

## vPath and vServices Commands

---

This chapter provides information about the vPath and vServices related commands on the Cisco Nexus 1000V Series switch and the Cisco Cloud Service Platform networking appliance.

# capability l3-vservice

To configure a port profile to be used with l3-vservice, use the **capability l3-vservice** command. To remove the capability from a port profile, use the **no** form of this command.

**capability l3-vservice**

**no capability l3-vservice**

<b>Syntax Description</b>	<b>l3-vservice</b>	Configure virtual network adapter to carry l3-vservice traffic.
<b>Defaults</b>	None	
<b>Command Modes</b>	Port-profile configuration (config-port-prof) network-admin	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)SM1(5.1)	This command was introduced.
<b>Usage Guidelines</b>	If you are configuring a port profile for <b>l3-vservice</b> , ensure that the port profile is configured in switchport mode.	
<b>Examples</b>	<p>This example shows how to configure a port profile to be used with l3-vservice:</p> <pre>n1000v# config t n1000v(config)# port-profile testprofile n1000v(config-port-prof)# capability l3-vservice n1000v(config-port-prof)#</pre> <p>This example shows how to remove the l3-vservice configuration from the port profile:</p> <pre>n1000v# config t n1000v(config)# port-profile testprofile n1000v(config-port-prof)# no capability l3-vservice n1000v(config-port-prof)#</pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show port-profile</b>	Displays information about the port profiles.

# clear vservice connection

To clear the Cisco vservice connections, use the **clear vservice connection** command.

```
clear vservice connection [module module-num]
```

Syntax Description	module	(Optional) Clears a specific module.
	<i>module-num</i>	Module number. The range is from 3 to 66.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

Examples	This example shows how to clear Cisco VSG connections: <pre>vsm# <b>clear vservice connection</b></pre>
----------	--

Related Commands	Command	Description
	<b>show vservice</b>	Displays Cisco VSG information.

# clear vservice statistics

To clear the Cisco vservice statistics, use the **clear vservice statistics** command.

```
clear vservice statistics [module module-number | ip <ip-address>]
```

Syntax Description	module	(Optional) Clears a module.
	<i>module-number</i>	Module number. The range of values is from 3 to 66.
	<b>ip</b>	IP address.
	<i>ip-address</i>	IP address.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Examples** This example shows how to clear Cisco vservice statistics for existing modules:

```
vsm# clear vservice statistics
Cleared statistics successfully in module 4
Cleared statistics successfully in module 6
```

Related Commands	Command	Description
	<b>show vservice</b>	Displays Cisco VSG information.

# copy running-config startup-config

To copy the running configuration to the startup configuration, use the **copy running-config startup-config** command.

## copy running-config startup-config

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** Any command mode

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** Use this command to save configuration changes in the running configuration to the startup configuration in persistent memory. When a device reload or switchover occurs, the saved configuration is applied.

**Examples** This example shows how to save the running configuration to the startup configuration:

```
vsm# copy running-config startup-config
[#####] 100%
```

Related Commands	Command	Description
	<b>show running-config</b>	Displays the running configuration.
	<b>show running-config diff</b>	Displays the differences between the running configuration and the startup configuration.
	<b>show startup-config</b>	Displays the startup configuration.
	<b>write erase</b>	Erases the startup configuration in the persistent memory.

# log-level

To set logging severity levels for the Cisco Prime Network Services Controller (Prime NSC) policy agent, use the **log-level** command. To reset logging levels, use the **no** form of this command.

**log-level** { **critical** | **debug0** | **debug1** | **debug2** | **debug3** | **debug4** | **info** | **major** | **minor** | **warn** }

**no** { **critical** | **debug0** | **debug1** | **debug2** | **debug3** | **debug4** | **info** | **major** | **minor** | **warn** }

## Syntax Description

<b>critical</b>	Sets the logging level to critical.
<b>debug0</b>	Sets the logging level to debug 0.
<b>debug1</b>	Sets the logging level to debug 1.
<b>debug2</b>	Sets the logging level to debug 2.
<b>debug3</b>	Sets the logging level to debug 3.
<b>debug4</b>	Sets the logging level to debug 4.
<b>info</b>	Sets the logging level to information.
<b>major</b>	Sets the logging level to major.
<b>minor</b>	Sets the logging level to minor.
<b>warn</b>	Sets the logging level to warning.

