QBIKGDP

Name/CLI Keyword	qbikgdp
Full Name	Qbik GDP
Description	Generic Discovery Protocol (GDP) is a protocol developed for finding or discovering Internet connectivity servers (such as WinGate). It is used by both the WinGate Internet Client (WGIC) and GateKeeper for finding WinGate. It is designed to be fully automatic, requiring no user intervention.
Reference	http://www.redline-software.com/eng/support/docs/wingate/GenericDiscoveryProtocol.php

RIS

Name/CLI Keyword	ris
Full Name	Relational Interface System
Description	Relational Interface System (RIS) is Intergraph Corporation's middleware for connecting client software and DBMS. It is used in geographic information systems Modular GIS Environment (MGE) and GeoMedia, the digital photogrammetric station ImageStation, security systems, CAD software (such as MicroStation) and mechanical-design software I/EMS (predecessor of Solid Edge). It was developed for UNIX (including CLIX) many years before Open Database Connectivity (ODBC) and in the last years for Apple Macintosh and Windows computers.

Underlying Protocols	-

RUSHD

Name/CLI Keyword	rushd
Full Name	RUSHD
Description	The Rush render queue allows users to manage jobs. A 'job' is usually just a range of frames that need to be rendered. The render queue consists of two executables: rush(1) is the command line oriented user front end tooland rushd(8) is the network daemon that runs on each host, one daemon per host.
