Cisco Nexus 6000 Series NX-OS Fabric Extender Command Reference

Cisco NX-OS Releases 6.x

First Published: March 2013

CONTENTS

Preface

This preface describes the audience, organization, and conventions of the *Cisco Nexus 6000 Series NX-OS Fabric Extender Command Reference*. It also provides information on how to obtain related documentation.

This preface includes the following sections:

- Audience, page v
- Document Conventions, page v
- Related Documentation, page vi
- Obtaining Documentation and Submitting a Service Request, page vii

Audience

This publication is for experienced users who configure and maintain Cisco NX-OS devices.

Document Conventions

Command descriptions use these conventions:

Convention	Description
boldface font	Commands and keywords are in boldface.
italic font	Arguments for which you supply values are in italics.
[ ]	Elements in square brackets are optional.
{x	y	z}	Alternative keywords are grouped in braces and separated by vertical bars.
[x	y	z]	Optional alternative keywords are grouped in brackets and separated by vertical bars.
string	A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.

Screen examples use these conventions:

screen font	Terminal sessions and information that the switch displays are in screen font.
boldface screen font	Information you must enter is in boldface screen font.
italic screen font	Arguments for which you supply values are in italic screen font.
< >	Nonprinting characters, such as passwords, are in angle brackets.
[ ]	Default responses to system prompts are in square brackets.
!, #	An exclamation point (!) or a pound sign (#) at the beginning of a line of code indicates a comment line.

This document uses the following conventions:

Note Means reader *take note*. Notes contain helpful suggestions or references to material not covered in the manual.

Caution Means reader *be careful*. In this situation, you might do something that could result in equipment damage or loss of data.

Related Documentation

Documentation for the Cisco Nexus 6000 Series Switch is available at the following URL:

http://www.cisco.com/en/US/products/ps12806/tsd_products_support_series_home.html

The documentation set is divided into the following categories:

Release Notes

The release notes are available at the follwing URL:

http://www.cisco.com/en/US/products/ps12806/prod_release_notes_list.html

Installation and Upgrade Guides

The installation and upgrade guides are available at the following URL:

http://www.cisco.com/en/US/products/ps12806/prod_installation_guides_list.html

Command References

The command references are available at the following URL:

http://www.cisco.com/en/US/products/ps12806/prod_command_reference_list.html

Technical References

The technical references are available at the following URL:

http://www.cisco.com/en/US/products/ps12806/prod_technical_reference_list.html

Configuration Guides

The configuration guides are available at the following URL:

http://www.cisco.com/en/US/products/ps12806/products_installation_and_configuration_guides_list.html

Error and System Messages

The system message reference guide is available at the following URL:

http://www.cisco.com/en/US/products/ps12806/products_system_message_guides_list.html

Documentation Feedback

To provide technical feedback on this document, or to report an error or omission, please send your comments to nexus6k-docfeedback@cisco.com. We appreciate your feedback.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation:

http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html

Subscribe to the *What's New in Cisco Product Documentation* as an RSS feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service. Cisco currently supports RSS Version 2.0.

A Commands

This chapter describes the Cisco NX-OS commands that begin with A that are used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

attach fex

To access the command-line interface (CLI) of a connected Fabric Extender to run diagnostic commands, use the **attach fex** command.

attach fex *chassis_ID*

Syntax Description	*chassis_ID*	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.

Command Default   None

Command Modes   EXEC mode

Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.

Usage Guidelines   Use the **attach fex** command to access the CLI on a connected Fabric Extender and performing diagnostic commands. We recommend that you use this command only following direction from Cisco technical support personnel.

Examples   This example shows how to access the CLI of a connected Fabric Extender to run diagnostic commands:

```
switch# attach fex 101
```

Related Commands	Command	Description
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

D Commands

This chapter describes the Cisco NX-OS commands that begin with D that are used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

description (fex)

To specify a description for a Fabric Extender, use the **description** command. To revert to the default description, use the **no** form of this command.

description *description*

no description

Syntax Description

description	Description of a Fabric Extender. The default is the string FEX*xxxx* where *xxxx* is the chassis ID. For example, if the chassis ID is 123, the default description is FEX0123. The maximum length is 20 alphanumeric characters.

Command Default   None

Command Modes   Fabric extender configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to specify a description for a Fabric Extender:

```
switch# configure terminal
switch(config)# fex 101
switch(config-fex)# description Rack16_FEX101
```

This example shows how to revert to the default description for a Fabric Extender:

```
switch# configure terminal
switch(config)# fex 101
switch(config-fex)# no description
```

Related Commands

Command	Description
fex	Creates a Fabric Extender and enters Fabric Extender configuration mode.
show fex	Displays all configured Fabric Extender chassis connected to the switch.

diagnostic bootup level

To configure the bootup diagnostic level to trigger diagnostics when the device boots, use the **diagnostic bootup level** command. To remove the bootup diagnostic level configuration, use the **no** form of this command.

> **diagnostic bootup level** {**bypass** | **complete**}

> **no diagnostic bootup level** {**bypass** | **complete**}

Syntax Description

bypass	Specifies that all bootup tests are skipped.
complete	Specifies that all bootup diagnostics are performed. This is the default value.

Command Default   Complete

Command Modes   Global configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to configure the bootup diagnostics level to trigger the complete diagnostics:

```
switch(config)# diagnostic bootup level complete
switch(config)#
```

This example shows how to remove the bootup diagnostics level configuration:

```
switch(config)# no diagnostic bootup level complete
switch(config)#
```

Related Commands

Command	Description
show diagnostic bootup level	Displays the bootup diagnostics level.
show diagnostic bootup result	Displays the results of the diagnostics tests.

F Commands

This chapter describes the Cisco NX-OS commands that begin with F that are used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

fcoe

To associate a Cisco Nexus 2000 Series Fabric Extender (FEX) to a switch for pinning Fibre Channel over Ethernet (FCoE) Initialization Protocol (FIP) and FCoE traffic, use the **fcoe** command. To remove the association, use the **no** form of this command.

fcoe [**vsan** *vsan-id*]

no fcoe [**vsan**]

Syntax Description	**vsan** *vsan-id*	Specifies the VSAN status. The VSAN ID range is from 1 to 4094.

Command Default   None

Command Modes   FEX configuration mode
VLAN configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines   Before you use this command, make sure that you enable the Fabric Extender (FEX) features on the switch by using the **feature fex** command.

You can use this command only on Cisco Nexus 2232P and Cisco Nexus 2232PQ Fabric Extenders. When you bind an interface to a virtual Fibre Channel interface to enable FCoE traffic, you must use slot number 1. The port number can be from 1 to 32.