## Command Default

None

## Command Modes

Cisco Prime NSC policy agent configuration (config-nsc-policy-agent)

## Supported User Roles

network-admin

## Command History

Release	Modification
5.2(1)SM1(5.1)	This command was introduced.

## Examples

This example shows how to set the logging level to critical:

```
vsm# configure
vsm(config)# nsc-policy-agent
vsm(config-nsc-policy-agent)# log-level critical
```

## Related Commands

Command	Description
<b>nsc-policy-agent</b>	Enables the Cisco Prime NSC policy agent configuration mode.

# org

To create a Cisco Prime NSC organization (domain), use the **org** command in VSM. To delete a Cisco Prime NSC organization, use the **no** form of the command.

**org** *organization-name*

**no org** [*organization-name*]

<b>Syntax Description</b>	<i>organization-name</i> Organization name. The range of values is from 1 to 251.
---------------------------	---

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	Port profile configuration (config-port-prof)
----------------------	---

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)SM1(5.1)	This command was introduced.

<b>Usage Guidelines</b>	<p>Cisco Prime NSC organizations are Cisco Prime NSC domains.</p> <p>You can hierarchically manage Cisco Prime NSC organizations. A user that is assigned at a top level organization has automatic access to all organizations under it. For example, an engineering organization can contain a software engineering organization and a hardware engineering organization. A locale containing only the software engineering organization has access to system resources only within that organization. However, a locale that contains the engineering organization has access to the resources for both the software engineering and hardware engineering organizations.</p>
-------------------------	---

<b>Examples</b>	<p>This example shows how to create an organization:</p> <pre>vsm# <b>configure</b> Enter configuration commands, one per line. End with CNTL/Z. vsm(config)# <b>port-profile pP1</b> vsm(config-port-prof)# <b>org root/tenant1</b> vsm(config-port-prof)#</pre>
-----------------	---

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>vservice</b>	Sets the IP address for a virtual firewall.

# ping vsn

To ping the virtual service nodes (VSN) from the vPath, use the **ping vsn** command. There is no **no** form of this command.

```
ping vsn {all | {ip <ip-addr>}} src-module {all | vpath-all | <module-num>} [timeout <secs>]
[count {unlimited | <count>}]
```

Syntax Description		
<b>ip</b>		Designates that a specific IP address is to be pinged.
<i>ip-addr</i>		IP address of the specific VSN.
<b>all</b>		Indicates that all VSNs must be pinged.
<b>src-module</b>		Designates the source module for the ping.
<i>module-num</i>		Module number for the source path.
<b>vpath all</b>		Designates that all source vPaths will be used.
<b>timeout</b>		(Optional) Designates a timeout.
<i>secs</i>		Duration of the pinging operation in seconds.
<b>count</b>		(Optional) Designates a count of pings.
<i>count</i>		Number of pings to be counted.

**Command Default** None

**Command Modes** EXEC

**SupportedUserRoles** network-admin

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** There is no **no** form of this command.

**Examples** This example shows how to ping a Cisco VSG:

```
vsm# ping ?
<CR>
  A.B.C.D or Hostname  IP address of remote system
  WORD                Enter Hostname
  vsn                 VSNS to be pinged
```

```
vsm# ping vsn
```

```
Input parameters:
```

- vsn : VSNS to be pinged.
  - o all : All VSNS that are currently associated to at least one VM. In other words, all VSNS specified in port-profiles that are bound to at least one VM.
  - o ip-addr <ip-addr> : All VSNS configured with this IP address.
- src-module : Source modules to originate ping request from.
  - o all : All online modules.
  - o vpath-all : All modules having VMs associated to port-profiles that has vn-service defined.
  - o <module-num> : A online module number.
- timeout <secs> : Time to wait for response from VSNS, in seconds. Default is 1 sec.
- count : Number of ping packets to be sent.
  - o <count> : Sepcifies number of ping packets to be sent. Default is 5. Min 1, Max 2147483647.
  - o unlimited : Send ping packets until command is stopped.

Specify the IP address if the VSN to be pinged is not associated to any VMs yet.

