

Text-Based CSV Files

Unified Communications Manager Bulk Administration (BAT) uses data that is entered in a comma-separated values (CSV) file format to provide information for insert transactions to the Unified Communications Manager database on the first node server. By using the CSV data format, you can build a textual file that contains data records in a tabular format.

You can create a CSV data file by using a text editor, such as Notepad++. You must use a separate line to enter data for each record. Separate each data field with a comma and include comma separators for blank fields. Enter data on every line in the data file because an error occurs during the insert transaction if you enter a blank line in a CSV file.

When you insert the data records to the Unified Communications Manager database, BAT accesses a set of designated folders that reside on the server that is running the first node database. For BAT to access the appropriate CSV data file for the transaction, you must upload the CSV data file to the first node database server of Unified Communications Manager.

Note

We recommend uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Unified Communications Manager.

Create Text-Based CSV File for Phones

You can create a CSV text file for phones, IP telephony devices, and user combinations using a text editor, such as Notepad++.

Instead of using the BAT spreadsheet for data input when you are adding phones, you can create the comma-separated values (CSV) file using lines of ASCII text with values separated by commas. There are different CSV data file formats for different phone types. You must use the appropriate phone file format for the CSV text file.

Note Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

Procedure

- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Use a separate line to enter the values for each phone, IP telephony device, or user combination that you want to add to Cisco Unified Communications Manager. You must create separate CSV files for each type of device. Keep in mind the following rules when you create the CSV data file.
- Always include comma separators, even if a field is blank.
 - Specify the user ID if the phone is to be associated to a user.
 - Directory Number fields are optional only when you are creating the CSV file for use with a BAT template that has no lines. If lines are configured on the BAT phone template, you must supply directory numbers in the CSV file for each device.
 - An error occurs when you insert a CSV file with blank lines.

- While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.

What to do next

Upload the CSV file to the first node of Cisco Unified Communications Manager.

```

CTI Ports-Users and H.323 Client-Users Combinations File Format

The following sample shows the field length and whether the field is optional or mandatory for a text-based CSV file for CTI ports with users and H.323 clients with users format.

First Name (Optional, up to 64 characters), Last Name (Mandatory, 1 to 64 characters), User ID (Mandatory, 1-128 characters), Password (Optional, up to 128 characters), Manager User ID (Optional, up to 128 characters, must use existing ID in global directory), Department (Optional, up to 64 characters), PIN (Optional, up to 128 numerals), Default Profile (Optional, up to 50 characters), User Locale (Optional, up to 50 characters), Telephone Number (Optional, up to 64 numerals), Primary Extension (Optional, up to 50 numerals), Associated PC (Optional, up to 50 characters), ICD Extension (Optional, up to 50 numerals), Mail ID (Optional, up to 255 characters), Presence Group (Optional, up to 50 characters), Subscribe Calling Search Space (Optional, up to 50 characters), Device Name (Mandatory, up to 15 characters for CTI ports-users combination and up to 50 characters for H.323client-users combinations), Description (Optional, up to 50 characters), Location (Optional, up to 50 characters), Directory Number (Optional, up to 24 numerals and special characters), Display (Optional, up to 30 characters), Line Text Label (Optional, up to 30 characters), Forward Busy External (Optional, up to 50 numerals and special characters), Forward No Answer External (Optional, up to 50 numerals and special characters), Forward No Coverage External (Optional, up to 50 numerals and special characters), Forward Busy Internal (Optional, up to 50 numerals and special characters), Forward No Answer Internal (Optional, up to 50 numerals and special characters), Forward No Coverage Internal (Optional, up to 50 numerals and special characters), Call Pickup Group (Optional, up to 50 characters)

Sample

```
John,Smith,johns,abcde,Daviss,12,12345,johnProfile,English United States,1,TAPS Port 1,CTI
TAPS Port 1,9725557154,9725557154,Mike,9725557172,9725557196,9725557112,9725557127,9725557158,
9725557189,9725557121/TollByPass,1230000000,Helpdesk
```

Note If you use a comma or double quotes as part of the value in one of the fields, you must enclose the entire text value with double quotation marks to designate it as a single value.

For example, if you entered John, Bill as a text value, then you must enter the value as “John,Bill”.

If you entered a double quote in a value, then you must replace the double quote with two consecutive double quotes and enclose the value with double quotes. For example you must enter John “Chief as “John”“Chief”.

Export the Fields for All Phone Details Option

When you are using the export utility to generate a file that containing all the details for the phone records, the export file has the following format.

Caution Cisco does not recommend editing the file that is generated with the export utility. The system dynamically generates fields, such as Logout time and Login time, that must not be edited at all. You must ensure that the login user ID and Product Specific XML fields are accurate for them to work properly, and you must not edit them. Use BAT to update the product specific configurations.

Phone CSV File Examples

The following list provides examples of commonly used phone CSV data files:

Using a Template Attribute-Forward Busy Destination

If Forward Busy Destination is 3001 on a phone template, all records in a CSV file that have no value for Forward Busy Destination use 3001.