Examples   This example shows how to configure a FEX as FCoE enabled:

```
switch# configure terminal
switch(config)# feature fex
switch(config)# fex 100
switch(config-fex)# fcoe
switch(config-fex)#
```

This example shows how to configure a pair of FEXs to carry FCoE traffic in a fabric virtual port channel (vPC) topology, with the host uplink ports in the FEXs configured to the same port channel:

```
switch# configure terminal
switch(config)# feature lacp
switch(config)# feature fex
switch(config)# feature fcoe
switch(config)# fex 100
switch(config-fex)# fcoe
switch(config-fex)# exit
switch(config)# interface vfc 1
switch(config-if)# bind interface eth101/1/1
```

```
switch(config)# interface eth101/1/1
switch(config-if)# channel-group 1
switch(config)# fex 102
switch(config-fex)# fcoe
switch(config)# interface vfc 1
switch(config-if)# bind interface eth102/1/1
switch(config)# interface eth102/1/1
switch(config-if)# channel-group 1
switch(config-if)#
```

This example shows how to configure FCoE traffic on a VLAN:

```
switch# configure terminal
switch(config)# vlan 5
switch(config-vlan)# fcoe vsan 1
switch(config-vlan)#
```

This example shows how to disable FCoE traffic on a FEX:

```
switch# configure terminal
switch(config)# fex 100
switch(config-fex)# no fcoe
switch(config-fex)#
```

Related Commands	Command	Description
	feature fcoe	Enables the FCoE feature on the switch.
	feature fex	Enables the FEX feature on the switch.
	feature lacp	Enables the Link Aggregation Control Protocol (LACP).
	show fex	Displays information about a specific FEX.

feature fex

To enable Fabric Extender (FEX) features on the switch, use the **feature fex** command. To disable FEX, use the **no** form of this command.

feature fex

no feature fex

Syntax Description   This command has no arguments or keywords.

Command Default   None

Command Modes   Global configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to enable FEX features on the switch:

```
switch(config)# feature fex
switch(config)#
```

Related Commands

Command	Description
fex	Creates a Fabric Extender and enters fabric extender configuration mode.
show feature	Displays the features enabled or disabled on the switch.

fex

To create a Fabric Extender and enter fabric extender configuration mode, use the **fex** command. To delete the Fabric Extender configuration, use the **no** form of this command.

> **fex** *chassis_ID*

> **no fex** *chassis_ID*

Syntax Description

chassis_ID	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.

Command Default   None

Command Modes   Global configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines   You can create and configure the Fabric Extender before you connect and associate it to an interface on the parent switch. Once you associate the Fabric Extender to the switch, the configuration you created is transferred over to the Fabric Extender and applied.

Examples   This example shows how to enter Fabric Extender configuration mode:

```
switch# configure terminal
switch(config)# fex 101
switch(config-fex)#
```

This example shows how to delete the Fabric Extender configuration:

```
switch(config-fex)# no fex 101
switch(config)#
```

Related Commands

Command	Description
beacon	Turns on the locator beacon LED of a Fabric Extender.
description (fex)	Specifies a description for a Fabric Extender.
fex associate	Associates a Fabric Extender to an Ethernet or EtherChannel interface.
pinning max-links	Specifies the number of statically pinned uplinks connected to a Fabric Extender.
serial	Assigns a serial number to a Fabric Extender.

Command	Description
show fex	Displays all configured Fabric Extender chassis connected to the switch.
type	Specifies the Fabric Extender card.

fex associate

To associate a Fabric Extender to a fabric interface, use the **fex associate** command. To disassociate the Fabric Extender, use the **no** form of this command.

fex associate *chassis_ID*

no fex associate [*chassis_ID*]

Syntax Description

chassis_ID	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.

Command Default   None

Command Modes   Interface configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines   Before you can associate an interface on the parent switch to the Fabric Extender, you must first make the interface into a fabric interface by entering the **switchport mode fex-fabric** command.

Examples   This example shows how to associate the Fabric Extender to an Ethernet interface:

```
switch# configure terminal
switch(config)# interface ethernet 1/40
switch(config-if)# switchport mode fex-fabric
switch(config-if)# fex associate 101
```

This example shows how to associate the Fabric Extender to an EtherChannel interface:

```
switch# configure terminal
switch(config)# interface port-channel 4
switch(config-if)# switchport mode fex-fabric
switch(config-if)# fex associate 101
```

Related Commands

Command	Description
show fex	Displays all configured Fabric Extender chassis connected to the switch.
switchport mode fex-fabric	Sets the interface to be an uplink port.

fex pinning redistribute

To redistribute the host interfaces on a Fabric Extender, use the **fex pinning redistribute** command.

> **fex pinning redistribute** *chassis_ID*

Syntax Description	*chassis_ID*	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.

Command Default　None

Command Modes　EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines　When you provision the Fabric Extender using the statically pinned mode (see the *Cisco Nexus 2000 Series Fabric Extender Software Configuration Guide*), the host interfaces on the Fabric Extender are pinned to the fabric interfaces in the order that they were initially configured. The next time that you reboot the Fabric Extender, the configured fabric interfaces are pinned to the host interfaces in an ascending order by the port number of the fabric interface.

Use the **fex pinning redistribute** command if you want to configure the same fixed distribution of host interfaces without restarting the Fabric Extender after your initial configuration.

⚠
Caution　This command disrupts all the host interface ports of the Fabric Extender. However, the disruption is shorter than would be the case if you reboot the Fabric Extender.

Examples　This example shows how to redistribute the host interfaces on a Fabric Extender:

```
switch# fex pinning redistribute 101
switch#
```

Related Commands

Command	Description
pinning max-links	Defines the number of uplinks on a Fabric Extender.
show fex	Displays all configured Fabric Extender chassis connected to the switch.
show interface fex-intf	Displays the Fabric Extender ports pinned to a specific switch interface.

fex queue-limit

To limit the amount of input buffer space (in bytes) allocated to each Fabric Extender port, use the **fex queue-limit** command. To disable the drop threshold and allow a Fabric Extender port to use all available buffer space, use the **no** form of this command.

> **fex queue-limit**

> **no fex queue-limit**

Syntax Description	This command has no arguments or keywords.

Command Default	Fabric Extender queue limit is available in the default configuration and is set on.

Command Modes	System QoS configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines By default, the drop threshold applies to each Fabric Extender port to limit the amount of buffer being allocated for each port. To restore the default queue limit of each Fabric Extender port, use the **fex queue-limit** command.

Examples This example shows how to set the queue limit for the input buffer for each Fabric Extender port:

```
switch(config)# system qos
switch(config-sys-qos)# fex queue-limit
switch(config-sys-qos)#
```

This example shows how to restore the default queue limit for each Fabric Extender port:

```
switch(config)# system qos
switch(config-sys-qos)# no fex queue-limit
switch(config-sys-qos)#
```

Related Commands

Command	Description
show fex	Displays all configured Fabric Extender chassis connected to the switch.

