

CHAPTER 3

Setting Up and Configuring a DMM Appliance

Revised: October 8, 2007

This chapter describes in a checklist how to set up a DMM appliance and configure its software. Use the checklist to track your progress while you complete the required tasks.

Before You Begin

- Complete the checklist in [Chapter 2, “Setting Up and Configuring a Video Portal Appliance.”](#) You must know the IP address and instance name for your Video Portal appliance.
- Verify that at least one computer on your network is configured for access to other networked devices through TCP ports 80 and 8080.
- Enable popup windows in your browser if they are disabled. You can complete the checklist only if popup windows are enabled.
- Learn if your network uses dynamic (DHCP) or static IP addresses, and—if your network uses static IP addresses:
 - Learn what IP address to assign to the DMM appliance.
 - Learn what subnet mask (netmask) to use.
 - Learn what IP addresses are assigned to the default network gateway, the primary DNS server, and the secondary DNS server.

✓	Task
<input type="checkbox"/>	1. Set up DMM appliance hardware. <ol style="list-style-type: none">a. Unpack the equipment from its container and verify that all components are present.b. Plug in the redundant power cables on the back of the appliance.c. Connect a live Ethernet cable to Port 1 on the back of the appliance.d. Connect a monitor to the VGA output on the back of the appliance.e. Connect a standard PS2 keyboard to the purple PS2 port in the back of the appliance.f. Power on the appliance.
<input type="checkbox"/>	2. After you can see and read the “Start of First Boot” message, press Enter .
<input type="checkbox"/>	3. Specify the fully qualified, DNS-routable hostname for the DMM appliance. You can enter either the DNS-routable hostname or the IP address. Select Change , then select OK . For example: <code>server.example.com</code>

✓	Task
<input type="checkbox"/>	<p>Caution  We recommend that you do not use DHCP to obtain an IP address for your appliance, due to the sometimes unpredictable expiration of IP addresses in DHCP systems and the administrative overhead of reconfiguring other devices to reestablish disrupted connections (for deployments or any other purpose). We further recommend that you do not change the static IP address that you assign to the appliance.</p> <p>4. Enter IP address and routing information. If your appliance will obtain its IP address from a DHCP server, select Yes to enable DHCP. Alternatively, if your appliance will use a static IP address, select No so that you can enter the static network settings.</p> <p>If your appliance will use a static IP address, you must:</p> <ol style="list-style-type: none"> a. Enter the IP address that your appliance should use. b. Enter the subnet mask. c. Enter the default gateway IP address or DNS-routable hostname. d. Enter the primary DNS server IP address or DNS-routable hostname. e. Enter the secondary DNS server IP address or DNS-routable hostname. f. Select OK.
<input type="checkbox"/>	5. Confirm if you entered the correct network settings. If the settings are correct, select Yes . Alternatively, if they are wrong, select No to go back and correct them.
<input type="checkbox"/>	6. Configure settings for the appliance network interface card (NIC). Do one of the following: <ul style="list-style-type: none"> • If the NIC for your appliance should autonegotiate the fastest possible transmission mode when it is connected to another device, select Yes. • If the NIC should not autonegotiate, select No, select the NIC speed, select OK, select the duplex method, select OK, then select Yes.
<input type="checkbox"/>	7. Select the time zone settings. <ol style="list-style-type: none"> a. Use the Up/Down arrow keys to navigate through the Time Zone list. b. Stop when the correct time zone is displayed, then select OK. c. If the settings are correct, select Yes. Alternatively, if they are wrong, select No to go back and correct them.
<input type="checkbox"/>	8. Select the current month, year, and day. <ol style="list-style-type: none"> a. Use the Tab key and the Up/Down arrow keys to navigate and change the selected values. b. When you are done, select OK. c. If the settings are correct, select Yes. Alternatively, if they are wrong, select No to go back and correct them.
<input type="checkbox"/>	9. Select the current hour, minute, and second. Use the format for military time (24 hours that increment from 0100 to 2400). <ol style="list-style-type: none"> a. Use the Tab key and the Up/Down arrow keys to navigate and change the selected values. b. When you are done, select OK. c. If the settings are correct, select Yes. Alternatively, if they are wrong, select No to go back and correct them.