In the output, the status of the ping request for each VSN for each module is shown. On a successful ping, the round-trip-time of ping request/response for a VSN is shown in microseconds next to the module number. On a failure, the failure message is shown next to the module number.

Various forms:

```
ping vsn all src-module all                (Ping all VSNS from all modules)
ping vsn all src-module vpath-all         (Ping all VSNS from all modules having
                                           VMs associated to VSNS)
ping vsn all src-module 3                 (Ping all VSNS from the specified module)
ping vsn ip 106.1.1.1 src-module all      (Ping specified VSN from all modules)
ping vsn ip 106.1.1.1 src-module vpath-all (Ping specified VSN from all modules
                                           having VMs associated to VSNS)
```

The options timeout and count apply to all of the above commands:

```
ping vsn all src-vpath all timeout 2 count 10
ping vsn all ip 106.1.1.1 count unlimited
```

Errors:

```
VSN response timeout - VSN is down, not reachable or not responding.
VSN ARP not resolved - VEM couldn't resolve MAC address of VSN.
no response from VEM - VEM is not sending ping response to VSM. Can happen when VEM
is down and VSM not detected it yet.
```

These examples show how to display all of the source module traffic:

```
vsm# ping vsn all src-module all
ping vsn 10.1.1.44 vlan 0 from module 9 10 11 12, seq=0 timeout=1-sec
  module(usec)   : 9(508)
  module(failed) : 10(VSN ARP not resolved) 11(VSN ARP not resolved)
                  12(VSN ARP not resolved)
ping vsn 10.1.1.40 vlan 0 from module 9 10 11 12, seq=0 timeout=1-sec
  module(usec)   : 9(974) 11(987) 12(1007)
  module(failed) : 10(VSN ARP not resolved)

ping vsn 10.1.1.44 vlan 0 from module 9 10 11 12, seq=1 timeout=1-sec
  module(usec)   : 9(277) 10(436) 11(270) 12(399)
ping vsn 10.1.1.40 vlan 0 from module 9 10 11 12, seq=1 timeout=1-sec
  module(usec)   : 9(376) 10(606) 11(468) 12(622)

ping vsn 10.1.1.44 vlan 0 from module 9 10 11 12, seq=2 timeout=1-sec
  module(usec)   : 9(272) 10(389) 11(318) 12(357)
ping vsn 10.1.1.40 vlan 0 from module 9 10 11 12, seq=2 timeout=1-sec
  module(usec)   : 9(428) 10(632) 11(586) 12(594)
```

```

ping vsn 10.1.1.44 vlan 0 from module 9 10 11 12, seq=3 timeout=1-sec
  module(usec)   : 9(284) 10(426) 11(331) 12(387)
ping vsn 10.1.1.40 vlan 0 from module 9 10 11 12, seq=3 timeout=1-sec
  module(usec)   : 9(414) 10(663) 11(644) 12(698)

ping vsn 10.1.1.44 vlan 0 from module 9 10 11 12, seq=4 timeout=1-sec
  module(usec)   : 9(278) 10(479) 11(334) 12(469)
ping vsn 10.1.1.40 vlan 0 from module 9 10 11 12, seq=4 timeout=1-sec
  module(usec)   : 9(397) 10(613) 11(560) 12(593)

vsm# ping vsn ip 10.1.1.40 src-module vpath-all
ping vsn 10.1.1.40 vlan 0 from module 9 11 12, seq=0 timeout=1-sec
  module(usec)   : 9(698) 11(701) 12(826)

ping vsn 10.1.1.40 vlan 0 from module 9 11 12, seq=1 timeout=1-sec
  module(usec)   : 9(461) 11(573) 12(714)

ping vsn 10.1.1.40 vlan 0 from module 9 11 12, seq=2 timeout=1-sec
  module(usec)   : 9(447) 11(569) 12(598)

ping vsn 10.1.1.40 vlan 0 from module 9 11 12, seq=3 timeout=1-sec
  module(usec)   : 9(334) 11(702) 12(559)

ping vsn 10.1.1.40 vlan 0 from module 9 11 12, seq=4 timeout=1-sec
  module(usec)   : 9(387) 11(558) 12(597)

vsm#

```

**Related Commands**

Command	Description
<b>ping</b>	Activates a signal to verify connections with other devices on a path.