H Commands

This chapter describes the Cisco NX-OS commands that begin with H that are used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

hardware buffer-threshold

To limit the amount of input hardware buffer usage for each Fabric Extender, use the **hardware buffer-threshold** command. To revert to the default and allow a Fabric Extender to use all available hardware buffer space, use the **no** form of this command.

> **hardware** *fex_card_typ* **buffer-threshold** *buffer-limit*

> **no hardware** *fex_card_typ* **buffer-threshold**

Syntax Description		
	fex_card_type	Fabric Extender card type. The following Fabric Extender card types are supported:
		• **N2148T**—Fabric Extender 48x1G 4x10G SFP+ Module
		See the "Usage Guidelines" section for a description of this Fabric Extender.
	buffer-limit	Buffer threshold limit in bytes. The range is from 81920 to 316160.

Command Default None

Command Modes Fabric extender configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

Note This command is supported only on a Cisco Nexus 2148T Fabric Extender.

The Cisco Nexus 2148T Fabric Extender has four 10-Gigabit Ethernet fabric interfaces for its uplink connection to the parent Cisco Nexus 6000 Series switch and 48 1000BASE-T (1-Gigabit) Ethernet host interfaces for its downlink connection to servers or hosts.

The **buffer-threshold** keyword sets the consumption level of input buffers before an indication is sent to the egress queue to start observing the tail drop threshold. If the buffer usage is lower than the configured buffer threshold, the tail drop threshold is ignored.

Examples This example shows how to configure the hardware buffer threshold limit on a Cisco Nexus 2148T Fabric Extender:

```
switch(config)# fex 110
switch(config-fex)# hardware N2148T buffer-threshold 163840
switch(config-fex)#
```

This example shows how to remove the hardware buffer threshold configured on a Cisco Nexus 2148T Fabric Extender:

```
switch(config)# fex 110
switch(config-fex)# no hardware N2148T buffer-threshold
switch(config-fex)#
```

Related Commands	Command	Description
	fex	Creates a Fabric Extender and enters fabric extender configuration mode.
	show fex	Displays all configured Fabric Extender chassis connected to the switch.
	show queuing interface	Displays information about interface queuing parameters, including buffer threshold and queue limits.
	show running-config fex	Displays the running configuration for Fabric Extenders.

hardware N2248PQ uplink-load-balance-mode

To enable the load balancing queues for the Cisco Nexus 2248PQ Fabric Extender, use the **hardware N2248PQ uplink-load-balance-mode** command. To disable load balancing queues,use the **no** form of this command.

> **hardware N2248PQ uplink-load-balance-mode**

> **no hardware N2248PQ uplink-load-balance-mode**

Syntax Description   This command has no arguments or keywords.

Command Default   None

Command Modes   Fabric extender configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

Note   This command is supported only on a Cisco Nexus 2248PQ Fabric Extender.

The Cisco Nexus 2248PQ has 48 10-Gigabit Ethernet host interfaces with SFP+ interface adapters and 16 10-Gigabit Ethernet fabric interfaces corresponding to 4 QSFP interface adapters for its uplink connection to the parent switch.

Examples   This example shows how to enable the load balancing queues for a Cisco Nexus 2248PQ Fabric Extender:

```
switch(config)# fex 100
switch(config-fex)# hardware N2248PQ uplink-load-balance-mode
switch(config-fex)#
```

This example shows how to disable the load balancing queues for a Cisco Nexus 2248PQ Fabric Extender:

```
switch(config)# fex 100
switch(config-fex)# no hardware N2248PQ uplink-load-balance-mode
switch(config-fex)#
```

Related Commands

Command	Description
fex	Creates a Fabric Extender and enters fabric extender configuration mode.
show fex	Displays all configured Fabric Extender chassis connected to the switch.
show queuing interface	Displays information about interface queuing parameters, including buffer threshold and queue limits.
show running-config fex	Displays the running configuration for Fabric Extenders.

hardware queue-limit

To control the egress queue tail drop threshold level on a Fabric Extender, use the **hardware queue-limit** command. To disable the drop threshold and allow a Fabric Extender to use all available hardware buffer space, use the **no** form of this command.

hardware *fex_card_typ* **queue-limit** [*queue-limit*] [**rx** | **tx**]

no hardware *fex_card_typ* **queue-limit** [**rx** | **tx**]

Syntax Description	*fex_card_type*	Fabric Extender card type. The following Fabric Extender card types are supported:
		• **N2148T**—Fabric Extender 48x1G 4x10G SFP+ Module
		• **N2224TP**—Fabric Extender 24x1G 2x10G SFP+ Module
		• **N2232P**—Fabric Extender 32x10G SFP+ 8x10G SFP+ Module
		• **N2232TM**—Fabric Extender 32x10GBase-T 8x10G SFP+ Module
		• **N2248T**—Fabric Extender 48x1G 4x10G SFP+ Module
		• **N2248TP-E**—Fabric Extender 48x1G 4x10G SFP+ Module
		• **N2248PQ**—Fabric Extender 48x10G SFP+ 16x10G SFP+ Module
		See the "Usage Guidelines" section for a description of these Fabric Extenders.
	queue-limit	(Optional) Queue limit in bytes. The range is from 81920 to 652800 for a Cisco Nexus 2148T Fabric Extender, from 32768 to 33538048 for a on a Cisco Nexus 2248TP-E Fabric Extender, and from 5120 to 652800 for all other supported Fabric Extenders.
	rx	(Optional) Specifies the default queue-limit for receiving (ingress).
		Note This keyword is supported only on a Cisco Nexus 2248TP-E Fabric Extender.
	tx	(Optional) Specifies the default queue-limit for transmission (egress).
		Note This keyword is supported only on a Cisco Nexus 2248TP-E Fabric Extender.

Command Default

The default queue-limit for **rx** (ingress) on a Cisco Nexus 2248TP-E Fabric Extender is 1MB.

The default queue-limit for **tx** (egress) on a Cisco Nexus 2248TP-E Fabric Extender is 4MB.

Command Modes

Fabric extender configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

You can use a lower queue limit value on the Fabric Extender to prevent one blocked receiver from affecting traffic being sent to other noncongested receivers (head-of-line blocking); however, this will increase burst absorption on the ingress traffic. A higher queue limit value provides better burst absorption and less head-of-line blocking protection.

Supported Cisco Nexus 2000 Series Fabric Extender

The following Cisco Nexus 2000 Series Fabric Extenders are supported on a Cisco Nexus 6000 Series switch:

- Cisco Nexus 2148T Fabric Extender—It has four 10-Gigabit Ethernet fabric interfaces for its uplink connection to the parent Cisco Nexus switch and 48 1000BASE-T (1-Gigabit) Ethernet host interfaces for its downlink connection to servers or hosts.

