIX command-line option string. The maximum number of characters is 80.

## Command Default

The date is displayed in local time.

## Command Modes

EXEC

Administration EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.4.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **utility date** command displays the internal time and date for the router.

### Date Format

Use the **format** *word* option to specify the format and content of the displayed date and time. The format is composed of ASCII characters and field descriptors prefaced with %, in a manner similar to a C-language printf() format specifier. In the output, each field descriptor is replaced by its corresponding value; all other characters are copied to the output without change. The format is specified using the following characters:

**%C**

Century in 'CC' form. For example: 20

**%y**

Year in 'YY' form. For example: 06

**%m**

Month in 'MM' form. For example: 08

**%d**

Date in 'DD' form. For example: 28

**%H**

Hour in 'hh (24 hr.)' form. For example: 18

**%M**

Minutes in 'mm' form. For example: 55

**%S**

seconds in 'ss' form. For example: 24

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. For example, the **universal** keyword can also be entered using the UNIX-equivalent (**-u**). To display the UNIX-equivalent syntax online, enter the **usage** keyword.

**Task ID****Task ID Operations**

universal execute

This example shows how to display the router date and time using the **utility date** command:

```
RP/0/RP0/CPU0:router# utility date
Fri Aug 04 11:53:38 UTC 2006
```

This example shows how to display the router date and time using a variety of options with the **format** keyword:

```
RP/0/RP0/CPU0:router# utility date format "%y%m%d"
060828

RP/0/RP0/CPU0:router# utility date format "%y-%m-%d"
06-08-28

RP/0/RP0/CPU0:router# utility date format "%C%y-%m-%d"
2006-08-28

RP/0/RP0/CPU0:router# utility date format "%C%y-%m-%d:%H:%M:%S"
2006-08-28:02:09:58

RP/0/RP0/CPU0:router# utility date format "DATE: %y-%m-%d %nTIME: %H:%M:%S"
DATE: 06-09-17
TIME: 12:42:24
```

---

**Related Commands**

| Command                                       | Description                                    |
|---|--|
| <a href="#">utility date set, on page 945</a> | Sets the internal date and time of the router. |

# utility date set

To set the router time, use the **utility date set** command in administration EXEC mode.

**utility date set** *hh:mm:ss*

## Syntax Description

*hh* Specifies the hour in 2-digit numerical format. Range is 00 to 23.

*mm* Specifies the minutes in 2-digit numerical format. Range is 0 to 59.

*ss* Specifies the seconds in 2-digit numerical format. Range is 0 to 59.

## Command Default

None

## Command Modes

Administration EXEC

## Command History

| Release       | Modification                 |
|---------------|------------------------------|
| Release 3.4.0 | This command was introduced. |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

A colon (:) is required between the entry for hour, minutes, and seconds.

**Note** Generally, if the system is synchronized by a valid outside timing mechanism, such as a Network Time Protocol (NTP) clock source, or if you have a networking device with calendar capability, you need not set the software clock. Use the **date** command or the **clock set** command if no other time sources are available.

**Note** To manually copy the hardware clock (calendar) settings into the software clock, use the **clock read-calendar** command in EXEC mode.

By default, the system makes a “slow adjustment” if the new time is in the range of the following:

- -2.5 minutes + old time
- 5 minutes + old time

In a slow adjustment, the clock speed increases by less than 100 percent or decreases by less than 50 percent over a period of time from 1 second to 5 minutes until the clock catches up with the new time. This slow adjustment does not cause major discontinuities in the time flow. Use the **-S0** option to disable the slow adjustment.

---

# utility df

To display the amount of disk space available for a directory or file, use the **utility df** command in EXEC mode or administration EXEC

mode.

**utility df** [{*WORD*} [**kbytes**] [**mountinfo**] [**vsfStats**] [**file** *input-file*] | **usage**}]

## Syntax Description

|                               |  |
|-------------------------------|--|
| <b>WORD</b>                   | (Optional) UNIX command-line option string. The maximum number of characters is 80.  |
| <b>kbytes</b>                 | (Optional) ( <b>-k</b> ) Displays the sizes in 1-K blocks (1024-byte units) instead of the default of 512 byte blocks.   |
| <b>mountinfo</b>              | (Optional) ( <b>-n</b> ) Displays the file-system mountpoints and types only.  |
| <b>vsfStats</b>               | (Optional) ( <b>-g</b> ) Displays all statvfs() information.   |
| <b>file</b> <i>input-file</i> | (Optional) Specifies the storage device and directory path of the device, directory, or file. When a directory or file is specified, the df utility displays the amount of space on the file system that contains the directory or file.<br><br>If no files are specified, then only the standard input (keyboard) is used.<br><br>The syntax of the <i>input-file</i> argument is as follows: <i>device</i> :[ <i> / directory-path</i> ]/ <i>filename</i><br><br>The <i>device</i> argument, followed by a colon, indicates the name of the device where the file is located. Use the online help (?) function to display the available storage devices and network protocols. |
| <b>usage</b>                  | (Optional) Displays the UNIX options supported by this command.  |

## Command Default

Information is displayed for all file systems.  
The results are displayed in 512-byte blocks.

## Command Modes

EXEC  
Administration EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 3.4.0 | This command was introduced.  |
| Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> and <b>compactflasha:</b> . |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the (disk free) **utility df** command to display the amount of disk space available for a device, directory, or file. Enter the command without keywords or arguments to display information for all mounted file systems.

Use the **vsfStats** keyword to invoke the `statvfs()` function, which provides additional details for all mounted file systems.

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. For example, the **kbytes** keyword can also be entered using the UNIX-equivalent (**-k**). To display the UNIX-equivalent syntax online, enter the **usage** keyword.

