- [Viewing Connection Status of Leader Machine in Remote Cluster and All Machines in Same Cluster](#), on page 352

How to Read the Listing

For each command, there is a description and at least one example of the command being used. The Usage section specifies the following command attributes:

Procedure

- Step 1** Does the command require a commit command to be implemented on the email gateway?
- Step 2** Is the command restricted to a particular mode (cluster, group, or machine).?
- Step 3** Does the command permit a batch format?

For more information about Centralized Management, see *User Guide for AsyncOS for Cisco Secure Email Gateway* .

For more information about batch formats, please see [Command Line Interface: The Basics](#).

Advanced Malware Protection

ampconfig

Configure file reputation filtering and file analysis. Do not modify advanced options without guidance from Cisco TAC.

Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For details, see the inline help by typing the command: help ampconfig .

Examples

Enabling File Reputation and File Analysis

```
mail.example.com> ampconfig

File Reputation: Disabled

Choose the operation you want to perform:

- SETUP - Configure Advanced-Malware protection service.

[]> setup

File Reputation: Disabled

Would you like to use File Reputation? [Y]>

Would you like to use File Analysis? [Y]>

File types supported for File Analysis:

1. Microsoft Executables

Do you want to modify the file types selected for File Analysis? [N]>

Specify AMP processing timeout (in seconds)

[120]>

Advanced-Malware protection is now enabled on the system.

Please note: you must issue the 'policyconfig' command (CLI) or Mail
Policies (GUI) to configure advanced malware scanning behavior for
default and custom Incoming Mail Policies.

This is recommended for your DEFAULT policy.

File Reputation: Enabled

File Analysis: Enabled

File types selected for File Analysis:

1. Microsoft Executables

Choose the operation you want to perform:

- SETUP - Configure Advanced-Malware protection service.

- ADVANCED - Set values for AMP parameters (Advanced configuration).

- CLEARCACHE - Clears the local File Reputation cache.

[]>
```

Selecting File Types for File Analysis

```

mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet

Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[ ]> setup

File Reputation: Enabled
Would you like to use File Reputation? [Y]> yes

Would you like to use File Analysis? [Y]> yes

Do you want to modify the file types selected for File Analysis? [N]> yes

Enter comma separated serial numbers from the list of groups to select file types associated
with the group.

1. Archived and compressed
2. Configuration
3. Database
4. Document
5. Email
6. Encoded and Encrypted
7. Executables [partly selected]
8. Font & Graphics and Images
9. Microsoft Documents
10. Miscellaneous
11. Multimedia
[ ]> 9
File types belonging to the group "Microsoft Documents":
1. Access.Extension.14(mda)
2. Access.MDBFile(mdb)
3. Access.MDEFile.14(mde)
4. Access.Shortcut.DataAccessPage.1(maw)
5. Access.Shortcut.Form.1(maf)
6. ....
Choose the operation you want to perform:
- PRINT - Print the file types for File Analysis
- ADD - Add the file type(s) for File Analysis
[ ]> add
Choose the file type(s) to be added for File Analysis from the list
File types that are not selected for File Analysis from group "Microsoft Documents":
1. Access.Extension.14(mda)
2. Access.MDBFile(mdb)
3. Access.MDEFile.14(mde)
4. Access.Shortcut.DataAccessPage.1(maw)
5. Access.Shortcut.Form.1(maf)
6. ....
[ ]> 1-3, 5
Choose the operation you want to perform:
- PRINT - Print the file types for File Analysis
- DELETE - Delete the file type(s) for File Analysis
- ADD - Add the file type(s) for File Analysis
[ ]> print
File types belonging to the group:
1. Access.Extension.14(mda) [selected]

```

```

2. Access.MDBFile(mdb) [selected]
3. Access.MDEFile.14(mde) [selected]
4. Access.Shortcut.DataAccessPage.1(maw)
5. Access.Shortcut.Form.1(maf) [selected]
6. .....
Choose the operation you want to perform:
- PRINT - Print the file types for File Analysis
- DELETE - Delete the file type(s) for File Analysis
- ADD - Add the file type(s) for File Analysis
Specify AMP processing timeout (in seconds)
[120]>

```

Advanced-Malware protection is now enabled on the system.

```

Please note: you must issue the 'policyconfig' command (CLI) or Mail Policies (GUI) to
configure advanced malware
scanning behavior for default and custom Incoming Mail Policies.
This is recommended for your DEFAULT policy. File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File
Analysis reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[]>

```

Configure Email Gateway to Use Public Cloud File Reputation and File Analysis Server

```

mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
    Microsoft Windows / DOS Executable
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CLEARCACHE - Clears the local File Reputation cache.

```

(Public Cloud File Analysis Services Only) Configuring Appliance Groups

To allow all appliances in your organization to view file analysis result details in the cloud for files sent for analysis from any appliance in your organization, you need to join all appliances to the same appliances group.

For more information, see the “File Reputation Filtering and File Analysis” chapter in the user guide.

Note After you configure an email gateway group, you cannot use the `setgroup` subcommand. If you want to need to modify the group for any reason, you must open a case with Cisco TAC. You can view the details of the email gateway group using the `viewgroup` subcommand.

Configure Email Gateway to Use an On-Premises File Analysis Server

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
  Microsoft Windows / DOS Executable
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CLEARCACHE - Clears the local File Reputation cache.
[ ]> advanced
Enter cloud query timeout?

- CLEARCACHE - Clears the local File Reputation cache.
[]>

```

Clearing Local File Reputation Cache

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[> cachesettings
Choose the operation you want to perform:
- MODIFYTIMEOUT - Configure the cache expiry period based on File Reputation disposition.
- CLEARCACHE - Clears the local File Reputation cache.
[> clearcache
```

Configuring Cache Expiry Period for File Reputation disposition values

In the following example, the `modifytimeout` sub command is used to configure the cache expiry period for malicious files.

Note The cache expiry period must be a value from 15 minutes to 7 days.

```
mail.example.com> ampconfig
File Reputation: Enabled
File Analysis: Enabled
File types selected for File Analysis:
  Microsoft Windows / DOS Executable
Appliance Group ID/Name: Not part of any group yet
Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[> cachesettings
Choose the operation you want to perform:
- MODIFYTIMEOUT - Configure the cache expiry period based on File Reputation disposition.
- CLEARCACHE - Clears the local File Reputation cache.
[> modifytimeout
Choose the operation you want to perform:
- CLEAN - Configure the cache expiry period for clean files.
- MALICIOUS - Configure the cache expiry period for malicious files.
- UNKNOWN - Configure the cache expiry period for unknown files.
[> malicious
Specify the cache expiry period for this file disposition (use 'd' for days, 'h' for hours,
or 'm' for minutes). If you
specify a value without a unit, it is always treated as days.
[1d]> 5d
```

Suppressing File Retrospective Verdict Alerts

```
mail.example.com> ampconfig

File Reputation: Enabled
```

```
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet

Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[]> advanced

Enter cloud query timeout?
[15]>

Choose a file reputation server:
1. AMERICAS (cloud-sa.amp.domain.com)
2. Private reputation cloud
[1]>

Do you want use the recommended reputation threshold from cloud service? [Y]>

Enter heartbeat interval?
[15]>

Do you want to enable SSL communication (port 443) for file reputation? [N]>

Do you want to suppress the file retrospective verdict alerts for the messages that are not
delivered to the recipient
[N]> yes
```

Configuring Cisco AMP Threat Grid Clustering for File Analysis

```
mail.example.com> ampconfig

File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet

Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File
Analysis reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[]> advanced

Enter cloud query timeout?
[15]>

Choose a file reputation server:
1. AMERICAS (cloud-sa.amp.cisco.com)
2. AMERICAS(Legacy) (cloud-sa.amp.sourcefire.com)
3. Private reputation cloud
[1]>

Do you want use the recommended analysis threshold from cloud service? [Y]>

Enter heartbeat interval?
[15]>

Do you want to enable SSL communication (port 443) for file reputation? [N]>

Do you want to suppress the verdict update alerts for all messages that are not
```

delivered to the recipient? [N]>

Choose a file analysis server:

1. AMERICAS (https://panacea.threatgrid.com)
 2. Private analysis cloud
- [1]> 2

There are no private analysis servers configured.

Choose the operation you want to perform:

- NEW - Configure a new private analysis server.
- [> **new**

Enter the file analysis server hostname or IP or URL.

[> **192.1.10.20**

Serial Number	Private Analysis Server
1	192.1.10.20

Choose the operation you want to perform:

- ADD - Add a new private analysis server to the cluster.
 - EDIT - Edit a private analysis server in the cluster.
 - DELETE - Delete a private analysis server from the cluster.
- [> **add**

Enter the new private analysis server hostname or IP address or URL to the cluster.

[> **192.1.10.30**

Serial Number	Private Analysis Server
1	192.1.10.20
2	192.1.10.30

Choose the operation you want to perform:

- ADD - Add a new private analysis server to the cluster.
 - EDIT - Edit a private analysis server in the cluster.
 - DELETE - Delete a private analysis server from the cluster.
- [>

Configuring Proxy Server Settings for File Analysis

mail.example.com> **ampconfig**

File Reputation: Enabled

File Analysis: Enabled

Appliance Group ID/Name: Not part of any group yet

Choose the operation you want to perform:

- SETUP - Configure Advanced-Malware protection service.
 - ADVANCED - Set values for AMP parameters (Advanced configuration).
 - SETGROUP - Add this appliance to the group of appliances that can share File Analysis reporting details.
 - CACHESETTINGS - Configure the cache settings for AMP.
- [> **advanced**

Enter cloud query timeout?

[20]>

Choose a file reputation server:

1. AMERICAS (cloud-sa.amp.cisco.com)
2. AMERICAS (Legacy) (cloud-sa.amp.sourcefire.com)
3. EUROPE (cloud-sa.eu.amp.cisco.com)

```
4. APJC (cloud-sa.apjc.amp.cisco.com)
5. Private reputation cloud
[1]>

Do you want use the recommended analysis threshold from cloud service? [Y]>

Enter heartbeat interval?
[15]>

Proxy server detail:
Server : 10.8.6.7
Port : 3128
User : testuser1
Passphrase: xxxxxx

Do you want to change proxy detail [N]>

Do you want to suppress the verdict update alerts for all messages that are not delivered
to the recipient? [N]>

Choose a file analysis server:
1. AMERICAS (https://panacea.threatgrid.com)
2. EUROPE (https://panacea.threatgrid.eu)
3. Private analysis cloud
[1]>

Use Existing File Reputation Proxy? [N]> no

Proxy server detail:
Server: 10.8.6.7
Port: 3128
User: testuser1
Password: xxxxxxxx

Do you want to change proxy detail [N]> yes

Enter proxy server url?
[10.8.6.7]> 10.8.7.5

Enter proxy port?
[3128]> 3230

Enter Username?
[testuser1]> testuser2

Edit passphrase []? [N]> no

File Reputation: Enabled
File Analysis: Enabled
Appliance Group ID/Name: Not part of any group yet

Choose the operation you want to perform:
- SETUP - Configure Advanced-Malware protection service.
- ADVANCED - Set values for AMP parameters (Advanced configuration).
- SETGROUP - Add this appliance to the group of appliances that can share File Analysis
reporting details.
- CACHESETTINGS - Configure the cache settings for AMP.
[]>
```

ampstatus

Description

Display the version of various Advanced Malware Protection (file reputation and analysis) components.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> ampstatus
Component                               Version   Last Updated
AMP Client Settings                     1.0      Never updated
AMP Client Engine                       1.0      Never updated
```

Spam and Graymail Management

This section contains the following commands:

antispanconfig

Description

Configure anti-spam policy.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

The following examples demonstrates the configuration for Anti-Spam functionality.

```
mail3.example.com> antispanconfig

IronPort Anti-Spam scanning: Disabled
Choose the operation you want to perform:
- SETUP - Edit IronPort Anti-Spam settings.
[]> setup
IronPort Anti-Spam scanning: Disabled
Would you like to use IronPort Anti-Spam scanning? [Y]> y
The IronPort Anti-Spam License Agreement is displayed (if you have not already accepted it).
```

```

Do you accept the above IronPort Anti-Spam license agreement? []> Y
Increasing the following size settings may result in decreased performance. Please consult
documentation for size
recommendations based on your environment.
Never scan message larger than: (Add a trailing K for kilobytes, M for megabytes, or no
letters for bytes.)
[1M]>
Always scan message smaller than: (Add a trailing K for kilobytes, M for megabytes, or no
letters for bytes.)
[512K]>
Please specify the IronPort Anti-Spam scanning timeout (in seconds)
[60]>
Choose Scanning Profile
1. Normal - Scanning profile used to block spam with small potential for false positives.
2. Aggressive - Scanning profile used to block spam that has more impact on spam detection
than the Normal profile with a larger potential for false positives.

If you have changed the global scanning profile settings, you must review the Anti-Spam
policy thresholds (Mail Policies > Incoming/Outgoing Mail Policies > Anti-Spam)
to produce satisfactory results.
If you have changed the scanning profile setting from Normal to Aggressive, you need to
reset the mail policy threshold values to the default values to avoid
undesirable false positives.
For Aggressive scanning profile, it is recommended to tune the policy threshold values to
smaller increments compared to the threshold values of the
Normal scanning profile.
IronPort Anti-Spam scanning is now enabled on the system.
Please note: You must issue the policyconfig command or Mail Policies (GUI) to configure
Cisco IronPort scanning behavior for default and custom policies.
This is recommended for your DEFAULT policy.
IronPort Anti-Spam scanning: Enabled
Choose the operation you want to perform:
- SETUP - Edit IronPort Anti-Spam settings.
[]>

```

antispamstatus

Description

Display anti-spam status.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```

mail3.example.com> antispamstatus
Choose the operation you want to perform:
- IRONPORT - Display IronPort Anti-Spam version and rule information.

- MULTISCAN - Display Intelligent Multi-Scan version and rule information.
[]> ironport
Component                Last Update                Version
CASE Core Files           Never updated               3.4.0-013

```

```

CASE Utilities          Never updated          3.4.0-013
Structural Rules       Never updated 3.3.1-009-20141210_214201
Web Reputation DB      Never updated          20141211_111021
Web Reputation Rules   Never updated 20141211_111021-20141211_170330
Content Rules          Never updated          unavailable
Content Rules Update   Never updated          unavailable
Last download attempt made on: Never

```

antispamupdate

Description

Manually request an immediate update of Anti-Spam rules and related CASE components. This also includes the Anti-Spam rules and CASE components used by Intelligent Multi-Scan (IMS), but not for the third-party anti-spam engines used by IMS.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

Example

```

mail3.example.com> antispamupdate
Choose the operation you want to perform:
- MULTISCAN - Request updates for Intelligent Multi-Scan
- IRONPORT - Request updates for IronPort Anti-Spam

[ ]> ironport
Requesting check for new CASE definitions

```

imsandgraymailconfig

- [Description, on page 14](#)
- [Usage, on page 15](#)
- [Example, on page 15](#)

Description

Configure the Cisco Intelligent Multi-Scan (IMS) and Graymail Detection and Safe Unsubscribe settings.

**Note**

- To configure the threshold for message scanning by Cisco Intelligent Multi-Scan and Graymail Detection and Safe Unsubscribing, use the `imsandgraymailconfig > globalconfig` sub command. These global configuration settings are common for both Cisco Intelligent Multi-Scan and Graymail Detection and Safe Unsubscribing.
- To configure policy settings for graymail detection and safe unsubscribing, use the `policyconfig` command. For more information, see [Create an Incoming Policy to Drop the Messages Identified as Bulk Email or Social Network Email, on page 224](#).

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format for graymail configuration. For more details, see the inline help by typing the command: `help imsandgraymailconfig`.

Example

The following examples demonstrates the configurations for Graymail Detection and Safe Unsubscribing and Intelligent Multi-Scan.

```
mail3.example.com> imsandgraymailconfig
```

```
Choose the operation you want to perform:
```

- GRAYMAIL - Configure Graymail Detection and Safe Unsubscribe settings
- MULTISCAN - Configure IronPort Intelligent Multi-Scan.
- GLOBALCONFIG - Common Global Configuration settings

```
[> graymail
```

```
Graymail Detection: Disabled
```

```
Choose the operation you want to perform:
```

- SETUP - Configure Graymail.

```
[> setup
```

```
Would you like to use Graymail Detection? [Y]> y
```

```
Would you like to enable automatic updates for Graymail engine? [Y]> y
```

```
Graymail Safe Unsubscribe: Disabled
```

```
Would you like to use Graymail Safe Unsubscribe? [Y]> y
```

```
Graymail Detection and Safe Unsubscribe is now enabled. Please note: The global settings are recommended only for your DEFAULT mail policy. To configure policy settings, use the incoming
```

```
or outgoing policy page on web interface or the 'policyconfig' command in CLI.
```

```
[> multiscan
```

```
IronPort Intelligent Multi-Scan: Disabled
```

```
Choose the operation you want to perform:
```

- SETUP - Edit Intelligent Multi-Scan settings.

```
[> setup
```

```
IronPort Intelligent Multi-Scan scanning: Disabled
```

```
Would you like to use IronPort Intelligent Multi-Scan scanning? [Y]> y
```

```
Would you like to enable regional scanning? [N]> n
```

Intelligent Multi-Scan scanning is now enabled on the system. Please note: you must issue the 'policyconfig' command (CLI) or Mail Policies (GUI) to configure Intelligent Multi-Scan scanning behavior for default and custom Incoming and Outgoing Mail Policies. This is recommended for your DEFAULT policy.

IronPort Intelligent Multi-Scan: Enabled

[> **globalconfig**

Choose the operation you want to perform:
 - SETUP - Configure Common Global settings
 [> setup

Increasing the following size settings may result in decreased performance.
 Please consult documentation for size recommendations based on your environment.

Never scan message larger than: (Add a trailing K for kilobytes,
 M for megabytes, or no letters for bytes.)
 [1M]>

Always scan message smaller than: (Add a trailing K for kilobytes,
 M for megabytes, or no letters for bytes.)
 [512K]>

Timeout for Scanning Single Message(in seconds):
 [60]>
 [>

graymailstatus

Description

Display the details of the existing graymail rules.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```
mail.example.com> graymailstatus
Component          Version      Last Updated
Graymail Engine    01.378.53   Never Updated
Graymail Rules     01.378.53#15 Never updated
Graymail Tools     1.0.03      Never updated
```

graymailupdate

Description

Manually request update of the graymail rules.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```
mail.example.com> graymailupdate
Requesting check for new Graymail updates.
```

incomingrelayconfig

Description

Use the **incomingrelayconfig** command to enable and configure the Incoming Relays feature. In the following examples, the Incoming Relays feature is first enabled, and then two relays are added, one is modified, and one is deleted.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example: Enabling Incoming Relays - Configuring an Incoming Relay

```
mail3.example.com> incomingrelayconfig
Incoming relays: Disabled
Choose the operation you want to perform:
- SETUP - Edit update configuration.
- RELAYLIST - Configure incoming relays.
[]> setup
This command helps your Cisco IronPort appliance determine the sender's
originating IP address.
You should ONLY enable this command if your Cisco IronPort appliance is NOT
directly connected to the Internet as the "first hop" in your email
infrastructure.
You should configure this feature if other MTAs or servers are configured at
your network's perimeter to relay mail to your Cisco IronPort appliance.
Do you want to enable and define incoming relays? [N]> y
Incoming relays: Enabled
Choose the operation you want to perform:
- SETUP - Edit update configuration.
- RELAYLIST - Configure incoming relays.
[]> relaylist
There are no relays defined.
Choose the operation you want to perform:
- NEW - Create a new entry
[]> new
Enter a name for this incoming relay (Ex: "first-hop")
[]> first-hop
Enter the IP address of the incoming relay. IPv4 and IPv6 addresses are supported.
```

Example: Enabling Incoming Relays - Configuring an Incoming Relay

```

For IPv4, CIDR format subnets such as 10.1.1.0/24, IP address ranges such as 10.1.1.10-20,
and subnets such as 10.2.3. are allowed.
For IPv6, CIDR format subnets such as 2001:db8::/32 and IP address ranges such as
2001:db8::1-2001:db8::11 are allowed.
Hostnames such as crm.example.com and partial hostnames such as .example.com are allowed.
[1]> 192.168.1.1
Do you want to use the "Received:" header or a custom header to determine the originating
IP address?
1. Use "Received:" header
2. Use a custom header
[1]> 1
Within the "Received:" header, enter the special character or string after which to begin
parsing for the originating IP address:
[from]> [
Within the headers, enter the position of the "Received:" header that contains the originating
IP address:
[1]> 1
There is 1 relay defined.
Choose the operation you want to perform:
- NEW - Create a new entry
- EDIT - Modify an entry
- DELETE - Remove an entry
- PRINT - Display the table
[1]> print
Incoming
relay name:      IP address:      Header           Match           Hops:

first-hop       192.168.1.1      Received         [                1
There is 1 relay defined.
Choose the operation you want to perform:
- NEW - Create a new entry
- EDIT - Modify an entry
- DELETE - Remove an entry
- PRINT - Display the table
[1]> new
Enter a name for this incoming relay (Ex: "first-hop")
[1]> second-hop
Enter the IP address of the incoming relay. IPv4 and IPv6 addresses are supported.
For IPv4, CIDR format subnets such as 10.1.1.0/24, IP address ranges such as 10.1.1.10-20,
and subnets such as 10.2.3. are allowed.
For IPv6, CIDR format subnets such as 2001:db8::/32 and IP address ranges such as
2001:db8::1-2001:db8::11 are allowed.
Hostnames such as crm.example.com and partial hostnames such as .example.com are allowed.
[1]> 192.168.1.2
Do you want to use the "Received:" header or a custom header to determine the originating
IP address?
1. Use "Received:" header
2. Use a custom header
[1]> 2
Enter the custom header name that contains the originating IP address:
[1]> x-Connecting-IP
There are 2 relays defined.
Choose the operation you want to perform:
- NEW - Create a new entry
- EDIT - Modify an entry
- DELETE - Remove an entry
- PRINT - Display the table
[1]> print
Incoming
relay name:      IP address:      Header           Match           Hops:
-----
first-hop       192.168.1.1      Received         [                1
second-hop     192.168.1.2      x-Connecting-IP n/a            n/a
There are 2 relays defined.

```

```

Choose the operation you want to perform:
- NEW - Create a new entry
- EDIT - Modify an entry
- DELETE - Remove an entry
- PRINT - Display the table
[ ]> delete
1. first-hop:      192.168.1.1
2. second-hop:    192.168.1.2
Enter the number of the entry you wish to delete:
[1]> 1
Incoming relay "first-hop" deleted.
There is 1 relay defined.
Choose the operation you want to perform:
- NEW - Create a new entry
- EDIT - Modify an entry
- DELETE - Remove an entry
- PRINT - Display the table
[ ]>

```

sblblconfig

Description

Configure End-User Safelist/Blocklist.

Note Safelists/Blocklists must be enabled on the appliance via the GUI in order to run this command.

Usage

Commit: This command does not require a 'commit'.

Batch Command: This command supports a batch format.

Batch Format - Import

Batch Format

Replaces all entries in the End-User Safelist/Blocklist with entries present in the specified file.

```
sblblconfig import <filename> <ignore invalid entries>
```

- filename - Name of the file that has to be imported. The file must be in the /configuration directory on the email gateway.
- ignore invalid entries - Whether to ignore invalid entries or not. Either 'Yes' or 'No.'

Batch Format - Export

Exports all entries in the End-User Safelist/Blocklist to a file the email gateway.

```
sblblconfig export
```

The email gateway saves a .CSV file to the /configuration directory using the following naming convention:
slbl<timestamp><serial number>.csv.

Example - Importing Safelist/Blocklist Entries

```
mail.example.com>
slblconfig
End-User Safelist/Blocklist: Enabled
Choose the operation you want to perform:
- IMPORT - Replace all entries in the End-User Safelist/Blocklist.
- EXPORT - Export all entries from the End-User Safelist/Blocklist.
[]>
import
Currently available End-User Safelist/Blocklist files:
1. slbl.csv
Choose the file to import from.
[1]>
1
Do you want to ignore invalid entries? [Y]>
Y
End-User Safelist/Blocklist import has been initiated...
Please wait while this operation executes.
End-User Safelist/Blocklist successfully imported.
Choose the operation you want to perform:
- IMPORT - Replace all entries in the End-User Safelist/Blocklist.
- EXPORT - Export all entries from the End-User Safelist/Blocklist.
[]>
```

Anti-Virus

This section contains the following CLI commands:

antivirusconfig

Description

Configure anti-virus policy.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

In the following example, the `antivirusconfig` command is used to enable Sophos virus scanning on the system and set the time-out value to 60 seconds. To configure the update server, update interval, and optional proxy server, see [updateconfig](#), on page 124.

Note The first time you invoke the `antivirusconfig` command, you may be presented with a license agreement, if you did not accept the license during the `systemsetup` command. If you do not accept the license agreement, the Sophos virus scanning engine will not be enabled on the email gateway.

```
mail3.example.com> antivirusconfig

Choose the operation you want to perform:
- SOPHOS - Configure Sophos Anti-Virus.
- MCAFEE - Configure McAfee Anti-Virus.
[]> sophos

Sophos Anti-Virus: Disabled

Choose the operation you want to perform:
- SETUP - Configure Sophos Anti-Virus.

[]> setup

Sophos Anti-Virus scanning: Disabled

Would you like to use Sophos Anti-Virus scanning? [Y]> y

(First time users see the license agreement displayed here.)

Please specify the Anti-Virus scanning timeout (in seconds)
[60]> 60

Would you like to enable automatic updates for Sophos engine? [Y] > Y

Sophos Anti-Virus scanning is now enabled on the system.

Please note: you must issue the 'policyconfig' command (CLI) or Mail
Policies (GUI) to configure Sophos Anti-Virus scanning behavior for default and custom
Incoming and Outgoing Mail Policies.
This is recommended for your DEFAULT policy.

Sophos Anti-Virus: Enabled
Choose the operation you want to perform:
- SETUP - Configure Sophos Anti-Virus.
[]>
```

Example: Enabling StrongPDF on Sophos Anti-Virus Engine

In the following example, you can use the `antivirusconfig > PDF` sub command to enable the strongPDF option on the Sophos Anti-Virus engine in your email gateway.

```
mail.example.com> antivirusconfig

Choose the operation you want to perform:
- SOPHOS - Configure Sophos Anti-Virus.
- MCAFEE - Configure McAfee Anti-Virus.
[]> sophos

Sophos Anti-Virus: Enabled
Choose the operation you want to perform:
- SETUP - Configure Sophos Anti-Virus.
```

Example: Disabling StrongPDF on Sophos Anti-Virus Engine

```

- PDF - Scanning of PDF files by Sophos Anti-Virus
engine.
[ ]> pdf

Currently, clean files that are corrupted because
of 'EOF missing,'etc. are marked as 'Clean' by the
Sophos Anti-Virus engine.

Do you want to mark a clean file that is corrupted
as clean? [Y]> no

Sophos Anti-Virus: Enabled

Choose the operation you want to perform:

Viewing Anti-Virus IDE Details

AsyncOS provides detailed status on the specific anti-virus signature files (IDE files) that have been downloaded by the email gateway. You can access these details using the **antivirusconfig -> detail** subcommand. For example:

```

mail3.example.com> antivirusconfig
Choose the operation you want to perform:
- SOPHOS - Configure Sophos Anti-Virus.
- MCAFEE - Configure McAfee Anti-Virus.
[]> sophos
Sophos Anti-Virus: Enabled
Choose the operation you want to perform:
- SETUP - Configure Sophos Anti-Virus.
- STATUS - View Sophos Anti-Virus status.
- DETAIL - View Sophos Anti-Virus detail.
[]> detail
Sophos Anti-Virus:
Product - 3.87
Engine - 2.25.0
Product Date - 01 Nov 2004
Sophos IDEs currently on the system:
'Mkar-E.Ide'           Virus Sig. - 23 Dec 2004 01:24:02
'Rbot-Sd.Ide'         Virus Sig. - 22 Dec 2004 19:10:06
'Santy-A.Ide'         Virus Sig. - 22 Dec 2004 06:16:32

    Last Update Success    Mon Oct 18 02:56:47 2004
```

antivirusupdate

Description

Manually update virus definitions.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> antivirusupdate
Choose the operation you want to perform:
- MCAFEE - Request updates for McAfee Anti-Virus
- SOPHOS - Request updates for Sophos Anti-Virus
[ ]> sophos
Requesting update of virus definitions
mail3.example.com>
```

Command Line Management

This section contains the following CLI commands:

commit

Description

Commit changes. Entering comments after the commit command is optional.

Usage

Commit: N/A

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> commit
Please enter some comments describing your changes:
[]> Changed "psinet" IP Interface to a different IP ad dress
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

commitdetail

Description

Display detailed information about the last commit.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> commitdetail
Commit at Mon Apr 18 13:46:28 2005 PDT with comments: "Enabled loopback".
mail3.example.com>
```

clearchanges or clear

Description

The **clear** command clears any configuration changes made since the last commit or clear command was issued.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```
mail3.example.com> clear
Are you sure you want to clear all changes since the last commit? [Y]> y
Changes cleared: Mon Jan 01 12:00:01 2003
mail3.example.com>
```

help or h or ?

Description

The **help** command lists all available CLI commands and gives a brief description of each command. The **help** command can be invoked by typing either help or a single question mark (?) at the command prompt.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```
mail3.example.com> help
Displays the list of all available commands.
```

rollbackconfig

The **rollbackconfig** command allows you to rollback to one of the previously committed 10 configurations.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> rollbackconfig
Previous Commits:
  Committed On                User                Description
-----
1. Fri May 23 06:53:43 2014    admin              new user
2. Fri May 23 06:50:57 2014    admin              rollback
3. Fri May 23 05:47:26 2014    admin              edit user
4. Fri May 23 05:45:51 2014    admin
Enter the number of the config to revert to.
[]> 2
Are you sure you want to roll back the configuration? [N]> y
Reverted to Fri May 23 06:50:57 2014    admin              rollback
Do you want to commit this configuration now? [N]> y
Committed the changes successfully
```

quit or q or exit

Description

The **quit** command logs you out of the CLI application. Configuration changes that have not been committed are cleared. The **quit** command has no effect on email operations. Logout is logged into the log files. (Typing exit is the same as typing quit.)

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```
mail3.example.com> quit
Configuration changes entered but not committed. Exiting will lose changes.
Type 'commit' at the command prompt to commit changes.
Are you sure you wish to exit? [N]> Y
```

Configuration File Management

This section contains the following CLI commands:

loadconfig

Description

Load a configuration file.

Note Loading configuration on clustered machines is supported only using GUI. For instructions, see *User Guide for AsyncOS for Cisco Secure Email Gateway*.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

In this example, a new configuration file is imported from a local location.

```
mail3.example.com> loadconfig
1. Paste via CLI
2. Load from file
[1]> 2
Enter the name of the file to import:
[>] changed.config.xml
Values have been loaded.
Be sure to run "commit" to make these settings active.
mail3.example.com> commit
Please enter some comments describing your changes:
[>] loaded new configuration file
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

In this example, a new configuration file is pasted directly at the command line. (Remember to type Control-D on a blank line to end the paste command.) Then, the system setup wizard is used to change the default hostname, IP address, and default gateway information. Finally, the changes are committed.

```
mail3.example.com> loadconfig
1. Paste via CLI
2. Load from file
[1]> 1
Paste the configuration file now.
Press CTRL-D on a blank line when done.
[The configuration file is pasted until the end tag
</config>
. Control-D is entered on a separate line.]
Values have been loaded.
Be sure to run "commit" to make these settings active.
mail3.example.com> systemsetup
[The system setup wizard is run.]
mail3.example.com> commit
Please enter some comments describing your changes:
[>] pasted new configuration file and changed default settings via
systemsetup
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

mailconfig

Description

To test the configuration, you can use the **mailconfig** command immediately to send a test email containing the system configuration data you just created with the **systemsetup** command.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```
mail.example.com> mailconfig
Please enter the email address to which you want to send the configuration file.
Separate multiple addresses with commas.
[ ]> user@example.com
Choose the passphrase option:
1. Mask passphrases (Files with masked passphrases cannot be loaded using loadconfig command)
2. Encrypt passphrases
3. Plain passphrases
[1]> 2
The configuration file has been sent to user@example.com.
```

Send the configuration to a mailbox to which you have access to confirm that the system is able to send email on your network.

Note For enhanced security, if encryption of sensitive data in the email gateway is enabled in **fipsconfig** command, you cannot use Plain passwords option.

resetconfig

Description

When physically transferring the email gateway, you may want to start with factory defaults. The **resetconfig** command resets *all* configuration values to factory defaults. This command is extremely destructive, and it should only be used when you are transferring the unit or as a last resort to solving configuration issues. It is recommended you run the **systemsetup** command after reconnecting to the CLI after you have run the **resetconfig** command.

Note The **resetconfig** command only works when the email gateway is in the offline state. When the **resetconfig** command completes, the email gateway is automatically returned to the online state, even before you run the **systemsetup** command again. If mail delivery was suspended before you issued the **resetconfig** command, the mail will attempt to be delivered again when the **resetconfig** command completes.

Danger The `resetconfig` command will return all network settings to factory defaults, potentially disconnecting you from the CLI, disabling services that you used to connect to the email gateway (FTP, Telnet, SSH, HTTP, HTTPS), and even removing additional user accounts you created with the `userconfig` command. Do not use this command if you are not able to reconnect to the CLI using the Serial interface or the default settings on the Management port through the default Admin user account.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> suspend
Delay (seconds, minimum 30):
[30]> 45
Waiting for listeners to exit...
Receiving suspended.
Waiting for outgoing deliveries to finish...
Mail delivery suspended.
mail3.example.com>
resetconfig
Are you sure you want to reset all configuration values? [N]> Y
All settings have been restored to the factory default.
```

saveconfig

Description

The `saveconfig` command saves the configuration file with a unique filename to the configuration directory.

Note If you are on a clustered environment, this command saves the complete cluster configuration. To run this command on a clustered machine, change your configuration mode to cluster.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

In the following example, the passphrases in the configuration file is encrypted and saved in the configuration directory.

```
mail.example.com> saveconfig
Choose the passphrase option:
1. Mask passphrases (Files with masked passphrases cannot be loaded using loadconfig command)
2. Encrypt passphrases

[1]> 2
File written on machine "mail.example.com" to the location
"/configuration/C100V-4232116C4E14C70C4C7F-7898DA3BD955-20140319T050635.xml".
Configuration saved.
```

Note For enhanced security, if encryption of sensitive data in the email gateway is enabled in fipsconfig command, you cannot use Plain passwords option.

showconfig

Description

The `showconfig` command prints the current configuration to the screen.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

In the following example, the configuration is displayed on CLI and the passphrases in the configuration are encrypted.

```
mail.example.com> showconfig
Choose the passphrase display option:
1. Mask passphrases (Files with masked passphrases cannot be loaded using loadconfig command)
2. Encrypt passphrases
3. Plain passphrases

```

Note For enhanced security, if encryption of sensitive data in the email gateway is enabled in `fipsconfig` command, you cannot use Plain passwords option.

Configuring Email Gateway to Consume External Threat Feeds

- [threatfeedconfig](#), on page 32
- [threatfeedstatus](#), on page 36
- [threatfeedupdate](#), on page 37

threatfeedconfig

- [Description](#), on page 32
- [Usage](#), on page 32
- [Example - Adding an External Threat Feed Source](#), on page 33
- [Example - Adding a SecureX Threat Response Feeds Source](#), on page 34

Description

The `threatfeedconfig` command is used to

- Enable the ETF engine in your email gateway.
- Configure an ETF source in your email gateway.
- Configure a SecureX Thread Response feeds source in your email gateway.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example - Enabling the External Threat Feeds Engine

In the following example, you can use the `setup` subcommand to enable the ETF engine on your email gateway.

```
mail.example.com> threatfeedconfig
```

```

Choose the operation you want to perform:
- SETUP - Configure External Threat Feeds.
- SOURCECONFIG - Configure an external threat feed source.

[ ]> setup
External Threat Feeds: Enabled
Would you like to use External Threat Feeds? [Y]> yes
Do you want to add a custom header to the message in the case of an External Threat Feeds
Lookup Failure? [N]> yes
Enter the header name:
[X-IronPort-ETF-Lookup-Failure]>

Enter the header content:
[true]>
Choose the operation you want to perform:
- SETUP - Configure External Threat Feeds.
- SOURCECONFIG - Configure an external threat feed source.

[ ]>

```

Example - Adding an External Threat Feed Source

In the following example, you can use the `sourceconfig` subcommand to add an ETF source on your email gateway.

```

mail.example.com > threatfeedconfig
Choose the operation you want to perform:
- SOURCECONFIG - Configure an external threat feed source.
[ ]> sourceconfig
Choose the operation you want to perform:
- ADD - Add a Source.
- LIST - List out all the sources.
- DETAIL - Get detailed information about a source.
- EDIT - Edit a source.
- SUSPEND - Suspend a source.
- RESUME - Resume a source.
- DELETE - Delete a source.
[ ]> add
Choose the operation you want to perform:
- POLL URL - Add an external threat feed source using the polling path and collection name.
[ ]> poll url
Enter a name for the external threat feed source:
[ ]> test_source
Enter a description for the external threat feed source (optional):
[ ]> test_source
Enter the host name for the external threat feed source:
[ ]> hailataxii.com
Enter the polling path for the external threat feed source:
[ ]> /taxii-data
Enter the collection name for the external threat feed source:
[ ]> guest.Abuse_ch
Enter the polling interval:
The polling interval can be an alphanumeric value that consists of a combination of
minutes, hours, or days followed by 'm','h' or 'd' suffixes. The numeric
values that are not entered with a suffix are considered as minutes by default. The
minimum value is 15 minutes.
[60m]> 30

Enter the age of the threat feed:
The value for the age must be between 1 and 365 days. Enter the age of the threat feed
that you want to fetch from the TAXII server. For example, if the age
is 30 days, the appliance fetches all threat feeds whose age is up to 30 days only.
[30]> 20

```

Example - Adding a SecureX Threat Response Feeds Source

```
Enter the time span for each poll segment:
The age of threat feeds for a poll can be split into different poll segments based
on the time span entered.
The minimum time span for a poll segment is 1 day. The maximum time span for a
poll segment is the value entered in the 'Age of Threat Feeds' field.
For example, if the age of the threat feeds is 30 days and the TAXII server has a fixed
limit on
the age of threat feeds (for example, '20 days'), enter the fixed limit, which must be less
than
the age of the threat feeds configured on your appliance.
[30]> 5

Do you want to use HTTPS? [Y]> yes
Enter the polling port:
[443]> 443
Do you want to use a proxy server for the threat feed source? [N]> no
Do you want to configure user credentials for the external threat feed source? [Y]> no
test_source successfully added.
```

Example - Adding a SecureX Threat Response Feeds Source

In the following example, you can use the `threatfeedconfig > sourceconfig` sub command to add a SecureX Threat Response feeds source in your email gateway.

Note The SecureX Threat Response feeds source is different from a typical TAXII feeds source. However, to enable polling of observables from the SecureX Threat Response server, you must map the SecureX Threat Response feed URL to the following TAXII source parameters.

- Hostname
- Polling Path
- Collection Name

For Example: The following is a sample SecureX Threat Response feed URL created in the SecureX Threat Response portal.

```
<https://private.intel.amp.cisco.com/ctia/feed/feed-d78e1eba-cbe6-5e13-8d47-197b344e41c9/view.txt?s=e8f3f519-9170-4b76-8b58-bda0be540ff3>
```

You can map the sample SecureX Threat Response feed URL details to the following TAXII source parameters:

- **Hostname** - consists of the “*private.intel.amp.cisco.com*” part of the SecureX Threat Response feed URL.
- **Polling Path** -: consists of the “*/ctia/feed/feed-d78e1eba-cbe6-5e13-8d47-197b344e41c9/view*” part of the SecureX Threat Response feed URL.

Note Do not include the “.txt” part of the SecureX Threat Response feed URL in the Polling Path.

- **Collection Name** - consists of “*e8f3f519-9170-4b76-8b58-bda0be540ff3*” part of the SecureX Threat Response feed URL.

Using the above example, you can configure the ‘Hostname,’ ‘Polling Path,’ and ‘Collection Name’ parameters.

```
mail.example.com > threatfeedconfig
Choose the operation you want to perform:
- SOURCECONFIG - Configure an external threat feed source.
[]> sourceconfig

Choose the operation you want to perform:
- ADD - Add a Source.
- LIST - List out all the sources.
- DETAIL - Get detailed information about a source.
- EDIT - Edit a source.
- SUSPEND - Suspend a source.
- RESUME - Resume a source.
- DELETE - Delete a source.
[]> add

Choose the operation you want to perform:
- POLL URL - Add an external threat feed source using the polling path and collection name.
[]> poll url

Enter a name for the external threat feed source:
[]> securex_ctr_source
```

```

Enter a description for the external threat feed source (optional):
[> SecureX Threat Response source

Enter the host name for the external threat feed source:
[> private.intel.amp.cisco.com

Enter the polling path for the external threat feed source:
[> /ctia/feed/feed-d78e1eba-cbe6-5e13-8d47-197b344e41c9/view

Enter the collection name for the external threat feed source:
[> e8f3f519-9170-4b76-8b58-bda0be540ff3

Enter the polling interval:
The polling interval can be an alphanumeric value that consists of a combination of
minutes, hours, or days followed by 'm','h' or 'd' suffixes. The numeric
values that are not entered with a suffix are considered as minutes by default. The
minimum value is 15 minutes.
[60m]>

Enter the age of the threat feed:
The value for the age must be between 1 and 365 days. Enter the age of the threat feed
that you want to fetch from the TAXII server. For example, if the age
is 30 days, the appliance fetches all threat feeds whose age is up to 30 days only.
[30]>

Enter the time span for each poll segment:
The age of threat feeds for a poll can be split into different poll segments based
on the time span entered.
The minimum time span for a poll segment is 1 day. The maximum time span for a
poll segment is the value entered in the 'Age of Threat Feeds' field.
For example, if the age of the threat feeds is 30 days and the TAXII server has a fixed
limit on
the age of threat feeds (for example, '20 days'), enter the fixed limit, which must be less
than
the age of the threat feeds configured on your appliance.
[30]>

Do you want to use HTTPS? [Y]> yes
Enter the polling port:
[443]> 443

Do you want to use a proxy server for the threat feed source? [N]> no

Do you want to configure user credentials for the external threat feed source? [Y]> no

securex_ctr_source successfully added.

```

threatfeedstatus

- [Description, on page 36](#)
- [Usage, on page 37](#)
- [Example - Viewing Current Version of External Threat Feeds Engine, on page 37](#)

Description

The `threatfeedstatus` command is used to display the current version of the ETF engine.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example - Viewing Current Version of External Threat Feeds Engine

In the following example, you can use the `threatfeedstatus` command to view the current version of the ETF engine.

```
mail.example.com> threatfeedstatus
Component                Version                Last Updated
External ThreatFeeds     1.0.0-0000001        2 Jul 2018 04:22 (GMT +00:00)
```

threatfeedupdate

- [Description, on page 37](#)
- [Usage, on page 37](#)
- [Example - Manually Updating External Threat Feeds Engine, on page 37](#)

Description

The `threatfeedupdate` command is used to manually update the ETF engine.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example - Manually Updating External Threat Feeds Engine

In the following example, you can use the `threatfeedupdate` command to manually update the ETF engine.

