

Troubleshooting

This chapter describes how to troubleshoot the ASA and includes the following sections:

- [Configuring and Running Captures with the Packet Capture Wizard, page 47-1](#)

Configuring and Running Captures with the Packet Capture Wizard

You can use the Packet Capture Wizard to configure and run captures for troubleshooting errors. The captures can use ACLs to limit the type of traffic captured, the source and destination addresses and ports, and one or more interfaces. The wizard runs one capture on each of the ingress and egress interfaces. You can save the captures on your PC to examine them in a packet analyzer.

Note

This tool does not support clientless SSL VPN capture.

To configure and run captures, perform the following steps:

Step 1 In the main ASDM application window, choose **Wizards > Packet Capture Wizard**.

The Overview of Packet Capture screen appears, with a list of the tasks through which the wizard will guide you to complete. Those tasks include the following:

- Selecting an ingress interface.
- Selecting an egress interface.
- Setting the buffer parameters.
- Running the captures.
- Saving the captures to your PC (optional).

Step 2 Click **Next**.

In a clustering environment, the Cluster Option screen appears. Go to [Step 3](#).

Note

For more information about clustering, see [Chapter 10, “Configuring a Cluster of ASAs.”](#)

In a non-clustering environment, the Ingress Traffic Selector screen appears. Go to [Step 4](#).

- Step 3** In the Cluster Option screen, choose one of the following options for running a capture: **This device only** or **The whole cluster**, then click **Next** to display the Ingress Selector screen.
- Step 4** To capture packets on an interface, click the **Select Interface** radio button. To capture packets on the ASA CX dataplane, click the **Use backplane channel** radio button.
- Step 5** In the Packet Match Criteria area, do one of the following:
- To specify the ACL to use for matching packets, click the **Specify access-list** radio button, and then choose the ACL from the Select ACL drop-down list. To add a previously configured ACL to the current drop-down list, click **Manage** to display the ACL Manager pane. Choose an ACL, and click **OK**.
 - To specify packets parameters, click the **Specify Packet Parameters** radio button.
- Step 6** To continue, see the “[Ingress Traffic Selector](#)” section on page 47-3.
- Step 7** Click **Next** to display the Egress Traffic Selector screen. To continue, see the “[Egress Traffic Selector](#)” section on page 47-4.

Note The source port services, destination port services, and ICMP type are read-only and are based on the choices that you made in the Ingress Traffic Selector screen.

- Step 8** Click **Next** to display the Buffers & Captures screen. To continue, see the “[Buffers](#)” section on page 47-4.
- Step 9** In the Capture Parameters area, to obtain the latest capture every 10 seconds automatically, check the **Get capture every 10 seconds** check box. By default, this capture uses the circular buffer.
- Step 10** In the Buffer Parameters area, you specify the buffer size and packet size. The buffer size is the maximum amount of memory that the capture can use to store packets. The packet size is the longest packet that the capture can hold. We recommend that you use the longest packet size to capture as much information as possible.
- a. Enter the packet size. The valid size ranges from 14 - 1522 bytes.
 - b. Enter the buffer size. The valid size ranges from 1534 - 33554432 bytes.
 - c. Check the **Use circular buffer** check box to store captured packets.

Note When you choose this setting, if all the buffer storage is used, the capture starts overwriting the oldest packets.

- Step 11** Click **Next** to display the Summary screen, which shows the cluster options for all units in the cluster (if you are using clustering), traffic selectors, and buffer parameters that you have entered. To continue, see the “[Summary](#)” section on page 47-4.
- Step 12** Click **Next** to display the Run Captures screen, and then click **Start** to begin capturing packets. Click **Stop** to end the capture. To continue, see the “[Run Captures](#)” section on page 47-4. If you are using clustering, go to Step 14.
- Step 13** Click **Get Capture Buffer** to determine how much buffer space you have remaining. Click **Clear Buffer on Device** to remove the current content and allow room in the buffer to capture more packets.
- Step 14** In a clustering environment, on the Run Captures screen, perform one or more of the following steps:
- Click **Get Cluster Capture Summary** to view a summary of packet capture information for all units in the cluster, followed by packet capture information for each unit.