## Task ID

### Task ID Operations

universal execute

In the following example, the (disk free) **utility df** command is entered without keywords or arguments to display information for all file systems:

```
RP/0/RP0/CPU0:router (admin) # utility df

/dev/hd0t6          77987744      61592  77926152      1% /harddisk:/
/nvram:             4086          60      4026          2%
/dev/disk1t6       2001280       382720  1618560       20% /disk1:/
/dev/disk0t6       2001184       533568  1467616       27% /disk0:/
/dev/fs0p1         121856         68      121787        1% /bootflash:
```

See [Table 93: utility df Column Descriptions \(left to right\), on page 950](#) for column descriptions.

In the following example, the **kbytes** keyword is used to display information in 1-K blocks (1024-byte units) instead of the default of 512-byte blocks:

```
RP/0/RP0/CPU0:router (admin) # utility df kbytes

/dev/hd0t6          38993872      30796  38963076      1% /harddisk:/
/nvram:             2043          30      2013          2%
/dev/disk1t6       1000640       191360  809280        20% /disk1:/
/dev/disk0t6       1000592       266784  733808        27% /disk0:/
/dev/fs0p1         60928         34      60893         1% /bootflash:
```

See [Table 93: utility df Column Descriptions \(left to right\), on page 950](#) for column descriptions.

In the following example, the **mountinfo** keyword is used to display file-system mountpoints and types only:

```
RP/0/RP0/CPU0:router (admin) # utility df mountinfo

Filesystem          Mounted on          Type
/dev/hd0t6          /harddisk:/        dos (fat32)
/nvram:
/dev/disk1t6        /disk1:/           dos (fat16)
/dev/disk0t6        /disk0:/           dos (fat16)
/dev/fs0p1          /bootflash:        flash
```

In the following example, the **vfsStats** keyword is used to invoke the `statvfs()` function, which provides additional details for all mounted file systems:

```
RP/0/RP0/CPU0:router(admin)# utility df vfsStats

/dev/hd0t6  /harddisk:/
  Blocks:  9748468 total    9740769 avail    [4096-byte blocks]
  Files :      0 total      0 avail
  Type  : dos (fat32)
  Flags : 00000120 [32bit, noatime]

/nvram:
  Blocks:    2043 total      2013 avail    [1024-byte blocks]
  Files :      0 total      0 avail
  Type  :
  Flags : 00000000 []

/dev/disk1t6  /disk1:/
  Blocks:   62540 total     50580 avail    [16384-byte blocks]
  Files :      0 total      0 avail
  Type  : dos (fat16)
  Flags : 00000120 [32bit, noatime]

/dev/disk0t6  /disk0:/
  Blocks:   62537 total     45863 avail    [16384-byte blocks]
  Files :      0 total      0 avail
  Type  : dos (fat16)
  Flags : 00000120 [32bit, noatime]

/dev/fs0p1  /bootflash:
  Blocks: 62390272 total  62355240 avail    [1-byte blocks]
  Files :      2 total      0 avail
  Type  : flash
  Flags : 00000000 []
```

This table describes the significant fields shown in the display.

**Table 92: utility df Field Descriptions**

| Field  | Description  |
|--------|--|
| Files  | Number of files in the file system.  |
| Blocks | Amount of space available on the file system in 1-K blocks.                    |
| Total  | Amount of disk space used by the directory or file.                            |
| Avail  | Amount of space available for use by the directory or file on the file system. |
| Type   | Type of file system.   |
| Flags  | Displays the file system properties.   |

In the following example, the **file source** keyword and argument are used to specify a directory:

```
RP/0/RP0/CPU0:router(admin)# utility df file disk0:/usr
```

```

/dev/disk0t6          2001184    533568    1467616    27% /disk0:/

```

This table describes the significant fields shown in the display.

**Table 93: utility df Column Descriptions (left to right)**

| Field      | Description  |
|------------|--|
| Filesystem | File system for the displayed information.                                     |
| 1k-blocks  | Amount of space available on the file system in 1-K blocks.                    |
| Used       | Amount of disk space used by the directory or file.                            |
| Available  | Amount of space available for use by the directory or file on the file system. |
| Use%       | Percentage of space used on the file system.                                   |
| Mounted on | Storage device where the file system is mounted.                               |

# utility du

To display the amount of disk space used in a device, directory, or file, use the **utility du** command in EXEC mode or administration EXEC mode.

**utility du** [{**all** | **specified**}] [{**kbytes** | **bytes** | **local**}] [*WORD*] [**file** *source*] | **usage**}]

## Syntax Description

|                    |  |
|--------------------|--|
| <b>all</b>         | (Optional) ( <b>-a</b> ) Displays the disk space used for each file in the directory. By default, information is displayed only for the directory. Use the <b>all</b> keyword to display the total disk space used by all files in the directory, including the directory itself.  |
| <b>specified</b>   | (Optional) ( <b>-s</b> ) Displays the total disk space used for each specified file, rather than the totals for any subdirectories.  |
| <b>kbytes</b>      | (Optional) ( <b>-k</b> ) Displays the disk space used in 1-K blocks (1024-byte units) instead of the default of 512-byte blocks.   |
| <b>bytes</b>       | (Optional) ( <b>-p</b> ) Displays the disk space used in bytes (the default is 512-byte blocks). Also generates error messages for exiting files that cannot be displayed.   |
| <b>local</b>       | (Optional) ( <b>-x</b> ) Displays information for the local device only.   |
| <i>WORD</i>        | (Optional) UNIX command-line option string. The maximum number of characters is 80.  |
| <b>file source</b> | (Optional) Displays the disk space used for a device, directory, or file.<br>The syntax for the <i>source</i> argument is <i>device</i> : / <i>directory-path</i> [ / <i>filename</i> ]<br>The <i>device</i> argument, followed by a colon, indicates the name of the device where the file is located. Use the online help (?) function to display the available storage devices and network protocols.<br>Enter the <b>utility du</b> command without specifying a device, directory, or file to display information for the current directory, and subdirectories. (The command behaves as if the filename dot (.) is entered.) |
| <b>usage</b>       | (Optional) Displays the UNIX options supported by this command.  |

## Command Default

Information for the current directory is displayed.