```
mail.example.com > threatfeedupdate

Requesting check for new External Threat Feeds updates.
```

Cluster Management

This section contains the following CLI commands:

clusterconfig

Description

The **clusterconfig** command is used to configure cluster-related settings. If this machine is not part of a cluster, running clusterconfig will give you the option of joining a cluster or creating a new cluster.

The **clusterconfig** command provides additional subcommands:

Non-Cluster Commands

The following commands are available when you are not in a cluster.

- **clusterconfig new <name>** — This will create a new cluster with the given name. This machine will be a member of this cluster and a member of a default cluster group called "Main Group".

<name> - The name of the new cluster.

- **clusterconfig join [--port=xx] <ip_of_remote_cluster> [<admin_password>]<groupname>** — This will add this machine to a cluster.

where:

<ip_of_remote_cluster> - The IP address of another machine in the cluster.

<admin_password > - The admin password of the cluster. This should not be specified if joining over CCS.

<groupname> - The name of the group to join.

<port> - The port of the remote machine to connect to (defaults to 22).

- **clusterconfig prepjoin print**

This will display the information needed to prepare the joining of this machine to a cluster over a CCS port.

Cluster Commands

The following commands are available when you are in a cluster.

- **clusterconfig addgroup <groupname>** — Creates a new cluster group. The group starts off with no members.
- **clusterconfig renamegroup <old_groupname> <new_groupname>** — Change the name of a cluster group.
- **clusterconfig deletegroup <groupname> [new_groupname]** — Remove a cluster group.

<groupname> - Name of the cluster group to remove.

<new_groupname> - The cluster group to put machines of the old group into.

- **clusterconfig setgroup <machinename> <groupname>** — Sets (or changes) which group a machine is a member of.

<machinename > - The name of the machine to set.

<groupname> - The group to set the machine to.

- **clusterconfig removemachine <machinename>** — Remove a machine from the cluster.

- `clusterconfig setname <name>` — Changes the name of the cluster to the given name.
- `clusterconfig list` — Display all the machines currently in the cluster.
- `clusterconfig connstatus` — Display all the machines currently in the cluster and add routing details for disconnected machines.
- `clusterconfig disconnect <machinename>` — This will temporarily detach a machine from the cluster.
 <machinename> - The name of the machine to disconnect.
- `clusterconfig reconnect <machinename>` - This will restore connections with machines that were detached with the “disconnect” command.
- `clusterconfig prepjoin new <serial_number> <hostname> <user_key>` — This will add a new host that is to join the cluster over the CCSport.
 <serial_number> - The serial number of the machine being added.
 <hostname> - The host name of the machine being added.
 <user_key> - The SSH user key from the "prepjoin print" command from the joining machine.
- `clusterconfig prepjoin delete <serial_number|hostname>` — This will remove a host that was previously indicated to be added from the "prepjoin new" command. This is only necessary to be used if you later decide not to add the host. When a host is successfully added to the cluster, its prepjoin information is automatically removed.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to cluster mode.

Batch Command: This command does not support a batch format.

Example

For an explanation of the `clusterconfig` command and its uses, see *User Guide for AsyncOS for Cisco Secure Email Gateway* .

Data Loss Prevention

This section contains the following CLI commands:

dlpstatus

Request version information for DLP Engine.

Note DLP must already be configured via the DLP Global Settings page in the GUI before you can use the `dlpstatus` command.

Usage

Commit: This command does not require a 'commit'.
 Cluster Management: This command is can be used at cluster, group or machine mode.
Batch Command: This command does not support a batch format.

Example

```
mail.example.com> dlpstatus

Component          Version   Last Updated
DLP Engine         3.0.2.31 Never updated
```

dlpupdate

Description

Update DLP Engine.

Note DLP must already be configured via the DLP Global Settings page in the GUI before you can use the **dlpupdate** command.

Usage

Commit: This command does not require a 'commit'.
 Cluster Management: This command is can be used at cluster, group or machine mode.
Batch Command: This command supports a batch format.

Batch Format

The batch format of the dlpupdate command forces an update of the DLP engine even if no changes are detected.

```
dlpupdate [force]
```

Example

```
mail.example.com> dlpupdate

Checking for available updates. This may take a few seconds..

Could not check for available updates. Please check your Network and Service Updates settings
and retry.

Choose the operation you want to perform:

- SETUP - Enable or disable automatic updates for DLP Engine.
```

```
[ ]> setup
Automatic updates for DLP are disabled
Do you wish to enable automatic updates for DLP Engine? [N]> y
Choose the operation you want to perform:
- SETUP - Enable or disable automatic updates for DLP Engine.
[ ]>
```

Domain Exception List

This section contains the following CLI command:

domainrepconfig

Description

The `domainrepconfig` command is used to create a Domain Exception List.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For more details, see the inline help by typing the command: `help domainrepconfig`.

Example

In the following example, you can use the `domainrepconfig` command to create a Domain Exception List.

```
mail.example.com> domainrepconfig
Would you like to configure an exception list for Sender Domain Reputation and
External Threat Feeds functionality? [N]> yes
Select the domain only address list to to be used for Sender Domain Reputation
and External Threat Feeds functionality
1. addr_list
[1]> 1
```

S/MIME Security Services

smimeconfig

Description

Configure S/MIME settings such as sending profiles, managing public keys, and so on.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Examples

Creating a Sending Profile for Signing and Encryption

The following example shows how to create a sending profile for signing and encrypting messages using S/MIME.

```
mail.example.com> smimeconfig
Choose the operation you want to perform:
- GATEWAY - Manage S/MIME gateway configuration.
[]> gateway
Choose the operation you want to perform:
- VERIFICATION - Manage S/MIME Public Keys.
- SENDING - Manage S/MIME gateway sending profiles.
[]> sending
Choose the operation you want to perform:
- NEW - Create a new S/MIME sending profile.
- EDIT - Edit a S/MIME sending profile.
- RENAME - Rename a S/MIME sending profile.
- DELETE - Delete a S/MIME sending profile.
- IMPORT - Import a S/MIME sending profile from a file
- EXPORT - Export a S/MIME sending profile to a file
- PRINT - Display S/MIME sending profiles.
[]> new
Enter a name for this profile:
> hr_sign_and_encrypt
1. Encrypt
2. Sign
3. Sign/Encrypt
4. Triple
Enter S/MIME mode:
[2]> 3
1. smime_signing
Select S/MIME certificate to sign:
[1]>
1. Detached
2. Opaque
Enter S/MIME sign mode:
[1]>
1. Bounce
```

```

2. Drop
3. Split
Enter S/MIME action:
[1]> 3
Choose the operation you want to perform:
- NEW - Create a new S/MIME sending profile.
- EDIT - Edit a S/MIME sending profile.
- RENAME - Rename a S/MIME sending profile.
- DELETE - Delete a S/MIME sending profile.
- IMPORT - Import a S/MIME sending profile from a file
- EXPORT - Export a S/MIME sending profile to a file
- PRINT - Display S/MIME sending profiles.
[]> print
S/MIME Sending Profiles
Name          Certificate      S/MIME Mode   Sign Mode   Action
-----
hr_sign_a     smime_signing   Sign/Encrypt  Detached    Split
Choose the operation you want to perform:
- NEW - Create a new S/MIME sending profile.
- EDIT - Edit a S/MIME sending profile.
- RENAME - Rename a S/MIME sending profile.
- DELETE - Delete a S/MIME sending profile.
- IMPORT - Import a S/MIME sending profile from a file
- EXPORT - Export a S/MIME sending profile to a file
- PRINT - Display S/MIME sending profiles.
[]>

```

Adding a Public Key for Encryption

The following example shows how to add the public key of the recipient's S/MIME certificate to the email gateway for encrypting messages.

```

mail.example.com> smimeconfig
Choose the operation you want to perform:
- GATEWAY - Manage S/MIME gateway configuration.
[]> gateway
Choose the operation you want to perform:
- VERIFICATION - Manage S/MIME Public Keys.
- SENDING - Manage S/MIME gateway sending profiles.
[]> verification
Choose the operation you want to perform:
- NEW - Create a new S/MIME Public Key.
- IMPORT - Import the list of S/MIME Public Keys from a file.
[]> new
Enter a name for this profile:
> hr_signing
1. Import
2. Paste
Choose one of the options for the certificate introducing:
[2]>
Paste public certificate in PEM format (end with '.'):
-----BEGIN CERTIFICATE-----
MIIDdDCCalygAwIBAgIBDTANBgkqhkiG9w0BAQUFADCB1jELMAkGA1UEBhMCSU4x
CzAJBgNVBAG...
-----END CERTIFICATE-----
.
C=IN,ST=KA,L=BN,O=Cisco,OU=stg,CN=cert_for_enc,emailAddress=admin@example.com
Choose the operation you want to perform:
- NEW - Create a new S/MIME Public Key.
- EDIT - Edit a S/MIME Public Key.
- RENAME - Rename a S/MIME Public Key.
- DELETE - Delete a S/MIME Public Key.
- IMPORT - Import the list of S/MIME Public Keys from a file.

```

```
- EXPORT - Export the list of S/MIME Public Keys to a file.
- PRINT - Display S/MIME Public Keys.
[]> print
S/MIME Public Keys
Name          Emails          Domains          Remaining
-----
hr_signin     admin@vm30bsd0008.ibqa     dns.vm30bsd0008.ibqa     145 days
```

Domain Keys

This section contains the following CLI commands:

domainkeysconfig

Description

Configure DomainKeys/DKIM support.

Usage

- Commit: This command requires a ‘commit’.
- Cluster Management: This command can be used in all three machine modes (cluster, group, machine).
- Batch Command: This command supports a batch format.

Note For enhanced security, if encryption of sensitive data in the email gateway is enabled in FIPS mode, you will not be able view the private key. If you intend to edit the private key, you can enter an existing private key or generate a new private key.

Batch Format - Signing Profiles

The batch format of the domainkeysconfig command can be used to create, edit, or delete signing profiles

- Adding a DomainKeys/DKIM signing profile:

```
domainkeysconfig profiles signing new <name> <type> <domain> <selector> <user-list>
[options]
```

Table 1: domainkeysconfig New Signing Profile Arguments

Argument	Description
<name>	Name of domain profile.
<type>	Type of domain. Can be dk or dkim .
<domain>	Domain field of domain profile. This forms the d tag of the Domain-Keys signature.
<selector>	Selector field of domain profile. This forms the s tag of the Domain-Keys signature.

Argument	Description
<user-list>	Comma separated list of domain profile users. Users are used to match against email addresses to determine if a specific domain profile should be used to sign an email. Use the special keyword all to match all domain users.
[options]	
--key_name	The name of the private key that will be used for signing.
--canon	The canonicalization algorithm to use when signing by DK. Currently supported algorithms are simple and nofws . Default is nofws .
--body_canon	The body canonicalization algorithm of to use when signing by DKIM. Currently supported algorithms are simple and relaxed . Default is simple .
--header_canon	The headers canonicalization algorithm of to use when signing by DKIM. Currently supported algorithms are simple and relaxed . Default is simple .
--body_length	Number of bytes of canonicalized body that are used to calculate the signature. Is used only in DKIM profiles. If used this value becomes l tag of the signature. By default it is not used.
--headers_select	Determines how to select headers for signing. Is used only in DKIM profiles. Can be one of all , standard , standard_and_custom . all means to sign all non-repetitive headers. "standard" means to sign predefined set of well known headers such as Subject, From, To, Sender, MIME headers etc. standard_and_custom means to sign well known headers and user-defined set of headers. Default is standard .
--custom_headers	User-defined set of headers to sign. Is used only in DKIM profiles if headers_select is standard_and_custom . Default is empty set.
--i_tag	Determines whether to include the i tag into the signature. Possible values are yes or no . Default is yes .
--agent_identity	The identity of the user or agent on behalf of which this message is signed. The syntax is a standard email address where the local-part may be omitted. Domain part of this address should be a sub-domain of or equal to the <domain> . This option is only applicable if --i_tag value is set to yes . Default is an empty local-part followed by an @ and by the <domain> .
--q_tag	Determines whether to include the q tag into the signature. Possible values are yes or no . Default is yes .
--t_tag	Determines whether to include the t tag into the signature. Possible values are yes or no . Default is yes .
--x_tag	Determines whether to include the x tag into the signature. Possible values are yes or no . Default is yes .
--expiration_time	Number of seconds before signature is expired. Is used only in DKIM profiles. This value becomes a difference of x and t tags of the signature. This option is only applicable if --x_tag value is set to yes . Default is 31536000 seconds (one year).

Argument	Description
--z_tag	Determines whether to include the z tag into the signature. Possible values are yes or no . Default is no .

- Editing a signing profile:

```
domainkeysconfig profiles signing edit <name> [signing-profile-options]
```

Signing profile options:

- rename <name>
- domain <domain>
- selector <selector>
- canonicalization <canon>
- canonicalization <header_canon> <body_canon>
- key <key_name>
- bodylength <body_length>
- headerselect <header_select>
- customheaders <custom_headers>
- itag <i_tag> [<agent_identity>]
- qtag <q_tag>
- ttag <t_tag>
- xtag <x_tag> [<expiration_time>]
- ztag <z_tag>
- new <user-list>
- delete <user-list>
- print
- clear
- Delete a signing profile:

```
domainkeysconfig profiles signing delete <name>
```

- Show a list of signing profiles:

```
domainkeysconfig profiles signing list
```

- Print the details of a signing profile:

```
domainkeysconfig profiles signing print <name>
```

- Test a signing profile:

```
domainkeysconfig profiles signing test <name>
```

- Import a local copy of your signing profiles:

```
domainkeysconfig profiles signing import <filename>
```

- Export a copy of your signing profile from the email gateway:

```
domainkeysconfig profiles signing export <filename>
```

- Delete all the signing profiles from the email gateway:

```
domainkeysconfig profiles signing clear
```

Batch Format - Verification Profiles

- Create a new DKIM verification profile:

```
domainkeysconfig profiles verification new <name> <verification-profile-options>
```

Table 2: domainkeysconfig Verification Profile Options

Argument	Description
--name	The name of DKIM verification profile.
--min_key_size	The smallest key to be accepted. Possible key-length values (in bits) are 512, 768, 1024, 1536 and 2048 . Default is 512.
--max_key_size	The largest key to be accepted. Possible key-length values (in bits) are 512, 768, 1024, 1536 and 2048 . Default is 2048.
--max_signatures_num	A maximum number of signatures in the message to verify. Possible value is any positive number. Default is 5 .
--key_query_timeout	A number of seconds before the key query is timed out. Possible value is any positive number. Default is 10 .
--max_systemtime_divergence	A number of seconds to tolerate wall clock asynchronization between sender and verifier. Possible value is any positive number. Default is 60.
--use_body_length	Whether to use a body length parameter. Possible values are yes or no . Default is yes .
--tempfail_action	The SMTP action should be taken in case of temporary failure. Possible values are accept or reject . Default is accept .
--tempfail_response_code	The SMTP response code for rejected message in case of temporary failure. Possible value is number in 4XX format. Default is 451 .
--tempfail_response_text	The SMTP response text for rejected message in case of temporary failure. Default is #4.7.5 Unable to verify signature - key server unavailable .

Argument	Description
--permfail_action	The SMTP action should be taken in case of permanent failure. Possible values are accept or reject . Default is accept .
--permfail_response_code	The SMTP response code for rejected message in case of permanent failure. Possible value is number in 5XX format. Default is 550 .
--permfail_response_text	The SMTP response text for rejected message in case of permanent failure. Default is #5.7.5 DKIM unauthenticated mail is prohibited.

- Edit a verification profile:

```
domainkeysconfig profiles verification edit <name> <verification-profile-options>
```

- Delete a verification profile:

```
domainkeysconfig profiles verification delete <name>
```

- Print details of an existing verification profile:

```
domainkeysconfig profiles verification print <name>
```

- Display a list of existing verification profiles:

```
domainkeysconfig profiles verification list
```

- Import a file of verification profiles from a local machine:

```
domainkeysconfig profiles verification import <filename>
```

- Export the verification profiles from the email gateway:

```
domainkeysconfig profiles verification export <filename>
```

- Delete all existing verification profiles from the email gateway:

```
domainkeysconfig profiles verification clear
```

Batch Format - Signing Keys

- Create a new signing key:

```
domainkeysconfig keys new <key_name> <key-options>
```

Table 3: domainkeysconfig Signing Keys Options

Argument	Description
<code>--generate_key</code>	Generate a private key. Possible key-length values (in bits) are 512 , 768 , 1024 , 1536 , and 2048 .
<code>--use_key</code>	Use supplied private key.
<code>--public_key</code>	Flag to derive and print to the screen a matching public key for the specified private key. If <code>--generate_key</code> is specified first, a new private key is generated first, followed by the display of a matching public key.

- Edit a signing key:

```
domainkeysconfig keys edit <key_name> key <key-options>
```

- Rename an existing signing key:

```
domainkeysconfig keys edit <key_name> rename <key_name>
```

- To specify a public key:

```
domainkeysconfig keys publickey <key_name>
```

- Delete a key:

```
domainkeysconfig keys delete <key_name>
```

- Display a list of all signing keys:

```
domainkeysconfig keys list
```

- Display all information about a specify signing key:

```
domainkeysconfig keys print <key_name>
```

- Import signing keys from a local machine:

```
domainkeysconfig keys import <filename>
```

- Export signing keys from the email gateway:

```
domainkeysconfig keys export <filename>
```

- Delete all signing keys on the email gateway:

```
domainkeysconfig keys clear
```

Batch Format - Search for a Key or Profile

- Search for a profile signing key:

```
domainkeysconfig search <search_text>
```

Batch Format - Global Settings

- Modify global settings for Domain Keys/DKIM on your email gateway:

```
domainkeysconfig setup <setup_options>
```

The option available is:

- `--sign_generated_msgs` - Specify whether to sign system-generated messages. Possible values are yes or no .

Example: Configuring Domain Keys via the CLI

Use the `domainkeysconfig` command in the CLI to configure Domain Keys on your email gateway.

The `domainkeysconfig` command has all of the features of the **Mail Policies -> Domain Keys** page. It also provides the ability to generate a sample Domain Keys DNS TXT record. For more information about generating sample Domain Keys DNS TXT records, see [Creating a Sample Domain Keys DNS TXT Record, on page 53](#).

In this example, a key is generated, and a domain profile is created:

```
mail3.example.com> domainkeysconfig
Number of DK/DKIM Signing Profiles: 0
Number of Signing Keys: 0
Number of DKIM Verification Profiles: 1
Sign System-Generated Messages: Yes
Choose the operation you want to perform:
- PROFILES - Manage domain profiles.
- KEYS - Manage signing keys.
- SETUP - Change global settings.
- SEARCH - Search for domain profile or key.
[ ]> keys
No signing keys are defined.
Choose the operation you want to perform:
- NEW - Create a new signing key.
- IMPORT - Import signing keys from a file.
[ ]> new
Enter a name for this signing key:
[ ]> testkey
1. Generate a private key
2. Enter an existing key
[1]>
Enter the size (in bits) of this signing key:
1. 512
```

```
2. 768
3. 1024
4. 1536
5. 2048
[3]>
New key "testkey" created.
There are currently 1 signing keys defined.
Choose the operation you want to perform:
- NEW - Create a new signing key.
- EDIT - Modify a signing key.
- PUBLICKEY - Create a publickey from a signing key.
- DELETE - Delete a signing key.
- PRINT - Display signing keys.
- LIST - List signing keys.
- IMPORT - Import signing keys from a file.
- EXPORT - Export signing keys to a file.
- CLEAR - Clear all signing keys.
[]>
Number of DK/DKIM Signing Profiles: 0
Number of Signing Keys: 1
Number of DKIM Verification Profiles: 1
Sign System-Generated Messages: Yes
Choose the operation you want to perform:
- PROFILES - Manage domain profiles.
- KEYS - Manage signing keys.
- SETUP - Change global settings.
- SEARCH - Search for domain profile or key.
[]> profiles
Choose the operation you want to perform:
- SIGNING - Manage signing profiles.
- VERIFICATION - Manage verification profiles.
[]> signing
No domain profiles are defined.
Choose the operation you want to perform:
- NEW - Create a new domain profile.
- IMPORT - Import domain profiles from a file.
[]> new
Enter a name for this domain profile:
[]> Example
Enter type of domain profile:
1. dk
2. dkim
[2]>
The domain field forms the basis of the public-key query. The value in
this field MUST match the domain of the sending email address or MUST
be one of the parent domains of the sending email address. This value
becomes the "d" tag of the Domain-Keys signature.
Enter the domain name of the signing domain:
[]> example.com
Selectors are arbitrary names below the "_domainkey." namespace. A
selector value and length MUST be legal in the DNS namespace and in
email headers with the additional provision that they cannot contain a
semicolon. This value becomes the "s" tag of the DomainKeys
Signature.
Enter selector:
[]> test
The private key which is to be used to sign messages must be entered.
A corresponding public key must be published in the DNS following the
form described in the DomainKeys documentation. If a key is not
immediately available, a key can be entered at a later time.
Select the key-association method:
1. Create new key
2. Paste in key
3. Enter key at later time
```

Example: Configuring Domain Keys via the CLI

```

4. Select existing key
[1]> 4
Enter the name or number of a signing key.
1. testkey
[1]>
The canonicalization algorithm is the method by which the headers and
content are prepared for presentation to the signing algorithm.
Possible choices are "simple" and "relaxed".
Select canonicalization algorithm for body:
1. simple
2. relaxed
[1]> 1
How would you like to sign headers:
1. Sign all existing, non-repeatable headers (except Return-Path header).
2. Sign "well-known" headers (Date, Subject, From, To, Cc, Reply-To, Message-ID, Sender,
MIME headers).
3. Sign "well-known" headers plus a custom list of headers.
[2]>
Body length is a number of bytes of the message body to sign.
This value becomes the "l" tag of the signature.
Which body length option would you like to use?
1. Whole body implied. No further message modification is possible.
2. Whole body auto-determined. Appending content is possible.
3. Specify a body length.
[1]>
Would you like to fine-tune which tags should be used in the
DKIM Signature? (yes/no) [N]>
Finish by entering profile users. The following types of entries are
allowed:
- Email address entries such as "joe@example.com".
- Domain entries such as "example.com".
- Partial domain entries such as ".example.com". For example, a partial
domain of ".example.com" will match "sales.example.com". This
sort of entry will not match the root domain ("example.com").
- Leave blank to match all domain users.
Enter user for this signing profile:
[1]> sales.example.com
Do you want to add another user? [N]>
There are currently 1 domain profiles defined.
Choose the operation you want to perform:
- NEW - Create a new domain profile.
- EDIT - Modify a domain profile.
- DELETE - Delete a domain profile.
- PRINT - Display domain profiles.
- LIST - List domain profiles.

DMARC Verification

This section contains the following CLI commands:

dmarcconfig

Description

Configure DMARC settings.

Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Batch Format - DMARC Verification Profiles

The batch format of the dmarcconfig can be used to create, edit, or delete verification profiles and modify global settings.

Add a DMARC Verification Profile

```
dmarcconfig profiles new <name> [options]
```

Argument	Description
<name>	Name of the DMARC profile.
[options]	
--rejectpolicy_action	The message action that AsyncOS must take when the policy in DMARC record is reject. Possible values are “reject”, “quarantine”, or “none.”

Argument	Description
<code>--rejectpolicy_response_code</code>	The SMTP response code for rejected messages. The default value is 550.
<code>--rejectpolicy_response_text</code>	The SMTP response text for rejected messages. The default value is “#5.7.1 DMARC unauthenticated mail is prohibited.”
<code>--rejectpolicy_quarantine</code>	The quarantine for messages that fail DMARC verification.
<code>--quarantinepolicy_action</code>	The message action that AsyncOS must take when the policy in DMARC record is quarantine. Possible values are “quarantine” or “none.”
<code>--quarantinepolicy_quarantine</code>	The quarantine for messages that fail DMARC verification.
<code>--tempfail_action</code>	The message action that AsyncOS must take on the messages that result in temporary failure during DMARC verification. Possible values are “accept” or “reject.”
<code>--tempfail_response_code</code>	The SMTP response code for rejected messages in case of temporary failure. The default value is 451.
<code>--tempfail_response_text</code>	The SMTP response text for rejected messages in case of temporary failure. The default value is “#4.7.1 Unable to perform DMARC verification.”
<code>--permfail_action</code>	The message action that AsyncOS must take on the messages that result in permanent failure during DMARC verification. Possible values are “accept” or “reject.”
<code>--permfail_response_code</code>	The SMTP response code for rejected messages in case of permanent failure. The default value is 550.
<code>--permfail_response_text</code>	The SMTP response text for rejected messages in case of permanent failure. The default value is “#5.7.1 DMARC verification failed.”

Edit a DMARC Verification Profile

```
dmARCconfig profiles edit <name> [options]
```

Delete a DMARC Verification Profile

```
dmARCconfig profiles delete <name>
```

Delete all the DMARC Verification Profiles

```
dmARCconfig profiles clear
```

View the Details of a DMARC Verification Profile

```
dmARCconfig profiles print <name>
```

Export DMARC Verification Profiles

```
dmARCconfig profiles export <filename>
```

Import DMARC Verification Profiles

```
dmARCconfig profiles import <filename>
```

Change Global Settings

```
dmARCconfig setup [options]
```

Options	Description
--report_schedule	The time when you want AsyncOS to generate DMARC aggregate reports.
--error_reports	Send delivery error reports to the domain owners if the DMARC aggregate report size exceeds 10 MB or the size specified in the RUA tag of DMARC record.
--org_name	The entity generating DMARC aggregate reports. This must be a domain name.
--contact_info	Additional contact information, for example, details of your organization's customer support, if the domain owners who receive DMARC aggregate reports want to contact the entity that generated the report.
--copy_reports	Send copy of all the DMARC aggregate reports to specific users, for example, internal users who perform analysis on the aggregate reports. Enter an email address or multiple addresses separated by commas.
--bypass_addresslist	Skip DMARC verification of messages from specific senders (address list). Note You can choose only address lists created with full email addresses.
--bypass_headers	Skip DMARC verification of messages that contain specific header field names. For example, use this option to skip DMARC verification of messages from mailing lists and trusted forwarders. Enter a header or multiple headers separated by commas.

Example

The following example shows how to setup a DMARC verification profile and edit the global settings of DMARC verification profiles.

```
mail.example.com> dmARCconfig
Number of DMARC Verification Profiles: 1
Daily report generation time is: 00:00
Error reports enabled: No
Reports sent on behalf of:
Contact details for reports:
Send a copy of aggregate reports to: None Specified
Bypass DMARC verification for senders from addresslist: None Specified
Bypass DMARC verification for messages with header fields: None Specified
```

```
Choose the operation you want to perform:
- PROFILES - Manage DMARC verification profiles.
- SETUP - Change global settings.
[]> profiles
There are currently 1 DMARC verification profiles defined.
Choose the operation you want to perform:
- NEW - Create a new DMARC verification profile.
- EDIT - Modify a DMARC verification profile.
- DELETE - Delete a DMARC verification profile.
- PRINT - Display DMARC verification profiles.
- IMPORT - Import DMARC verification profiles from a file.
- EXPORT - Export DMARC verification profiles to a file.
- CLEAR - Clear all DMARC verification profiles.
[]> new
Enter the name of the new DMARC verification profile:
[]> dmarc_ver_profile_1
Select the message action when the policy in DMARC record is reject:
1. No Action
2. Quarantine the message
3. Reject the message
[3]> 1
Select the message action when the policy in DMARC record is quarantine:
1. No Action
2. Quarantine the message
[2]> 2
Select the quarantine for messages that fail DMARC verification (when the DMARC policy is
quarantine).
1. Policy
[1]> 1
What SMTP action should be taken in case of temporary failure?
1. Accept
2. Reject
[1]> 2
Enter the SMTP response code for rejected messages in case of temporary failure.
[451]>
Enter the SMTP response text for rejected messages in case of temporary failure. Type DEFAULT
to use the default response text
'#4.7.1 Unable to perform
DMARC verification.'
[#4.7.1 Unable to perform DMARC verification.]>
What SMTP action should be taken in case of permanent failure?
1. Accept
2. Reject
[1]> 2
Enter the SMTP response code for rejected messages in case of permanent failure.
[550]>
Enter the SMTP response text for rejected messages in case of permanent failure. Type DEFAULT
to use the default response text
'#4.7.1 Unable to perform
DMARC verification.'
[#5.7.1 DMARC verification failed.]>
There are currently 2 DMARC verification profiles defined.
Choose the operation you want to perform:
- NEW - Create a new DMARC verification profile.
- EDIT - Modify a DMARC verification profile.
- DELETE - Delete a DMARC verification profile.
- PRINT - Display DMARC verification profiles.
- IMPORT - Import DMARC verification profiles from a file.
- EXPORT - Export DMARC verification profiles to a file.
- CLEAR - Clear all DMARC verification profiles.
[]>
Number of DMARC Verification Profiles: 2
Daily report generation time is: 00:00
Error reports enabled: No
```

```

Reports sent on behalf of:
Contact details for reports:
Send a copy of aggregate reports to: None Specified

```

DNS

This section contains the following CLI commands:

dig

Description

Look up a record on a DNS server

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Batch Format

The batch format of the dig command can be used to perform all the functions of the traditional CLI command.

- Look up a record on a DNS server

```
dig [options] [@<dns_ip>] [qtype] <hostname>
```

- Do a reverse lookup for given IP address on a DNS server

```
dig -x <reverse_ip> [options] [@<dns_ip>]
```

These are the options available for the dig command's batch format

-s <source_ip>	Specify the source IP address.
-t	Make query over TCP.
-u	Make query over UDP (default).
dns_ip	- Query the DNS server at this IP address.
qtype	- Query type: A, PTR, CNAME, MX, SOA, NS, TXT.
hostname	- Record that user want to look up.
reverse_ip	- Reverse lookup IP address.
dns_ip	- Query the DNS server at this IP address.

Example

The following example explicitly specifies a DNS server for the lookup.

```
mail.com> dig @111.111.111.111 example.com MX
; <<>> DiG 9.4.3-P2 <<>> @111.111.111.111 example.com MX
; (1 server found)
;; global options: printcmd
;; Got answer:
;; ->>HEADER<<- opcode: QUERY, status: NOERROR, id: 18540
;; flags: qr aa rd ra; QUERY: 1, ANSWER: 1, AUTHORITY: 1, ADDITIONAL: 3
;; QUESTION SECTION:
;example.com.                IN      MX
;; ANSWER SECTION:
mexample.com.                10800   IN      MX      10 mexample.com.
;; AUTHORITY SECTION:
example.com.                 10800   IN      NS      test.example.com.
;; ADDITIONAL SECTION:
example.com. 10800 IN      A       111.111.111.111
example.com. 10800 IN      AAAA    2620:101:2004:4201::bd
example.com. 300    IN      A       111.111.111.111
;; Query time: 6 msec
;; SERVER: 10.92.144.4#53(10.92.144.4)
;; WHEN: Fri Dec 9 23:37:42 2011
;; MSG SIZE rcvd: 143
```

Note The **dig** command filters out the information in the Authority and Additional sections if you do not explicitly specify the DNS server when using the command.

Example: Verifying TLSA Record of the DNS Server Supporting DNSSEC

The following example explicitly verifies TLSA records.

```
mail.example.com> dig

Enter the host or IP address to look up.
[1]> example.com

Choose the query type:
1. A       the host's IP address
2. AAAA    the host's IPv6 address
3. CNAME   the canonical name for an alias
4. MX      the mail exchanger
5. NS      the name server for the named zone
6. PTR     the hostname if the query is an Internet address, otherwise the pointer to other
information
7. SOA     the domain's "start-of-authority" information
8. TLSA    TLSA Record
9. TXT     the text information
[1]> 8

Which interface do you want to query from?
1. Auto
2. Management
[1]> 2

Please enter the host or IP address of DNS server.
Leave the entry blank to use the default server.
Important! To perform DNSSEC queries, enter the host or IP address of the DNS Server
```

```

supporting DNSSEC.

```

dnsconfig

Description

Configure DNS setup

Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Batch Format

The batch format of the dnsconfig command can be used to perform all the functions of the traditional CLI command.

- Configuring DNS to use a local nameserver cache:

```
dnsconfig parent new <ns_ip> <priority>
```

Command arguments:

- <ns_ip> - The IP address of the nameserver. Separate multiple IP addresses with commas.
- <priority> - The priority for this entry.
- Deleting the local nameserver cache:

```
dnsconfig parent delete <ns_ip>
```

- Configuring alternate DNS caches to use for specific domains:

```
dnsconfig alt new <domains> <ns_ip>
```

Note Cannot be used when using Internet root nameservers.

Command arguments:

- <ns_ip> - The IP address of the nameserver. Separate multiple IP addresses with commas.
- <domains> - A comma separated list of domains.
- Deleting the alternate DNS cache for a specific domain:

```
dnsconfig alt delete <domain>
```

- Configuring DNS to use the Internet root nameservers:

```
dnsconfig roots new <ns_domain> <ns_name> <ns_ip>
```

Nameserver arguments:

- <ns_domain> - The domain to override.
- <ns_name> - The name of the nameserver.
- <ns_ip> - The IP address of the nameserver.

Note You can override certain domains by specifying an alternate name server for that domain.

- Deleting nameservers:

```
dnsconfig roots delete <ns_domain> [ns_name]
```

Note When deleting, if you do not specify an ns_name , then all nameservers for that domain will be removed.

- Clearing all DNS settings and automatically configuring the system to use the Internet root servers:

```
dnsconfig roots
```

Displaying the current DNS settings.

```
dnsconfig print
```

Example

Each user-specified DNS server requires the following information:

- Hostname
- IP address
- Domain authoritative for (alternate servers only)

Four subcommands are available within the **dnsconfig** command:

Table 4: Subcommands for dnsconfig Command

Syntax	Description
new	Add a new alternate DNS server to use for specific domains or local DNS server.
delete	Remove an alternate server or local DNS server.
edit	Modify an alternate server or local DNS server.
setup	Switch between Internet root DNS servers or local DNS servers.

```
mail3.example.com> dnsconfig
Currently using the Internet root DNS servers.
Alternate authoritative DNS servers:
1. com: dns.example.com (10.1.10.9)
Choose the operation you want to perform:
- NEW - Add a new server.
- EDIT - Edit a server.
- DELETE - Remove a server.
- SETUP - Configure general settings.

dnsflush

Description

Clear all entries from the DNS cache.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```
mail3.example.com> dnsflush
Are you sure you want to clear out the DNS cache? [N]> Y
```

dnshostprefs

Description

Configure IPv4/IPv6 DNS preferences

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```
mail3.example.com> dnshostprefs
Choose the operation you want to perform:
- NEW - Add new domain override.
- SETDEFAULT - Set the default behavior.
[]> new
Enter the domain you wish to configure.
[]> example.com
How should the appliance sort IP addresses for this domain?
```

```

1. Prefer IPv4
2. Prefer IPv6
3. Require IPv4
4. Require IPv6

[1]>

```

dnslistconfig

Description

Configure DNS List services support

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```

mail3.example.com> dnslistconfig
Current DNS List Settings:
Negative Response TTL: 1800 seconds
DNS List Query Timeout: 3 seconds
Choose the operation you want to perform:
- SETUP - Configure general settings.
[1]> setup
Enter the cache TTL for negative responses in seconds:
[1800]> 1200
Enter the query timeout in seconds:
[3]>
Settings updated.
Current DNS List Settings:
Negative Response TTL: 1200 seconds
DNS List Query Timeout: 3 seconds
Choose the operation you want to perform:
- SETUP - Configure general settings.
[1]>

```

dnslisttest

Description

Test a DNS lookup for a DNS-based list service.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```
mail3.example.com> dnslisttest
Enter the query server name:
[]> mail4.example.com
Enter the test IP address to query for:
[127.0.0.2]> 10.10.1.11
Querying: 10.10.1.11.mail4.example.com
Result: MATCHED
```

dnsstatus

Description

Display DNS statistics.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> dnsstatus
Status as of: Mon Apr 18 10:58:07 2005 PDT
Counters:
DNS Requests          Reset      Uptime      Lifetime
Network Requests     186        186         186
Cache Hits            1,300     1,300      1,300
Cache Misses          1          1           1
Cache Exceptions      0          0           0
Cache Expired         185        185         185
```

Enhanced User Experience using How-Tos Widget

This section contains the following CLI commands:

howtoupdate

Description

The `howtoupdate` command is used to manually update the How-Tos component.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For more details, see the inline help by typing the command: `help howtoupdate`.

Example

In the following example, you can use the `howtoupdate` command to manually update the How-Tos component.

```
mail.example.com > howtoupdate
Requesting update of How-Tos component
```

howtostatus

Description

The `howtostatus` command is used to display the current version of the How-Tos component.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For more details, see the inline help by typing the command: `help howtostatus`.

Example

In the following example, you can use the `howtostatus` command to view the current version of the How-Tos component.

```
mail.example.com > howtostatus
Component          Version Last Updated
How-Tos            1.0 4 Jul 2018 04:22 (GMT +00:00)
```

General Management/Administration/Troubleshooting

This section contains the following CLI commands:

addressconfig

Description

The **addressconfig** command is used to configure the From: Address header. You can specify the display, user, and domain names of the From: address. You can also choose to use the Virtual Gateway domain for the domain name. Use the **addressconfig** command for mail generated by AsyncOS for the following circumstances:

- Anti-virus notifications
- Bounces
- DMARC feedback reports
- Notifications (`notify()` and `notify-copy()` filter actions)
- Quarantine Messages (and “Send Copy” in quarantine management)
- Reports
- All other messages

In the following example, the From: Address for notifications is changed from: Mail Delivery System [MAILER-DAEMON@domain] (the default) to Notifications [Notification@example.com]

Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> addressconfig
Current anti-virus from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current bounce from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current notify from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current quarantine from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current DMARC reports from: "DMARC Feedback" <MAILER-DAEMON@domain>
Current all other messages from: "Mail Delivery System" <MAILER-DAEMON@domain>
Choose the operation you want to perform:
- AVFROM - Edit the anti-virus from address.
- BOUNCEFROM - Edit the bounce from address.
- NOTIFYFROM - Edit the notify from address.
- QUARANTINEFROM - Edit the quarantine bcc from address.
- DMARCFROM - Edit the DMARC reports from address.
- OTHERFROM - Edit the all other messages from address.
[]> notifyfrom
Please enter the display name portion of the "notify from" address
["Mail Delivery System"]> Notifications
Please enter the user name portion of the "notify from" address
[MAILER-DAEMON]> Notification
```

```

Do you want the virtual gateway domain used for the domain? [Y]> n
Please enter the domain name portion of the "notify from" address
[]> example.com
Current anti-virus from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current bounce from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current notify from: Notifications <Notification@example.com>
Current quarantine from: "Mail Delivery System" <MAILER-DAEMON@domain>
Current DMARC reports from: "DMARC Feedback" <MAILER-DAEMON@domain>
Current all other messages from: "Mail Delivery System" <MAILER-DAEMON@domain>
Choose the operation you want to perform:
- AVFROM - Edit the anti-virus from address.
- BOUNCEFROM - Edit the bounce from address.
- NOTIFYFROM - Edit the notify from address.
- QUARANTINEFROM - Edit the quarantine bcc from address.
- DMARCFROM - Edit the DMARC reports from address.
- OTHERFROM - Edit the all other messages from address.
[]>

```

adminaccessconfig

Description

Use the **adminaccessconfig** command to configure:

- Login message (banner) for the administrator.
- IP-based access for email gateway administrative interface.
- Web interface Cross-Site Request Forgeries protection.
- Option to use host header in HTTP requests.
- Web interface and CLI session inactivity timeout.
- Maximum HTTP header size.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Batch Format

The batch format of the **adminaccessconfig** command can be used to perform all the functions of the traditional CLI command.

- Select whether to allow access for all IP addresses or limit access to specific IP address/subnet/range

```
adminaccessconfig ipaccess <all/restrict/proxyonly/proxy>
```

- Adding a new IP address/subnet/range

```
adminaccessconfig ipaccess new <address>
```

- Editing an existing IP address/subnet/range

```
adminaccessconfig ipaccess edit <oldaddress> <newaddress>
```

- Deleting an existing IP address/subnet/range

```
adminaccessconfig ipaccess delete <address>
```

- Printing a list of the IP addresses/subnets/ranges

```
adminaccessconfig ipaccess print
```

- Deleting all existing IP addresses/subnets/ranges

```
adminaccessconfig ipaccess clear
```

- Printing the login banner

```
adminaccessconfig banner print
```

- Importing a login banner from a file on the email gateway

```
adminaccessconfig banner import <filename>
```

- Deleting an existing login banner

```
adminaccessconfig banner clear
```

- Printing the welcome banner

```
adminaccessconfig welcome print
```

- Importing a welcome banner from a file on the email gateway

```
adminaccessconfig welcome import <filename>
```

- Deleting an existing welcome banner

```
adminaccessconfig welcome clear
```

- Exporting a welcome banner

```
adminaccessconfig welcome export <filename>
```

- Add an allowed proxy IP address

```
adminaccessconfig ipaccess proxylist new <address>
```

- Edit an allowed proxy IP address

```
adminaccessconfig ipaccess proxylist edit <oldaddress> <newaddress>
```

- Delete an allowed proxy IP address

```
adminaccessconfig ipaccess proxylist delete <address>
```

- Delete all existing allowed proxy IP addresses

```
adminaccessconfig ipaccess proxylist clear
```

- Configure the header name that contains origin IP address

```
adminaccessconfig ipaccess proxy-header <header name>
```

- Enable or disable web interface Cross-Site Request Forgeries protection

```
adminaccessconfig csrf <enable|disable>
```

- Check whether web interface Cross-Site Request Forgeries protection is enabled

```
adminaccessconfig csrf print
```

- Configure web interface session timeout

```
adminaccessconfig timeout gui <value>
```

- Configure CLI session timeout

```
adminaccessconfig timeout cli <value>
```

Example - Configuring Network Access List

You can control from which IP addresses users access the email gateway. Users can access the email gateway from any machine with an IP address from the access list you define. When creating the network access list, you can specify IP addresses, subnets, or CIDR addresses.

AsyncOS displays a warning if you do not include the IP address of your current machine in the network access list. If your current machine's IP address is not in the list, it will not be able to access the email gateway after you commit your changes.

In the following example, network access to the email gateway is restricted to two sets of IP addresses:

```
mail.example.com> adminaccessconfig
Choose the operation you want to perform:
- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator
```

```

login.
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- XSS - Configure Cross-Site Scripting Attack protection.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
- MAXHTTPHEADERFIELDSize - Configure maximum HTTP header field size.
- HOW-TOS - Configure How-Tos feature.
[]> ipaccess
Current mode: Allow All.
Please select the mode:
- ALL - All IP addresses will be allowed to access the administrative interface.
- RESTRICT - Specify IP addresses/Subnets/Ranges to be allowed access.
- PROXYONLY - Specify IP addresses/Subnets/Ranges to be allowed access through proxy.
- PROXY - Specify IP addresses/Subnets/Ranges to be allowed access through proxy or directly.
[]> restrict
List of allowed IP addresses/Subnets/Ranges:
Choose the operation you want to perform:
- NEW - Add a new IP address/subnet/range.
[]> new
Please enter IP address, subnet or range.
[]> 192.168.1.2-100
List of allowed IP addresses/Subnets/Ranges:
1. 192.168.1.2-100
Choose the operation you want to perform:

- EDIT - Modify an existing entry.
- DELETE - Remove an existing entry.
- CLEAR - Remove all the entries.
[]> new
Please enter IP address, subnet or range.
[]> 192.168.255.12
List of allowed IP addresses/Subnets/Ranges:
1. 192.168.1.2-100
2. 192.168.255.12
Choose the operation you want to perform:
- NEW - Add a new IP address/subnet/range.
- EDIT - Modify an existing entry.
- DELETE - Remove an existing entry.
- CLEAR - Remove all the entries.
[]>
Warning: The host you are currently using [72.163.202.175] is not included in the User
Access list. Excluding it will prevent your
host from connecting to the administrative interface. Are you sure you want to continue?
[N]> Y
Current mode: Restrict.
Please select the mode:
- ALL - All IP addresses will be allowed to access the administrative interface.
- RESTRICT - Specify IP addresses/Subnets/Ranges to be allowed access.
- PROXYONLY - Specify IP addresses/Subnets/Ranges to be allowed access through proxy.
- PROXY - Specify IP addresses/Subnets/Ranges to be allowed access through proxy or directly.
[]>

```

Example - Configuring Login Banner

You can configure the email gateway to display a message called a “login banner” when a user attempts to log into the email gateway through SSH, Telnet, FTP, or Web UI. The login banner is customizable text that appears above the login prompt in the CLI and to the right of the login prompt in the GUI. You can use the login banner to display internal security information or best practice instructions for the email gateway. For example, you can create a simple note that saying that unauthorized use of the email gateway is prohibited or a detailed warning concerning the organization’s right to review changes made by the user to the email gateway.

Example - Configuring Web Interface and CLI Session Timeout

The maximum length of the login banner is 2000 characters to fit 80x25 consoles. A login banner can be imported from a file in the /data/pub/configuration directory on the email gateway. After creating the banner, commit your changes.

In the following example, the login banner “Use of this system in an unauthorized manner is prohibited” is added to the email gateway:

```
mail.example.com> adminaccessconfig
Choose the operation you want to perform:
- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator
login.
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- XSS - Configure Cross-Site Scripting Attack protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
- MAXHTTPHEADERFIELDSIZE - Configure maximum HTTP header field size.
- HOW-TOS - Configure How-Tos feature.
[]> banner
A banner has not been defined.
Choose the operation you want to perform:
- NEW - Create a banner to display at login.
- IMPORT - Import banner text from a file.
[]> new
Enter or paste the banner text here. Enter CTRL-D on a blank line to end.
Use of this system in an unauthorized manner is prohibited.
^D
Choose the operation you want to perform:
- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator
login.
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
[]> banner
Banner: Use of this system in an unauthorized manner is prohibited.
Choose the operation you want to perform:
- NEW - Create a banner to display at login.
- IMPORT - Import banner text from a file.
- DELETE - Remove the banner.
[]>
```

Example - Configuring Web Interface and CLI Session Timeout

The following example sets the web interface and CLI session timeout to 32 minutes.

Note The CLI session timeout applies only to the connections using Secure Shell (SSH), SCP, and direct serial connection. Any uncommitted configuration changes at the time of CLI session timeout will be lost. Make sure that you commit the configuration changes as soon as they are made.

```
mail.example.com> adminaccessconfig
Choose the operation you want to perform:
- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator
login.
```

```

- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- XSS - Configure Cross-Site Scripting Attack protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
- MAXHTTPHEADERFIELDSIZE - Configure maximum HTTP header field size.
- HOW-TOS - Configure How-Tos feature.