```
1231123245AB,SEP1231123245AB,Dallas,johns,9728437154,9728437154,Mike,,9728437196,9728437127,9728437154,9728437178,9728437189,9728437121/TollByPass,1230000000,Helpdesk
```

No Phone Description Entry

If the description for a phone is blank, use this format:

```
1231123245AB,,Dallas,johns,9728437154,9728437154,Mike,9728437172,9728437196,9728437127,9728437154,9728437178,9728437189,9728437121/TollByPass,1230000000,Helpdesk
```

No Active Line or Location Entry

If no active line is required and the location is also blank, use this format:

```
1231123245AB,SEP1231123245AB,,,1230000000,HelpDesk
```

Two Active Lines

If two active lines are required, use this format:

```
1231123245AB,SEP1231123245AB,Dallas,johns,9725557154,9725557154,Mike,9725557172,9725557196,9728437127,9728437154,9728437178,9728437189,9725557121/TollByPass,9725557155,9725557155,Kelvin,9725557133,9725557196,9728437112,9728437145,9728437187,9728437198,9725557112/TollByPass,1230000000,Helpdesk
```

Note For the MAC Address, enter MAC address values or check the option for creating dummy MAC addresses.

Mandatory Phone Entries

If one line is required and you want to include only the required values and none of the optional values, use this format:

```
1231123245AB,,,,,9725557154,,,,,
```

Using Dummy MAC Address Option

If the option is checked for a dummy MAC address and you want one line, use this format:

```
,Dallas,9725557154,9725557154,Mike,9725557172,9725557196,9728437127,9728437154,9728437178,  
9728437189,9725557121/TollByPass,johns,1230000000,Helpdesk
```

Create Text-Based CSV User File

You can create a CSV text file for users using a text editor, such as Notepad++.

Instead of using the BAT spreadsheet for data input when you are adding users, you can create the comma-separated values (CSV) file by using lines of ASCII text with values separated by commas. You must use the user file format for the user CSV text file.

Note Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

Procedure

- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Using a separate line for each user, enter the values for each user that you want to add to Cisco Unified Communications Manager.
- You can associate any number of existing devices to a new user by entering the device name of all the devices separated by a comma at the end of the record.
- You can associate a directory number to a user, even if that user does not control any device.
- Note** An error occurs if any blank lines exist in the CSV file.
- Step 3** While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.

What to do next

Upload the file to first node of the Cisco Unified Communications Manager.

Related Topics

[Create Text-Based CSV File for IME Trusted Group Configuration](#), on page 35

[Upload File to Server](#)

[User File Format](#), on page 8

User File Format

Tip You must specify PIN and Password values, either on the CSV file or when using BAT for file insertion. If you want to apply individual PINs or passwords for each user or group of users, specify the PIN and password information in the CSV file. If you want to use a default PIN and password that all users can use, do not specify PIN or password values in the CSV file and instead provide this information when you use BAT to insert the CSV file in Cisco Unified Communications Manager.

The following sample format and examples show the fields, field length, and whether the field is optional or mandatory for a text-based CSV file for users.

First Name (Optional, up to 64 characters), Last Name (Mandatory, 1 to 64 characters), User ID (Mandatory, up to 128 characters), Manager User ID (Optional, up to 128 characters, must use existing ID in global directory), Department (Optional, up to 64 characters), PIN (Optional, up to 128 numerals), Default Profile (Optional, up to 50 characters), User Locale (Optional, up to 50 characters), Telephone Number (Optional, up to 64 numerals), Primary Extension (Optional, up to 50 numerals), Associated PC (Optional, up to 50 characters), ICD Extension (Optional, up to 50 numerals), Mail ID (Optional, up to 255 characters), Presence Group (Optional, up to 50 characters), Subscribe Calling Search Space (Optional, up to 50 characters).

Sample