- Cisco Nexus N2224TP Fabric Extender—It has two 10-Gigabit Ethernet fabric interfaces with small form-factor pluggable (SFP+) interface adapters for its uplink connection to the parent Cisco Nexus switch and 24 1000BASE-T (1-Gigabit) Ethernet host interfaces for its downlink connection to servers or hosts. It does not support Fibre Channel over Ethernet (FCoE).

- Cisco Nexus 2232P Fabric Extender—It has eight 10-Gigabit Ethernet fabric interfaces with small form-factor pluggable (SFP+) interface adapters for its uplink connection to the parent Cisco Nexus switch and 32 10-Gigabit Ethernet fabric interfaces with SFP+ interface adapters for its downlink connection to servers or hosts.

- Cisco Nexus 2232TM Fabric Extender—It has eight 10-Gigabit Ethernet fabric interfaces with small form-factor pluggable (SFP+) interface adapters for its uplink connection to the parent Cisco Nexus switch and 32 10-Gigabit BASE-T Ethernet fabric interfaces for its downlink connection to servers or hosts.

- Cisco Nexus 2248T Fabric Extender—It has four 10-Gigabit Ethernet fabric interfaces with SFP+ interface adapters for its uplink connection to the parent Cisco Nexus switch and 48 1000BASE-T (1-Gigabit) Ethernet host interfaces for its downlink connection to servers or hosts.

- Cisco Nexus N2248TP-E Fabric Extender—It has four 10-Gigabit Ethernet fabric interfaces for its uplink connection to the parent Cisco Nexus switch and 48 1000BASE-T (1-Gigabit) Ethernet host interfaces with small form-factor pluggable (SFP+) interface adapters for its downlink connection to servers or hosts.

- Cisco Nexus 2248PQ Fabric Extender—It has 48 10-Gigabit Ethernet host interfaces with SFP+ interface adapters and 16 10-Gigabit Ethernet fabric interfaces corresponding to 4 QSFP interface adapters for its uplink connection to the parent switch.

Examples

This example shows how to configure the hardware buffer queue limit on a Cisco Nexus 2248T Fabric Extender:

```
switch(config)# fex 110
switch(config-fex)# hardware N2248T queue-limit 327680
switch(config-fex)#
```

This example shows how to remove the hardware buffer queue limit configured on a Cisco Nexus 2248T Fabric Extender:

```
switch(config)# fex 110
switch(config-fex)# no hardware N2248T queue-limit
switch(config-fex)#
```

Related Commands	**Command**	**Description**
	fex	Creates a Fabric Extender and enters fabric extender configuration mode.
	show fex	Displays all configured Fabric Extender chassis connected to the switch.
	show queuing interface	Displays information about interface queuing parameters, including buffer threshold and queue limits.
	show running-config fex	Displays the running configuration for Fabric Extenders.

hardware shared-buffer-size

To configure the shared buffer size for a Cisco Nexus 2000 Series Fabric Extender, use the **hardware shared-buffer-size** command. To revert to the default setting, use the **no** form of this command.

hardware *fex_card_type* **shared-buffer-size** [*buffer-size*]

no hardware *fex_card_type* **shared-buffer-size** [*buffer-size*]

Syntax Description		
	fex_card_type	Fabric Extender card type. The following Fabric Extender card types are supported:
		• **N2248TP-E**—Fabric Extender 48x1G 4x10G SFP+ Module
		• **N2248PQ**—Fabric Extender 48x10G SFP+ 16x10G SFP+ Module
		See the "Usage Guidelines" section for a description of this Fabric Extender.
	buffer-size	(Optional) Shared buffer size (KB). The range is from 10800KB to 25392KB.

Command Default   The default size of the shared buffer is 25392KB.

Command Modes   Fabric Extender configuration mode

Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
		The Cisco Nexus N2248TP-E Fabric Extender and the Cisco Nexus N2248PQ Fabric Extender were introduced.

Usage Guidelines

Note   This command is supported only on Cisco Nexus 2248TP-E and Cisco Nexus N2248PQ Fabric Extenders.

The Cisco Nexus N2248TP-E Fabric Extender has four 10-Gigabit Ethernet fabric interfaces for its uplink connection to the parent Cisco Nexus switch and 48 1000BASE-T (1-Gigabit) Ethernet host interfaces with small form-factor pluggable (SFP+) interface adapters for its downlink connection to servers or hosts.

The total available buffer is 32MB which is shared in both direction (ingress, egress).

The default size of the shared buffer is 25392KB. However, when configuring an Ethernet-based pause no-drop class, the shared buffer size changes to 10800KB. This change is required to increase the dedicated buffer that supports the pause no-drop class. The pause no-drop class does not use buffer space from the shared-pool.

The Cisco Nexus 2248PQ Fabric Extender has 48 10-Gigabit Ethernet host interfaces with SFP+ interface adapters and 16 10-Gigabit Ethernet fabric interfaces corresponding to 4 QSFP interface adapters for its uplink connection to the parent switch.

Examples   This example shows how to configure the hardware buffer size on a Cisco Nexus 2248TP-E Fabric Extender:

```
switch# configure terminal
switch(config)# fex 100
switch(config-fex)# hardware N2248TTP-E shared-buffer-size 25000
switch(config-fex)#
```

This example shows how to remove the hardware pause no-drop configuration between a Cisco Nexus 2248TTP-E Fabric Extender and a switch:

```
switch# configure terminal
switch(config)# fex 100
switch(config-fex)# no hardware N2248TTP-E shared-buffer-size 25000
switch(config-fex)#
```

Related Commands

Command	Description
fex	Creates a Fabric Extender and enters fabric extender configuration mode.
show fex	Displays all configured Fabric Extender chassis connected to the switch.
show running-config fex	Displays the running configuration for Fabric Extenders.

hardware uplink-pause-no-drop

To configure a pause no-drop class up to a distance of 3000 meters between the Cisco Nexus 2000 Series Fabric Extender and a Cisco Nexus 6000 switch, use the **hardware uplink-pause-no-drop** command. To revert to the default setting, use the **no** form of this command.

hardware *fex_card_type* **uplink-pause-no-drop distance** [*distance-value*]

no hardware *fex_card_type* **uplink-pause-no-drop distance** [*distance-value*]

Syntax Description		
fex_card_type	Fabric Extender card type. The following Fabric Extender card types are supported:	
	• **N2248TP-E**—Fabric Extender 48x1G 4x10G SFP+ Module	
	• **N2248PQ**—Fabric Extender 48x10G SFP+ 16x10G SFP+ Module	
	See the "Usage Guidelines" section for a description of this Fabric Extender.	
distance	Specifies the distance between the Fabric Extender and switch.	
distance-value	(Optional) Distance in meters. The range is from 300 to 3000.	

Command Default The default distance between a Fabric Extender and the switch is 300 meters.