✓	Task
<input type="checkbox"/>	<p>10. Enter a password for the admin account. This is by default the account to use when you administer the appliance. The password that you enter must contain at <i>least</i> six characters. When you are done, select OK.</p> <p>Tip We recommend that you use a strong password. A strong password has at least eight characters and contains numbers, letters (both uppercase and lowercase), and symbols.</p>
<input type="checkbox"/>	<p>11. Enter a password for the pwadmin account. This is the account to use if you forget your password for the admin account. When you are done entering the password, select OK twice.</p> <p>After a moment, the appliance reboots and a login prompt is displayed.</p>
<input type="checkbox"/>	<p>12. Obtain a DMM software license key and use it to activate the DMM modules that you purchased.</p> <ol style="list-style-type: none"> a. At the login prompt, use the admin username and the password that you specified in Task 10 to log in to the Appliance Administration Interface (AAI). In the displayed menu, the SHOW_INFO option is highlighted by default. b. Press Enter, then write down: <ul style="list-style-type: none"> • The IP address displayed for your DMM appliance. • The serial number displayed for your DMM appliance. c. Compose an email message that includes or identifies <i>all</i> of the following: <ul style="list-style-type: none"> • The Cisco sales order number for your DMM purchase. • The DMM appliance serial number. • Your email address. • The name of your organization. • The department name within your organization. • The DMM module (or modules) that you purchased. <p>In addition, if you purchased the DMM module for digital signage, include the number of Cisco Digital Media Player (DMP) devices that you will manage centrally. Permitted increments for the number of DMP devices are multiples of 10.</p> <ol style="list-style-type: none"> d. Send the email message to dms-softwarekeys@cisco.com. e. After you receive the license key from Cisco, save a local copy of it. f. To load DMM in a web browser, use the DMM appliance IP address that you saw in AAI (<a href="http://<DMM_IP_address>:8080/">http://<DMM_IP_address>:8080/). <p>Alternatively, if you already loaded DMM in your browser for any reason, select Administrator Module from the untitled list at the top far-right of any page.</p> <ol style="list-style-type: none"> g. Click Install/Upgrade License. h. Click Browse, find and select the license file where you saved it, then click Open. i. Click Install License. The DMM software features and modules that you purchased are now enabled.

✓	Task
<input type="checkbox"/>	<p>13. Enter configuration values for the Video Portal module. To load the Video Portal Module Installation Configuration page in your browser, go to <a href="http://<DMM_IP_address>:8080/DMM/">http://<DMM_IP_address>:8080/DMM/, then fill in the fields:</p> <ul style="list-style-type: none"> • Superuser Email—The email address of the user who will act as the Video Portal “superuser.” • Superuser Password—The password for the “superuser” account. The password must contain at least six characters, at least one numeral, and both uppercase and lowercase characters. • Server Base URL—The routable DNS name for your Video Portal appliance. DMM fills this field automatically, but you can change the URL if it is wrong. • IP or fully qualified domain name—The IP address that you wrote down in Task 12-b. • Installed Instance Name—The Video Portal appliance instance name that you specified in Task 11 in Chapter 2, “Setting Up and Configuring a Video Portal Appliance.”
<input type="checkbox"/>	<p>14. Create Video Portal module database tables. Select Proceed with DMM Installation, then wait while the database tables are created.</p> <p>The next page says if the database creation succeeded and summarizes the results.</p>
<input type="checkbox"/>	<p>15. Verify that the Video Portal module configuration values are correct. Click Launching the Cisco Video Portal. The Video Portal plugin detector page appears briefly, then the Video Portal appears.</p>

✓	Task
<input type="checkbox"/>	<p>16. Configure the values for system variables on your DMM appliance.</p> <ol style="list-style-type: none"> a. Log in with the superuser account password that you created. b. Click the Setup tab, then enter all the following values: <ul style="list-style-type: none"> • Application Administrator Contact Email—The email address that receives help requests from users. • Deployment Email Reply To—The email address that receives any user replies to the deployment and notification messages that DMM sends. • Deployment CC Email Recipient—The email address that receives a copy of every deployment and notification message that DMM sends to any user. • Password Retrieval Email—The email address that receives user requests to retrieve and restore lost passwords. • Metadata Checkout Duration—The duration (in minutes) that a user can lock metadata for editing. • Scheduled Deployment Interval—The interval (in minutes) between automated cycles when DMM checks whether there are any scheduled deployments that it should process. This setting pertains only to scheduled deployments; immediate deployments start immediately. • Default Content Provider—The content provider name to assign, by default, to any new program upon its creation. For example, you might enter the name of your organization. • E-mail Server—The routable DNS name or IP address of the SMTP server through which DMM sends deployment and approval email messages automatically. • Application Server Base—The lowest-level HTTP URL (including the TCP port number) that points to your DMM appliance. For example: <code>http://dmm.yourdomain.com:8080</code>. • Upload URL—The HTTP URL (including the TCP port number) that points to the subdirectory where you keep uploaded binary files temporarily on your DMM appliance. For example: <code>http://dmm.yourdomain.com:8080/DMM/temp/video_portal/asset</code>.
	<p>Caution You must not change the <i>Upload Path on Local File System</i> value from its default, even though the field is editable. Deployments fail if you change it.</p> <ul style="list-style-type: none"> • Upload Path on Local File System—The complete file system pathname (starting from the root directory) that points to the subdirectory where you keep uploaded binary files temporarily on your DMM appliance. For example: <code>/dm2/apache-tomcat/webapps/DMM/temp/video_portal/asset</code>. • Preview URL—The HTTP URL (including the TCP port number) that points to the private staging area on your DMM appliance.
	<p>Caution You must not change the <i>Preview Path on Local File System</i> value from its default, even though the field is editable. Previews fail if you change it.</p> <ul style="list-style-type: none"> • Preview Path on Local File System—The complete file system pathname (starting from the root directory) that points to the staging area subdirectory on your DMM appliance. For example: <code>/dm2/apache-tomcat/webapps/DMM/temp/video_portal</code>. <p>c. To save and commit your entries, click Save Configuration Parameters.</p>