# policy-agent-image

To designate the policy agent image local URL as bootflash, use the **policy-agent-image** command. To remove the designation, use the no form of the command.

**policy-agent-image bootflash:<nsc-pa name>**

**no policy-agent-image bootflash:<nsc-pa name>**

<b>Syntax Description</b>	<b>bootflash:</b> Designates the policy agent image local URL as bootflash.				
<b>Command Default</b>	None				
<b>Command Modes</b>	Prime NSC policy agent configuration (config-nsc-policy-agent)				
<b>SupportedUserRoles</b>	network-admin				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>5.2(1)SM1(5.1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	5.2(1)SM1(5.1)	This command was introduced.
Release	Modification				
5.2(1)SM1(5.1)	This command was introduced.				
<b>Examples</b>	<p>This example shows how to designate the local URL that contains the policy agent image:</p> <pre>vsm# <b>configure</b> vsm(config)# <b>nsc-policy-agent</b> vsm(config-nsc-policy-agent)# <b>policy-agent-image bootflash:nsc_pa</b></pre>				
<b>Related Commands</b>	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><b>nsc-policy-agent</b></td> <td>Enables the NSC policy agent configuration mode.</td> </tr> </tbody> </table>	Command	Description	<b>nsc-policy-agent</b>	Enables the NSC policy agent configuration mode.
Command	Description				
<b>nsc-policy-agent</b>	Enables the NSC policy agent configuration mode.				

# pop

To pop a mode off the stack or to restore a mode, use the **pop** command.

**pop** *file-name*

<b>Syntax Description</b>	<i>file-name</i>	Name of the file.
---------------------------	------------------	-------------------

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	EXEC
----------------------	------

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)SM1(5.1)	This command was introduced.

<b>Examples</b>	This example shows how to restore from a file called file1:
-----------------	---

```
vsm# pop file1
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>push</b>	Pushes the current mode onto the stack.

# port-profile

To create a port profile and enter port profile configuration mode, use the **port-profile** command. To remove the port profile configuration, use the **no** form of this command.

**port-profile** *profile-name*

**no port-profile** *profile-name*

<b>Syntax Description</b>	<i>profile-name</i>	Port profile name. The range of valid values is from 1 to 80.
<b>Defaults</b>	None	
<b>Command Modes</b>	Global configuration (config)	
<b>SupportedUserRoles</b>	network-admin	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)SM1(5.1)	This command was introduced.
<b>Usage Guidelines</b>	The port profile name must be unique for each port profile.	
<b>Examples</b>	<p>This example shows how to create a port profile called AccessProf:</p> <pre>vsm# <b>configure</b> vsm(config)# <b>port-profile AccessProf</b> vsm(config-port-prof)#</pre> <p>This example shows how to remove the port profile called AccessProf:</p> <pre>vsm# <b>configure</b> vsm(config)# <b>no port-profile AccessProf</b> vsm(config)#</pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show port-profile</b>	Displays information about the port profiles.

# push

To push the current mode onto stack or to save it, use the **push** command.

**push** *file-name*

<b>Syntax Description</b>	<i>file-name</i>	Name of the file.
---------------------------	------------------	-------------------

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	EXEC
----------------------	------

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)SM1(5.1)	This command was introduced.

<b>Examples</b>	This example shows how to push file1 onto the stack:
-----------------	--

```
vsm# push file1
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>pop</b>	Pops the current mode off the stack.

# registration-ip

To set the service registry IP address, use the **registration-ip** command. To discard the service registry IP address, use the **no** form of this command.

**registration-ip** *ip-address*

**no registration-ip**

---

<i>ip-address</i>	Service registry IP address. The format is A.B.C.D.
-------------------	---

---

---

**Command Default** None

---

**Command Modes** Cisco Prime NSC policy agent configuration mode (config-nsc-policy-agent)

---

**SupportedUserRoles** network-admin

---

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)SM1(5.1)	This command was introduced.

---

---

**Examples** This example shows how to set the service registry IP address:

```
vsm# configure
vsm(config)# nsc-policy-agent
vsm(config-nsc-policy-agent)# registration-ip 209.165.200.233
vsm(config-nsc-policy-agent)#
```

---

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>nsc-policy-agent</b>	Enters the Cisco Prime NSC policy agent configuration mode.