Command Modes Fabric Extender configuration mode

Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
		The Cisco Nexus N2248TP-E Fabric Extender and the Cisco Nexus N2248PQ Fabric Extender were introduced.

Usage Guidelines

> **Note** This command is supported only on Cisco Nexus 2248TP-E and Cisco Nexus N2248PQ Fabric Extenders.

The Cisco Nexus N2248TP-E Fabric Extender has four 10-Gigabit Ethernet fabric interfaces for its uplink connection to the parent Cisco Nexus switch and 48 1000BASE-T (1-Gigabit) Ethernet host interfaces with small form-factor pluggable (SFP+) interface adapters for its downlink connection to servers or hosts.

The Cisco Nexus 2248PQ Fabric Extender has 48 10-Gigabit Ethernet host interfaces with SFP+ interface adapters and 16 10-Gigabit Ethernet fabric interfaces corresponding to 4 QSFP interface adapters for its uplink connection to the parent switch.

Examples   This example shows how to configure the hardware pause no-drop class up to a distance of 3000 meters between a Cisco Nexus 2248TTP-E Fabric Extender and a switch:

```
switch# configure terminal
switch(config)# fex 100
switch(config-fex)# hardware N2248TTP-E pause-no-drop distance 3000
switch(config-fex)#
```

This example shows how to remove the hardware pause no-drop configuration between a Cisco Nexus 2248TTP-E Fabric Extender and a switch:

```
switch# configure terminal
switch(config)# fex 100
switch(config-fex)# no hardware N2248TTP-E pause-no-drop distance 3000
switch(config-fex)#
```

Related Commands

Command	Description
fex	Creates a Fabric Extender and enters fabric extender configuration mode.
show fex	Displays all configured Fabric Extender chassis connected to the switch.
show running-config fex	Displays the running configuration for Fabric Extenders.

L Commands

This chapter describes the Cisco NX-OS commands that begin with L that are used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

locator-led fex

To turn on the locator LED of a Fabric Extender, use the **locator-led** command. To turn off the locator LED, use the **no** form of this command.

locator-led fex *chassis_ID*

no locator-led fex *chassis_ID*

Syntax Description

chassis_ID	Fabric Extender chassis ID. The range is from 100 to 199.

Command Default   None

Command Modes   EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines   Use the **locator-led** command to toggle the locator LED of a Fabric Extender, which allows you to easily identify the machine in a busy data center.

Examples   This example shows how to turn on the locator LED for a specific Fabric Extender chassis:

```
switch# locator-led fex 100
switch#
```

This example shows how to turn off the locator beacon LED for a specific Fabric Extender chassis:

```
switch# no locator-led fex 100
switch#
```

Related Commands

Command	Description
show fex	Displays all configured Fabric Extender chassis connected to the switch.
show locator-led	Displays the status of the locator LED in Fabric Extender modules.

logging fex

To set the logging alert level for Fabric Extender events, use the **logging fex** command. To reset the logging level, use the **no** form of this command.

logging fex [*severity-level*]

no logging fex [*severity-level*]

Syntax Description	*severity-level* (Optional) Number of the desired severity level at which messages should be logged. Messages at or numerically lower than the specified level are logged. Severity levels are as follows:

- 0—emergency: System unusable
- 1—alert: Immediate action needed
- 2—critical: Critical condition—default level
- 3—error: Error condition
- 4—warning: Warning condition
- 5—notification: Normal but significant condition
- 6—informational: Informational message only
- 7—debugging: Appears during debugging only

Command Default None

Command Modes Global configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to set the logging alert level for Fabric Extender events:

```
switch(config)# logging fex 4
```

This example shows how to reset the logging level:

```
switch(config)# no logging fex
```

Related Commands

Command	Description
show fex	Displays all configured Fabric Extender chassis connected to the switch.

■ **logging fex**

P Commands

This chapter describes the Cisco NX-OS commands that begin with P that are used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

pinning max-links

To specify the number of statically pinned uplinks, use the **pinning max-links** command. To reset to the default, use the **no** form of this command.

pinning max-links *uplinks*

no pinning max-links

Syntax Description	*uplinks*	Number of uplinks. The range is from 1 to 8. The default is 1.
		This command is applicable only if the Fabric Extender is connected to its parent switch using one or more statically pinned fabric interfaces.

Command Default The default number of uplinks is 1.

Command Modes Fabric extender configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines Use the **pinning max-links** command when you create a number of pinned fabric interface connections to enable the parent switch to determine a distribution of host interfaces. The host interfaces are divided by the number of *uplinks* and distributed accordingly.

⚠
Caution Changing the value of *uplinks* is disruptive. All the host interfaces on the Fabric Extender are brought down and back up as the parent switch reassigns its static pinning.

Examples This example shows how to specify the number of statically pinned uplinks for a Fabric Extender:

```
switch# configure terminal
switch(config)# fex 101
switch(config-fex)# pinning max-links 4
```

This example shows how to revert to the uplink count to the default for a Fabric Extender:

```
switch# configure terminal
switch(config)# fex 101
switch(config-fex)# no pinning max-links
```

Related Commands	**Command**	**Description**
	fex	Creates a Fabric Extender and enters fabric extender configuration mode.
	fex pinning redistribute	Redistributes the host interfaces on a Fabric Extender.
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

■ **provision**

provision

To preprovision a module in a chassis slot, use the **provision** command. To remove a preprovisioned module from a slot, use the **no** form of this command.

> **provision model** *model-name*

> **no provision model** [*model-name*]

Syntax Description

model	Specifies the type of module to be provisioned.
model-name	Module name. The supported modules are as follows: • **N2K-C2148T**—Cisco Nexus 2000 Series Fabric Extender 48x1G 4x10G Module • **N2K-C2232P**—Cisco Nexus 2000 Series Fabric Extender 32x10G Module • **N2K-C2232TM**—Cisco Nexus 2000 Series Fabric Extender 32x10G Module • **N2K-C2248T**—Cisco Nexus 2000 Series Fabric Extender 48x1G 4x10G Module • **N2K-N2224TP**—Cisco Nexus 2000 Series Fabric Extender 24x1G 2x10G SFP+ Module • **N2248PQ**—Cisco Nexus 2000 Series Fabric Extender 48x10G SFP+ 16x10G SFP+ Module • **N55-M16FP**—Cisco 16 port Port Fiber Channel Expansion Module 16 x SFP • **N55-M16P**—Cisco 16x10-Gigabit Ethernet Expansion Module • **N55-M16UP**—Cisco 16x10-Gigabit Flexible Ethernet Expansion Module • **N55-M8P8FP**—Cisco 8 Port 1/2/4/8-Gigabit Fibre Channel + 8 Port 10-Gigabit Ethernet Expansion Module • **N5K-M1008**—Cisco 8 Port Fiber Channel Expansion Module 8 x SFP • **N5K-M1060**—Cisco 6 Port Fiber Channel Expansion Module 6 x SFP • **N5K-M1404**—Expansion Module 4 x 10GBase-T LAN, 4 x Fiber Channel • **N5K-M1600**—Cisco 6-port 10 Gigabit Ethernet SFP Module 6 x SFP

Command Default None

Command Modes Slot configuration mode
Switch profile configuration mode

Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.