```
John,Smith,johns,abc123de,karend,0012055,9989,johns profile,English
United States,SEP1231123245AB,9725557154,SEP0010EB001234
```

You must specify delimiters even if a field is blank. Refer to the following examples and sample CSV records when you are creating CSV files.

Example 1

If the manager for a user is blank, use this format:

```
John,Smith,johns,abc123de,,0012055,9989,johns profile,English United
States,SEP1231123245AB,9725557154,SEP0010EB001234
```

Example 2

When you want to complete only the mandatory fields, use this format:

```
Smith,johns,,,,,,,,
```

Example 3

When you want to complete only the mandatory fields and associate the user to a phone, use this format:

```
Smith,johns,,,,,,,,,SEP1231123245AB,
```

Example 4

A user can control more than one device. You can add device names for additional devices at the end of the record.

- If the user controls only one device, use this format:

```
John,Smith,johns,abc123de,karend,0012055,9989,johns profile,English
United States,SEP1231123245AB,9725557154
```

- If the user controls three devices, use this format:

```
John,Smith,johns,abc123de,karend,0012055,9989,johns profile,English
UnitedStates,SEP1231123245AB,9725557154,SEP0010EB001234,SEP0010EB432101
```

Update Users File Format

Use a text editor to create the CSV text file for updating users. Upload the file to first node server.

When you are updating a record, you need to supply all mandatory fields for a file. If you have stored values in the optional fields, and you update a record with blank optional fields, you will reset the values to blank. It is possible for you to retain previously stored values during update.

The following sample format shows the field length and string types followed by examples of CSV files for updating users.

User ID (Mandatory, 1 to 128 characters), Password (Optional, up to 128 characters), Manager (Optional, up to 128 characters, must use existing ID in global directory), Department (Optional, up to 64 characters), PIN (Optional, up to 128 numerals), Default Profile (Optional, up to 50 characters), User Locale (Optional, up to 50 characters), Telephone Number (Optional, up to 64 numerals), Primary Extension (Optional, up to 50 numerals), Associated PC (Optional, up to 50 characters), ICD Extension (Optional, up to 50 numerals), Mail ID (Optional, up to 255 characters).

Sample

```
johns,Daviss,123,johnProfile,English United States,SEP8612113425AC,9725557154
```

Note You must specify delimiters even if a field is blank. Refer to the following examples and sample CSV records when you are creating CSV files.

Example 1

If the manager for a user is blank. use this format:

```
johns,,123,johnProfile,English United States,SEP8612113425AC,9725557154
```

Example 3

Mandatory fields include the following fields:

```
John,Daviss,123,johnProfile,,,
```

Create Text-Based CSV File for User Device Profile

You can create a CSV text file for user device profiles using a text editor, such as Notepad++.

Instead of using the BAT spreadsheet for data input when you are adding user device profiles, you can create the comma-separated values (CSV) file by using lines of ASCII text with values separated by commas. You must use the user device profile file format for the CSV text file.

Note If you use comma or double quotes as part of string in one of the fields, you must enclose the entire text string with double quotes.

Note Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

Procedure

-
- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Using a separate line for each user device profile, enter the values for each user device profile that you want to add to Cisco Unified Communications Manager.
- Note** An error occurs if any blank lines exist in the CSV file.
- Step 3** While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.
-

What to do next

Upload the CSV file to the first node server for Cisco Unified Communications Manager.

User Device Profile File Format

The following sample format shows the field length and string types followed by examples of a CSV files for user device profiles.

```
Device Profile Name(Mandatory, 1 to 50 characters),Description(Optional, 1 to 50
characters),Login UserID (Optional, 4 to 30 characters),Directory Number(Optional, up to
```

24 numerals and special characters),Display(Optional, for internal Caller ID, up to 30 characters),Line Text Label(Optional, up to 30 characters),Forward Busy External Destination(Optional, up to 50 numerals),Forward No Answer External Destination(Optional, up to 50 numerals),Forward No Coverage External(Optional, up to 50 numerals),Forward Busy Internal Destination(Optional, up to 50 numerals),Forward No Answer Internal Destination(Optional, up to 50 numerals),Forward No Coverage Internal(Optional, up to 50 numerals),Call Pickup Group(Optional, up to 50/50 characters),Speed Dial Number(Optional, up to 50 numerals),Speed Dial Label(optional, up to 30 characters)

Sample