## Command Modes

EXEC

Administration EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 3.4.0 | This command was introduced.  |
| Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

**Usage Guidelines**

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Enter the **utility du** command without specifying a file to display information for the current directory. The command behaves as if the filename dot (.) is entered.

**Note**

Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. For example, the **kbytes** keyword can also be entered using the UNIX-equivalent (**-k**). To display the UNIX-equivalent syntax online, enter the **usage** keyword.

**Task ID****Task ID Operations**

universal execute

In the following example, the **utility du** command is used to display the disk space used for the subdirectories in the MPLS package directory:

```
RP/0/RP0/CPU0:router# utility du file disk0:/hfr-mpls-3.4.0

160 /disk0:/hfr-mpls-3.4.0/schema
104 /disk0:/hfr-mpls-3.4.0/lib/cerrno
625 /disk0:/hfr-mpls-3.4.0/lib/mib
2545 /disk0:/hfr-mpls-3.4.0/lib
9658 /disk0:/hfr-mpls-3.4.0/bin
39 /disk0:/hfr-mpls-3.4.0/startup
840 /disk0:/hfr-mpls-3.4.0/parser
37 /disk0:/hfr-mpls-3.4.0/configs
35 /disk0:/hfr-mpls-3.4.0/mib
35 /disk0:/hfr-mpls-3.4.0/rules
34 /disk0:/hfr-mpls-3.4.0/partitions
135 /disk0:/hfr-mpls-3.4.0/etc/compat
167 /disk0:/hfr-mpls-3.4.0/etc
66 /disk0:/hfr-mpls-3.4.0/instdb_v
181 /disk0:/hfr-mpls-3.4.0/lc/bin
33 /disk0:/hfr-mpls-3.4.0/lc/startup
246 /disk0:/hfr-mpls-3.4.0/lc
112 /disk0:/hfr-mpls-3.4.0/instdb
14006 /disk0:/hfr-mpls-3.4.0
```

In the following example, the **utility du** command is used to display the disk space used for a subdirectories:

```
RP/0/RP0/CPU0:router# utility du file disk0:/
hfr
-mpls-3.8.0/configs37 /disk0:/hfr-mpls-3.8.0/configs
```

In the following example, the **utility du** command is used to display the disk space used for the current working directory:

```
RP/0/RP0/CPU0:router# cd disk0:/
```

```

hfr
-mpls-3.8.0
RP/0/RP0/CPU0:router# utility du

      160 ./schema
      104 ./lib/cerrno
      625 ./lib/mib
     2545 ./lib
     9658 ./bin
        39 ./startup
      840 ./parser
        37 ./configs
        35 ./mib
        35 ./rules
        34 ./partitions
      135 ./etc/compat
      167 ./etc
        66 ./instdb_v
      181 ./lc/bin
        33 ./lc/startup
      246 ./lc
      112 ./instdb
     14006 .

```

**Related Commands**

# utility egrep

To search a file or the results of standard input using full regular expressions, use the **utility egrep** command in

EXEC mode or administration EXEC

mode.

**utility egrep** {**expr** *expression* | **script** *expression-file*} [*WORD*] [**count**] [**linenum**] [**matchfile**] [**matchline**] [**nocase**] [**nofile**] [**reverse**] [**file** *search-file*]

**utility egrep** *expression* [*WORD*] [**count**] [**linenum**] [**matchfile**] [**matchline**] [**nocase**] [**nofile**] [**reverse**] [**file** *search-file*]

## utility egrep usage

| Syntax Description                   |  |
|--------------------------------------|--|
| <b>expr</b> <i>expression</i>        | (-e) A regular expression. This form is used when only one expression is specified on the command line. Any names specified after this option are treated as input files.  |
| <b>script</b> <i>expression-file</i> | (-f) A file containing a set of regular expressions, each separated by a new line. The type of the expressions is determined by the -e and -f options. This form is used when more than one expression is specified. You can specify more than one -f option.<br><br>The syntax of the <i>expression-file</i> argument is: [ <i>device</i> :]/ <i>filename</i> |
| <i>WORD</i>                          | (Optional) UNIX command-line option string. The maximum number of characters is 20.  |
| <b>count</b>                         | (Optional) (-c) Displays a count of selected lines.  |
| <b>linenum</b>                       | (Optional) (-n) Before each output line, displays the line's line number.  |
| <b>matchfile</b>                     | (Optional) (-l) ("el") Displays only the names of files containing the selected lines.   |
| <b>matchline</b>                     | (Optional) (-x) Includes only input lines selected against an entire fixed string or regular expression.   |
| <b>nocase</b>                        | (Optional) (-i) Ignores uppercase and lowercase distinctions during comparisons.   |
| <b>nofile</b>                        | (Optional) (-h) Displays results without a filename prefix attached to the matched lines. This option applies only when more than one file is searched.  |
| <b>reverse</b>                       | (Optional) (-v) Selects only those lines that don't match the specified patterns.  |
| <b>file</b> <i>search-file</i>       | (Optional) The file used for the search. Replace the <i>search-file</i> argument with the device and directory path of the file. The syntax for the <i>search-file</i> argument is: [ <i>device</i> :]/ <i>filename</i> .  |
| <b>usage</b>                         | (Optional) Displays the UNIX options supported by this command.  |

## Command Default

If no files are specified, the keyboard input (standard input) is used.

If more than one input file is specified, then the filename is displayed before each line.

### Command Modes

EXEC, Admin EXEC

### Command History

| Release       | Modification  |
|---------------|---|
| Release 3.4.0 | This command was introduced.  |
| Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

### Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The grep utility searches files for character patterns using regular expressions and returns all lines that contain that pattern. The **utility egrep** command uses full regular expressions (expressions using the full set of alphanumeric and special characters) to match the patterns.

The results are displayed to the standard output (terminal screen).

#### Note

The egrep utility options are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. For example, the **count** keyword can also be entered using the UNIX-equivalent (-c). To display the UNIX-equivalent syntax online, enter the **usage** keyword.