---

# shared-secret

To set the shared secret password for communication between the Cisco Virtual Security Gateway (VSG), the Virtual Supervisor Module (VSM), and the Cisco Prime Network Services Controller (Prime NSC), use the **shared-secret** command. To discard the shared secret password, use the **no** form of this command.

**shared-secret** *shared-secret-password*

**no shared-secret**

<b>Syntax Description</b>	<i>shared-secret-password</i> Shared secret password. The range of valid values is from 1 to 64. You must use at least one uppercase character.
---------------------------	---

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	Cisco Prime NSC policy agent configuration mode (config-nsc-policy-agent)
----------------------	---

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)SM1(5.1)	This command was introduced.

<b>Examples</b>	This example shows how to set the shared secret password:
-----------------	---

```
vsm# configure
vsm(config)# nsc-policy-agent
vsm(config-nsc-policy-agent)# shared-secret Password123
vsm(config-nsc-policy-agent)#
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
		<b>nsc-policy-agent</b>

# show org port brief

To display the ports attached to the port profile where org is configured, use the show org port brief command.

```
show org port brief [port-profile pp_name | vethernet veth_num] [module module_num]
```

## Syntax Description

<b>port-profile</b>	Filters the port information for the specified port-profile name.
<i>pp_name</i>	Specifies the port-profile name.
<b>vethernet</b>	Filters the port information for the specified virtual ethernet number.
<i>vethernet_num</i>	Specifies the virtual ethernet number.
<b>module</b>	Filters the display by module number.
<i>module_num</i>	Specifies the module number to see the virtual ethernet connections on the module.

## Command Modes

EXEC

## SupportedUserRoles

Network-admin  
Network-operator

## Command History

Release	Modification
5.2(1)SM1(5.1)	This command was introduced.

## Usage Guidelines

You can use the following operators with the **show org port brief** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- module—Filter the output per a specific module number.
- |—Pipes the command output to a filter.

## Examples

This example shows how to display the port information:

```
vsm# show org port brief
Veth Mod VM-Name vNIC IP-Address
2 4 traffic-vm-ubuntu-50 192.170.0.50,
3 4 traffic-vm-win-70 192.170.0.70,
5 3 traffic-vm-win-30 192.170.0.30,
8 3 traffic-vm-ubuntu-10 192.170.0.10,
```

# show running-config

To display the running configuration, use the **show running-config** command.