```
John Profile,John's Profile,Johns,9725557154,9725557154,Mike,9725557172,9725557196,
9725557126,9725557154,9725557178,9725557189,9725557121/TollByPass,1230000000,Helpdesk
```

Example 1

You must specify delimiters even if a field is blank. The following example shows the correct format for not specifying a Display setting:

```
John Profile,John's
Profile,Johns,9725557154,,Mike,9725557172,9725557196,9725557126,9725557154,9725557178,
9725557189,9725557121/TollByPass,1230000000,Helpdesk
```

Example 2

If it is a 0-line profile and only mandatory fields are added, use the following example:

```
John Profile,,,,
```

Example 3

If only the mandatory fields are completed and you want to associate the user device profile to only one directory number, use this format:

```
John Profile,,,9725557154,,,,,
```

User Device Profile with Two Lines and Two Speed Dials

The following example format shows the field length and string types of a CSV file for user device profiles with two lines.

```
User Device Profile Name(Mandatory, 1 to 50 characters),Description(Optional, 1 to 50
characters),Login UserID (Optional, 4 to 30 characters),Directory Number1(Optional, up to
24 numerals and special characters),Display1(Optional, for internal Caller ID, up to 30
characters),Line Text Label1(Optional, up to 30 characters),Forward Busy External
Destination1(Optional, up to 50 numerals),Forward No Answer External Destination1(Optional,
up to 50 numerals),Forward No Coverage External Destination1(Optional, up to 50
numerals),Forward Busy Internal Destination1(Optional, up to 50 numerals),Forward No Answer
Internal Destination1(Optional, up to 50 numerals),Forward No Coverage Internal
Destination1(Optional, up to 50 numerals),Call Pickup Group1(Optional, up to 50/50
characters),Directory Number2(Optional, up to 24 numerals and special
characters),Display2(Optional, for internal Caller ID, up to 30 characters),Line Text
Label2(Optional, up to 30 characters),Forward Busy External Destination2(Optional, up to
50 numerals),Forward No Answer External Destination2(Optional, up to 50 numerals),Forward
No Coverage External Destination2(Optional, up to 50 numerals),Forward Busy Internal
Destination2(Optional, up to 50 numerals),Forward No Answer Internal Destination2(Optional,
up to 50 numerals),Forward No Coverage Internal Destination2(Optional, up to 50
numerals),Call Pickup Group2(Optional, up to 50/50 characters),Speed Dial Number1(Optional,
up to 50 numerals),Speed Dial Label1(optional, up to 30 characters),Speed Dial
Number2(Optional, up to 50 numerals),Speed Dial Label2(optional, up to 30 characters)
```

Example

```

```

Export File Fields for User Device Profile with All Details Option

When you are using the export utility to generate a file that contains all the details for the user device profiles, the export file will have the following format. The example shows the length and type of fields in the export all details file.

The export utility does not generate model-specific fields for user device profiles.

**Caution**

Cisco does not recommend editing the file that is generated with the export utility. The system dynamically generates some fields, such as Logout time and Login time, that must not be edited at all. You must ensure that the login user ID and Product Specific XML fields are accurate for them to work properly, and you must not edit them. Use BAT to update the product-specific configurations.

```

Create Text-Based CSV File for Cisco Unified CM Assistant Manager-Assistant Associations

You can create a CSV text file for Unified CM Assistant manager and assistants using a text editor, such as Notepad++.

Instead of using the BAT spreadsheet for data input when you are adding Unified CM Assistant managers and assistants, you can create the comma-separated values (CSV) file by using lines of ASCII text with values separated by commas. You must use the manager and assistants file format for the CSV text file.

Note Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

Procedure

-
- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Using a separate line for each manager-assistants association, enter the values for each manager-assistant that you want to add to Cisco Unified Communications Manager.

Note An error occurs if any blank lines exist in the CSV file.

You can assign multiple assistants to a manager by entering the user IDs of the manager and assistants separated by a comma at the end of the record.

- Step 3** While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.
-

What to do next

Upload the CSV file to the first node server for Cisco Unified Communications Manager.

[Upload File to Server](#)

Managers and Assistants File Formats

The following sample formats and examples show the field length and string types for Unified Communications Manager Assistant manager and assistant associations. Use the user ID of the manager for the Manager ID and the user ID of the assistant for the Assistant ID. You can also associate many managers to one assistant by putting the Assistant ID first, followed by a list of Manager IDs. When you insert the CSV file, you select the type of association.