[]> timeout
Enter WebUI inactivity timeout(in minutes):
[30]> 32
Enter CLI inactivity timeout(in minutes):
[30]> 32
Choose the operation you want to perform:
- BANNER - Configure login message (banner) for appliance administrator login.
- WELCOME - Configure welcome message (post login message) for appliance administrator
login.
- IPACCESS - Configure IP-based access for appliance administrative interface.
- CSRF - Configure web UI Cross-Site Request Forgeries protection.
- HOSTHEADER - Configure option to use host header in HTTP requests.
- TIMEOUT - Configure GUI and CLI session inactivity timeout.
[]>
mail.example.com> commit
Please enter some comments describing your changes:
[]> Changed WebUI and CLI session timeout values
Do you want to save the current configuration for rollback? [Y]>
Changes committed: Wed Mar 12 08:03:21 2014 GMT

```

Note After committing the changes, the new CLI session timeout takes affect only during the subsequent login.

certconfig

Description

Configure security certificates and keys.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example - Pasting in a certificate

In the following example, a certificate is installed by pasting in the certificate and private key.

```

mail1.example.com> certconfig
Choose the operation you want to perform:
- CERTIFICATE - Import, Create a request, Edit or Remove Certificate Profiles
- CERTAUTHORITY - Manage System and Customized Authorities
- CRL - Manage Certificate Revocation Lists
[]> certificate
List of Certificates
Name          Common Name          Issued By          Status          Remaining          FQDN

```

Example - Pasting in a certificate

```

date

Description

Displays the current date and time

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```

mail.example.com> date
Tue Mar 10 11:30:21 2015 GMT

```

daneverify

- [Description, on page 80](#)
- [Usage, on page 80](#)
- [Example, on page 80](#)

Description

Checks whether DANE is supported for a specified domain.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format. For more details, see the inline help by typing the command: `help daneverify`.

Example

In the following example, you can use the `daneverify` command to verify DANE support for a specified domain.

```
mail3.example.com> daneverify
Enter the DANE domain to verify against: []> example-dane.net
Trying DANE MANDATORY for example-dane.net
SECURE MX RECORD found for example-dane.net
SECURE A record (10.10.1.198) found for MX(mail.example.com.cs2.test-dane.net) in
example-dane.net
SECURE TLSA Record found for MX(mail.example.com.cs2.test-dane.net) in example-dane.net TLS
connection established: protocol TLSv1.2, cipher DHE-RSA-AES128-SHA256.
Certificate verification successful for TLSA
record(030101329aad19cfb5a0bb8d3b99c67dd1282a4dcdf67bd9c4efc08578657065fe7504)
TLS connection succeeded example-dane.net.
DANE_SUCESS for example-dane.net
DANE verification completed.
```

diagnostic

Description

Use the diagnostic command to:

- Troubleshoot hardware and network issues using various utilities
- Check the RAID status
- Display ARP cache
- Clear LDAP, DNS, and ARP caches
- Send SMTP test messages
- Restart and viewing the status of Service Engines enabled on the email gateway.

Using the diagnostic Command

The following commands are available within the diagnostic submenu:

Table 5: diagnostic Subcommands

Option	Sub Commands	Availability
RAID	1. Run disk verify	Available on C30 and C60 only.
	2. Monitor tasks in progress	
	3. Display disk verify verdict	
DISK_USAGE (deprecated)	No Sub Commands	This command has been deprecated. Instead, use the diskquotaconfig command.
NETWORK	FLUSH	C- and M-Series
	ARPSHOW	
	SMTTPING	
	TCPDUMP	
REPORTING	DELETEDB	C- and M-Series
	DISABLE	
TRACKING	DELETEDB	C- and M-Series
	DEBUG	
RELOAD	No Sub Commands	C- and M-Series
SERVICES	RESTART	C- and M-Series
	STATUS	

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command supports a batch format.

Batch Format

The batch format of the diagnostic command can be used to check RAID status, clear caches and show the contents of the ARP cache. To invoke as a batch command, use the following formats:

Use the batch format to perform the following operations:

- Check the RAID status

```
diagnostic raid
```

- Show the contents of the ARP cache

```
diagnostic network arpshow
```

- Show the contents of the NDP cache

```
diagnostic network ndpshow
```

- Clear the LDAP, DNS, ARP and NDP caches

```
diagnostic network flush
```

- Reset and delete the reporting database

```
diagnostic reporting deletedb
```

- Enable reporting daemons

```
diagnostic reporting enable
```

- Disable reporting daemons

```
diagnostic reporting disable
```

- Reset and delete the tracking database

```
diagnostic tracking deletedb
```

- Reset configuration to the initial manufacturer values

```
diagnostic reload
```

Example: Displaying and Clearing Caches

The following example shows the **diagnostic** command used to display the contents of the ARP cache and to flush all network related caches.

```
mail.example.com> diagnostic
```

```

Choose the operation you want to perform:
- RAID - Disk Verify Utility.
- DISK_USAGE - Check Disk Usage.
- NETWORK - Network Utilities.
- REPORTING - Reporting Utilities.
- TRACKING - Tracking Utilities.
- RELOAD - Reset configuration to the initial manufacturer values.[]> network
Choose the operation you want to perform:
- FLUSH - Flush all network related caches.
- ARPSHOW - Show system ARP cache.
- NDPSHOW - Show system NDP cache.
- SMTTPPING - Test a remote SMTP server.
- TCPDUMP - Dump ethernet packets.
[]> arpshow
System ARP cache contents:
(10.76.69.3) at 00:1e:bd:28:97:00 on em0 expires in 1193 seconds [ethernet]
(10.76.69.2) at 00:1e:79:af:f4:00 on em0 expires in 1192 seconds [ethernet]
(10.76.69.1) at 00:00:0c:9f:f0:01 on em0 expires in 687 seconds [ethernet]
(10.76.69.149) at 00:50:56:b2:0e:2b on em0 permanent [ethernet]
Choose the operation you want to perform:
- FLUSH - Flush all network related caches.
- ARPSHOW - Show system ARP cache.
- NDPSHOW - Show system NDP cache.
- SMTTPPING - Test a remote SMTP server.
- TCPDUMP - Dump ethernet packets.
[]> flush
Flushing LDAP cache.
Flushing DNS cache.
Flushing system ARP cache.
10.76.69.3 (10.76.69.3) deleted
10.76.69.2 (10.76.69.2) deleted
10.76.69.1 (10.76.69.1) deleted
10.76.69.149 (10.76.69.149) deleted
Flushing system NDP cache.
fe80::250:56ff:feb2:e2d%em2 (fe80::250:56ff:feb2:e2d%em2) deleted
fe80::250:56ff:feb2:e2c%em1 (fe80::250:56ff:feb2:e2c%em1) deleted
fe80::250:56ff:feb2:e2b%em0 (fe80::250:56ff:feb2:e2b%em0) deleted
Network reset complete.

```

Example: Verify Connectivity to Another Mail Server

The following example shows diagnostics used to check connectivity to another mail server. You can test the mail server by sending a message or pinging the server.

```

mail.example.com> diagnostic
Choose the operation you want to perform:
- RAID - Disk Verify Utility.
- NETWORK - Network Utilities.
- REPORTING - Reporting Utilities.
- TRACKING - Tracking Utilities.
- RELOAD - Reset configuration to the initial manufacturer values.
[]> network
Choose the operation you want to perform:
- FLUSH - Flush all network related caches.
- ARPSHOW - Show system ARP cache.
- NDPSHOW - Show system NDP cache.
- SMTTPPING - Test a remote SMTP server.
- TCPDUMP - Dump ethernet packets.
[]> smtpping
Enter the hostname or IP address of the SMTP server:
[mail.example.com]> mail.com
The domain you entered has MX records.
Would you like to select an MX host to test instead? [Y]> y

```

Example: Reset Email Gateway Configuration to the Initial Manufacturer Values

```

Select an MX host to test.
1. mx00.gmx.com
2. mx01.gmx.com
[1]>
Select a network interface to use for the test.
1. Management
2. auto
[2]> 1
Do you want to type in a test message to send? If not, the connection will be tested but
no email will be sent. [N]>
Starting SMTP test of host mx00.gmx.com.
Resolved 'mx00.gmx.com' to 74.208.5.4.
Unable to connect to 74.208.5.4.

```

Example: Reset Email Gateway Configuration to the Initial Manufacturer Values

The following example shows how to reset your email gateway configuration to the initial manufacturer values.

```

mail.example.com> diagnostic
Choose the operation you want to perform:
- RAID - Disk Verify Utility.
- NETWORK - Network Utilities.
- REPORTING - Reporting Utilities.
- TRACKING - Tracking Utilities.
- RELOAD - Reset configuration to the initial manufacturer values.
[ ]> reload
This command will remove all user settings and reset the entire device.
If this is a Virtual Appliance, all feature keys will be removed,
and the license must be reapplied.
Are you sure you want to continue? [N]> Y
Are you *really* sure you want to continue? [N]> Y
Do you want to wipe also? [N]> Y

```

Restarting and Viewing Status of Service Engines

You can use the `diagnostic > services` sub command in the CLI to:

- Restart the service engines enabled on your email gateway without having to reboot your email gateway.
- View the status of service engines enabled on your email gateway.

For more information, refer to the CLI Reference Guide for Cisco Secure Email Gateway.

diskquotaconfig

View or configure disk space allocation for reporting and tracking, quarantines, log files, packet captures, and configuration files.

See *User Guide for AsyncOS for Cisco Secure Email Gateway* for complete information about this feature.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format.

Batch Format

```
diskquotaconfig <feature> <quota> [<feature> <quota> [<feature> <quota>[<feature> <quota>]]]
```

Valid values for <feature> are euq , pvo , tracking , reporting

Valid values for <quota> are integers.

Example

```
mail.example.com> diskquotaconfig
Service                                     Disk Usage(GB)   Quota(GB)
-----
Spam Quarantine (EUQ)                       1                 1
Policy, Virus & Outbreak Quarantines        1                 3
Reporting                                    5                10
Tracking                                     1                10
Miscellaneous Files                          5                30
    System Files Usage : 5 GB
    User Files Usage : 0 GB
Total                                         13                54 of 143

Choose the operation you want to perform:
- EDIT - Edit disk quotas
[ ]> edit
Enter the number of the service for which you would like to edit disk quota:
1. Spam Quarantine (EUQ)
2. Policy, Virus & Outbreak Quarantines
3. Reporting
4. Tracking
5. Miscellaneous Files
[1]> 1
Enter the new disk quota -
[1]> 1
Disk quota for Spam Quarantine (EUQ) changed to 1
Service                                     Disk Usage(GB)   Quota(GB)
-----
Spam Quarantine (EUQ)                       1                 1
Policy, Virus & Outbreak Quarantines        1                 3
Reporting                                    5                10
Tracking                                     1                10
Miscellaneous Files                          5                30
    System Files Usage : 5 GB
    User Files Usage : 0 GB
Total                                         13                54 of 143

Choose the operation you want to perform:
- EDIT - Edit disk quotas
[ ]>
```

ecconfig

Set or clear the enrollment client that is used to obtain certificates for use with the URL Filtering feature.

Do not use this command without guidance from Cisco support.

Entries must be in the format <hostname:port> or <IPv4 address:port> . Port is optional.

To specify the default server, enter ecconfig server default .

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used at all levels in a cluster.

Batch Command: This command supports a batch format.

Batch Format

- To specify a non-default enrollment client server:

```
> ecconfig server <server_name:port>
```

To use the default enrollment client server:

```
> ecconfig server default
```

Example

```
mail.example.com> ecconfig
Enrollment Server: Not Configured (Use Default)
Choose the operation you want to perform:
- SETUP - Configure the Enrollment Server
[ ]> setup
Do you want to use non-default Enrollment server?
WARNING: Do not configure this option without the assistance of Cisco Support.
Incorrect configuration can impact the services using certificates from the Enrollment
server. [N]> y
[ ]> 192.0.2.1
Choose the operation you want to perform:
- SETUP - Configure the Enrollment Server
[ ]>
```

ecstatus

Display the current version of the enrollment client that is used to automatically obtain certificates for use with the URL Filtering feature.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> ecstatus
Component          Version      Last Updated
Enrollment Client  1.0.2-046   Never updated
```

ecupdate

Manually update the enrollment client that is used to automatically obtain certificates for use with the URL Filtering feature. Normally, these updates occur automatically. Do not use this command without guidance from Cisco support.

If you use the force parameter (ecupdate [force]) the client is updated even if no changes are detected.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format.

Batch Format

```
> ecupdate [force]
```

Example

```
mail.example.com> ecupdate  
Requesting update of Enrollment Client.
```

encryptionconfig

Configure email encryption.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

The following example shows modifications to an encryption profile:

```
mail.example.com> encryptionconfig  
IronPort Email Encryption: Enabled  
Choose the operation you want to perform:  
- SETUP - Enable/Disable IronPort Email Encryption  
- PROFILES - Configure email encryption profiles  
- PROVISION - Provision with the Cisco Registered Envelope Service  
[]> setup  
PXE Email Encryption: Enabled  
Would you like to use PXE Email Encryption? [Y]>  
WARNING: Increasing the default maximum message size(10MB) may result in  
decreased performance. Please consult documentation for size recommendations  
based on your environment.  
Maximum message size for encryption: (Add a trailing K for kilobytes, M for  
megabytes, or no letters for bytes.)
```

Example

```
[10M]>
Enter the email address of the encryption account administrator
[administrator@example.com]>

HIPAA                 Hosted Service       No               Not Provisioned
Choose the operation you want to perform:
- NEW - Create a new encryption profile
- EDIT - Edit an existing encryption profile
- DELETE - Delete an encryption profile
- PRINT - Print all configuration profiles
- CLEAR - Clear all configuration profiles
- PROXY - Configure a key server proxy
[]>
IronPort Email Encryption: Enabled
Choose the operation you want to perform:
- SETUP - Enable/Disable IronPort Email Encryption
- PROFILES - Configure email encryption profiles
- PROVISION - Provision with the Cisco Registered Envelope Service
[]>

```

encryptionstatus

Description

The **encryptionstatus** command shows the version of the PXE Engine and Domain Mappings file on the email gateway, as well as the date and time the components were last updated.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```

mail3.example.com> encryptionstatus
Component          Version    Last Updated
PXE Engine         6.7.1     17 Nov 2009 00:09 (GMT)
Domain Mappings File 1.0.0     Never updated

```

encryptionupdate

Description

The **encryptionupdate** command requests an update to the PXE Engine on the email gateway.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> encryptionupdate
Requesting update of PXE Engine.
```

enginestatus

Description

The **enginestatus** command is used to display the status and CPU usage of various engines enabled on the email gateway.

Usage

Commit: This command does not requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For more details, see the inline help by typing the command: help enginestatus.

Example

The following example shows how to view the status and CPU usage of all engines enabled on the email gateway:

```
vm30esa0086.ibqa> enginestatus
Choose the operation you want to perform:
- GRAYMAIL - View Graymail engine status
- SOPHOS - View Sophos engine status
- CASE - View CASE engine status
- AMP - View AMP engine status
- MCAFEE - View McAfee engine status
- ALL - View status of All engines
[ ]> ALL
CASE Status: UP CPU: 0.0%
Component                               Version                               Last Updated
CASE Core Files                          3.5.0-008                            Never updated
CASE Utilities                            3.5.0-008                            Never updated

```

featurekey

Description

The **featurekey** command lists all functionality enabled by keys on the system and information related to the keys. It also allows you to activate features using a key or check for new feature keys.

For virtual email gateways, see also [loadlicense, on page 322](#) and [showlicense, on page 322](#).

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

In this example, the **featurekey** command is used to check for new feature keys.

```

mail3.example.com> featurekey
Module                Quantity  Status  Remaining  Expiration Date
Outbreak Filters      1        Active  28 days    Tue Feb 25 06:40:53
2014
IronPort Anti-Spam   1        Dormant  30 days    Wed Feb 26 07:56:57
2014
Sophos Anti-Virus    1        Active  26 days    Sun Feb 23 02:27:48
2014
Bounce Verification  1        Dormant  30 days    Wed Feb 26 07:56:57
2014
Incoming Mail Handling 1        Active  20 days    Sun Feb 16 08:55:58
2014
IronPort Email Encryption 1        Dormant  30 days    Wed Feb 26 07:56:57
2014
Data Loss Prevention 1        Active  25 days    Fri Feb 21 10:07:10
2014
McAfee               1        Dormant  30 days    Wed Feb 26 07:56:57
2014
Choose the operation you want to perform:
- ACTIVATE - Activate a (pending) key.
- CHECKNOW - Check now for new feature keys.
[>] checknow
No new feature keys are available.

```

featurekeyconfig

Description

The **featurekeyconfig** command allows you to configure the machine to automatically download available keys and update the keys on the machine.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

In this example, the featurekeyconfig command is used to enable the autoactivate and autocheck features.

```
mail3.example.com> featurekeyconfig
Automatic activation of downloaded keys: Disabled
Automatic periodic checking for new feature keys: Disabled
Choose the operation you want to perform:
- SETUP - Edit feature key configuration.
[]> setup
Automatic activation of downloaded keys: Disabled
Automatic periodic checking for new feature keys: Disabled
Choose the operation you want to perform:
- AUTOACTIVATE - Toggle automatic activation of downloaded keys.
- AUTOCHECK - Toggle automatic checking for new feature keys.
[]> autoactivate
Do you want to automatically apply downloaded feature keys? [N]> y
Automatic activation of downloaded keys: Enabled
Automatic periodic checking for new feature keys: Disabled
Choose the operation you want to perform:
- AUTOACTIVATE - Toggle automatic activation of downloaded keys.
- AUTOCHECK - Toggle automatic checking for new feature keys.
[]> autocheck
Do you want to periodically query for new feature keys? [N]> y
Automatic activation of downloaded keys: Enabled
Automatic periodic checking for new feature keys: Enabled
```

fipsconfig

Description

The **fipsconfig** command configures the Federal Information Processing Standard (FIPS) settings for Email Security appliances. You can use this command to:

- Enable or disable FIPS mode
- Encrypt sensitive data such as passwords and keys, in your appliance. If you enable this option,
- Sensitive data in your appliance are encrypted and stored.

Note All users, including the administrators, cannot view the sensitive information in the configuration files.

- Swap space in your appliance is encrypted to prevent any unauthorized access or forensic attacks, if the physical security of the appliance is compromised.
- Check if your appliance contains any non-FIPS-compliant objects.
- Minimize FIPS restrictions on SMTP DANE in email gateway.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in the following modes: cluster and machine.

Batch Command: This command does not support a batch format.

Example: Enabling FIPS Mode

Note Before enabling FIPS mode, you must modify all the non-FIPS-compliant objects to meet the FIPS requirements.

The following example shows how to enable FIPS mode.

```
mail.example.com> fipsconfig
FIPS mode is currently disabled.
```

Choose the operation you want to perform:

```
- SETUP - Configure FIPS mode.
- FIPSCHECK - Check for FIPS mode compliance.
- ENCRYPTCONFIG - Configure encryption of sensitive data in the appliance.
[ ]> setup
```

To finalize FIPS mode, the appliance will reboot immediately. No commit will be required.

```
Are you sure you want to enable FIPS mode and reboot now ? [N]> yes
```

```
Do you want to minimize FIPS restriction on SMTP DANE in the email gateway ? [N]> no
```

```
Enter the number of seconds to wait before forcibly closing connections.
[30]>
```

```
System rebooting. Please wait while the queue is being closed...
Closing CLI connection.
Rebooting the system...
```

Example: Encrypting Sensitive Data in a FIPS Compliant Appliance

The following example shows how to encrypt sensitive data in a FIPS compliant appliance.

```
mail1.example.com> fipsconfig

FIPS mode is currently disabled.
```

```

Choose the operation you want to perform:
- SETUP - Configure FIPS mode.
- FIPSCHECK - Check for FIPS mode compliance.
- ENCRYPTCONFIG - Configure encryption of sensitive data in the appliance.
[ ]> encryptconfig

Do you want to enable encryption of sensitive data in the appliance? [Y]> yes

Encryption is in enable state.
mail1.example.com>

```

Example: Checking FIPS Mode Compliance

The following example shows how to check if your appliance contains any non-FIPS-compliant objects.

```

mail.example.com> fipsconfig

FIPS mode is currently disabled.

Choose the operation you want to perform:
- SETUP - Configure FIPS mode.
- FIPSCHECK - Check for FIPS mode compliance.
- ENCRYPTCONFIG - Configure encryption of sensitive data in the appliance
[ ]> fipscheck

Currently, there are non-FIPS-compliant objects configured.

List of non FIPS compliant DKIM Verification Profiles:
-----
1.          PROFILE NAME          KEY SIZE
-----
1.          DEFAULT                512

To be FIPS compliant, you must modify the above listed objects to meet FIPS requirements.
For more information, see the
FIPS Management chapter in the Cisco AsyncOS Email User Guide.

FIPS mode is currently disabled.

```

Note Before enabling FIPS mode, you must modify all the non-FIPS-compliant objects to meet the FIPS requirements.

Example: [Scenario - Enabling FIPS mode] Minimizing FIPS Restrictions on SMTP DANE on Email Gateway in Machine Mode

In the following example, use the `fipsconfig> setup` sub command to minimize FIPS restrictions on SMTP DANE when you enable FIPS mode on your email gateway in the machine mode.

```

mail1.example.com> fipsconfig

FIPS mode is currently disabled.

Choose the operation you want to perform:
- SETUP - Configure FIPS mode.
- FIPSCHECK - Check for FIPS mode compliance.
- ENCRYPTCONFIG - Configure encryption of sensitive data in the appliance.
[ ]> setup

To finalize FIPS mode, the appliance will reboot immediately. No commit will be required.

```

Example: [Scenario - Enabling FIPS mode] Minimizing FIPS Restrictions on SMTP DANE on Email Gateway in Cluster Mode

```

Are you sure you want to enable FIPS mode and reboot now ? [N]> yes

Do you want to minimize FIPS restriction on SMTP DANE in the email gateway ? [N]> yes

Enter the number of seconds to wait before forcibly closing connections.
[30]> 2

System rebooting. Please wait while the queue is being closed..
Closing CLI connection.
Rebooting the system...

```

Example: [Scenario - Enabling FIPS mode] Minimizing FIPS Restrictions on SMTP DANE on Email Gateway in Cluster Mode

In the following example, use the `fipsconfig> setup` sub command to minimize FIPS restrictions on SMTP DANE when you enable FIPS mode on your email gateway in the cluster mode.

Note When you minimize FIPS restrictions on SMTP DANE, your logged-in machine reboots automatically, and you need to reboot the other machines in the cluster manually.

```

(Cluster New-Cluster)> fipsconfig

FIPS mode is currently disabled.

Choose the operation you want to perform:
- SETUP - Configure FIPS mode.
- FIPSCHECK - Check for FIPS mode compliance.
- ENCRYPTCONFIG - Configure encryption of sensitive data in the appliance.
[ ]> setup

To finalize FIPS mode, each cluster member should be rebooted.

Your login host will reboot immediately. Other machines should be rebooted manually.

No commit will be required

Are you sure you want to enable FIPS mode and reboot now ? [N]> yes

Do you want to minimize FIPS restriction on SMTP DANE in the email gateway ? [N]> yes

Enter the number of seconds to wait before forcibly closing connections.
[30]> 2

Telling cluster that mail1.example.com is going down . . .

System rebooting. Please wait while the queue is being closed..

Closing CLI connection.
Rebooting the system...

```

Example: [Scenario - FIPS mode already enabled] Minimizing FIPS Restrictions on SMTP DANE on Email Gateway in Machine Mode

In the following example, use the `fipsconfig> minimizedata` sub command to minimize FIPS restrictions on SMTP DANE when you have already enabled FIPS mode on your email gateway in the machine mode.

```

maill.example.com> fipsconfig

FIPS mode is currently enabled.

Choose the operation you want to perform:
- SETUP - Configure FIPS mode.
- FIPSCHECK - Check for FIPS mode compliance.
- MINIMIZEDATA - Minimize FIPS restriction on SMTP DANE
- ENCRYPTCONFIG - Configure encryption of sensitive data in the appliance.
[]> minimizedata

FIPS restriction is currently minimized for SMTP DANE in the email gateway.

When you change FIPS restriction, the email gateway reboots immediately.

No commit is required.

Do you want to enforce FIPS restriction on SMTP DANE in the email gateway ? [N]> yes

System rebooting. Please wait while the queue is being closed....

```

Example: [Scenario - FIPS mode already enabled] Minimizing FIPS Restrictions on SMTP DANE on Email Gateway in Cluster Mode

In the following example, use the `fipsconfig > minimizedata` sub command to minimize FIPS restrictions on SMTP DANE when you have already enabled FIPS mode on your email gateway in the cluster mode.

Note When you minimize FIPS restrictions on SMTP DANE, your logged-in machine reboots automatically, and you need to reboot the other machines in the cluster manually.

```

(Cluster New-Cluster)> fipsconfig

FIPS mode is currently enabled.

Choose the operation you want to perform:
- SETUP - Configure FIPS mode.
- FIPSCHECK - Check for FIPS mode compliance.
- MINIMIZEDATA - Minimize FIPS restriction on SMTP DANE
- ENCRYPTCONFIG - Configure encryption of sensitive data in the appliance.
[]> minimizedata

FIPS restriction is currently enforced for SMTP DANE in the email gateway.

When you change FIPS restriction, each cluster member must be rebooted.

Your login host reboots immediately. Other cluster machines must be rebooted manually.

No commit is required

Do you want to minimize FIPS restriction on SMTP DANE in the email gateway ? [N]> yes

Telling cluster that maill.example.com is going down . . .

System rebooting. Please wait while the queue is being closed...
Closing CLI connection.
Rebooting the system...

```

generalconfig

Description

The **generalconfig** command allows you to configure browser settings.

Usage

Commit: This command requires 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For details, see the inline help by typing the command: `help generalconfig`.

Example - Configure Internet Explorer Compatibility Mode Override

The following example shows how to override IE Compatibility Mode.

```
mail.example.com> generalconfig
Choose the operation you want to perform:
- IEVERRIDE - Configure Internet Explorer Compatibility Mode Override
[]> ieoverride
    For better web interface rendering, we recommend that you enable Internet
    Explorer Compatibility Mode Override. However, if enabling this feature
    is against your organizational policy, you may disable this feature.
    Internet Explorer Compatibility Mode Override is currently disabled.
Would you like to enable Internet Explorer Compatibility Mode Override? [N]y
Choose the operation you want to perform:
- IEVERRIDE - Configure Internet Explorer Compatibility Mode Override
[]>
```

healthcheck

Description

Checks the health of your email gateway. Health check analyzes historical data (up to three months) in the current Status Logs to determine the health of the email gateway.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> healthcheck
Analyzing the system to determine current health of the system.
The analysis may take a while, depending on the size of the historical data.

System analysis is complete.
The analysis indicates that the system has experienced the following issue(s) recently:
Entered Resource conservation mode
```

```

Delay in mail processing
High CPU usage
High memory page swapping
High memory usage

```

For more information about these problems and how to remediate them, see the TechNote <http://www.cisco.com/c/en/us/support/docs/security/email-security-appliance/118881-technote-esa-00.html>

healthconfig

Description

Configure the threshold of various health parameters of your email gateway such as CPU usage, maximum messages in work queue and so on

Usage

Commit: This command requires 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```

mail.example.com> healthconfig
Choose the operation you want to perform:
- WORKQUEUE - View and edit workqueue-health configuration.
- CPU - View and edit CPU-health configuration.
- SWAP - View and edit swap-health configuration.
[]> workqueue
Number of messages in the workqueue : 0
Current threshold on the workqueue size : 500
Alert when exceeds threshold : Disabled
Do you want to edit the settings? [N]> y
Please enter the threshold value for number of messages in work queue.
[500]> 550
Do you want to receive alerts if the number of messages in work queue exceeds
threshold value? [N]> n
Choose the operation you want to perform:
- WORKQUEUE - View and edit workqueue-health configuration.
- CPU - View and edit CPU-health configuration.
- SWAP - View and edit swap-health configuration.
[]> cpu
Overall CPU usage : 0 %
Current threshold on the overall CPU usage: 85 %
Alert when exceeds threshold : Disabled
Do you want to edit the settings? [N]> y
Please enter the threshold value for overall CPU usage (in percent)
[85]> 90
Do you want to receive alerts if the overall CPU usage exceeds threshold value?[N]> n
Choose the operation you want to perform:
- WORKQUEUE - View and edit workqueue-health configuration.
- CPU - View and edit CPU-health configuration.
- SWAP - View and edit swap-health configuration.
[]> swap
Number of pages swapped from memory in a minute : 0
Current threshold on the number of pages swapped from memory per minute : 5000

```

```
Alert when exceeds threshold : Disabled
Do you want to edit the settings? [N]> y
Please enter the threshold value for number of pages swapped from memory in a
minute.
[5000]> 5500
Do you want to receive alerts if number of pages swapped from memory in a
minute exceeds the threshold? [N]> n
Choose the operation you want to perform:
- WORKQUEUE - View and edit workqueue-health configuration.
- CPU - View and edit CPU-health configuration.
- SWAP - View and edit swap-health configuration.
[]>
```

ntpconfig

Description

The **ntpconfig** command configures AsyncOS to use Network Time Protocol (NTP) to synchronize the system clock with other computers. NTP can be turned off using the **settime** command.

Usage

Commit: This command requires 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com>
ntpconfig
Currently configured NTP servers:
1. time.ironport.com
Choose the operation you want to perform:
- NEW - Add a server.

- DELETE - Remove a server.
- SOURCEINT - Set the interface from whose IP address NTP queries should originate.
- AUTH - Configure NTP authentication.
[]> new
Please enter the fully qualified hostname or IP address of your NTP server.
[]> ntp.example.com
Currently configured NTP servers:
1. time.ironport.com
2. bitsy.mit.edi
Choose the operation you want to perform:
- NEW - Add a server.

- DELETE - Remove a server.
- SOURCEINT - Set the interface from whose IP address NTP queries should originate.
- AUTH - Configure NTP authentication.
[]> sourceint
```

When initiating a connection to an NTP server, the outbound IP address used is chosen automatically.

If you want to choose a specific outbound IP address, please select its interface name now.

```
1. Auto
```

```

2. Management (172.19.0.11/24: elroy.run)
3. PrivateNet (172.19.1.11/24: elroy.run)
4. PublicNet (172.19.2.11/24: elroy.run)
[1]> 1
Currently configured NTP servers:
1. time.ironport.com
2. bitsy.mit.edi
Choose the operation you want to perform:
- NEW - Add a server.

- DELETE - Remove a server.
- SOURCEINT - Set the interface from whose IP address NTP queries should originate.
- AUTH - Configure NTP authentication.
[1]> auth

Would you like to enable NTP authentication? [N]>yes
Currently configured NTP servers:
1. time.ironport.com
2. bitsy.mit.edi
Authentication is on
Choose the operation you want to perform:
- NEW - Add a server.

- DELETE - Remove a server.
- SOURCEINT - Set the interface from whose IP address NTP queries should originate.
- AUTH - Configure NTP authentication.

mail3.example.com> commit
Please enter some comments describing your changes:
[1]> Added new NTP server
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT

```

portalregistrationconfig

The Cisco Talos Email Status Portal is a web-based tool for monitoring the status of email submissions from end-users. This portal requires all your email gateways to have a common registration ID.

Use the **portalregistrationconfig** command in CLI to set the registration ID. If your email gateways are not part of a cluster, you must set a common registration ID on all your email gateways.

For more information about the portal, see Managing Spam and Graymail chapter in user guide or online help.

Usage

Commit: This command requires ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```

mail3.example.com> portalregistrationconfig

Choose the operation you want to perform:

- REGISTRATION_ID - Set up the Registration ID.
[1]> registration_id
Enter the new value of the Registration ID.

```

```
[ ]> registrationidexample1234
```

reboot

Description

Restart the email gateway.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> reboot
Enter the number of seconds to wait before abruptly closing connections.
[30]>
Waiting for listeners to exit...
Receiving suspended.
Waiting for outgoing deliveries to finish...
Mail delivery suspended.
```

resume

Description

Resume receiving and deliveries

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> resume
Receiving resumed for Listener 1.
Mail delivery resumed.
Mail delivery for individually suspended domains must be resumed individually.
```

resumedel

Description

Resume deliveries.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> resumedel
Currently suspended domains:
1. domain1.com
2. domain2.com
3. domain3.com
Enter one or more domains [comma-separated] to which you want to resume delivery.
[ALL]> domain1.com, domain2.com
Mail delivery resumed.
```

resumelister

Description

Resume receiving on a listener.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> resumelister
Choose the listener(s) you wish to resume.
Separate multiple entries with commas.
1. All
2. InboundMail
3. OutboundMail
[1]> 1
Receiving resumed.
mail3.example.com>
```

revert

Description

Revert to a previous release.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> revert
This command will revert the appliance to a previous version of AsyncOS.
WARNING: Reverting the appliance is extremely destructive.
The following data will be destroyed in the process:
- all configuration settings (including listeners)
- all log files
- all databases (including messages in Virus Outbreak and Policy quarantines)
- all reporting data (including saved scheduled reports)
- all message tracking data
- all IronPort Spam Quarantine message and end-user safelist/blocklist data
Only the network settings will be preserved.
Before running this command, be sure you have:
- saved the configuration file of this appliance (with passphrases unmasked)
- exported the IronPort Spam Quarantine safelist/blocklist database
  to another machine (if applicable)
- waited for the mail queue to empty
Reverting the device causes an immediate reboot to take place.
After rebooting, the appliance reinitializes itself and reboots
again to the desired version.
  Available versions
  =====
  1. 9.1.0-019
Please select an AsyncOS version [1]:
Do you want to continue? [N]>
```

samlconfig

- [Description, on page 104](#)
- [Usage, on page 105](#)
- [Example – Configure New SAML Profile, on page 105](#)
- [Example – Modifying SAML Profile, on page 107](#)

Description

Configure SAML profile with Service Provider and Identity Provider Settings.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, and machine).

Batch Command: This command does not support a batch format.

Example – Configure New SAML Profile

In the following example, the `samlconfig` command is used to create a new SAML Profile with service provider and identity provider settings. You must enter a valid certificate and the private key for the service provider. You can either configure the identity provider configuration manually or import an existing identity provider metadata.

```
mail.example.com > samlconfig
Choose the operation you want to perform:
- UILOGIN - Create a new SAML Profile for UI Login.
[]> uilogin
No SAML profiles are configured on the system.
Choose the operation you want to perform:
- NEW - Create a new SAML profile.
[]> new
Please enter the Service Provider Settings:
Enter the SP profile Name:
[]> SP1
Enter the SP Entity Id:
[]> ENTSP
Name ID Format: urn:oasis:names:tc:SAML:1.1:nameid-format:emailAddress
Assertion Consumer URL: http://mail.example.com
Please paste the SP Certificate
.
Paste the content now.
Press CTRL-D on a blank line when done.

```

Example – Modifying SAML Profile

In the following example, you can use the `samlconfig` command to modify the service provider or identity provider settings of an existing SAML profile.

```
mail.example.com > samlconfig
```

Choose the operation you want to perform:

```
- UILOGIN - Create a new SAML Profile for UI Login.
```

```
[ ]> uiloin
```

Currently configured SAML User profiles:

```
-----
```

Type	Name	Entity ID	URL
SP Settings	SP1	ENTSP	http://mail.example.com
IDP Settings	IDP1	https://WIN-BL0P4116	https://WIN-
	BL0P4116VDB/dag/saml2/idp/Si		

```
-----
```

```
Choose the operation you want to perform:
- EDIT - Modify a SAML profile.
- DELETE - Delete a SAML profile.
[ ]> edit
Choose the operation you want to perform:
- SP - Edit Service Provider Settings.
- IDP - Edit Identity Provider Settings.
[ ]>
```

settime

Description

The **settime** command allows you to manually set the time if you are not using an NTP server. The command asks you if you want to stop NTP and manually set the system clock. Enter the time is using this format: **MM/DD/YYYY HH:MM:SS**.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> settime
WARNING: Changes to system time will take place immediately
and do not require the user to run the commit command.
Current time 09/23/2001 21:03:53.
This machine is currently running NTP.
In order to manually set the time, NTP must be disabled.
Do you want to stop NTP and manually set the time? [N]> Y
Please enter the time in MM/DD/YYYY HH:MM:SS format.
[ ]> 09/23/2001 21:03:53
Time set to 09/23/2001 21:03:53.
```

settz

Description

Set the local time zone.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> setz
Current time zone: Etc/GMT
Current time zone version: 2010.02.0
Choose the operation you want to perform:
- SETUP - Set the local time zone.
[]> setup
Please choose your continent:
1. Africa
2. America
[ ... ]
11. GMT Offset
[2]> 2
Please choose your country:
1. Anguilla
[ ... ]
45. United States
46. Uruguay
47. Venezuela
48. Virgin Islands (British)
49. Virgin Islands (U.S.)
[45]> 45
Please choose your timezone:
1. Alaska Time (Anchorage)
2. Alaska Time - Alaska panhandle (Juneau)
[ ... ]
21. Pacific Time (Los_Angeles)
[21]> 21
Current time zone: America/Los_Angeles
Choose the operation you want to perform:
- SETUP - Set the local time zone.
[]>
```

shutdown

Description

Shut down the system to power off

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> shutdown
Enter the number of seconds to wait before forcibly closing connections.
[30]>
System shutting down. Please wait while the queue is being closed...
Closing CLI connection.
The system will power off automatically.
Connection to mail.example.com closed.
```

smaconfig

- [Description, on page 110](#)
- [Usage, on page 110](#)
- [Example, on page 110](#)

Description

The `smaconfig` command is used to add, delete, or view the Cisco Secure Email and Web Manager connection parameters and keys.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Example

In the following example, you can use the `smaconfig` command to add email gateways to the Cisco Secure Email and Web Manager using pre-shared keys, and view the Cisco Secure Email and Web Manager connection details (host name and user keys).

```
mail.example.com> smaconfig
Choose the operation you want to perform:
- ADD - Add a new SMA Connection Parameter and Key.
[> add

Enter the hostname of the system that you want to add.
[> m380q03.ibqa

Enter the user key of the host m380q03.ibqa.
Press enter on a blank line to finish.

Choose the operation you want to perform:
- SETUP - Setup SSH server configuration settings
[]>

```

Example: Installing a New Public Key for the Administrator Account

In the following example, a new public key is installed for the administrator account:

```

mail.example.com> sshconfig
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
[]> userkey
Currently installed keys for admin:
Choose the operation you want to perform:
- NEW - Add a new key.
- USER - Switch to a different user to edit.
[]> new
Please enter the public SSH key for authorization.
Press enter on a blank line to finish.
[-paste public key for user authentication here-]
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
[]>

```

Example: Categorizing an IP Address as Persistent Blocked List or Allowed List

If the email gateway or the `ipblockd` service is restarted, the IP address that you categorize as a persistent blocked list or allowed list is retained.

Note You can categorize IP addresses as persistent blocked lists\or allowed lists only on AsyncOS 11.0.2 and above.

The following example shows how to categorize IP addresses as persistent allowed list:

```

mail.example.com> sshconfig
Choose the operation you want to perform:
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
- ACCESS CONTROL - Edit SSH allowed list/blocked list
[]> access control

Choose the operation you want to perform:
- ALLOWED_LIST - Manage the persistent allowed list

```

```
- BLOCKED_LIST - Manage the persistent blocked list
[]> allowed_list
```

Choose the operation you want to perform:

```
- ADD - Add address(es)
- REMOVE - Remove address(es)
- PRINT - Print addresses
[]> add
```

Enter an IP address or a comma-separated list of addresses.
Addresses already in the Allowed list will be ignored.

```
[]> 10.8.85.77
```

The addresses were successfully added to the Allowed list

The following example shows how to categorize IP addresses as persistent blocked list:

```
mail.example.com> sshconfig
```

Choose the operation you want to perform:

```
- SSHD - Edit SSH server settings.
- USERKEY - Edit SSH User Key settings
- ACCESS CONTROL - Edit SSH allowed list/blocked list
[]> access control
```

Choose the operation you want to perform:

```
- ALLOWED_LIST - Manage the persistent allowed list
- BLOCKED_LIST - Manage the persistent blocked list
[]> blocked_list
```

Choose the operation you want to perform:

```
- ADD - Add address(es)
- REMOVE - Remove address(es)
- PRINT - Print addresses
[]> add
```

Enter an IP address or a comma-separated list of addresses.
Addresses already in the Allowed list will be ignored.

```
[]> 10.8.85.77
```

The addresses were successfully added to the blocked list

status

Description

Show system status.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> status
```

```
Status as of: Thu Oct 21 14:33:27 2004 PDT
```

```

Up since:                               Wed Oct 20 15:47:58 2004 PDT (22h 45m 29s)
Last counter reset:                     Never

```

supportrequest

Description

Send a message to Cisco customer support. This command requires that the email gateway is able to send mail to the Internet. A trouble ticket is automatically created, or you can associate the support request with an existing trouble ticket.

To access Cisco technical support directly from the email gateway, your Cisco.com user ID must be associated with your service agreement contract for this email gateway. To view a list of service contracts that are currently associated with your Cisco.com profile, visit the Cisco.com Profile Manager at <https://sso.cisco.com/autho/forms/CDClogin.html> . If you do not have a Cisco.com user ID, register to get one. See information about registering for an account in the online help or user guide for your release.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

Example

The following example shows a support request that is not related to an existing support ticket.

```
mail.example.com> supportrequest
Please Note:
If you have an urgent issue, please call one of our worldwide Support Centers
(www.cisco.com/support). Use this command to open a technical support request
for issues that are not urgent, such as:
- Request for information.
- Problem for which you have a work-around, but would like an alternative
solution.
Do you want to send the support request to supportrequest@mail.qa?
[Y]>
Do you want to send the support request to additional recipient(s)?
[N]>
Is this support request associated with an existing support ticket?
[N]>
Please select a technology related to this support request:
1. Security - Email and Web
2. Security - Management
[1]> 1
Please select a subtechnology related to this support request:
1. Cisco Email Security Appliance (C1x0,C3x0, C6x0, X10x0) - Misclassified
Messages
2. Cisco Email Security Appliance (C1x0,C3x0, C6x0, X10x0) - SBRS
3. Cisco Email Security Appliance (C1x0,C3x0, C6x0, X10x0) - Other
4. Email Security Appliance - Virtual
[1]> 3
Please select the problem category:

10. Passphrase Recovery
[1]> 5
Please enter a subject line for this support request:
[ ]> <Subject line for support request>
Please enter a description of your issue, providing as much detail as possible
to aid in diagnosis:
[ ]> <Description of issue>
It is important to associate all your service contracts with your Cisco.com profile (CCO
ID) in order for you to receive complete
access to support and services from Cisco. Please follow the URLs below to associate your
contract coverage on your Cisco.com profile.
If you do not have a CCO ID, please follow
the URL below to create a CCO ID.
How to create a CCO ID:
https://tools.cisco.com/RPF/register/register.do
How to associate your CCO ID with contract:
https://tools.cisco.com/RPFA/profile/profile_management.do
Frequently Asked Question:
```

[N]>
```

supportrequeststatus

Description

Display Support Request Keywords version information for requesting support from Cisco TAC.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> supportrequeststatus
Component          Version   Last Updated
Support Request    1.0      Never updated
```

supportrequestupdate

Description

Request manual update of Support Request Keywords for requesting support from Cisco TAC.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> supportrequestupdate
Requesting update of Support Request Keywords.
```

suspend

Description

Suspend receiving and deliveries

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> suspend
Enter the number of seconds to wait before abruptly closing connections.
[30]> 45
Waiting for listeners to exit...
Receiving suspended for Listener 1.
Waiting for outgoing deliveries to finish...
Mail delivery suspended.
mail3.example.com>
```

suspenddel

Description

Suspend deliveries

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> suspenddel
Enter the number of seconds to wait before abruptly closing connections.
[30]>
Enter one or more domains [comma-separated] to which you want to suspend delivery.
[ALL]> domain1.com, domain2.com, domain3.com
Waiting for outgoing deliveries to finish...
Mail delivery suspended.
```

suspendlistener

Description

Suspend receiving.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> suspendlistener
Choose the listener(s) you wish to suspend.
Separate multiple entries with commas.
1. All
2. InboundMail
3. OutboundMail
[1]> 1
Enter the number of seconds to wait before abruptly closing connections.
[30]>
Waiting for listeners to exit...
Receiving suspended.
mail3.example.com>
```

tcpservices

Description

Display information about files opened by processes.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.cisco.com> tcpservices
System Processes (Note: All processes may not always be present)
  ftpd.main      - The FTP daemon
  ginetd         - The INET daemon
  interface      - The interface controller for inter-process communication
  ipfw           - The IP firewall
  slapd          - The Standalone LDAP daemon
  sntpd          - The SNTP daemon
  sshd           - The SSH daemon
  syslogd        - The system logging daemon
```

```

winbindd      - The Samba Name Service Switch daemon
Feature Processes

```

techsupport

Description

Allow Cisco TAC to access your system.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports batch format.

Example

```

mail3.example.com> techsupport
Service Access currently disabled.
Serial Number: XXXXXXXXXXXX-XXXXXXX
Choose the operation you want to perform:
- SSHACCESS - Allow a Cisco IronPort Customer Support representative to remotely access
your system, without establishing a tunnel.
- TUNNEL - Allow a Cisco IronPort Customer Support representative to remotely access your
system, and establish a secure tunnel
           for communication.