### Task ID

#### Task ID Operations

universal execute

In the following example, the **utility egrep** command is used to locate the regular expression “uptime”. The **linenum** keyword is also entered to display the line number before each line of output.

```
RP/0/RP0/CPU0:router# show version | utility egrep expr uptime linenum
7:router uptime is 5 days, 19 hours, 27 minutes
```

In the following example, the **utility egrep** command is used to locate a regular expression in a file. In this example, all lines with “adm” are displayed. The \* character is used as a wildcard.

```
RP/0/RP0/CPU0:router# utility egrep expr Adm* nofile file disk0:/usr/passwd

adm:x:4:4:Admin:/var/adm:
lp:x:71:8:Line Printer Admin:/usr/spool/lp:
uucp:x:5:5:uucp Admin:/usr/lib/uucp:
nuucp:x:9:9:uucp Admin:/var/spool/uucppublic:/usr/lib/uucp/uucico
listen:x:37:4:Network Admin:/usr/net/nls:
ssadmin:x:901218:60001:Sun StorEdge(tm) Configuration Service Agent Admin:./bin/false
```

In the following example, the **nocase** keyword is used to ignore the character case:

```
RP/0/RP0/CPU0:router# utility egrep expr Adm* nocase file disk0:/usr/passwd

adm:x:4:4:Admin:/var/adm:
lp:x:71:8:Line Printer Admin:/usr/spool/lp:
uucp:x:5:5:uucp Admin:/usr/lib/uucp:
nuucp:x:9:9:uucp Admin:/var/spool/uucppublic:/usr/lib/uucp/uucico
listen:x:37:4:Network Admin:/usr/net/nls:
ssadmin:x:901218:60001:Sun StorEdge(tm) Configuration Service Agent Admin:./bin/false
```

In the following example, the **linenum** keyword is used to append the line number to the beginning of each output line:

```
RP/0/RP0/CPU0:router# utility egrep expr Adm* linenum file disk0:/usr/passwd

5:adm:x:4:4:Admin:/var/adm:
6:lp:x:71:8:Line Printer Admin:/usr/spool/lp:
7:uucp:x:5:5:uucp Admin:/usr/lib/uucp:
8:nuucp:x:9:9:uucp Admin:/var/spool/uucppublic:/usr/lib/uucp/uucico
9:listen:x:37:4:Network Admin:/usr/net/nls:
15:ssadmin:x:901218:60001:Sun StorEdge(tm) Configuration Service Agent Admin:./bin/false
```

#### Related Commands

| Command                                    | Description                                   |
|--|---|
| <a href="#">utility fgrep, on page 957</a> | Searches a file for a fixed character string. |

# utility fgrep

To search a file for a fixed character string, use the **utility fgrep** command in EXEC mode or administration EXEC

mode.

**utility fgrep** {**expr** *expression* | **script** *expression-file*} [**WORD**] [**count**] [**linenum**] [**matchfile**] [**matchline**] [**nocase**] [**nofile**] [**reverse**] [**file** *search-file*]

**utility fgrep** *expression* [**WORD**] [**count**] [**linenum**] [**matchfile**] [**matchline**] [**nocase**] [**nofile**] [**reverse**] [**file** *search-file*]

## utility fgrep usage

| Syntax Description                   |   |
|--------------------------------------|---|
| <b>expr</b> <i>expression</i>        | (-e) A regular expression, whose type is determined by the -e and -f options. This form is used when only one expression is specified on the command line. Any names specified after this option are treated as input files.  |
| <b>script</b> <i>expression-file</i> | (-f) A file containing a set of regular expressions, each separated by a new line. The type of the expressions is determined by the -e and -f options. This form is used when more than one expression is specified. You can specify more than one -f option.<br><br>The syntax of the <i>expression-file</i> argument is: <i>device</i> :[/ <i>directory-path</i> ]/ <i>filename</i> |
| <b>WORD</b>                          | (Optional) UNIX command-line option string. The maximum number of characters is 20.   |
| <b>count</b>                         | (Optional) (-c) Displays a count of selected lines.   |
| <b>linenum</b>                       | (Optional) (-n) Before each output line, displays the line's line number.   |

| <b>matchline</b>                     | (Optional) (-x) Includes only input lines selected against an entire fixed string or regular expression.  |
| <b>nocase</b>                        | (Optional) (-i) Ignores uppercase and lowercase distinctions during comparisons.  |
| <b>nofile</b>                        | (Optional) (-h) Displays results without a filename prefix attached to the matched lines. This option applies only when more than one file is searched.   |
| <b>reverse</b>                       | (Optional) (-v) Selects only those lines that don't match the specified patterns.   |
| <b>file</b> <i>search-file</i>       | (Optional) The file used for the search. Replace the <i>search-file</i> argument with the device and directory path of the file. The syntax for the <i>search-file</i> argument is: <i>device</i> :[/ <i>directory-path</i> ]/ <i>filename</i>  |
| <b>usage</b>                         | (Optional) Displays the UNIX options supported by this command.   |

**Command Default** The keyboard input (standard input) is used if no files are specified.

If more than one input file is specified, then the filename is displayed before each line.

**Command Modes** EXEC, Admin EXEC

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 3.4.0 | This command was introduced.  |
|                 | Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **utility fgrep** command searches files for a fixed character string (as opposed to `grep` and `egrep`, which search for a pattern that matches an expression).

The results are displayed to the standard output (terminal screen).

**Note** The `fgrep` utility options are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. For example, the **count** keyword can also be entered using the UNIX-equivalent (**-c**). To display the UNIX-equivalent syntax online, enter the **usage** keyword.

| Task ID | Task ID Operations |
|---------|--------------------|
|         | universal execute  |

The following example, the **utility fgrep** command is used with the **nocase** and **linenum** keywords:

```
RP/0/RP0/CPU0:router# show version | utility fgrep expr uptime nocase linenum
7:router uptime is 5 days, 20 hours, 10 minutes
```

| Related Commands | Command                                    | Description                                     |
|------------------|--|---|
|                  | <a href="#">utility egrep, on page 954</a> | Searches a file using full regular expressions. |

# utility find

To locate files within one or more directories, use the **utility find** command in

EXEC mode or administration EXEC

mode.