Default Manager-Assistant Association

Use the following default format for manager-assistant association.

```
ManagerID (Mandatory, 1 to 30 characters),AssistantID 1 (Mandatory, 1 to 30
characters),AssistantID 2 (Optional, 1 to 30 characters)...AssistantID # (Optional, 1 to
30 characters)
```

Sample

```
Johns, Mikeh, Larryh
```

Default Assistant-Manager Association

Use the following default format for assistant-manager association.

```
AssistantID (Mandatory, 1 to 30 characters),ManagerID 1 (Mandatory, 1 to 30
characters),ManagerID 2 (Optional, 1 to 30 characters)...ManagerID # (Optional, 1 to 30
characters)
```

Sample

```
Larryh, Johns, Mikeb, Karend
```

Custom Manager-Assistant Association

For proxy line configurations, you can build a CSV data file that specifies the proxy lines on assistant phones by using this format.

```
ManagerID (Mandatory, 1 to 30 characters),Device Name (Optional, 15 characters),Intercom
DN (Optional, 1 to 24 characters),Assistant User ID (Mandatory, 1 to 30 characters),Device
Name (Optional, 15 characters),Intercom DN (Optional, 1 to 24 characters),Proxy Line DN
(Mandatory, 1 to 24 characters),Manager Line DN (Mandatory, 1 to 24 characters)
```

Example

```
Johns, SEP1231123245AB, 90001, Mikeh, SEP2342342342AB, 20001, 20002, 90002
```

FXO or FXS Trunks CSV File Format

The following sample format shows the required field length and string types followed by sample of CSV files for a Cisco VG200 gateway.

```
MGCP Domain Name (Mandatory, 1 to 64 characters), Description (Optional, up to 100 characters),  
Slot (Mandatory, up to 3 numerals), Subunit (Mandatory, up to 3 numerals), Port  
Number (Mandatory, up to 3 numerals), Port Description (Optional, up to 50 characters), Port  
Directory Number (Optional, up to 24 numerals and special characters)
```

Sample

```
MGCPTest, VG200 Lab Gateway, 0, 1, 0, Port 0, 97255576601MGCPTest, VG200 Lab Gateway, 0, 1, 1, Port  
1, 97255572001
```

Note You must include comma separators even if a field is blank. Specify the directory number and route partition only if the port type in the Cisco VG200 gateway template is POTS.

Example 1

If the Description for a Cisco VG200 gateway is blank, use this format:

```
MGCPTest, ,0,1,0,Port 0,97255576601
```

[Related Topics](#), on page 41

T1 CAS T1 PRI or E1 PRI Trunks File Format

The following sample format shows the required field length and string types followed by examples of CSV files for the Cisco VG200 gateway.

T1 CAS Trunks

MGCP Domain Name (Mandatory, 1 to 64 characters), Description (Optional, up to 100 characters), Slot (Mandatory, up to 3 numerals), Subunit (Mandatory, up to 3 numerals), Port Number (Mandatory, up to 3 numerals), Port Description (Optional, up to 50 characters), CAS Port Number (Optional, up to 3 numerals)

Sample 1

```
MGCPTest, VG200 Lab Gateway, 001, 001, 001, , ,
```

T1 PRI or E1 PRI

MGCP Domain Name (Mandatory, 1 to 64 characters), Description (Optional, up to 100 characters), Slot (Mandatory, up to 3 numerals), Subunit (Mandatory, up to 3 numerals), Port Number (Mandatory, up to 3 numerals), Port Description (Optional, up to 50 characters)

Sample 2

```
MGCPTest, VG200 Lab Gateway, 001, 001, 001, ,
```

Note You must include comma separators even if a field is blank.

Example for Both Trunk Options

If you provide only the mandatory value, use this format:

```
MGCPTest, , 001, 001, 001, , ,
```

T1 CAS Examples

If the Description for a Cisco VG200 gateway is blank, use this option:

```
MGCPTest, , 001001, 001, 001, MGCP Port,
```

For port identifiers, ensure the first digit is either 0 or 1 (signifying either Sub-Unit 0 or Sub-Unit 1), followed by the port number, 01 to 24. Acceptable values include 001 through 024 or 101 through 124. If the Cisco VG200 gateway template has three port identifiers, use this option:

```
MGCPTest, VG200 Lab Gateway, 001, 002, 003
```

Create Text-Based CSV File for ISR 4461 Gateways

You can create a CSV text file for ISR 4461 gateways using a text editor, such as Notepad++.