```

```

- STATUS - Display the current techsupport status.
[]> sshaccess
A random seed string is required for this operation
1. Generate a random string to initialize secure communication (recommended)
2. Enter a random string
[1]> 1
Are you sure you want to enable service access? [N]> y
Service access has been ENABLED. Please provide the string:
QT22-JQZF-YAQL-TL8L-8@2L-95
to your Cisco IronPort Customer Support representative.
Service Access currently ENABLED (0 current service logins).
Tunnel option is not active.
Serial Number: XXXXXXXXXXXX-XXXXXXX
Choose the operation you want to perform:
- DISABLE - Prevent customer service representatives from remotely accessing your system.
- STATUS - Display the current techsupport status.
[]>

```

tlsverify

Description

Establish an outbound TLS connection on demand and debug any TLS connection issues concerning a destination domain. To create the connection, specify the domain to verify against and the destination host. AsyncOS checks the TLS connection based on the Required (Verify) TLS setting

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format.

Batch Format

The batch format of the `tlsverify` command can be used to perform all the functions of the traditional CLI command to check the TLS connection to the given hostname.

```
tlsverify <domain> <hostname>[:<port>]
```

Example

```

mail3.example.com> tlsverify
Enter the TLS domain to verify against:
[]> example.com
Enter the destination host to connect to. Append the port (example.com:26) if you are not
connecting on port 25:
[example.com]> mxe.example.com:25
Connecting to 1.1.1.1 on port 25.
Connected to 1.1.1.1 from interface 10.10.10.10.
Checking TLS connection.
TLS connection established: protocol TLSv1, cipher RC4-SHA.
Verifying peer certificate.
Verifying certificate common name mxe.example.com.
TLS certificate match mxe.example.com

```

```
TLS certificate verified.
TLS connection to 1.1.1.1 succeeded.
TLS successfully connected to mx.example.com.
TLS verification completed.
```

trace

Description

Trace the flow of a message through the system

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> trace
Enter the source IP
[ ]> 192.168.1.1
Enter the fully qualified domain name of the source IP
[ ]> example.com
Select the listener to trace behavior on:
1. InboundMail
2. OutboundMail
[1]> 1
Fetching default SenderBase values...
Enter the SenderBase Org ID of the source IP. The actual ID is N/A.
[N/A]>
Enter the SenderBase Reputation Score of the source IP. The actual score is N/A.
[N/A]>
Enter the Envelope Sender address:
[ ]> pretend.sender@example.net
Enter the Envelope Recipient addresses. Separate multiple addresses by commas.
[ ]> admin@example.com
Load message from disk? [Y]> n
Enter or paste the message body here. Enter '.' on a blank line to end.
Subject: Hello
This is a test message.
.
HAT matched on unnamed sender group, host ALL

Note When using trace , you must include both the header and the body of the message pasted into the CLI.

trackingconfig

Description

Configure the tracking system.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> trackingconfig
Message Tracking service status: Message Tracking is enabled.
Choose the operation you want to perform:
- SETUP - Enable Message Tracking for this appliance.
[]> setup
Would you like to use the Message Tracking Service? [Y]>
Do you want to use Centralized Message Tracking for this appliance? [N]>
Would you like to track rejected connections? [N]>
Message Tracking service status: Local Message Tracking is enabled.
Rejected connections are currently not being tracked.
Choose the operation you want to perform:
- SETUP - Enable Message Tracking for this appliance.
[]>
```

tzupdate

Description

Update timezone rules

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command supports a batch format.

Batch Format

The batch format of the tzupdate command forces an update off all time zone rules even if no changes are detected.

```
tzupdate [force]
```

Example

```
mail.example.com> tzupdate
Requesting update of Timezone Rules
```

updateconfig

Description

Configure system update parameters.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Note The `CLIENTCERTIFICATE` and `VLNID` subcommands do not require a 'commit'.

Note The `VLNID` subcommand is only applicable for SLR or PLR registered virtual devices (that is, SLR or PLR registered device operating in air-gap mode).

Examples

Configure the Email Gateway to Download Updates from Updater Servers

In the following example, the `updateconfig` command is used to configure the email gateway to download update images from Cisco servers and download the list of available AsyncOS upgrades from a local server.

```
mail.example.com> updateconfig
Service (images):                               Update URL:
-----
Feature Key updates                             http://downloads.ironport.com/asyncos
Timezone rules                                 Cisco IronPort Servers
Enrollment Client Updates                     Cisco IronPort Servers
Support Request updates                       Cisco IronPort Servers
Cisco IronPort AsyncOS upgrades              Cisco IronPort Servers
Service (list):                               Update URL:
-----
Timezone rules                                 Cisco IronPort Servers
Enrollment Client Updates                     Cisco IronPort Servers
Support Request updates                       Cisco IronPort Servers
Service (list):                               Update URL:
-----
Cisco IronPort AsyncOS upgrades              Cisco IronPort Servers
Update interval: 5m
Alert Interval for Disabled Automatic Engine Updates: 30d
Proxy server: not enabled
HTTPS Proxy server: not enabled
Choose the operation you want to perform:
- SETUP - Edit update configuration.
- VALIDATE_CERTIFICATES - Validate update server certificates
- TRUSTED_CERTIFICATES - Manage trusted certificates for updates
[1]> setup

Configure the Email Gateway to Verify the Validity of Updater Server Certificate

If you configure this option, every time the email gateway communicates the Cisco updater server, the validity of the updater server certificate is verified. If the verification fails, updates are not downloaded and the details are logged in Updater Logs. The following example shows how to configure this option:

```

mail.example.com> updateconfig
Service (images):                                Update URL:

Configure the Email Gateway to Trust Proxy Server Communication

If you are using a non-transparent proxy server, you can add the CA certificate used to sign the proxy certificate to the email gateway. By doing so, the email gateway trusts the proxy server communication. The following example shows how to configure this option:

```

...
Choose the operation you want to perform:
- SETUP - Edit update configuration.
- VALIDATE_CERTIFICATES - Validate update server certificates
- TRUSTED_CERTIFICATES - Manage trusted certificates for updates
[]> trusted_certificates
Choose the operation you want to perform:
- ADD - Upload a new trusted certificate for updates.
[]> add
Paste certificates to be trusted for secure updater connections, blank to quit
Trusted Certificate for Updater:
Paste cert in PEM format (end with '.'):
-----BEGIN CERTIFICATE-----
MMIICiDCCAFGgAwIBAgIBATANBgkqhkiG9w0BAQUFADCBgDELMakGAlUEBhMCSU4x
DDAKBgNVBAgTA0tBUjENM.....
-----END CERTIFICATE-----
.
Choose the operation you want to perform:
- ADD - Upload a new trusted certificate for updates.
- LIST - List trusted certificates for updates.
- DELETE - Delete a trusted certificate for updates.
[]>

```

Uploading Cisco Talos Certificate in Email Gateway

In the following example, you can use the `updateconfig > clientcertificate` sub command to upload the Cisco Talos certificate in the email gateway

updatenow

Description

Requests an update to all system service components.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does support a batch format.

Batch Format

The batch format of the updatenow command can be used to update all components on the email gateway even if no changes are detected.

```
updatenow [force]
```

Example

```
mail3.example.com> updatenow
Success - All component updates requested
```

version

Description

View system version information

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> version
Current Version
=====
Product: Cisco C100V Email Security Virtual Appliance
Model: C100V
Version: 9.1.0-019
Build Date: 2015-02-17
Install Date: 2015-02-19 05:17:56
Serial #: 421C73B18CFB05784A83-B03A99E71ED8
```

```

BIOS: 6.00
CPUs: 2 expected, 2 allocated
Memory: 6144 MB expected, 6144 MB allocated
RAID: NA
RAID Status: Unknown
RAID Type: NA
BMC: NA

```

wipedata

Description

Use the **wipedata** command to wipe the core files on the disk and check the status of the last operation.

Note Depending on the size of the data, wipe action may take a while and can affect the system performance until the action is complete.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```

mail.example.com> wipedata
Wiping data may take a while and can affect system performance till it completes.
Choose the operation you want to perform:
- STATUS - Display status of last command run
- COREDUMP - Wipe core files on disk
[]> coredump
wipedata: In progress
mail.example.com> wipedata
Wiping data may take a while and can affect system performance till it completes.
Choose the operation you want to perform:
- STATUS - Display status of last command run
- COREDUMP - Wipe core files on disk
[]> status
Last wipedata status: Successful

```

upgrade

Description

The **upgrade** CLI command displays a list of available upgrades and upgrades the AsyncOS system to the version specified by the user.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> upgrade
Are you sure you want to proceed with upgrade? [N]> y

Choose the operation you want to perform:
- DOWNLOADINSTALL - Downloads and installs the upgrade image (needs reboot).
- DOWNLOAD - Downloads the upgrade image.
[]> downloadinstall

Upgrades available.
1. AsyncOS 10.0.2 build 020 upgrade For Email, 2017-05-09. This is release for Maintenance
   Deployment.
2. AsyncOS 11.0.0 build 132 upgrade For Management, 2017-12-08.This release is for Maintenance
   Deployment.
.....
Performing an upgrade may require a reboot of the system after the upgrade is applied. You
can log in to your appliance after the upgrade is done.
Do you want to proceed with the upgrade? [Y]>Y
```

Content Scanning

contentscannerstatus

Display the content scanning engine version information.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> contentscannerstatus
Component          Version          Last Updated
Content Scanner Tools 11.2.1884.970097  Never updated
```

contentscannerupdate

Request manual update of the content scanning engine. If 'force' parameter is used, update is performed even if no changes are detected.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> contentsscannerupdate force
Requesting forced update for Content Scanner.
```

LDAP

This section contains the following CLI commands:

ldapconfig

Description

Configure LDAP servers

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example - Creating a New LDAP Server Profile

In the following example, the `ldapconfig` command is used to define an LDAP server for the email gateway to bind to, and queries for recipient acceptance (`ldapaccept` subcommand), routing (`ldaprouting` subcommand), masquerading (`masquerade` subcommand), end-user authentication for the Spam Quarantine (`isqauth` subcommand), and alias consolidation for spam notifications (`isqalias` subcommand) are configured.

First, the nickname of "PublicLDAP" is given for the `mldapserver.example.com` LDAP server. Queries are directed to port 3268 (the default). The search base of `example.com` is defined (`dc=example,dc=com`), and queries for recipient acceptance, mail re-routing, and masquerading are defined. The queries in this example are similar to an OpenLDAP directory configuration which uses the `inetLocalMailRecipient` auxiliary object class defined in the expired Internet Draft *draft-lachman-laser-ldap-mail-routing-xx.txt*, also sometimes known as "the Laser spec." (A version of this draft is included with the OpenLDAP source distribution.) Note that in this example, the alternate mailhost to use for queried recipients in the mail re-routing query is `mailForwardingAddress`. Remember that query names are case-sensitive and must match exactly in order to return the proper results.

```
mail3.example.com> ldapconfig
No LDAP server configurations.
Choose the operation you want to perform:
- NEW - Create a new server configuration.
- SETUP - Configure LDAP options.
[ ]> new
Please create a name for this server configuration (Ex: "PublicLDAP"):

Idapflush

Description

Flush any cached LDAP results.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```

mail3.example.com> ldapflush
Are you sure you want to flush any cached LDAP results? [N]> y
Flushing cache
mail3.example.com>

```

Idaptest

Description

Perform a single LDAP query test

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

In this example, the `ldaptest` command is used to test the only recipient acceptance query for the configured LDAP server configuration. The recipient address “`admin@example.com`” passes the test, while the recipient address “`bogus@example.com`” fails.

```

mail3.example.com> ldaptest
Select which LDAP query to test:
1. PublicLDAP.ldapaccep
[1]> 1
Address to use in query:
[]> admin@example.com
LDAP query test results:
    Query: PublicLDAP.ldapaccept
    Argument: admin@example.com
    Action: pass
LDAP query test finished.
mail3.example.com> ldaptest
Select which LDAP query to test:
1. PublicLDAP.ldapaccep
[1]> 1
Address to use in query:
[]> bogus@example.com
LDAP query test results:
    Query: PublicLDAP.ldapaccept
    Argument: bogus@example.com
    Action: drop or bounce (depending on listener settings)
    Reason: no matching LDAP record was found
LDAP query test finished.
mail3.example.com>

```

sievechar

Description

Sets or disables the character used for Sieve Email Filtering, as described in RFC 3598. Note that the Sieve Character is ONLY recognized in LDAP Accept and LDAP Reroute queries. Other parts of the system will operate on the complete email address.

Allowable characters are: `-_+=/^\#`

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

In this example, the sievechar command is used to define + as the sieve character recognized in Accept and LDAP Reroute queries.

```

mail3.example.com> sievechar
Sieve Email Filtering is currently disabled.
Choose the operation you want to perform:
- SETUP - Set the separator character.
[]> setup
Enter the Sieve Filter Character, or a space to disable Sieve Filtering.
[]> +
Sieve Email Filter is enabled, using the '+' character as separator.
This applies only to LDAP Accept and LDAP Reroute Queries.
Choose the operation you want to perform:

```

```
- SETUP - Set the separator character.  
[]>
```

Mail Delivery Configuration/Monitoring

This section contains the following CLI commands:

addresslistconfig

Description

Configure address lists.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Batch Format

The batch format for the `addresslistconfig` command can be used to create a new address list, edit an existing address list, print a list of address lists, delete an address list, or find conflicting addresses within an address list.

- Adding a new address list:

```
addresslistconfig new <name> --descr=<description> --addresses=<address1,address2,...>
```

- Editing an existing address list:

```
addresslistconfig edit <name> --name=<new-name> --descr=<description>  
--addresses=<address1,address2,...>
```

- Deleting an address list:

```
addresslistconfig delete <name>
```

- Printing a list of address lists:

```
addresslistconfig print <name>
```

- Finding conflicting addresses within an address list:

```
addresslistconfig conflicts <name>
```

Example

```
mail1.example.com> addresslistconfig
```

```
No address lists configured.
```

```
Choose the operation you want to perform:
- NEW - Create a new address list.
[]> new

Enter a name for the address list:
> add-list1

Enter a description for the address list:
> This is a sample address list

Enter the type of list:
1. Full Email Addresses only
2. Domains only
3. IP Addresses only
4. All of the above
Enter the type of the address list:
[4]> 1

Enter a comma separated list of addresses:
(e.g.: user@example.com)
> user1@example.com, user2@example.com

Address list "add-list1" added.

Choose the operation you want to perform:
- NEW - Create a new address list.
- EDIT - Modify an address list.
- DELETE - Remove an address list.
- PRINT - Display the contents of an address list.
- CONFLICTS - Find conflicting entries within an address list.
[]>
```

aliasconfig

Description

Configure email aliases.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Batch Format

The batch format of the aliasconfig command can be used to add a new alias table, edit an existing table, print a list of email aliases, and import/export alias table. To invoke as a batch command, use the following format of the aliasconfig command with the variables listed below:

- Adding a new email alias:

```
aliasconfig new <domain> <alias> [email_address1] [email_address2] ...
```

Note Using the 'aliasconfig new' command with a non-existent domain causes the domain to be created.

- Editing an existing email alias

```
aliasconfig edit <domain> <alias> <email_address1> [email_address2] ...
```

- Displaying an email alias:

```
aliasconfig print
```

- Importing a local alias listing:

```
aliasconfig import <filename>
```

- Exporting an alias listing on the email gateway:

```
aliasconfig export <filename>
```

Example

```
mail3.example.com> aliasconfig
Enter address(es) for "customer care".
Separate multiple addresses with commas.
[ ]> bob@example.com, frank@example.com, sally@example.com
Adding alias customer care: bob@example.com, frank@example.com, sally@example.com
Do you want to add another alias? [N]> n
There are currently 1 mappings defined.
Choose the operation you want to perform:
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- PRINT - Display the table.
- IMPORT - Import aliases from a file.
- EXPORT - Export table to a file.
- CLEAR - Clear the table.
[ ]> new
How do you want your aliases to apply?
1. Globally
2. Add a new domain context
3. example.com
[1]> 1
Enter the alias(es) to match on.
Separate multiple aliases with commas.
Allowed aliases:
- "user@domain" - This email address.
- "user" - This user for any domain
- "@domain" - All users in this domain.
- "@.partialdomain" - All users in this domain, or any of its sub domains.
```

```
[ ]> admin
Enter address(es) for "admin".
Separate multiple addresses with commas.
[ ]> administrator@example.com
Adding alias admin: administrator@example.com
Do you want to add another alias? [N]> n
There are currently 2 mappings defined.
Choose the operation you want to perform:
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- PRINT - Display the table.
- IMPORT - Import aliases from a file.
- EXPORT - Export table to a file.
- CLEAR - Clear the table.
[ ]> print
admin: administrator@example.com
[ example.com ]
customercare: bob@example.com, frank@example.com, sally@example.com
There are currently 2 mappings defined.
Choose the operation you want to perform:
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- PRINT - Display the table.
- IMPORT - Import aliases from a file.
- EXPORT - Export table to a file.
- CLEAR - Clear the table.
[ ]>
```

Table 6: Arguments for Configuring Aliases

Argument	Description
<domain>	The domain context in which an alias is applied. 'Global' specifies the Global Domain Context.
<alias>	The name of the alias to configure Aliases permitted at the Global Comain Context: 'user@domain' — This email address. 'user'— This user for any domain. '@domain— All users in this domain. '@.partialdomain'— All users in this domain or any of its sub-domains. Aliases permitted for specific domain contexts: 'user'— This user in this domain context 'user@domain'— This email address
<email_address>	The email address that an alias maps to. A single alias can map to multiple email addresses.
<filename>	The filename to use with importing/exporting the alias table.

archivemessage

Description

Archive older messages in your queue.

Usage

Commit: This command does not require a commit.

Cluster Management: This command is restricted to machine mode..

Batch Command: This command does not support a batch format.

Example

In the following example, an older message is archived:

```
mail3.example.com>
archivemessage
Enter the MID to archive.
[0]> 47
```

```
MID 47 has been saved in file oldmessage_47.mbox in the configuration
```

altsrchoost

Description

Configure Virtual Gateway(tm) mappings.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

In the following example, the altsrchoost table is printed to show that there are no existing mappings. Two entries are then created:

- Mail from the groupware server host named @exchange.example.com is mapped to the PublicNet interface.
- Mail from the sender IP address of 192.168.35.35 is mapped to the AnotherPublicNet interface.

Finally, the altsrchoost mappings are printed to confirm and the changes are committed.

```
mail3.example.com> altsrchoost
There are currently no mappings configured.
Choose the operation you want to perform:
- NEW - Create a new mapping.
- IMPORT - Load new mappings from a file.
```

```
[ ]> new
Enter the Envelope From address or client IP address for which you want to set up a Virtual
Gateway mapping.
Partial addresses such as "@example.com" or "user@" are allowed.
[ ]> @exchange.example.com
Which interface do you want to send messages for @exchange.example.com from?
1. AnotherPublicNet (192.168.2.2/24: mail4.example.com)
2. Management (192.168.42.42/24: mail3.example.com)
3. PrivateNet (192.168.1.1/24: mail3.example.com)
4. PublicNet (192.168.2.1/24: mail4.example.com)
[1]> 4
Mapping for @exchange.example.com on interface PublicNet created.
Choose the operation you want to perform:
- NEW - Create a new mapping.
- EDIT - Modify a mapping.
- DELETE - Remove a mapping.
- IMPORT - Load new mappings from a file.
- EXPORT - Export all mappings to a file.
- PRINT - Display all mappings.
- CLEAR - Remove all mappings.
[ ]> new
Enter the Envelope From address or client IP address for which you want to set up a Virtual
Gateway mapping.
Partial addresses such as "@example.com" or "user@" are allowed.
[ ]> 192.168.35.35

bounceconfig

Description

Configure the behavior of bounces.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. See the inline CLI help for more details. Use the help command to access the inline help for this command.

Example

In the following example, a bounce profile named bounceprofile is created using the **bounceconfig** command. In this profile, all hard bounced messages are sent to the alternate address **bounce-mailbox@example.com**. Delay warnings messages are enabled. One warning message will be sent per recipient, and the default value of 4 hours (14400 seconds) between warning messages is accepted

```
mail3.example.com> bounceconfig
Current bounce profiles:
1. Default
Choose the operation you want to perform:
- NEW - Create a new profile.
- EDIT - Modify a profile.
[ ]> new
Please create a name for the profile:
[ ]> bounceprofile
Please enter the maximum number of retries.

Applying a Bounce Profile to a Listener

After a bounce profile has been configured, you can apply the profile for each listener using the `listenerconfig` -> `bounceconfig` command and then committing the changes.

Note Bounce profiles can be applied based upon the listener that a message was received on. However, this listener has nothing to do with how the message is ultimately delivered.

In this example, the `OutboundMail` private listener is edited and the bounce profile named `bouncepr1` is applied to it.

```

mail3.example.com> listenerconfig
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP Port 25 Private
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[]> edit
Enter the name or number of the listener you wish to edit.
[]> 2
Name: OutboundMail
Type: Private
Interface: PrivateNet (192.168.1.1/24) TCP Port 25
Protocol: SMTP
Default Domain:
Max Concurrency: 600 (TCP Queue: 50)
Domain Map: Disabled
TLS: No
SMTP Authentication: Disabled
Bounce Profile: Default
Footer: None
LDAP: Off

```

```

Choose the operation you want to perform:
- NAME - Change the name of the listener.
- INTERFACE - Change the interface.
- LIMITS - Change the injection limits.
- SETUP - Configure general options.
- HOSTACCESS - Modify the Host Access Table.
- BOUNCECONFIG - Choose the bounce profile to use for messages injected on this listener.
- MASQUERADE - Configure the Domain Masquerading Table.
- DOMAINMAP - Configure domain mappings.
[ ]> bounceconfig
Please choose a bounce profile to apply:
1. Default
2. bouncepr1
3. New Profile
[1]> 2

bouncerecipients

Description

Bounce messages from the queue.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

Recipients to be bounced are identified by either the destination recipient host or the message sender identified by the specific address given in the Envelope From line of the message envelope. Alternately, all messages in the delivery queue can be bounced at once.

Bounce by Recipient Host

```
mail3.example.com> bouncerecipients
Please select how you would like to bounce messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 1
Please enter the hostname for the messages you wish to bounce.
[]> example.com
Are you sure you want to bounce all messages being delivered to "example.com"? [N]> Y
Bouncing messages, please wait.
100 messages bounced.
```

Bounce by Envelope From Address

```
mail3.example.com> bouncerecipients
Please select how you would like to bounce messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 2
Please enter the Envelope From address for the messages you wish to bounce.
[]> mailadmin@example.com
Are you sure you want to bounce all messages with the Envelope From address of
"mailadmin@example.com"? [N]> Y
Bouncing messages, please wait.
100 messages bounced.
```

Bounce All

```
mail3.example.com> bouncerecipients
Please select how you would like to bounce messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]>
Are you sure you want to bounce all messages in the queue? [N]> Y
Bouncing messages, please wait.
1000 messages bounced.
```

bvconfig

Description

Configure settings for Bounce Verification. Use this command to configure keys and invalid bounced emails.

Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

The following example shows key configuration and settings configured for invalid bounced emails.

```
mail3.example.com> bvconfig
Behavior on invalid bounces: reject
Key for tagging outgoing mail: key
Previously-used keys for verifying incoming mail:
  1. key (current outgoing key)
  2. goodneighbor (last in use Wed May 31 23:21:01 2006 GMT)
Choose the operation you want to perform:
- KEY - Assign a new key for tagging outgoing mail.
- PURGE - Purge keys no longer needed for verifying incoming mail.
- CLEAR - Clear all keys including current key.
- SETUP - Set how invalid bounces will be handled.
[ ]> key
Enter the key to tag outgoing mail with (when tagging is enabled in the Good
Neighbor Table)
[ ]> basic_key
Behavior on invalid bounces: reject
Key for tagging outgoing mail: basic_key
Previously-used keys for verifying incoming mail:
  1. basic_key (current outgoing key)
  2. key (last in use Wed May 31 23:22:49 2006 GMT)
  3. goodneighbor (last in use Wed May 31 23:21:01 2006 GMT)
Choose the operation you want to perform:
- KEY - Assign a new key for tagging outgoing mail.
- PURGE - Purge keys no longer needed for verifying incoming mail.
- CLEAR - Clear all keys including current key.
- SETUP - Set how invalid bounces will be handled.
[ ]> setup
How do you want bounce messages which are not addressed to a valid tagged
recipient to be handled?
1. Reject.
2. Add a custom header and deliver.
[1]> 1
Behavior on invalid bounces: reject
Key for tagging outgoing mail: basic_key
Previously-used keys for verifying incoming mail:
  1. basic_key (current outgoing key)
  2. key (last in use Wed May 31 23:22:49 2006 GMT)
  3. goodneighbor (last in use Wed May 31 23:21:01 2006 GMT)
Choose the operation you want to perform:

deleterecipients

Description

Delete messages from the queue

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

The email gateway gives you various options to delete recipients depending upon the need. The following example show deleting recipients by recipient host, deleting by Envelope From Address, and deleting all recipients in the queue.

Delete by Recipient Domain

```
mail3.example.com> deleterecipients
Please select how you would like to delete messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 1
Please enter the hostname for the messages you wish to delete.
[]> example.com
Are you sure you want to delete all messages being delivered to "example.com"? [N]> Y
Deleting messages, please wait.
100 messages deleted.
```

Delete by Envelope From Address

```
mail3.example.com> deleterecipients
Please select how you would like to delete messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 2
Please enter the Envelope From address for the messages you wish to delete.
[]> mailadmin@example.com
Are you sure you want to delete all messages with the Envelope From address of
"mailadmin@example.com"? [N]> Y
Deleting messages, please wait.
100 messages deleted.
```

Delete All

```
mail3.example.com> deleterecipients
Please select how you would like to delete messages:
1. By recipient host.
2. By Envelope From address.
3. All.
```

```
[1]> 1
Are you sure you want to delete all messages in the queue? [N]> Y
Deleting messages, please wait.
1000 messages deleted.
```

deliveryconfig

Description

Configure mail delivery

Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

In the following example, the `deliveryconfig` command is used to set the default interface to “Auto” with “Possible Delivery” enabled. The system-wide maximum outbound message delivery is set to 9000 connections.

```
mail3.example.com> deliveryconfig
Choose the operation you want to perform:
- SETUP - Configure mail delivery.
[ ]> setup
Choose the default interface to deliver mail.
1. Auto
2. AnotherPublicNet (192.168.3.1/24: mail4.example.com)
3. Management (192.168.42.42/24: mail3.example.com)
4. PrivateNet (192.168.1.1/24: mail3.example.com)
5. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 1
Enable "Possible Delivery" (recommended)? [Y]> y
Please enter the default system wide maximum outbound message delivery
concurrency
[10000]> 9000
mail3.example.com>
```

delivernow

Description

Reschedule messages for immediate delivery. Users have the option of selecting a single recipient host, or all messages currently scheduled for delivery.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```
mail3.example.com> delivernow
Please choose an option for scheduling immediate delivery.
1. By recipient domain
2. All messages
[1]> 1
Please enter the recipient domain to schedule for delivery.
[]>foo.com
Scheduling all messages to foo.com for delivery.
```

destconfig

Formerly the **setgoodtable** command. The table is now called the Destination Control Table. Use this table to configure delivery limits for a specified domain.

Using the destconfig Command

The following commands are available within the destconfig submenu:

Table 7: destconfig Subcommands

Syntax	Description
SETUP	Change global settings.
NEW	Add new limits for a domain.
EDIT	Modify the limits for a domain.
DELETE	Remove the limits for a domain.
DEFAULT	Change the default limits for non-specified domains.
LIST	Display the list of domains and their limits.
DETAIL	Display the details for one destination or all entries.
CLEAR	Remove all entries from the table.
IMPORT	Imports a table of destination control entries from a .INI configuration file.
EXPORT	Exports a table of destination control entries to a .INI configuration file.

The **destconfig** command requires the following information for each row in the Destination Controls table.

- Domain (recipient host)
- Maximum simultaneous connections to the domain
- Messages-per-connection limit
- Recipient limit
- System-wide or Virtual Gateway switch
- Enforce limits per domain

- Time period for recipient limit (in minutes)
- Bounce Verification
- Bounce profile to use for the domain

Sample Destination Control Table

The following table shows entries in a destination control table.

Table 8: Example Destination Control Table Entries

Domain	Conn. Limit	Rcpt. Limit	Min. Prd.	Enforce MX/DOM
(default)	500	None	1	Domain
Unlisted domains get their own set of 500 connections with unlimited repts/hr				
(default)	500	None	1	MXIP
Mail gateways at unlisted domains get up to 500 connections, with unlimited repts/hr				
partner.com	10	500	60	Domain
All gateways at partner.com will share 10 connections, with 500 repts/minute maximum				
101.202.101.2	500	None	0	MXIP
Specifying an IP address				

Batch Format

The batch format of the `destconfig` command can be used to perform all the functions of the traditional CLI command.

- Creating a new destination control table

```
destconfig new <profile> [options]
```

- Editing an existing destination control table

```
destconfig edit <default|profile> [options]
```

- Deleting an existing destination control table

```
destconfig delete <profile>
```

- Displaying a summary of all destination control entries

```
destconfig list
```

- Displaying details for one destination or all entries

```
destconfig detail <default|profile|all>
```

- Deleting all existing destination control table entries

```
destconfig clear
```

- Import table from a file

```
destconfig import <filename>
```

- Export table to a file

```
destconfig export <filename>
```

For the edit and new batch commands, any or all of the following options may be provided by identifying the value with the variable name and an equals sign. Options not specified will not be modified (if using edit) or will be set to default values (if using new).

concurrency_limit=<int> - The maximum concurrency for a specific host.
concurrency_limit_type=<host MXIP> - Maximum concurrency is per host or per MX IP.
concurrency_limit_apply=<system VG> - Apply maximum concurrency is system wide or by Virtual Gateway (tm) .
max_messages_per_connection=<int> - The maximum number of messages that will be sent per connection.
recipient_limit_minutes=<int> - The time frame to check for recipient limits in minutes.
recipient_limit=<int> - The number of recipients to limit per unit of time.
use_tls=<off on require on_verify required_verify> - Whether TLS should be on, off, or required for a given host.
bounce_profile=<default profile> - The bounce profile name to use.
bounce_verification=<off on> - Bounce Verification option.

Example: Creating a new destconfig Entry

In the following example, the current destconfig entries are printed to the screen. Then, a new entry for the domain partner.com is created. The concurrency limit of 100 simultaneous connections and recipient limit of 50 recipients for a 60-minute time period is set for that domain. So, the system will never open more than 100 connections or deliver to more than more than 50 recipients in a given hour to the domain partner.com . No bounce profile is assigned for this specific domain, and no specific TLS setting is configured. Finally, the changes are printed to confirm and then committed

```
mail3.example.com> destconfig
There are currently 2 entries configured.
Choose the operation you want to perform:
- SETUP - Change global settings.
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- DEFAULT - Change the default.
- LIST - Display a summary list of all entries.
- DETAIL - Display details for one destination or all entries.
- CLEAR - Remove all entries.
- IMPORT - Import tables from a file.
- EXPORT - Export tables to a file.

[]> Throttled delivery to partner.com in the destconfig table
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT

```

Example: Bounce Profile and TLS Settings

In this example, a new `destconfig` entry is configured for the domain `newpartner.com`. TLS connections are required. The example also shows the bounce profile named `bouncepr1` (see [Applying a Bounce Profile to a Listener, on page 147](#)) configured to be used for all email delivery to the domain `newpartner.com`.

```

[ ]> enabled TLS for delivery to newpartner.com using demo certificate
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT

```

Example: Inbound “Shock Absorber”

In this example, another **destconfig** entry is created to throttle mail to the internal groupware server `exchange.example.com`. This “shock absorber” entry for your internal server throttles inbound delivery to your internal groupware servers during periods of especially high volume traffic. In this example, the email gateway will never open more than ten simultaneous connections or deliver to more than 1000 recipients to the internal groupware server `exchange.example.com` in any given *minute*. No bounce profile or TLS setting is configured:

```

mail3.example.com> destconfig
There are currently 2 entries configured.
Choose the operation you want to perform:
- SETUP - Change global settings.
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- DEFAULT - Change the default.

[]> set up shock absorber for inbound mail
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT

```

Example: Global Settings

In this example, the TLS alert and certificate for TLS connections are configured.

```

mail3.example.com> destconfig
Choose the operation you want to perform:
- SETUP - Change global settings.
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- DEFAULT - Change the default.
- LIST - Display a summary list of all entries.
- DETAIL - Display details for one destination or all entries.
- CLEAR - Remove all entries.
- IMPORT - Import tables from a file.
- EXPORT - Export tables to a file.
[]> setup
The "Demo" certificate is currently configured. You may use "Demo", but this will not be
secure.
1. partner.com
2. Demo
Please choose the certificate to apply:
[1]> 1
Do you want to send an alert when a required TLS connection fails? [N]> n

```

Example: Enabling TLS Connection with DANE Support

In this example, a new `destconfig` entry is configured for the domain `newpartner.com`, where TLS connections are enabled with "Opportunistic" DANE support.

Note You must select a TLS support option to enable the DANE prompt.

```
mail3.example.com> destconfig
There are currently 1 entries configured. Choose the operation you want to perform:

- SETUP - Change global settings.
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- DEFAULT - Change the default.
- LIST - Display a summary list of all entries.
- DETAIL - Display details for one destination or all entries.
- CLEAR - Remove all entries.
- IMPORT - Import tables from a file.
- EXPORT - Export tables to a file.

[ ]> new

Enter the domain you wish to configure.[ ]> newpartner.com
Do you want to configure a concurrency limit for newpartner.com? [Y]>
Enter the max concurrency limit for "newpartner.com".
[500]>

Do you want to apply a messages-per-connection limit to this domain? [N]>
Do you want to apply a recipient limit to this domain? [N]>
Select how the limits will be enforced:
1. System Wide

[1]>
Do you wish to apply a specific TLS setting for this domain? [N]> y
Do you want to use TLS support?
1. No
2. Preferred
3. Required
4. Preferred - Verify
5. Required - Verify
6. Required - Verify Hosted Domains

[2]> 3
You have chosen to enable TLS.
Please use the 'certconfig' command to ensure that there is a valid certificate configured.

Do you want to configure DANE Support? [N]> y
Info:
If you configure DANE as 'Opportunistic' and the remote host does not support DANE,
opportunistic TLS is preferred for encrypting SMTP conversations.

If you configure DANE as 'Mandatory' and the remote host does not support DANE,
no connection is established to the destination host.

If you configure DANE as 'Mandatory' or 'Opportunistic' and the remote host supports DANE,
```

it is preferred for encrypting SMTP conversations.

Please choose a DANE option:

1. No
2. Opportunistic
3. Mandatory

[2]> 2

Do you want to apply a specific bounce verification address tagging setting for this domain?
[N]>

hostrate

Description

Monitor activity for a particular host

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```
mail3.example.com> hostrate
Recipient host:
[]> aol.com
Enter the number of seconds between displays.
[10]> 1
      Time      Host      CrtCncOut   ActvRcp ActvRcp   DlvRcp HrdBncRcp SftBncEvt
      Status

imageanalysisconfig

Description

Configure the IronPort Image Analysis settings

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```
mail.example.com>imageanalysisconfig
IronPort Image Analysis: Enabled
Image Analysis Sensitivity: 65
Verdict Ranges: Clean (0-49), Suspect(50-74), Inappropriate (75+)
Skip small images with size less than 100 pixels (width or height)

(First time users see the license agreement displayed here.)
Choose the operation you want to perform:
- SETUP - Configure IronPort Image Analysis.
[]> setup
IronPort Image Analysis: Enabled
Would you like to use IronPort Image Analysis? [Y]>
Define the image analysis sensitivity. Enter a value between 0 (least sensitive) and 100
(most sensitive). As sensitivity increases, so does the false
positive rate. The default setting of 65 is recommended.
[65]>
Define the range for a CLEAN verdict. Enter the upper bound of the CLEAN range by entering
a value between 0 and 98. The default setting of 49 is
recommended.
[49]>
Define the range for a SUSPECT verdict. Enter the upper bound of the SUSPECT range by
entering a value between 50 and 99. The default setting of 74 is
recommended.
[74]>
Would you like to skip scanning of images smaller than a specific size? [Y]>
Please enter minimum image size to scan in pixels, representing either height or width of
a given image.
[100]>
IronPort Image Analysis: Enabled
Image Analysis Sensitivity: 65
Verdict Ranges: Clean (0-49), Suspect(50-74), Inappropriate (75+)
Skip small images with size less than 100 pixels (width or height)
Choose the operation you want to perform:
- SETUP - Configure IronPort Image Analysis.
[]>
```

oldmessage

Description

Displays the mid and headers of the oldest non-quarantine message on the system.

Usage

Commit: This command does not require a commit.

Cluster Management: This command is restricted to machine mode..

Batch Command: This command does not support a batch format.

Example

In the following example, an older messages are displayed:

```
mail3.example.com>
oldmessage
MID 9: 1 hour 5 mins 35 secs old
Received: from test02.com ([172.19.0.109])
by test02.com with SMTP; 14 Feb 2007 22:11:37 -0800
From: user123@test02.com
To: 4031@example.com
Subject: Testing
Message-Id: <20070215061136.68297.16346@test02.com>
```

rate

Description

Monitor message throughput

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> rate

Enter the number of seconds between displays.

```

redirectrecipients

Description

Redirect all messages to another relay host.

Danger Redirecting messages to a receiving domain that has /dev/null as its destination results in the loss of messages. The CLI does not display a warning if you redirect mail to such a domain. Check the SMTP route for the receiving domain before redirecting messages.

Danger Redirecting recipients to a host or IP address that is not prepared to accept large volumes of SMTP mail from this host will cause messages to bounce and possibly result in the loss of mail.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format.

Batch Format

The batch format of the redirectrecipients command can be used to perform all the functions of the traditional CLI command.

- Redirects all mail to another host name or IP address

```
redirectrecipients host <hostname>
```

Example

The following example redirects all mail to the example2.com host.

```

mail3.example.com> redirectrecipients
Please enter the hostname or IP address of the machine you want to send all mail to.
[]> example2.com
WARNING: redirecting recipients to a host or IP address that is not prepared to accept large
volumes of SMTP mail from this host
will cause messages to bounce and possibly result in the loss of mail.
Are you sure you want to redirect all mail in the queue to "example2.com"? [N]> y
Redirecting messages, please wait.
246 recipients redirected.

```

resetcounters

Description

Reset all of the counters in the system

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail13.example.com> resetcounters
Counters reset: Mon Jan 01 12:00:01 2003
```

removemessage

Description

Attempts to safely remove a message for a given message ID.

The **removemessage** command can only remove messages that are in the work queue, retry queue, or a destination queue. Note that depending on the state of the system, valid and active messages may not be in any of those queues.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
example.com>
removemessage
Enter the MID to remove.
[ ]> 1
MID 1: 19 secs old
Received: from example2.com ([172.16.0.102])
    by test02.com with SMTP; 01 Mar 2007 19:50:41 -0800
From: user123@test02.com
To: 9526@example.com
Subject: Testing
Message-Id: <20070302035041.67424.53212@test02.com>
Remove this message? [N]> y
```

showmessage

Description

Shows the message and message body for a specified message ID.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
example.com> showmessage
MID 9: 1 hour 5 mins 35 secs old
Received: from example2.com([172.19.0.109])
  by test02.com with SMTP; 14 Feb 2007 22:11:37 -0800
From: user123@test02.com
To: 4031@example.com
Subject: Testing
Message-Id: <20070215061136.68297.16346@test02.com>
This is the message body.
```

showrecipients

Description

Show messages from the queue by recipient host, Envelope From address, or all messages.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does support a batch format.

Batch Format

The batch format of the showrecipients command can be used to perform all the functions of the traditional CLI command.

- Find messages by a recipient host name

```
showrecipients host <hostname>
```

- Find messages by an envelope from address

```
showrecipients [sender_options] <sender_email>
```

Example

The following sender_option is available:

--match-case Case-sensitive matching for the username portion of an address.

- Find all messages

```
showrecipients all
```

Example

The following example shows messages in the queue for all recipient hosts.

```
mail3.example.com> showrecipients
Please select how you would like to show messages:
1. By recipient host.
2. By Envelope From address.
3. All.
[1]> 3

```

tophosts

Description

To get immediate information about the email queue and determine if a particular recipient host has delivery problems — such as a queue buildup — use the `tophosts` command. The `tophosts` command returns a list of the top 20 recipient hosts in the queue. The list can be sorted by a number of different statistics, including active recipients, connections out, delivered recipients, soft bounced events, and hard bounced recipients.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```

mail3.example.com> tophosts
Sort results by:

```

```

1. Active Recipients
2. Connections Out
3. Delivered Recipients
4. Hard Bounced Recipients
5. Soft Bounced Events
[1]> 1
Status as of:                Fri Mar 13 06:09:18 2015 GMT
Hosts marked with '*' were down as of the last delivery attempt.
# Recipient Host              Active Conn.   Deliv.   Soft   Hard
# Recipient Host              Recip.   Out     Recip. Bounced Bounced
1* example.com                2        0        0       0       0

```

unsubscribe

Description

Update the global unsubscribe list

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

In this example, the address `user@example.net` is added to the Global Unsubscribe list, and the feature is configured to hard bounce messages. Messages sent to this address will be bounced; the email gateway will bounce the message immediately prior to delivery.

```
mail3.example.com> unsubscribe
Global Unsubscribe is enabled. Action: drop.
Choose the operation you want to perform:
- NEW - Create a new entry.
- IMPORT - Import entries from a file.
- SETUP - Configure general settings.
[]> new
Enter the unsubscribe key to add. Partial addresses such as "@example.com"
or "user@" are allowed, as are IP addresses. Partial hostnames such as "@.example.com" are
allowed.
[]> user@example.net
Email Address 'user@example.net' added.
Global Unsubscribe is enabled. Action: drop.
Choose the operation you want to perform:
- NEW - Create a new entry.
- DELETE - Remove an entry.
- PRINT - Display all entries.
- IMPORT - Import entries from a file.
- EXPORT - Export all entries to a file.
- SETUP - Configure general settings.
- CLEAR - Remove all entries.
[]> setup
Do you want to enable the Global Unsubscribe feature? [Y]> y
Would you like matching messages to be dropped or bounced?
1. Drop
2. Bounce
[1]> 2
Global Unsubscribe is enabled. Action: bounce.
Choose the operation you want to perform:
- NEW - Create a new entry.
- DELETE - Remove an entry.
- PRINT - Display all entries.
- IMPORT - Import entries from a file.
- EXPORT - Export all entries to a file.
- SETUP - Configure general settings.
- CLEAR - Remove all entries.
[]>
mail3.example.com> commit
Please enter some comments describing your changes:
[]> Added username "user@example.net" to global unsubscribe
```

```
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

workqueue

Description

Display and/or alter work queue pause status

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> workqueue
Status: Operational
Messages: 1243
Manually pause work queue? This will only affect unprocessed messages. [N]> y
Reason for pausing work queue:
[ ]> checking LDAP server
Status: Paused by admin: checking LDAP server
Messages: 1243
```

Note Entering a reason is optional. If you do not enter a reason, the system logs the reason as “operator paused .”

In this example, the work queue is resumed:

```
mail3.example.com> workqueue
Status: Paused by admin: checking LDAP server
Messages: 1243
Resume the work queue? [Y]> y
Status: Operational
Messages: 1243
```

Networking Configuration / Network Tools

This section contains the following CLI commands:

etherconfig

Description

Configure Ethernet settings, including media settings, NIC pairing, VLAN configuration, and DSR configuration.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail3.example.com> etherconfig
Choose the operation you want to perform:
- MEDIA - View and edit ethernet media settings.
- VLAN - View and configure VLANs.
- LOOPBACK - View and configure Loopback.
- MTU - View and configure MTU.
- MULTICAST - Accept or reject ARP replies with a multicast address.
[]> vlan
VLAN interfaces:
Choose the operation you want to perform:
- NEW - Create a new VLAN.
[]> new
VLAN tag ID for the interface (Ex: "34"):
[]> 12
Enter the name or number of the ethernet interface you wish bind to:
1. Data 1
2. Data 2
3. Management
[1]> 1
VLAN interfaces:
1. VLAN 12 (Data 1)
Choose the operation you want to perform:
- NEW - Create a new VLAN.
- EDIT - Edit a VLAN.
- DELETE - Delete a VLAN.
[]>
Choose the operation you want to perform:
- MEDIA - View and edit ethernet media settings.
- VLAN - View and configure VLANs.
- LOOPBACK - View and configure Loopback.
- MTU - View and configure MTU.
- MULTICAST - Accept or reject ARP replies with a multicast address.
[]> loopback
Currently configured loopback interface:
Choose the operation you want to perform:
- ENABLE - Enable Loopback Interface.
[]>
Choose the operation you want to perform:
- MEDIA - View and edit ethernet media settings.
- VLAN - View and configure VLANs.
- LOOPBACK - View and configure Loopback.
- MTU - View and configure MTU.
- MULTICAST - Accept or reject ARP replies with a multicast address.
[]> mtu
Ethernet interfaces:
1. Data 1 default mtu 1500
2. Data 2 default mtu 1500
3. Management default mtu 1500
4. VLAN 12 default mtu 1500
Choose the operation you want to perform:
- EDIT - Edit an ethernet interface.
[]> edit
```

```

Enter the name or number of the ethernet interface you wish to edit.
[]> pair1
That value is not valid.
Enter the name or number of the ethernet interface you wish to edit.
[]> 12
That value is not valid.
Enter the name or number of the ethernet interface you wish to edit.
[]> 2
Please enter a non-default (1500) MTU value for the Data 2 interface.
[]> 1200
Ethernet interfaces:
1. Data 1 default mtu 1500
2. Data 2 mtu 1200
3. Management default mtu 1500
4. VLAN 12 default mtu 1500
Choose the operation you want to perform:
- EDIT - Edit an ethernet interface.
[]>

```

interfaceconfig

Description

Configure the interface. You can create, edit, or delete interfaces. You can enable FTP, change an IP address, and configure Ethernet IP addresses.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format.