✓	Task
<input checked="" type="checkbox"/>	<p>17. Configure values for your Video Portal.</p> <p>a. Enter all the following values:</p> <ul style="list-style-type: none"> • Video Portal Web Server Base—The top-level HTTP URL of the server on which your audience can find your Video Portal. • The URL to the live video portal—The HTTP URL that points directly to your public Video Portal. • Default Audio Only Image—The SWF or non-progressive JPEG image to show as the thumbnail for every audio file. You must specify a file that is 100 pixels wide and 75 pixels high (or is any multiple of that size). • Default Preview Image—The SWF or non-progressive JPEG image to show as a placeholder thumbnail image when no other preview image is available for a video file. You must specify a file that is 100 pixels wide and 75 pixels high (or is any multiple of that size). • Supported Media Formats—The formats to support. Select any combination of Flash Video, Windows Media, Real, and MPEG4/H.264. <p>b. To save and commit your entries, click Save Portal Parameters.</p>
<input type="checkbox"/>	<p>18. Configure Video Portal deployment settings. You must deploy files to at least one remote location, because you cannot present them to audiences directly from your DMM appliance.</p> <p>Note You cannot edit the values that pertain to Video Portal Metadata files.</p> <p>a. To specify the deployment locations—which can differ for the different supported filetypes—select Setup > Deployment Locations, then enter <i>all</i> of the following values for <i>every</i> supported filetype that you selected in Task 17. Any invalid entries will cause deployments to fail:</p> <ul style="list-style-type: none"> • Connection type—The protocol or method for file transfer (the options are FTP, SFTP, and SCP). • Host address—The DNS-routable hostname or IP address of the remote server where you will deploy files of the relevant filetype. • Login name—A user account name that has the required privileges to access the remote server. • Login password—The assigned password for the login name that you specified. If you select the SFTP option for deployments to your Video Portal appliance, the password that you enter must be exactly the same as your Video Portal admin password. • Root file directory—The absolute directory path to files that you will deploy. • Root URL Path—The absolute URL, where the Video Portal will host and reference your files. <p>Note If you upgrade from DMM 3.4, you must enter the remote location settings for MPEG4/H.264 files. This newer DMM version adds a location automatically for that filetype.</p> <p>b. To save your selections and let them take effect for every filetype, click Save Deployment Locations.</p> <p>c. Select Video Portal > Deployments, then click  Schedule New Deployment.</p> <p>d. Select the Video Part 1 check box (in the “Video Part Selection” area).</p> <p>e. To deploy the pre-loaded content and metadata immediately, select the Schedule Immediately check box (in the “Deployment Time” area.)</p> <p>f. Click Create Deployment.</p> <p>g. To ensure that the content and metadata deployed appropriately, use another computer on your network to access the Video Portal that you installed.</p>

✓	Task
<input type="checkbox"/>	<p>19. Discover the DMPs in your network. If you purchased a DMM-DS license to centrally manage multiple Cisco Digital Media Player 4300G (DMP) devices, DMM can autodiscover your DMPs and organize them into groups for simplified and remote management of your DMPs anywhere globally.</p> <ol style="list-style-type: none"> a. Select Digital Signage Module from the the untitled list at the top far-right of any page. b. Select Applications > Full Applications List. c. From the Application Types list, select DMP Discovery, then click  (Add New Application). d. Enter the required values: <ul style="list-style-type: none"> • Name—A short and meaningful group name that applies equally well to every DMP in the specified range. For example, you might indicate that devices in this group are all located in Boston or Singapore. • Description—(Optional) A longer description of the group, its purpose, its policies, or anything else. • Discovery IP range—The range of IP addresses in which DMM should autodiscover DMPs. e. To save and commit your entries, click Submit. Alternatively, to discard your entries, click Cancel.
<input type="checkbox"/>	<p>20. Configure your DMP devices to recognize the authority of your DMM appliance. Do the following for each centrally managed DMP in your digital signage network:</p> <ol style="list-style-type: none"> a. To log in to the embedded device management software, point your browser to the DMP IP address. b. At the login prompt, enter the username and the password that you configured for the DMP. c. In the Settings area, click DMM, then enter the required values: <ul style="list-style-type: none"> • DMM Host—The IP address of your DMM server appliance. • Timeout (Seconds)—The maximum number of seconds that your DMP should wait for a response from your DMM appliance. d. To confirm your entries and to implement them until you change them or until you restart the DMP, click Apply. e. To make your configuration changes permanent even after you reboot your DMP, click Save Configuration, then (after you see the Save Configuration page) click Save. f. Click Reboot DMP, then (after you see the Reboot DMM page) click Reboot.

Setup and software configuration are now complete.