**utility find** {**path** *directory-path* [**LINE** | **name** *filename-pattern* | **user** *user-id*] | **usage**}

## Syntax Description

|                                     |   |
|-------------------------------------|---|
| <b>path</b> <i>directory-path</i>   | Specifies the storage device and directory for the file search. The search is performed for the specified directory and all subdirectories in that directory tree.<br><br>If a directory path is not specified, then the search is performed in the current directory (a path of . [dot] is assumed). |
| <i>LINE</i>                         | (Optional) UNIX command-line expressions provided as a string.  |
| <b>name</b> <i>filename-pattern</i> | (Optional) Searches for the name of the file. The <i>filename-pattern</i> argument is a regular expression string.  |
| <b>user</b> <i>user-id</i>          | (Optional) Searches for files belonging to a specific user. The <i>user-id</i> argument is the username of the file owner.  |
| <b>usage</b>                        | (Optional) Displays the UNIX options supported by this command.   |

## Command Default

If a directory path is not specified, then the search is performed in the current directory.

If a **name** *filename-pattern* is not specified, then the search return all files in the specified directory.

If a user is not specified, then the search is performed for all users.

## Command Modes

EXEC, Admin EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 3.4.0 | This command was introduced.  |
| Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **utility find** command to locate files within one or more directories. You can perform the search for a specific directory (and its subdirectories). If a directory is not specified, then the search is performed for the current directory.

To search for a regular expression string, use the **name filename-pattern** keyword and argument. Replace the *filename-pattern* argument with the regular expression string. If this option is not used, then all files within the specified directory are displayed.

To search for files belonging to a specific user, use the *user-id* argument. If this option is not used, then files belonging to all users are displayed.

| Task ID | Task ID   | Operations |
|---------|-----------|------------|
|         | universal | execute    |

In the following example, the **utility find** command is used to locate the file named “hfr-fwdg-3.8.0”. The path is the root directory of disk0:

```
RP/0/RP0/CPU0:router# utility find path disk0: name hfr-fwdg-3.4.0

disk0:/instdb/admin_pkgs_mdata/hfr-fwdg-3.8.0
disk0:/hfr-fwdg-3.8.0
```

In the following example, the **utility find** command is used to locate files matching a pattern. In this example, all files ending in “.txt” are displayed:

```
RP/0/RP0/CPU0:router# utility find path disk0:/usr name *.txt

disk0:/usr/test2.txt
```

In the following example, the UNIX equivalent option is used to locate files matching a pattern. In this example, all files ending in “.txt” are displayed:

```
RP/0/RP0/CPU0:router# utility find path disk0: -name *.txt

disk0:/hfr-base-3.8.0/etc/vim/doc/editing.txt
disk0:/hfr-base-3.8.0/etc/vim/doc/help.txt
disk0:/hfr-base-3.8.0/etc/vim/doc/intro.txt
disk0:/hfr-base-3.8.0/etc/vim/doc/uganda.txt
disk0:/usr/test2.txt
```

In the following example, the files belonging to a specific user are displayed:

```
RP/0/RP0/CPU0:router# utility find path disk0:/usr user 0

disk0:/usr
disk0:/usr/passwd
disk0:/usr/test2.txt
```

In the following example, the UNIX equivalent option is used to display files belonging to a specific user:

```
RP/0/RP0/CPU0:router# utility find path disk0:/usr -user 0

disk0:/usr
disk0:/usr/passwd
```

```
disk0:/usr/test2.txt
```

**Related Commands**

| Command                                    | Description             |
|--|-------------------------|
| <a href="#">utility which, on page 977</a> | Locates a program file. |

# utility head

To copy bytes or lines at the beginning of a file or from the standard input, use the **utility head** command in EXEC mode or administration EXEC mode.

**utilityhead**[{*WORD* | [**bytes**] [**count** *number*][**file** *source*] | **usage**}]

| Syntax Description         |   |
|----------------------------|---|
| <b>WORD</b>                | (Optional) UNIX command-line option string. The maximum number of characters is 80.   |
| <b>bytes</b>               | (Optional) ( <b>-c</b> ) Copies the data in bytes from the beginning of each specified file. The default setting is to copy lines of data.  |
| <b>count</b> <i>number</i> | (Optional) ( <b>-n</b> ) Specifies the number of lines (default) or bytes to be copied. The <i>number</i> argument is an unsigned decimal integer.<br><br>By default, the <b>utility head</b> command copies the first ten units (lines or bytes) of the file. Use the <b>count</b> <i>number</i> option to change the default. |
| <b>file</b> <i>source</i>  | (Optional) Specifies the storage device, directory, and filename for the files.<br><br>If a file is not specified, the standard input is used.  |
| <b>usage</b>               | (Optional) Displays the UNIX options supported by this command.   |

**Command Default** If the **utility head** command is entered without keywords or arguments, the first ten lines of the file or standard output are copied.  
  
If no file is specified, then the standard input is used.

**Command Modes** EXEC, Admin EXEC

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 3.4.0 | This command was introduced.  |
|                 | Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

**Usage Guidelines** The **utility head** command copies the beginning bytes (default) or lines of one or more files to the standard output (usually the user interface display). Use the **bytes** or **lines** keywords to copy the data based on lines or bytes. Use the **count** *number* option to specify the number of bytes or lines to copy. By default, the **utility head** command copies the first 10 lines of each file.

If more than one file is selected, an identifying header is added before the output for each file. If no file is specified, then the standard input (keyboard) is used.

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. To display the UNIX-equivalent syntax online, enter the **usage** keyword.