Batch Format

The batch format of the interfaceconfig command can be used to perform all the functions of the traditional CLI command.

- Creating a new interface

interfaceconfig new <name>
<ethernet interface>
<hostname>
--ip=IPv4 Address/Netmask
--ip6=IPv6 Address/Prefix Length
[--ftp[=<port>]]

<code>[--telnet[=<port>]]</code>
<code>[--ssh[=<port>]]</code>
<code>[--http[=<port>]]</code>
<code>[--https[=<port>]]</code>
<code>[--euq_http[=<port>]]</code>
<code>[--euq_https[=<port>]]</code>
<code>[--ccs[=<port>]].</code>
FTP is available only on IPv4 .

- Deleting an interface

```
interfaceconfig delete <name>
```

Example: Configuring an Interface

```
mail.example.com> interfaceconfig
Currently configured interfaces:
1. Management (10.76.69.149/24 on Management: mail.example.com)
Choose the operation you want to perform:
- NEW - Create a new interface.
- EDIT - Modify an interface.
- GROUPS - Define interface groups.
- DELETE - Remove an interface.
[ ]> edit
Enter the number of the interface you wish to edit.
[ ]> 1
IP interface name (Ex: "InternalNet"):
[Management]>
Would you like to configure an IPv4 address for this interface (y/n)? [Y]>
IPv4 Address (Ex: 192.168.1.2 ):
[1.1.1.1]>
Netmask (Ex: "24", "255.255.255.0" or "0xffffffff00"):
[0xffffffff]>
Would you like to configure an IPv6 address for this interface (y/n)? [N]> n
Ethernet interface:
1. Data 1
2. Data 2
3. Management
[3]>
Hostname:
[mail.example.com]>
Do you want to configure custom SMTP Hello to use in the SMTP conversation? [N]>
Do you want to enable SSH on this interface? [Y]>
Which port do you want to use for SSH?
```

```
[22]>
Do you want to enable FTP on this interface? [N]>
Do you want to enable Cluster Communication Service on this interface? [N]>
Do you want to enable HTTP on this interface? [Y]>
Which port do you want to use for HTTP?
[80]>
Do you want to enable HTTPS on this interface? [Y]>
Which port do you want to use for HTTPS?
[443]>
Do you want to enable Spam Quarantine HTTP on this interface? [N]>
Do you want to enable Spam Quarantine HTTPS on this interface? [N]>
Do you want to enable AsyncOS API (Monitoring) HTTP on this interface? [N]> y
Which port do you want to use for AsyncOS API (Monitoring) HTTP?
[6080]>
Do you want to enable AsyncOS API (Monitoring) HTTPS on this interface? [N]> y
Which port do you want to use for AsyncOS API (Monitoring) HTTPS?
[6443]>
The "Demo" certificate is currently configured. You may use "Demo", but this will not be
secure. To assure privacy, run "certconfig" first.
Both HTTP and HTTPS are enabled for this interface, should HTTP requests redirect to the
secure service? [Y]>
You have edited the interface you are currently logged into. Are you sure you want to
change it? [Y]>
Currently configured interfaces:
1. Management (10.76.69.149/24 on Management: mail.example.com)
Choose the operation you want to perform:
- NEW - Create a new interface.
- EDIT - Modify an interface.
- GROUPS - Define interface groups.
- DELETE - Remove an interface.
[]>
```

nslookup

Description

Use the **nslookup** command to check the DNS functionality.

The **nslookup** command can confirm that the email gateway is able to reach and resolve hostnames and IP addresses from a working DNS (domain name service) server.

Table 9: nslookup Command Query Types

Query Type	Description
	the host's Internet address
CNAME	the canonical name for an alias
MX	the mail exchanger
NS	the name server for the named zone
PTR	the hostname if the query is an Internet address, otherwise the pointer to other information
SOA	the domain's "start-of-authority" information
TXT	the text information

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```
mail.example.com> nslookup
Please enter the host or IP address to resolve.
[]> vm30esa0086.ibqa
Choose the query type:
1. A           the host's IP address
2. AAAA        the host's IPv6 address
3. CNAME       the canonical name for an alias
4. MX          the mail exchanger
5. NS          the name server for the named zone
6. PTR         the hostname if the query is an Internet address,
otherwise the pointer to other information
7. SOA         the domain's "start-of-authority" information
8. TXT         the text information
[1]> 2
AAAA=2001:420:54ff:ff06::95 TTL=30m
```

netstat

Description

Use the netstat command to displays network connections (both incoming and outgoing), routing tables, and a number of network interface statistics. Note that this version will not support all arguments. Specifically, you cannot use -a, -A, -g, -m, -M, -N, -s. The command was designed to be run in interactive mode, so that you may enter netstat, then choose from five options to report on. You can also specify the interface to listen on and the interval for display.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```
example.com> netstat
Choose the information you want to display:
1. List of active sockets.
2. State of network interfaces.
3. Contents of routing tables.
4. Size of the listen queues.
5. Packet traffic information.
[1]> 2
Select the ethernet interface whose state you wish to display:
1. Data 1
2. Data 2
```

```

3. Management
4. ALL
[ ]> 1
Show the number of bytes in and out? [N]>
Show the number of dropped packets? [N]> y

packetcapture

Description

Use the **netstat** command to displays network connections (both incoming and outgoing), routing tables, and a number of network interface statistics. Note that this version will not support all arguments. Specifically, you cannot use `-a`, `-A`, `-g`, `-m`, `-M`, `-N`, `-s`. The command was designed to be run in interactive mode, so that you may enter `netstat`, then choose from five options to report on. You can also specify the interface to listen on and the interval for display.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format

Example

```

mail.example.com> packetcapture
Capture Information:
  Status:          No capture running
Current Settings:
  Maximum File Size: 200 MB
  Limit:           None (Run Indefinitely)
  Interface(s):    ALL
  Filter:          (tcp port 25)
Choose the operation you want to perform:
- START - Start packet capture.
- SETUP - Change packet capture settings.
[ ]> start
Success - Packet Capture has started
Capture Information:
  File Name:       C100V-421C73B18CFB05784A83-B03A99E71ED8-20150312-105256.cap
  File Size:       0 of 200M
  Duration:        0s

```

ping

Description

The ping command allows you to test connectivity to a network host from the email gateway.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

Example

```

mail3.example.com> ping
Which interface do you want to send the pings from?
1. Auto
2. Management (192.168.42.42/24: mail3.example.com)
3. PrivateNet (192.168.1.1/24: mail3.example.com)

```

```

4. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 1
Please enter the host you wish to ping.
[> anotherhost.example.com
Press Ctrl-C to stop.
PING anotherhost.example.com (

```

Note You must use Control-C to end the ping command.

ping6

Description

Ping a network host using IPv6

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

Example

```

mail.example.com> ping6
Which interface do you want to send the pings from?
1. Auto
2. Management (192.168.42.42/24: mail3.example.com)
[1]> 1
Please enter the host you wish to ping.
[> anotherhost.example.com
Press Ctrl-C to stop.

```

Note You must use Control-C to end the `ping6` command.

routeconfig

Description

The `routeconfig` command allows you to create, edit, and delete static routes for TCP/IP traffic. By default, traffic is routed through the default gateway set with the `setgateway` command. However, AsyncOS allows specific routing based on destination.

Routes consist of a nickname (for future reference), a destination, and a gateway. A gateway (the next hop) is an IP address such as 10.1.1.2. The destination can be one of two things:

- an IP address, such as 192.168.14.32
- a subnet using CIDR notation. For example, 192.168.5.0/24 means the entire class C network from 192.168.5.0 to 192.168.5.255.

For IPv6 addresses, you can use the following formats:

- 2620:101:2004:4202::0-2620:101:2004:4202::ff
- 2620:101:2004:4202::
- 2620:101:2004:4202::23
- 2620:101:2004:4202::/64

The command presents a list of all currently configured TCP/IP routes for you to select from using the `edit` and `delete` subcommands.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format.

Batch Format

The batch format of the `smtproutes` command can be used to perform all the functions of the traditional CLI command. You can choose whether to use IPv4 or IPv6 addresses for the route.

- Creating a static route:

```
routeconfig new 4|6 <name> <destination_address> <gateway_ip>
```

Table 10: routeconfig Arguments

Argument	Description
4 6	The IP version (IPv4 or IPv6) to apply this command to. For clear and print this option can be omitted and the command applies to both versions.

Argument	Description
name	The name of the route.
destination_address	The IP or CIDR address to match on for outgoing IP traffic.
gateway_ip	The IP address to send this traffic to.

- Editing a static route:

```
routeconfig edit 4|6 <name> <new_name> <destination_address> <gateway_ip>
```

- Deleting a static route:

```
routeconfig delete 4|6 <name>
```

- Deleting all static routes:

```
routeconfig clear [4|6]
```

- Printing a list of static routes:

```
routeconfig print [4|6]
```

Example

```
mail3.example.com> routeconfig
Configure routes for:
1. IPv4
2. IPv6
[1]>
Currently configured routes:
Choose the operation you want to perform:

- DELETE - Remove a route.
- CLEAR - Clear all entries.
[]>

```

setgateway

Description

The setgateway command configures the default next-hop intermediary through which packets should be routed. Alternate (non-default) gateways are configured using the routeconfig command.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```

mail3.example.com> setgateway
Warning: setting an incorrect default gateway may cause the current connection to be
interrupted when the changes are committed.
Enter new default gateway:
[10.1.1.1]> 192.168.20.1
mail3.example.com> commit
Please enter some comments describing your changes:
[]> changed default gateway to 192.168.20.1
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT

```

sethostname

Description

The hostname is used to identify the system at the CLI prompt. You must enter a fully-qualified hostname. The sethostname command sets the name of the email gateway. The new hostname does not take effect until you issue the commit command.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```
oldname.example.com> sethostname  
[oldname.example.com]> mail3.example.com  
oldname.example.com>
```

For the hostname change to take effect, you must enter the commit command. After you have successfully committed the hostname change, the new name appears in the CLI prompt:

```
oldname.example.com> commit  
Please enter some comments describing your changes:  
[ ]> Changed System Hostname  
Do you want to save the current configuration for rollback? [Y]> n  
Changes committed: Fri May 23 11:42:12 2014 GMT
```

The new hostname appears in the prompt as follows:

```
mail3.example.com>
```

smtproutes

Description

Set up permanent domain redirections.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

Batch Format

The batch format of the smtproutes command can be used to perform all the functions of the traditional CLI command.

- Creating a new SMTP route

```
smtproutes new <source> <destination> [destination] [destination] [...]
```

- Deleting an existing SMTP route

```
smtproutes delete <source>
```

- Clear a listing of SMTP routes

```
smtproutes clear
```

- Print a listing of SMTP routes

```
smtproutes print
```

- Import a listing of SMTP routes

```
smtproutes import <filenames>
```

- Export a listing of SMTP routes

```
smtproutes export <filenames>
```

Example

In the following example, the `smtproutes` command is used to construct a route (mapping) for the domain `example.com` to `relay1.example.com`, `relay2.example.com`, and `backup-relay.example.com`. Use `/pri=#` to specify a destination priority. THE # should be from 0-65535, with larger numbers indicating decreasing priority. If unspecified, the priority defaults to 0.

(Note that you may have constructed the same mapping during the `systemsetup` command when you configured the InboundMail public listener.)

```
mail3.example.com> smtproutes
There are no routes configured.
Choose the operation you want to perform:
- NEW - Create a new route.
- IMPORT - Import new routes from a file.
[ ]> new
Enter the domain for which you want to set up a permanent route.
Partial hostnames such as ".example.com" are allowed.
Use "ALL" for the default route.
[ ]> example.com
Enter the destination hosts, separated by commas, which you want mail
for example.com to be delivered.
Enter USEDNS by itself to use normal DNS resolution for this route.
Enter /dev/null by itself if you wish to discard the mail.
Enclose in square brackets to force resolution via address (A)
records, ignoring any MX records.
[ ]> relay1.example.com/pri=10, relay2.example.com, backup-relay.example.com
```

```

Mapping for example.com to relay1.example.com, relay2.example.com,
backup-relay.example.com/pri=10 created.
There are currently 1 routes configured.
Choose the operation you want to perform:
- NEW - Create a new route.
- EDIT - Edit destinations of an existing route.
- DELETE - Remove a route.
- PRINT - Display all routes.
- IMPORT - Import new routes from a file.
- EXPORT - Export all routes to a file.
- CLEAR - Remove all routes.
[]>

```

sslconfig

Description

Configure SSL settings for the email gateway.

Note You cannot change server and client methods in the FIPS 140-2 compliance mode.

After you configure TLS 1.3, you can use it for TLS communication across the legacy or new web interfaces of your email gateway and the API services.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example

```

mail.example.com> sslconfig

sslconfig settings:

## telnet

### Description

Connect to a remote host

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

### Example

```
mail3.example.com> telnet
Please select which interface you want to telnet from.
1. Auto
2. Management (192.168.42.42/24: mail3.example.com)
3. PrivateNet (192.168.1.1/24: mail3.example.com)
4. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 3
Enter the remote hostname or IP.
[]> 193.168.1.1
Enter the remote port.
[25]> 25
Trying 193.168.1.1...
Connected to 193.168.1.1.
Escape character is '^'.
```

## traceroute

### Description

Use the traceroute command to test connectivity to a network host using IPV4 from the email gateway and debug routing issues with network hops.

## Usage

Commit: This command does not require a ‘commit’.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

## Example

```
mail3.example.com> traceroute
Which interface do you want to trace from?
1. Auto
2. Management (192.168.42.42/24: mail3.example.com)
3. PrivateNet (192.168.1.1/24: mail3.example.com)
4. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 1
Please enter the host to which you want to trace the route.
[]> 10.1.1.1
Press Ctrl-C to stop.
traceroute to 10.1.1.1 (10.1.1.1), 64 hops max, 44 byte packets
 1 gateway
 (192.168.0.1) 0.202 ms 0.173 ms 0.161 ms
 2 hostname
 (10.1.1.1) 0.298 ms 0.302 ms 0.291 ms
mail3.example.com>
```

## traceroute6

### Description

Use the **traceroute6** command to test connectivity to a network host using IPV6 from the email gateway and debug routing issues with network hops.

### Usage

Commit: This command does not require a ‘commit’.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

## Example

```
mail.example.com> traceroute6
Which interface do you want to trace from?
1. Auto
2. D1 (2001:db8::/32: example.com)
[1]> 1
Please enter the host to which you want to trace the route.
[]> example.com
Press Ctrl-C to stop.
connect: No route to host
vm10esa0031.qa> traceroute6
Which interface do you want to trace from?
```

```
1. Auto
2. D1 (2001:db8::/32: example.com)
[1]> 2
Please enter the host to which you want to trace the route.
[]> example.com
Press Ctrl-C to stop.
traceroute6 to example.com (2606:2800:220:1:248:1893:25c8:1946) from 2001:db8::, 64 hops
max, 12 byte packets
sendto: No route to host
 1 traceroute6: wrote example.com 12 chars, ret=-1
 *sendto: No route to host
traceroute6: wrote example.com 12 chars, ret=-1
 *sendto: No route to host
traceroute6: wrote example.com 12 chars, ret=-1
```

## trailblazerconfig

- [Description, on page 195](#)
- [Usage, on page 196](#)
- [Example, on page 196](#)

## Description

The `trailblazerconfig` command is used to route your incoming and outgoing connections through HTTP and HTTPS ports on the new web interface.

You can see the inline help by using the following command on the CLI: `help trailblazerconfig`.

**Note** By default, `trailblazerconfig` CLI command is enabled on your email gateway. Make sure that the HTTPS ports are opened on the firewall. Also, ensure that your DNS server can resolve the hostname that you specified for accessing the email gateway.

The `trailblazerconfig` command helps you to avoid the following issues:

- Requiring to add multiple certificates for API ports in certain browsers.
- Redirecting to the legacy web interface when you refresh the Spam Quarantine, Safelist or Blocklist page.
- Metrics bar on the Advanced Malware Protection report page does not contain any data.

### Important

When you enable `trailblazerconfig` command on the email gateway, the requested URL will contain the `trailblazerconfig` HTTPS port number appended to the hostname.

The syntax is as follows:

```
trailblazerconfig enable <https_port> <http_port>- runs the trailblazer configuration on the default
ports (HTTPS: 4431).
```

```
trailblazerconfig disable- disables the trailblazer configuration
```

```
trailblazerconfig status- checks the status of the trailblazer configuration
```

## Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## Example

The following example shows how to enable and view status of `trailblazerconfig` command.

```
mail1.example.com> trailblazerconfig enable 4431

trailblazer is enabled.
To access the Next Generation web interface, use the port 4419 for HTTPS.
mail1.example.com> trailblazerconfig status
trailblazer is running with https on 4419 port.
mail1.example.com> trailblazerconfig disable
trailblazer is disabled.
[]>
```

# Outbreak Filters

This section contains the following CLI commands:

## outbreakconfig

### Description

Use the **outbreakconfig** command to configure the Outbreak Filter feature. You perform the following actions using this command:

- Enable Outbreak Filters globally
- Enable Adaptive Rules scanning
- Set a maximum size for files to scan (note that you are entering the size in *bytes* )
- Enable alerts for the Outbreak Filter

### Usage

**Commit:** This command requires a 'commit'.

**Cluster Management:** This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format.

## Example

```
mail.example.com> outbreakconfig
Outbreak Filters: Enabled
Choose the operation you want to perform:
- SETUP - Change Outbreak Filters settings.
[]> setup
Outbreak Filters: Enabled
```

```
Would you like to use Outbreak Filters? [Y]>
Outbreak Filters enabled.
Outbreak Filter alerts are sent when outbreak rules cross the threshold (go above or back
down below), meaning that new messages of
certain types could be quarantined or will no longer be quarantined, respectively.
Would you like to receive Outbreak Filter alerts? [N]>
What is the largest size message Outbreak Filters should scan?
[524288]>
Do you want to use adaptive rules to compute the threat level of messages? [Y]>

The Outbreak Filters feature is now globally enabled on the system. You must use the
'policyconfig' command in the CLI or the Email
Security Manager in the GUI to enable Outbreak Filters for the desired Incoming and Outgoing
Mail Policies.
Choose the operation you want to perform:
- SETUP - Change Outbreak Filters settings.
[]>
```

## outbreakflush

### Description

Clear the cached Outbreak Rules.

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### Example

```
mail3.example.com> outbreakflush
Warning - This command removes the current set of Outbreak Filter Rules, leaving your network
exposed until the next rule download.
Run "outbreakupdate force" command to immediately download Outbreak Filter Rules.
Are you sure that you want to clear the current rules? [N]> y
Cleared the current rules.
mail3.example.com>
```

## outbreakstatus

### Description

The **outbreakstatus** command shows the current Outbreak Filters feature settings, including whether the Outbreak Filters feature is enabled, any Outbreak Rules, and the current threshold.

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

## Example

```
mail3.example.com> outbreakstatus
Outbreak Filters: Enabled

Component Last Update Version
CASE Core Files 26 Jan 2014 06:45 (GMT +00:00) 3.3.1-005
CASE Utilities 26 Jan 2014 06:45 (GMT +00:00) 3.3.1-005

Outbreak Filter Rules with higher threat levels pose greater risks.
(5 = highest threat, 1 = lowest threat)

Last update: Mon Jan 27 04:36:27 2014

mail3.example.com>
```

## outbreakupdate

### Description

Requests an immediate update of CASE rules and engine core.

### Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

**Batch Command:** This command does not support a batch format.

### Example

```
elroy.run> outbreakupdate
Requesting updates for Outbreak Filter Rules.
```

## Policy Enforcement

This section contains the following CLI commands:

# dictionaryconfig

## Description

Configure content dictionaries

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

## Example

Use **dictionaryconfig -> new** to create dictionaries, and **dictionaryconfig -> delete** to remove dictionaries.

### Creating a Dictionary

```
example.com> dictionaryconfig
No content dictionaries have been defined.
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.

[]> new
Enter a name for this content dictionary.
[]> HRWords
Do you wish to specify a file for import? [N]>
Enter new words or regular expressions, enter a blank line to finish.
<list of words typed here>
Currently configured content dictionaries:
1. HRWords
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
- RENAME - Change the name of a content dictionary.
[]> delete
Enter the number of the dictionary you want to delete:
1. HRWords
[]> 1
Content dictionary "HRWords" deleted.
No content dictionaries have been defined.
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
[]>
```

## Creating a Dictionary 2

In this example, a new dictionary named “secret\_words” is created to contain the term “codename.” Once the dictionary has been entered, the edit -> settings subcommand is used to define the case-sensitivity and word boundary detection for words in the dictionary.

```
mail3.example.com> dictionaryconfig
No content dictionaries have been defined.
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
[]> new
Enter a name for this content dictionary.
[]> secret_words
Do you wish to specify a file for import? [N]>
Enter new words or regular expressions, enter a blank line to finish.
codename
Currently configured content dictionaries:
1. secret_words
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
- RENAME - Change the name of a content dictionary.
[]> edit
Enter the number of the dictionary you want to edit:
1. secret_words
[]> 1
Choose the operation you want to perform on dictionary 'secret_words':
- NEW - Create new entries in this dictionary.
- IMPORT - Replace all of the words in this dictionary.
- EXPORT - Export the words in this dictionary.
- DELETE - Remove an entry in this dictionary.
- PRINT - List the entries in this dictionary.
- SETTINGS - Change settings for this dictionary.
[]> settings
Do you want to ignore case when matching using this dictionary? [Y]>
Do you want strings in this dictionary to only match complete words? [Y]>
Enter the default encoding to be used for exporting this dictionary:
1. US-ASCII
2. Unicode (UTF-8)
3. Unicode (UTF-16)
4. Western European/Latin-1 (ISO 8859-1)
5. Western European/Latin-1 (Windows CP1252)
6. Traditional Chinese (Big 5)
7. Simplified Chinese (GB 2312)
8. Simplified Chinese (HZ GB 2312)
9. Korean (ISO 2022-KR)
10. Korean (KS-C-5601/EUC-KR)
11. Japanese (Shift-JIS (X0123))
12. Japanese (ISO-2022-JP)
13. Japanese (EUC)
[2]>
Choose the operation you want to perform on dictionary 'secret_words':
- NEW - Create new entries in this dictionary.
- IMPORT - Replace all of the words in this dictionary.
- EXPORT - Export the words in this dictionary.
- DELETE - Remove an entry in this dictionary.
- PRINT - List the entries in this dictionary.
- SETTINGS - Change settings for this dictionary.
```

```
[]>
Currently configured content dictionaries:
1. secret_words
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
- RENAME - Change the name of a content dictionary.
[]>
mail3.example.com> commit
Please enter some comments describing your changes:
[]> Added new dictionary: secret_words
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT
```

## Importing Dictionaries

In the example below, using the **dictionaryconfig** command, 84 terms in the profanity.txt text file are imported as Unicode (UTF-8) into a dictionary named profanity .

```
mail3.example.com> dictionaryconfig
No content dictionaries have been defined.
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
[]> new
Enter a name for this content dictionary.
[]> profanity
Do you wish to specify a file for import? [N]> y
Enter the name of the file to import:
[]> profanity.txt
Enter the encoding to use for the imported file:
1. US-ASCII
2. Unicode (UTF-8)
3. Unicode (UTF-16)
4. Western European/Latin-1 (ISO 8859-1)
5. Western European/Latin-1 (Windows CP1252)
6. Traditional Chinese (Big 5)
7. Simplified Chinese (GB 2312)
8. Simplified Chinese (HZ GB 2312)
9. Korean (ISO 2022-KR)
10. Korean (KS-C-5601/EUC-KR)
11. Japanese (Shift-JIS (X0123))
12. Japanese (ISO-2022-JP)
13. Japanese (EUC)
[2]>
84 entries imported successfully.
Currently configured content dictionaries:
1. profanity
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
- RENAME - Change the name of a content dictionary.
```

## Exporting Dictionaries

In the example below, using the `dictionaryconfig` command, the `secret_words` dictionary is exported to a text file named `secret_words_export.txt`

```
mail3.example.com> dictionaryconfig
Currently configured content dictionaries:
1. secret_words
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
- RENAME - Change the name of a content dictionary.
[]> edit
Enter the number of the dictionary you want to edit:
1. secret_words
[]> 1
Choose the operation you want to perform on dictionary 'secret_words':
- NEW - Create new entries in this dictionary.
- IMPORT - Replace all of the words in this dictionary.
- EXPORT - Export the words in this dictionary.
- DELETE - Remove an entry in this dictionary.
- PRINT - List the entries in this dictionary.
- SETTINGS - Change settings for this dictionary.
[]> export
Enter a name for the exported file:
[]> secret_words_export.txt
mail3.example.com> dictionaryconfig
Currently configured content dictionaries:
1. secret_words
Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
- RENAME - Change the name of a content dictionary.
[]> edit
Enter the number of the dictionary you want to edit:
1. secret_words
[]> 1
Choose the operation you want to perform on dictionary 'secret_words':
- NEW - Create new entries in this dictionary.
- IMPORT - Replace all of the words in this dictionary.
- EXPORT - Export the words in this dictionary.
- DELETE - Remove an entry in this dictionary.
- PRINT - List the entries in this dictionary.
- SETTINGS - Change settings for this dictionary.
[]> export
Enter a name for the exported file:
[]> secret_words_export.txt
```

## Example - Configuring Maximum Number of Content Dictionaries in Email Gateway

In the following example, you can use the `dictionaryconfig>dictionarylimits` sub command to configure a maximum number of 150 content dictionaries in your email gateway.

---

**Note** By default, you can configure a maximum of 100 content dictionaries in your email gateway.

---

---

**Note** When you use content dictionaries extensively with 'Message Body or Attachments' content filter condition or 'Body Scanning' or 'Attachment Scanning' message filter rules, it may degrade system performance.

---

```
mail1.example.com>> dictionaryconfig

Currently configured content dictionaries:
1. secret_words

Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
- RENAME - Change the name of a content dictionary.
[]> dictionarylimits

Enter the maximum number of content dictionaries that you want to create in
your email gateway.
When you use content dictionaries extensively with 'Message Body or
Attachments' content filter condition or 'Body Scanning' or 'Attachment
Scanning' message filter rules, it may degrade system performance.
[100]> 150

The maximum number of content dictionaries that you can configure in your email
gateway is 150.
Currently configured content dictionaries:
1. secret_words

Choose the operation you want to perform:
- NEW - Create a new content dictionary.
- EDIT - Modify a content dictionary.
- DELETE - Remove a content dictionary.
- DICTIONARYLIMITS - Configure maximum number of content dictionaries that you
can create in your email gateway.
- RENAME - Change the name of a content dictionary.
[]>
mail1.example.com> commit

Please enter some comments describing your changes:
[]> Committed the new changes

Do you want to save the current configuration for rollback? [Y]>

Changes committed: Thu Aug 05 10:35:10 2021 GMT
mail1.example.com>>
```

## exceptionconfig

### Description

Use the **exceptionconfig** command in the CLI to create the domain exception table. In this example, the email address “admin@zzzaazzz.com” is added to the domain exception table with a policy of “Allow.”

### Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine)..

Batch Command: This command does not support a batch format.

### Example

```
mail3.example.com> exceptionconfig
Choose the operation you want to perform:
- NEW - Create a new domain exception table entry
[]> new
Enter a domain, sub-domain, user, or email address for which you wish to
provide an exception:
[]> mail.partner.com
Any of the following passes:
- @[IP address]
 Matches any email address with this IP address.
- @domain
 Matches any email address with this domain.
- @.partial.domain
 Matches any email address domain ending in this domain.
- user@
 Matches any email address beginning with user@.
- user@domain
 Matches entire email address.
Enter a domain, sub-domain, user, or email address for which you wish to
provide an exception:
[]> admin@zzzaazzz.com
Choose a policy for this domain exception:
1. Allow
2. Reject
[1]> 1
Choose the operation you want to perform:
- NEW - Create a new domain exception table entry
- EDIT - Edit a domain exception table entry
- DELETE - Delete a domain exception table entry
- PRINT - Print all domain exception table entries
- SEARCH - Search domain exception table
- CLEAR - Clear all domain exception entries
[]>
```

## filters

### Description

Configure message processing options.

## Usage

**Commit:** This command requires a ‘commit’.

**Cluster Management:** This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format

## Example

In this example, the filter command is used to create three new filters:

- The first filter is named **big\_messages**. It uses the body-size rule to drop messages larger than 10 megabytes.
- The second filter is named **no\_mp3s**. It uses the attachment-filename rule to drop messages that contain attachments with the filename extension of .mp3 .
- The third filter is named **mailfrompm**. It uses mail-from rule examines all mail from postmaster@example.com and blind-carbon copies administrator@example.com .

Using the **filter -> list** subcommand, the filters are listed to confirm that they are active and valid, and then the first and last filters are switched in position using the move subcommand. Finally, the changes are committed so that the filters take effect.

```
mail3.example.com> filters
Choose the operation you want to perform:
- NEW - Create a new filter.
- IMPORT - Import a filter script from a file.
[]> new
Enter filter script. Enter '.' on its own line to end.
big_messages:
 if (body-size >= 10M) {
 drop();
 }
.
1 filters added.
Choose the operation you want to perform:
- NEW - Create a new filter.
- DELETE - Remove a filter.
- IMPORT - Import a filter script from a file.
- EXPORT - Export filters to a file
- MOVE - Move a filter to a different position.
- SET - Set a filter attribute.
- LIST - List the filters.
- DETAIL - Get detailed information on the filters.
- LOGCONFIG - Configure log subscriptions used by filters.
- ROLLOVERNOW - Roll over a filter log file.
[]> new
Enter filter script. Enter '.' on its own line to end.
no_mp3s:
 if (attachment-filename == '\\.mp3$') {
 drop();
 }
.
1 filters added.
Choose the operation you want to perform:
- NEW - Create a new filter.
- DELETE - Remove a filter.
- IMPORT - Import a filter script from a file.
- EXPORT - Export filters to a file
- MOVE - Move a filter to a different position.
```

```

- SET - Set a filter attribute.
- LIST - List the filters.
- DETAIL - Get detailed information on the filters.
- LOGCONFIG - Configure log subscriptions used by filters.
- ROLLOVERNOW - Roll over a filter log file.
[> new
Enter filter script. Enter '.' on its own line to end.
mailfrompm:
 if (mail-from == "^postmaster$")
 { bcc ("administrator@example.com"); }
.
1 filters added.
Choose the operation you want to perform:
- NEW - Create a new filter.
- DELETE - Remove a filter.
- IMPORT - Import a filter script from a file.
- EXPORT - Export filters to a file
- MOVE - Move a filter to a different position.
- SET - Set a filter attribute.
- LIST - List the filters.
- DETAIL - Get detailed information on the filters.
- LOGCONFIG - Configure log subscriptions used by filters.
- ROLLOVERNOW - Roll over a filter log file.
[> list

```

## policyconfig

### Description

Configure per recipient or sender based policies.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Examples

#### Creating an Incoming Mail Policy to Drop Spam Messages and Archive Suspected Spam Messages

In this example, the `policyconfig -> edit -> antispam` subcommand is used to edit the Anti-Spam settings for the default incoming mail policy. (Note that this same configuration is available in the GUI from the Email Security Manager feature.)

- First, messages *positively* identified as spam are chosen not to be archived; they will be dropped.
- Messages that are *suspected* to be spam are chosen to be archived. They will also be sent to the Spam Quarantine installed on the server named `quarantine.example.com`. The text `[quarantined: possible spam]` is prepended to the subject line and a special header of `X-quarantined: true` is configured to be added to these suspect messages. In this scenario, Administrators and end-users can check the quarantine for false positives, and an administrator can adjust, if necessary, the suspected spam threshold.

Finally, the changes are committed.

```
mail13.example.com> policyconfig
```

Would you like to configure Incoming or Outgoing Mail Policies?

|       |            |             |                              |           |                 |                   |

|         |          |        |     |     |     |         |
|---------|----------|--------|-----|-----|-----|---------|
| DEFAULT | Ironport | Mcafee | N/A | N/A | Off | Enabled |
|---------|----------|--------|-----|-----|-----|---------|

Choose the operation you want to perform:

- NEW - Create a new policy
- EDIT - Edit an existing policy
- PRINT - Print all policies
- FILTERS - Edit content filters

[1]> **new**

Enter the name for this policy:

[1]> **sales\_team**

Begin entering policy members. The following types of entries are allowed:

Username entries such as joe@, domain entries such as @example.com, sub-domain entries such as @.example.com, LDAP group memberships such as ldap(Engineers)

Enter a member for this policy:

[1]> **ldap(sales)**

Please select an LDAP group query:

1. PublicLDAP.ldapgroup

[1]> **1**

Is this entry a recipient or a sender?

1. Recipient
2. Sender

[1]> **1**

Add another member? [Y]> **n**

Would you like to enable Anti-Spam support? [Y]> **y**

Use the policy table default? [Y]> **n**

Begin Anti-Spam configuration

Some messages will be positively identified as spam. Some messages will be identified as suspected spam. You can set the IronPort Anti-Spam Suspected Spam Threshold below.

The following configuration options apply to messages POSITIVELY identified as spam:

What score would you like to set for the IronPort Anti-Spam spam threshold?

[90]> **90**

1. DELIVER
2. DROP
3. BOUNCE
4. IRONPORT QUARANTINE

What do you want to do with messages identified as spam?

[1]> **2**

Do you want to archive messages identified as spam? [N]> **n**

Do you want to enable special treatment of suspected spam? [Y]> **y**

What score would you like to set for the IronPort Anti-Spam suspect spam threshold?

[50]> **50**

The following configuration options apply to messages identified as SUSPECTED spam:

1. DELIVER
2. DROP
3. BOUNCE
4. IRONPORT QUARANTINE

What do you want to do with messages identified as SUSPECTED spam?

[1]> **4**

Do you want to archive messages identified as SUSPECTED spam? [N]> **n**

1. PREPEND
2. APPEND
3. NONE

Do you want to add text to the subject of messages identified as SUSPECTED spam?

[1]> **3**

Do you want to add a custom header to messages identified as SUSPECTED spam? [N]> **n**

Anti-Spam configuration complete

Would you like to enable Anti-Virus support? [Y]> **y**

## Creating a Policy for the Engineering Team

```

Use the policy table default? [Y]> y
Would you like to enable Outbreak Filters for this policy? [Y]> y
Use the policy table default? [Y]> y
Incoming Mail Policy Configuration

```

| Name:<br>----- | Anti-Spam:<br>----- | Anti-Virus:<br>----- | Advanced Malware<br>Protection:<br>----- | Graymail:<br>----- | Content Filter:<br>----- | Outbreak<br>Filters:<br>----- |
|----------------|---------------------|----------------------|------------------------------------------|--------------------|--------------------------|-------------------------------|
| sales_team     | IronPort            | Default              | Default                                  | Default            | Default                  | Default                       |

## Creating the scan\_for\_confidential Content Filter

```
Choose the operation you want to perform:
- NEW - Create a new policy
- EDIT - Edit an existing policy
- DELETE - Remove a policy
- PRINT - Print all policies
- SEARCH - Search for a policy by member
- MOVE - Move the position of a policy
- FILTERS - Edit content filters
- CLEAR - Clear all policies
[]>
```

Next, create three new content filters to be used in the Incoming Mail Overview policy table.

In the CLI, the filters subcommand of the policyconfig command is the equivalent of the Incoming Content Filters GUI page. When you create content filters in the CLI, you must use the save subcommand to save the filter and return to the policyconfig command.

First, create the scan\_for\_confidential content filter:

### Creating the scan\_for\_confidential Content Filter

Incoming Mail Policy Configuration

| Name:<br>----- | Anti-Spam:<br>----- | Anti-Virus:<br>----- | Advanced Malware<br>Protection:<br>----- | Graymail:<br>----- | Content<br>Filter:<br>----- | Outbreak<br>Filters:<br>----- |
|----------------|---------------------|----------------------|------------------------------------------|--------------------|-----------------------------|-------------------------------|
| sales_team     | IronPort            | Default              | Default                                  | Default            | Default                     | Default                       |
| engineering    | Default             | Default              | Default                                  | Default            | Default                     | Enabled                       |
| DEFAULT        | Ironport            | Mcafee               | N/A                                      | Off                | Off                         | Enabled                       |

```
Choose the operation you want to perform:
- NEW - Create a new policy
- EDIT - Edit an existing policy
- DELETE - Remove a policy

Incoming Mail Policy Configuration

```

| Name:<br>----- | Anti-Spam:<br>----- | Anti-Virus:<br>----- | Advanced Malware<br>Protection:<br>----- | Graymail:<br>----- | Content Filter:<br>----- | Outbreak<br>Filters:<br>----- |
|----------------|---------------------|----------------------|------------------------------------------|--------------------|--------------------------|-------------------------------|
| sales_team     | IronPort            | Default              | Default                                  | Default            | Default                  | Default                       |
| engineering    | Default             | Default              | Default                                  | Default            | Enabled                  | Enabled                       |
| DEFAULT        | Ironport            | Mcafee               | N/A                                      | Off                | Enabled                  | Enabled                       |

```

Choose the operation you want to perform:
- NEW - Create a new policy
- EDIT - Edit an existing policy
- DELETE - Remove a policy
- PRINT - Print all policies
- SEARCH - Search for a policy by member
- MOVE - Move the position of a policy

```

```
- FILTERS - Edit content filters
- CLEAR - Clear all policies
[]>
```

**Note** The CLI does not contain the notion of adding a new content filter within an individual policy. Rather, the filters subcommand forces you to manage all content filters from within one subsection of the policyconfig command. For that reason, adding the drop\_large\_attachments has been omitted from this example.

## DLP Policies for Default Outgoing Policy

This illustrates how to enable DLP policies on the default outgoing policy.

```
mail3.example.com> policyconfig
Would you like to configure Incoming or Outgoing Mail Policies?

Unscannable Message Handling
```

```
Current actions to take if any of the attachments could not be scanned due to message errors:
```

- WARNING: Delivering Unscannable due to Message Errors messages normally
- Prepending subjects with "[WARNING: ATTACHMENT UNSCANNED]"
- Archiving copies of the original message.

```

Do you want to edit the actions for Unscannable Message due to message errors? [N]> yes

Current actions to take if any of the attachments could not be scanned due to rate limit hit:
- WARNING: Delivering Unscannable due to Rate Limit messages normally
- Prepending subjects with "[WARNING: ATTACHMENT UNSCANNED]"
- Archiving copies of the original message.
Do you want to edit the actions for Unscannable Message due to rate limit hit? [N]> yes

Current actions to take if any of the attachments could not be scanned due to AMP Service not available:
- WARNING: Delivering Unscannable due to AMP Service Not Available messages normally
- Prepending subjects with "[WARNING: ATTACHMENT UNSCANNED]"
- Archiving copies of the original message.
Do you want to edit the actions for Unscannable Message due to AMP Service not available? [N]> yes

```

### Example: Setting Priority for "From" Header

In the following example, the `policyconfig > match headers priority` sub command is used to set the priority for the "From" message header, to match the incoming and outgoing messages in your email gateway.

```

mail1.example.com > policyconfig

Would you like to configure Incoming Mail Policy or Outgoing Mail Policies or Match Headers Priority?

1. Incoming Mail Policies
2. Outgoing Mail Policies
3. Match Headers Priority
[1]> 3

Match Headers Priority Configuration
Priority: Headers:
----- -
P1 Envelope Sender

Choose the operation you want to perform:
- ADD - Add match priority for headers
- EDIT - Edit an existing match priority for headers
- REMOVE - Remove an existing match priority for headers
[]> add

Choose headers for priority 2
Add header "From" Header:
1. Yes
2. No
[1]> 1

Add header "Reply-To" Header:
1. Yes
2. No
[1]> 2

Add header "Sender" Header:
1. Yes
2. No
[1]> 2

Match Headers Priority Configuration
Priority: Headers:
----- -
P1 Envelope Sender

```

P2 "From" Header

## Modify Incoming Policy to Enable Forwarding of Message Metadata to the Cisco Advanced Phishing Protection Cloud Service

In the following example, you can create an incoming mail policy to enable forwarding of metadata of messages to the Cisco Advanced Phishing Protection cloud service.

```
mail.example.com> policyconfig
```

Would you like to configure Incoming Mail Policy or Outgoing Mail Policies or Match Headers Priority?

1. Incoming Mail Policies
2. Outgoing Mail Policies
3. Match Headers Priority

```
[1]> 1
```

Incoming Mail Policy Configuration

## quarantineconfig

### Description

Configure system quarantines.

### Usage

**Commit:** This command requires a ‘commit’.

**Cluster Management:** This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### Example

```
mail3.example.com> quarantineconfig
Currently configured quarantines:
Quarantine Name Size (MB) % full Messages Retention Policy
1 Outbreak 3,072 0.0 1 12h Release
2 Policy 1,024 0.1 497 10d Delete
3 Virus 2,048 empty 0 30d Delete
2,048 MB available for quarantine allocation.
```

```

Choose the operation you want to perform:
- NEW - Create a new quarantine.
- EDIT - Modify a quarantine.
- DELETE - Remove a quarantine.
- OUTBREAKMANAGE - Manage the Outbreak Filters quarantine.
[]> new
Please enter the name for this quarantine:
[]> HRQuarantine
Retention period for this quarantine. (Use 'd' for days or 'h' for hours or 'm' for
'minutes'.):
[]> 15d
1. Delete
2. Release
Enter default action for quarantine:
[1]> 2
Do you want to modify the subject of messages that are released because
"HRQuarantine" overflows? [N]>
Do you want add a custom header to messages that are released because
"HRQuarantine" overflows? [N]>
Do you want to strip all attachments from messages that are released
because "HRQuarantine" overflows? [N]>
Do you want default action to apply automatically when quarantine space fills up? [Y]>
Currently configured quarantines:
Quarantine Name Size (MB) % full Messages Retention Policy
1 HRQuarantine 1,024 N/A N/A 15d Release
2 Outbreak 3,072 0.0 1 12h Release
3 Policy 1,024 0.1 497 10d Delete
4 Virus 2,048 empty 0 30d Delete
(N/A: Quarantine contents is not available at this time.)
1,024 MB available for quarantine allocation.
Choose the operation you want to perform:
- NEW - Create a new quarantine.
- EDIT - Modify a quarantine.
- DELETE - Remove a quarantine.
- OUTBREAKMANAGE - Manage the Outbreak Filters quarantine.

```

## Users and Quarantines

Once you answer “y” or yes to the question about adding users, you begin user management, where you can manage the user list. This lets you add or remove multiple users to the quarantine without having to go through the other quarantine configuration questions. Press Return (Enter) at an empty prompt ([ ]>) to exit the user management section and continue with configuring the quarantine.

---

**Note** You will only be prompted to give users access to the quarantine if guest or operator users have already been created on the system.

---

A quarantine's user list only contains users belonging to the Operators or Guests groups. Users in the Administrators group always have full access to the quarantine. When managing the user list, the NEW command is suppressed if all the Operator/Guest users are already on the quarantine's user list. Similarly, DELETE is suppressed if there are no users to delete.

## scanconfig

### Description

Configure attachment scanning policy

## Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

## Example

In this example, the scanconfig command sets these parameters:

- MIME types of video/\*, audio/\*, image/\* are skipped (not scanned for content).
- Nested (recursive) archive attachments up to 10 levels are scanned. (The default is 5 levels.)
- The maximum size for attachments to be scanned is 25 megabytes; anything larger will be skipped. (The default is 5 megabytes.)
- The document metadata is scanned.
- Attachment scanning timeout is set at 180 seconds.
- Attachments that were not scanned are assumed to not match the search pattern. (This is the default behavior.)
- ASCII encoding is configured for use when none is specified for plain body text or anything with MIME type plain/text or plain/html.

---

**Note** When setting the assume the attachment matches the search pattern to Y, messages that cannot be scanned will cause the message filter rule to evaluate to true. This could result in unexpected behavior, such as the quarantining of messages that do not match a dictionary, but were quarantined because their content could not be correctly scanned. This setting does not apply to DLP scanning.

---

```
mail3.example.com> scanconfig
There are currently 5 attachment type mappings configured to be SKIPPED.
Choose the operation you want to perform:
- NEW - Add a new entry.
- DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
[1]> setup
1. Scan only attachments with MIME types or fingerprints in the list.
2. Skip attachments with MIME types or fingerprints in the list.

## stripheaders

### Description

Define a list of message headers to remove.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Example

```

mail3.example.com> stripheaders
Not currently stripping any headers.
Choose the operation you want to perform:
- SETUP - Set message headers to remove.
[]> setup
Enter the list of headers you wish to strip from the messages before they are delivered.
Separate multiple headers with commas.
[]> Delivered-To
Currently stripping headers: Delivered-To
Choose the operation you want to perform:
- SETUP - Set message headers to remove.
[]>
mail3.example.com>

```

## textconfig

### Description

Configure text resources such as anti-virus alert templates, message disclaimers, and notification templates, including DLP, bounce, and encryption notifications.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

## Example

Use **textconfig -> NEW** to create text resources, and **textconfig > delete** to remove them.

