

Math

The `Math` action element is used to evaluate basic mathematical expressions. The mathematical expression is composed of operators and functions in the form of a string which is passed as a setting to the element, parsed and evaluated at runtime. The result is a double value stored as a string in either element data or session data. All common arithmetic operators are supported. Boolean operators are also fully supported. Boolean expressions are evaluated to be either 1.0 or 0.0 (*true* or *false* respectively).

Settings

Name (Label)	Type	Req'd	Single Setting Value	Substitution Allowed	Default	Notes
Type (Type)	string enum	Yes	true	false	Element	This setting specifies the type of data that will store the result of the mathematical expression. Possible values are: <code>Element</code> <code>Session</code> . Default = <code>Element</code> .

Name (Name)	string	Yes	true	true	None	This setting specifies the name to assign to the data that will store the result of the mathematical expression.
Expression (Expression)	string	Yes	true	true	None	This setting specifies the mathematical expression to parse and evaluate. For supported operators and functions see tables below.

Element Data

Element data is created *only* when the `type` setting is set to *Element*. In all other cases, no element data is created.

Name	Type	Notes
[value of setting “name”]	string	The result of the mathematical expression.

Session Data

Session data is created *only* when the `type` setting is set to *Session*. In all other cases, no session data is created.

Name	Type	Notes
[value of setting “name”]	string	The result of the mathematical expression.

Exit States

Name	Notes
done	The mathematical expression was evaluated and the result was stored as either element data or session data.

Folder and Class Information