In the following example, the **utility head** command is used to display the first 15 lines from the output of the **show version** command:

```
RP/0/RP0/CPU0:router# show version | utility head count 15

# utility less

To display a file page-by-page, use the **utility less** command in EXEC mode or administration EXEC mode.

**utility less** {[**exitEOF**] [*WORD*] | **nocase** | **position** *line-number* | **startat** *string*} [**file** *source-file*]

## Syntax Description

|                                    |   |
|------------------------------------|---|
| <b>exitEOF</b>                     | (Optional) ( <b>-E</b> ) Automatically exits the utility the first time an end-of-file is encountered.  |
| <i>WORD</i>                        | (Optional) UNIX command-line option string. The maximum number of characters is 80.   |
| <b>nocase</b>                      | (Optional) ( <b>-i</b> ) Ignores uppercase and lowercase distinctions during comparisons.   |
| <b>position</b> <i>line-number</i> | (Optional) ( <b>-j</b> ) Uses the line at <i>line-number</i> on the screen to position matched lines during a pattern search.   |
| <b>startat</b> <i>string</i>       | (Optional) ( <b>-p</b> ) Starts at the first occurrence of the pattern specified by the <i>string</i> argument in the file.   |
| <b>file</b> <i>source-file</i>     | (Optional) Specifies the storage device and directory path for the text file to be displayed. The default is standard input.<br><br>The syntax for the <i>source-file</i> argument is: <i>device</i> :[/ <i>directory-path</i> ]/ <i>filename</i> |

## Command Default

If no text file is specified, standard input is assumed.

## Command Modes

EXEC  
Administration EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 3.5.0 | This command was introduced.  |
| Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **utility less** command to display files page by page. You can specify regular expressions for pattern matching using the **startat** keyword. You can scroll up as well as down. When you enter the less mode, commands are similar to the “vi” editor.

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. To display the UNIX-equivalent syntax online, enter the **usage** keyword.

| <a href="#">utility cut, on page 938</a>  | Cuts characters or lines from the output displayed from standard input or a file.     |
| <a href="#">utility sort, on page 968</a> | Sorts, merges, or sequence-checks the output displayed from standard input or a file. |
| <a href="#">utility tail, on page 971</a> | Copies the end portion of the output displayed from standard input or a file.         |

## utility sort

To sort, merge, or sequence-check the lines in one or more files, or from the standard input, use the **utility sort** command in

EXEC mode or administration EXEC

mode.

**utility sort** {{{*WORD* | [[**dict**] [**fieldSep** *character*] [**ignoreblank**] [**key** *key-definition*] [**lowercase**] [**merge**] [**numeric**] [**outfile** *filename*] [**printable**] [**reverse**] [**unique**]]} } [**file** *filename*] | **usage**}

| Syntax Description               |  |
|----------------------------------|--|
| <b>WORD</b>                      | (Optional) UNIX command-line option string. The maximum number of characters is 80.  |
| <b>dict</b>                      | (Optional) ( <b>-d</b> ) Sorts in dictionary order. Uses only alphanumeric and blank characters in the sort operation.   |
| <b>fieldSep</b> <i>character</i> | (Optional) ( <b>-t</b> ) Specifies a character as the field separator.   |
| <b>ignoreblank</b>               | (Optional) ( <b>-b</b> ) Ignores leading blank characters in field comparisons.  |
| <b>key</b> <i>key-definition</i> | (Optional) ( <b>-k</b> ) Defines a key to be the sort key. The <i>key-definition</i> argument field is defined using the following syntax:<br><br><i>field_start</i> [ <i>type_string</i> ] [, <i>field_end</i> ] [ <i>type_string</i> ]<br><ul style="list-style-type: none"> <li>• <i>field_start</i> and <i>field_end</i>—Specifies the beginning and end of the key field.</li> <li>• <i>type_string</i>—Specifies attributes specific to the key.</li> </ul> <p>The <i>field_start</i> and <i>field_end</i> arguments are each specified by a pair of digits of the form <i>m.n</i>, where the <i>m</i> refers to the field starting after the <i>m</i>th field separator in a line. For <i>field_start</i>, the <i>.n</i> refers to the <i>n</i>th character of the specified field, and is taken as zero if not specified. For <i>field_end</i>, the <i>.n</i> refers to the <i>n</i>th character after the last character of the specified field, and is taken as zero if not specified.</p> <p>The <i>type_string</i> argument may be formed from the characters <i>bdfinr</i>, which apply their defined attributes to the determination of the key.</p> <p><b>Note</b> When ordering options appear independent of key field specifications, the requested field ordering rules are applied globally to all sort keys. When attached to a specific key, the specified ordering options override all global ordering options for that key.</p> |
| <b>lowercase</b>                 | (Optional) ( <b>-f</b> ) Folds uppercase letters into lowercase (ignores case and treats upper case characters the same as lowercase characters).  |
| <b>merge</b>                     | (Optional) ( <b>-m</b> ) Merges sorted files. Assumes that the files are already sorted and so does not sort the files.  |
| <b>numeric</b>                   | (Optional) ( <b>-n</b> ) Interprets the field as numeric and sorts in numeric order. Includes the sign and optional thousands separator. This keyword also ignores leading blank characters in field comparisons (implies the <b>ignoreblank</b> keyword).   |

|                                |  |
|--------------------------------|--|
| <b>outfile</b> <i>filename</i> | (Optional) <b>(-o)</b> Writes the results to a file. The <i>filename</i> argument is the destination disk, directory, and filename. The <i>filename</i> argument can be the same as the source file. |
| <b>printable</b>               | (Optional) <b>(-i)</b> Ignores all nonprintable characters.  |
| <b>reverse</b>                 | (Optional) <b>(-r)</b> Reverses the sort order. The sort is ascending by default.  |
| <b>unique</b>                  | (Optional) <b>(-u)</b> Suppresses all but one line in each set of lines having equal keys.   |
| <b>file</b> <i>filename</i>    | (Optional) Specifies a file to be sorted.  |
| <b>usage</b>                   | (Optional) Displays the UNIX options supported by this command.  |

**Command Default**

If no file is specified, then the standard input (keyboard) is used.

If an **outfile** *filename* keyword and argument is not specified, then the standard output (display) is used.

The file is sorted in ascending order.

**Command Modes**

EXEC, Admin EXEC

**Command History**

| Release       | Modification  |
|---------------|---|
| Release 3.4.0 | This command was introduced.  |
| Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

**Usage Guidelines****Note**

Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. To display the UNIX-equivalent syntax online, enter the **usage** keyword.

In the following example, the **utility sort** command is used to sort the contents of the file “words.txt”:

```
RP/0/RP0/CPU0:router# utility sort file disk0:/usr/words.txt
```

# utility tail

To copy the end portion of a file or the standard input, use the **utility tail** command in EXEC mode or administration EXEC mode.

**utility tail** {{{*WORD* | [**bytes**] [**continuous**] [**count** *number*]}} [file *input-file*] | **usage**}

## Syntax Description

|                        |   |
|------------------------|---|
| <b>WORD</b>            | (Optional) UNIX command-line option string. The maximum number of characters is 80.   |
| <b>bytes</b>           | (Optional) ( <b>-e</b> ) Copies the end of the file measured in bytes. The default is lines.  |
| <b>continuous</b>      | (Optional) ( <b>-f</b> ) Continues to copy data from the end of the file after the last line is reached. The operation pauses for 1 second, and then resumes in a continuous loop.<br><br>The input file must be a regular file, not a terminal or a FIFO special file (a named pipe).  |
| <b>count number</b>    | (Optional) ( <b>-n</b> ) Copies the number of lines (default) or bytes specified with the <i>number</i> argument. The range is 0 to 4294967295. By default, the last 10 lines are copied.<br><br>The <i>number</i> argument is a decimal integer that defines the location in the file to begin copying: <ul style="list-style-type: none"> <li>• Include the plus (+) character to copy from the beginning of the file.</li> <li>• Include the minus (-) character to copy from the end of the file.</li> <li>• Do not include a character to copy from the end of the file.</li> </ul> <p><b>Note</b> Select the <b>bytes</b> keyword to copy the information measured in a count of bytes.</p> |
| <b>file input-file</b> | (Optional) Directory path and filename for the input file. If no file is specified, then the standard input is used.<br><br>The syntax for the <i>input-file</i> argument is: <i>device</i> :[/ <i>directory-path</i> ]/ <i>filename</i><br><br>The <i>device</i> argument, followed by a colon, indicates the name of the device where the file is located. Use the online help (?) function to display the available storage devices and network protocols.   |
| <b>usage</b>           | (Optional) Displays the UNIX options supported by this command.   |

## Command Default

If the **utility tail** command is entered without keywords or arguments, the last 10 lines of the standard input are copied.

## Command Modes

EXEC, Admin EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 3.4.0 | This command was introduced.  |
| Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

**Usage Guidelines**

Use the **utility tail** command to copy data from the end of a file. By default, the last 10 lines are copied. Use the **bytes** keyword to copy the data measured in bytes. Use the **count** *number* option to define the number of lines or bytes to copy. Use the **file** *filename* option to specify an input file.

**Note**

Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. To display the UNIX-equivalent syntax online, enter the **usage** keyword.

In the following example, the **utility tail** command is used to display the last 10 lines of the output from the **show version** command:

```
RP/0/RP0/CPU0:router# show version | utility tail count 10

  By iox25.cisco.com in /auto/ioxws46/nightly/ci-34_hfr_06.09.13 for c2.95.3-8

RP/0/RP0/CPU0:router#
```

In the following example, the **utility tail** command is used with the **bytes** keyword to display the last 10 bytes in the output:

```
RP/0/RP0/CPU0:router# show version | utility tail count 10 bytes

  .95.3-p8

RP/0/RP0/CPU0:router#
```

# utility uniq

To display or remove repeated lines in a file, use the **utility uniq** command in EXEC mode or administration EXEC mode.

**utility uniq** [{{[[*WORD*]]|[**afterChars** *number*] [**afterField** *number*] [**count**] [{**nonrepeating** | **repeating**}]}}] [**infile** *input-file* **outfile** *output-file*] | **usage**}]

| Syntax Description                |   |
|-----------------------------------|---|
| <b>WORD</b>                       | (Optional) UNIX command-line option string. The maximum number of characters is 80.   |
| <b>afterChars</b> <i>number</i>   | (Optional) ( <b>-s</b> ) Ignores the first characters on each line of the input file. Use the <i>number</i> argument to specify the number of characters. The range is 0 to 4294967295.   |
| <b>afterField</b> <i>number</i>   | (Optional) ( <b>-f</b> ) Ignores the first fields on each line of the input file. Use the <i>number</i> argument to specify the number of fields. The range is 0 to 4294967295.   |
| <b>count</b>                      | (Optional) ( <b>-c</b> ) Displays the number of times the line appeared in the input file at the beginning of each output line.   |
| <b>nonrepeating</b>               | (Optional) ( <b>-u</b> ) Displays only the nonrepeating lines from the input file (repeating lines are not displayed).  |
| <b>repeating</b>                  | (Optional) ( <b>-d</b> ) Displays only the repeating lines from the input file (nonrepeating lines are not displayed).  |
| <b>infile</b> <i>input-file</i>   | (Optional) Specifies an input file for processing. The <i>input-file</i> argument specifies the device, directory, and filename of the input file. If no input file is specified, then the standard input (keyboard) is used.<br><br>The syntax of the <i>input-file</i> argument is: <i>device</i> :[/ <i>directory-path</i> ]/ <i>filename</i> .<br><br>The <i>device</i> argument, followed by a colon, indicates the name of the device where the file is located. Use the online help (?) function to display the available storage devices and network protocols. |
| <b>outfile</b> <i>output-file</i> | (Optional) Specifies an output file. The <i>output-file</i> argument specifies the device, directory, and filename of the output file. If no file is specified, then the standard output (display) is used.<br><br>The syntax of the <i>output-file</i> argument is: <i>device</i> :[/ <i>directory-path</i> ]/ <i>filename</i> .<br><br>The <i>device</i> argument, followed by a colon, indicates the name of the device where the file is located. Use the online help (?) function to display the available storage devices and network protocols.                  |
| <b>usage</b>                      | (Optional) Displays the UNIX options supported by this command.   |

## Command Default

If no input file is specified, then the standard input is used.

If no output file is specified, then the standard output is used.

---

**Command Modes** EXEC, Admin EXEC

---

| Command History | Release       | Modification  |
|-----------------|---------------|---|
|                 | Release 3.4.0 | This command was introduced.  |

---

**Usage Guidelines** Use the **utility uniq** command to display only lines that are repeated in a file, or to display only lines that appear once. This utility compares only adjacent lines, so the file or standard input must be sorted.

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. To display the UNIX-equivalent syntax online, enter the **usage** keyword.

---

In the following example, the **utility uniq** command is used to display the repeating lines in the output of the **show environment** command:

```
RP/0/RP0/CPU0:router# show environment | utility uniq repeating
host      5V          4500,5500      4250,5750      4000,6000

```

# utility wc

To count words, lines, or bytes in a file, use the **utility wc** command in EXEC mode or administration EXEC mode.

**utility wc** [{*WORD* | **bytes** | **lines** | **words**}] [**file** *input-file*] | **usage**}]

## Syntax Description

|                               |   |
|-------------------------------|---|
| <b>WORD</b>                   | (Optional) UNIX command-line option string. The maximum number of characters is 80.   |
| <b>bytes</b>                  | (Optional) ( <b>-c</b> ) Displays the number of bytes in each input file.   |
| <b>lines</b>                  | (Optional) ( <b>-l</b> ) ( <b>-œel-?</b> ) Displays the number of lines in each input file.   |
| <b>words</b>                  | (Optional) ( <b>-w</b> ) Displays the number of words in each input file.   |
| <b>file</b> <i>input-file</i> | (Optional) Specifies the input file. The <i>input-file</i> argument specifies the device, directory, and filename of the input file. If no input file is specified, then the standard input (keyboard) is used.<br><br>The syntax of the <i>input-file</i> argument is: <i>device</i> :[/ <i>directory-path</i> ]/ <i>filename</i> .<br><br>The <i>device</i> argument, followed by a colon, indicates the name of the device where the file is located. Use the online help (?) function to display the available storage devices and network protocols. |
| <b>usage</b>                  | (Optional) Displays the UNIX options supported by this command.   |

## Command Default

Output is displayed in the order bytes, words, and lines, even if the options are entered in a different order.

## Command Modes

EXEC, Administration EXEC

## Command History

| Release       | Modification  |
|---------------|---|
| Release 3.4.0 | This command was introduced.  |
| Release 3.6.0 | The following devices were added: <b>disk0a:</b> , <b>disk1a:</b> , and <b>compactflasha:</b> . |

## Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Output is displayed in the following order:

- When keywords are entered, the output appears in the order bytes, words, and lines.
- When no keyword is entered, the output appears in the order lines, words, and bytes.
- When any UNIX equivalent options are entered, the output appears in the order specified by the options. For example, if the command **utility wc -w -l -c** is entered, the output appears in the order words, lines, and bytes.

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. To display the UNIX-equivalent syntax online, enter the **usage** keyword.

---

**Task ID**

---

**Task ID Operations**

---

 universal execute
 

---

In the following example, the **utility wc** command is issued to display the number of lines, words, and bytes in the output of the **show version** command:

```
RP/0/RP0/CPU0:router# show version | utility wc
                221      1160      10820
```

The output displays the following:

- 221 lines
- 1160 words
- 10820 bytes

In the following example, the **utility wc** command is entered with the **words** keyword to display the number of words in the output of the **show version** command:

```
RP/0/RP0/CPU0:router# show version | utility wc words
                1160
```

# utility which

To locate a program file, use the **utility which** command in EXEC mode or administration EXEC mode.

**utility which** {{{*WORD* | [**all**] [**fullname**] [**long** [*link*]]}} **program** *program-name* | **usage**}

| Syntax Description |                                    |   |
|--------------------|------------------------------------|---|
|                    | <i>WORD</i>                        | (Optional) UNIX command-line option string. The maximum number of characters is 80.   |
|                    | <b>all</b>                         | (Optional) ( <b>-a</b> ) Displays all occurrences of the program specified by the <b>program</b> <i>pathname</i> keyword and argument.        |
|                    | <b>fullname</b>                    | (Optional) ( <b>-f</b> ) Displays the full pathname of the program file.  |
|                    | <b>long</b> [ <i>link</i> ]        | (Optional) ( <b>-l</b> ) (“el”) Displays the long format for each program found, and also displays link information if the file is a symlink. |
|                    | <b>program</b> <i>program-name</i> | Specifies the name of the program file.   |
|                    | <b>usage</b>                       | (Optional) Displays the UNIX options supported by this command.   |

**Command Default** None

**Command Modes** EXEC, Admin EXEC

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.4.0 | This command was introduced. |

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note** Keywords are entered using the displayed syntax, or with UNIX-equivalent syntax. The UNIX-equivalent syntax is displayed in parentheses () in the syntax description. To display the UNIX-equivalent syntax online, enter the **usage** keyword.

| Task ID | Task ID   | Operations |
|---------|-----------|------------|
|         | universal | execute    |

In the following example, the **utility which** command is entered without keywords or arguments to display the location of the perl program:

```
RP/0/RP0/CPU0:router# utility which program perl
/pkg/bin/perl
```

In the following example, the **utility which** command is entered with the **fullname** keyword to display the full directory path of the perl program:

```
RP/0/RP0/CPU0:router# utility which fullname program perl
/disk0:/hfr-base-3.8.0.1I/sbin/perl
```

In the following example, the **utility which** command is entered with the **long** keyword to display additional details about the perl program file:

```
RP/0/RP0/CPU0:router# utility which long program perl
-rwxrwxrwx 1 0 0 19245 Jul 28 14:31 /pkg/bin/perl
```