```
mail3.example.com> textconfig
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
[]> new
What kind of text resource would you like to create?
1. Anti-Virus Container Template
2. Anti-Virus Notification Template
3. DLP Notification Template
4. Bounce and Encryption Failure Notification Template
5. Message Disclaimer
6. Encryption Notification Template (HTML)
7. Encryption Notification Template (text)
8. Notification Template
[1]> 5
Please create a name for the message disclaimer:
[]> disclaimer 1
Enter the encoding for the message disclaimer:
1. US-ASCII
2. Unicode (UTF-8)
3. Unicode (UTF-16)
4. Western European/Latin-1 (ISO 8859-1)
5. Western European/Latin-1 (Windows CP1252)
6. Traditional Chinese (Big 5)
7. Simplified Chinese (GB 2312)
8. Simplified Chinese (HZ GB 2312)
9. Korean (ISO 2022-KR)
10. Korean (KS-C-5601/EUC-KR)
11. Japanese (Shift-JIS (X0123))
12. Japanese (ISO-2022-JP)
13. Japanese (EUC)
[1]>
Enter or paste the message disclaimer here. Enter '.' on a blank line to end.
This message was sent from an IronPort(tm) Email Security appliance.
.
Message disclaimer "disclaimer 1" created.
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
- EXPORT - Export text resource to a file.
- PRINT - Display the content of a resource.
- EDIT - Modify a resource.
- DELETE - Remove a resource from the system.
- LIST - List configured resources.
[]> delete
Please enter the name or number of the resource to delete:
[]> 1
Message disclaimer "disclaimer 1" has been deleted.
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
[]>
```

Use **textconfig -> EDIT** to modify an existing text resource. You can change the encoding or replace the text of the selected text resource.

## Importing Text Resources

Use **textconfig -> IMPORT** to import a text file as a text resource. The text file must be present in the configuration directory on the email gateway.

```
mail3.example.com> textconfig
Current Text Resources:
1. footer.2.message (Message Footer)
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
- EXPORT - Export text resource to a file.
- PRINT - Display the content of a resource.
- EDIT - Modify a resource.
- DELETE - Remove a resource from the system.
- LIST - List configured resources.
[]> import
What kind of text resource would you like to create?
1. Anti-Virus Container Template
2. Anti-Virus Notification Template
3. DLP Notification Template
4. Bounce and Encryption Failure Notification Template
5. Message Disclaimer
6. Encryption Notification Template (HTML)
7. Encryption Notification Template (text)
8. Notification Template
[1]> 8
Please create a name for the notification template:
[]> strip.mp3files
Enter the name of the file to import:
[]> strip.mp3.txt
Enter the encoding to use for the imported file:
1. US-ASCII
[list of encodings]
[1]>
Notification template "strip.mp3files" created.
Current Text Resources:
1. disclaimer.2.message (Message Disclaimer)
2. strip.mp3files (Notification Template)
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
- EXPORT - Export text resource to a file.
- PRINT - Display the content of a resource.
- EDIT - Modify a resource.
- DELETE - Remove a resource from the system.
- LIST - List configured resources.
[]>
```

## Exporting Text Resources

Use **textconfig -> EXPORT** to export a text resource as a text file. The text file will be created in the configuration directory on the email gateway.

```
mail3.example.com> textconfig
Current Text Resources:
1. footer.2.message (Message Footer)
2. strip.mp3 (Notification Template)
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
```

```

- EXPORT - Export text resource to a file.
- PRINT - Display the content of a resource.
- EDIT - Modify a resource.
- DELETE - Remove a resource from the system.
- LIST - List configured resources.
[]> export
Please enter the name or number of the resource to export:
[]> 2
Enter the name of the file to export:
[strip.mp3]> strip.mp3.txt
Enter the encoding to use for the exported file:
1. US-ASCII
[list of encoding types]
[1]>
File written on machine "mail3.example.com" using us-ascii encoding.
Current Text Resources:
1. footer.2.message (Message Footer)
2. strip.mp3 (Notification Template)
Choose the operation you want to perform:
- NEW - Create a new text resource.
- IMPORT - Import a text resource from a file.
- EXPORT - Export text resource to a file.
- PRINT - Display the content of a resource.
- EDIT - Modify a resource.
- DELETE - Remove a resource from the system.
- LIST - List configured resources.
[]>

```

## Logging and Alerts

This section contains the following CLI commands:

### alertconfig

#### Description

Configure email alerts.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Example: Creating a New Alert

In this example, a new alert recipient (alertadmin@example.com) is created and set to receive critical system, hardware, and directory harvest attack alerts.

```

mail1.example.com> alertconfig
Not sending alerts (no configured addresses)
Alerts will be sent using the system-default From Address.
Cisco IronPort AutoSupport: Disabled
Choose the operation you want to perform:

```

## Example: Sending Alerts over TLS

```

- NEW - Add a new email address to send alerts.
- SETUP - Configure alert settings.
- FROM - Configure the From Address of alert emails.
[]> new
Please enter a new email address to send alerts.
(Ex: "administrator@example.com")
[]> alertadmin@example.com
Choose the Alert Classes. Separate multiple choices with commas.
1. All
2. System
3. Hardware
4. Updater
5. Outbreak Filters
6. Anti-Virus
7. Anti-Spam
8. Directory Harvest Attack Prevention
9. Release and Support Notifications
[1]> 2,3,8
Select a Severity Level. Separate multiple choices with commas.
1. All
2. Critical
3. Warning
4. Information
[1]> 2
Sending alerts to:
 alertadmin@example.com
 Class: Hardware - Severities: Critical
 Class: Directory Harvest Attack Prevention - Severities: Critical
 Class: System - Severities: Critical
Initial number of seconds to wait before sending a duplicate alert: 300
Maximum number of seconds to wait before sending a duplicate alert: 3600
Maximum number of alerts stored in the system are: 50
Alerts will be sent using the system-default From Address.
Cisco IronPort AutoSupport: Disabled
Choose the operation you want to perform:
- NEW - Add a new email address to send alerts.
- EDIT - Modify alert subscription for an email address.
- DELETE - Remove an email address.
- CLEAR - Remove all email addresses (disable alerts).
- SETUP - Configure alert settings.
- FROM - Configure the From Address of alert emails.
[]>

```

## Example: Sending Alerts over TLS

In this example, you can use the `alertconfig> setup` sub command to configure your email gateway to send alerts over TLS.

```

mail1.example.com> alertconfig
Sending alerts to:
 admin@company.com
 Class: Outbreak Filters - Severities: All
 Class: Threatfeeds - Severities: All
 Class: SAML - Severities: All
 Class: Message Delivery - Severities: All
 Class: System - Severities: All

```

```
Alerts will be sent using the system-default From Address.
```

```
Cisco IronPort AutoSupport: Enabled
```

You will receive a copy of the weekly AutoSupport reports.

Alert messages are sent using a TLS connection.

Choose the operation you want to perform:

- NEW - Add a new email address to send alerts.
  - EDIT - Modify alert subscription for an email address.
  - DELETE - Remove an email address.
  - CLEAR - Remove all email addresses (disable alerts).
  - SETUP - Configure alert settings.
  - FROM - Configure the From Address of alert emails.
- [ ]>

## displayalerts

### Description

Display the last n alerts sent by the email gateway.

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Example

```
> displayalerts
Date and Time Stamp Description

10 Mar 2015 11:33:36 +0000 The updater could not validate the server certificate. Server
certificate not validated - unable to get local issuer
certificate
Last message occurred 28 times between Tue Mar 10 10:34:57 2015 and Tue Mar 10 11:32:24
2015.
10 Mar 2015 11:23:39 +0000 The updater has been unable to communicate with the update
server for at least 1h.
Last message occurred 8 times between Tue Mar 10 10:29:57 2015 and Tue Mar 10 11:18:24 2015.
10 Mar 2015 10:33:36 +0000 The updater could not validate the server certificate. Server
certificate not validated - unable to get local issuer
certificate
Last message occurred 26 times between Tue Mar 10 09:33:55 2015 and Tue Mar 10 10:29:57
2015.
10 Mar 2015 10:23:39 +0000 The updater has been unable to communicate with the update
server for at least 1h.
Last message occurred 9 times between Tue Mar 10 09:26:54 2015 and Tue Mar 10 10:22:56 2015.
```

## findevent

### Description

Find events in mail log files

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Example: Search by envelope FROM

```
mail.example.com> findevent
Please choose which type of search you want to perform:
1. Search by envelope FROM
2. Search by Message ID
3. Search by Subject
4. Search by envelope TO
[1]> 1
Enter the regular expression to search for.
[]> "
Currently configured logs:

 Log Name Log Type Retrieval Interval

**grep****Description**

Searches for text in a log file.

**Usage**

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

Batch Command: This command does not support a batch format.

The grep command can be used to search for text strings within logs. Use the following syntax when you run the grep command:

```
grep [-C count] [-e regex] [-i] [-p] [-t] [regex] log_name
```

**Note** You must enter either `-e regex` or `regex` to return results.

Use the following options when you run the grep command:

**Table 11: grep Command Options**

| Option | Description                                                                                                       |
|--------|-------------------------------------------------------------------------------------------------------------------|
| -C     | Provides lines of context around the grep pattern found. Enter a value to specify the number of lines to include. |
| -e     | Enter a regular expression.                                                                                       |
| -i     | Ignores case sensitivities.                                                                                       |
| -p     | Paginates the output.                                                                                             |
| -t     | Runs the grep command over the tail of the log file.                                                              |
| regex  | Enter a regular expression.                                                                                       |

## Example of grep

The following example shows a search for the text string 'clean' or 'viral' within the antivirus logs. The **grep** command includes a regex expression:

```
mail3.example.com> grep "CLEAN\\|VIRAL" antivirus
Fri Jun 9 21:50:25 2006 Info: sophos antivirus - MID 1 - Result 'CLEAN' ()
Fri Jun 9 21:53:15 2006 Info: sophos antivirus - MID 2 - Result 'CLEAN' ()
Fri Jun 9 22:47:41 2006 Info: sophos antivirus - MID 3 - Result 'CLEAN' ()
Fri Jun 9 22:47:41 2006 Info: sophos antivirus - MID 4 - Result 'CLEAN' ()
Fri Jun 9 22:47:41 2006 Info: sophos antivirus - MID 5 - Result 'CLEAN' ()
Fri Jun 9 22:47:41 2006 Info: sophos antivirus - MID 6 - Result 'CLEAN' ()
Fri Jun 9 22:47:42 2006 Info: sophos antivirus - MID 12 - Result 'CLEAN' ()
Fri Jun 9 22:53:04 2006 Info: sophos antivirus - MID 18 - Result 'VIRAL' ()
Fri Jun 9 22:53:05 2006 Info: sophos antivirus - MID 16 - Result 'VIRAL' ()
Fri Jun 9 22:53:06 2006 Info: sophos antivirus - MID 19 - Result 'VIRAL' ()
Fri Jun 9 22:53:07 2006 Info: sophos antivirus - MID 21 - Result 'VIRAL' ()
Fri Jun 9 22:53:08 2006 Info: sophos antivirus - MID 20 - Result 'VIRAL' ()
```

```
Fri Jun 9 22:53:08 2006 Info: sophos antivirus - MID 22 - Result 'VIRAL' ()
mail3.example.com>
```

## logconfig

### Description

Configure access to log files.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Example of FTP Push Log Subscription

In the following example, the **logconfig** command is used to configure a new delivery log called `myDeliveryLogs`. The log is then configured to be pushed via FTP to a remote host

```
mail3.example.com> logconfig
Currently configured logs:
1. "antispam" Type: "Anti-Spam Logs" Retrieval: FTP Poll
2. "antivirus" Type: "Anti-Virus Logs" Retrieval: FTP Poll
3. "asarchive" Type: "Anti-Spam Archive" Retrieval: FTP Poll
4. "authentication" Type: "Authentication Logs" Retrieval: FTP Poll
5. "avarchive" Type: "Anti-Virus Archive" Retrieval: FTP Poll
6. "bounces" Type: "Bounce Logs" Retrieval: FTP Poll
7. "cli_logs" Type: "CLI Audit Logs" Retrieval: FTP Poll
8. "encryption" Type: "Encryption Logs" Retrieval: FTP Poll
9. "error_logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
10. "euq_logs" Type: "IronPort Spam Quarantine Logs" Retrieval: FTP Poll
11. "euqgui_logs" Type: "IronPort Spam Quarantine GUI Logs" Retrieval: FTP Poll
12. "ftpd_logs" Type: "FTP Server Logs" Retrieval: FTP Poll
13. "gui_logs" Type: "HTTP Logs" Retrieval: FTP Poll
14. "mail_logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
15. "reportd_logs" Type: "Reporting Logs" Retrieval: FTP Poll
16. "reportqueryd_logs" Type: "Reporting Query Logs" Retrieval: FTP Poll
17. "scanning" Type: "Scanning Logs" Retrieval: FTP Poll
18. "slbld_logs" Type: "Safe/Block Lists Logs" Retrieval: FTP Poll
19. "sntpd_logs" Type: "NTP logs" Retrieval: FTP Poll
20. "status" Type: "Status Logs" Retrieval: FTP Poll
21. "system_logs" Type: "System Logs" Retrieval: FTP Poll
22. "trackerd_logs" Type: "Tracking Logs" Retrieval: FTP Poll
23. "updater_logs" Type: "Updater Logs" Retrieval: FTP Poll
Choose the operation you want to perform:
- NEW - Create a new log.
- EDIT - Modify a log subscription.
- DELETE - Remove a log subscription.
- SETUP - General settings.
- LOGHEADERS - Configure headers to log.
- HOSTKEYCONFIG - Configure SSH host keys.
[> new
Choose the log file type for this subscription:
1. IronPort Text Mail Logs
2. qmail Format Mail Logs
3. Delivery Logs
```

22. "system\_logs" Type: "System Logs" Retrieval: FTP Poll
23. "trackerd\_logs" Type: "Tracking Logs" Retrieval: FTP Poll
24. "updater\_logs" Type: "Updater Logs" Retrieval: FTP Poll

## Example of SCP Push Log Subscription

In the following example, the **logconfig** command is used to configure a new delivery log called LogPush . The log is configured to be pushed via SCP to a remote host with the IP address of 10.1.1.1, as the user logger , and stored in the directory /tmp . Note that the **sshconfig** command is automatically called from within the **logconfig** command when the log retrieval method is SCP push. (See “Configuring Host Keys” for information about Host keys, and “Managing Secure Shell (SSH) Keys” for more information about User keys, in the *User Guide for AsyncOS for Cisco Secure Email Gateway* .) Also note that an IP address can be used at the hostname prompt.

```
mail3.example.com> logconfig
Currently configured logs:
1. "antispam" Type: "Anti-Spam Logs" Retrieval: FTP Poll
2. "antivirus" Type: "Anti-Virus Logs" Retrieval: FTP Poll
3. "asarchive" Type: "Anti-Spam Archive" Retrieval: FTP Poll
4. "authentication" Type: "Authentication Logs" Retrieval: FTP Poll
5. "avarchive" Type: "Anti-Virus Archive" Retrieval: FTP Poll
6. "bounces" Type: "Bounce Logs" Retrieval: FTP Poll
7. "cli_logs" Type: "CLI Audit Logs" Retrieval: FTP Poll
8. "encryption" Type: "Encryption Logs" Retrieval: FTP Poll
9. "error_logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
10. "euq_logs" Type: "IronPort Spam Quarantine Logs" Retrieval: FTP Poll
11. "euggui_logs" Type: "IronPort Spam Quarantine GUI Logs" Retrieval: FTP Poll
12. "ftpd_logs" Type: "FTP Server Logs" Retrieval: FTP Poll

## Example of Syslog Push Log Subscription

In the following example, the **logconfig** command is used to configure a new delivery log called MailLog SyslogPush . The log is configured to be pushed to a remote syslog server with the IP address of 10.1.1.2, using TCP, with a 'mail' facility and stored in the directory.

```

mail3.example.com> logconfig
Currently configured logs:
1. "antispam" Type: "Anti-Spam Logs" Retrieval: FTP Poll
2. "antivirus" Type: "Anti-Virus Logs" Retrieval: FTP Poll
3. "asarchive" Type: "Anti-Spam Archive" Retrieval: FTP Poll

```

## rollovernow

### Description

Roll over a log file.

### Usage

**Commit:** This command does not require a ‘commit’.

**Cluster Management:** This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### Example

```

mail3.example.com> rollovernow
Currently configured logs:
1. "antispam" Type: "Anti-Spam Logs" Retrieval: FTP Poll
2. "antivirus" Type: "Anti-Virus Logs" Retrieval: FTP Poll
3. "asarchive" Type: "Anti-Spam Archive" Retrieval: FTP Poll
4. "authentication" Type: "Authentication Logs" Retrieval: FTP Poll
5. "avarchive" Type: "Anti-Virus Archive" Retrieval: FTP Poll
6. "bounces" Type: "Bounce Logs" Retrieval: FTP Poll
7. "cli_logs" Type: "CLI Audit Logs" Retrieval: FTP Poll
8. "encryption" Type: "Encryption Logs" Retrieval: FTP Poll
9. "error_logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll

```

```

10. "euq_logs" Type: "IronPort Spam Quarantine Logs" Retrieval: FTP Poll
11. "euggui_logs" Type: "IronPort Spam Quarantine GUI Logs" Retrieval: FTP Poll
12. "ftpd_logs" Type: "FTP Server Logs" Retrieval: FTP Poll
13. "gui_logs" Type: "HTTP Logs" Retrieval: FTP Poll
14. "mail_logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
15. "reportd_logs" Type: "Reporting Logs" Retrieval: FTP Poll
16. "reportqueryd_logs" Type: "Reporting Query Logs" Retrieval: FTP Poll
17. "scanning" Type: "Scanning Logs" Retrieval: FTP Poll
18. "slbld_logs" Type: "Safe/Block Lists Logs" Retrieval: FTP Poll
19. "sntpd_logs" Type: "NTP logs" Retrieval: FTP Poll
20. "status" Type: "Status Logs" Retrieval: FTP Poll
21. "system_logs" Type: "System Logs" Retrieval: FTP Poll
22. "trackerd_logs" Type: "Tracking Logs" Retrieval: FTP Poll
23. "updater_logs" Type: "Updater Logs" Retrieval: FTP Poll
24. All Logs
Which log would you like to roll over?
[]> 2
Log files successfully rolled over.
mail3.example.com>

```

## snmpconfig

### Description

Configure SNMP.

### Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Example

In the following example, the `snmpconfig` command is used to enable SNMP on the “PublicNet” interface on port 161. A passphrase for version 3 is entered and then re-entered for confirmation. The system is configured to service version 1 and 2 requests, and the community string `public` is entered for GET requests from those versions 1 and 2. The trap target of `snmp-monitor.example.com` is entered. Finally, system location and contact information is entered.

```

mail1.example.com> snmpconfig

Current SNMP settings:
SNMP Disabled.

Choose the operation you want to perform:
- SETUP - Configure SNMP.
[]> setup

Do you want to enable SNMP? [Y]>
SNMP default version is V3

Choose an IP interface for SNMP requests.
1. Management (10.10.4.5/27: mail1.example.com) [1]>

Which port shall the SNMP daemon listen on?
[161]>

```

## Example

```
Select SNMPv3 security level:
1. noAuthNoPriv - Authentication is done using the SNMPv3 username, and no privacy is
 activated.
2. authNoPriv - Authentication is done using the SNMPv3 authentication passphrase, and no
 privacy is activated.
3. authPriv - Authentication is done using the SNMPv3 authentication passphrase, and privacy
 is activated using the SNMPv3 privacy passphrase.
[3]>

Select SNMPv3 authentication type:
1. SHA
[1]>

Select SNMPv3 privacy protocol:
1. AES
[1]>

Enter the SNMPv3 authentication passphrase.
[]>

The SNMPv3 passphrase must be at least 8 characters.

Enter the SNMPv3 authentication passphrase.
[]>

Enter the SNMPv3 authentication passphrase again to confirm.
[]>

Enter the SNMPv3 privacy passphrase.
[]>

Enter the SNMPv3 privacy passphrase again to confirm.
[]>
Warning: The same authentication and privacy passwords reduce the security of the system.

Do you want to set other passwords? [Y]> n

Service SNMP V1/V2c requests? [N]> Y

Enter the SNMP V1/V2c community string.
[ironport]>

Shall SNMP V2c requests be serviced from IPv4 addresses? [Y]>

From which IPv4 networks shall SNMP V1/V2c requests be allowed? Separate multiple networks
with commas.
[127.0.0.1/32]>

Select the version for SNMP traps:
1. 2c
2. 3
[2]>

Enter the Trap target as a host name, IP address or list of IP addresses separated by commas
(IP address preferred). Enter "None" to disable traps.
[127.0.0.1]> 10.10.0.28

Enterprise Trap Status
1. CPUUtilizationExceeded Disabled
2. FIPSMoDeDisableFailure Enabled
3. FIPSMoDeEnableFailure Enabled
4. FailoverHealthy Enabled
5. FailoverUnhealthy Enabled
```

```

6. connectivityFailure Disabled
7. keyExpiration Enabled
8. linkUpDown Enabled
9. memoryUtilizationExceeded Disabled
10. resourceConservationMode Enabled
11. updateFailure Enabled

Do you want to change any of these settings? [N]>

Enter the System Location string.
[Unknown: Not Yet Configured]>

Enter the System Contact string.
[snmp@localhost]>

Current SNMP settings:
Listening on interface "Management" 10.10.4.5/27 port 161.
SNMP v3: Enabled.
Security level: authPriv
Authentication Protocol: SHA
Encryption Protocol: AES
SNMP v1/v2: Enabled, accepting requests from subnet 127.0.0.1/32,fe::1/64.
SNMP v1/v2 Community String: ironport
Trap version: V3
Trap target: 10.10.0.28
Location: Unknown: Not Yet Configured
System Contact: snmp@localhost

Choose the operation you want to perform:
- SETUP - Configure SNMP.
[]>
mail1.example.com > commit

```

## tail

### Description

Continuously display the end of a log file. The tail command also accepts the name or number of a log to view as a parameter: tail 9 or tail mail\_logs.

### Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

**Batch Command:** This command does not support a batch format.

### Example

```

mail3.example.com> tail
Currently configured logs:
1. "antispam" Type: "Anti-Spam Logs" Retrieval: FTP Poll
2. "antivirus" Type: "Anti-Virus Logs" Retrieval: FTP Poll
3. "asarchive" Type: "Anti-Spam Archive" Retrieval: FTP Poll
4. "authentication" Type: "Authentication Logs" Retrieval: FTP Poll
5. "avarchive" Type: "Anti-Virus Archive" Retrieval: FTP Poll
6. "bounces" Type: "Bounce Logs" Retrieval: FTP Poll

```

```

7. "cli_logs" Type: "CLI Audit Logs" Retrieval: FTP Poll
8. "encryption" Type: "Encryption Logs" Retrieval: FTP Poll
9. "error_logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
10. "euq_logs" Type: "IronPort Spam Quarantine Logs" Retrieval: FTP Poll
11. "euqgui_logs" Type: "IronPort Spam Quarantine GUI Logs" Retrieval: FTP Poll
12. "ftpd_logs" Type: "FTP Server Logs" Retrieval: FTP Poll
13. "gui_logs" Type: "HTTP Logs" Retrieval: FTP Poll
14. "mail_logs" Type: "IronPort Text Mail Logs" Retrieval: FTP Poll
15. "reportd_logs" Type: "Reporting Logs" Retrieval: FTP Poll
16. "reportqueryd_logs" Type: "Reporting Query Logs" Retrieval: FTP Poll
17. "scanning" Type: "Scanning Logs" Retrieval: FTP Poll
18. "slbld_logs" Type: "Safe/Block Lists Logs" Retrieval: FTP Poll
19. "sntpd_logs" Type: "NTP logs" Retrieval: FTP Poll
20. "status" Type: "Status Logs" Retrieval: FTP Poll
21. "system_logs" Type: "System Logs" Retrieval: FTP Poll
22. "trackerd_logs" Type: "Tracking Logs" Retrieval: FTP Poll
23. "updater_logs" Type: "Updater Logs" Retrieval: FTP Poll
Enter the number of the log you wish to tail.

## Reporting

This section contains the following CLI commands:

### reportingconfig

#### Using the reportingconfig command

The following subcommands are available within the reportingconfig submenu:

**Table 12: reportingconfig Subcommands**

| Syntax        | Description                                                              | Availability  |
|---------------|--------------------------------------------------------------------------|---------------|
| filters       | Configure filters for the Cisco Secure Email Gateway.                    | M-Series only |
| alert_timeout | Configure when you will be alerted due to failing to get reporting data. | M-Series only |
| domain        | Configure domain report settings.                                        | M-Series only |

| Syntax    | Description                                                                                                                  | Availability  |
|-----------|------------------------------------------------------------------------------------------------------------------------------|---------------|
| mode      | Enable centralized reporting on the Cisco Secure Email Gateway. Enable centralized or local reporting for the email gateway. | C-, M-Series  |
| mailsetup | Configure reporting for the email gateway.                                                                                   | C-Series only |

## Usage

Commit: This command requires a 'commit'.

### Example: Enabling Reporting Filters (M-Series only)

```
mail3.example.com> reportingconfig
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT_TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]> filters
Filters remove specific sets of centralized reporting data from the "last year" reports.
Data from the reporting groups selected below will not be recorded.
All filtering has been disabled.
1. No Filtering enabled
2. IP Connection Level Detail.
3. User Detail.
4. Mail Traffic Detail.
Choose which groups to filter, you can specify multiple filters by entering a comma separated
list:
[]> 2, 3
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT_TIMEOUT - Configure when you will be alerted due to failing to get
reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]>
```

### Enabling HAT REJECT Information for Domain Reports (M-Series only)

```
mail3.example.com> reportingconfig
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT_TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]> domain
If you have configured HAT REJECT policy on all remote appliances providing reporting data
to this appliance to occur at the message
recipient level then of domain reports.
Use message recipient HAT REJECT information for domain reports? [N]> y
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT_TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]>
```

## Enabling Timeout Alerts (M-Series only)

```
mail3.example.com> reportingconfig
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT_TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]> alert_timeout
An alert will be sent if reporting data has not been fetched from an appliance after 360
minutes.
Would you like timeout alerts to be enabled? [Y]> y
After how many minutes should an alert be sent?
[360]> 240
Choose the operation you want to perform:
- FILTERS - Configure filtering for the SMA.
- ALERT_TIMEOUT - Configure when you will be alerted due to failing to get reporting data
- DOMAIN - Configure domain report settings.
- MODE - Enable/disable centralized reporting.
[]>
```

## Enabling Centralized Reporting for an Email Gateway

```
mail3.example.com> reportingconfig
Choose the operation you want to perform:
- MAILSETUP - Configure reporting for the ESA.
- MODE - Enable centralized or local reporting for the ESA.
[]> mode
Centralized reporting: Local reporting only.
Do you want to enable centralized reporting? [N]> y
Choose the operation you want to perform:
- MAILSETUP - Configure reporting for the ESA.
- MODE - Enable centralized or local reporting for the ESA.
[]>
```

## Configure Storage Limit for Reporting Data (C-Series only)

```
mail.example.com> reportingconfig
Choose the operation you want to perform:
- MAILSETUP - Configure reporting for the ESA.
- MODE - Enable centralized or local reporting for the ESA.
[]> mailsetup
SenderBase timeout used by the web interface: 5 seconds
Sender Reputation Multiplier: 3
The current level of reporting data recording is: unlimited
No custom second level domains are defined.
Legacy mailflow report: Disabled
Choose the operation you want to perform:
- SENDERBASE - Configure SenderBase timeout for the web interface.
- MULTIPLIER - Configure Sender Reputation Multiplier.
- COUNTERS - Limit counters recorded by the reporting system.
- THROTTLING - Limit unique hosts tracked for rejected connection reporting.
- TLD - Add customer specific domains for reporting rollup.
- STORAGE - How long centralized reporting data will be stored on the C-series before being
overwritten.
- LEGACY - Configure legacy mailflow report.
[]> storage
While in centralized mode the C-series will store reporting data for the M-series to collect.

If the M-series does not collect that data then eventually the C-series will begin to
```

```
overwrite the oldest data with new data.
A maximum of 24 hours of reporting data will be stored.
How many hours of reporting data should be stored before data loss?
[24]> 48
SenderBase timeout used by the web interface: 5 seconds
Sender Reputation Multiplier: 3
The current level of reporting data recording is: unlimited
No custom second level domains are defined.
Legacy mailflow report: Disabled
Choose the operation you want to perform:
- SENDERBASE - Configure SenderBase timeout for the web interface.
- MULTIPLIER - Configure Sender Reputation Multiplier.
- COUNTERS - Limit counters recorded by the reporting system.
- THROTTLING - Limit unique hosts tracked for rejected connection reporting.
- TLD - Add customer specific domains for reporting rollup.
- STORAGE - How long centralized reporting data will be stored on the C-series
before being overwritten.
- LEGACY - Configure legacy mailflow report.
[]>
```

## Improving Phishing Detection using Service Logs

This section contains the following CLI command:

- [servicelogsconfig](#), on page 259

### servicelogsconfig

- [Description](#), on page 259
- [Usage](#), on page 259
- [Example - Enabling Service Logs on Email Gateway](#), on page 259
- [Example - Disabling Service Logs on Email Gateway](#), on page 260

### Description

The `servicelogsconfig` command is used to enable or disable Service Logs on your email gateway.

### Usage

**Commit:** This command requires a 'commit'.

**Cluster Management:** This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command supports a batch format.

### Example - Enabling Service Logs on Email Gateway

In the following example, you can use the `servicelogsconfig` command to enable Service Logs on your email gateway.

```
mail1.example.com> servicelogsconfig
```

```
Share limited data with Service Logs Information Service: Disabled.
```

## Example - Disabling Service Logs on Email Gateway

```
Choose the operation you want to perform:
- SETUP - Configure Service Logs settings
[]> setup
```

```
Do you want to share data with the Service Logs Information Service (recommended)? [N]>
yes
```

```
Share limited data with Service Logs Information Service: Enabled
```

```
Choose the operation you want to perform:
- SETUP - Configure Service Logs settings
[]>
```

## Example - Disabling Service Logs on Email Gateway

In the following example, you can use the `servicelogsconfig` command to disable Service Logs on your email gateway.

```
mail1.example.com> servicelogsconfig
```

```
Share limited data with Service Logs Information Service: Enabled.
```

```
Choose the operation you want to perform:
- SETUP - Configure Service Logs settings
[]> setup
```

```
Do you want to share data with the Service Logs Information Service (recommended)? [N]>
no
```

```
The system will no longer share data with Service Logs.
Are you sure you want to disable (not recommended)? [N]> yes
```

```
Share limited data with Service Logs Information Service: Disabled
```

```
Choose the operation you want to perform:
- SETUP - Configure Service Logs settings
[]>
```

# Sender Domain Reputation Filtering

This section contains the following CLI commands:

- [sdrconfig](#), on page 260
- [sdradvancedconfig](#), on page 262
- [sdrstatus](#), on page 263
- [sdrdiagnostics](#), on page 264
- [sdrupdate](#), on page 264

## sdrconfig

- [Description](#), on page 261
- [Usage](#), on page 261

- [Example, on page 261](#)
- [Example – Blocking Messages based on SDR Verdict Range at SMTP Conversation Level , on page 262](#)

## Description

The `sdrconfig` command is used to enable SDR filtering on your email gateway.

## Usage

**Commit:** This command requires a 'commit'.

**Cluster Management:** This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command supports a batch format. For more details, see the inline help by typing the command: `help sdrconfig`.

## Example

In the following example, you can use the `sdrconfig` command to enable SDR filtering on your email gateway.

```
mail.example.com > sdrconfig
```

```
Would you like to enable sender domain reputation check? [N]> yes
```

```
SDR uses headers such as 'Envelope-From:', 'From:' and 'Reply-to' to determine the reputation of the message.
```

```
In addition, it also uses the results of the email authentication mechanisms such as SPF, DKIM, and DMARC
```

```
to decide the reputation.
```

```
The following additional attributes of the message can also be included in the Sender Domain Reputation check to improve the efficacy:
```

```
- Username part of the email address present in the 'Envelope-From:', 'From:' and 'Reply-To:' headers.
```

```
- Display name in the 'From:' and 'Reply-To:' headers.
```

```
Do you want to include these additional attributes of the message for the Sender Domain Reputation check? [N]> yes
```

```
Sender Domain Reputation (SDR) is a new feature in AsyncOS 12.0 that sends certain telemetry data to Cisco.
```

```
If you choose to enable the 'Additional Attributes' function in SDR, that telemetry data will include
```

```
the processing of personal data as described in the Cisco ESA Privacy Data Sheet
```

```
(https://www.cisco.com/c/en/us/about/trust-center/solutions-privacy-data-sheets.html) and the
```

```
Cisco Online Privacy Statement (https://www.cisco.com/c/en_in/about/legal/privacy-full.html).
```

```
To enable the "Additional Attributes" feature in SDR, you must agree to the Cisco Content Security Supplemental
```

```
End User License Agreement
```

```
(https://www.cisco.com/c/en/us/about/legal/cloud-and-software/software-terms.html).
```

```
By selecting Yes, you agree to be bound to the Cisco Content Security Supplemental End User License Agreement
```

```
(https://www.cisco.com/c/en/us/about/legal/cloud-and-software/software-terms.html).
```

```
I accept the Cisco Content Security Supplemental End User License Agreement. [N]> yes
```

## Example – Blocking Messages based on SDR Verdict Range at SMTP Conversation Level

In the following example, you can use the `sdrconfig` command to block messages based on the SDR verdict range (for example, 'Awful' to 'Weak') at the SMTP conversation level.

```
mail.example.com > sdrconfig
```

```
Would you like to disable the Sender Domain Reputation check? [N]> no
```

```
SDR uses headers such as 'Envelope-From:', 'From:' and 'Reply-to' to determine the reputation of the message. In addition, it also uses the results of the email authentication mechanisms such as SPF, DKIM, and DMARC to decide the reputation.
```

```
The following additional attributes of the message can also be included in the Sender Domain Reputation check to improve the efficacy:
```

- Username part of the email address present in the 'Envelope-From:', 'From:' and 'Reply-To:' headers.
- Display name in the 'From:' and 'Reply-To:' headers.

```
Do you want to include these additional attributes of the message for the Sender Domain Reputation check? [N]>
```

```
Do you want to block messages based on Sender Domain Reputation verdict? [Y]> yes
Verdicts configured to be blocked currently:
"awful"
```

```
Sender Domain Reputation Verdicts:
```

1. Awful
2. Poor
3. Tainted
4. Weak
5. Unknown
6. Neutral

```
Choose the sender domain reputation verdict upto which email should be blocked:[1]> 4
```

```
Email with the following Sender Domain Reputation verdicts will be blocked:
"awful poor tainted weak"
```

```
NOTE: Email with the Sender Domain Reputation verdict as 'Good' will always be allowed.
```

```
mail1.example.com> commit
```

```
Please enter some comments describing your changes:
[]> commit
```

```
Do you want to save the current configuration for rollback? [Y]>
Changes committed: Tue Nov 03 09:08:36 2020 GMT
mail1.example.com>
```

## sdradvancedconfig

- [Description, on page 263](#)
- [Usage, on page 263](#)
- [Example, on page 263](#)

## Description

The `sdradvancedconfig` command is used to configure advanced parameters when connecting your email gateway to the SDR service.

## Usage

**Commit:** This command requires a 'commit'.

**Cluster Management:** This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command supports a batch format. For more details, see the inline help by typing the command: `help sdradvancedconfig`.

## Example

In the following example, you can use the `sdradvancedconfig` command to configure advanced parameters when connecting your email gateway to the SDR service.

```
mail.example.com > sdradvancedconfig

Enter SDR query timeout in seconds [5]> 3

Enter the Domain Reputation service hostname [v2.beta.sds.cisco.com]>

Do you want to verify server certificate? [Y]>

Enter the default debug log level for RPC server: [Info]>

Enter the default debug log level for HTTP Client: [Info]>

Do you want exception list matches based on envelope-from domain only? [Y]>
```

## sdrstatus

- [Description, on page 263](#)
- [Usage, on page 263](#)
- [Example, on page 264](#)

## Description

The `sdrstatus` command is used to display the current version of the SDR component.

## Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to the machine mode.

**Batch Command:** This command does not support a batch format.

## Example

In the following example, you can use the `sdrstatus` command to view the current version of the SDR component.

```
mail.example.com> sdrstatus

Component Version Last Updated
SDR Client 1.0 2 Jul 2018 04:22 (GMT +00:00)
```

## sdrupdate

- [Description, on page 264](#)
- [Usage, on page 264](#)
- [Example, on page 264](#)

## Description

The `sdrupdate` command is used to manually update the SDR component.

## Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to the machine mode.

**Batch Command:** This command does not support a batch format.

## Example

In the following example, you can use the `sdrupdate` command to manually update the SDR component.

```
mail.example.com > sdrupdate

Requesting update of Sender Domain Reputation component.
```

## sdrdiagnostics

- [Description, on page 264](#)
- [Usage, on page 264](#)
- [Example, on page 265](#)

## Description

The `sdrdiagnostics` command is used to check if your email gateway is connected to the SDR service.

## Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to the machine mode.

**Batch Command:** This command does not support a batch format.

## Example

In the following example, you can use the `sdrdiagnostics` command to check if your email gateway is connected to the SDR service.

```
mail.example.com > sdrdiagnostics

1. Show status of the domain reputation service
[1]> 1
Connection Status: Connected
```

# Mailbox Auto Remediation

This section contains the following CLI commands:

- [marstatus, on page 265](#)
- [marupdate, on page 265](#)

## marstatus

- [Description, on page 265](#)
- [Usage, on page 265](#)
- [Example, on page 265](#)

## Description

The `marstatus` command is used to display the current version of the MAR component.

## Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to the machine mode.

**Batch Command:** This command does not support a batch format.

## Example

In the following example, you can use the `marstatus` command to view the current version of the Mailbox Auto Remediation component.

```
mail.example.com> marstatus

Component Version Last Updated
Mailbox Remediation 1.0 29 Jun 2019 04:22 (GMT +00:00)
```

## marupdate

- [Description, on page 266](#)

- [Usage, on page 266](#)
- [Example, on page 266](#)

## Description

The `marupdate` command is used to manually update the MAR component.

## Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to the machine mode.

**Batch Command:** This command does not support a batch format.

## Example

In the following example, you can use the `marupdate` command to manually update the Mailbox Auto Remediation component.

```
mail.example.com > marupdate
```

```
Requesting update of Mailbox Remediation component.
```

# Smart Software Licensing

This section contains the following CLI commands:

- [license\\_smart, on page 266](#)
- [showlicense\\_smart, on page 271](#)
- [smartaccountinfo, on page 272](#)

## license\_smart

- [Description, on page 267](#)
- [Usage, on page 267](#)
- [Example: Configuring Port for Smart Agent Service, on page 267](#)
- [Example: Enabling Smart Licensing, on page 267](#)
- [Example: Registering the Email Gateway with the Smart Software Manager, on page 267](#)
- [Example: Status of Smart Licensing, on page 268](#)

- [Example - Enabling Smart Software Licensing for all Machines in Cluster , on page 270](#)
- [Example - Registering all Machines in Cluster with Cisco Smart Software Manager , on page 270](#)

## Description

Configure smart software licensing feature.

## Usage

**Commit:** This command requires a 'commit'.

**Cluster Management:** This command can be used only in machine mode. This command does not support cluster and group mode.

**Batch Command:** This command supports a batch format. For details, see the inline help by typing the command: `help license_smart`

## Example: Configuring Port for Smart Agent Service

```
mail.example.com> license_smart
Choose the operation you want to perform:
- ENABLE - Enables Smart Licensing on the product.
- SETAGENTPORT - Set port to run Smart Agent service.
[]> setagentport

Enter the port to run smart agent service.
[65501]>
```

## Example: Enabling Smart Licensing

```
mail.example.com> license_smart
Choose the operation you want to perform:
- ENABLE - Enables Smart Licensing on the product.
[]> enable
After enabling Smart Licensing on your appliance, follow below steps to activate the feature keys (licenses):
a) Register the product with Smart Software Manager using license_smart > register command in the CLI.
b) Activate the feature keys using license_smart > requestsmart_license command in the CLI.
Note: If you are using a virtual appliance, and have not enabled any of the features in the classic licensing mode; you will not be able to activate the licenses, after you switch to the smart licensing mode. You need to first register your appliance, and then you can activate the licenses (features) in the smart licensing mode.
Commit your changes to enable the Smart Licensing mode on your appliance. All the features enabled in the Classic Licensing mode will be available in the Evaluation period.
Type "Y" if you want to continue, or type "N" if you want to use the classic licensing mode
[Y/N] []> y
> commit
Please enter some comments describing your changes:
[]>
Do you want to save the current configuration for rollback? [Y]>
```

## Example: Registering the Email Gateway with the Smart Software Manager

```
mail.example.com> license_smart
To start using the licenses, please register the product.
Choose the operation you want to perform:
- REGISTER - Register the product for Smart Licensing.
```

**Example: Status of Smart Licensing**

```

- URL - Set the Smart Transport URL.
- STATUS - Show overall Smart Licensing status.
- SUMMARY - Show Smart Licensing status summary.
[]> register
Reregister this product instance if it is already registered [N]> n
Enter token to register the product:

## smartaccountinfo

- [Description, on page 272](#)
- [Usage, on page 272](#)
- [Example: Viewing Smart Account Details, on page 272](#)

### Description

The `smartaccountinfo` command is used to view details of the smart account created in the Cisco Smart Software Manager portal

### Usage

**Commit:** This command requires a 'commit.'

**Cluster Management:** This command can be used in all three machine modes (cluster, group, and machine).

**Batch Command:** This command supports a batch format.

### Example: Viewing Smart Account Details

In this example, you can use the `smartaccountinfo` command to view details of the smart account created in the Cisco Smart Software Manager portal:

```
mail1.example.com> smartaccountinfo

Smart Account details

Product Instance ID: b56r42423-5sdf-5fsf-7823-r24gf32ad334s
Smart Account Domain: exampleaccount.cisco.com
Smart Account ID: 111111
Smart Account Name : exampleaccount.cisco.com
VLN: VLNESAI111111
Virtual Account Domain: ESA
Virtual Account ID: 333333
mail1.example.com>
```

## SMTP Services Configuration

This section contains the following CLI commands:

### callaheadconfig

#### Description

Add, edit, and remove SMTP Call-Ahead profiles

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

## Example

In the following example you can create a new SMTP call-ahead profile for delivery host.

```
> callaheadconfig
No SMTP Call-Ahead profiles are configured on the system.
Choose the operation you want to perform:
- NEW - Create a new profile.
[]> new
Select the type of profile you want to create:
1. Delivery Host
2. Static Call-Ahead Servers
[1]> 1
Please enter a name for the profile:
[]> delhost01
Advanced Settings:
 MAIL FROM Address: <>
 Interface: Auto
 Timeout Value: 30
 TLS support for recipient validation: disabled
 Validation Failure Action: ACCEPT
 Temporary Failure Action: REJECT with same code
 Maximum number of connections: 5
 Maximum number of validation queries: 1000
 Cache size: 10000
 Cache TTL: 900
Do you want to change advanced settings? [N]> n
Currently configured SMTP Call-Ahead profiles:
1. delhost01 (Delivery Host)
Choose the operation you want to perform:
- NEW - Create a new profile.
- EDIT - Modify a profile.
- DELETE - Delete a profile.
- PRINT - Display profile information.
- TEST - Test profile.
- FLUSHCACHE - Flush SMTP Call-Ahead cache.
[]>
```

In the following example you can create a new SMTP call-ahead profile for call ahead server.

```
> callaheadconfig
Currently configured SMTP Call-Ahead profiles:
1. delhost01 (Delivery Host)
Choose the operation you want to perform:
- NEW - Create a new profile.
- EDIT - Modify a profile.
- DELETE - Delete a profile.
- PRINT - Display profile information.
- TEST - Test profile.
- FLUSHCACHE - Flush SMTP Call-Ahead cache.
[]> new
Select the type of profile you want to create:
1. Delivery Host
2. Static Call-Ahead Servers
```

## Example – Enabling TLS Support for SMTP Call-ahead Recipient Validation

```
[1]> 2
Please enter a name for the profile:
[]> Static
Enter one or more Call-Ahead servers hostname separated by commas.
[]> 192.168.1.2
Advanced Settings:
 MAIL FROM Address: <>
 Interface: Auto
 Timeout Value: 30
TLS support for recipient validation: disabled
 Validation Failure Action: ACCEPT
 Temporary Failure Action: REJECT with same code
 Maximum number of connections: 5
 Maximum number of validation queries: 1000
 Cache size: 10000
 Cache TTL: 900
Do you want to change advanced settings? [N]> n
Currently configured SMTP Call-Ahead profiles:
1. Static (Static Call-Ahead Servers)
2. delhost01 (Delivery Host)
Choose the operation you want to perform:

## listenerconfig

### Description

The `listenerconfig` command allows you to create, edit, and delete a listener. AsyncOS requires that you specify criteria that messages must meet in order to be accepted and then relayed to recipient hosts — either internal to your network or to external recipients on the Internet.