Usage Guidelines Use this command to define the modules (line card or Cisco Nexus 2000 Series Fabric Extender) to preprovision. If the card type does not match the card in the slot or the module is not compatible with the chassis, you see the following messages:

```
ERROR: The card type does not match the card in slot
```

or

```
ERROR: This module cannot be configured for this chassis
```

You can configure features or interfaces (Ethernet, Fibre Channel) on the modules before the modules are inserted in the switch chassis. You can also use this command to manage the configuration of these features or interfaces when the module is offline due to a failure or scheduled downtime. These configurations are applied when the module comes online.

When you preprovision a module by specifying the type of module, platform manager will allow only modules of matching type to come online. If you configure the interfaces for the module without specifying the module type, the configuration is applied when the module comes online, regardless of the module type.

You can preprovision modules and interfaces in a switch profile. The modules and interfaces are preprovisioned when you apply (commit) the switch profile. Once the module is inserted and interfaces are created, the preprovisioning module passes on the configuration to the respective applications before the interfaces come up.

Mutual exclusion is a mechanism where configuration outside the switch profile is not allowed in the switch profile and vice-versa. This requirement is to ensure that configuration in the switch profile is exactly the same on both switches. Preprovisioned configuration is the same as a configuration when the module is online, so mutual exclusion checks would continue to apply normally.

Examples This example shows how to preprovision a module in slot 2 of the chassis:

```
switch(config)# slot 2
switch(config-slot)# provision model N5K-M1404
switch(config-slot)#
```

This example shows how to remove a preprovisioned module from a chassis slot:

```
switch(config)# slot 2
switch(config-slot)# no provision model N5K-M1404
switch(config-slot)#
```

This example shows how to remove all preprovisioned modules or line cards from a chassis slot:

```
switch(config)# slot 2
switch(config-slot)# no provision model
switch(config-slot)#
```

Related Commands	Command	Description
	show module	Displays module information.
	show provision	Displays provisioned modules.
	show switch-profile	Displays switch profile information.
	show running-config exclude-provision	Displays the running configuration excluding the preprovisioned features.
	slot	Enables a slot for preprovisioning a module.
	switch-profile	Configures a switch profile.

S Commands

This chapter describes the Cisco NX-OS commands that begin with S that are used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

serial

To assign a serial number to a Fabric Extender, use the **serial** command. To remove the serial number, use the **no** form of this command.

> **serial** *serial_string*

> **no serial**

Syntax Description

serial_string	Serial number string for the Fabric Extender. The string is alphanumeric, case sensitive, and has a maximum length of 20 characters.

Command Default None

Command Modes Fabric extender configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines The serial number string you define with the **serial** command must match the serial number of the Fabric Extender. If you configure a serial number and then you use the **fex associate** command to associate the corresponding chassis ID to the switch, the association will succeed only if the Fabric Extender reports a matching serial number string.

⚠ **Caution** Configuring a serial number other than that of the given Fabric Extender will force the Fabric Extender offline.

Examples This example shows how to specify a serial number for a Fabric Extender:

```
switch# configure terminal
switch(config)# fex 101
switch(config-fex)# serial Rack16_FEX101
```

This example shows how to remove a serial number from a Fabric Extender:

```
switch# configure terminal
switch(config)# fex 101
switch(config-fex)# no serial
```

Related Commands	Command	Description
	fex	Creates a Fabric Extender and enters fabric extender configuration mode.
	fex associate	Associates a Fabric Extender to an Ethernet or EtherChannel interface.
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

slot

To enable preprovisioning on a slot in a chassis, use the **slot** command. To disable the slot for preprovisioning, use the **no** form of this command.

> **slot** *slot-number*

> **no slot** *slot-number*

Syntax Description

slot-number	Slot number in the chassis. The range is from 2 to 199.

Command Default   None

Command Modes   Global configuration mode
Configuration synchronization mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines   Use this command to enable preprovisioning of features or interfaces of a module on a slot in a chassis. Preprovisioning allows you to configure features or interfaces (Ethernet, Fibre Channel) on modules before the modules are inserted in the switch chassis.

Examples   This example shows how to enable a chassis slot for preprovisioning of a module:

```
switch(config)# slot 2
switch(config-slot)#
```

This example shows how to disable a chassis slot for preprovisioning of a module:

```
switch(config)# no slot 2
switch(config)#
```

Related Commands

Command	Description
port	Configures ports as Ethernet, native Fibre Channel or Fibre Channel over Ethernet (FCoE) ports.
provision	Preprovisions a module in a slot.
show running-config exclude-provision	Displays the running configuration excluding the preprovisioned features.

switchport mode fex-fabric

To set the interface type to be an uplink port for a Fabric Extender, use the **switchport mode fex-fabric** command.

> **switchport mode fex-fabric**

> **no switchport mode fex-fabric**

Syntax Description   This command has no arguments or keywords.

Command Default   None

Command Modes   Interface configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to set an Ethernet interface to be an uplink port for a Fabric Extender:

```
switch# configure terminal
switch(config)# interface ethernet 1/40
switch(config-if)# switchport mode fex-fabric
```

This example shows how to set an EtherChannel interface to be an uplink port for a Fabric Extender:

```
switch# configure terminal
switch(config)# interface port-channel 4
switch(config-if)# switchport mode fex-fabric
```

Related Commands

Command	Description
fex associate	Associates a Fabric Extender to an Ethernet or EtherChannel interface.
show fex	Displays all configured Fabric Extender chassis connected to the switch.

■ switchport mode fex-fabric

Show Commands

This chapter describes the Cisco NX-OS **show** commands used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

show diagnostic result fex

To display the results from the diagnostic tests for a Fabric Extender chassis, use the **show diagnostic result fex** command.

> **show diagnostic result fex** *chassis_ID*

Syntax Description

chassis_ID	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.