Instead of using the BAT spreadsheet for data input when you are adding Cisco ISR 4461 gateways, you can create the comma-separated values (CSV) file by using lines of ASCII text with values separated by commas. You must use the appropriate file format for the type of trunk and port for the gateway.

Note We recommend uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Unified Communications Manager.

Procedure

-
- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Using a separate line for each gateway, enter the values for each gateway and port that you want to add to Unified Communications Manager.
- Note** An error occurs if any blank lines exist in the CSV file.
- Step 3** While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.
-

What to do next

Upload the CSV file to the first node server for Unified Communications Manager.

Create Text-Based CSV File for Cisco Catalyst 6000 FXS Ports

You can create a CSV text file for Cisco Catalyst 6000 FXS ports using a text editor, such as Notepad++.

Instead of using the BAT spreadsheet for data input when you are adding Cisco Catalyst 6000 FXS ports, you can create the comma-separated values (CSV) file by using lines of ASCII text with values separated by commas. You must use the appropriate file format for the type of gateway.

Procedure

- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Using a separate line for each port, enter the values for each port that you want to add to Cisco Unified Communications Manager.
- Note** An error occurs if any blank lines exist in the CSV file.
- Step 3** While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.
-

What to do next

Upload the CSV file to the first node server for Cisco Unified Communications Manager.

[Cisco Catalyst 6000 \(FXS\) Torts File Format](#), on page 25
[Related Topics](#), on page 41

Cisco Catalyst 6000 (FXS) Torts File Format

The CSV file contains information about each port as a record. Each record specifies the gateway MAC address and port number on that gateway to which you want to add or update the port details.

Note BAT does not add Cisco Catalyst 6000 (FXS) gateways. It only adds or updates ports to an existing gateway.

For the MAC address, enter no MAC address values for an existing Cisco Catalyst 6000 (FXS) gateway. This MAC address uses the last 12 characters in the Gateway Name.

If you provide no values for Partition for any record on the CSV file, the system uses values from the BAT template for these fields.

The following sample format shows the required field length and string types followed by examples of CSV files for Catalyst 6000 (FXS) ports.

```
MAC Address (Mandatory, 12 characters),Port Number (Mandatory, 2 numerals),Directory  
Number(Optional, up to 24 numerals and special characters)
```

Sample

```
1231123245AB,23,9725557250
```

Note You must include comma separators even if a field is blank.

Note Do not specify a partition unless you have also specified a directory number.

Examples

If the directory number for a port is blank, use this format:

```
1231123245AB,23,
```

If you want to add only the mandatory values, use this format:

```
1231123245AB,23,
```

CSV File Format for VG202 and VG204 Gateways

The following sample formats and examples show the fields, field length, and whether the field is optional or mandatory for a text-based CSV file for VG202 and VG204 Gateways.

There are two CSV file formats for VG202 and VG204 Gateways depending upon the Protocol:

- MGCP
- SCCP

For MGCP Gateway

Domain Name (Mandatory, 1 to 64 characters), Description (Optional, up to 100 characters), Slot (Mandatory, up to 3 numerals), Subunit (Mandatory, up to 3 numerals), Port Number (Mandatory, up to 3 numerals), Port Description (Optional, up to 50 characters), Port Directory Number (Optional, up to 24 numerals and special characters).

Sample

```
test,test,0,0,0,sample,1000
```

For SCCP Gateway

Mac Address (Mandatory, 1 to 64 characters), Description (Optional, up to 100 characters), Slot (Mandatory, up to 3 numerals), Subunit (Mandatory, up to 3 numerals), Port Number (Mandatory, up to 3 numerals), Port Description (Optional, up to 50 characters), Port Directory Number (Optional, up to 24 numerals and special characters).

Sample

```
SKIGW111111111111,test,0,0,0,sample,1000
```

Create Custom Text-Based CSV Files for Client Matter Codes and Forced Authorized Codes

You can create a custom text-based CSV file using a text editor, such as Notepad++.

Procedure

-
- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Using a separate line for each code, create a custom Client Matter Codes (CMC) CSV file or a Forced Authorized Codes (FAC) CSV file, as described in the following steps:
- For CMC—Step 3 and Step 4
 - For FAC— Step 3 and Step 4

Tip Remember that you must create two separate CSV files, one for CMC and one for FAC.