These qualifying criteria are defined in listeners; collectively, they define and enforce your mail flow policies. Listeners also define how the email gateway communicates with the system that is injecting email.

**Table 13: listenerconfig Commands**

|                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name                                             | Unique nickname you supply for the listener, for future reference. The names you define for listeners are case-sensitive. AsyncOS does not allow you to create two identical listener names.                                                                                                                                                                                                                                                                                                                                                                                                             |
| IP Interface                                     | Listeners are assigned to IP interfaces. All IP interfaces must be configured using the <code>systemstartup</code> command or the <code>interfaceconfig</code> command before you create and assign a listener to it.                                                                                                                                                                                                                                                                                                                                                                                    |
| Mail protocol                                    | The mail protocol is used for email receiving: either ESMTP or QMQP                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| IP Port                                          | The specific IP port used for connections to the listener. by default SMTP uses port 25 and QMQP uses port 628.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Listener Type:<br>Public<br>Private<br>Sink hole | Public and private listeners are used for most configurations. By convention, private listeners are intended to be used for private (internal) networks, while public listeners contain default characteristics for receiving email from the Internet.<br><br>“Sink hole” listeners can be used for testing or troubleshooting purposes. When you create a sink hole listener, you choose whether messages are written to disk or not before they are deleted. (See the “Testing and Troubleshooting” chapter of the <i>User Guide for AsyncOS for Cisco Secure Email Gateway</i> for more information.) |

## Usage

Commit: This command requires a ‘commit’.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

## Batch Format - General listenerconfig

The batch format of the **listenerconfig** command can be used to add and delete listeners on a particular interface. The batch format of the listenerconfig command also allows you to configure a listener’s HAT and RAT.

- Adding a new listener:

```
listenerconfig new <name> <public|private|sinkhole|sinkholequeueing>
<interface_name> <smtp|qmqp>
```

- Deleting a listener:

```
listenerconfig delete <name>
```

## Batch Format - HAT

The following examples demonstrate the use of the batch format of listenerconfig to perform various HAT-related tasks. For more information about arguments, consult *Table - listenerconfig Argument Values -HAT* below:

- Adding a new sendergroup to the HAT

```
listenerconfig edit <name> hostaccess new sendergroup <name> <host_list> <behavior>
[options [--comments]]
```

- Add a new policy to the HAT

```
listenerconfig edit <name> hostaccess new policy <name> <behavior> [options]
```

- Add a new host list to a sendergroup

```
listenerconfig edit <name> hostaccess edit sendergroup <name> new <host_list>
```

- Delete a host from a sendergroup

```
listenerconfig edit <name> hostaccess edit sendergroup <name> delete <host>
```

- Move a host in a sendergroup’s list order

```
listenerconfig edit <name> hostaccess edit sendergroup <name> move <host>
```

```
<host-to-insert-before>
```

- Modify a sendergroup's policy

```
listenerconfig edit <name> hostaccess edit sendergroup <name> policy <behavior> [options]
```

- Print a sendergroup listing

```
listenerconfig edit <name> hostaccess edit sendergroup <name> print
```

- Rename a sendergroup

```
listenerconfig edit <name> hostaccess edit sendergroup <name> rename <name>
```

- Editing a HAT's policy

```
listenerconfig edit <name> hostaccess edit policy <name> <behavior> [options]
```

- Deleting a sendergroup from a HAT

```
listenerconfig edit <name> hostaccess delete sendergroup <name>
```

- Deleting a policy

```
listenerconfig edit <name> hostaccess delete policy <name>
```

- Moving a sendergroup's position in the HAT

```
listenerconfig edit <name> hostaccess move <group> <group-to-insert-before>
```

- Changing a HAT default option

```
listenerconfig edit <name> hostaccess default [options]
```

- Printing the hostaccess table

```
listenerconfig edit <name> hostaccess print
```

- Import a local copy of a HAT

```
listenerconfig edit <name> hostaccess import <filename>
```

- Exporting a copy of the HAT from the email gateway

```
listenerconfig edit <name> hostaccess export <filename>
```

- Deleting all user defined sendergroups and policies from the HAT

```
listenerconfig edit <name> hostaccess clear
```

- Adding the sender's country of origin for a particular sender group.

```
listenerconfig edit incoming hostaccess edit sendergroup ALLOWED_LIST
country add India Nepal Cyprus
```

- Deleting the sender's country of origin for a particular sender group.

```
listenerconfig edit incoming hostaccess edit sendergroup ALLOWED_LIST
country delete Cyprus
```

- Printing the sender's country of origin for a particular sender group.

```
listenerconfig edit incoming hostaccess edit sendergroup ALLOWED_LIST
country print
```

**Table 14: listenerconfig Argument Values -HAT**

Argument	Description
<behavior>	“Accept”, “Relay”, “Reject”, “TCP Refuse”, or “Continue”. When selecting a behavior for use with a sendergroup, additional behaviors of the form “Policy: FOO” are available (where “FOO” is the name of policy).
<filename>	The filename to use with importing and exporting the hostaccess tables.
<group>	A sendergroup <name>.
<host>	A single entity of a <host_list>
<host_list>	Enter the hosts to add. Hosts can be formatted as follows: CIDR addresses (10.1.1.0/24) IP address ranges (10.1.1.10-20) IP Subnets (10.2.3) Hostname (crm.example.com) Partial Hostname (.example.com) Sender Base Reputation Score range (7.5:10.0) Senderbase Network Owner IDS (SBO:12345) Remote blocked_list queries (dnslist[query.blocked_list.example]) <b>Note</b> Separate multiple hosts with commas

Argument	Description
<name>	The name of the sendergroup or policy. HAT labels must start with a letter or underscore, followed by any number of letters, numbers, underscores or hyphens.
<b>[options]</b>	
--max_size	Maximum message size. Add a trailing k for kilobytes, M for megabytes, or no letters for bytes.
--max_conn	Maximum number of connections allowed from a single host.
--max_msgs	Maximum number of messages per connection.
--max_rcpt	Maximum number of recipients per message.
--override	Override the hostname in the SMTP banner. "No" or SMTP banner string.
--cust_acc	Specify a custom SMTP acceptance response. "No" or SMTP acceptance response string.
--acc_code	Custom SMTP acceptance response code. Default is 220.
--cust_rej	Specify a custom SMTP rejection response. "No" or SMTP rejection response string.
--rej_code	Custom SMTP rejection response code. Default is 554.
--rate_lim	Enable rate limiting per host. "No", "default" or maximum number of recipients per hour per host.
--cust_lim	Specify a custom SMTP limit exceeded response message. "No" or SMTP rejection response string. Default is "No".
--lim_code	Custom SMTP limit exceeded response code. Default is 452.
--use_sb	Use SenderBase for flow control by default. "Yes", "No", or "default".
--as_scan	Enable anti-spam scanning. "Yes", "No", "Default".
--av_scan	Enable anti-virus scanning. "Yes", "No", "Default".
--sdr_scan	Enable Sender Domain Reputation scanning. "Yes," "No," "Default."
--dhap	Directory Harvest Attack Prevention. "No", "default", or maximum number of invalid recipients per hour from a remote host.
--tls	Not supported; use menuing system to configure TLS.
--sig_bits	Number of bits of IP address to treat as significant. From 0 to 32, "No" or "default".
--dkim_signing	Enable DKIM signing. "Yes", "No", "Default."
--dkim_verification	Enable DKIM verification. "Yes", "No", "Default."

Argument	Description
--dkim_verification_profile <name>	The name of DKIM verification profile. This option is only applicable if --dkim_verification value is set to “Yes.”
--spf	Enable SPF verification. “Yes”, “No”, “Default.”
--spf_conf_level	SPF conformance level. Used with “--spf Yes” only. “spf_only”, “sidf_compatible”, “sidf_strict.”
--spf_downgrade_pra	Downgrade SPF PRA verification result. Used with “--spf Yes” and “--spf_conf_level sidf_compatible” only. “Yes”, “No.”
--spf_helo_test	SPF HELO test. Used with “--spf Yes” and “--spf_conf_level sidf_compatible,” or “--spf_conf_level spf_only.” “Yes”, “No”.
--dmarc_verification	Enable DMARC verification. “Yes”, “No”, “Default.”
--dmarc_verification_profile <name>	The name of DMARC verification profile. This option is only applicable if --dmarc_verification value is set to “Yes.”
--dmarc_agg_reports	Enable DMARC aggregate reports. “Yes”, “No”, “Default.” This option is only applicable if --dmarc_verification value is set to “Yes.”

## Batch Format - RAT

The following examples demonstrate the use of the batch format of listenerconfig to perform various RAT-related tasks. For more information about arguments, consult *Table - listenerconfig Argument Values - RAT* below:

- Adding a new recipient to the RAT

```
listenerconfig edit <name> rcptaccess new <rat_addr> [options]
```

- Editing a recipient in the RAT

```
listenerconfig edit <name> rcptaccess edit <rat_addr> [options]
```

- Deleting a recipient from the RAT

```
listenerconfig edit <name> rcptaccess delete <rat_addr>
```

- Printing a copy of the RAT

```
listenerconfig edit <name> rcptaccess print
```

- Importing a local RAT to your email gateway

```
listenerconfig edit <name> rcptaccess import <filename>
```

- Exporting a RAT

```
listenerconfig edit <name> rcptaccess export <filename>
```

- Clearing the default access

```
listenerconfig edit <name> rcptaccess clear <default_access>
```

**Table 15: listenerconfig Argument Values - RAT**

Argument	Description
<rat_addr>	Enter the hosts to add. Hosts can be formatted as follows: CIDR addresses (10.1.1.0/24) Hostname (crm.example.com) Partial Hostname (.example.com) Usernames (postmaster@) Full email addresses (joe@example.com, joe@[1.2.3.4]) <b>Note</b> Separate multiple hosts with commas
<options>	
--action	Action to apply to address(es). Either “Accept” or “Reject”. Default is “Accept”.
--cust_resp	Specify a custom SMTP response. “No” or SMTP acceptance response string.
--resp_code	Custom SMTP response code. Default is 250 for “Accept” actions, 550 for “Reject”.
--bypass_rc	Bypass receiving control. Default is “No”.
--bypass_la	Bypass LDAP Accept query. Either “Yes” or “No.”
--bypass_ca	Bypass SMTP Call-Ahead. Default is "No".

## Example - Adding a listener

In the following example, the listenerconfig command is used to create a new private listener called OutboundMail that can be used for the B listener needed in the Enterprise Gateway configuration. (Note: you also had the option to add this private listener during the GUI’s System Setup Wizard CLI **systemsetup** command.)

A private listener type is chosen and named OutboundMail. It is specified to run on the PrivateNet IP interface, using the SMTP protocol over port 25. The default values for the Host Access Policy for this listener are then accepted.

```
mail3.example.com> listenerconfig
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
```

```

Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[]> new
Please select the type of listener you want to create.
1. Private
2. Public
3. Sinkhole
[2]> 1
Please create a name for this listener (Ex: "OutboundMail"):
[]> OutboundMail
Please choose an IP interface for this Listener.
1. Management (192.168.42.42/24: mail3.example.com)
2. PrivateNet (192.168.1.1/24: mail3.example.com)
3. PublicNet (192.168.2.1/24: mail3.example.com)
[1]> 2
Choose a protocol.
1. SMTP
2. QMQP
[1]> 1
Please enter the TCP port for this listener.
[25]> 25
Please specify the systems allowed to relay email through the IronPort C60.
Hostnames such as "example.com" are allowed.
Partial hostnames such as ".example.com" are allowed.
IP addresses, IP address ranges, and partial IP addresses are allowed.
Separate multiple entries with commas.
[]> .example.com
Do you want to enable rate limiting for this listener? (Rate limiting defines the maximum
number of recipients per hour you are
willing to receive from a remote domain.) [N]> n
Default Policy Parameters
=====
Maximum Message Size: 100M
Maximum Number Of Connections From A Single IP: 600
Maximum Number Of Messages Per Connection: 10,000
Maximum Number Of Recipients Per Message: 100,000
Maximum Number Of Recipients Per Hour: Disabled
Use SenderBase for Flow Control: No
Spam Detection Enabled: No
Virus Detection Enabled: Yes
Allow TLS Connections: No
Allow SMTP Authentication: No
Require TLS To Offer SMTP authentication: No
Would you like to change the default host access policy? [N]> n
Listener OutboundMail created.
Defaults have been set for a Private listener.
Use the listenerconfig->EDIT command to customize the listener.
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP TCP Port 25 Private
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[]>

```

## Example - Adding a Sender's Country of Origin to a Sender Group

In the following example, the `listenerconfig` command is used to modify a listener to add the sender's country of origin for a particular sender group.

```
mail3.example.com> listenerconfig
```

```
Currently configured listeners:
```

1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP TCP Port 25 Private

```
Choose the operation you want to perform:
```

- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.

```
[]> edit
```

```
Enter the name or number of the listener you wish to edit.
```

```
[]> 1
```

```
Name: InboundMailhostacce
```

```
Type: Public
```

```
Interface: PublicNet (192.168.2.1/24) TCP Port 25
```

```
Protocol: SMTP
```

```
Default Domain:
```

```
Max Concurrency: 1000 (TCP Queue: 50)
```

```
Domain map: disabled
```

```
TLS: No
```

```
SMTP Authentication: Disabled
```

```
Bounce Profile: Default
```

```
Use SenderBase For Reputation Filters and IP Profiling: Yes
```

```
Footer: None
```

```
LDAP: off
```

```
Choose the operation you want to perform:
```

- NAME - Change the name of the listener.
- INTERFACE - Change the interface.
- LIMITS - Change the injection limits.

```
- SETUP - Configure general options.
- HOSTACCESS - Modify the Host Access Table.
- RCPTACCESS - Modify the Recipient Access Table.
- BOUNCECONFIG - Choose the bounce profile to use for messages injected on this listener.
- MASQUERADE - Configure the Domain Masquerading Table.
- DOMAINMAP - Configure domain mappings.

[]> hostaccess

Default Policy Parameters

=====

Maximum Message Size: 10M

Maximum Number Of Concurrent Connections From A Single IP: 10

Maximum Number Of Messages Per Connection: 10

Maximum Number Of Recipients Per Message: 50

Directory Harvest Attack Prevention: Enabled

Maximum Number Of Invalid Recipients Per Hour: 25

Maximum Number Of Recipients Per Hour: Disabled

Use SenderBase for Flow Control: Yes

Spam Detection Enabled: Yes

Virus Detection Enabled: Yes

Allow TLS Connections: No

Allow SMTP Authentication: No

Require TLS To Offer SMTP authentication: No

DKIM/DomainKeys Signing Enabled: No

DKIM Verification Enabled: No

SPF/SIDF Verification Enabled: No

DMARC Verification Enabled: No

Envelope Sender DNS Verification Enabled: No

Domain Exception Table Enabled: No

Accept untagged bounces: No

There are currently 4 policies defined.

There are currently 5 sender groups.

Choose the operation you want to perform:
```

**Example - Adding a Sender's Country of Origin to a Sender Group**

```

- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- MOVE - Move an entry.
- DEFAULT - Set the defaults.
- PRINT - Display the table.
- IMPORT - Import a table from a file.
- EXPORT - Export the table to a file.
- CLEAR - Remove all entries.

[]> edit

1. Edit Sender Group
2. Edit Policy

[1]>1

Currently configured HAT sender groups:

1. ALLOWED_LIST (My trusted senders have no anti-spam scanning or rate limiting)
2. BLOCKED_LIST (Spammers are rejected)
3. SUSPECTLIST (Suspicious senders are throttled)
4. UNKNOWNLIST (Reviewed but undecided, continue normal acceptance)
5. MyList
6. (no name, first host = ALL) (Everyone else)

Enter the sender group number or name you wish to edit.

[]> 1

Choose the operation you want to perform:

- NEW - Add a new host.
- DELETE - Remove a host.
- COUNTRY - Add and delete countries.
- POLICY - Change the policy settings and options.
- PRINT - Display the current definition.
- RENAME - Rename this sender group.

- DELETE - Delete countries
- PRINT - Print countries

```
[> print
```

```
Afghanistan [af]
```

```
Algeria [dz]
```

```
Anguilla [ai]
```

## Example - Customizing the Host Access Table (HAT) for a listener via Export and Import

Many of the subcommands within the `listenerconfig` command allow you to import and export data in order to make large configuration changes without having to enter data piecemeal in the CLI.

These steps use the CLI to modify the Host Access Table (HAT) of a listener by exporting, modifying, and importing a file. You can also use the HAT CLI editor or the GUI to customize the HAT for a listener. For more information, see the “Configuring the Gateway to Receive Mail” and “Using Mail Flow Monitor” chapters in the *User Guide for AsyncOS for Cisco Secure Email Gateway*.

To customize a HAT for a listener you have defined via export and import:

### Procedure

#### Step 1

Use the `hostaccess -> export` subcommands of `listenerconfig` to export the default HAT to a file.

In the following example, the HAT for the public listener `InboundMail` is printed, and then exported to a file named `inbound.HAT.txt`

#### Example:

```
mail3.example.com> listenerconfig
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP TCP Port 25 Private
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[> edit
Enter the name or number of the listener you wish to edit.
[> 1
Name: InboundMail
Type: Public
Interface: PublicNet (192.168.2.1/24) TCP Port 25
Protocol: SMTP
Default Domain:
Max Concurrency: 1000 (TCP Queue: 50)
Domain map: disabled
TLS: No
SMTP Authentication: Disabled
Bounce Profile: Default
Use SenderBase For Reputation Filters and IP Profiling: Yes
Footer: None
LDAP: off
Choose the operation you want to perform:
- NAME - Change the name of the listener.
- INTERFACE - Change the interface.
- LIMITS - Change the injection limits.
- SETUP - Configure general options.
- HOSTACCESS - Modify the Host Access Table.
- RCPTACCESS - Modify the Recipient Access Table.
- BOUNCECONFIG - Choose the bounce profile to use for messages injected on this listener.
- MASQUERADE - Configure the Domain Masquerading Table.
- DOMAINMAP - Configure domain mappings.
[> hostaccess
Default Policy Parameters

[> export
Enter a name for the exported file:
[> inbound.HAT.txt
File written on machine "mail3.example.com".

```

#### Example:

**Step 2** Outside of the Command Line Interface (CLI), get the file inbound.HAT.txt .

**Step 3** With a text editor, create new HAT entries in the file.

In this example, the following entries are added to the HAT above the ALL entry:

spamdomain.com	REJECT
.spamdomain.com	REJECT
251.192.1.	TCPREFUSE
169.254.10.10	RELAY

- The first two entries reject all connections from the remote hosts in the domain spamdomain.com and any subdomain of spamdomain.com .
- The third line refuses connections from any host with an IP address of 251.192.1. x .
- The fourth line allows the remote host with the IP address of 169.254.10.10 to use the email gateway as an SMTP relay for all of its outbound email to the Internet

**Note** The order that rules appear in the HAT is important. The HAT is read from top to bottom for each host that attempts to connect to the listener. If a rule matches a connecting host, the action is taken for that connection immediately. You should place all custom entries in the HAT above an ALL host definition. You can also use the HAT CLI editor or the GUI to customize the HAT for a listener. For more information, see the “Configuring the Gateway to Receive Mail” and “Using Mail Flow Monitor” chapters in the *User Guide for AsyncOS for Cisco Secure Email Gateway*.

**Step 4** Save the file and place it in the configuration directory for the interface so that it can be imported. (See Appendix B, “Accessing the Email Gateway,” for more information.)

**Step 5** Use the `hostaccess -> import` subcommand of `listenerconfig` to import the edited Host Access Table file.

In the following example, the edited file named `inbound.HAT.txt` is imported into the HAT for the `InboundMail` listener. The new entries are printed using the `print` subcommand.

**Example:**

```
mail3.example.com> listenerconfig
Currently configured listeners:
1. InboundMail (on PublicNet, 192.168.2.1) SMTP TCP Port 25 Public
2. OutboundMail (on PrivateNet, 192.168.1.1) SMTP TCP Port 25 Private
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[]> edit
Enter the name or number of the listener you wish to edit.
[]> 1
Name: InboundMail

## Example - Advanced HAT Parameters

The following table defines the syntax of advanced HAT parameters. Note that for the values below which are numbers, you can add a trailing **k** to denote kilobytes or a trailing **M** to denote megabytes. Values with no letters are considered bytes. Parameters marked with an asterisk support the variable syntax shown in the following table.

Table 16: Advanced HAT Parameter Syntax

Parameter	Syntax	Values	Example Values
Maximum messages per connection	<code>max_msgs_per_session</code>	Number	1000
Maximum recipients per message	<code>max_rcpts_per_msg</code>	Number	10000 1k
Maximum message size	<code>max_message_size</code>	Number	1048576 20M
Maximum concurrent connections allowed to this listener	<code>max_concurrency</code>	Number	1000
SMTP Banner Code	<code>smtp_banner_code</code>	Number	220
SMTP Banner Text (*)	<code>smtp_banner_text</code>	String	Accepted
SMTP Reject Banner Code	<code>smtp_banner_code</code>	Number	550
SMTP Reject Banner Text (*)	<code>smtp_banner_text</code>	String	Rejected
Override SMTP Banner Hostname	<code>use_override_hostname</code>	on   off   default	default
	<code>override_hostname</code>	String	newhostname
Use TLS	<code>tls</code>	on   off   required	on
Use anti-spam scanning	<code>spam_check</code>	on   off	off
Use Sophos virus scanning	<code>virus_check</code>	on   off	off
Maximum Recipients per Hour	<code>max_rcpts_per_hour</code>	Number	5k
Maximum Recipients per Hour Error Code	<code>max_rcpts_per_hour_code</code>	Number	452
Maximum Recipients per Hour Text (*)	<code>max_rcpts_per_hour_text</code>	String	Too manyrecipients
Use SenderBase	<code>use_sb</code>	on   off	on
Define SenderBase Reputation Score	<code>sbrs[value1 :value2 ]</code>	-10.0- 10.0	<code>sbrs[-10:-7.5]</code>

Parameter	Syntax	Values	Example Values
Directory Harvest Attack Prevention: Maximum Invalid Recipients Per Hour	dhap_limit	Number	150

## Adding bypass\_ca Argument to listenerconfig

The following example shows how to add the `bypass_ca` argument to `listenerconfig`:

```
esa.example.com (SERVICE)> help listenerconfig.
```

```
rcptaccess_options are the following:
```

```
new <rat_addr> [options]
edit <rat_addr> [options]
delete <rat_addr>
print
import <filename>
export <filename>
clear <default_access>
```

```
default_access - Default access for empty RAT. Either "ACCEPT"
or "REJECT".
```

```
rat_addr - Hostnames such as "example.com" and "[1.2.3.4]" are
allowed. Partial hostnames such as ".example.com"
are allowed. Usernames such as "postmaster@" are
allowed. Full email addresses such as
"joe@example.com" or "joe@[1.2.3.4]" are allowed.
Separate multiple entries with commas.
```

```
options - Various options to modify a host access policy:
```

```
--action Action to apply to address(es). Either
 "Accept" or "Reject". Default is "Accept".
--cust_resp Specify a custom SMTP response. "No" or SMTP
 acceptance response string.
--resp_code Custom SMTP response code. Default is 250 for
 "Accept" actions, 550 for "Reject".
--bypass_rc Bypass receiving control. Default is "No".
--bypass_la Bypass LDAP Accept queries for this Recipient. Default is "No".
--bypass_ca Bypass SMTP Call-Ahead. Default is "No".
```

## Example - Configuring SPF and SIDF

When configuring the default settings for a listener's Host Access Table, you can choose the listener's SPF/SIDF conformance level and the SMTP actions (ACCEPT or REJECT) that the email gateway performs, based on the SPF/SIDF verification results. You can also define the SMTP response that the email gateway sends when it rejects a message.

Depending on the conformance level, the appliance performs a check against the HELO identity, MAIL FROM identity, or PRA identity. You can specify whether the email gateway proceeds with the session (ACCEPT) or terminates the session (REJECT) for each of the following SPF/SIDF verification results for each identity check:

- **None.** No verification can be performed due to the lack of information.
- **Neutral.** The domain owner does not assert whether the client is authorized to use the given identity.
- **SoftFail.** The domain owner believes the host is not authorized to use the given identity but is not willing to make a definitive statement.
- **Fail.** The client is not authorized to send mail with the given identity.

- **TempError**. A transient error occurred during verification.
- **PermError**. A permanent error occurred during verification.

The email gateway accepts the message for a Pass result unless you configure the SIDF Compatible conformance level to downgrade a Pass result of the PRA identity to None if there are Resent-Sender: or Resent-From: headers present in the message. The email gateway then takes the SMTP action specified for when the PRA check returns None.

If you choose not to define the SMTP actions for an identity check, the email gateway automatically accepts all verification results, including Fail.

The email gateway terminates the session if the identity verification result matches a REJECT action for any of the enabled identity checks. For example, an administrator configures a listener to accept messages based on all HELO identity check results, including Fail, but also configures it to reject messages for a Fail result from the MAIL FROM identity check. If a message fails the HELO identity check, the session proceeds because the email gateway accepts that result. If the message then fails the MAIL FROM identity check, the listener terminates the session and then returns the SMTP response for the REJECT action.

The SMTP response is a code number and message that the email gateway returns when it rejects a message based on the SPF/SIDF verification result. The TempError result returns a different SMTP response from the other verification results. For TempError, the default response code is 451 and the default message text is #4.4.3 Temporary error occurred during SPF verification . For all other verification results, the default response code is 550 and the default message text is #5.7.1 SPF unauthorized mail is prohibited . You can specify your own response code and message text for TempError and the other verification results.

Optionally, you can configure the email gateway to return a third-party response from the SPF publisher domain if the REJECT action is taken for Neutral, SoftFail, or Fail verification result. By default, the email gateway returns the following response:

550-#5.7.1 SPF unauthorized mail is prohibited.

550-The domain example.com explains:

550 <Response text from SPF domain publisher>

To enable these SPF/SIDF settings, use the listenerconfig -> edit subcommand and select a listener. Then use the hostaccess -> default subcommand to edit the Host Access Table's default settings. Answer yes to the following prompts to configure the SPF controls:

```
Would you like to change SPF/SIDF settings? [N]> yes
Would you like to perform SPF/SIDF Verification? [Y]> yes
```

The following SPF control settings are available for the Host Access Table:

Table 17: SPF Control Settings

Conformance Level	Available SPF Control Settings
SPF Only	<ul style="list-style-type: none"> <li>• whether to perform HELO identity check</li> <li>• SMTP actions taken based on the results of the following identity checks: <ul style="list-style-type: none"> <li>• HELO identity (if enabled)</li> <li>• MAIL FROM Identity</li> </ul> </li> <li>• SMTP response code and text returned for the REJECT action</li> <li>• verification time out (in seconds)</li> </ul>
SIDF Compatible	<ul style="list-style-type: none"> <li>• whether to perform a HELO identity check</li> <li>• whether the verification downgrades a Pass result of the PRA identity to None if the Resent-Sender: or Resent-From: headers are present in the message</li> <li>• SMTP actions taken based on the results of the following identity checks: <ul style="list-style-type: none"> <li>• HELO identity (if enabled)</li> <li>• MAIL FROM Identity</li> <li>• PRA Identity</li> </ul> </li> <li>• SMTP response code and text returned for the REJECT action</li> <li>• verification timeout (in seconds)</li> </ul>
SIDF Strict	<ul style="list-style-type: none"> <li>• SMTP actions taken based on the results of the following identity checks: <ul style="list-style-type: none"> <li>• MAIL FROM Identity</li> <li>• PRA Identity</li> </ul> </li> <li>• SMTP response code and text returned in case of SPF REJECT action</li> <li>• verification timeout (in seconds)</li> </ul>

The following example shows a user configuring the SPF/SIDF verification using the SPF Only conformance level. The email gateway performs the HELO identity check and accepts the None and Neutral verification results and rejects the others. The CLI prompts for the SMTP actions are the same for all identity types. The user does not define the SMTP actions for the MAIL FROM identity. The email gateway automatically accepts all verification results for the identity. The email gateway uses the default reject code and text for all REJECT results.

## Example: SPF/SIDF Settings

```

Would you like to change SPF/SIDF settings? [N]> yes
Would you like to perform SPF/SIDF Verification? [N]> yes
What Conformance Level would you like to use?
1. SPF only
2. SIDF compatible
3. SIDF strict
[2]> 1
Would you like to have the HELO check performed? [Y]> y
Would you like to change SMTP actions taken as result of the SPF verification? [N]> y
Would you like to change SMTP actions taken for the HELO identity? [N]> y
What SMTP action should be taken if HELO check returns None?
1. Accept
2. Reject
[1]> 1
What SMTP action should be taken if HELO check returns Neutral?
1. Accept
2. Reject

```

```
[1]> 1
What SMTP action should be taken if HELO check returns SoftFail?
1. Accept
2. Reject
[1]> 2
What SMTP action should be taken if HELO check returns Fail?
1. Accept
2. Reject
[1]> 2
What SMTP action should be taken if HELO check returns TempError?
1. Accept
2. Reject
[1]> 2
What SMTP action should be taken if HELO check returns PermError?
1. Accept
2. Reject
[1]> 2
Would you like to change SMTP actions taken for the MAIL FROM identity? [N]> n
Would you like to change SMTP response settings for the REJECT action? [N]> n
Verification timeout (seconds)
[40]>
```

The following shows how the SPF/SIDF settings are displayed for the listener's Default Policy Parameters.

## Example: SPF/SIDF in Default Policy Parameters

```
SPF/SIDF Verification Enabled: Yes
Conformance Level: SPF only
Do HELO test: Yes
SMTP actions:
 For HELO Identity:
 None, Neutral: Accept
 SoftFail, Fail, TempError, PermError: Reject
 For MAIL FROM Identity: Accept
SMTP Response Settings:
 Reject code: 550
 Reject text: #5.7.1 SPF unauthorized mail is prohibited.
 Get reject response text from publisher: Yes
 Defer code: 451
 Defer text: #4.4.3 Temporary error occurred during SPF verification.
Verification timeout: 40
```

## Example - Enable DMARC Verification

The following example shows how to enable DMARC verification.

```
mail.example.com> listenerconfig
Currently configured listeners:
1. Listener 1 (on Management, 172.29.181.70) SMTP TCP Port 25 Public
Choose the operation you want to perform:
- NEW - Create a new listener.
- EDIT - Modify a listener.
- DELETE - Remove a listener.
- SETUP - Change global settings.
[]> edit
Enter the name or number of the listener you wish to edit.
[]> 1
Name: Listener 1
Type: Public
Interface: Management (172.29.181.70/24) TCP Port 25
Protocol: SMTP
```

## Example - Enable DMARC Verification

```

Default Domain: <none configured>
Max Concurrent Connections: 300 (TCP Queue: 50)
Domain Map: Disabled

Would you like to enable DKIM verification? [N]>
Would you like to change SPF/SIDF settings? [N]>
Would you like to enable DMARC verification? [N]> Y
Select the DMARC verification profile to use:
1. DEFAULT
[1]> 1
Would you like to send aggregate reports? [N]> Y
Note: DMARC reports should be DMARC compliant.
 Secure delivery is recommended for delivery of DMARC reports.
 Please enable TLS support using the `destconfig` command.
Would you like to enable envelope sender verification? [N]> Y
Would you like to specify a custom SMTP response for malformed envelope senders? [Y]>
Enter the SMTP code to use in the response. 553 is the standard code.
[553]>
Enter your custom SMTP response. Press Enter on a blank line to finish.
Would you like to specify a custom SMTP response for envelope sender domains which do not
resolve? [Y]>
Enter the SMTP code to use in the response. 451 is the standard code.
[451]>
Enter your custom SMTP response. Press Enter on a blank line to finish.
Would you like to specify a custom SMTP response for envelope sender domains which do not
exist? [Y]>
Enter the SMTP code to use in the response. 553 is the standard code.
[553]>
Enter your custom SMTP response. Press Enter on a blank line to finish.
Would you like to enable use of the domain exception table? [N]>
Do you wish to accept untagged bounces? [N]>
Default Policy Parameters
=====
Maximum Message Size: 20M
Maximum Number Of Concurrent Connections From A Single IP: 10
Maximum Number Of Messages Per Connection: 10
Maximum Number Of Recipients Per Message: 50
```

## Example - Enable DMARC Verification

```

Directory Harvest Attack Prevention: Enabled
Maximum Number Of Invalid Recipients Per Hour: 25
Maximum Number Of Recipients Per Hour: Disabled
Maximum Number of Recipients per Envelope Sender: Disabled
Use SenderBase for Flow Control: Yes
Spam Detection Enabled: Yes
Virus Detection Enabled: Yes
Allow TLS Connections: No
Allow SMTP Authentication: No
Require TLS To Offer SMTP authentication: No
DKIM/DomainKeys Signing Enabled: No
DKIM Verification Enabled: No
SPF/SIDF Verification Enabled: No
DMARC Verification Enabled: Yes
 DMARC Verification Profile: DEFAULT
 Aggregate reports: Yes
Envelope Sender DNS Verification Enabled: Yes
Domain Exception Table Enabled: No
Accept untagged bounces: No
There are currently 4 policies defined.
There are currently 5 sender groups.
Choose the operation you want to perform:
- NEW - Create a new entry.
- EDIT - Modify an entry.
- DELETE - Remove an entry.
- MOVE - Move an entry.
- DEFAULT - Set the defaults.
- PRINT - Display the table.
- IMPORT - Import a table from a file.
- EXPORT - Export the table to a file.
- RESET - Remove senders and set policies to system default.
[]>
Name: Listener 1
Type: Public
Interface: Management (172.29.181.70/24) TCP Port 25
Protocol: SMTP
Default Domain: <none configured>
Max Concurrent Connections: 300 (TCP Queue: 50)
Domain Map: Disabled
TLS: No
SMTP Authentication: Disabled
Bounce Profile: Default
Use SenderBase For Reputation Filters and IP Profiling: Yes
Footer: None
Heading: None
SMTP Call-Ahead: Disabled
LDAP: Off
Choose the operation you want to perform:

- EDIT - Modify a listener.

```

```
- DELETE - Remove a listener.
- SETUP - Change global settings.
[]>
mail.example.com>
```

## localeconfig

### Description

Configure multi-lingual settings

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Example

```
mail3.example.com> localeconfig
```

```
Behavior when modifying headers: Use encoding of message body
Behavior for untagged non-ASCII headers: Impose encoding of message body
Behavior for mismatched footer or heading encoding: Try both body and footer or heading
encodings
Behavior when decoding errors found: Disclaimer is displayed as inline content and the
message body is added as an attachment.
```

```
Choose the operation you want to perform:
- SETUP - Configure multi-lingual settings.
[]> setup
```

```
If a header is modified, encode the new header in the same encoding as the message body?
(Some MUAs incorrectly handle headers encoded in a different encoding than the body.
However, encoding a modified header in the same encoding as the message body may cause
certain
characters in the modified header to be lost.) [Y]>
```

```
If a non-ASCII header is not properly tagged with a character set and is being used or
modified,
impose the encoding of the body on the header during processing and final representation
of the message?
(Many MUAs create non-RFC-compliant headers that are then handled in an undefined way.
Some MUAs handle headers encoded in character sets that differ from that of the main body
in an incorrect way.
Imposing the encoding of the body on the header may encode the header more precisely.
This will be used to interpret the content of headers for processing, it will not modify
or rewrite the
header unless that is done explicitly as part of the processing.) [Y]>
```

```
Disclaimers (as either footers or headings) are added in-line with the message body whenever
possible.
However, if the disclaimer is encoded differently than the message body, and if imposing a
single encoding
will cause loss of characters, it will be added as an attachment. The system will always
try to use the
message body's encoding for the disclaimer. If that fails, the system can try to edit the
```

```

message body to
use an encoding that is compatible with the message body as well as the disclaimer. Should
the system try to
re-encode the message body in such a case? [Y]>

```

```

If the disclaimer that is added to the footer or header of the message generates an error
when decoding the message body,
it is added at the top of the message body. This prevents you to rewrite a new message
content that must merge with
the original message content and the header/footer-stamp.
The disclaimer or message body is split into separate message attachment. Do you want the
appliance to ignore
such errors when decoding the message body? [N]>

```

```

Behavior when modifying headers: Use encoding of message body
Behavior for untagged non-ASCII headers: Impose encoding of message body
Behavior for mismatched footer or heading encoding: Try both body and footer or heading
encodings
Behavior when decoding errors are found: Disclaimer or message body is added
as a message attachment.

```

```

Choose the operation you want to perform:
- SETUP - Configure multi-lingual settings.
[]> mail3.example.com

```

## smtpauthconfig

### Description

Configure SMTP Auth outgoing and forwarding profiles.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

### Example

In the following example, the **smtpauthconfig** command is used to create a new, forwarding-based profile for the server "smtp2.example.com:"

```

mail3.example.com> smtpauthconfig
Choose the operation you want to perform:
- NEW - Create a new SMTP Auth profile
[]> new
Choose the type of profile you wish to create:
- FORWARD - Create an SMTP Auth forwarding server group profile
- OUTGOING - Create an outgoing SMTP Auth profile
[]> forward
Enter a name for this profile:
[]> forwarding-based
Please begin entering forwarding servers for this group profile.
Enter a hostname or an IP address for the forwarding server:
[]> smtp2.example.com
Enter a port:
[25]>

```

```

Choose the interface to use for forwarding requests:
1. Auto
2. Data 1 (192.168.1.1/24: mail3.example.com)
3. Data 2 (192.168.2.1/24: mail3.example.com)
4. Management (192.168.42.42/24: mail3.example.com)
[1]>
Require TLS? (issue STARTTLS) [Y]> y
Enter the maximum number of simultaneous connections allowed:
[10]>
Use SASL PLAIN mechanism when contacting forwarding server? [Y]>
Use SASL LOGIN mechanism when contacting forwarding server? [Y]>
Would you like to enter another forwarding server to this group? [N]>
Choose the operation you want to perform:
- NEW - Create a new SMTP Auth profile
- EDIT - Edit an existing SMTP Auth profile
- PRINT - List all profiles
- DELETE - Delete a profile
- CLEAR - Delete all profiles
[]>
mail3.example.com> commit
Please enter some comments describing your changes:
[]> created SMTP auth profile
Do you want to save the current configuration for rollback? [Y]> n
Changes committed: Fri May 23 11:42:12 2014 GMT

```

---

**Note** An authenticated user is granted a RELAY HAT policy.

You may specify more than one forwarding server in a profile. SASL mechanisms CRAM-MD5 and DIGEST-MD5 are not supported between the email gateway and a forwarding server.

---

## System Setup

### systemsetup

#### Description

First time system setup as well as re-installation of the system.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

#### Example

```

mail3.example.com> systemsetup
WARNING: The system setup wizard will completely delete any existing
'listeners' and all associated settings including the 'Host Access Table' -
mail operations may be interrupted.
Are you sure you wish to continue? [Y]> y

```

## Example

```

Before you begin, please reset the administrator passphrase to a new value.
Old passphrase:
Would you like to get a system generated passphrase? [N]>
New passphrase:
Retype new passphrase:

You will now configure the network settings for the IronPort C100.
Please create a fully qualified hostname for the IronPort C100 appliance
(Ex: "ironport-C100.example.com"):
[> ironport-C100.example.com

You will now assign an IP address for the "Data 1" interface.
Please create a nickname for the "Data 1" interface (Ex: "Data 1"):
[> Data 1
Enter the static IP address for "Data 1" on the "Data 1" interface? (Ex:
"192.168.1.1"):
[> 192.168.1.1
What is the netmask for this IP address? (Ex: "255.255.255.0" or "0xfffff00"):
[255.255.255.0]>
You have successfully configured IP Interface "Data 1".

Would you like to assign a second IP address for the "Data 1" interface? [Y]> n
What is the IP address of the default router (gateway) on your network?:
[192.168.1.1]> 192.168.2.1

Do you want to enable the web interface on the Data 1 interface? [Y]> y
Do you want to use secure HTTPS? [Y]> y
Note: The system will use a demo certificate for HTTPS.
Use the "certconfig" command to upload your own certificate.

Do you want the IronPort C100 to use the Internet's root DNS servers or would
you like it to use your own DNS servers?
1. Use Internet root DNS servers
2. Use my own DNS servers
[1]> 2
Please enter the IP address of your DNS server.
[> 192.168.0.3
Do you want to enter another DNS server? [N]>
You have successfully configured the DNS settings.

You are now going to configure how the IronPort C100 accepts mail by creating a
"Listener".
Please create a name for this listener (Ex: "MailInterface"):
[> InboundMail
Please choose an IP interface for this Listener.
1. Data 1 (192.168.1.1/24: ironport-C100.example.com)
[1]> 1
Enter the domain names or specific email addresses you want to accept mail for.
Hostnames such as "example.com" are allowed.
Partial hostnames such as ".example.com" are allowed.
Usernames such as "postmaster@" are allowed.
Full email addresses such as "joe@example.com" or "joe@[1.2.3.4]" are allowed.
Separate multiple addresses with commas.
[> example.com, .example.com
Would you like to configure SMTP routes for example.com, .example.com? [Y]> n
Please specify the systems allowed to relay email through the IronPort C100.
Hostnames such as "example.com" are allowed.
Partial hostnames such as ".example.com" are allowed.
IP addresses, IP address ranges, and partial IP addresses are allowed.
Separate multiple entries with commas.
[> example.com, .example.com
Do you want to enable filtering based on SenderBase Reputation Service (SBRs)
Scores for this listener? (Your selection will be used to filter all incoming
mail based on its SBRs Score.) [Y]> y

```

```

Do you want to enable rate limiting for this listener? (Rate limiting defines
the maximum number of recipients per hour you are willing to receive from a
remote domain.) [Y]> y
Enter the maximum number of recipients per hour to accept from a remote domain.
[]> 1000
Default Policy Parameters
=====
Maximum Message Size: 10M
Maximum Number Of Concurrent Connections From A Single IP: 10
Maximum Number Of Messages Per Connection: 10
Maximum Number Of Recipients Per Message: 50
Directory Harvest Attack Prevention: Enabled
Maximum Number Of Invalid Recipients Per Hour: 25
Maximum Number Of Recipients Per Hour: 1,000
Maximum Recipients Per Hour SMTP Response:
 452 Too many recipients received this hour
Use SenderBase for Flow Control: Yes
Spam Detection Enabled: Yes
Virus Detection Enabled: Yes
Allow TLS Connections: No
Allow SMTP Authentication: No
Require TLS To Offer SMTP authentication: No
DKIM/DomainKeys Signing Enabled: No
DKIM Verification Enabled: No
SPF/SIDF Verification Enabled: No
DMARC Verification Enabled: No
Envelope Sender DNS Verification Enabled: No
Domain Exception Table Enabled: No
Accept untagged bounces: No
Would you like to change the default host access policy? [N]> n
Listener InboundMail created.
Defaults have been set for a Public listener.
Use the listenerconfig->EDIT command to customize the listener.

Do you want to use Anti-Spam scanning in the default Incoming Mail policy? [Y]> y
Would you like to enable IronPort Spam Quarantine? [Y]> y
IronPort Anti-Spam configured globally for the IronPort C100 appliance. Use the
policyconfig command (CLI) or Mail Policies (GUI) to customize the IronPort
settings for each listener.
IronPort selected for DEFAULT policy

Do you want to use Anti-Virus scanning in the default Incoming and Outgoing
Mail policies? [Y]> y
1. McAfee Anti-Virus
2. Sophos Anti-Virus
Enter the number of the Anti-Virus engine you would like to use on the default
Incoming and Outgoing Mail policies.
[]> 2
Sophos selected for DEFAULT policy

Do you want to enable Outbreak Filters? [Y]> y
Outbreak Filters enabled.
Outbreak Filter alerts are sent when outbreak rules cross the threshold (go above or back
down below),
meaning that new messages of certain types could be quarantined or will no longer be
quarantined, respectively.
Allow the sharing of limited data with SenderBase? [Y]> y
You have successfully configured Outbreak Filters and SenderBase.

You will now configure system alerts.
Please enter the email address(es) to send alerts.
(Ex: "administrator@example.com")
Separate multiple addresses with commas.
[]> administrator@example.com

```

```

Would you like to enable IronPort AutoSupport, which automatically emails
system alerts and weekly status reports directly to IronPort Customer Support?
You will receive a complete copy of each message sent to IronPort.
(Recommended) [Y]> y

You will now configure scheduled reporting.
Please enter the email address(es) to deliver scheduled reports to.
(Leave blank to only archive reports on-box.)
Separate multiple addresses with commas.
[> administrator@example.com

You will now configure system time settings.
Please choose your continent:
1. Africa
2. America
...
11. GMT Offset
[11]> 2
Please choose your country:
1. Anguilla
...
47. United States
48. Uruguay
49. Venezuela
50. Virgin Islands (British)
51. Virgin Islands (U.S.)
[> 47
Please choose your timezone:
1. Alaska Time (Anchorage)
...
26. Pacific Time (Los_Angeles)
[> 26
Do you wish to use NTP to set system time? [Y]> y
Please enter the fully qualified hostname or IP address of your NTP server, or
press Enter to use time.ironport.com:
[time.ironport.com]>

Would you like to commit these changes at this time? [Y]> y
Congratulations! System setup is complete.
For advanced configuration, please refer to the User Guide.