Command Default   None

Command Modes   EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to display the results from the diagnostic tests for a Fabric Extender:

```
switch# show diagnostic result fex 100

Related Commands	Command	Description
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

show inventory fex

To display the physical inventory of a Fabric Extender, such as the name, description, and volume ID, use the **show inventory fex** command.

show inventory fex *chassis_ID*

Syntax Description

chassis_ID	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.

Command Default   None

Command Modes   EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to display the physical inventory of a specific Fabric Extender chassis:

```
switch# show inventory fex 100
NAME: "FEX 100 CHASSIS", DESCR: "N5K-C5110T-BF-1GE  CHASSIS"
PID: N5K-C5110T-BF-1GE , VID: V01 , SN: JAF1237ABSE

NAME: "FEX 100 Module 1", DESCR: "Fabric Extender Module: 48x1GE, 4X10GE Supervi
sor"
PID: N5K-C5110T-BF-1GE , VID: V00 , SN: JAF1237ABSE

NAME: "FEX 100 Fan 1", DESCR: "Fabric Extender Fan module"
PID: N2K-C2148-FAN     , VID: N/A , SN: N/A

NAME: "FEX 100 Power Supply 1", DESCR: "Fabric Extender AC power supply"
PID: N5K-PAC-200W      , VID: 00V0, SN: PAC12473L17

switch#
```

Related Commands

Command	Description
show fex	Displays all configured Fabric Extender chassis connected to the switch.

show locator-led

To display the status of the locator LED in a Fabric Extender, use the **show locator-led** command.

show locator-led status

Syntax Description	**status**	Displays the status of the locator LED in a Fabric Extender module.

Command Default   None

Command Modes   EXEC mode

Command History	**Release**	**Modification**
	6.0(2)N1(1)	This command was introduced.

Usage Guidelines   Use the **locator-led** command to toggle the locator LED of a Fabric Extender.

Examples   This example shows how to display the modules that have the locator LED set to off or on:

```
switch# show locator-led status
Component       Locator LED Status
----------------------------------
FEX 100         off
FEX 101         off
FEX 102         off
FEX 103         off
FEX 105         off
switch#
```

Related Commands	**Command**	**Description**
	locator-led	Turns on the locator LED of a Fabric Extender chassis.
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

show module fex

To display the module information for a Fabric Extender, use the **show module fex** command.

> **show module fex** [**all** | *chassis_ID*]

Syntax Description

chassis_ID	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.
all	Displays information about all Fabric Extender modules.

Command Default None

Command Modes EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples This example shows how to display the module information of Fabric Extenders:

```
switch# show module fex all
FEX Mod Ports Card Type                              Model              Status.
--- --- ----- -------------------------------- ------------------ -----------

```

Related Commands	Command	Description
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

show provision

To display information about provision, use the **show provision** command.

show provision failed-config *slot-number*

Syntax Description

failed-config	Displays the configuration that failed to be applied to the slot.
slot-number	Slot number in the chassis. The range is from 2 to 199.

Command Default   None

Command Modes   EXEC mode
Configuration synchronization mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to display the preprovisioning configuration that failed to be applied to slot 2:

```
switch# show provision failed-config 2
Config has not been applied yet for this slot.

switch#
```

Related Commands

Command	Description
provision	Preprovisions a module in a slot.
show running-config exclude-provision	Displays the running configuration excluding the preprovisioned features.
slot	Enables a slot for preprovisioning a module.

show queuing interface

To display the queuing information of interfaces, use the **show queuing interface** command.

show queuing interface [**ethernet** *slot-chassis-no/port-slot-no/port-no*]

Syntax Description

ethernet	(Optional) Specifies that queuing information be displayed for an Ethernet interface or a Fabric Extender.
slot-chassis-no	Slot number of the Ethernet interface or chassis ID of the Fabric Extender. The range is from 1 to 255.
port-slot-no	Port number of the Ethernet interface or the remote slot ID of the Fabric Extender. The range is from 1 to 128.
port-no	Port number of the Fabric Extender. The range is from 1 to 48.

Command Default

Displays the queuing information for all interfaces.

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the queuing information, including the buffer threshold and queue limit values, of a specified interface:

```
switch# show queuing interface eth101/1/1
Ethernet101/1/1 queuing information:
  Input buffer allocation:
  Qos-group: 0  3  4  (shared)
  frh: 3
  drop-type: drop
  cos: 0 2 3 4 6 7
  xon       xoff       buffer-size
  ---------+---------+-----------
  11520     21760      44800

  Qos-group: 2
  frh: 2
  drop-type: no-drop
  cos: 1 5
  xon       xoff       buffer-size
  ---------+---------+-----------
  12800     23040      46080

  Queueing:
  queue    qos-group    cos            priority  bandwidth mtu
  --------+-----------+-------------+---------+---------+----
  3        0 3 4        0 2 3 4 6      WRR       99        9280
  2        2            1 5            WRR       1         9280
```

Cisco Nexus 6000 Series NX-OS Fabric Extender Command Reference

        Per-priority-pause status            : Rx (Inactive), Tx (Inactive)
switch#
```

Table 1 describes the significant fields shown in the display.

Table 1   ***show queuing interface Field Descriptions***

Field	Description
Ethernet ...	Ethernet interface information.
qoS-group	Information about QoS groups configured on the switch.
sched-type	Type of schedule.
WRR	Weighted round robin(WRR). Queue eight for scheduling.
Priority	Priority of the queue.
q-size	Queue size.
drop-type	Queue drop type can be either drop or no-drop.
MTU	Maximum transmit unit (MTU) for the queue.
Xon	Transmission on at this threshold.
Xoff	Transmission off at this threshold.
Buffer threshold	Buffer threshold value for the interface.
Queue limit	Queue limit value for the interface.

Related Commands	Command	Description
	hardware buffer-threshold	Configures the hardware buffer threshold.
	hardware queue-limit	Configures the hardware queue limit.
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

show running-config exclude-provision

To display the running configuration without the configuration for offline preprovisioned interfaces, use the **show running-config exclude-provision** command.

show running-config exclude-provision

Syntax Description   This command has no arguments or keywords.

Command Default   None

Command Modes   EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to display the running configuration without the offline preprovisioned interfaces:

```

Related Commands	Command	Description
	copy running-config startup-config	Copies the running configuration to the startup configuration.
	provision	Preprovisions a module in a slot.
	show provision	Displays the preprovisioned module information.
	show startup-config exclude-provision	Displays the startup configuration without the preprovisioning information for offline interfaces.
	slot	Configures a chassis slot for a predefined module.

show running-config fex

To display the running configuration for Fabric Extenders (FEXs), use the **show running-config fex** command.

show running-config fex [**all**]

Syntax Description	**all**	(Optional) Displays FEX information including default settings.

Command Default None

Command Modes EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples This example shows how to display information on the running FEX configuration, including the buffer threshold value and queue limit:

```
switch# show running-config fex

Related Commands	Command	Description
	hardware buffer-threshold	Configures the hardware buffer threshold.
	hardware queue-limit	Configures the hardware queue limit.
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

show sprom fex

To display information about the SPROM, use the **show sprom fex** command.

show sprom fex {**all** | *chassis_ID* {**all** | **backplane** | **powersupply** *module_no*}}

Syntax Description

chassis_ID	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.
all	Displays all SPROM content for a specific Fabric Extender.
backplane	Displays the backplane SPROM content for a specific Fabric Extender.
powersupply	Displays the power supply SPROM content for a specific Fabric Extender.
module_no	Power supply module number for a specific Fabric Extender. The range is from 1 to 2.