- Step 3** To create a CMC CSV file, enter the corresponding information, where x, y represent the following fields:
- x—The client matter code (mandatory entry for all additions, updates, and deletions)
 - y—The description (optional if you update the entry)

For example, you may enter 5555,Acme Toys, where 5555 equals the mandatory client matter code, and Acme Toys equals the description.

- Step 4** To create a FAC CSV file, enter the corresponding information, where x,y,z represent the following fields:
- x—The forced authorization code (mandatory entry for all additions, updates, and deletions)
 - y—The authorization code name (optional if you update the entry)
 - z—The authorization level (optional if you update the entry)

For example, you may enter 1234,John Smith,20, where 1234 equals the forced authorization code, John Smith equals the authorization code name, and 20 equals the authorization level.

Caution If you add new codes at the same time that you update them, make sure that you enter all required information. You can change any part of an existing record, but you must include the code; for example, the forced authorization code or client matter code. Deleting information and leaving it blank does not remove the information from the database; a blank value does not overwrite an existing value in the database, but, updating the value, for example, to Acme Toys, Inc., or John L. Smith from the preceding examples, overwrites the existing value in the database.

- Step 5** Upload the CSV file to the first node of Cisco Unified Communications Manager.

While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.

Note Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

- Step 6** Perform one of the following tasks:

- If you made additions or updates, insert the file in the CUCM database using BAT.
- You can delete code settings.

Note You cannot perform insert and update operations simultaneously with the same CSV file. You have to create separate CSV files for insert and update.

CMC File Format

The following sample format and examples show the fields, field length, and whether the field is optional or mandatory for a text-based CSV file for client matter codes.

```
Client Matter Code(Mandatory, 1 to 16 numerals),Description(Optional, 1 to 50 Characters)
```

Sample

```
1234567890123456,Marketing
```

Example

If the value of the field includes a comma, that field must be enclosed in double quotes. Use this format for fields with commas:

```
1234567890123456, "Marketing, team"
```

Related Topics

[Related Topics](#), on page 41

Update CMC File Format

Use a text editor to create the CSV text file for updating client matter codes.

The following sample format shows the field length and string types followed by examples of CSV files for updating client matter codes.

```
Client Matter Code(Mandatory, 1 to 16 numerals),Description(Optional, 1 to 50 Characters)
```

Sample

```
1234567890123456,Marketing
```

Example

If the description is empty, use this format:

```
1234567890123456,
```

[Related Topics](#), on page 41

Update FAC File Format

Use a text editor to create the CSV text file for updating forced authorization codes.

The following sample format shows the field length and string types followed by examples of CSV files for updating forced authorization codes.

```
Forced Authorization Code(Mandatory, 1 to 16 numerals),Authorization Code Name (Mandatory,
1 to 50 Characters),Authorization Level(Mandatory,values range from 0 to 255)
```

Sample

```
1234567890123456,John FAC,251
```

Example

Values you do not want to update must still include the delimiter. If only the Authorization Code Name has to be updated use the following format:

```
1234567890123456,John FAC,
```

If only the Authorization level has to be updated, use the following format:

```
1234567890123456,John FAC,220
```

Create Text-Based CSV File for Call Pickup Groups

You can create a custom text-based CSV file for call pickup groups using a text editor, such as Notepad++.

Procedure

-
- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
Use a separate line for each call pickup group name.
- Step 2** Enter the Pickup Group Name, Pickup Group Number, Partition, Other Pickup Group Name-Member1... Other Pickup Group Name-Member10.
For example, you may enter Marketing,7815,Part1,Marketing,Managers,Training, where Marketing is the mandatory pickup group name, 7815 is the mandatory pickup group number. Part1 is the partition, Marketing, Managers, and Training are the other pickup group names that are associated to the pickup group Marketing.
- Caution** Deleting information and leaving it blank does not remove the information from the database; a blank value does not overwrite an existing value in the database, but updating the value, for example, to Sales from Marketing, from the preceding examples, overwrites the existing value in the database.
- Step 3** Upload the CSV file to the first node of Cisco Unified Communications Manager.
While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.

Note Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

Step 4 Perform one of the following tasks:

- If you made additions or updates, insert the file in the CUCM database using BAT.
- You can delete call pickup groups settings.