- Click **Get Capture Buffer** to determine how much buffer space you have remaining in each unit of the cluster. The Capture Buffer from Device dialog box appears.
 - Click **Clear Buffer on Device** to remove the current content for one or all of the units in a cluster and allow room in the buffer to capture more packets.
- Step 15** Click **Save captures** to display the Save Capture dialog box. You have the option of saving either the ingress capture, the egress capture, or both. To continue, see the “[Save Captures](#)” section on page 47-5.
- Step 16** To save the ingress packet capture, click **Save Ingress Capture** to display the Save capture file dialog box. Specify the storage location on your PC, and click **Save**.
- Step 17** Click **Launch Network Sniffer Application** to start the packet analysis application specified in Tools > Preferences for analyzing the ingress capture.
- Step 18** To save the egress packet capture, click **Save Egress Capture** to display the Save capture file dialog box. Specify the storage location on your PC, and click **Save**.
- Step 19** Click **Launch Network Sniffer Application** to start the packet analysis application specified in Tools > Preferences for analyzing the egress capture.
- Step 20** Click **Close**, then click **Finish** to exit the wizard.
-

Ingress Traffic Selector

To configure the ingress interface, source and destination hosts or networks, and the protocol for packet capture, perform the following steps:

-
- Step 1** In the Point of Ingress area, choose the ingress interface name from the drop-down list.
- Step 2** Enter the ingress source host and network. To capture packets on the ASA CX dataplane, click the **Use backplane channel** radio button.
- Step 3** Enter the ingress destination host and network.
- Step 4** Enter the protocol type to capture. Available protocols are ah, eigrp, esp, gre, icmp, icmp6, igmp, igmp, ip, ipinip, nos, ospf, pcp, pim, snp, tcp, or udp.
- a. Enter the ICMP type for ICMP only. Available types include all, alternate address, conversion-error, echo, echo-reply, information-reply, information-request, mask-reply, mask-request, mobile-redirect, parameter-problem, redirect, router-advertisement, router-solicitation, source-quench, time-exceeded, timestamp-reply, timestamp-request, traceroute, or unreachable.
 - b. Specify the source and destination port services for the TCP and UDP protocols only. Available options include the following:
 - To include all services, choose All Services.
 - To include a service group, choose Service Groups.
 - To include a specific service, choose one of the following: aol, bgp, chargen, cifx, citrix-ica, ctiqbe, daytime, discard, domain, echo, exec, finger, ftp, ftp-data, gopher, h323, hostname, http, https, ident, imap4, irc, kerberos, klogin, kshell, ldap, ldaps, login, lotusnotes, lpd, netbios-ssn, nntp, pcanywhere-data, pim-auto-rp, pop2, pop3, pptp, rsh, rtsp, sip, smtp, sqlnet, ssh, sunrpc, tacacs, talk, telnet, uucp, or whois.
-

Egress Traffic Selector

To configure the egress interface, source and destination hosts/networks, and source and destination port services for packet capture, perform the following steps:

-
- Step 1** To capture packets on an interface, click the **Select Interface** radio button. To capture packets on the ASA CX dataplane, click the **Use backplane channel** radio button.
 - Step 2** In the Point of Egress area, choose the egress interface name from the drop-down list.
 - Step 3** Enter the egress source host and network.
 - Step 4** Enter the egress destination host and network.
The protocol type selected during the ingress configuration is already listed.
-

Buffers

To configure the packet size, buffer size, and use of the circular buffer for packet capture, perform the following steps.

-
- Step 1** Enter the longest packet that the capture can hold. Use the longest size available to capture as much information as possible.
 - Step 2** Enter the maximum amount of memory that the capture can use to store packets.
 - Step 3** Use the circular buffer to store packets. When the circular buffer has used all of the buffer storage, the capture will overwrite the oldest packets first.
-

Summary

The Summary screen shows the cluster options (if you are using clustering), traffic selectors, and the buffer parameters for the packet capture selected in the previous wizard screens.

Run Captures

To start and stop the capture session, view the capture buffer, launch a network analyzer application, save packet captures, and clear the buffer, perform the following steps:

-
- Step 1** To begin the packet capture session on a selected interface, click **Start**.
 - Step 2** To stop the packet capture session on a selected interface, click **Stop**.
 - Step 3** To obtain a snapshot of the captured packets on the interface, click **Get Capture Buffer**.
 - Step 4** To show the capture buffer on the ingress interface, click **Ingress**.
 - Step 5** To show the capture buffer on the egress interface, click **Egress**.
 - Step 6** To clear the buffer on the device, click **Clear Buffer on Device**.

- Step 7** To start the packet analysis application for analyzing the ingress capture or the egress capture specified in Tools > Preferences, click **Launch Network Sniffer Application**.
- Step 8** To save the ingress and egress captures in either ASCII or PCAP format, click **Save Captures**.
-

Save Captures

To save the ingress and egress packet captures to ASCII or PCAP file format for further packet analysis, perform the following steps:

-
- Step 1** To save the capture buffer in ASCII format, click **ASCII**.
- Step 2** To save the capture buffer in PCAP format, click **PCAP**.
- Step 3** To specify a file in which to save the ingress packet capture, click **Save ingress capture**.
- Step 4** To specify a file in which to save the egress packet capture, click **Save egress capture**.
-