```
show running-config [aaa | diff | ip | port-profile | vlan | acllog | eem | ipqos | port-security | vrf
| aclmgr | exclude | ipv6 | radius | vservice | adjmgr | exclude-provision | l3vm | rpm | vshd
| all | expand-port-profile | license | security | arp | icmpv6 | monitor | snmp | cdp | igmp |
network | spanning-tree | cert-enroll | interface | ntp | vdc-all]
```

## Syntax Description

<b>aaa</b>	(Optional) Displays the Authentication, Authorization and Accounting (AAA) configuration.
<b>aclmgr</b>	(Optional) Displays the running configuration for Access Control List (ACL) manager.
<b>adjmgr</b>	(Optional) Displays adjacency manager information.
<b>all</b>	(Optional) Displays the current operating configurations.
<b>arp</b>	(Optional) Displays Address Resolution Protocol (ARP) information.
<b>cdp</b>	(Optional) Displays the Cisco- Discovery Protocol (CDP) configuration.
<b>cert-enroll</b>	(Optional) Displays the certificate configuration.
<b>diff</b>	(Optional) Displays the difference between the running and startup configurations.
<b>eem</b>	(Optional) Displays the event manager running configuration.
<b>exclude</b>	(Optional) Excludes the running configuration of specified features.
<b>exclude-provision</b>	(Optional) Exclude configuration for offline pre-provisioned interfaces.
<b>expand-port-profile</b>	(Optional) Displays port profile information.
<b>icmpv6</b>	(Optional) Displays Internet Control Message Protocol (ICMPv6) information.
<b>igmp</b>	(Optional) Displays Internet Group Management Protocol (IGMP) information.
<b>interface</b>	(Optional) Displays interface configurations.
<b>ip</b>	(Optional) Displays Internet Protocol (IP) information.
<b>ipqos</b>	(Optional) Displays the running configuration for the IP Quality of Service (QoS) manager.
<b>ipv6</b>	(Optional) Displays IPv6 information.
<b>l3vm</b>	(Optional) Displays Layer 3 Virtual Machine (L3VM) information.
<b>license</b>	(Optional) Displays the licensing configuration.
<b>monitor</b>	(Optional) Displays Ethernet Switched Port Analyzer (SPAN) session information.
<b>network</b>	(Optional) Displays network information.
<b>ntp</b>	(Optional) Displays Network Time Protocol (NTP) information.
<b>port-profile</b>	(Optional) Displays port-profile configurations.
<b>port-security</b>	(Optional) Displays port-security configurations.
<b>radius</b>	(Optional) Displays the Remote Authentication Dial In User Service (RADIUS) configuration.
<b>rpm</b>	(Optional) Displays RPM information.

<b>security</b>	(Optional) Displays the security configurations.
<b>snmp</b>	(Optional) Displays the Simple Network Management Protocol (SNMP) configuration.
<b>spanning-tree</b>	(Optional) Displays spanning-tree protocol information.
<b>vdc-all</b>	(Optional) Displays all Virtual Device Context (VDC) configurations.
<b>vlan</b>	(Optional) Displays virtual large area network (VLAN) information.
<b>vrf</b>	(Optional) Displays Virtual Routing and Forwarding (VRF) information.
<b>vshd</b>	(Optional) Displays the running configuration for virtual shared hardware device (VSHD).
<b>aclog</b>	Displays aclog information.
<b>vservice</b>	Displays virtual service node.

**Command Default** None

**Command Modes** EXEC

**SupportedUserRoles** network-admin  
network-operator

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show running-config** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display the running configuration:

```

**Related Commands**

Command	Description
show aaa	Displays AAA information.

# show running-config vservice node

To display the configuration details of the virtual service nodes in the network, use the **show running-config vservice node** command.

**show running-config vservice node**

**Syntax Description** This command has no arguments or keywords.

**Command Default** None

**Command Modes** EXEC

**SupportedUserRoles** Network-admin  
Network-operator

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show running-config vservice node** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- node-name—Displays the configuration of the specified vservice node name.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display the information of the configured vservice nodes:

```
vsm# show running-config vservice node

!Command: show running-config vservice node
!Time: Wed May 8 06:54:03 2013

version 5.2(1)SM1(5.1)
logging level vns_agent 2
vservice node VSG13 type vsg
  ip address 192.168.180.33
  adjacency 13
  fail-mode close
vservice node VSGhv-13 type vsg
  ip address 192.168.180.31
  adjacency 13
  fail-mode close
```

Related Commands	Command	Description
	vservice node	Configures a virtual service node.

# show nsc-pa status

To display the installation status of a policy agent, use the **show nsc-pa status** command.

**show nsc-pa status**

**Syntax Description** This command has no arguments or keywords.

**Command Default** None

**Command Modes** Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show nsc-pa status** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display the installation status of the policy agent:

```
VSM-hpv# configure
VSM-hpv(config)# show nsc-pa status
NSC Policy-Agent status is - Installed Successfully. Version 3.2(1c)-`vsm
```

Related Commands	Command	Description
	<b>nsc-policy-agent</b>	Enters the Cisco Prime NSC policy agent configuration mode.

# show vservice brief

To display only a brief summary about the Virtual Service Nodes (VSN), use the **show vservice brief** command.

```
show vservice brief {[node-name <node name>] | { [node-l3] [node-ipaddr <ip-addr>]} | [
module <module-num>]}
```

## Syntax Description

<b>node-name</b>	(Optional) Displays service node name.
<i>node-name</i>	Specifies the service node.
<b>node-l3</b>	Displays the port information for the Layer 3 adjacency of a node.
<b>node-ipaddr</b>	Displays the port information for the specified IP address of the node.
<i>ip-addr</i>	Specifies the IP address of the service node.
<b>module</b>	(Optional) Displays module number.
<i>module-num</i>	Specifies the module number to see all the VSN connections on the module.