Create Text-Based CSV File for Remote Destination Profile

Instead of using the BAT spreadsheet for data input when you are adding Remote Destination Profiles (RDPs), you can create the comma-separated values (CSV) file by using lines of ASCII text with values separated by commas. You can use a text editor such as Notepad++.

**Note**

Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

Procedure

-
- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Use a separate line to enter the values for each RDP that you want to add to Cisco Unified Communications Manager. Keep in mind the following rules when you create the CSV data file.
- Always include comma separators, even if a field is blank.
 - Specify the user ID if the RDP is to be associated to a user.
 - Consider Directory Number fields as optional only when you are creating the CSV file for use with a BAT template that has no lines. If lines are configured on the BAT RDP template, you must supply directory numbers in the CSV file for each RDP.
 - An error occurs when you insert a CSV file with blank lines.
- Step 3** While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.
-

What to do next

Upload the CSV file to the first node of Cisco Unified Communications Manager.

End User CAPF Profile File Format

The following sample format and example shows the fields, field length, and whether the field is optional or mandatory for a text-based CSV file for end user CAPF profile.

Instance ID (Mandatory, 1 to 132 characters), End User ID (Mandatory, 1 to 128 characters), Certificate Operation (Mandatory, 1 to 100 characters), Authentication Mode (Mandatory, 1 to 100 characters), Authentication String (Optional, 1 to 50 characters), Key Size (Mandatory, 1 to 4 characters), Operation Completes By (Mandatory, 1 to 15 characters)

Sample

Instance ID,End User ID,Certificate Operation,Authentication Mode,Authentication String,Key Size,Operation Completes By

```
11,user,No Pending Operation,By Existing Certificate (precedence to
LSC),1234567,512,2010:1:21:12
```

Create Text-Based CSV File for Mobility Profile

Instead of using the BAT spreadsheet for data input when you are inserting mobility profiles, you can create the comma-separated values (CSV) file by using lines of ASCII text with values that are separated by commas. You can use a text editor such as Notepad++.

Note Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

Procedure

- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** Use a separate line to enter the values for each mobility profile that you want to add. Keep in mind the following rules when you create the CSV data file:
 - Always include comma separators, even if a field is blank.
 - An error occurs when you insert a CSV file with blank lines.
- Step 3** While saving your CSV file, choose to save it as UTF-8 encoded. In Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down.

What to do next

Upload the CSV file to the first node of Cisco Unified Communications Manager.

Mobility Profile File Format

The following sample format and example shows the fields, field length, and whether the field is optional or mandatory for a text-based CSV file for Mobility Profile.

Mobility Profile Name (Mandatory, 1 to 50 characters), Description (Optional, 1 to 128 characters), Service Access Number (Optional, 1 to 50 characters), Enterprise Feature Access Number/Partition (Optional, 1 to 50 characters), Callback Caller ID (Optional, 1 to 50 characters), Mobile Client Calling Option (Mandatory, 1 to 50 characters).

Sample

Mobility Profile Name,Description,Service Access Number,Enterprise Feature Access Number/Partition,Callback Caller Id,Mobile Client Calling Option

```
MoProfile1,testexport,2323,123456 in part1,33,Dial via Office Reverse
```

Create Text based CSV file for Infrastructure Devices

You can create a CSV text file for Infrastructure Devices using a text editor, such as Notepad++.

Note Cisco recommends uploading Text-Based CSV files saved in the UTF-8 format only, as characters other than ASCII characters can be stored in this format. Using a text editor, such as Notepad++, you can select encoding as UTF-8 without Byte Order Mark (BOM) from the Encoding drop-down. Text-Based CSV files saved in formats other than UTF-8 may render garbled when downloaded from Cisco Unified Communications Manager.

Procedure

- Step 1** Open a text editor or any application that allows you to export or create a text-based CSV file.
- Step 2** The first line of the CSV file must be "ACCESSPOINT OR SWITCH NAME,IPV4 ADDRESS,IPV6 ADDRESS,BSSID,DESCRIPTION".
- Step 3** Use a separate line to enter the values for each infrastructure device that you want to add. The CSV file must have the following comma delineated columns:
 - Device Name
 - IPv4 Address
 - IPv6 Address
 - BSSID
 - Description
- Step 4** To View sample csv data file, Click **Bulk administration > Infrastructure Device > Insert Infrastructure Device**.
The **Insert Infrastructure Device Configuration** window opens.
- Step 5** Click **View Sample File**.
