Information About the MTU

The default maximum transmission unit (MTU) size for frames received and sent on all device interfaces is 1500 bytes.

You can change the MTU size to support switched jumbo frames on all Gigabit Ethernet and 10-Gigabit Ethernet interfaces and to support routed frames on all routed ports.

Restrictions for System MTU

When configuring the system MTU values, follow these guidelines:

- The device does not support the MTU on a per-interface basis.

How to Configure MTU

Configuring the System MTU

Beginning in privileged EXEC mode, follow these steps to change the MTU size for switched and routed packets:

SUMMARY STEPS

1. **configure terminal**
2. **system mtu *bytes***
3. **system mtu jumbo *bytes***
4. **system mtu routing *bytes***

5. `end`
6. `copy running-config startup-config`
7. `show system mtu`

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: Device# <code>configure terminal</code>	Enters global configuration mode.
Step 2	system mtu bytes Example: Device(config)# <code>system mtu 2500</code>	(Optional) Changes the MTU size for all Fast Ethernet interfaces on the switch. The range is 1500 to 9198 bytes; the default is 1500 bytes.
Step 3	system mtu jumbo bytes Example: Device(config)# <code>system mtu jumbo 7500</code>	(Optional) Changes the MTU size for all Gigabit Ethernet and 10-Gigabit Ethernet interfaces on the switch or the switch stack. The range is 1500 to 9198 bytes; the default is 1500 bytes.
Step 4	system mtu routing bytes Example: Device(config)# <code>system mtu routing 2000</code>	(Optional) Changes the system MTU for routed ports. You can also set the maximum MTU to be advertised by the routing protocols that support the configured MTU size. The system routing MTU is the maximum MTU for routed packets and is also the maximum MTU that the switch advertises in routing updates for protocols such as OSPF. Note This command is not supported on switches running the LAN base feature set.
Step 5	end Example: Device(config)# <code>end</code>	Returns to privileged EXEC mode.
Step 6	copy running-config startup-config Example: Device# <code>copy running-config startup-config</code>	Saves your entries in the configuration file.
Step 7	show system mtu Example: Device# <code>show system mtu</code>	Verifies your settings.

Configuration Examples for System MTU

This example shows how to set the maximum packet size for a Gigabit Ethernet port to 7500 bytes:

```
Device(config)# system mtu 7500
Device(config)# exit
```

This example shows how to set the jumbo packet size for a Gigabit Ethernet port to 7500 bytes:

```
Device(config)# system mtu jumbo 7500
Device(config)# exit
```

If you enter a value that is outside the allowed range for the specific type of interface, the value is not accepted. This example shows the response when you try to set Gigabit Ethernet interfaces to an out-of-range number:

```
Device(config)# system mtu jumbo 25000
                        ^
% Invalid input detected at '^' marker.
```