```

## URL Filtering

This section contains the following CLI commands:

### aggregatorconfig

#### Description

Configure address for Cisco Aggregator Server on the email gateway. This server provides details of the end users who clicked on rewritten URLs and the action (allowed, blocked or unknown) associated with each user click.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

## Example

```
mail.example.com> aggregatorconfig
Choose the operation you want to perform:
- EDIT - Edit aggregator configuration
[]> edit
Edit aggregator address:
[aggregator.organization.com]> org-aggregator.com
Successfully changed aggregator address to : org-aggregator.com
```

## urllistconfig

### Description

Configure or import allowed lists of URLs that will not be evaluated by URL filtering features. These lists are not used by the Outbreak Filters feature.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

## Example

```
> urllistconfig
No URL lists configured.
Choose the operation you want to perform:
NEW - Create a new URL list-
[]> new
Do you want to import a URL list?
[N]>
Enter a name for the URL list
[]> sample
Enter the URL domains that need to be skipped from scanning for URL Filtering.
Enter one URL domain per line and '.' to finish.
cisco.com
ironport.com/*
*.example.com
10.2.4.5/24
[2001:DB8::1]
URL list sample added.
There are currently 4 URL lists configured.
Choose the operation you want to perform:
- NEW - Create a new URL allowed list.
- EDIT - Modify an existing URL allowed list.
- DELETE - Delete an existing URL allowed list.
[]>EDIT
Choose the operation to edit the URL allowed list:
- IMPORT - Import a file into an existing URL allowed list
- EXPORT - Export an existing URL allowed list into a file
- RENAME - Rename an existing URL allowed list
```

```
[]>IMPORT
Assign new name to the imported list? (By default, name stored in the
file will be applied to the list)
[N] > Y
Enter name of the list > new_list
Enter filename to import from > URLfile
NOTE: These files will be stored in /pub/configuration
URL list "new_list" added.
```

## websecurityadvancedconfig

### Description

Configure the following advanced settings for URL filtering:

- **URL Lookup Timeout:** The time taken for the URL to request the IP address for a certain domain name.
- **Maximum number of URLs to scan in message body:** The maximum number of URLs that are scanned in a message body .
- **Maximum number of URLs to scan in message attachments:** The maximum number of URLs that are scanned in the attachments of a message.
- **Rewrite URL text and HREF in the message:** You can choose whether you want the full rewritten URL to appear in the message body or the rewritten URL to only appear in the HREF for HTML messages.
- **URL logging:** Displays URL details in Mail Logs and Message Tracking.

---

**Note** Except to change timeout values for troubleshooting purposes, use this command only under the direction of Cisco support.

---

The timeout value is the value, in seconds, for communication with the cloud services that provide reputation and category for URLs.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format.

### Batch Format

For the batch format, see the CLI inline help.

### Example

```
mail.example.com> websecurityadvancedconfig
Enter URL lookup timeout in seconds:
[15]>
```

```
Enter the maximum number of URLs that can be scanned in a message body:
[100]>

Enter the maximum number of URLs that can be scanned in the attachments in a
message:
[25]>

Do you want to rewrite both the URL text and the href in the message? Y
indicates that the full rewritten URL will appear in the email body. N
indicates that the rewritten URL will only be visible in the href for HTML
messages. [N]>

Logging of URLs is currently enabled.
Do you wish to disable logging of URL's? [N]>

>
```

## websecurityconfig

### Description

Configure basic settings for URL filtering (URL reputation and URL category features.)

Normally, certificate management is automatic. Unless directed to do otherwise by Cisco TAC, you should select No at the prompt to set a certificate.

### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. See the inline CLI help for more details. Use the help command to access the inline help for this command.

### Example

```
mail.example.com> websecurityconfig
Enable URL Filtering? [N]> y
Do you wish to enable Web Interaction Tracking? [N]> y
Web Interaction Tracking is enabled.
Do you want to add URLs to the allowed list using a URL list? [N]> y
1. urllist1
2. urllist2
3. No URL list
Enter the number of URL list
[1]> 1
URL list 'urllist1' added
mail.example.com> websecurityconfig
URL Filtering is enabled.
URL list 'urllist1' used.
System provided certificate used.
Web Interaction Tracking is enabled.
```

## websecuritydiagnostics

### Description

View diagnostic statistics related to URL filtering.

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

### Example

```
mail.example.com> websecuritydiagnostics
Cache Size: 254
Cache Hits: 551
Response Time
 Minimum: None
 Average: 0.0
 Maximum: None
DNS Lookup Time
 Minimum: 9.4198775
 Average: 10.1786801765
 Maximum: 10.544356
```

## User Management

This section contains the following CLI commands:

### userconfig

#### Description

Manage user accounts and connections to external authentication sources.

#### Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to cluster mode.

Batch Command: This command supports a batch format. See the inline CLI help for more details. Use the help command to access the inline help for this command, for example,

```
mail.example.com> userconfig help
```

### Example - Creating a New User Account

The following example shows how to create a new user account with a Help Desk User role.

```

mail.example.com> userconfig
Users:
1. admin - "Administrator" (admin)
External authentication: Disabled
Choose the operation you want to perform:
- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
- PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.
[]> new
Enter your Passphrase to make changes:
Enter the new username.
[]> helpdesk
Enter the full name for helpdesk.
[]> HELP DESK
Assign a role to "helpdesk":
1. Administrators - Administrators have full access to all settings of the system.
2. Operators - Operators are restricted from creating new user accounts.
3. Read-Only Operators - Read-Only operators may only view settings and status information.
4. Guests - Guest users may only view status information.
5. Technicians - Technician can only manage upgrades and feature keys.
6. Help Desk Users - Help Desk users have access only to ISQ and Message Tracking.
[1]> 6
Would you like to get a system generated passphrase? [N]>
Enter the passphrase for helpdesk
[]>
Please enter the new passphrase again:
Users:
1. admin - "Administrator" (admin)
2. helpdesk - "HELP DESK" (helpdesk)
External authentication: Disabled
Choose the operation you want to perform:
- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
- PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.
[]>

```

## Example - Setting Up a RADIUS Server for External Authentication

The following example shows how to set up a RADIUS server for external authentication. To set up a RADIUS server, enter the hostname, port, shared passphrase, and whether to use CHAP or PAP for the authentication protocol.

```

mail.example.com> userconfig
Users:
1. admin - "Administrator" (admin)
2. hdesk_user - "Helpdesk User" (helpdesk)
External authentication: Disabled

```

**Example - Enabling Two-Factor Authentication for Specific User Role**

```

Choose the operation you want to perform:
- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
- PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.
[]> external
Choose the operation you want to perform:
- SETUP - Set up global settings.
[]> setup
Do you want to enable external authentication? [N]> Y
Please enter the timeout in seconds for how long the external authentication credentials
will be cached. (Enter '0' to disable expiration of
authentication credentials altogether when using one time passphrases.)
[0]> 30
Choose a mechanism to use:
LDAP is unavailable because no LDAP queries of type EXTERNALAUTH are configured
1. RADIUS
[1]> 1
Configured RADIUS servers:
- No RADIUS servers configured
Choose the operation you want to perform:
- NEW - Add a RADIUS server configuration.
[]> new
Please enter host name or IP address of the RADIUS server:
[]> radius.example.com
Please enter port number of the RADIUS server:
[1812]>
Please enter the shared passphrase:
>
Please enter the new passphrase again.
>
Please enter timeout in seconds for receiving a valid reply from the server:
[5]>
1. CHAP
2. PAP
Select authentication type:
[2]>
Configured RADIUS servers:
Host Port Timeout (s) Auth type

radius.example.com 1812 5 pap
Choose the operation you want to perform:
- NEW - Add a RADIUS server configuration.
- EDIT - Modify a RADIUS server configuration.
- DELETE - Remove a RADIUS server configuration.
- CLEAR - Remove all RADIUS server configurations.
[]>

```

**Example - Enabling Two-Factor Authentication for Specific User Role**

In the following example, the `twofactorauth` sub command is used to enable two-factor authentication for a specific user role.

```

mail.example.com> userconfig

Users:

```

```
1. admin - "Administrator" (admin)
2. hdesk_user - "Helpdesk User" (helpdesk)

External authentication: Disabled

Two-Factor Authentication: Disabled

Choose the operation you want to perform:

- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
- PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- TWOFACTORAUTH - Configure Two-Factor Authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.

[]> twofactorauth

Choose the operation you want to perform:

- SETUP - Set up global settings.
- PRIVILEGES - Configure Two-Factor Authentication based on User Role Privileges.

[]> setup

Do you want to enable external authentication? [N]> y

Choose the operation you want to perform:

- NEW - Add a two-factor authentication server configuration.
- EDIT - Modify two-factor authentication server configuration.
- DELETE - Remove a two-factor authentication server configuration.
- CLEAR - Remove all two-factor authentication server configurations.

[]> new

Please enter host name or IP address of the RADIUS server:

[]> radius.example.com

Please enter port number of the RADIUS server:

[1812]> 1800
```

## Example - Enabling Two-Factor Authentication for Specific User Role

```
Please enter the shared passphrase:
>
Please enter the new passphrase again.
>
Please enter timeout in seconds for receiving a valid reply from the server:
[5]> 10

## Example – Enabling SAML Authentication

```
mail.example.com > userconfig
Users:
1. admin - "Administrator" (admin)
External authentication: Disabled
Two-Factor Authentication: Disabled
Choose the operation you want to perform:
- NEW - Create a new account.
- EDIT - Modify an account.
- DELETE - Remove an account.
- POLICY - Change passphrase and account policy settings.
- PASSPHRASE - Change the passphrase for a user.
- ROLE - Create/modify user roles.
- STATUS - Change the account status.
- EXTERNAL - Configure external authentication.
- TWOFACORAUTH - Configure Two-Factor Authentication.
- DLPTRACKING - Configure DLP tracking privileges.
- URLTRACKING - Configure URL tracking privileges.
[]> external
Choose the operation you want to perform:
- SETUP - Set up global settings.
[]> setup
Do you want to enable external authentication? [N]> y
Please enter the timeout in seconds for how long the external authentication credentials
will be cached.
(Enter '0' to disable expiration of authentication credentials altogether when using one
time passphrases.)
[0]> 10
Choose a mechanism to use:
LDAP is unavailable because no LDAP queries of type EXTERNALAUTH are configured
1. RADIUS
2. SAML
[1]> 2
Please enter the external group name to map (group names are case-sensitive):
[]> member-of
Assign a role to "member-of":
1. Administrators - Administrators have full access to all settings of the system.
2. Operators - Operators are restricted from creating new user accounts.
3. Read-Only Operators - Read-Only operators may only view settings and status information.
4. Guests - Guest users may only view status information.
5. Technicians - Technician can only manage upgrades and feature keys.
6. Help Desk Users - Help Desk users have access only to ISQ and Message Tracking.
[1]> 1
Mapping for "member-of" to Administrators created.
Please enter group attribute to be matched in saml attributes:
[[]]> Group Name
Choose the operation you want to perform:
- SETUP - Set up global settings.
- GROUPS - Configure external group mapping.
[]> groups
There are currently 1 mappings configured.
Choose the operation you want to perform:
- NEW - Create a new mapping.
- EDIT - Edit destination of an existing mapping.
- DELETE - Remove a mapping.
- CLEAR - Clear all mappings.
- PRINT - Display all mappings.
[]>
```

# passphrase or passwd

## Description

Change your passphrase.

## Usage

Commit: This command requires a 'commit'.

Cluster Management: This command is restricted to cluster mode.

---

**Note** The passwd command is a special case because it needs to be usable by guest users who can only ever be in machine mode. If a guest user issues the passwd command on a machine in a cluster, it will not print the warning message but will instead just silently operate on the cluster level data without changing the user's mode. All other users will get the above written behavior (consistent with the other restricted configuration commands).

---

Batch Command: This command does not support a batch format.

## Example

```
mail3.example.com> passphrase
Old passphrase: your_old_passphrase
Would you like to get a system generated passphrase? [N]>
New passphrase: your_new_passphrase
Retype new passphrase: your_new_passphrase
passphrase changed.
```

# last

## Description

The last command displays who has recently logged into the system. By default, it shows all users who have logged into the system

## Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

## Example

```
elroy.run> last
Username Remote Host Login Time Logout Time Total Time
=====
admin 10.251.23.186 Thu Sep 01 09:14 still logged in 1h 5m
admin 10.251.23.186 Wed Aug 31 14:00 Wed Aug 31 14:01 1m
```

```

admin 10.251.16.231 Wed Aug 31 13:36 Wed Aug 31 13:37 0m
admin 10.251.23.186 Wed Aug 31 13:34 Wed Aug 31 13:35 0m

admin 10.251.60.37 Tue Aug 30 01:45 Tue Aug 30 02:17 32m
admin 10.251.16.231 Mon Aug 29 10:29 Mon Aug 29 10:41 11m
shutdown Thu Aug 25 22:20

```

## who

### Description

The **who** command lists all users who are logged into the system via the CLI, the time of login, the idle time, and the remote host from which the user is logged in.

### Usage

**Commit:** This command does not require a ‘commit’.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto). This command requires access to the local file system.

**Batch Command:** This command does not support a batch format.

### Example

```

mail3.example.com> who
Username Login Time Idle Time Remote Host What
===== ===== ===== ===== =====
admin 03:27PM 0s 10.1.3.201 cli

```

## whoami

### Description

The **whoami** command displays the username and full name of the user currently logged in, and which groups the user belongs to.

### Usage

**Commit:** This command requires a ‘commit’.

**Cluster Management:** This command can be used in all three machine modes (cluster, group, machine).

**Batch Command:** This command does not support a batch format.

### Example

```

mail3.example.com> whoami
Username: admin
Full Name: Administrator
Groups: admin, operators, config, log, guest

```

# Virtual Email Gateway Management

## loadlicense

### Description

Loads an XML license for a virtual email gateway. You can load from a file or copy and paste. For complete information, see the *Cisco Content Security Virtual Appliance Installation Guide* available from <http://www.cisco.com/c/en/us/support/security/email-security-appliance/products-installation-guides-list.html>.

This command is available to users with Admin or Operator privileges.

### Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

Batch Command: This command does not support a batch format.

### Example

```
mail.example.com> loadlicense
1 Paste via CLI
2 Load from file
How would you like to load a license file?
[1]> 2
Enter the name of the file in /configurations to import:
[]> <filename>
TERMS AND CONDITIONS OF USE
<Terms and conditions>
Do you accept the above license agreement?
[]> y
The license agreement was accepted.
The following feature key have been added:
<feature keys>
```

Errors and hardware misconfigurations may also be shown.

## showlicense

### Description

Displays information about the current virtual email gateway license. Additional details are available using the [featurekey](#) command.

This command is available to users with Admin or Operator privileges.

### Usage

Commit: This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode. It is further restricted to the login host (i.e., the specific machine you are logged onto).

**Batch Command:** This command supports a batch format.

## Batch Format

The syntax of this command is: showlicense

## Example

```
mail.example.com> showlicense
company: Example Inc.
org: Widget Division
unit: Portland Data Center
seats: 1000
city: Portland
state: Oregon
country: US
email: mailadmin@example.com
begin_date: Tue Dec 6 17:45:19 2011
end_date: Mon Sep 1 17:45:19 2014
vln: ABC-123423123
serial: 1003385
```

# Geolocation

This section contains the following CLI commands:

## geolocationupdate

### Description

Manually update the geolocation list.

### Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode.

**Batch Command:** This command supports a batch format. For details, see the inline help by typing the command: `help geolocationupdate`.

## Example

```
mail3.example.com> geolocationupdate
Requesting update of Geo Countries List.
```

## geolocationstatus

### Description

Displays the current version of the geolocation list.

### Usage

**Commit:** This command does not require a 'commit'.

**Cluster Management:** This command is restricted to machine mode.

**Batch Command:** This command does not support a batch format.

### Example

```
mail3.example.com> geolocationstatus

Component Version Last Updated
Geo Countries List 1.0.48 26 Feb 2017 04:22 (GMT +00:00)
```

## Configuring Cisco Cloud Service Portal Settings and Usage

- [Example - Disabling CSN on Email Gateway, on page 331](#)
- [Example - Downloading Cisco Cloud Services Certificate and Key from Cisco Talos Intelligence Services Portal, on page 332](#)

## Description

The `cloudserviceconfig` command is used to:

- Reregister your email gateway with the Cisco Cloud Services portal.
- Enable the Cisco Cloud Services portal on your email gateway.
- Disable the Cisco Cloud Services portal on your email gateway.
- Register your email gateway with the Cisco Cloud Services portal.
- Automatically register your email gateway with the Cisco Cloud Services portal.
- Deregister your email gateway from the Cisco Cloud Services portal.
- Choose the Cisco Secure Cloud server to connect your email gateway to the Cisco Cloud Services portal
- Enable Cisco SecureX Thread Response on your email gateway.
- Disable Cisco SecureX Thread Response on your email gateway.
- Enable Cisco Success Network (CSN) on your email gateway.
- Disable Cisco Success Network (CSN) on your email gateway.
- Download the Cisco Cloud Services certificate and key from the Cisco Talos Intelligence Services portal.

## Usage

**Commit:** This command does not require a 'commit.'

**Cluster Management:** This command is restricted to the machine mode.

**Batch Command:** This command supports a batch format.

## Example - Enabling Cisco Cloud Services on Email Gateway

In the following example, you can use the `cloudserviceconfig > enable` sub command to enable Cisco Cloud Services on your email gateway.

```
mail1.example.com > cloudserviceconfig
```

```
Choose the operation you want to perform:
```

```
- ENABLE - The Cisco Cloud Service is currently disabled on your appliance.
```

```
[> enable
```

```
The Cisco Cloud Service is currently enabled on your appliance.
```

```
Currently configured Cisco Secure Cloud Server is: api.apj.sse.itd.cisco.com
```

```
Available list of Cisco Secure Cloud Servers:
```

1. AMERICAS (api-sse.cisco.com)
2. APJC (api.apj.sse.itd.cisco.com)
3. EUROPE (api.eu.sse.itd.cisco.com)

## Example - Disabling Cisco Cloud Services on Email Gateway

```

Enter Cisco Secure Cloud Server to connect to the Cisco Cloud Service portal.:
[> 1

Selected Cisco Secure Cloud Server is api-sse.cisco.com.

Make sure you run "commit" to make these changes active.
maill.example.com > commit

Please enter some comments describing your changes:

```

## Example - Registering Email Gateway with Cisco Cloud Services Portal

In the following example, you can use the `cloudserviceconfig > register` sub command to register your email gateway with the Cisco Cloud Services portal.

---

**Note** You can only use this sub command if Smart Software licensing is not enabled, and your email gateway is not registered with Cisco Smart Software Manager.

---

```

maill.example.com > cloudserviceconfig

The appliance is not registered with the Cisco Cloud Service portal.

Currently configured Cisco Cloud Server is api-sse.cisco.com

```

```

Choose the operation you want to perform:
- DISABLE - The Cisco Cloud Service is currently enabled on your appliance.
- REGISTER - To register the appliance with the Cisco Cloud Service portal.
- SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud
Service portal.
[]> register

Enter a registration token key to register your appliance with the Cisco Cloud
Service portal.
[]> c7fda800adc846792af38d15e4

The appliance registration is in progress.
mail1.example.com>

```

## Example - Automatically Registering Email Gateway with Cisco Cloud Services Portal

In the following example, you can use the `cloudserviceconfig> autoregister` sub command to automatically register your email gateway with the Cisco Cloud Services portal.

**Note** You can only use this sub command, if your email gateway is not automatically registered with the Cisco Cloud Services portal when Smart Software licensing is enabled, and your email gateway is registered with Cisco Smart Software Manager.

```

mail1.example.com> cloudserviceconfig

The appliance is successfully registered with the Cisco Cloud Service portal.

Currently configured Cisco Cloud Server is api-sse.cisco.com

Choose the operation you want to perform:
- SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud Service portal.
- AUTOREGISTER - register the appliance with the Cisco Cloud Service portal using Smart
Licensing Information.
- ENABLESECUREX - To enable the SecureX feature on your appliance.
- DISABLECSN - To disable the Cisco Success Network feature on your appliance.
[]> autoregister

The auto-registration of the appliance with the Cisco Cloud Service portal is in progress.
mail1.example.com > cloudserviceconfig

The appliance is successfully registered with the Cisco Cloud Service portal.

Currently configured Cisco Cloud Server is api-sse.cisco.com

Choose the operation you want to perform:
- SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud Service portal.
- FETCHCERTIFICATE - Download the Cisco Talos certificate and key
- ENABLESECUREX - To enable the SecureX feature on your appliance.
- DISABLECSN - To disable the Cisco Success Network feature on your appliance.
[]>

```

## Example - Deregistering Email Gateway from Cisco Cloud Services Portal

In the following example, you can use the `cloudserviceconfig> deregister` sub command to deregister your email gateway from the Cisco Cloud Services portal.

**Example - Reregistering Email Gateway with Cisco Cloud Services Portal**

```

maill.example.com> cloudserviceconfig

The appliance is successfully registered with the Cisco Cloud Service portal.

Currently configured Cisco Cloud Server is api-sse.cisco.com

Choose the operation you want to perform:
- DISABLE - The Cisco Cloud Service is currently enabled on your appliance.
- Deregister - To deregister the appliance from the Cisco Cloud Service portal.
- SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud
Service portal.
- ENABLEEXECUREX - To enable the SecureX feature on your appliance.
- ENABLECSN - To enable the Cisco Success Network feature on your appliance.
[]> deregister

Do you want to deregister your appliance from the Cisco Cloud Service portal.

If you deregister, you will not be able to access the Cloud Service features. [N]> yes

The appliance deregistration is in progress.
maill.example.com>

```

**Example - Reregistering Email Gateway with Cisco Cloud Services Portal**

In the following example, you can use the `cloudserviceconfig>reregister` sub command to reregister your email gateway with the Cisco Cloud Services portal.

```

maill.example.com> cloudserviceconfig

The appliance is successfully registered with the Cisco Cloud Service portal.
Currently configured Cisco Cloud Server is api-sse.cisco.com

Choose the operation you want to perform:
- FETCHCERTIFICATE - Download the Cisco Talos certificate and key
- DISABLESECUREX - To disable the SecureX feature on your appliance.
- DISABLECSN - To disable the Cisco Success Network feature on your appliance.
- REREGISTER - To reregister the appliance with the Cisco Cloud Service portal
[]> reregister

## Example - Enabling CSN on Email Gateway

In the following example, you can use the `cloudserviceconfig> enablecsn` sub command to enable CSN on your email gateway.

```
mail1.example.com > cloudserviceconfig
```

```
The appliance is successfully registered with the Cisco Cloud Service portal.
```

```
Currently configured Cisco Cloud Server is api-sse.cisco.com
```

```
Choose the operation you want to perform:
```

- DISABLE - The Cisco Cloud Service is currently enabled on your appliance.
  - DEREGISTER - To deregister the appliance from the Cisco Cloud Service portal.
  - SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud Service portal.
  - ENABLESECUREX - To enable the SecureX feature on your appliance.
  - ENABLECSN - To enable the Cisco Success Network feature on your appliance.
- ```
[> enablecsn
```

```
The Cisco Success Network feature is currently enabled on your appliance.
```

```
The appliance is successfully registered with the Cisco Cloud Service portal.
```

```
Currently configured Cisco Cloud Server is api-sse.cisco.com
```

```
Choose the operation you want to perform:
```

- DISABLE - The Cisco Cloud Service is currently enabled on your appliance.
 - DEREGISTER - To deregister the appliance from the Cisco Cloud Service portal.
 - SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud Service portal.
 - ENABLESECUREX - To enable the SecureX feature on your appliance.
 - DISABLECSN - To disable the Cisco Success Network feature on your appliance.
- ```
[>
```

## Example - Disabling CSN on Email Gateway

In the following example, you can use the `cloudserviceconfig> disablecsn` sub command to disable CSN on your email gateway.

```
mail1.example.com > cloudserviceconfig
```

```
The appliance is successfully registered with the Cisco Cloud Service portal.
```

```
Currently configured Cisco Cloud Server is api-sse.cisco.com
```

```
Choose the operation you want to perform:
```

- DISABLE - The Cisco Cloud Service is currently enabled on your appliance.
  - DEREGISTER - To deregister the appliance from the Cisco Cloud Service portal.
  - SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud Service portal.
  - ENABLESECUREX - To enable the SecureX feature on your appliance.
  - DISABLECSN - To disable the Cisco Success Network feature on your appliance.
- ```
[> disablecsn
```

```
The Cisco Success Network feature is currently disabled on your appliance.
```

```
The appliance is successfully registered with the Cisco Cloud Service portal.
```

```
Currently configured Cisco Cloud Server is api-sse.cisco.com
```

```
Choose the operation you want to perform:
```

- DISABLE - The Cisco Cloud Service is currently enabled on your appliance.

Example - Downloading Cisco Cloud Services Certificate and Key from Cisco Talos Intelligence Services Portal

- DEREGISTER - To deregister the appliance from the Cisco Cloud Service portal.
- SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud Service portal.

Example - Downloading Cisco Cloud Services Certificate and Key from Cisco Talos Intelligence Services Portal

In the following example, you can use the `cloudserviceconfig>fetchcertificate` sub command to download the Cisco Cloud Services certificate and key from the Cisco Talos Intelligence Services portal.

Note You can only use this sub command when the existing Cisco Cloud Services certificate is expired and if you have registered your email gateway with Cisco Smart Software Manager.

```
mail1.example.com> cloudserviceconfig

The appliance is successfully registered with the Cisco Cloud Service portal.

Currently configured Cisco Cloud Server is api-sse.cisco.com

Choose the operation you want to perform:
- SETTRS - Set the Cisco Secure Cloud Server to connect to the Cisco Cloud
Service portal.
- FETCHCERTIFICATE - Download the Cisco Talos certificate and key.
- ENABLESECUREX - To enable the SecureX feature on your appliance.
- ENABLECSN - To enable the Cisco Success Network feature on your appliance.
[ ]> fetchcertificate

Current Cisco Talos certificate is valid for 2593 days.

Do you want to overwrite the existing certificate and key [Y][N] ? [ ]> yes

Successfully downloaded the Cisco Talos certificate and key.

mail1.example.com>
```

Configuring Safe Print Settings on Email Gateway

Use the `scanconfig > safeprint` sub command to configure safe print settings on your email gateway.

safeprint

- [Description, on page 332](#)
- [Usage, on page 333](#)
- [Example, on page 333](#)

Description

The `safeprint` sub command is used to configure safe print settings on the email gateway.

Usage

Commit: This command requires a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command supports a batch format. For more details, see the inline help by typing the command: `scanconfig safeprint`.

Example

In the following example, you can use the `safeprint` sub command to configure safe print settings on your email gateway.

```
mail.example.com> scanconfig

Choose the operation you want to perform:

- NEW - Add a new entry.
- DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
- SAFEPRINT - Configure safeprint settings.

[ ]> safeprint
Enter the maximum attachment size that can safe-print.
[5242880]> 2
Enter the maximum number of pages that you can safe print in an attachment.
[10]> 5
Do you want to use the recommended image quality value to safe print an attachment? [Y]>
yes
Do you want to modify the file types selected to safe print an attachment?
[N]> no
Choose the operation you want to perform:

- NEW - Add a new entry.
- DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
- SAFEPRINT - Configure safeprint settings.

Connecting the Email Gateway to Talos Cloud Services

This section contains the following CLI commands:

- [talosupdate](#), on page 334

- [talosstatus](#), on page 334

talosupdate

Description

The `talosupdate` command is used to request for an update of the Talos engine.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> talosupdate
Requesting update for Talos components
```

talosstatus

Description

The `talosstatus` command displays the version and update status of each updatable component used for communicating to the Talos cloud services.

Usage

Commit: This command does not require a 'commit'.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format.

Example

```
mail.example.com> talosstatus
Component                               Version                               Last
Updated
Sender IP Reputation Client             1.0.0-1350252                       28 Feb

Integrating the Email Gateway with Cisco Advanced Phishing Protection

- [eaasconfig](#), on page 335
- [eaasupdate](#), on page 336
- [eaasstatus](#), on page 336

eaasconfig

- [Description](#), on page 335
- [Usage](#), on page 335
- [Example - Registering the Email Gateway](#), on page 335

Description

Register the email gateway with the Cisco Advanced Phishing Protection cloud service.

Usage

Commit: This command require a 'commit'.

Cluster Management: This command can be used in all three machine modes (cluster, group, machine).

Batch Command: This command does not support a batch format.

Example - Registering the Email Gateway

The following example shows a sample configuration to register your email gateway to the Cisco Advanced Phishing Protection cloud service.

```
mail.example.com> eaasconfig

Choose the operation you want to perform:

- REGISTER - To Register the appliance with APP portal

[]> register

Available list of APP region(s) for the registration
1. AMERICA

Select the EAAS region to connect
[]> 1
Enter passphrase obtained from APP portal:
Registration is in progress. Please wait.
Successfully registered the device with APP portal.

Would you like enable APP [Y]> y
```

eaasupdate

- [Description, on page 336](#)
- [Usage, on page 336](#)
- [Example, on page 336](#)

Description

Manually request update of the Cisco Advanced Phishing Protection engine.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command supports a batch format. For more details, see the inline help by typing the command: `eaasupdate force`.

Example

```
mail.example.com > eaasupdate
Requesting check for new EaaS updates
```

eaasstatus

- [Description, on page 336](#)
- [Usage, on page 336](#)
- [Example, on page 336](#)

Description

Manually request update of the Cisco Advanced Phishing Protection engine.

Usage

Commit: This command does not require a ‘commit’.

Cluster Management: This command is restricted to machine mode.

Batch Command: This command does not support a batch format

Example

```
mail.example.com > eaasstatus

Component                               Version  Last Updated
Advanced Phishing Protection Engine     1.0     Never updated
Advanced Phishing Protection Config     1.0     Never updated
```

Scanning Password-protected Attachments in Messages

Use the `scanconfig > protectedattachmentconfig` sub command to:

- Enable scanning of password-protected attachments in incoming or outgoing messages.
- Create user-defined passphrases to open password-protected attachments in incoming or outgoing messages.
- Switch priority of user-defined passphrases.
- Edit user-defined passphrases.
- Delete user-defined passphrases.
- View user-defined passphrases.

protectedattachmentconfig

- [Description, on page 337](#)
- [Usage, on page 338](#)
- [Example - Enable Scanning of Password-protected Attachments in Incoming and Outgoing Messages, on page 338](#)
- [Example - Creating User-defined Passphrases to Open Password-protected Attachments, on page 339](#)
- [Example - Switching Priority of User-defined Passphrases, on page 341](#)
- [Example - Editing a User-defined Passphrase, on page 342](#)
- [Example - Deleting a User-defined Passphrase, on page 344](#)

Description

The `protectedattachmentconfig` sub command is used to enable scanning of password-protected attachments in incoming or outgoing messages.

The `protectedattachmentconfig` sub command is used to:

- Enable scanning of password-protected attachments in incoming or outgoing messages.
- Create user-defined passphrases to open password-protected attachments in incoming or outgoing messages.
- Switch priority of user-defined passphrases.
- Edit user-defined passphrases.
- Delete user-defined passphrases.
- View user-defined passphrases.

Usage

Commit: This sub command requires a 'commit'.

Cluster Management: This sub command can be used in all three machine modes (cluster, group, and machine).

Batch Command: This command does not support a batch format.

Example - Enable Scanning of Password-protected Attachments in Incoming and Outgoing Messages

In the following example, you can use the `protectedattachmentconfig` sub command to enable scanning of password-protected attachments in incoming and outgoing messages

```
mail.example.com> scanconfig
```

```
There are currently 5 attachment type mappings configured to be SKIPPED.
```

```
Choose the operation you want to perform:
```

- NEW - Add a new entry.
- DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
- SAFEPRINT - Configure safeprint settings.
- PROTECTEDATTACHMENTCONFIG - Scan password protected attachments.

```
[> protectedattachmentconfig
```

```
Scanning of password-protected attachments for inbound mails: disabled.
Scanning of password-protected attachments for outbound mails: disabled.
```

```
Do you want to scan password-protected attachments for inbound mails?
y/n [N]> yes
```

```
Do you want to scan password-protected attachments for outbound mails?
y/n [N]> yes
```

```
There are currently 5 attachment type mappings configured to be SKIPPED.
```

```
Choose the operation you want to perform:
```

- NEW - Add a new entry.
- DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
- SAFEPRINT - Configure safeprint settings.
- PROTECTEDATTACHMENTCONFIG - Scan password protected attachments.

```

```

Example - Creating User-defined Passphrases to Open Password-protected Attachments

In the following example, you can use the `protectedattachmentconfig` sub command to create two user-defined passphrases to open password-protected attachments in incoming and outgoing messages.

```

mail.example.com> scanconfig

There are currently 5 attachment type mappings configured to be SKIPPED.

Choose the operation you want to perform:
- NEW - Add a new entry.
- DELETE - Remove an entry.
- SETUP - Configure scanning behavior.
- IMPORT - Load mappings from a file.
- EXPORT - Save mappings to a file.
- PRINT - Display the list.
- CLEAR - Remove all entries.
- SMIME - Configure S/MIME unpacking.
- SAFEPRINT - Configure safeprint settings.
- PROTECTEDATTACHMENTCONFIG - Scan password protected attachments.

[]> protectedattachmentconfig

Scanning of password-protected attachments for inbound mails: enabled.
Scanning of password-protected attachments for outbound mails: enabled.

Do you want to scan password-protected attachments for inbound mails? y/n [Y]>
Do you want to scan password-protected attachments for outbound mails? y/n [Y]>

Scan password protected attachments configuration unchanged.

Scanning of password-protected attachments is enabled.

Do you want to use user-defined passwords to scan password-protected
attachments? y/n [Y]> yes

You can now use user-defined passwords to scan password-protected attachments.

Choose the operation you want to perform on user-defined passwords.
- NEW - Add a new password.
[]> new

Enter a priority for the new password:
[1]> 1

Enter the new password:
[]> example_passphrase@123

A new password with priority 1 is added.

Priority:          Password:
-----          -
1                 example_passphrase@123

```

Example - Creating User-defined Passphrases to Open Password-protected Attachments

Choose the operation you want to perform on user-defined passwords.

- NEW - Add a new password.
- EDIT - Edit the password.
- SWAP - Swap the priority of the password.
- DELETE - Delete the password.
- PRINT - Print the configured password(s).

[> **new**

```
Priority:          Password:
-----          -
1                example_passphrase@123
```

Enter a priority for the new password:

[2]> **2**

Enter the new password:

[> example_passphrase@321

A new password with priority 2 is added.

```
Priority:          Password:
-----          -
1                example_passphrase@123
2                example_passphrase@321
```

Choose the operation you want to perform on user-defined passwords.

- NEW - Add a new password.
- EDIT - Edit the password.
- SWAP - Swap the priority of the password.
- DELETE - Delete the password.
- PRINT - Print the configured password(s).

Configuring OpenID Connect 1.0 on Email Gateway for AsyncOS APIs

Use the `oidconfig` command to perform the following tasks:

- Configure OpenID Connect on your email gateway for AsyncOS APIs.
- Delete OpenID Connect configuration settings on your email gateway.

oidcconfig

- [Description, on page 346](#)
- [Usage, on page 346](#)
- [Example - Configuring OpenID Connect for AsyncOS APIs., on page 346](#)
- [Example - Deleting OpenID Connect Configuration Settings on Email Gateway, on page 347](#)

Description

The `oidcconfig` command is used to perform the following tasks:

- Configure OpenID Connect for AsyncOS APIs.
- Delete OpenID Connect configuration settings on your email gateway.

Usage

Commit: This command requires a 'commit.'

Cluster Management: This command can be used in all three machine modes (cluster, group, and machine).

Batch Command: This command supports a batch format.

Example - Configuring OpenID Connect for AsyncOS APIs.

In the following example, you can use the `oidcconfig` command to configure OpenID Connect on your email gateway for AsyncOS APIs.

```
maill.example.com> oidcconfig
```

```
Choose the operation you want to perform:
```

```
- SETUP - Configure OpenID Connect for AsyncOS APIs
```

```
[> setup
```

```
Enter the value for metadata URL
```

```
The metadata URL is used to fetch the OpenID Connect configuration metadata. The metadata is used to validate the access token
```

```
[> https://maill.example.com/adfs/.well-known/openid-configuration
```

```
Enter the value for "issuer"
```

```
The value must match the issuer claim value of the access token when validating the access token
```

```
[> http://maill.example.com/adfs/services/trust
```

```
Enter the value for "claim" that contains role information
```

```
The value is used to retrieve the role information from the access token.
```

```
[> CiscoMaillAPICaller
```

```
Enter the value for "audience":
```

```
Use a comma to separate multiple values
```

```
[> Role
```

```
Do you want to create an external group mappings? [Y]> yes
```

```
Choose the operation you want to perform:
```

```
- NEW - Create a new external group mapping.
```

```
[> new
```

```
Enter the external group name to map (group names are case-sensitive):
[]> role_map

Assign a role to "role_map":
1. Administrators - Administrators have full access to all settings of the system.
2. Operators - Operators are restricted from creating new user accounts.
3. Read-Only Operators - Read-Only operators may only view settings and status information.
4. Guests - Guest users may only view status information.
5. Technicians - Technician can only manage upgrades and feature keys.
6. Help Desk Users - Help Desk users have access only to ISQ and Message Tracking.
[1]> 1

Mapping for 'role_map' to 'Administrators' created.

Choose the operation you want to perform:
- SETUP - Configure OpenID Connect for AsycOS APIs
- DELETE - Remove OpenID Connect configuration settings

- [csaupdate](#), on page 350

csaconfig

- [Description](#), on page 348
- [Usage](#), on page 348
- [Example - Enabling Cisco Secure Awareness Cloud Service on Email Gateway](#), on page 348
- [Example - Viewing Details of Repeat Clickers List](#), on page 349
- [Example – Updating the Repeat Clickers List](#), on page 349

Description

The `csaconfig` command is used to:

- Enable the Cisco Secure Awareness cloud service on your email gateway.
- View details of the Repeat Clickers list.
- Update the Repeat Clickers list.

Usage

Commit: This command requires a 'commit.'

Cluster Management: This command can be used in all three machine modes (cluster, group, and machine).

Batch Command: This command does not support a batch format.

Example - Enabling Cisco Secure Awareness Cloud Service on Email Gateway

In the following example, you can use the `csaconfig > enable` sub command to enable the Cisco Secure Awareness cloud service on your email gateway.

```
mail1.example.com> csaconfig
```

```
Choose the operation you want to perform:
```

```
- ENABLE - To Enable CSA Service
```

```
[> enable
```

```
Available list of Servers:
```

1. AMERICAS
2. EUROPE

```
Select the CSA region to connect :
[]> 1

Please enter the CSA token for the region selected : de7c55f3ffe94dfb064642

Please specify the Poll Interval

Example - Viewing Details of Repeat Clickers List

In the following example, you can use the `csaconfig > show_list` sub command to view the details of the Repeat Clickers list.

```
maill.example.com > csaconfig

Choose the operation you want to perform:
- EDIT - To edit CSA settings
- DISABLE - To disable CSA service
- UPDATE_LIST - To update the Repeat Clickers list
- SHOW_LIST - To view details of the Repeat Clickers list
[]> show_list

List Name : Repeat Clickers
Report ID : 2020
Last Updated : 2020-10-20 11:50:23
List Status : Active
```

Example – Updating the Repeat Clickers List

In the following example, you can use the `csaconfig > update_list` sub command to perform an on-demand update or download of the Repeat Clickers list:

```
maill.example.com > csaconfig

Choose the operation you want to perform:
- EDIT - To edit CSA settings
- DISABLE - To disable CSA service
- UPDATE_LIST - To update the Repeat Clickers list
- SHOW_LIST - To view details of the Repeat Clickers list
[]> update_list

Machine: maill.example.com An update for the Repeat Clickers list was initiated
successfully
```

csastatus

- [Description, on page 350](#)
- [Usage, on page 350](#)
- [Example - Displaying Current Version of Cisco Secure Awareness Components, on page 350](#)

Description

The `csastatus` command is used to display the current version of the Cisco Secure Awareness components.

Usage

Commit: This command requires a 'commit.'

Cluster Management: This command can be used in all three machine modes (cluster, group, and machine).

Batch Command: This command does not support a batch format.

Example - Displaying Current Version of Cisco Secure Awareness Components

In the following example, you can use the `csastatus` command to display the current version of the Cisco Secure Awareness components:

```
mail.example.com> csastatus
Component                Version                Last Updated
Cisco Secure Awareness Config  1.0.0-0000001        2 Jul 2018 04:22 (GMT +00:00)
Cisco Secure Awareness Engine  1.0.0-0000001        2 Jul 2018 04:22 (GMT +00:00)
```

csaupdate

- [Description, on page 350](#)
- [Usage, on page 350](#)
- [Example - Manually Updating Cisco Secure Awareness Components, on page 350](#)

Description

The `csaupdate` command is used to manually update the Cisco Secure Awareness components.

Usage

Commit: This command requires a 'commit.'

Cluster Management: This command can be used in all three machine modes (cluster, group, and machine).

Batch Command: This command does not support a batch format.

Example - Manually Updating Cisco Secure Awareness Components

In the following example, you can use the `csaupdate` command to manually update the Cisco Secure Awareness components:

```
mail11.example.com> csaupdate

Requesting check for new CSA updates
mail11.example.com >
```

Creating a File Hash List

Use the `filehashlistconfig` command to:

- Create a file hash list for any one of the following supported file hash types – MD5 or SHA-256.
- Create a file hash list to configure a content filter to take action on messages that contain attachments that match a particular file hash.
- Create a file hash list to use as an exception list for the External Threat Feeds (ETF) feature.

filehashlistconfig

- [Description, on page 351](#)
- [Usage, on page 351](#)
- [Example - Creating a File Hash List, on page 351](#)

Description

The `filehashlistconfig` command is used to:

- Create a file hash list for any one of the following supported file hash types – MD5 or SHA-256.
- Create a file hash list to configure a content filter to take action on messages that contain attachments that match a particular file hash.
- Create a file hash list to use as an exception list for the External Threat Feeds (ETF) feature.

Usage

Commit: This sub command requires a 'commit'.

Cluster Management: This sub command can be used in all three machine modes (cluster, group, and machine).

Batch Command: This command does not support a batch format.

Example - Creating a File Hash List

In the following example, you can use the `filehashlistconfig` command to create a file hash list.

```
mail1.example.com> filehashlistconfig
```

```
No file hash lists configured.
```

```
Choose the operation you want to perform:
```

```
- NEW - Create a new file hash list.
```

```
[ ]> new
```

```
Enter a name for the file hash list:
```

```

> test_file_hash_list

Enter a description for the file hash list:
> Test File Hash List

Enter the type of the file hash list:
1. MD5 checksum(s) only
2. SHA256 checksum(s) only
3. All of the above
Enter the type of the file hash list:
[3]> 2

Enter a list of file hashes separated by commas:
(e.g.: 753710fda3dc815e26cf7d2094d417aab6426b38b99f14e9dd53129e37506e45)
> 753710fda3dc815e26cf7d2094d417aab6426b38b99f14e9dd53129e37506e45

File hash list "myhashlist" added.

Choose the operation you want to perform:
- NEW - Create a new file hash list.
- EDIT - Edit an existing file hash list.
- DELETE - Remove a file hash list.
- PRINT - Display the contents of a file hash list.

Viewing Connection Status of Leader Machine in Remote Cluster and All Machines in Same Cluster

Use the `interclusterconnstatus` command to view the connection status of the leader machine in the remote cluster and all the machines in the same cluster.

Note The leader machine is the machine used to initiate inter-cluster synchronization.

interclusterconnstatus

- [Description, on page 353](#)
- [Usage, on page 353](#)
- [Example – Viewing Connection Status of Leader Machine in Remote Cluster and All Machines in Same Cluster, on page 353](#)

Description

The `interclusterconnstatus` command is used to view the connection status of the leader machine in the remote cluster and all the machines in the same cluster.

Usage

Commit: This command does not require a 'commit.'

Cluster Management: This command can be used in the cluster mode only.

Batch Command: This command does not support a batch format.

Example – Viewing Connection Status of Leader Machine in Remote Cluster and All Machines in Same Cluster

In the following example, you can use the `interclusterconnstatus` command to view the connection status of the leader machine in the remote cluster (Cluster2) and all the machines in the same cluster (Cluster1).

```
(Cluster 1)> interclusterconnstatus

Cluster 1
=====
  Leader machine example1.com (Serial #: 421xxxxxxxxx)

Group Main_Group:
  Machine example1.com (Serial #:421xxxxxxxxx)
  Machine exampl2.com (Serial #: 431xxxxxxxxx)

Cluster 2
=====
  Leader machine exampl31.com (Serial #: 441xxxxxxxxx)
```

Note: To check the connection status of the remote cluster devices, execute "interclusterconnstatus" command in connected leader machine.

Example – Viewing Connection Status of Leader Machine in Remote Cluster and All Machines in Same Cluster