## Command Default

None

## Command Modes

EXEC

## Supported User Roles

network-admin  
network-operator

## Command History

Release	Modification
5.2(1)SM1(5.1)	This command was introduced.

## Usage Guidelines

You can use the following operators with the **show vservice brief** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

## Examples

This example shows how to display brief information about the Cisco VSGs:

```
VSM-hpv# sh vservice brief
```

```
-----  
Node Information  
-----
```

```
ID Name Type IP-Address Mode State Module
```

■ **show vservice brief**

```

**Related Commands**

Command	Description
<b>show vservice port</b>	Displays vEth port information.

# show vservice connection

To display VSN connections, use the **show vservice connection** command.

```
show vservice connection [port-profile <pp_name> | service-profile <sp_name> | node-name
<node_name> | {[node-l3] [node-ipaddr <ip_addr>]}] [module <module_num>]
```

Syntax	Description
<b>port-profile</b>	Filters the port information for the specified port-profile name.
port-profile	Specifies the port-profile name.
<b>service-profile</b>	Filters the port information for the specified service-profile name.
service_profile	Specifies the service-profile name.
<b>node-name</b>	(Optional) Displays service node name.
node-name	Specifies the service node.
<b>node-l3</b>	Displays the port information for the Layer 3 adjacency of a node.
<b>node-ipaddr</b>	Displays the port information for the specified IP address of the node.
ip-addr	Specifies the IP address of the service node.
<b>module</b>	(Optional) Displays module number.
module-num	Specifies the module number to see all the VSN connections on the module.

**Command Default** None

**Command Modes** EXEC

**Supported User Roles** network-admin  
network-operator

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show vservice connection** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display Cisco VSG connections:

```
vsm-hpv# show vservice connection
```

## show vservice connection

**Related Commands**

Command	Description
<b>show vservice port vethernet</b>	Displays information about virtual Ethernet (vEth) ports.

# show vsn port vethernet

To display information about virtual Ethernet (vEth) ports, use the **show vsn port vethernet** command.

**show vsn port vethernet** *port-number*

<b>Syntax Description</b>	<i>port-number</i>	Port number. The range is from 1 to 1048575.
<b>Command Default</b>	None	
<b>Command Modes</b>	EXEC	
<b>SupportedUserRoles</b>	network-admin network-operator	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SV1(1)	This command was introduced.

## Usage Guidelines

You can use the following operators with the **show vsn port vethernet** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

## Examples

This example shows how to display information about vEth port 2:

```
vsm# show vsn port vethernet 2

Veth           : Veth2
VM Name        : UD136-1
VM uuid        : 42 3b e1 60 17 e6 92 c4-3b 47 f4 b7 4c a0 be 1b
DV Port        : 7458
DVS uuid       : 90 33 3b 50 c2 11 2a 50-ae c5 0f 07 b2 b3 23 2c
Flags          : 0x148
VSN Data IP    : 192.168.136.1
Security Profile : sp1
Org            : Not set
VNSP id        : 1
IP addresses:
vsm#
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show vservice statistics</b>	Displays virtual service node statistics.

# tcp state-checks

To configure the Cisco Nexus 1000V switch to perform TCP state checks, use the **tcp state-checks** command. To disable TCP state checks, use the **no** form of the command.

**tcp state-checks**

**no tcp state-checks**

**Syntax Description** There are no arguments.

**Command Modes** vservice global configuration (config-vservice-global)

**SupportedUserRoles** network-admin  
system-admin

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** Use this command to enable or disable TCP state checks. The TCP state check is disabled by default.

**Examples** This example shows how to enable the switch to perform the TCP state checks:

```
n1000v(config)# vservice global type vsg
n1000v(config-vservice-global)# tcp state-checks
```

Related Commands	Command	Description
	vservice global type vsg	Enters the vservice global configuration mode.

# vservice

To associate a port-profile with a service node, use the **vservice** command from the config-port-profile mode of the port-profile. To delete a port-profile configuration, use the **no** form of this command.

```
vservice { node node_name [profile profile_name] }
```

```
no vservice
```

Syntax Description	node	Specifies the service node to associate the port-profile with.
	<i>node_name</i>	The pre-defined service node name.
	<b>profile</b>	(Optional) Specifies the service profile the service node is to be associated with.
	<i>profile_name</i>	The pre-defined service profile name.