Command Default   None

Command Modes   EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to display all SPROM content for a specific Fabric Extender:

```

switch#
```

Related Commands	Command	Description
	show fex	Displays all configured Fabric Extender chassis connected to the switch.

show startup-config exclude-provision

To display the startup configuration that excludes the configuration for offline preprovisioned interfaces, use the **show startup-config exclude-provision** command.

show startup-config exclude-provision

Syntax Description   This command has no arguments or keywords.

Command Default   None

Command Modes   EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to display the startup configuration without the offline preprovisioned interfaces:

```
switch# show startup-config exclude-provision
```

Related Commands

Command	Description
provision	Preprovisions a module in a slot.
show provision	Displays the preprovisioned module information.
show running-config exclude-provision	Displays the running configuration excluding the preprovisioned features.
slot	Configures a chassis slot for a predefined module.

show system reset-reason fex

To display the reason for the last reset of the Fabric Extender, use the **show system reset-reason fex** command.

show system reset-reason fex *chassis_ID*

Syntax Description	*chassis_ID*	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.

Command Default   None

Command Modes   EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to display the last reset reason for a specific Fabric Extender:

```
switch# show system reset-reason fex 111
---- reset reason for FEX 111 ---

1) At 553612 usecs after Sat Dec 15 02:11:58 2012
    Reset Reason: Kernel Reboot (1)
    Service (Additional Info): Reload new image
    Image Version: 6.0(2)N1(1)

2) At 334319 usecs after Fri Dec 14 00:18:23 2012
    Reset Reason: Kernel Reboot (1)
    Service (Additional Info): Reload new image
    Image Version: 6.0(2)N1(1)

3) At 525416 usecs after Thu Dec 13 02:32:25 2012
    Reset Reason: Kernel Reboot (1)
    Service (Additional Info): Reload new image
    Image Version: 6.0(2)N1(1)

4) At 684084 usecs after Wed Dec  5 00:12:46 2012
    Reset Reason: Kernel Reboot (1)
    Service (Additional Info): Reload new image
    Image Version: 6.0(2)N1(1)

switch#
```

Related Commands

Command	Description
show fex	Displays all configured Fabric Extender chassis connected to the switch.

show version fex

To display the software version information about a Fabric Extender, use the **show version fex** command.

show version fex *chassis_ID*

Syntax Description	*chassis_ID*	Fabric Extender chassis ID. The chassis ID range is from 100 to 199.

Command Default   None

Command Modes   EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples   This example shows how to display the software version of a Fabric Extender:

```
switch# show version fex 100
Software
  Bootloader version:        1.12
  System boot mode:          primary
  System image version:      4.2(1)N2(1) [build 4.2(1)N2(1)]

Hardware
  Module:                    Fabric Extender 48x1GE Module
  CPU:                       Motorola, e300c1
  Serial number:             JAF1302ABDP
  Bootflash:                 locked

Kernel uptime is 0 day(s), 9 hour(s), 9 minutes(s), 16 second(s)

Last reset at Fri Jul 02 04:27:04 2010
  Reason: Reset Requested by CLI command reload
  Service: Reload requested by supervisor
switch#
```

Related Commands

Command	Description
show fex	Displays all configured Fabric Extender chassis connected to the switch.

T Commands

This chapter describes the Cisco NX-OS commands that begin with T that are used to manage a Cisco Nexus 2000 Series Fabric Extender from a Cisco Nexus 6000 switch.

type

To set the Fabric Extender card type to a specific card, use the **type** command. To revert to the default FEX card, use the **no** form of this command.

type *fex_card_type*

no type

Syntax Description

fex_card_type	Fabric Extender card type. The following Fabric Extender card types are supported: • **N2148T**—Fabric Extender 48x1G 4x10G SFP+ Module • **N2224TP**—Fabric Extender 24x1G 2x10G SFP+ Module • **N2232P**—Fabric Extender 32x10G SFP+ 8x10G SFP+ Module • **N2232TM**—Fabric Extender 32x10GBase-T 8x10G SFP+ Module • **N2248T**—Fabric Extender 48x1G 4x10G SFP+ Module • **N2248PQ**—Fabric Extender 48x10G SFP+ 16x10G SFP+ Module

Command Default   None

Command Modes   Fabric extender configuration mode

Command History

Release	Modification
4.2(1)N1(1)	This command was introduced.

Usage Guidelines   The following Cisco Nexus 2000 Series Fabric Extenders are supported on a Cisco Nexus 6000 Series switch:

• Cisco Nexus 2148T Fabric Extender—It has four 10-Gigabit Ethernet fabric interfaces for its uplink connection to the parent Cisco Nexus switch and 48 1000BASE-T (1-Gigabit) Ethernet host interfaces for its downlink connection to servers or hosts.

• Cisco Nexus N2224TP Fabric Extender—It has two 10-Gigabit Ethernet fabric interfaces with small form-factor pluggable (SFP+) interface adapters for its uplink connection to the parent Cisco Nexus switch and 24 1000BASE-T (1-Gigabit) Ethernet host interfaces for its downlink connection to servers or hosts. It does not support Fibre Channel over Ethernet (FCoE).

• Cisco Nexus 2232P Fabric Extender—It has eight 10-Gigabit Ethernet fabric interfaces with small form-factor pluggable (SFP+) interface adapters for its uplink connection to the parent Cisco Nexus switch and 32 10-Gigabit Ethernet fabric interfaces with SFP+ interface adapters for its downlink connection to servers or hosts.

- Cisco Nexus 2232TM Fabric Extender—It has eight 10-Gigabit Ethernet fabric interfaces with small form-factor pluggable (SFP+) interface adapters for its uplink connection to the parent Cisco Nexus switch and 32 10-Gigabit BASE-T Ethernet fabric interfaces for its downlink connection to servers or hosts.

- Cisco Nexus 2248T Fabric Extender—It has four 10-Gigabit Ethernet fabric interfaces with SFP+ interface adapters for its uplink connection to the parent Cisco Nexus switch and 48 1000BASE-T (1-Gigabit) Ethernet host interfaces for its downlink connection to servers or hosts.

- Cisco Nexus 2248PQ Fabric Extender—It has 48 10-Gigabit Ethernet host interfaces with SFP+ interface adapters and 16 10-Gigabit Ethernet fabric interfaces corresponding to 4 QSFP interface adapters for its uplink connection to the parent switch.

Examples   This example shows how to configure the Fabric Extender card:

```
switch(config)# fex 100
switch(config-fex)# type N2148T
switch(config-fex)#
```

Related Commands

Command	Description
fex	Creates a Fabric Extender and enters fabric extender configuration mode.
show fex	Displays all configured Fabric Extender chassis connected to the switch.