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	Port-profile configuration (config-port-prof)
----------------------	---

<b>SupportedUserRoles</b>	Network-admin
---------------------------	---------------

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

<b>Usage Guidelines</b>	You can associate either the service node to the chosen port-profile entity. If the node is of type VSG, then specifying a profile is mandatory.
-------------------------	--

<b>Examples</b>	<p>This example shows how to configure a port-profile with a node and service profile:</p> <pre>vsm(config)# <b>port-profile port1</b> &lt;----- Enter the mode of the port-profile entity you want to configure vsm(config-port-prof)# <b>vservice node vsg1 profile sp1</b> vsm(config-port-prof)#</pre>
-----------------	--

Related Commands	Command	Description
	<b>show port-profile</b>	Displays information about the port profiles.

# vservice node

To configure a service node, use the **vservice node** command. To disable a service node, use the **no** form of the command.

```
vservice node node_name type { vsg
ip address ip-address | no ip address
adjacency { I3 } | no adjacency failmode { close | open } | no failmode
```

```
no vservice node node_name
no ip address
no adjacency
no failmode
```

Syntax Description		
	<i>node_name</i>	Displays the service node name to identify it in the network.
	<b>type</b>	Displays the type of service node to be configured. The values include <b>vsg</b> .
	<b>vsg</b>	Cisco virtual security gateway (VSG) service node.
	<b>ip-address</b>	Displays IP address of the associated service node.
	<i>ip-address</i>	IP address of the associated service node. This IP address should match the IP address of the data interface node.
	<b>adjacency</b>	Specifies the adjacency for I3 mode.
	<b>I3</b>	Specifies Layer 3 (using IP address) mode for the service node.
	<b>failmode</b>	Sets state to be in either fail close, or fail open mode.
	<b>close</b>	Drops packets if the Cisco VSG is down. This is the default value.
	<b>open</b>	Allows the packets to pass through if the Cisco VSG is down.

**Command Default** None

**Command Modes** Global configuration (config)

**SupportedUserRoles** Network-admin

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** Use the **vservice node** command to configure a service node with an existing Cisco VSG. That node in turn is associated with either a port profile or a vservice path.

You can only delete inactive vservice nodes. The inactive nodes are not configured with any virtual machines or service paths.

**Examples**

This example shows how to enter the vservice-node mode, and configure the IP address of a vservice node, adjacency, and fail-mode settings:

```
vsm(config)# vservice node test type vsg <----- enter the vservice-node mode
vsm(config-vservice-node)# ip address 1.1.11.11
vsm(config-vservice-node)# adjacency 13
vsm(config-vservice-node)# fail-mode close
vsm(config-vservice-node)#
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show vservice node brief</b>	Displays the vservice node information, in brief.
<b>show vservice node detail</b>	Displays the vservice node information, in detail.

# nsc-policy-agent

To enter Cisco Prime Network Services Controller (Prime NSC) policy agent mode, use the **nsc-policy-agent** command.

## **nsc-policy-agent**

**Syntax Description** This command has no arguments or keywords.

**Command Default** None

**Command Modes** Global configuration (config)

**SupportedUserRoles** network-admin

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Usage Guidelines** Use the Cisco Prime NSC policy agent configuration mode to configure policy agents.

**Examples** This example shows how enter policy agent mode:

```
vsm# configure
vsm(config)# nsc-policy-agent
vsm(config-nsc-policy-agent)#
```

Related Commands	Command	Description
	<b>configure</b>	Enters global configuration mode.

# vservice global type vsg

To enter the vservice global configuration mode, use the **vservice global type vsg** command.

**vservice global type vsg**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** vservice global configuration (config-vservice-global)

**SupportedUserRoles** network-admin

Command History	Release	Modification
	5.2(1)SM1(5.1)	This command was introduced.

**Examples** This example shows how to enter the vservice global configuration mode:

```
n1000v# configure <----- enter the config mode
n1000v(config)# vservice global type vsg
n1000v(config-vservice-global)#
```

Related Commands	Command	Description
	<b>tcp state-checks</b>	Configures selective TCP state checks on the switch traffic.
